-----*****-----

To My Most Beloved Lord Ram

A humble word of dedication

No creature is perfect; it's foolhardy to claim so. The best of paintings cannot replace the original; the best of words cannot express the original emotions and sentiments. Even the Lord was not satisfied by one flower or one butterfly—he went on endlessly evolving and designing newer forms. So, I have done my best, I have poured out my being in these books. Honestly, I am totally incompetent— it was the Lord who had done the actual writing and had moved my fingers as if they were merely an instrument in his divine hands. But nonetheless, it's a tribute to the Lord's glory that he does not take the credit himself, but bestows it to them whom he loves as his very own. And to be his very own is indeed an unmatched honour. However, I still beg forgiveness for all omissions, commissions and transgressions on my part that I may have inadvertently made. It's the Lord's glories that I sing, rejoice in, write on and think of to the best of my ability. I hope my readers will also absorb the divine fragrance effusing from the flowers representing the Lord's books, enjoy the ambrosia pouring out of them and marvel at the Lord's stupendous glories.

I submit this effort at the Lord's holy feet, and finding no words to express my profound gratitude to him, I just wish to remain quiet, and let my silence do the speaking and praying on my behalf.

Finally, I pay my greatest obeisance to Hanuman, the enlightened devotee of Lord Ram, whom I regard as my Guru (a spiritual guide), without whose blessings this effort would not have borne fruit.

Author

Anthology of all the Principal Upanishads of the Atharva Veda

Introduction

Benediction

Gayatri Upanishad

The Atharva Veda's eight Kandikas (sub-sections), from 31 to 38, of the Gopath Brahman are collectively known as the Gayatri Upanishad. These eight Kandikas have been numbered 1-8 for the sake of convenience here. It is conversation between sages Maudgalya (who belonged to the lineage of sage Mudgal) and Glav Maitreya (who belonged to the lineage of sage Mitrayu). It reveals the great knowledge pertaining to the Supreme Being, called the Savita, whose visible manifestation is the celestial Sun and other primary units upon which the entire edifice of creation and its auspicious survival is based, such as the fire, wind, moon, day, heat and warmth, clouds, electric, Pran (life consciousness factors), the Vedas and the fire sacrifice. The dynamic aspect of this Supreme Being is known as Savitri much like the rays of the Sun which help to spread the heat, energy and light of the latter even to the farthest corners of the world.

A famous Mantra dedicated to the Sun God is also called Gayatri Mantra because of the fact that it was the first such Mantra revealed by the creator Brahma in the composition style called Gayatri and became synonymous with it.

There are other Upanishads with a similar line of exposition, such as the Savitri Upanishad of the Sam Veda tradition, and Brihad Aranyaka Upanishad (Canto 5, Brahman 14) of the Shukla Yajur Veda tradition.

Kandika 1

1. Once, sage Glav Maitreya (accompanied by his retinue of disciples) came to the hermitage of another renowned sage Maudgalya who was honoured by the title of 'eleven Aksha'¹. He watched the disciples of the latter sage and, in his false sense of pride and vanity of being superior in knowledge, wondered sarcastically, 'What does this person Maudgalay teach his disciples?' (1).

[Note—¹The title 'eleven Aksha' indicated a sage who had not only obtained control over his ten vital winds collectively called the Prans—the five main Prans such as Pran, Apaana, Samaana, Vyan and Udaana, and the five subsidiary Prans such as Nag, Kurma, Krikar, Devdutta and Dhananjay—but had also attained self-realisation by activating the dynamic energy of the Atma, the pure consciousness called the 'self'.]

2. The peeved disciples approached their master (Maudgalya) and submitted, 'Oh Lord! The guest that we have today has cast aspersions on you and has expressed doubts about the level of your knowledge, erudition and wisdom. He has called you Agyani, i.e. one who is ignorant.'

Maudgalya asked them, 'Is he an expert and acclaimed himself?'

The disciples replied, 'Oh yes, sir. He is an expert preacher of the three Vedas' (2).

3. Sage Maudgalya said, 'Oh dear! Call his most wise and learned disciple who aspires to excel in metaphysics near me' (3).

4. The obedient disciple summoned one such expert disciple of the guest sage and presented him to his own teacher. The teacher asked the disciple of sage Maitreya, 'Oh dear! What does your teacher teach you?'

The disciple replied, 'Sir, my teacher is an expert teacher of the three Vedas' (4).

5. Maudgalya enquired, 'Oh dear! Since all the Vedas reside in my mouth (i.e. I know them by heart and can repeat them flawlessly orally) why does your teacher say that I am an Agyani (i.e. that I do not know them, that I am not learned)? Does he not know how one gentleman should behave with another; is he not aware of the etiquettes to be followed when dealing with another man of stature? All right. Now I shall ask a question, and if he cannot answer it then it means that he does not teach the Vedas (5).

6. Oh dear! If he is ignorant he would say that the knowledge which the teacher gives to his disciples and others relates to Savitri¹. Go and tell him that sage Maudgalya whom you have called ignorant (Agyani) wishes to ask you one question. If you cannot answer it satisfactorily, then you would have to suffer severely for one year (for insinuating another sage, and for misguiding your own disciples)' (6).

[Note—¹The word Savitri literally means the rays of the Sun which is known as Savita. Knowledge pertaining to the supreme Brahman and the pure Consciousness is like the Savitri because it enlightens the spiritual aspirant and shows him the light of Truth.]

-----****-----

Kandika 2

1. Sage Maudgalya instructed his disciple—'Dear, go to sage Glav Maitreya and say "Oh Acharya (a teacher of the Vedas; a religious instructor)! Please teach me about 'Savitri-Gayatri'¹ having twenty four subtle centers and twelve nodal points, whose eyes are represented by 'Bhrigu-Angira'², and in which the entire creation rests or upon which the whole world is founded".' (1).

[Note—¹The *Gayatri* is particular style of composition of hymns, called a Chanda, of the Vedas. The first Mantra ever revealed by the creator Brahma to sage Vishwamitra was in this style and was dedicated to Savitra, the Sun God who is a manifestation of the Supreme Being with all his dazzling splendour vividly on display. This Mantra is extremely important because it is capable of bestowing immortality and liberation to its followers. Because of its great spiritual importance, the Mantra itself became synonymous with the Chanda, and the Savitri Mantra came to be known as Gayatri Mantra.

Savitri is literally the rays of the brilliant Sun as viewed in the middle of the day when it is at the peak of its glory, splendour and brilliance. The visual and the most dynamic aspect of Brahman, the supreme transcendental Being, is therefore Savitri, and the latter is conceptualised as a Mother Goddess. While Gayatri is associated with the beginning of creation represented by Brahma, Savitri is associated with the growth

and development of creation represented by Vishnu. Therefore, Gayatri is associated with the morning Sun and Savitri with the mid-day Sun.

²Bhrigu and Angiras were two renowned sages who were self and Brahm realised.

Sage *Bhrigu* is a well known sage and seer who appears in a number of Vedic and Purnaic works. His name 'Bhrigu' is derived from the root word 'Bhrij' or 'Bhraaj' which literally means to roast or burn, and therefore it could mean the sage, who was a fire sacrifice priest, had some mystical powers which allowed him to kindle the altar fire. According to mythological history, the patron God of lightening, Lord Maatarishwan, brought the celestial lightening down to earth and taught three priests the art of kindling the sacred altar fire using the Aranis ('the fire sticks' used to kindle fire by vigorous rubbing together). These three priests were the Bhrigu, the Angiras, and the Atharvan.

Sage Bhrigu has been described as the 'Manas Putra' of Brahma, the creator. [That is, Bhrigu was born as the son of Brahma because the latter wished in his mind and heart, the 'Mana', to have a son, a 'Putra', rather than the usual process by which a son is born, i.e. the physical process of procreation by intercourse.] He is also stated elsewhere as being the son of Indra (the king of Gods). The Taittiriya Upanishad of Krishna Yajur Veda tradition, in its Valli 3, Anuvak 1 describes him as 'Bhirgu Vaaruni', i.e. the son of Varun (the Water God). He was the father of Laxmi, the divine consort of Vishnu the sustainer and protector of creation. That is why Laxmi, the goddess of wealth and prosperity, is also known as Bhargavi, the daughter of Bhargava, or Bhrigu. In other births he is regarded as the father of Shukracharya, the moral preceptor of the Demons. He is also said to be the father of sages like Chavanya.

He was one of the ancient sages after whom a lineage was established—and his descendents assumed his name as their surname or title. It is 'Bhargava' or 'Bhrigu'. Some well known names of sages who followed him in this lineage are sages Jamdagni and Parashuram.

He once tested the Trinity Gods (Brahma, Vishnu and Shiva) and determined that Vishnu is the best amongst them and alone deserves worship. He is one of the four sages (the others being Marichi, Atri and Kashyap) who had elaborately described the Vakhanas Aagam followed by some Vaishnav sects (followers of Vishnu worship).

He performed severe austerity and penance at a place called Bhrigu Kaccha located on the banks of river Narmada where it merges with the Arabian Sea. It is situated in the Broach area of Gujrat state of western India.

He is credited with composing the tome of astrology and horoscopes known as 'Bhrigu Sanhita'. It is said to contain a data base of all possible horoscopes that can be created by considering all possible permutations and combinations of the nine planets and twelve zodiac signs.

The third chapter, called Valli no. 3, of the famous Taittiriya Upanishad of the Krishna Yajur Veda tradition is revealed by Varun to Bhrigu when the latter approached his father Varun to ask him the method by which Brahm can be realised.

Angira— A brief life-sketch of sage Angiras is given as a note no. 2 of verse no. 8, question (Canto) no. 2 of the Prashna Upanishad which is Chapter no. 1 of this volume.

Since the Gayatri Mantra is dedicated to the Sun God who is an embodiment of Fire, the reference is being made to these two sages Bhrigu and Angira because they worshipped the sacred fire. At the time of creation, the Sun God took up his residence in the eye of the body of the first creature. Since the sun is a crucible of celestial fire and these two sages worshipped the fire, they are honoured by saying that they are like the two eyes of this Gayatri knowledge.]

2. Sage Maudgalya's disciple went to the camp of sage Maitreya and asked this question of him, but the latter could not reply. Then the confident disciple politely rebuked him, saying, 'Oh Lord! You had called Maudgalya an Agyani (an ignorant), but you could not answer a single question he asked. Now you would have to bear its consequences; you would have to suffer for one year as punishment' (2).

3. Sage Maitreya summoned his disciples and instructed them—'All of you can go home now if you so wish. I had the temerity to call Maudgalya incompetent; I could not answer his one question. Now I shall go to him and appease him, ask for his forgiveness so that he feels calmed down and become pleased with me' (3).

4. He took some Samidha¹ in his hands and approached sage Maudgalya in the early hours of the morning with a sincere request for being taught the metaphysical knowledge which he lacked. He pleaded, 'Oh wise and learned teacher! I am Maitreya'.

Maudgalya asked, 'Say, why have you come?'

Maitreya replied humbly, 'I had called you incompetent. I could not answer the question you had asked me. Now I have presented myself to serve you and fully please you'. (4).

[Note—¹Samidha is a gift taken by the disciple as a token of respect for his teacher and to indicate to the latter that he is being approached with some sincere query in mind which the teacher, true to tradition, is bound to answer].

5. Maudgalya said, 'You had come here with ulterior motives (to prove me junior to you in knowledge, which shows that you are haughty). In spite of it, I shall give you a chariot of auspicious thoughts that would take you to your desired spiritual destination. [That is, I shall now preach you noble thoughts which would act as a vehicle that would take you to your destination.] Take it (or ride upon it)' (5).

6. Maitreya felt reassured and gladly submitted, 'Your auspicious words are most welcome and they have removed my grave fears. I shall obey your instructions diligently, and in full'.

He paid his due respects to Maudgalya in a proper way and went near him. Then he enquired, 'Oh wise and learned teacher! What is the quintessential and primary element of Savita (the Sun God as a manifestation of the Supreme Being) that is to be selected, revered and accepted by all spiritual aspirants? What is the Bharga of this deity (i.e. what is life infusing essence that gives this deity its importance)? How do experts in this branch of metaphysics describe its sublime authority, powers and potentials? How do they describe the element 'Dhi' in this Mantra (i.e. the hymn called the Gayatri)? How do this deity (Savita; the Sun God) inspire the elements and enter the realm of the heavens to move in it freely?' (6).

7. Maudgalya replied, 'The hymn of the Vedas called the Gayatri Chanda is the acceptable form of this deity. [That is, these hymns embody all the virtues and magnificent qualities represented by the celestial Sun. When one uses these hymns to worship the Lord, he is in close contact with the object of worship.]

Scholars and experts in this knowledge assert that food is its Bharga. [That is, the main importance of the Sun God for which he is worshipped and lauded in the Vedas is his quality of helping grow food on earth by way of regulating the seasons, rainfall and the cycle of day and night, by providing light, heat and energy etc. that

are absolutely essential for cultivation and growth of food which sustains all forms of life on earth.]

Karma (efforts and deeds) is the basic element called Dhi because it is the Karma that enables all success in life. It is Karma that enables this deity to keep on moving in this creation. [As is obvious here, even food requires an effort to be procured and eaten. Life would come to a standstill and a naught if there the creature did not make any effort.]’ (7).

8. Hearing this, Maitreya respectfully asked Maudgalya to elaborate further—‘Oh wise and learned teacher! Please tell me what is Savita and what is Savitri¹?’ (8).

[Note—¹An entire Upanishad called ‘Savitri Upanishad’ of the Sam Veda tradition is dedicated to this theme, and it is Chapter 13 of the second volume in this series.]

-----*****-----

Kandika 3

1. Sage Maudgalya preached—‘The Mana (mind) is the Savita, and the Vaani (speech; the spoken word) is the Savitri. [That is, it is the mind that inspires speech; it is the mind that makes the creature speak what he says.]

The Mana and the Vaani stay together; they cohabit. They are like a couple. [That is, one always speaks what the mind wants him to speak.]

One is the womb of the other. [The words to be spoken are conceived in the mind, and knowledge of words and language helps the mind to decide how to express itself.] (1).

[Note—In this Kandika, Savita is regarded as the universal Inspirer, while Savitri is the element that is inspired, the dynamic aspect of Savita. So for example, if the mind is the inspirer, the words spoken by the creature is the manifestation of the dynamic abilities of the mind, and hence it is the Savitri. The same logic can be extended to all the following verses.]

2. Agni (fire) is Savita, and Prithivi (earth) is Savitri. [It is the fire that is latently present in the bosom of earth that enables the latter to harbour life. If there was no heat and warmth on earth, there would be no life on it. Further, fire is an integral part of the cycle of food production, growth, its preparation for consumption and its digestion.]

Both Agni and Prithivi coexist; they stay together like couples. One is the womb of the other. [If earth is to foster life, it must invariably harbour fire in its bosom. The fire needs a base and crucible to survive, and the earth provides a vast reservoir for it. The proof lies in the fact that if the fire took up its residence in the sky it would be blown away by its arch enemy, the wind element. Since the basic virtues of fire to provide warmth, heat, energy and light as harbingers of life are most evident on earth, it is deemed to be its womb because life can exist only on earth and not in the far away planets or stars.] (2).

[Note—If Savita is regarded as the universal Inspirer called the fire element, then earth would be the Savitri because it represents the dynamism of fire on display. It is on earth that the fire burns ferociously, and not in the sky where it would be immediately blown away by the wind.]

3. Vayu (wind) is Savita, and Antariksha (the deep recesses of the sky) is the Savitri. [The air element pervaded throughout the sky; there is no corner of the sky where there is no air. The air element is not visible, but its visible manifestation is the sky.]

Both Vayu and Antariksha stay together; they cohabit; they are like couples. One is the womb of the other. [Wind is always generated in vacant space and not in solids. The sky and wind element are both inseparable from one another much like the fire and the earth elements.] (3).

[Note—If Savita is regarded as the universal Inspirer called the wind element, then sky would be the Savitri because it represents the dynamism of wind on display. It is in the space of the sky that fierce storms blow, thereby putting on display the power and punch of the wind element.]

4. Aditya (the celestial Sun) is the Savita, and the Duloka (the heavens) is the Savitri. [The Sun is the visible manifestation of the Supreme Being. The rays of the sun spread out in all the direction of the heavens where the Supreme Being symbolically has his abode. The illumination that the sun provides to the sky and the countless objects present in the latter, such as the moon, the planets and the stars etc. is a metaphoric way of saying that the Supreme Being is making his presence felt even in the remotest corners of the universe.]

The Aditya and Duloka coexist; they cannot be separated; they are like inseparable couples. [Obviously, one cannot ever imagine the presence of the Sun except in the sky.]

One is the womb of the other. [The sun rises, moves and sets in the bosom of the sky. Hence, the sky is its womb. Likewise, the sky is visible in the light of the sun; hence the latter is like the womb of the former.] (4).

[Note—If Savita is regarded as the universal Inspirer called the Sun, then the heaven would be the Savitri because it represents the dynamism of sun on display. It is in the vast recesses of the sky that all the planets, the moon and the stars shine to showcase the power and potentials of the sun to even light up the remotest corners of the universe.]

5. The Chandrama (the Moon) is Savita, and the Nakshatras (the stars) are the Savitri. Where there is the Chandrama there would be the Nakshatras. They cohabit; they are like couples; they invariably accompany each other. [The moon is always seen in the night, and the stars too are visible in the night sky. Since the presence of either of them indicated the night sky as opposed to the day sky, they are like inseparable couples.]

One is like the womb of the other. [When one sees the moon, one is certain to see the stars. On the other hand, the moon gets its glory because it is surrounded by lesser bright objects called the stars in the sky, for had it not been so the moon would also have been like one insignificant stars amongst the countless ones in the night sky. So, each gives importance to the other.] (5).

[Note—If Savita is regarded as the universal Inspirer called the Moon, then the stars would be the Savitri because they both complement each other in the field of astrology and astronomy. The position of the Moon in the astrological chart has great significance as it is believed to exert its influence on the other stars to determine the destiny of an individual.]

6. The Day is Savita, and the Night is Savitri. Where there is a day, there is bound to be a night. These two units of creation coexist; they are like inseparable couples who cannot be separated from one another. One is the womb of the other (6).

[Note—The sun shines in the day time, and it is a prelude for the night. The day and the night move continuously in an endless and seamless cycle. It is not possible at all to have a continuous day or night. The day is likened to the Savita because when the sun rises in the morning it wakes up the creature and inspires him to get involved in the daily grind of life. The night is the Savitri because only after a hard day's toil would a man find the importance and value of rest and sleep.

The sun rises from the dark bowls of the night, and hence the latter is like the womb which produces the new sun the next morning. It is the day that leads to the sun setting and the night emerging, so it is the creator of the night. Had there been no day and sun, there would have been an endless darkness of the night and the term 'night' itself would become irrelevant.]

7. Heat and warmth (Ushnaa) is like the Savita, and cold (Sheet) is like Savitri. Both coexist in this creation. Where there is heat and warmth, cold would not be far away, and vice versa. They are like couples who might look temporarily separate from one another but cannot be permanently separated. One is the harbinger of the other; one creates or leads to the other (7).

[Note—This observation is very evident in the cycle of seasons—we have the summer season followed by the winter season, and vice versa. The summer season is compared to the Savita because it is during this period the days are the longest and a man finds more time for his activities. The warm rainy season is when crops are grown and harvested. It is the time when the man is inspired to do all outdoor activities which would become difficult once frigid winter sets in. Hence, warmth and heat are symbolic of the Savita aspect of Nature. Since the cold days are bound to follow suit, these two aspects—heat and cold—are like couples. For a temporary phase they appear to be separated from one another because summer and winter cannot exist together, but they are bound by a thread of inseparability so much so that one is bound to follow the other religiously and seamlessly.

The efforts made during the warm time bears fruits that are enjoyed during the winter season, so the cold time is the revelation of the benefits of the summer season. Hence, the favourable environment created by the warmth and heat of the summer season produces results that are enjoyed when there is extreme cold and much of outdoor physical activity is not practically feasible.

There is another way of interpreting this verse. Heat is associated with anger and vengeance, while cold is linked with peace, calmness and tranquility. When one becomes angry it is said that he has done something in the heat of the moment. Warmth is the precondition for the body remaining active. So, the element of heat and warmth are the universal inspirer which motivate all actions. After every phase of anger there is the phase of remorse and cool; after every energetic activity there is the need to cool down, rest and recuperate. So, these two elements coexist and are inseparable from one another.]

8. The clouds are the Savita, and the rains are the Savitri. [The rain is created from the cloud. The cloud is therefore the inspirer, and the product of this inspiration is the rain.]

The cloud and rain go hand in hand; they cannot have separate existence; they are like a couple. One is the creator of the other (8).

[Note—There cannot be any rain without the cloud, and the cloud that has any relevance is the one which brings rain. Hence, they both complement each other; one would lose its significance in the absent of the other.]

9. The electric is the Savita, and its lightening is the Savitri. [The lightening is the dynamic principle of electric. It is the body of the electric that inspires the lightening

to shine and streak in a dazzling brilliance. Had there been no such thing as electric and had it not possessed such stupendous powers as it does, there would have been no lightening. The electric is not visible as such, but its presence is made evident by the lightening just like no one can see the wind but its presence is obvious during storms.]

Where there is electric there would be lightening; they coexist and cohabit. They cannot be separated from one another. One produces the other (9).

[Note—There cannot be any lightening without the presence of electric, and lightening shows indisputably and unequivocally that there is electric that has caused it. The electric is the inspirer and the lightening is the result of this inspiration; lightening is the dynamism and energy of electric on visible display.]

10. The Pran (life infusing forces of Nature) is the Savita, and the food is the Savitri. [Only living beings need food, so Pran is the universal inspirer that motivates the creature to search for food, to grow it, to cook it and to eat it. The food that is grown, collected, cooked and eaten is the result of dynamism shown by Pran. If no effort is made, there would be no agriculture and no crops.]

Where there is food, there is Pran (life). They coexist and cannot be separated. They are like a couple. One is like the womb (creator) of the other (10).

[Note—When a living being wishes to live, he must have food, and therefore he makes effort to grow it and procure it. All life on earth rests on food; so food is the creator and sustainer of life. Food is needed by living beings only and it is grown by them only. At the same time, the food has any value and relevance for the living being because it can sustain life; if the food does not show this unique ability to support life, no one would pay any heed to it. For instance, any food that is harmful for health is abhorred by all, whereas people fight for food that would help them live in this world.]

11. The Vedas are the Savita, and the Chandas (the poetical style of their composition) are like the Savitri. [The Vedas are the body of knowledge which symbolize the Supreme Being, but this body is revealed in the form of the Chandas, because it is the hymns composed in the various styles in which the Vedas have been revealed or have come into existence that make the text of these Vedas accessible and comprehensible for the human being. Had there been no Chandas, the Vedas would have remained unknown, or so abstract and mysterious that no living being would have been able to either learn them or teach them to others. In essence, the Chandas are the medium which have been singularly responsible in the revelation of the sacred knowledge that has been encapsulated in the verses of the Vedas that use the Chandas for this purpose. So, the Supreme Being inspired great sages and seers to reveal the magnificent secrets about him in the form of hymns composed in various styles called the Chandas. The Chandas are, in other words, instruments for the manifestation of the dynamism and the mystical knowledge enshrined in the Vedas. The Mantras of the Vedas, or their hymns, which are given shape in different styles of poetry known as the Chanda, have great mystical powers which would have remained useless and untapped if there were no words weaved in the form of different narrative styles, the Chandas, to reveal them for the benefit of human kind.]

Where there is the Veda, the Chanda must always be present (because for the simple reason that the Vedas were composed in the Chandas). They coexist; they cannot be separated from one another. One gives rise to the other (11).

[Note—In order to read, learn and understand the Vedas, and use their hymns in practice, it is most important to have a perfect knowledge of the Chandas and their intricate nature. In ancient times, the only scripture studied and taught were the

Vedas. So it was assumed that if a man was an expert in the Chandas he must also have studied the Vedas. If one was chanting any hymn, then it surely must be from the Vedas. Hence, they coexist.]

12. The Yagya (fire sacrifice or any other religious ceremony) is the Savita, and the Dakshina (donations given during such rites) is the Savitri. [When one did a fire sacrifice, he was inspired to make charities. He not only paid the fee to the priests but made general donations and set aside funds for noble causes such as feeding the poor, constructing shelters, gardens and digging wells for drinking water etc., besides giving liberal alms to the poor which he would not otherwise have normally done. So the Yagya is the inspirer that propels him to do noble deeds. The success of the Yagya and the fame it gave to the patron depended upon the Dakshina that were given during such rituals.]

They live together and cannot be separated. If there is a Yagya, the Dakshina must accompany it (because without making charities the fire sacrifice and other forms of religious deeds were deemed to be futile and they did not yield any desired result.)

One was the creator of the other (12).’

[Note—If one desired to benefit from any religious deed such as the fire sacrifice or any other form of ritual collectively called Yagya, he was ordained to make charities. Similarly, if the word spread that a particular person is making huge donations, it was deemed that he is performing some great sacrifice. In fact and in practical terms, making charities in itself is like performing some great fire sacrifice because parting with wealth is not an easy thing to do under normal circumstances.]

13. At the end of this discourse, Galva Maitreya said to Maudgalya—‘Oh great teacher! I have been greatly obliged by you; I feel very grateful to you and sincerely thank you. I am a Brahmchari (a student disciple), and I am presenting myself before you to serve you. This Brahmchari (i.e. me) have become fulfilled and satisfied with the knowledge I was seeking’.

Saying this, Maitreya got up and strolled around in an exuberant mood. He had discovered a great truth of metaphysics, and exulted in this new-found wisdom—‘Ah! Now I have come to realise that this Brahmchari (i.e. myself) who has become acquainted with these great inspirers and their dynamic principles (as described in the foregoing verses) would not have a short lifespan. He (i.e. I) would live a long and fruitful life (marked by true knowledge that would lead to his, i.e. my, ultimate emancipation and salvation)’ (13).

-----*****-----

Kandika 4

1. Sage Maudgalya said to Maitreya—‘The universal divinity known as Brahm has manifested itself as the ‘Sri’ (the virtues of majesty, glory, splendour, grandeur and magnificence) of creation. Brahm is the foundation and support of this creation; the entire edifice of creation rests upon Brahm and owes its existence to the latter. Brahm is the shelter and succour for this creation.

In order to access this divine entity, it is imperative to do Tapa (austerity, penance, sufferance and rigid self control). So, I advise you to do Tapa because if one accepts the vows of Tapa, he is established in the Truth. [That is, if one exercises the greatest of self control, if one diligently follows the rules of conduct as laid down in

the scriptures, if one strives to cleanse himself of all worldly taints that scar his pure self, if one gets rid of delusions and acquires true knowledge, one is surely able to see or get acquainted with the Absolute Truth known as Brahm.] (1).

2. That holy Being known as Savita created the Brahmin (those who are well-versed in the knowledge of Brahm) with his association with Savitri. [Here, the creator Brahma is referred to as Savita, and his dynamic knowledge has been personified as the divine female counterpart Savitri. The off spring is the Brahmin, the learned one. Therefore, the Brahmin has the gene of Brahma in him, and it is the gene of knowledge that is exclusive and refined.]

The creator gave this Brahmin the Mantra of Savitri. Hence, the word ‘Tattsa-viturvarenayam’ is the first phase or stanza of the divine Mantra known as Savitri Mantra. [In other words, Brahma told his off spring about his noble lineage. He told the Brahmin that he is born from Savitri, his symbolic divine Mother who represents the divine knowledge that the creator possessed, and which was subsequently divulged by him. In other words, the Brahmin is a personified form of Savitri, and as a dutiful son he must protect the dignity of this divine Mother at all costs. By initiating him with this Mantra the creator baptized him, and infused in him the Spirit of divinity that would not only be his identity but would also offer protection to him against evils. Thus, ‘knowledge and its teaching’ was the forte of true Brahmins.] (2).

3. The divine Being known as Savita blessed the earth with ‘Rik’. [The word Rik means worldly assets. Here it refers to the creation of the first Veda called the Rik or Rig Veda. This sentence means that the supreme creator impregnated the earth with all sorts of natural wealth and minerals; he empowered the earth with the primary body of knowledge to enable the earth to create and sustain its own life and ecosystem. He made the earth self-sustaining and self-reliant. Everything that was needed for life to thrive was liberally given to earth. The creator ensured that the creatures that would come to live on this earth would be well-provided for.]

From this Rik evolved (was created) Agni (the fire). [That is, after blessing the earth with its endless supply of material wealth, the creator injected the element of fire in it. He did it because all the wealth would have been useless had there been no life on earth. And fire is an important pre-requisite for life to survive anywhere.]

From Agni evolved the ‘Sri’. [The fire was symbolised by the great fire sacrifices. With warmth and heat, life began to appear and thrive on this earth in all its multifarious forms. The glory, power, magnificence and grandeur of the creator began to reveal themselves in the form of these myriad varieties of colourful life forms, which are collectively called Sri here.]

From the Sri evolved the woman. [In other words, the dynamism of the Supreme Being as revealed in this world was personified in the body of the woman. There is a very interesting message here—since this creation with all its magnificent charms and exciting allurements is a delusory mirage created by the creator, it follows that the woman who personifies this aspect of creation also presents a charm that is equally delusory and entrapping. A man who gets entangled with this world can never hope to find emancipation and salvation, and this would also apply to his involvement with the woman.]

From the woman evolved the couple or the need to form a union. [The enticements of the colourful world attracted the creature towards themselves. The creature got hooked to them. This created a chain of desires and a never-ending list of unsatisfied goals. The lust for a woman is similar in nature; it is rarely satisfied.]

This union or conjunction created the off spring. [The numerous attractions of the world first made the creature desire for one thing, but this first step set off a chain reaction. More was needed and new desires were created. The man was not satisfied with the products of Nature, and he started to create things artificially to satisfy his hunger for more. We have artificial man-made food, countless objects of daily use, numerous artificial man-made attractions which we find more alluring as compared to the products offered by Mother Nature.]

From this off spring evolved or arose the cycle of Karma and Tapa (hard effort and labour). [In order to fulfill one's desires, one needed to make an effort, and this involved hard toil and personal sacrifices.]

From the Tapa evolved the Satya or the awareness of the Truth. [When the creature could not find peace even after hard labour, he wandered why it was so. So, this led to the realisation of the 'truth' in him. He realised that peace and happiness do not come with this world, so what is the great idea in pursuing it relentlessly. Instead, he must search the means of permanent and real peace. So begins this journey inwards, towards his truthful inner 'self'.]

From this Truth arose Brahm, i.e. the knowledge of the ultimate Absolute Truth (which is his own Atma or pure conscious self, and which Truth is narrated in the Vedas). [When a man meditated upon his 'self', he realised what true peace and bliss was. This made him self-realised and enlightened. He came to know the Absolute Truth about his own self as well as the rest of this world. This made him 'Brahm realised' too; the awareness of Brahm rose within his inner being. In other words, being 'self-realised' and being 'Brahm-realised' were the two sides of the same coin.]

The knowledge of the Truth was personified as the Brahmin. Since this knowledge requires the greatest of self-restraint over the sense organs and being constantly wary of falsehood and delusions, it was associated and synonymous with 'Vrat'—i.e. observing strict vows of auspicious thoughts and be ever vigilant against evil ones.

Hence, it is the rigorous practice of strict Vrat, i.e. it is by steadily following the rules and tenets of an auspicious and righteous way of life that a Brahmin acquires glory and majestic powers. It is this eclectic virtue that gives a Brahmin his exalted position in society. It is this virtue that makes him feel fulfilled and accomplished. It is an inalienable part of the character of a true Brahmin (3).

4. An expert who understands and accepts the esoteric meaning of this first step of the divine Savitri Mantra as narrated in this Kandika, and preaches it to others, his family tradition remains uninterrupted and continues uniformly for a long time, and he himself remains steady and uniformly exalted. [That is, his family and its members gain a steady reputation of being wise and learned, and he himself remains immune to delusions created by so many paths and philosophies created out of ignorance of the ultimate Truth of Brahm. He is so steady in his knowledge that nothing bothers him, and his own reputation as an expert in the essence of the Vedas spreads far and wide.] (4).

-----*****-----

Kandika 5

1. The second step of Savitri Mantra is 'Bhargo Devasya Dhimahi'.

The divine Lord named Savita (i.e. the creator Brahma) established a union between the Antariksha (the sky and its vast space beyond the upper atmosphere of the earth) and Yaju. [The word 'Yaju' refers to the second Veda called the Yajur Veda. This Veda principally consists of rites. The offerings made by saying the hymns of the Yajur Veda were intended for the Gods who are supposed to inhabit the Antariksha. These Gods are junior in the hierarchy of Gods.]

The Yaju was closely associated with Vayu (the wind). The latter had close association with the clouds; the clouds with the rain; the rain with the herbs and other plants; the herbs and plants with the animals; the animals with Karma or efforts; Karma with Tapa (hard toil and labour); Tapa with Satya (truth); Satya with Brahm or the knowledge of the Absolute Truth; this knowledge is closely related with the Brahmin (i.e. the Brahmin is supposed to know the reality of Brahm); and the exalted Brahmin has a close association with the strict codes of moral conduct and religious way of auspicious life, collectively called the religious 'Vrats' (or religious duties and obligations). [The fire sacrifice was usually done to please the Gods in ancient societies that were predominantly agrarian as they totally depended upon the mercy of the forces of Nature for their survival because these forces affected agriculture, forestry and animal husbandry. These Gods were personified forms of the various forces of Nature. The fire sacrifice needed the use of hymns to do various rituals. The hymns that were used belonged to the Yajur Veda as this Veda was especially dedicated to the conduct of the fire sacrifice. The forces of Nature, when benevolent and helpful, produced adequate rainfall and well regulated seasons, which in turn meant all-round well-being and happiness for the people. This was interpreted as the fire sacrifice being successful and the Gods pleased. It so happened that the Brahmins were the only class of people who were expert in this field just like we have generations of people working as 'Smiths' who are regarded as being naturally gifted in the skills pertaining to their trade, be it as goldsmiths or as ironsmiths.]

It is the strict practice of these Vrats, i.e. it is the strict adherence to a life of auspiciousness and righteousness that makes a Brahmin so honourable and revered. It fulfills him and it bestows him with steady fame and honour (1).

2. An expert who understands and accepts the esoteric meaning of this second step of the divine Savitri Mantra as narrated in this Kandika, and preaches it to others, his family tradition remains uninterrupted and continues uniformly for a long time, and he himself remains steady and uniformly exalted. [That is, his family and its members gain a steady reputation of being wise and learned, and he himself remains immune to delusions created by so many paths and philosophies created out of ignorance of the ultimate Truth of Brahm. He is so steady in his knowledge that nothing bothers him, and his own reputation as an expert in the essence of the Vedas spreads far and wide.] (2).

-----*****-----

Kandika 6

1. The third step of Savitri Mantra is 'Dhiyo Yo Naha Prachodayaat'.

The divine Lord named Savita (i.e. the creator Brahma) established a union between the Duloka (the heavens) and Sam. [The word 'Sam' refers to the third Veda called the Sam Veda. This Veda principally consists of musical hymns that require special skills to recite. These hymns are meant to please the superior God who lives in

the heaven. Since Brahm, the Supreme Being, is the Emperor of all the Gods, these hymns are primarily aimed to honour him. Since only the best can be offered to the Emperor, these hymns are considered as the best form of tribute offered to the Lord. They are sung most melodiously and in an enchanting manner because they are meant for the Lord of the world.]

The Sam was closely associated with Aditya (the Sun God because the latter is a visible manifestation of Brahm and the Viraat Purush, the invisible and all-encompassing macrocosmic gross body of Brahm). The latter had close association with the brilliant rays of the sun. [In other words, the rays of the sun symbolically spread the magnificent glory of Brahm in every corner of creation by illuminating them and removing darkness.]

The rays were closely related with rains. [As is clearly known now, the rains depend upon the heat of the sun which evaporates water from the oceans and transforms it into rain. The heat of the sun is transmitted by the medium of the rays.]

The rain is very closely related with vegetation and herbs; the latter with the animals; the animals with Karma or efforts; Karma with Tapa (hard toil and labour); Tapa with Satya (truth); Satya with Brahm or the knowledge of the Absolute Truth; this knowledge is closely associated with the Brahmin (i.e. the Brahmin is supposed to know the reality of Brahm); and the Brahmin is closely related with the strict codes of moral conduct and religious way of auspicious life, collectively called keeping of the religious Vrats.

It is the strict practice of these auspicious Vrats, i.e. it is the strict adherence to a life of auspiciousness and righteousness that makes a Brahmin so honourable and revered. It fulfills him and it bestows him with steady fame and honour (1).

2. An expert who understands and accepts the esoteric meaning of this third step of the divine Savitri Mantra as narrated in this Kandika, and preaches it to others, his family tradition remains uninterrupted and continues uniformly for a long time, and he himself remains steady and uniformly exalted. [That is, his family and its members gain a steady reputation of being wise and learned, and he himself remains immune to delusions created by so many paths and philosophies created out of ignorance of the ultimate Truth of Brahm. He is so steady in his knowledge that nothing bothers him, and his own reputation as an expert in the essence of the Vedas spreads far and wide.] (2).

[Note—The Gayatri Mantra has been expounded and elucidated upon in Brihad Aranyak Upanishad, Canto 5, Brahman 14, as well as in other Upanishads, such as the Savitri Upanishad which is entirely dedicated to it, the Maitrayanyu Upanishad, Canto 5, verse no. 7, the Chandogya Upanishad, Canto 3, Section 12, verse nos. 1-9 belonging to the Sam Veda tradition, and Narsingh Tapini Upanishad of the Atharva Veda tradition, in its verse nos. 5-9.

The full Mantra is OM BHURBHUVAHA SVAHA¹, TSAVIURVARENYAM², BHARGO DEVASYA DHIMAH³, DHIYO YO NAH PRACODAYAT⁴. It means 'OM is the supreme, transcendental Brahm. He is the lord of creation of the terrestrial, the celestial and heavenly worlds. I offer my oblations to you. That Brahm is luminous like the sun. He is excellent, the best, the most exalted, a destroyer of sins, and a divine entity. May he imbibe, infuse and inspire our intellect with wisdom and enlightenment so that we are purified and move on the righteous and noble path'. The four phrases of the Gayatri Mantra are clearly marked by small numerals in this Mantra. This Mantra appears in the Rig Veda (3/62/10), the Sam Veda (1462), and Yajur Veda (3/35, 22/9, 30/2, 36/6).]

-----*****-----

Kandika 7

1. Only an expert and competent Brahmin is eligible to accept this divine and esoteric knowledge that is supreme in essence and form. It is only a competent Brahmin who can access it, accept it, implement it and experience its effect and truthfulness (1).

2. The Brahm is closely associated with the Akash or sky. Brahm fills the sky and pervades in every corner of it. [In other words, the sky is the closest analogue of Brahm. The sky showcases some of the grandest virtues of Brahm—such as it being eternal, steady, endless, infinite, fathomless, measureless, indescribable, indefinable, immutable, indivisible, all-encompassing, all-pervading, immaculate and untainted inspite of harbouring countless heavenly bodies, essentially invisible but becoming visible for the benefit of the world, and so on and so forth.]

The sky is closely associated with the air element; the sky accepts the air and it is filled with air; the sky is impregnated with air.

The air is closely associated with Jyoti or light; the air accepts light and illumination and is filled with it. [This fact is evident during thunderstorms. The clouds move due to strong air currents, and it is during great storms that lightening strikes. Its thunder rumbles and echoes far and wide, and its sound is carried to distant places by the wind blowing in that direction. It is a well known fact that sound travels through the medium of the air in the form of waves.]

The lightening is closely associated with rain. When one accepts lightening, one would also accept rains. The rain is pregnant with lightening; the lightening is harbinger of rain. [Only a dark rain-bearing cloud would show streaks of lightening. So lightening and rain are closely related with each other. When there is lightening, rain is always there; both accompany each other. A thick rain-bearing bank of cloud harbours lightening in its body. One cannot exclude lightening when there are heavy rains, and vice-versa.]

The water of the rain is closely associated with the earth. The earth receives the water of the rain, it provides the water for the formation of rain, and the earth itself is surrounded and submerged in an ocean of water. The earth's existence depends upon water and rain.

The earth is closely associated with food. The food covers the surface of earth; it is grown on earth and it perishes on earth. [The term 'food' is not restricted to plants and vegetables only but also to animals. Each specie of animal is the food for the higher specie. The verse refers to the food chain which spreads across the globe.]

The food is closely associated with Pran, the vital factors that sustain all forms of life on this earth. Pran is fully dependent upon food; the food virtually eclipses Pran and controls its existence. [There would be no life without food.]

The Pran is closely associated with the Mana (the thinking mind and emotional aspect of the heart of a creature). The Mana derives its strength and energy from the Pran; it owes its existence on the Pran. [This is because only as long as there is life in the body would a creature think and have emotions. A dead body has no thoughts or emotions.]

The Mana is closely associated with Vaani or speech. The Mana controls the Vaani fully. Whatever a creature speaks is a manifestation of his Mana—i.e. it shows what he thinks and what his emotions are.

Vaani is closely associated with the Vedas. It is the faculty of speech that enables a man to recite the hymns of the Vedas, teach them and learn about them. The Vedas were traditionally transmitted by the oral method, necessitating the need of perfection in speech and highlighting its significance. [The Vedas would have remained unknown had it not been for the faculty of speech. Further, the faculty of speech would have lost its importance if it was used only for the pursuit of the world devoid of any spiritual content.]

The Vedas are closely associated with the Yagya or the fire sacrifices. No fire sacrifice could be done without the invocation of the Vedas and their hymns.

A wise and learned person who understands this secret is blessed with the presence of the twelve Mahabhuts¹ in his own self. He becomes an expert in the performance of the fire sacrifices. [Since the great elements of creation called the Mahabhuts are established in him, i.e. he becomes self-realised and understands that his own body is a microcosm of the entire creation with his own Atma being a personification of the supreme Brahm, he is deemed to be doing the fire sacrifice even while meditating upon his 'self' inspite of the fact that he is not doing any external ritual of the physical form of the fire sacrifice. This fact is affirmed in Pran Agnihotra Upanishad of the Krishna Yajur Veda tradition.] (2).

[Note—¹The twelve Maha Bhuts have been listed in this Kandika. They are the following—Brahm, Akash (sky), Vayu (air or wind), Jyoti (light), Aapo (water), Bhumi (earth), Anna (food), Pran (life or the vital winds that sustain life), Mana (mind), Vani (speech), Vedas, Yagya (fire sacrifice) = 12.]

-----*****-----

Kandika 8

1. Those who think that they are experts in performance of formal rituals associated with fire sacrifices are actually ignorant ones. [This is because they are mechanical in carrying out their duties and do it as means of earning money. They have no idea of the philosophy behind these fire sacrifices nor do they know the hidden meaning of the hymns they so enthusiastically recite.]

The fire sacrifice (Yagya) is established and gets its empowerment and authority from the Vedas. The Vedas are established in and dependent upon the Vaani or speech (because they have to be incanted or recited properly during the fire sacrifice to make the latter bear fruits).

The speech is established in and dependent upon the Mana or the mind. [It is the mind that inspires and enables the man to recite the hymns of the Vedas. These Vedas are to be known by heart and this directly involves the faculty of memory in the mind. The heart is closely linked with the process because it makes the man completely involved in the process of recitation; the renderings become soulful and beseeching if the heart coordinates with the mind. If the mind is disturbed, it obviously would affect the recitation of the Vedas.]

The Mana is established in and dependent upon the Pran or the vital life forces and consciousness present inside the body. [To sing or chant the hymns of the Vedas, one needs energy and strength which is provided by the vital winds called Pran present in the body.]

Pran is established in and dependent upon the Anna or food eaten by the man. [This is very clear. If one has not eaten for a prolonged time, one would feel so weak and low in energy that not only would he not be able to recite the hymns loudly but

would even have difficulty in recalling the verses in the first instance. He would stumble over the words and speak in an incoherent manner. The importance of food in this particular context has been beautifully explained in Chandogya Upanishad of the Sam Veda tradition, in its Canto 6, section 7.]

Anna or food is established in and dependent upon the Bhumi or earth. It is on earth that food is grown.

The Bhumi or earth is established in and dependent upon the Aapo or water. [The earth is filled with water in the form of the ocean. Nearly three-fourth of the area of the earth consists of the ocean. The land mass seems to be virtually floating on this ocean. The life on earth is sustained by water, and the food is also dependent upon water. If there is no water, if there is a drought, there is famine.]

The importance of Aapo or water lies in the presence of the Tej or fire. Water is dependent upon fire for its powers to be manifested. [It is the heat of the sun and the latent fire present in the earth that helps in the evaporation of water that ultimately forms the rain. This rain helps water to reach the areas of the earth where the rivers and the ocean have no reach. Further, fire is needed to keep the earth warm, and only warm water can be conducive to harboring life in its vibrant forms. This is proved by the fact that those areas of the earth which are covered by ice have no forests and animal life. Water is dependent upon the mercy of the fire, for should the fire so wish it can very easily evaporate the entire treasure of water on earth and the latter would parch dry to death.]

The fire or Tej is established in or dependent upon Vayu or air. [Air is both a friend of the fire as well as its enemy. To light a fire, air is needed to be blown into the fire pit. But this air can also blow out the lighted fire should it wish to do so. The fire needs a constant company of fresh air to remain lighted. If the air is removed, the fire would be immediately extinguished.]

The Vayu or air is established or present in the Akash or sky; the air is dependent on the sky for its existence. [Air is invariably present in the open space of the sky, and both are usually treated as having almost the same characteristic features—such as the quality of being formless, omnipresent, all-pervading, all-encompassing, infinite, eternal, fathomless, measureless, colourless, taintless, free from all corruptions, pure and immaculate etc. Wherever there is the sky, the air is deemed to be present, and vice versa. Air cannot dwell in solids, it can only live in the open space represented by the sky, and therefore the sky is a pre-requisite for the survival of the air.]

The Akash or sky is established in or dependent upon Brahm for its existence. [The sky is infinite itself, but there must be something or some entity which harbours this sky. Even as all the units of creation need some kind medium to support them, the sky too needed it. The sky harbours everything that exists in this creation, but it needs some medium for its own base; it cannot exist in total void, it cannot hang in a vacuum, it must have some foundation of its own. This foundation or resting place of the sky is Brahm. In other words, this Brahm must be larger than the sky to accommodate the latter. So, Brahm encloses the sky from all sides; Brahm is like the moat around the fort. There is nothing outside Brahm. This fact of Brahm enclosing the entire creation from all sides has been explicitly affirmed and explained in the *Shwetashwatar Upanishad* of the Krishna Yajur Veda tradition, in its Canto 3, verse no. 7, 9, and Canto 6, verse nos. 2, 9. In fact, the sky was the first of the five Bhuts or the primary elements created by Brahm in the beginning of creation, the others being air, fire, water and earth in decreasing order of subtlety and increasing order of grossness. Everything in creation was created by Brahm, and this product cannot

supersede the creator. The glories of Brahm as the highest citadel of authority in creation and as the Lord of all that exists have been elaborately explained in the *Shwetashwatar Upanishad*.]

Brahm is established in a Brahmin. That is, Brahm finds his glory and divinity manifested in the form of a learned, self-realised, erudite, enlightened and wise person known as a Brahmin. [That is, a true Brahmin is a representative of Brahm and is an embodiment of the virtues that Brahm stands for. The Brahmin is an embodiment of the divine and eclectic knowledge that pertains to Brahm, he exemplifies the glories and authority of Brahm—i.e. he is a Brahm-realised person. If he does not fulfill this criterion, he is not fit to be called a Brahmin. The qualities of a Brahmin that determine who a true Brahmin is have been enumerated in the *Vajrashuchika Upanishad* of the Sam Veda tradition, as well as in the *Dhyan Bindu Upanishad*, verse no. 14 of Krishna Yajur Veda.]

In this way, a wise and learned person who knows the essence of these twelve Mahabhuts¹ attains great fame and honour, achieves the reward of being auspicious, and obtains success in his spiritual pursuit. He attains an exalted stature in this life which is no less than that lived by the Gods in heaven. He is freed from all sins and their evil effects, and consequentially achieves immense honour and acclaim (1).

[Note--¹According to this Kandika, the twelve Mahabhuts or units of creation are the following—Veda, Vani (speech), Mana (mind), Pran (life; vital winds), Anna (food), Bhumi (earth), Aapo (water), Tej (fire), Vayu (air or wind), Akash (sky), Brahm (the Supreme Being), Brahmin = 12.]

-----*****-----

Anthology of all the Principal Upanishads of the Atharva Veda

Preface

‘Come! Step forward and move ahead of those who are standing with you. Come! Try and attempt to reach those who have moved ahead of you, have excelled you’. (Atharva Veda, 2/11/4).

‘Peace be on earth; peace be in the sky; peace be in the heaven; peace be in the waters; peace be upon the plants; peace be upon the trees. May all the Gods grant me peace. May peace be generated by these all-encompassing invocations. I humbly pray to all that is evil, all that is terrible, all that is cruel, to be peaceful, and grant us tranquility’. (Atharva Veda, 19/9/14).

‘Vedanta (Upanishad) teaches the basic philosophy of all religions; this philosophy is no monopoly of any particular religion. This is why Vedanta will become the universal religion; convert it into universal treasure. Vedanta must not remain as the closed preserve of a group of narrow-minded people.’ (Swami Vivekanand, complete works, 2/109).

‘That which we have seen and heard declare we unto you, that ye also may have fellowship with us: and truly our fellowship is with the Father. And these things write we unto you, that your joy may be full. This then is the message which we have heard of him, and declare unto you, that God is light, and in him is no darkness at all’ (The Holy Bible, New Testament, 1John 1/3-5).

‘Now therefore, if you will indeed obey My voice and keep my covenant, then you shall be a special treasure to Me above all people, for all the earth is mine’ (the Book of Exodus, 19/5, the Old Testament, Holy Bible); then ‘I will certainly be with you’ (the Book of Exodus, 3/12, the Old Testament, Holy Bible).

‘This is the scripture whereof there is no doubt, a guidance unto those who ward off (evil); Who believeth in the unseen, and establish worship, and spend of that We have bestowed upon them; These depend on guidance from their Lord. These are the successful.’ (The Holy Quran, Surah ii, verse nos. 2-5). ‘And believe in that which I reveal---and part not with my revelations for a trifling price, and keep your duty unto Me; Confound not the Truth with falsehood, not knowingly conceal the Truth’ (the Holy Quran, Surah ii, verse nos. 21-42). ‘Read: And thy Lord is the most bounteous; Who teacheth by the pen; Teacheth man that which he knew not’ (the Holy Quran, Surah xcvi, verse nos. 3-5). O Lord! In thee we put our trust, and unto thee we turn in repentance, and unto thee is the journeying (destination) (the Holy Quran, Surah lx, verse no. 4).

‘Truth only succeeds, not the falsehood’ (Mundaka Upanishad, 3/1/16).

The present volume contains all the thirty one **Upanishads of the Atharva Veda**. The sequence in which they appear in this volume follows the true Vedic tradition as laid down by one of the major Upanishads, viz. the ‘Muktikopanishad’, in its Canto 1, verse no. 57. It says—

_____प्रश्नमुण्डकमाण्डूक्याथर्वशिरोऽथर्बशिखाबृहज्जाबालनृसिंहतापनीनारदपरिव्राजकसीता_
 शरभमहानारायणरामरहस्यरामतापनीशाडिल्यपरमहंसपरिव्राजकान्नपूर्णसूर्यात्मपाशुपतपरब्रह्म_
 त्रिपुरातपनदेवीभावनाब्रह्मजाबालगणपतिमहावाक्यगोपालतपनकृष्णहयग्रीवदत्तात्रेयगारुडानामथर्ववे—
 दगतानामेकत्रिंशत्संख्याकानामुपनिषदां_भद्रं_कर्णेभिरिति_शान्तिः_॥५७॥

‘There are there are thirty one Upanishads in the Atharva Veda as follows—(1) Prashna, (2) Mundak, (3) Mandukya, (4) Atharvashiras, (5) Atharva-shikha, (6) Brihajjabal, (7) Nrisinghtapini, (8) Narad-parivrajak, (9) Sita, (10) Sharabh, (11) Tripadvibhuti-mahanarayan, (12) Ramrahsya, (13) Ramtapini, (14)Shandilya, (15) Paramhansa-parivrajak, (16) Annapurna, (17) Surya, (18) Atma, (19) Pashupat, (20) Par-Brahm, (21) Tripura-tapini, (22) Devi, (23) Bhavana, (24) Bhasma-jabal, (25) Ganapati, (26) Mahavakya, (27) Gopal-tapini, (28) Krishna, (29) Haigriv,(30) Dattatreya and (31) Garud’.

The Upanishads speak about the absolute spiritual ‘truth’ irrespective of the Vedas to which they belong, or who the Rishi (sage or seer) was who taught them. Their language and conceptual style may vary from one to another due to various reasons, such as the different Rishis who explained them or the period of time when they were pronounced, but since they are speaking about the universal ‘truth’ which is always the same and immutable, their essence is invariably the same.

This volume is the fifth and the last one in the pentamorous series consisting of five volumes, with several parts to a volume, of all the 108 Upanishads arranged and presented for the reader in true Vedic tradition.

The Upanishads are the perennial philosophy of life and its truth, and they endeavour to teach the spiritual seeker the way to access this eclectic truth, to realise who he actually is, and find eternal peace, happiness, contentedness and bliss for himself by reaching his goal of spiritual liberation and deliverance once and for all. The amazing aspect of the Upanishads is that though they talk and preach about the same subject they appear fresh every time one reads them, and their philosophy is as applicable now as they were when they were first conceptualized. Each reading provides a newer insight to the secrets of life and the way to unravel them.

Now let us have a very brief pre-view of each of the Upanishads that appear in the Atharva Veda.

To introduce this volume, I’ve selected the **Gayatri Upanishad** appearing in the Atharva Veda’s Gopath Brahman. Gayatri is regarded as the crown jewel of all Mantras, and it an apt prayer to start the mystical journey of the Upanishads belonging to this Veda. This Upanishad is included as the ‘introductory benediction’ in the very beginning of this book.

Chapter 1--Prashna Upanishad—This Upanishad is the Brahman of the Pippalaad branch of the Atharva Veda. It describes the six answers given by sage Pippalaad to queries raised by six other sages. First, Kabandhi enquired about Pran (the consciousness that infuses life and mobility in creation) and Rayi (the entity in which the Pran resides and which gives effect to the dynamism of Pran; the Prakriti or

Nature). The second question was asked by Bhargava pertaining to the chief life supporting factor in creation, the factor which forms the foundation and basis of life in this world. The third question was asked by Kausalya, the son of Ashwal; it was in six parts and related to the origin of Pran. The fourth query was raised by Gargya and it was in the form of five questions pertaining to the relationship between Parmatma (the Supreme Being) and the Jivatma (the living being). In the fifth question, Satyakam wished to know about the worship of OM, the divine symbol of Brahm. And finally, the sixth question was asked by Sukeshaa in which the latter wished to know about the 16 Kalaas or aspects of the Purush, the cosmic Male.

Chapter 2—Mundak Upanishad—This Upanishad belongs to the Shaunak branch of Atharva Veda. It has three Cantos called ‘Mundaks’, and each Mundak has two sections. The word Mundak refers to shaving of the head, implying shedding of all ignorance and its attendant delusions from the Mana (thinking mind and emotional heart), and instead filling it with truthful knowledge of the Reality. It has been taught by sage Angira to sage Shaunak.

The first Mundak is related to the Paraa and Aparaa Vidya—the former being the knowledge pertaining to the supreme transcendental Brahm which is the ultimate and absolute Truth of creation, and the latter refers to that body of knowledge that is known and which can enlighten the aspirant about the Paraa Vidya which is the knowledge of the transcendental Brahm. In this second category come the four Vedas—the Rik, the Sam, the Yajur and the Atharva, and the fire sacrifices.

The second Mundak compares the creation of the multi-dimensional world from Brahm with sparklers springing out from a burning fire. It also describes the world’s end just like these sparklers dying off. It cites the analogy of the bow and arrow to describe how an aspirant can use the medium of OM, the bow, and his Atma, the arrow, to attain the knowledge of Brahm. The glorious virtues of Brahm and the importance of attaining the latter are also discussed.

The third Mundak compares the body as the tree on which two birds representing the Parmatma (the Supreme Being) and the Jivatma (the living being) are sitting. It goes on to stress that knowledge of Brahm, or the knowledge of the Absolute Truth is possible only when the inner-self of the aspirant is pure and cleansed of all evil thoughts and other worldly contaminants that act as millstones around the Atma. It concludes by enumerating the immense spiritual rewards obtained by diligently and honestly pursuing Brahm Vidya, the eternal and blissful knowledge of the truthful Brahm.

Chapter 3—Mandukya Upanishad—In this Upanishad, the greatness and divinity of the ethereal word OM has been described. It is proclaimed here that OM is the best and the most honoured address for the supreme transcendental Brahm, the Supreme Being. The Upanishad describes the various subtle and sublime aspects of OM, and how it relates to the various aspects of creation. It goes on to describe the world as the visible manifestation of the invisible Brahm who has no attributes. The entire creation is the habitat of the cosmic Brahm, and the seven Lokas (divisions of the world) are its seven aspects or branches or manifestations. In this revealed form, Brahm’s mouth are the various Indris (sense organs of the body of the creature), the Pran (the vital winds representing the life consciousness in this body), the Antahakaran (the inner self and the subtle body) etc.

Chapter 4—Atharvashir Upanishad—This Upanishad has seven Kandikas or short Cantos. It is a sort of dictionary or ready reckoner which succinctly defines the various epithets or adjectives that are used to describe the glorious and magnificent virtues of the Supreme Being also known as Brahm. Here, the Supreme Being is named Rudra which also happens to be one of the names of Lord Shiva, but as Kandika 4 explains, the word Rudra refers to a divine entity whose most sublime and eclectic form is known easily to enlightened, wise and realised souls, but which is very inaccessible for all others.

In Kandikas 1 and 2 as well as in Kandika 3, stanzas 1-2, Lord Rudra himself declares that he is the supreme Lord of creation, and as such each unit and phase of creation such as the Sun, the Moon, the Gods (representing the various forces of Nature), the Bhuts (the primary elements), the animate and the inanimate things, the visible and the invisible, all the worlds such as the terrestrial, the nether and the heavenly, the minutest and the most colossus, the most humble and the most powerful, as well as the past, the present and the future and beyond are all manifestations of Rudra. In fact, the entire creation is a vivid depiction of the magnificent glories and stupendity of Rudra. It is Rudra who gives each unit of creation its glory, magnificence, virtues and worth.

Kandikas 2 and 3 are in the form of liturgical hymns sung by the Gods in honour of Rudra who is a personification of the dynamic aspects of the supreme transcendental Lord known as Brahm wherein the greatness and divine virtues of Brahm are outlined.

Kandika 4 defines all the epithets used to describe the Supreme Being, such as the terms OM, Pranav, Sarwavyaapi (all-pervading), Anant (endless), Tarak (one which gives emancipation and salvation), Shukshma (minute; subtle), Shukla (lighted; white), Krishna (dark; hidden), Vidyut (electric; light; energy), Param Brahm (the Supreme Being), Ek (the only one), Rudra, Ishan (the Lord), Indra (the king of the patron Gods of creation), Maheshwar (the great Ishwar or Lord) etc.

Kandika 5 essentially outlines the all-inclusive nature of Rudra who is Brahm, the Supreme Being, personified.

Kandika 6 outlines the genesis of creation and establishes that this creation has emerged from one supreme transcendental Brahm known as Rudra.

Finally, Kandika 7 extols the importance of grasping the teaching of this Upanishad because it briefly and precisely enlightens an aspirant about the divine virtues of the Supreme Being.

Chapter 5—Atharva-shikha Upanishad—This Upanishad is entirely dedicated to the theme of OM. OM is a synonym of the supreme transcendental Brahm as well as is the greatest of Mantras that is used as a standard medium for meditation and contemplation that aid in one's spiritual progress. This Upanishad builds upon the Atharvashir Upanishad in as much as it describes more finely the various components of OM, the ethereal word representing Pranav or the supreme Brahm. It elaborately deals with the concept of OM in a comprehensive manner. Kandika 1 elaborates upon the concept of OM by describing all its components along with the relevant Vedas, the patron Gods, the Chandas or style of composition (metres), the sacred fires, and the symbolism of colours. In effect, it outlines the genesis of creation in the context of the primordial sound of OM. Kandikas 2 and 3 elaborate upon other divine and glorious virtues of OM, such as it being the illuminator of the spiritual path of a seeker, as representing all the four states of existence of consciousness, as a bestower of mystical powers, as an infallible instrument for the realisation of Brahm and the

true 'self', as the progenitor of the entire creation, including all the Gods, and such other concepts with special emphasis on their metaphysical connotations.

In effect, this present Atharva-shikha Upanishad marks the culmination of meditation and contemplation or Yoga involving the use of the divine Mantra OM when the spiritual aspirant has attained perfect and exemplary quietude and blissfulness. He is then deemed to have attained Shambhu or Brahm-hood. It is a natural progression from the earlier stages of enlightenment when he had realised Brahm in his form as Rudra and Ishan that has been narrated in Atharvashir Upanishad.

So we can safely conclude that this present Atharva-shikha Upanishad is the 'tip or head' ('Shikha') of that body of knowledge which was initiated by its cousin Atharvashir Upanishad. In a sense, this Atharva-shika Upanishad rounds off the teaching of the previous Atharvashir Upanishad.

Chapter 6—Brihajjabal Upanishad—This Upanishad describes the Tej or the radiant splendour and divine glory of the supreme transcendental Divinity known as Brahm, the Absolute Truth, besides which there is nothing in this world. The very thought that there can be something else besides this Absolute Truth (Brahm) is itself a delusion arising out of extreme ignorance of its reality. This Brihajjabal Upanishad is equivalent to the tip or head or the citadel of all Vedic teachings because it removes all shades of ignorance and delusions. It has eight Brahmanas or Cantos.

Brahman 1 describes how the creator Brahma desired to create, and how this basic notion of having a 'desire' was at the root of Brahma getting embroiled in the cumbersome and entangling process of the affairs of creation. This is followed by a conversation between sage Bhusund and Lord Kalagnirudra, one of the divine forms of Lord Shiva, in which the Lord outlines how the creation came into being from the five symbolic dynamic but subtle forms of the Supreme Being. He describes how the five primary elements, the five types of cows and the five forms of 'Bhasmas' or sacred ashes that are metaphors for five qualities in creation have come into existence.

Brahman 2 elaborates upon two primary concepts of metaphysics and how they form a couple that compliment and supplement each other. One is the concept of Agni or the fire element and the Soma or the elixir of life known as the water element without both of which life would not have come into existence, and the other is the concept of Shiva and Shakti, the cosmic Consciousness and its dynamic aspect respectively. It describes the various connotations of these four units and the finer nuances of meaning attached to them. Besides this, the significance of the term Bhasma (ash) is very succinctly described in this Canto.

Brahman 3 is an exposition, first, on the proper way to produce the sacred Bhasma (ash) and in this it bears close resemblance to two other Upanishad of this genre—i.e. the Kalagnirudra Upanishad of the Krishna Yajur Veda, and Bhasma Jabal Upanishad of the Atharva Veda traditions, second, on the religious importance and significance of the cow and answers the confounding question why the Hindus regard the cow as holy, and third, it describes in detail the process of doing the fire sacrifice using the holy cow's dung as an offering to the consecrated fire of the sacrifice as an oblation.

Brahmanas 4 and 5 are an extension of Brahman 3 and they describes in minute detail how, when and by whom the Bhasma, the sacred ash, is to be worn on the body in the form of the Tripundra—the three lines marked on various parts of the body, especially the forehead. This Tripundra is a symbol worn by the worshipper as a token of his having accepted the supreme transcendental Brahm, in his manifestation as

Shiva, as his primary deity and Lord, as well as a sign of his own purification, his vanquishing of sins and protection from their evil consequences, and his initiation into the fold of seekers of Mukti (liberation and deliverance) by symbolically establishing the mark of the Lord on his own body. The immense spiritual rewards of wearing the Tripundra on the body by the worshipper are outlined in Brahman 5.

Brahman 6 describes five astounding mystical powers of the sacred Bhasma (the holy ash of the fire sacrifice) by illustrating them citing a story from the Purans. Each power is like an honoured title or an epithet assigned to the Bhasma. Hence, this Brahman describes the 'Naam Panchak' or the five names by which the Bhasma is known. For instance, the first power is its ability to give life to a cursed man who is condemned to death (verse nos. 1-4). The second is its power to eliminate the curse of horrific sins (verse nos. 5-6). The third is its power that established a unique similarity between Lords Vishnu and Shiva and to provide all round welfare and auspiciousness to a devotee (verse nos. 7-11). This power is endorsed by Lord Vishnu himself. The sacred Bhasma is so powerful that various Gods stand around to attend the devotee who wears it, and it is a bestower of all wisdom, erudition and knowledge to its wearer—these two additional facts bring the total number of glorious virtues of Bhasma to five (verse no. 12).

Brahman 7 describes two things—one, the importance of the Bhasma and the Tripundra as revealed to king Janak by Brahma, and to sage Pippalaad by Vishnu and Kalaghirudra (from verse nos. 1 to 7), and two, the importance of the Rudraksha beads as revealed to sage Sanatkumar by Lord Kalagnirudra (in verse no. 8).

Finally, Kalagnirudra enumerates the profound metaphysical and spiritual importance and significance of Brihajjabal Upanishad in Brahman 8.

This is one Upanishad which highlights why the cow is held in high esteem and treated as sacred by the Hindus. In this context, Brahman 1 and 3 are very explicit.

Chapter 7—Nrisingh Purvatapini Upanishad—This is a revealed Upanishad as it is a discourse given by Prajapati Brahma, the creator, to answer certain questions asked by the Gods. It expounds upon both the Saguna and the Nirguna aspects of the supreme transcendental Brahm (i.e. on the formed aspect of Brahm having specific attributes as well as the unformed, invisible, attributeless and cosmic aspect of the same Divinity). It lays emphasis on that aspect of Brahm which is very dynamic, most powerful, invincible and strong, and which had revealed itself as a half lion and half man incarnation to save the devotee named Prahalad from the tyranny of his demon father Hiranyakashipu. Since a 'man' is the best in the higher order of living beings, and the 'lion' in the lower order of creatures, the form of the Supreme Being as half man and half lion is to depict the fact that he represents the best of everything in this creation.

The 'Tapini' group of Upanishads is the one which mostly deal with the details connected with Upasana (meditation) of a particular deity to whom they are dedicated, and by whose name they are known. The word 'Purva' refers to the commentary on this Upanishad as narrated by the renowned sage Adi Shankaracharya (A.D. 788-820).

The Upanishad is divided into five sections called 'Upanishads' themselves, and have a total of 77 verses or Mantras.

In Canto or Upanishad 1 it is described how there was only the causal water everywhere before this creation came into being, how the creator Brahma emerged atop a divine lotus that came out of this water, and how Brahma had done Tapa

(severe penance and austerity) to initiate the process of creation. It was then that he 'saw' or realised or obtained the powerful Nrisingh Mantra by whose dynamic powers he was enabled to start the process of creation. This Upanishad refers to this Mantra revealed in the Anushtubh (or Anushtup) Chand style of composition. A parallel is drawn between the four steps or lines of this divine Mantra, and the earth, the semi-Gods in the lower heaven (called the Antariksha), the higher Gods such as the Vasus, Rudras and Adityas in the upper heaven (called the Duloka), and Brahm. Again, the four Vedas (Rig, Sam, Yajur and Atharva) are also symbolically represented by these four lines of the Nrisingh Mantra. Then the Upanishad sings the eulogies of the profoundness and greatness of repeating this Mantra, and enumerates the immense rewards got there from. The four steps of this Mantra are also likened to the various things and beings in creation, such as fire, gods, vital airs, the sun, the moon, the Trinity Gods, and so on. A devotee can have a divine vision of the deity by repeating this Mantra.

Canto or Upanishad 2 describes how the Gods conquered sin and its consequence death when they were preached this Nrisingh Mantra by Brahma the creator. Then meditation using the divine Mantra OM as representing Pranav or Brahm, and its synonymous nature with the four Vedas and the sacred fires is narrated. It is followed by the method of using this OM for the purpose of Nyas (investiture). Then follows a detailed exposition on each of the words of the Nrisingh Mantra.

Canto or Upanishad 3 describes the Beej (seed) and Shakti (dynamic power) of the Nrisingh Mantra. Prajapati Brahma asserts that Maya (the power of creating delusions) is its Shakti, and the Akash (the sky) is its Beej. It is from Maya Shakti that Brahma can create, and it is from the Akash that everything sprouts and expands because the vast cosmic space of the sky is the crucible that harbours the entire creation, right from its primordial stage to its birth, growth and development, and till its conclusion.

Canto or Upanishad 4 deals with the 'Angamantras' or subsidiary Mantras. They are OM, the Savitri Mantra of Yajur Veda (same as the first part of the Mahanarayan Upanishad, 15/2), the Laxmi Mantra of Yajur Veda. This is followed by the famous 'Nrisingh Gayatri Mantra'.

Canto or Upanishad 5 describes the powerful Sudarshan Chakra or the discus like weapon of Lord Narsingh. The Sudarshan Chakra is held by Lord Vishnu, the second of the Trinity Gods who is the protector of creation. This discus has six, or eight, or twelve, or sixteen or even thirty two spokes with corresponding teeth. The esoteric method of meditation connected with them is also narrated. Finally, a long litany of benefits got by worshipping Lord Narsingh with the Mantra is described.

A minor Upanishad called 'Nrisingh Shat-chakra Upanishad' describing the Chakra (wheel of worship) dedicated to Lord Nrisingh is included as an addendum no. 1 of this Chapter.

Chapter 8—Narad Parivraajak Upanishad—This is major Upanishad dealing exclusively with the concept of Sanyas—the life of complete renunciation and dispassion, and one that deals with the monastic way of life. It was enunciated by the great celestial sage Narad, and is revealed in the form of nine 'Updeshas' or teachings which we shall call Cantos in this Chapter.

It is a combination of prose and verses composed in the Anushtup Chanda (metre) style.

In Canto 1, the sages Shaunak and others have asked sage Narad about the way by which a person can find freedom and deliverance from the endless and stubborn fetters of this material. Narad, in his answer, starts with giving a detailed account of the four Ashrams and Varnas (phases of a man's life and the classes in which the society is divided), and their relevant laws and tenets.

In Canto 2 sage Shaunak has asked Narad to give a detailed account of the sanctified process, of the formalities and procedure to be followed in accepting the life of Sanyas.

In Canto 3 sage Narad has asked Brahma, the creator, to describe the virtues of those who are eligible to accept the life and vows of Sanyas, and Brahma answers him in detail. In this process, Brahma explains the concept of 'Aatur Sanyas'—i.e. about an aspirant who is very eager to accept the rigorous vows of renunciation as a means of liberation, deliverance, emancipation and salvation.

Cantos 4 and 5 explain in detail the due diligent process of accepting Sanyas and its tremendous importance and significance for the spiritual aspirant. The various types of Sanyas and their differences are enumerated in Canto 5.

Canto 6 deals with the eclectic concept of Turiyateet (which is the transcendental state of existence) and how to obtain it. It also highlights the various aspects of daily life of an aspirant who has accepted the vows of Sanyas.

Canto 7 describes the different types of Sanyasis and the laws of conduct that they are adjured to follow.

In Canto 8 Brahma extensively explains to Narad the divine Mantra OM pertaining to Pranav or Brahm, the supreme transcendental Being. This Canto has a unique metaphysical importance in as much as it elaborately describes the various forms of Brahm, or better still we can say that it describes elaborately the various terms or adjectives usually employed to address Brahm, the Supreme Being. Perhaps this is the only place where all the esoteric epithets used for Brahm have been comprehensively explained under one roof.

And finally Canto 9 marks the culmination of one's spiritual search when he is enlightened about the supreme transcendental Brahm. Hence, this Canto attempts to narrate about this Brahm. It also describes in the process the signs of a self and Brahm realised ascetic, and how he obtains the ultimate destination for his self. This Canto concludes the most profound of Sanyas Upanishads.

Chapter 9 is Sita Upanishad—This Upanishad was revealed as a dialogue between the Gods and Prajapati Brahma, the creator. In it, Sita, who was the divine consort of Lord Ram, an incarnation of Lord Vishnu and hence a personification of the supreme transcendental Brahm, has been established as the personification of the eternal cosmic dynamic powers of Brahm revealed as Shakti and called Mother Nature at the cosmic level of creation. This dynamic Shakti of the Supreme Brahm is omnipotent and universal, and it is responsible for creation, sustenance and conclusion of creation. The supreme, transcendental Brahm, who has revealed himself in the form of Sri Ram, utilises the services of this cosmic energy and majestic power to exercise his authority in the world. This Upanishad describes Sita as the primary Nature, the meaning of the word Sita, her divine and ethereal un-manifest form as well as her form with a litany of divine attributes. It lists her righteous and noble virtues, the various connotations and forms of Shakti and its embodiment as Sita, and all other such metaphysical and philosophical aspects pertaining to Sita, the Mother Goddess.

Besides this, it is the only Upanishad which describes the classification of the Vedas into four parts, and other scriptures that came into being along with the Vedas as primary sources of knowledge.

Chapter 10—Sharav Upanishad—This Upanishad was revealed as a discourse between sage Pippalaad and the creator Brahma. It describes the greatness of Lord Shiva in his form as Rudra.

The word ‘Sharav’ literally means the killer or slayer. It also means one who provides liberation and deliverance to the creature. In other words, Sharav is that form of the Supreme Being which instills fear in the heart of evil and pervert creatures, and kills or eliminates their evil tendencies on the one hand, and provides them with freedom from the torments of the world on the other hand. The word also refers to ‘the Lord who shines in the heart of his devotees’. According to legend, Lord Vishnu had incarnated as Nrisingh, the half man and half lion incarnation, to kill the demon Hiranyakashipu who had been tormenting his own son Prahalad because the child was a devout follower of Vishnu. After having killed the demon, Nrisingh started roaming in the forests, striking terror in the hearts of all the creatures. It was then that Shiva, the universal Lord who has been honoured with the epithet of ‘Mahadev’ as he is the greatest and supreme God, had assumed the form of Sharav, the killer, and liberated Vishnu from the body of Nrisingh. Thus liberated, Vishnu had thanked him a lot and went to his divine abode called Vaikunth. So this ferocious form of Shiva known as Sharav was also called ‘Rudra’, the angry and ferocious form of the Lord. One can imagine the fight that might have raged between Nrisingh and Rudra, and obviously Rudra must have been more ferocious than Nrisingh in order to subdue the latter.

Presently, when sage Pippalaad asked Brahma who was the senior God amongst the Trinity consisting of Brahma himself, Vishnu and Shiva, the latter replied that it is Rudra, or Shiva. Hence, this Upanishad is dedicated to Lord Rudra in his manifestation as Sharav, and is therefore named ‘Sharav Upanishad’.

The Gods have praised Sharav and established the latter’s superiority. This Upanishad describes the immense rewards of being enlightened about the esoteric secrets and of the real and truthful form of Lord Rudra, along with the special norms to be observed while studying this eclectic philosophy. It also highlights the oneness between Shiva as Rudra and Vishnu.

Chapter 11—Tripadvibhut-Maha-Narayan Upanishad—This great Upanishad was revealed as a discourse given by Lord Vishnu to the creator Brahma. Brahma had asked the Lord to disclose the secrets of the ‘Param Tattva’, the Supreme Principle and the Absolute Truth of creation, by knowing which everything becomes known, and which provides the spiritual aspirant with Mukti or Moksha (liberation, deliverance, freedom, emancipation and salvation). It primarily deals with the supremacy of Brahm, the Supreme Being in creation and called by various names such as ‘Brahm’, ‘Maha Narayan’, ‘Adi-Narayan’, ‘Narayan’, ‘Maha Vishnu’, ‘Viraat Purush’, ‘Brahma’, ‘Hiranyagarbha’, and so on.

This Upanishad derives its name from the fact that Brahm, the Supreme Being, is also known as ‘Maha Narayan’, and he is said to have four ‘Paads’, literally meaning limbs but implying aspects or forms or branches of the same Brahm. One of the Paad is the creation as is known and dominated by the Bhuts (elements); it is the comparatively grosser aspect of Brahm. The other three Paads are of subtle nature. Hence the name ‘Tripadvi + Bhut + Maha Narayan = Tripadvibhut Maha-Narayan Upanishad.

The main thrust of this Upanishad is to emphasise the point that though Brahm is said to exist in all these forms, basically it is a 'non-dual' and an immutable divine entity that remains uniform and universal. It is this Brahm that exists as the supreme transcendental cosmic Consciousness and the universal Truth of creation. The question as to why then does the essentially non-dual Brahm appear to have duality and various evident forms that cannot be denied or wished away is emphatically answered and explained in detail in this grand Upanishad. It is this eclectic non-dual Brahm that is so much extolled and revered by the Vedas and the Upanishads. It is this non-dual Brahm that is the aim of attainment of all spiritual aspirants and seekers of Truth. [Refer Canto 1, paragraphs 5-6; Canto 2, paragraphs 1-8, 12, Canto 3, paragraphs 1-6; and Canto 4, paragraphs 1-6.]

The Upanishad belongs to the 'Devdarshi' branch of the Atharva Veda (refer Canto 1, paragraph no. 2), and is in the style of long narrative prose as opposed to the system of verses that is usually employed in the Upanishads.

The Upanishad consists of a total of eight Cantos divided into two main sections—the first is called 'Purva Kanda' consisting of four Cantos (nos. 1 to 4), and the second is called 'Uttar Kanda' consisting of another four Cantos (nos. 5 to 8).

Canto 1 describes what is meant by the enigmatic and most esoteric term 'Brahm', who he is or what it is. It enumerates the grand characteristics and magnificent divine qualities that make Brahm so unique and enigmatic entity in creation that is lauded and revered by the scriptures, besides describing the four Paads of Brahm, literally meaning the limbs of Brahm, and implying the different eclectic forms or aspects of Brahm, both at the macrocosmic as well as the microcosmic level of creation. The four Paads of Brahm have been beautifully explained in this Upanishad elsewhere also—viz. Canto 4, paragraph nos. 2-3, 6, and Canto 8, paragraph no. 4

Canto 2 expands upon the discussion of Canto 1 and narrates the two basic forms of Brahm—the 'Nirguna' or 'Nirakar' form which refers to that aspect of Brahm which is without any attributes, is indefinable and invisible, and is beyond the reach of mind, intellect and imagination, and the 'Saguna' or 'Sakar' form which displays characteristics quite the opposite of Nirguna—viz. it has definite attributes, is visible and verifiable, is comprehensible and described by the scriptures. In the course of this discussion another very important principle concerning Brahm is explained—the concept of Advaitya or non-duality. Included in this Canto are the description of the Genesis of Creation and the all-inclusive and all-pervading nature of Brahm as the Viraat Purush. The concept of Advaitya in the context of Brahm having different Paads and forms as Nirguna and Saguna is further explained in Canto 8 (paragraph nos. 2-7).

Canto 3 describes the 'Mool-Avidya'—literally the primary cause of ignorance of the Truth, and the various units of measurement of time on the celestial scale such as the length of one life of Brahma the creator, the length of one life of Vishnu, the length of one life of Viraat Purush, and the length of one life of Adi-Narayan. This measurement helps one to understand the *relative nature* of the terms 'birth and death', or 'creation and destruction', or 'day and night' etc. on the cosmic scale. This Canto also explains why Brahm appears to have multifarious forms, and cites a beautiful analogy of the crystal appearing to be red when in proximity with the China Rose flower. It then illustrates the formless omnipresence of Brahm by citing the example of the Fire.

Canto 4 further elaborates upon the concept of Advaitya or non-dual nature of Brahm which was first introduced in Canto 2. It explains why Brahm is imagined or

visualised to have a dual form whereas it is not the truth as explained in Canto 3 along with enumerating some of the grand divine qualities of Brahm that make the latter so holy and unique. It also outlines the path leading to Mukti or Moksha (liberation, deliverance, freedom, emancipation and salvation).

Canto 5 answers three very pertinent spiritual questions—viz. (i) How and why does Avidya (ignorance or lack of true knowledge) reappear once it has been destroyed or eliminated?, (ii) Why does a creature remain deluded and trapped in this world of artificiality, and how to get rid of it and become freed?, and (iii) What is the path to Mukti—or liberation and deliverance from this ensnaring world. In the process it describes in graphic detail the path taken by a devotee of Lord Vishnu when he leaves the gross mortal body and embarks upon his spiritual journey to reach the highest echelons of heaven where Vishnu resides, the heaven known as Vaikunth.

The description is continued in the next two Cantos, Canto no. 6 and 7, as well. These three Cantos, viz. 5, 6 and 7, describe in graphic detail the most fascinating journey undertaken by the spiritual traveller as he crosses the various layers of heaven, called Vaikunth, the abode of Lord Vishnu, en-route to his final destination to the Lord Adi-Narayan, the primordial and primary Lord of creation, the Supreme Being who is also known as Adi-Maha Vishnu.

Canto 6 describes the path through many Vaikunths which are traditionally regarded as being the abode of Lord Vishnu, the Lord who is considered as being synonymous with the Viraat Purush, the Supreme Being and Brahm personified. So by describing more than one Vaikunth the Upanishad alludes to the relative nature of existence and extends the ‘philosophy of relativity’ enunciated earlier in Canto 3.

Further, by citing a number of instances such as the existence of a number of Universes and many Vaikunthas (Canto 6), different time scales (Canto 3), the many Paads of Brahm (Canto 1), and the simultaneous existence of both Saguna as well as Nirguna Brahm the Upanishad highlights the fact that the actual and real Truth, though being always and irrevocably ‘one, immutable and unchangeable’, does appear to have more than one meaning, and a man who gets deluded by this dichotomy and schism is the one who is under the spell of Maya and Avidya.

The second half of Canto 7 is dedicated to the description of the Sudarshan Chakra and the Narayan Yantra which is a worship instrument used in mystical forms of worship of Lord Narayan or Vishnu. All the Mantras used in their construction are given in full along with their location and meaning.

Canto 8 essentially describes the following topics as a sort of summary of the preaching of this Upanishad—(i) the non-dual or Advaitya nature of Brahm (paragraph nos. 1-3), (ii) the four Paads of Brahm (paragraph no. 4), (iii) the proclamation, called the Mahavakyas, of a Brahm-realised person (paragraph nos. 5-6), (iv) the attainment of Mukti (spiritual liberation and deliverance), (v) the two great forms of Yoga, viz. Saalamba and Niraalamba (paragraph nos. 8-9), (vi) the importance of Bhakti or devotion (paragraph no. 12), (vii) how to have the knowledge of the Param Tattva (paragraph nos. 13-14), and (viii) who a true Guru (teacher) is, and his importance.

The Upanishad concludes by emphasizing the profound spiritual benefits of studying and implementing its teachings.

Chapter 12—Ram Rahasya Upanishad—This Upanishad is dedicated to the eclectic and divine theme of Lord Ram and unfolds the great metaphysical and spiritual secrets pertaining to the Lord who has been established here as being a visible manifestation of the supreme transcendental divinity known as Brahm. It has a parallel in Ram's other Upanishad, the Ram Tapini Upanishad, with the only difference that this present Upanishad has been preached by Hanuman, who is considered as the greatest devotee of the Lord and the most erudite expert on this theme. The Upanishad has five Cantos.

Canto 1 introduces the subject when different seers and sages approached Hanuman and requested him to preach them the great metaphysical and spiritual truths about Lord Ram and how to worship him to invoke his blessings. This Canto emphasizes that the hymns composed by all the great devotees of the Lord have equal importance and effect, and they are equally valuable as the ones appearing in the scriptures. A number of such hymns have been included at end of this Chapter. It is stressed here that the various Mantras of Lord Ram have the same metaphysical import and divine mystical powers as the Mantras of the Vedas devoted to Brahm for the simple reason that Lord Ram is none but the Supreme Being himself personified.

Canto 2 is a unique section because it elaborately describes all the Mantras of Lord Ram, starting from the one-letter Mantra to the longest ones having forty seven letters, along with how they have been conceptualized and how to worship and meditate upon the Lord with them.

Canto 3 is another fascinating one in which the mystical charm instrument/apparatus called a 'Pooja Yantra', which is like a Talisman, is used for invoking divine intercession to help the worshipper to accomplish astounding feats and acquire stupendous supernatural powers which would have been impossible otherwise. This Yantra is much like any modern-day electronic instrument having an electronic circuit which is used by a man to enable him to acquire tremendous powers and potentials, and achieve successes in numerous exercises which would have been virtually impossible for him to achieve with his mere physical body and mind. This Canto describes how this Yantra is constructed, and how to worship or use it.

Canto 4 elaborately narrates the sanctified process for accepting the different Mantras of Lord Ram along with the strict codes of conduct and rules that are to be followed for their application by the devotee worshipper. These Mantras are used for dual purpose—viz. for doing formal religious rituals during sacrifices as well as for the purpose of doing Japa (repetition of the holy Mantras) for achieving specific aims.

Finally, Canto 5 describes the metaphysical and spiritual importance and significance of Lord Ram's Mantras, especially the six letter Mantra (OM Ramaye Namaha), and what benefits the worshipper can expect by using this Mantra with due faith and reverence. It establishes the supremacy of Lord Ram's Mantra over all other Mantras, and espouses the fact that the well known, universal, ethereal, divine and sacred Mantra OM is also the Mantra for Lord Ram. This final declaration by Hanuman winds up this very fascinating Upanishad.

Chapter 13—Ram Tapini Upanishad—The Ram Tapini Upanishad supplements and compliments the Ram Rahasya Upanishad. It consists actually of two Upanishads—viz. *Ram Purva Tapini* which is the preceding Upanishad and makes up the first half, and *Ram Uttar Tapini* which is the subsequent Upanishad and makes up the second half. Both are included in this Chapter as Sections 1 and 2.

There is no basic difference between the 'Purva' and the 'Uttar' Ram Tapini Upanishads except the fact that they are like the fore and hind parts of the same

scripture. Besides this, the Ram Purva Tapini Upanishad lays stress on ritualistic forms of worship as it describes elaborately the worship instrument known as the Ram Yantra which is used in mystical and ritualistic forms of worship. This instrument is like a geometrical diagram and it contains all the esoteric Mantras of Ram and other Gods incorporated in it, thereby standing for the creation and all forms of divinity in a miniature form. On the other hand, the Ram Uttar Tapini Upanishad is based on the principles of Vedanta and lays stress on meditation upon Lord Ram using his divine and all powerful Mantras.

Both these Upanishads however emphasise that Lord Ram is known as the 'Tarak Brahm', i.e. he is a personification of the Supreme Being whose blessing provides the creature Mukti and Moksha (spiritual liberation, deliverance, emancipation and salvation to the soul), and that the Lord's Mantra is therefore known as the 'Tarak Mantra' as it enables the creature to attain this spiritual goal.

Section 1—The 'Ram Purva Tapini Upanishad' is composed in the 'Anushtup Chanda' style of verses, and there are in all five elaborate Cantos in it.

Briefly, Canto 1, Canto 2 and Canto 3 till verse no. 15 describe the esoteric secret meanings and different connotations of the various names and Mantras, including the Beej Mantras, of Lord Ram, along with their spiritual significance and the relevant prayers that are employed to honour and worship the Lord. To highlight the great importance and significance of the Beej Mantra of Lord Ram, Canto 2, verse no. 2 asserts that it is the seed from which the whole universe has emerged like a huge banyan tree that is born from its seed. The Beej Mantra is the root or seed from which the rest of the Mantra is constructed, and it is like a formula in any field of science that helps one not only to understand and unravel the secrets of that particular field but also to implement these unique principles of science in practice—the only difference being that the field of study and practice here is spiritual and metaphysical.

The story of Ramayan, which is a sort of biography of Lord Ram, from the Lord's forest sojourn till his victory over the demons at Lanka and his return to his capital at Ayodhya to be crowned its King-Emperor, is outlined in Canto 4, verse nos. 16-31.

The next phase of this great Upanishad begins from Canto 4, verse no. 32 and lasts till Canto 5, verse no. 6 wherein the worship Yantra of Lord Ram, called also as the 'Bhupur Yantra', is described in graphic detail in a step-by-step method as how to construct it, the placement of various Mantras in it, and the steps involved in formal forms of worship using this Yantra.

The worship 'Yantra' of Lord Ram is in the shape of a geometrical diagram that is made to accommodate various divine Mantras that are charged with cosmic energy and dynamism that helps this creation to survive on its own steam. The Yantra is a sort of magical Charm or Talisman used to harness the dynamic cosmic powers that remain beyond the reach of ordinary men, and which, once tapped, can empower the person with supernatural powers and authority. Like any other modern-day gadget or machinery, it has a complex structure with numerous components, and to make it effective it is of paramount importance that the art and skill of its construction and usage be thoroughly mastered. Otherwise it is as useless as any other electric, electronic or mechanical gadget or machine that is either not properly made or is not properly operated. But once correctly made and used, the Ram Yantra, also called the Bhupur Yantra, can prove to be a panacea for all problems faced by the Lord's devotee and spiritual aspirant. It is an instrument or apparatus in the pattern of a geometrical diagram used for formal forms of worship of the Lord, and is regarded as the whole universe in a miniature form.

The Upanishad concludes by outlining the immense pecuniary and spiritual rewards obtainable by having sincere devotion for and diligent worshipping of Lord Ram in Canto 5, verse nos. 7-10.

Section 2—The ‘Ram Uttar Tapini Upanishad’ is in the form of a dialogue between sage Yagyavalkya and some sages led by Brishapati, Bharadwaj and Atri. It has six Cantos. Its major part is in the form of prose as it is a dialogue. The subjects covered in this Upanishad are the following—

Cantos 1 and 4 describe the spiritual and metaphysical importance of the ‘Avimukta Kshetra’—the site that provides spiritual Mukti (liberation and deliverance) to the soul of a creature. Two sites have been given this honour—one is in the terrestrial world in the city of Kashi or Varanasi located on the banks of river Ganges, and the other is in the body of the spiritual aspirant itself. The latter location is in the forehead, between the two eyebrows and situated at the root of the nose. These facts are narrated in Canto 4 in detail. While Canto no. 1 is revealed as a dialogue between Yagyavalkya and sage Bharadwaj, Canto no. 4 is in the form of a dialogue between Yagyavalkya and sage Atri.

Canto 2 narrates the metaphysical importance of the ethereal Mantra ‘OM’ and its similarity to the Tarak Mantra of Lord Ram. The eclectic and spiritually empowered ‘Tarak Mantra’ of Lord Ram is compared with and treated as being a synonym of the Pranav mantra OM that relates to the supreme transcendental Brahm. This Tarak Mantra is powerful and potent enough to give the creature his final Moksha (emancipation and salvation) by ensuring that he crosses this vast ocean-like world of a continuous cycle of birth and death and their attendant miseries and torments in which he had been trapped for generations. This Canto is revealed as an answer that sage Yagyavalkya gave to sage Bharadwaj when the latter wished to know about the Tarak Mantra.

Canto 3 is an exposition on the four divine Paads or aspects of the supreme transcendental Brahm, the cosmic Consciousness, by way of description of the four states in which the consciousness exists in this world—viz. the Jagrat or waking state, Swapna or dreaming state, Sushupta or deep sleep state, and Turiya or the state that transcends the the Sushupta state. Another interesting aspect of this Canto is that it asserts that Lord Ram and his brothers Laxman, Bharat and Shatrughan are none but the four letters or aspects of the ethereal Mantra OM manifested in their forms. Then it goes on to assert that Sita, the consort of Lord Ram, is a manifestation of Mother Nature known as the primordial Prakriti. This Canto is an extension of the discourse Yagyavalkya was giving to Bharadwaj.

Canto 5 lists the forty-seven great Mantras of Lord Ram which have the potentials of ensuring a man’s all-round spiritual welfare. They were taught by Lord Ram to the creator Brahma, and were revealed for the benefit of sage Bharadwaj by sage Yagyavalkya.

Finally, Canto 6 winds up this Upanishad by highlighting the immense spiritual benefits of pursuing it diligently and honestly. Once again, this Canto is an extension of the question-answer session between sages Yagyavalkya and Bharadwaj. This Canto lauds the stupendous spiritual powers and greatness of the Mantras of Lord Ram which are described as being superior to and far more powerful than any other Mantra dedicated to any other deity.

Chapter 14—Shandilya Upanishad—This Upanishad derives its name from sage Shandilya who approached the ancient sage Atharva to learn the details of the various aspects of Yoga (meditation) and Brahm, the invisible but the divine and sublime

Supreme Being. The knowledge was then passed on to the line of disciples of sage Shandilya who then named this Upanishad in the honour of their Guru.

The Upanishad has three Cantos of which the first one is the largest, occupies the greater part of the text, and deals with the concept of Yoga in a comprehensive manner.

Canto 1 has eleven sections and a total of ninety-seven verses. It deals comprehensively with the philosophy of Yoga and its practice. It explains the various terms associated with the philosophy of Yoga with a metaphysical perspective, and a reading would show how implementing these in practice can actually lead to an overall improvement in the life and personality of the practitioner. Briefly, its Section 1 defines the eight-fold path of Yoga, and the ten aspects of Yam (self-restraint of the sense organs and the mind), section the ten kinds of Niyams (spiritual orders and regulations), section 3 outlines the eight Asanas (sitting postures) of Yoga, section 4 deals with the details about the various Naadis (nerves and veins), the Kundalini (the coiled subtle energy center at the base of the spine, called the 'serpent power' because of its coiled nature and its latent dynamism), and the ten vital winds called the Prans, and it explains how these Naadis are de-clogged and activated with the help of the energy of the Kundalini and the vital winds, along with the process to do so, section 5 deals with the eligibility for Yoga and then goes on to describe the preliminaries of Pranayam (breath control), section 6 compliments the previous section and completes the discussion on Pranayam, section 7 is dedicated to Hath Yoga and describes how to cleanse the blocked Naadis, the method of doing Pranayam, rules governing food during Yoga, various Bandhas (closure of body apertures) and Mudras (postures), and the manifold benefits of Yoga such as attainment of various Siddhis (mystical powers), sections 8-9 describe the five kinds of Pratyahars (restraining the mind and withdrawing it from involvement with the sense organs) and Dharmas (convictions and beliefs), section 10 narrates the two kinds of Dhyana (remembrance and concentration of the mind), and finally section 11 deals with the eclectic concept of Samadhi or total absorption in meditation.

The second and third Cantos primarily deal with the esoteric but eclectic concept of the supreme, transcendental and divine Brahm. The second Canto is the shortest with only one section having six verses, while the third and the last Canto has two sections with twenty-one verses. Hence, there are in all fourteen sections and one hundred twenty-four verses.

Canto 2 is pre-eminently a summary of Advaitya Vedanta and deals with the eclectic concept of the non-dual Brahm, the Supreme Being and the cosmic Consciousness which is the universal theme in all the Upanishads. It outlines some of the unique qualities of Brahm, and asserts that it is a divine entity that cannot be defined, is beyond the faculty of speech and the comprehension of the mind, and is invisible but nevertheless omnipresent in this creation.

Finally, Canto 3 builds up on the theme of Brahm and in section 1 answers the question as to how the one and non-dual Brahm can assume the form of this multifaceted world of such immense diversity. Section 2 elucidates the different meanings of the term Brahm.

Chapter 15—Param-Hans Parivrajak Upanishad—This Upanishad describes the special eclectic and divine qualities and unique characteristics of a Parivrajak (i.e. a Sanyasi; a renunciate ascetic, monk, mendicant or friar) who has reached higher state of spiritual realisation when he becomes self and Brahm realised, is internally very pure, pious and holy, and hence honoured by the epithet of being a 'Param Hans'.

This title draws its name from the legendary Swan which is regarded as pure, holy, discriminatory and the wisest amongst birds because it has the mystical ability to pick up water and leave behind water, or pick up pearls from an assortment of gems. The Swan lives in clean water and none of the impurities of the water ever affects it.

The Upanishad outlines the necessary qualities that entitle a spiritual aspirant to be called a 'Parivrajak' (a Sanyasi), and then elevated to the stature of being called a 'Param Hans Parivrajak' which is a rare honour, the method of attaining this exalted state of existence, his way of life, what his state of mind is, how he thinks and behaves, what is the significance and symbolism of his renouncing everything in this world, including the important signs of religion such as the sacred thread, the tuft of hair on the head etc., and other such relevant topics.

It also describes how the Sanyasi reaches the climax of his spiritual pursuit by obtaining Mukti or Moksha which is liberation and deliverance from delusions and ignorance that leads to emancipation and salvation of the soul by realizing who or what the supreme transcendental Brahm essentially is, and how his own 'self' is this Brahm personified.

The text is in the form of an interrupted long prose. Therefore, for the purpose of this narrative it has been divided into seven paragraphs based on one major central idea that is covered in a particular paragraph.

It is a revealed Upanishad as it was preached by the primeval Lord known as Adi-Narayan (i.e. the primary form of Lord Vishnu which is also known as the Viraat Purush) when he was approached by Brahma, the creator of this world, to learn about the concept of a Param-Hans Sanyasi.

Chapter 16—Annapurna Upanishad—The Annapurna Upanishad is a fairly long one with five Cantos having a total of three hundred thirty-seven verses. It is a dialogue between sage Nidagh, the ascetic disciple who wished to know how to obtain spiritual liberation and deliverance, and sage Ribhu, the enlightened one and the most exalted amongst those sages who were Brahm-realised.

This Upanishad is a brilliant exposition on the philosophy of Advaitya Vedanta, the eclectic philosophy of non-duality, and it focuses on the Atma, the pure conscious 'self', the realisation of which is Mukti (spiritual liberation and deliverance of the creature) from all the fetters having their origin in delusions and ignorance. Since this Atma is no other entity but the supreme Consciousness of creation known as Brahm, the Upanishad emphasizes that to be truly enlightened, wise and learned one must be self-realised and Brahm-realised simultaneously. In fact there is no difference between these two divine states of existences. The Upanishad describes how a fully self-realised and enlightened person feels, how he experiences a profound sense of blessedness when he has truly understood the Atma (the pure consciousness) and other spiritual Truths.

The Upanishad derives its name 'Annapurna' from the fact that it opens with the praises of Goddess Annapurna, the divine Shakti or the majestic power of the Supreme Being which provides nourishment to all, in the form of an invocation or introductory. The Mantra dedicated to Annapurna was divulged to sage Ribhu by his father, and it has twenty-seven letters. Ribhu had worshipped Goddess Annapurna persistently day after day using this Mantra, and she finally appeared before him to bless him and grant him the boon of 'self knowledge', or the divine and eclectic knowledge pertaining to the Atma, the pure consciousness. This made sage Ribhu 'self' and 'Brahm' realised, most fulfilled and attained soul.

Goddess Annapurna is none other than Goddess Laxmi, the divine consort of Lord Vishnu, the sustainer, nourisher and protector of this creation. It is Laxmi who fulfills all the desires of the creature and provides him with nourishment and welfare in this world. Hence she is honoured as ‘Annapurna’—literally one who fills the granary and provides food to this world. She represents the dynamic powers of the Supreme Being by which he takes care of this creation.

This Upanishad is an elaborate discourse on the philosophy of Advaitya Vedanta—or the principles of non-duality, and how a wise and enlightened aspirant gains true knowledge and attains the state of true liberation and deliverance from all the spiritual fetters that tie down an ordinary creature to this gross world and an equally gross body. During its long rambling discourse, the text describes and explains many relevant spiritual and metaphysical topics, such as for instance the concept of various states of existences (such as Jagrat, Swapna, Sushupta, Turiya and Turiya-teet), the concept of ‘Bhrama’ (delusion and misconception about any given thing or situation; spiritual delusions), of what constitutes the various ‘Sankalps’, ‘Vasanas’ and ‘Vrittis’ (worldly volitions, passions and inherent mental tendencies brought to this life from the previous life) that a creature harbours in his inner self, and how to overcome them, the concept of ‘Mano-naash’ (conquering the mind and the sub-conscious and their stabilization as well as dissolution through diligent practice), of ‘Sanyas’ (the life of renunciation and detachment), of ‘Jivan Mukta’ (to be spiritually liberated even while alive and having a gross body), of ‘Videha Mukti’ (to be spiritually liberated without the interference of the physical gross body), of how to overcome the various faults and temptations of this world, of what is really meant by the various names that are assigned to the basically indivisible and uniform ‘sky element’ known as the ‘Akash’ (such as the subtle forms of the sky known as Ghatakash or the sky present inside an empty pot, Mathakash or the space within the walls of a monastery etc), and many other such important topics that any student of metaphysics must be well conversant with.

Chapter 17—Surya Upanishad—In this Upanishad it is affirmed that the Sun and the supreme transcendental Brahm are one and the same, that the Sun is a visible manifestation of Brahm, the Supreme Being. The Upanishad begins with naming the Rishi (the seer or sage who had first conceptualized this eclectic doctrine and composed the hymns in honour of the Sun God), Devta (the patron deity of the hymns to whom the prayers are offered), Chanda (the poetical style employed in composing the hymns) etc. The famous Gayatri Mantra is verse no. 2 of this Upanishad. Verse nos. 3-6 outline the origin of this creation from the Sun God, emphasizing in its course that all the Gods of the Trinity as well as the supreme Brahm are represented in visible form of the Sun. Verse no. 7 describes the eight-letter divine Mantra of the Sun God. It is called the ‘Suryaasthakshari Mantra’. Finally, the benefits of repeating this Mantra are enumerated in verse no. 8. It is to be noted that this Upanishad gives results when its Mantras are offered to the Sun God in the Hindu month of Ashwini (roughly October) when the Sun is in the asterism of Hasta. It is believed that this empowers the worshipper to overcome the fear of death also.

Chapter 18—Atma Upanishad—This Upanishad is dedicated exclusively to the theme of the Atma, the cosmic Consciousness that is at the root of life in the entire creation. The Upanishad expounds upon the three aspects of the Atma which is a cosmic entity that is primarily non-dual, immanent, omnipresent, single (i.e. without

any company), immutable, indivisible, universal and uniformly one and wholesome as well as the common denominator in all units and aspects of this creation.

The *first* aspect of this universal Consciousness is known as the 'Atma'. The Atma is that aspect of creation which is its quintessential truth and soul, and without which this creation and its constituent units would have neither any meaning nor any substance whatsoever. The Atma is the cosmic Consciousness that pervades in each and every single unit or aspect of this living world, and without which this existence with all its myriad forms, its magnificent varieties, its stupendous charms and beauty, and its vibrant dynamism would just have no meaning or relevance. Without the Atma the gross body of the individual Jiva, the living being or the creature, would not be alive and active; the body and its components would be dead had there been no consciousness in them. Hence, broadly speaking, the term 'Atma' is applied to the soul of existence; it is synonymous with life and its magnificence, beauty, vitality, dynamism, energy and vibrancy. It is like the 'atom' in the physical sciences which is at the core of all elements in this creation, and nothing is imaginable without the atom.

The *second* aspect of the cosmic Consciousness is known as the 'Antaraatma'. This word has two parts—viz. 'Anatar' meaning inner or hidden or secret, and 'Atma' meaning of course the universal consciousness known as the soul. Therefore, the Antaraatma (or Antar-Atma) is that aspect of the cosmic and universal Consciousness that lives inside the body of an individual creature as his 'true self'. Generally speaking, when we use the term 'soul' vis-à-vis a living being, it is the Antaraatma that we refer to, because it is the consciousness residing inside the gross body of the individual that gives the individual his unique identity.

The above two terms used for the universal cosmic Consciousness, viz. the Atma and the Antaraatma, pertain to the grosser level of creation because they relate to the physical world limited to the creation that is of any relevance as far as the individual creature is concerned, and with which he is directly related. But it must be remembered that this Consciousness is 'universal, unbound, cosmic, ethereal, infinite, eternal, indivisible, immutable, immanent, omnipresent and all-pervading. Therefore surely there is definite *third* dimension to it—and this is the supreme transcendental Atma that is all-encompassing and almighty. This 'supreme transcendental and almighty Atma is known as the 'Param-Atma' or 'Parmatma' ('Param' = supreme, transcendental and one above or beyond which nothing exists). This Parmatma is Brahm, the Supreme Being.

This Upanishad expounds the tenet of non-duality or oneness between the Atma and the supreme transcendental Consciousness known as Brahm, as well as the great metaphysical truth that whatever that exists in this creation at all levels, whether visible or invisible, whether microcosmic or macrocosmic, whether living or inane, is a manifestation of one single Brahm. It outlines the astounding but paradoxical virtues and qualities of Brahm that makes it so unique and unparalleled in creation.

The Upanishad establishes beyond doubt the truth of the existence of Brahm. It cites several examples and similes to help elucidate the principles of metaphysics that it propounds. For instance, it takes the example of the sun which does not diminish in its brilliance inspite of appearing to be darkened during the solar eclipse to establish that Brahm and Atma always remain eternally untainted and uniform even though one attributes it with so many changeable virtues and colourful characteristics, some positive and others negative, because of their association with this delusion and ignorance ridden gross world.

Other examples cited to emphasize this fact are the mistaking of a piece of rope for a snake, and the dead left-over cuticle of a snake to be a live serpent. Then it cites the case of a child playing with toys, forgetting its hunger or pain, to help understand how wise people remain engrossed or submerged in the thoughts of Brahm and the Atma in spite of the incessant restlessness, the flux, the miseries, the troubles and tribulations along with the upheaval of the topsy-turvy world surrounding them.

Hence, the only way to realise the true nature of the Atma is to free one's self from delusions and ignorance. When this happens, the creature is deemed to have obtained Mukti, or spiritual liberation, deliverance, emancipation and salvation. This implies that he has obtained complete self-realisation whereby his one Atma is dissolved or merged with the cosmic Atma known as Brahm even as two samples of milk, oil or water become indistinguishable from one another when they are mixed together.

Chapter 19—Pashupat Brahm Upanishad—This is a revealed Upanishad as it was first preached by the creator Brahma himself to sage Valakhilya. It is sub-divided into two parts—the first is known as Purva Kanda, and the second as Uttar Kanda. It primarily deals with the great metaphysical concepts of Brahm, the supreme transcendental cosmic Consciousness and the Absolute Truth of creation, and uses the metaphor of Hans, the divine Swan that is used as a symbol of high purity and wisdom, to establish that Brahm and the pure conscious Atma residing as the 'true self' in the inner-being of all living creatures are the same divine entities. Just like the divine Mantra OM which is dedicated to Brahm and is synonymous with the latter as it is deemed to be an all-pervading cosmic sound manifestation of Brahm, the word Hans, when used as a Mantra, also implies both the Atma as well as the Brahm. 'Hans' is a broad term that is used as a metaphor for all that is wise, divine, holy, pure, immaculate, uncorrupt, auspicious and noble, qualities that apply to both the Brahm and the Atma.

The Upanishad derives its name from the fact that Brahm is known as 'Pashupati' (Kanda1, verse no. 32) because Brahm, manifested in the form of the eclectic virtues of wisdom, conscience, intelligence, virtuousness, righteousness, nobility, propriety and auspiciousness, as well as in right deed, conduct and thought, helps a man overcome, vanquish and control the natural animal-like savage instincts in a living being. It follows that anyone who has learnt to exercise exemplary control over his sense organs and their natural urges and instincts is a personification of Brahm. Since Brahm is represented by the Atma as well as by its symbol known as Pranav or OM, it follows that by taking the aid of the Atma or the word Mantra OM one can directly access Brahm.

Attainment of Brahm-hood is therefore directly related to the realisation of the Atma which is a microcosmic counterpart of the cosmic divinity known as Brahm that resides in the body of the individual creature and forms his true self. The word OM acts as a catalyst in the process of establishing a unity between this Atma and its principal form Brahm. Therefore, attainment of self-realisation and Brahm-hood are synonymous with each other and go hand in hand; they are marked by the grand virtues of wisdom, enlightenment and knowledge of the 'truth'. These virtues free the spiritual aspirant from the fetters of ignorance (Agyan) that had cast a thick veil of delusions (Maya) around him that acts as an abominable and foreboding obstacle in the path of his Mukti (which means his spiritual liberation, deliverance, emancipation and salvation).

The Upanishad emphasizes and establishes the fact that the best form of religious sacrifice as well as worship is that which is done internally as opposed to the external rituals and formalities. It goes on to elucidate that Brahm, the Supreme Being and the Lord of creation, is to be found in the inner-self of the worshipper and nowhere outside. It points out that all external paraphernalia of religion only have a symbolic value, and in this context it cites the instance of the sacred thread, the two great fire sacrifices known as the Vajpaye Yagya and the Ashwamedh Yagya, the observation of Sandhya which means the offering of prayers three times a day, the bird Hans, the Mantra OM employed during worship, and so on. True knowledge of Brahm that is rich in wisdom and a source of one's spiritual enlightenment and freedom is the Sutra (formula or thread) that links the Atma (i.e. the 'self') of the creature to the supreme Brahm (i.e. the Supreme Being and the supreme Self), and paves the way for his final Mukti. Then it also says that each unit of creation, including the great Trinity Gods, i.e. Brahma the creator, Vishnu the sustainer, and Rudra the concluder, are only 'images' of Brahm in as much as they depict one or the other of the countless glories and virtues of Brahm, but they are *not* Brahm in the complete sense (verse no. 10). This Kanda outlines the method of meditating upon Brahm with the help of aids such as Hans and Pranav. These grand topics are covered in Kanda (Canto) 1.

The ideas expressed in the first Kanda are further elaborated in Kanda 2 which outlines how the supreme Brahm has a paradoxical nature in the sense that while the whole creation is its image, is regulated and empowered by it from within, Brahm still is absolutely different from any of its images and things that it controls and empowers. During the course of enumerating the glories and virtues of Brahm, this Kanda also outlines the eclectic characters and way of thinking a Brahm-realised and enlightened person.

Chapter 20—Par-Brahm Upanishad/Parbrahmo-panishad—This Upanishad is primarily classified as a Sanyas Upanishad as it emphasizes the role of Sanyas in Brahm-realisation, or spiritual enlightenment and awakening. It has twenty Mantras or verses.

It opens with sage Shaunak asking sage Pippalaad where the things of this creation were before the latter came into existence, and who is the Lord who created them. In his answer Pippalaad outlines the grand and magnificent virtues of the supreme transcendental Brahm. This Upanishad derives its name from this very fact.

The term 'Brahm' as envisioned in this Upanishad incorporates all the aspects of creation, and therefore Brahm is said to have various forms, known as the 'Paads' of Brahm. These are the following—the Tripaad Brahm, i.e. the three planes of existence in which Brahm exists, the Chatush Paad Brahm which corresponds to the four planes of existence, and the Panch Paad Brahm which pertains to the five divine aspects of Brahm. From the metaphysical angle they correspond to the various states of existence of consciousness, viz. the Jagrat state or the waking state, the Swapna state or the dreaming state, the Sushupta state or the deep sleep state, the Turiya state or the post-Sushupta state, and the Turiyateet state which is the super-conscious state of transcendental existence.

The ordinary living being known as the Jiva corresponds to the first three states of existence, and hence to the Tripaad Brahm. When the same Jiva becomes enlightened and self-realised he attains the Chatush Paad of Brahm, and finally when he becomes Brahm-realised he attains the Panch Paad of Brahm. To achieve these

eclectic states of existence, the Jiva is advised to take recourse to the 8-fold path of Yoga (verse no. 2).

Further, the terms Atma, Pran and consciousness are all treated as being synonyms of Brahm.

Next comes the discussion about the importance and significance of the sacred thread (called the Yagyopavit or the Brahm Sutra) as well as the tuft of hair worn on the top of the head (called the Shikha) as symbols of Brahm. These concepts have been extensively dealt with in this Upanishad. They are of no real consequence if their true meaning is not understood and practiced in one's thoughts and actions (verse nos. 3, 6-11, 15-20). True sacred thread and tuft of hair is internal awakening and enlightenment about Brahm, the cosmic Consciousness that resides in the inner-self as the pure Atma, and this Gyan (knowledge) itself is like the Agni (the sacred fire) as it burns all spiritual impurities of the aspirant, and renders him holy, divine and pure (verse nos. 12-14).

Finally, the Upanishad concludes that a wise spiritual aspirant should discard external paraphernalia of Sanyas (life of renunciation) such as the sacred thread and the tuft of hair on the head, and instead concentrate on meditating upon Brahm by employing the Mantra 'OM', which he should treat as a representative of his sacred thread as well as the tuft of hair, for attaining Mukti (liberation and deliverance).

Chapter 21—Tripura Tapini Upanishad—This Upanishad belongs to the Tapini category of Upanishads which narrate the dynamic Shakti (the all-powerful dynamism representing the cosmic energy) aspect of the Supreme Being. This Shakti is visualized in a female form as a divine Goddess. It employs numerous symbols and esoteric formulas to invoke this Shakti. In the present case, this Shakti is represented by Goddess 'Tripura'.

The word 'Tripura' has many connotations—viz. it refers to the Goddess who lives uniformly throughout the known three worlds in a subtle form, providing them with their inherent energy and vitality; it means the Goddess who has three divine forms as the Bindu (drop of energy and knowledge), the Bija (the seed from which the entire creation emerged) and the Naad (the primeval sound vibrations in the cosmic ether which was the primary source of creation); it means also the Trinity Gods (Brahma the creator, Vishnu the sustainer, and Shiva or Rudra the concluder) personified; it implies the three Gunas (the Sata Guna, the Raja Guna and the Tama Guna); she represents the three divine dynamic aspects of the Trinity Gods, i.e. Saraswati (the power of knowledge and speech), Laxmi (the power of wealth and fame), and Parvati (the cosmic Mother). The Goddess Tripura is therefore a personified form of the dynamism of Brahm, the supreme transcendental Authority of creation, in entirety.

This Upanishad has five elaborate Cantos. While Cantos 1-4 are composed in the form of paragraphs, the last Canto 5 is in the form of verses. Canto 1 is primarily dedicated to espousing the divinity and supremacy of the Goddess, and explains how she is Brahm personified. Since the Tapini category of Upanishads describe esoteric forms of occult worship along with the secret formulas invoked for such worship, an instrument or a geometrical figure is needed for the purpose, and in the present case it is the Sri Chakra. This is elaborately described in Canto 2. The various Mudras (postures of the body during such worship) are described in Canto 3. The next Canto 4 is dedicated to the theme of Mukti or liberation, deliverance, emancipation and salvation of the soul, the various Mantra that aid the process, and how the worshipper can have a divine glimpse of the Goddess. Finally, Canto 5 is totally dedicated to

elucidating upon the doctrines pertaining to Brahm-realisation and outlines the philosophy related to Brahm.

Chapter 22—Devi Upanishad—This Upanishad was revealed as a preaching of the divine Mother Goddess for the benefit of Gods. It describes the primary esoteric form of the Goddess as dynamism of the Supreme Being personified. It stresses that whatever that exists in this vast and multifarious creation is actually the same Goddess revealed in all these individual forms. It goes on to explain the Adi-Vidya, the primary knowledge, followed by the monosyllabic Mantra of the Goddess which is her Beej Mantra, and the nine-lettered Mantra which is called the Maha-Chandi Vidya, along with the rewards associated with them. Though this Upanishad is brief, but for those who follow the occult science of Tantra Vidya it is of utmost importance and significance.

Chapter 23—Bhavana Upanishad—This Upanishad emphasizes the point that the body of the spiritual aspirant itself is the holy altar where a wise man visualizes the presence of the Divinity, the Supreme Being and his dynamic Shakti. A lot of symbolism is employed in this Upanishad to emphasize the great metaphysical truth that it is the same universal Brahm who is the supreme transcendental Authority and Lord of this creation, the cosmic Consciousness and the dynamic powerhouse that drives this creation from the inside as well as from the outside that has revealed itself in the form of the various units of the individual creature's body which is like a microcosm, as well as the visible world on a large scale which is the macrocosm.

In this visualization, the Upanishad draws a parallel between the various units of the body of a living being at three level of its microcosmic existence, viz. the gross, the subtle and the causal, and the different units of this visible creation at the macrocosmic level. The supreme transcendental Brahm, i.e. the cosmic Consciousness, and its dynamism in the form of Shakti, i.e. the strength, the power, the energy, the vitality and the vigour that actually drives this whole creation on behalf of Brahm, is inherently present in all of these units, whether at the level of the body or the level of the creation. The dynamism of Brahm in the form of its Shakti is the underlying power that controls and operates this world from the inside as well as from the outside. This Shakti drives the world and empowers each unit of its various components to function smoothly according to the larger scheme of things.

Since a deity is worshipped on an altar, especially the Goddess whose place of worship is called a 'Shakti Peeth' which is literally a seat or center of energy, vitality, power and strength, the vital points of the body are also known as Peeths.

Another important point to note is that a wise spiritual aspirant is advised to understand the subtle philosophy and the metaphysical imports of the various steps involved in formal ritualistic forms of worship, and use these as symbolisms to offer his obeisance to the Supreme Being in the correct manner which would be a truthful form of worship and would actually be of any spiritual benefit to him. Mere formalities would be of no real good to him if he has not grasped their essence. It is like eating food to fill the stomach or satisfy one's taste buds but not being able to digest the food that is eaten, for the body actually benefits when the nutrients of the food are absorbed by it and not merely by filling up the intestines with tasty food. The gross food would be expelled and the body would remain weak and under-nourished inspite of the man eating to his full. So is the case when the worship is done as ritual involving formalities, without actually understanding what it means and what its intention is.

Chapter 24—Bhasma-jabal Upanishad—As the name suggests, this Upanishad is dedicated to the theme that truthful knowledge and enlightenment is one that literally ‘reduces to ashes’ (Bhasma) all the spiritual delusions and misconceptions of the Jiva, the living being, and establishes a seamless uniformity between the Jiva and Brahm, the Supreme Being.

It is in the form of a conversation between Lord Shiva, the most enlightened of the Gods and the patron Lord of all ascetics, and sage Bhusund, the disciple of the great sage Jabal. Since the disciple adopted the name of his Guru (moral preceptor) as his surname, Bhusund was known as ‘Jabal’.

In Canto 1, this sage ‘Jabal’, alias Bhusund, requested Lord Shiva to enlighten him about the great spiritual and metaphysical importance and significance of ‘Bhasma’, the ash of the sacred fire sacrifice. The Lord not only explained the physical characteristics of this mystically empowered ash but also how to correctly wear it on the aspirant’s body along with its stupendous divine qualities which bestow the wearer with Mukti or Moksha, i.e. spiritual liberation, deliverance, emancipation and salvation. When properly worn on the body with full understanding of its significance and importance, this seemingly ordinary ash of the fire pit assumes astounding qualities and powers, enabling the wearer to become self-realised and Brahm-realised. The knowledge of Brahm and the truthful ‘self’ is like the great fire of the doomsday because it burns all sorts of delusions and ignorance that completely swamp the wisdom and intellect of the creature that has forced him to remain trapped in this world, and instead establishes oneness between his own individual ‘self’, which is a microcosm, with the cosmic ‘Self’ known as Brahm, which is the macrocosm of existence.

Canto 2 describes how the Rudraksha beads are worn on the body, as well as the detailed form of doing Dhyan, or meditation and contemplation, upon Lord Rudra or Shiva as he is the Supreme Being personified.

The Upanishad incorporates in its discussion two versions of the great ‘Rudra Suktas’ which are hymns dedicated to Lord Shiva. Besides these Suktas, a number of other eclectic Mantras of Shiva, such as the single word Mantra ‘Shivam’, the six letter Mantra ‘OM Namaha Shivaaye’, and the eight letter Mantra ‘OM Namaha Mahadevaaye’ are also enumerated along with their great powers and usage.

Chapter 25—Ganpati Upanishad—This Upanishad is dedicated to Lord Ganpati (also known as Lord Ganesh), the God who is offered worship first in any religious ceremony as he ensures its successful completion and obtaining of desired fruits by the worshipper.

It is propounded herein that Lord Ganpati resides in the inner-self of all living beings as their Atma, the soul and the pure consciousness. It then goes on to explain the meaning of the word Ganapati, how to meditate upon the Lord, the Mala-Mantras dedicated to him which are used to turn the beads of the rosary while doing Japa (repetition of the holy Mantras), the spiritual rewards of such meditation and contemplation, some special Mantras of the Lord which help the worshipper to fulfill his desires and attain fruits of his efforts, the benefits of reading this eclectic Upanishad, and the rules to be followed while doing so as well as for preaching this Upanishad to others.

The visible form of Lord Ganpati has also been described in this Upanishad (verse no. 11-14).

Chapter 26—Mahavakya Upanishad—This Upanishad is a short one, having only twelve Mantras or verses. It was revealed to the Gods by Brahma, the creator. It primarily deals with the esoteric knowledge of the divine and the sublime entity known as the Atma, the pure consciousness which is the ultimate Truth and absolute Reality of creation. The Atma, which is inherently immaculate and enlightened, however appears to be veiled in a shroud of ignorance and its attendant delusions, thereby robbing it of its immaculacy, its majesty, its magnificence, its primacy, its pristine purity, its glorious virtues, and its divine character. When one becomes aware of the reality of the Atma, he discovers it to be as splendid and radiant as the sun which is self-illuminated; the Atma is brilliant like the sun. This Atma is the supreme Shiva principle—i.e. it is the ultimate truth, most eclectic, sublime and holy, and a fount of bliss and beatitude.

The Atma is a personification of the supreme cosmic Consciousness that is also known as Brahm, and therefore it is the Absolute Truth of existence. The Atma is the truthful ‘self’ of all living beings. This ‘truthful self’ as well as Brahm are also known as the Hans, the divine Swan which is employed in the scriptures for an entity that is truthful, pure, holy and immaculate. Therefore, when a man becomes self-realised, he becomes Brahm-realised as well as a personification of Brahm. He then honestly proclaims ‘I am Hans’—i.e. I am a personification of Hans which is a divine bird symbolizing the eclectic virtues that are associated with Brahm as well as the Atma.

This realisation overwhelms the spiritual aspirant as he submerges himself in a high tide of ecstasy and bliss. The Upanishad concludes by highlighting the glories of it, and the immense spiritual benefits derived by reading and understanding it meaningfully.

The Upanishad derives its name ‘Maha Vakya’ from the fact that it preaches the Great Truth of existence, the ‘truth’ of the Atma and Brahm. The word ‘Maha’ means great, and ‘Vakya’ means a saying, an edict, an axiom, or an axiomatic maxim. It teaches and espouses the philosophy of Advaita Vedanta which essentially says that the ‘Truth’ is always one and not more than one, that this ‘Truth’ vis-à-vis this existence is known as the Consciousness, that the Consciousness is an immutable, eternal, constant, universal and uniform divine entity, and that it is known as the Atma at the microcosmic level of creation and as Brahm at the macrocosmic level. Knowledge of this eclectic and quintessential truth is a liberating factor for the creature who is tied in the fetters of ignorance and its attendant delusions. The Atma, therefore, is the ‘Tattwa’ or the fundamental principle and essence of creation; it is principal aim of all spiritual aspirants; it is the real target that ought to be pursued by all seekers of Truth.

Chapter 27—Gopal Tapini Upanishad—This Upanishad is dedicated to Lord Krishna whose other name is ‘Gopal’ (which literally means the Lord who takes care of cowherds, but implies in its ambit all the creatures of this creation). The Upanishad is in two parts—the Purva or previous section called the ‘Gopal Purva Tapini Upanishad’, and the Uttar or subsequent section called the ‘Gopal Uttar Tapini Upanishad’. Therefore, we shall divide this Chapter into two sections—viz. section 1 dealing with the first Upanishad, and section 2 dealing with the second Upanishad.

The ‘Gopal Purva Tapini Upanishad’ essentially deals with the divine form of Lord Krishna as it describes that the Lord is none but the Supreme Being himself personified in his form. It goes on to describe the divine form of Lord Krishna which should be meditated upon, along with the eighteen-letter Mantra of the Lord and its

spiritual importance. It then narrates the worship Yantra, the instrument that is used to offer worship to the Lord in formal forms of worship. This Upanishad was revealed by the creator Brahma when he answered the Gods who asked him as to who was the greatest God and Lord in creation.

The ‘Gopal Uttar Tapini Upanishad’ was however revealed by sage Durbasa for the benefit of the Gopis (milkmaids and cowherds’ wives) led by Radha when they enquired from the sage about the truthful nature and form of Lord Krishna. This is because they were confused about the reality of the Lord and his divine nature as his worldly activities seemed to be quite the contrary to the established principles regarding divinity, immaculacy and code of decent and ethical conduct. But the truth of the matter is that the Lord was absolutely immaculate and uncorrupt internally as well as externally. When the ladies had their doubts about this fact regarding Lord Krishna, sage Durbasa preached them the truth of Lord Krishna’s divine form and nature. Incorporated in his teachings are the various metaphysical, theological and spiritual concepts.

The sage cites the conversation between Lord Narayan, the Supreme Being, and Brahma, the creator, wherein the former preaches the latter about the various aspects of the greatest of the different incarnations of the Lord as Krishna. Great metaphysical and spiritual truths are revealed in this discourse. The concluding part of the Upanishad lists sixteen great Mantras of Lord Krishna that were revealed to Brahm by Lord Narayan. They are on the same pattern as the ones revealed for Lord Ram in the Ram Uttar Tapini Upanishad.

Chapter 28—Krishna Upanishad—This Upanishad reveals the divine aspects of Lord Krishna, the incarnation of Lord Vishnu that appeared on earth in the Hindu era known as Dwapar, which was the third of the four-era cycle of creation and conclusion. He followed the incarnation of Vishnu as Lord Ram in the previous era known as Treta-Yug.

There is a legendary tale that the great Gods and sages who lived in the heaven once approached Lord Vishnu, the sustainer and caretaker of this creation and regarded as the Supreme Being himself, and told the Lord that they were so overwhelmed by the Lord’s divine form during his incarnation as Ram that they wished to be very near to him and enjoy the privilege of his close company with an unrestricted access to him, the benefit they were denied during the Lord’s incarnation as Ram. At this request, Vishnu granted them their wish and promised them that during his next incarnation as Lord Krishna they would have this good fortune. This fact is revealed in verse nos. 1-2 of the present Upanishad.

The rest of the Upanishad is dedicated to explain the divine form of Krishna. It explains how Lord Krishna, along with his different companions as well as opponents, symbolized the various aspects of the Supreme Being alongside the auspicious and righteous aspects of creation as well as those aspects that are opposed to auspiciousness and righteousness. It establishes that Lord Krishna is none but Lord Vishnu in a visible human form. It stresses that a person who knows this secret and worships the Lord as such is able to get the reward that is equivalent to going to all pilgrim sites as well as obtain liberation and deliverance from this gross body and this entrapping world.

This Upanishad compliments the ‘Gopal Tapini Upanishad’.

Chapter 29—Hayagriva Upanishad—This Upanishad is dedicated to Lord Hayagriva, the horse-headed incarnation of Lord Vishnu. The word ‘Hayagriva’ has two parts—‘Haya’ means a horse, and ‘Griva’ means a neck or head.

This Upanishad was revealed to sage Narad by the creator Brahma when the sage requested him to preach Brahm Vidya, the knowledge pertaining to the supreme transcendental Brahm, the Supreme Being.

The Upanishad lists the Mantras of Lord Hayagriva, and emphasizes in its concluding verses that the primary form of Mantras that were offered by the Gods to the Supreme Being were in the form of musical sounds instead of articulated words just like the neighing of a horse. This is the genesis of the Beej Mantras of any given hymn.

Chapter 30—Dattatreya Upanishad—This Upanishad is dedicated to Lord Dattatreya who is believed to represent Lord Vishnu, the sustainer and protector of creation. The story regarding this form of Vishnu has been narrated in a note to stanza no. 4 of Section 1 of this Upanishad.

It has a total of three Sections or Khandas. The Mantras (hymns) of this Upanishad are in the form of a running prose, with only one in the style of a verse. For the purpose of narration, however, we shall be dividing the prose into convenient paragraphs or stanzas.

It is one of the revealed Upanishad as it was preached by Lord Narayan, the Supreme Being, when he was asked by Brahma, the creator, about the transcendental knowledge that is not only supremely enlightening but also a provider of liberation from the endless cycle of birth and death in this mortal world. The Lord advised him to meditate and contemplate upon the element of ‘Sattva’, the quality of eternal truthfulness and purity from which effuse equally eternal virtues of holiness, purity and divinity. Those who do so realise that the Lord to whom this Sattva refers to is a personified form of ‘Datta’, i.e. one who gives the boon of the knowledge of the transcendental and the divine. This knowledge pertains to Brahm, the Supreme Being that is the cosmic Consciousness and the Absolute Truth of creation.

On successful meditation as advised by Lord Narayan, Brahma was able to become realised as he experienced this Sattva principle, the principle of the eternal Truth. He then preached it to others.

After this preliminary introduction, a series of Mantras dedicated to Lord Dattatreya are given. These Mantras are of different categories, such as one-lettered, six-lettered ones etc. All this is narrated in the first Section.

The second Section gives the Mala-Mantra, the long Mantra used to turn the rosary by those who worship Lord Dattatreya.

The third and the final Section outlines the reward that the worshipper gets by practicing the teachings of this Upanishad, and offering his oblations to Lord Dattatreya and meditating upon him. Such a person becomes Jivan Mukta, i.e. he obtains spiritual liberation and deliverance even while he is alive and active in this mortal world.

Chapter 31—Garud Upanishad—This Upanishad is dedicated to Garud, the legendary bird known as Heron or Eagle which is regarded as the celestial vehicle of Lord Vishnu, the sustainer and protector of creation. Garud is no ordinary bird, but has divinity and greatness inherent in him, as otherwise he would not have been selected by Vishnu to be his mount. Being the only God in the closest proximity of Vishnu, Garud acquires special significance for the devotees of Lord Vishnu. He is

invoked to neutralize all sorts of negative and horrifying circumstances in this world which resemble the poison or toxin contained in the bite of a venomous serpent that torment the spiritual aspirant endlessly. This special virtue and power of Garud is derived from the fact that he is regarded as the greatest foe of the poisonous snake. Therefore, the knowledge of the Mantras dedicated to Lord Garud are directly related to the mystical occult powers that help one to overcome the poison of snake-bite. This knowledge is called ‘Garud Vidya’.

The Upanishad enumerates and describes in detail all the different Mantras pertaining to Lord Garud, how to do Japa with them, how to use them in practice (verse nos. 2-8), and what are the great benefits of invoking and mastering these Mantras (verse nos. 12-25) on the same pattern as done in the other Upanishads dedicated to different deities. The divine form of Lord Garud is also narrated (in verse nos. 5-7).

In the course of its narration, the Upanishad lists the names of different types of snakes (verse nos. 5 and 24) along with the exceptionally magnificent and miraculous power of Garud to neutralize all types of poisons (verse nos. 9-24). The worshipper of Lord Garud becomes immune from the bite of venomous insects and reptiles (verse no. 25). This Upanishad was first revealed to sage Narad by Brahma, the creator. It was then passed down the line of sages and seers for the benefit of the creatures of this creation (as listed in verse no. 1).

There are a number of ‘Yantras’ or worship instruments that are used in formal ritualistic forms of worship of deities described in some of the Upanishads of the Atharva Veda. They are added to the relevant Chapters—e.g. (i) Sudarshan Chakra at the end of Chapter 11 (Tripadvibhut Maha Narayan Upanishad), (ii) Ram Yantra to Chapter 12 (Ram Rahasya Upanishad), (iii) another version of the Ram Yantra to Chapter 13 (Ram Tapini Upanishad), (iv) DeviYantra to Chapter 21 (Tripura Tapini Upanishad), and (v) Gopal Yantra to Chapter 27 (Gopal Tapini Upanishad).

A number of appendices have been added to this volume to supplement and compliment the main text. A brief summary is as follows—

Appendix 1 contains the **Shanti Paath** that is common to all the Upanishads of the Atharva Veda. This Shanti Paath is recited at the beginning and at the end of reading of a particular Upanishad. It is basically done to request the Supreme Being to give the reader peace and bliss.

Appendix 2—Pran Sukta—The ‘Pran Sukta’ is the fourth Sukta (hymn) of the eleventh Kanda (Canto or Section) of the Atharva Veda. It has a total of twenty-six verses. In relation to the Upanishads, it has special relevance to the Prashna Upanishad which is Chapter 1 of this present volume.

In this Sukta, Pran, the life-conscious factor in this creation revealed in the form of ‘vital winds’, is treated as being synonymous with the Supreme Being and shown equal reverence because without Pran no life is tenable in this world. The Rishi of this Sukta, i.e. the sage who had first conceptualized or formulated this hymn, was Bhargava Vaidarbhi.

Pran has been lauded as the most exalted and powerful of all the elements in creation, as being all-pervading and omnipresent in the living world, as being the entity that injects life and consciousness in this creation, and as being the essence life-

sustaining force present in all herbs and food that sustain life in this world. Therefore, it deserves the greatest of respect and honour.

Appendix 3—Neel Rudra Upanishad—This is a minor Upanishad belonging to the Atharva Veda tradition, having three short Khandas or Cantos. It basically narrates the ‘Raudra’ (angry) form of Lord Shiva who is known as ‘Neel-Kantha Rudra’ because of the fact that his throat is permanently tinged purple or dark blue.

In the first Canto, prayer is made to Lord Rudra to shed aside his angry form, and instead adopt a form which is calm and auspicious.

In the second Canto, it is visualized that Lord Rudra is in the affectionate form of Gopal, one of the names of Lord Krishna, who is bewitching with the trademark peacock’s feather stuck in the lock of hairs on his head. Rudra is also said to be Indra, the king of Gods. This Canto also narrates the most potent weapons of Rudra in his form as Indra because the latter needed these weapons to rule over this world.

And finally, Canto three narrates the ‘Neel-Kanth’ form of Rudra, or the form of Lord Shiva with a dark-blue tinged throat. This colour of the throat shows that the Lord is so merciful that he did not care about his own welfare but gulped the ‘Halaal poison’, the most corroding and fierce poison that was produced at the time of the churning of the ocean by the Gods and the Demons in search of Amrit, the elixir of eternal life and bliss.

Neel Kanth Rudra or Shiva with the blue/purple throat is also known by other names, such as Kedareshwar (the Lord of Kedar, the mountainous abode of Shiva), Virupaksha (the Lord with three eyes, hence looking most unconventional) etc.

Appendix 4—Surya Sukta—The ‘Surya Sukta’ is a hymn dedicated to the Sun God known as Surya. It lauds Surya as being the eye of the whole world, providing the latter with light and the consequent ability to see. Surya infuses life in this world by the way of providing it with energy, light, heat, vitality and dynamism without which no life is ever sustainable. Hence, it is equivalent to being the Atma or soul of the whole world; the world depends upon Surya for its survival and nourishment. Surya inspires the living being towards auspiciousness and righteousness as symbolized by the ‘light’ that it provides—i.e. it removes the darkness of ignorance and its attendant delusions and accompanying ghosts, and instead illuminates the correct path, symbolized by wisdom, erudition, knowledge and intelligence, for the creature to follow in order to reach his desired destination. The Sun blesses the creation with energy, vitality, health and nourishment; the Sun controls the seasons and rainfall; the Sun helps growth and development of plants and crops.

The Sun has special importance for the seekers of the Truth and the Supreme Being as it is the most splendid and vivid evidence of the truthful Lord. Nothing else in this creation matches the Sun in its astounding dynamism and eternal energy, its magical life-injecting and life-sustaining abilities, its stupendous brilliance, radiance, splendour, majestic glory and magnificence that can be equated with those of Brahm, the supreme transcendental Being. In fact, for all practical purposes for this world, Sun is a visible manifestation of Brahm, the Supreme Being.

Hence, Surya is an object of great reverence and adoration for all living beings; Surya is the de-facto Lord of creation. It has special relevance to the Surya Upanishad which is Chapter 17 of the present volume.

Appendix 5 is the **Griha Sukta** which appears in the Paippalaad branch of the Atharva Veda. It is relevant to the Brihajjabal Upanishad (Brahman 3, verse no. 11

especially). This Sukta is essentially a prayer for the all-round welfare and well-being of the householder.

Appendix 6 There are many esoteric concepts, principles, topics or terms of metaphysics, theology and spiritualism forming an integral part of the Upanishad Texts, as their lexicon, that need a detailed explanation and more elaboration for their proper and correct understanding, to make their meaning clear so that they become useful for a wider and better understanding of the texts of the Upanishads, making them easy and comprehensible for even a lay person.

Since such concepts, principles, topics or terms are many, since the body of relevant information is broad-based and extensive, and since they need a detailed analysis and exhaustive explanation which can be applied to the reading of all Upanishads, this author (Ajai Kumar Chhawchharia) thought it prudent and practical to publish them as independent Books by collating and curating relevant information from a wide swathe of the Upanishadic texts.

This appendix no. 6 at the end of our current book on the 'Shukla Yajur Veda Upanishads' provides to the reader a list of such Books, along with the websites and links from where they can be independently accessed / downloaded if the reader is interested to do so.

Appendix 7 is a brief introduction to the Author of this book, Ajai Kumar Chhawchharia, and the many books written by him as a service to Lord Ram.

Appendix 8 has a number of Diagrams and Sketches that are related to different Upanishads of the Atharva Veda.

I feel shy to say a word to express my deep and overwhelming sense of gratitude and thanks for my Guru Lord Hanuman ji, because words cannot do justice to my feelings and the extent of benevolence, munificence and benediction that the Lord has been gracious enough to shower on me, and without whose wish, direct intervention and constant guidance, this volume, like the others in the series, would not have materialised at all.

At the same time, I ask forgiveness from my beloved Lord Ram, who is the very essence and soul of my life, for all my incompetence and childishness, and the audacity that I displayed to plunge headlong in the vast ocean representing the Upanishads just by relying upon his grace and mercy. And lo and behold, the Lord has held my hands and made the pen flow as if by magic, and this is the fact and the truth of my heart with no pretensions of modesty or simplicity whatsoever on my part. 'For there is not a word on my tongue, but behold, Oh Lord, you know it altogether. You have hedged me behind and before, and laid your hand upon me' (Bible, Psalms, 139/4-5). Oh Lord! I have uttered what I did not understand, things too wonderful for me which I did not know' (Bible, Job 42/2), but 'must I not take heed to speak what the Lord has put in my mouth?' (Bible, Numbers 23/12), for 'the Spirit of the Lord spoke by me, and His word was on my tongue (when I spoke what I said)' (Bible, 2 Samuel 23/2). Sure indeed, for 'You in your mercy have led forth the people whom you have redeemed; you have guided them in your strength to your holy habitation' (Bible, Old Testament, Exodus, 15/13 (the song of Moses)).

'God shall be my hope, my stay, my guide and lanthanum to my feet' (Shakespeare's Henry, vi, part 2, 11:iii)

I humbly present this book to my esteemed readers with a sincere request to excuse me for the errors of omission and commission, and this request is out of the depths of my heart.

Date—May, 2022.

Anthology of all the Principal Upanishads of the Atharva Veda

Chapter 1

Prashna Upanishad

This Upanishad is the Brahman of the Pippalaad branch of the Atharva Veda. It describes the six answers given by sage Pippalaad to queries raised by six other sages. First, Kabandhi enquired about Pran (the consciousness that infuses life and mobility in creation) and Rayi (the entity in which the Pran resides and which gives effect to the dynamism of Pran; the Prakriti or Nature). The second question was asked by Bhargava pertaining to the chief life supporting factor in creation, the factor which forms the foundation and basis of life in this world. The third question was asked by Kausalya, the son of Ashwal; it was in six parts and related to the origin of Pran. This question was an extension of the second question which revealed that Pran is the main factor that supports all forms of life in this world. The fourth query was raised by Gargya and it was in the form of five questions pertaining to the relationship between Parmatma (the Supreme Being) and the Jivatma (the living being). In the fifth question, Satyakam wished to know about the worship of OM, the divine symbol of Brahm. And finally, the sixth question was asked by Sukeshaa in which the latter wished to know about the 16 Kalaas or aspects of the Purush, the cosmic Male.

Sage Pippalaad answered them all satisfactorily, and they thanked him for enlightening them about these profound secrets of creation.

-----*****-----

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of this Shanti Paath.

Canto 1 (Question 1)

1. The son of sage Bharadwaj named Sukeshaa, the son of Shibi named Satyakam, the son of Garga named Saurayayani, the son of Ashwalya named Kausalya, Bhargava who resided in the country called Vidharva, and Kabandhi who belonged to the clan of sage Kaatyaayan—these six great sages worshipped Brahm, the Supreme Being, and observed all the relevant sacraments as ordained by the scriptures. They wished to learn and know more about Brahm, and with this auspicious desire in mind they took some Samidha (a gift as a token of respect and to indicate to the teacher that they have come to seek knowledge from him instead of testing the latter's competence) in their hands and went earnestly to the hermitage of sage Pippalaad¹ to seek this knowledge from him (1).

[Note--¹Sage *Pippalaad* perhaps got his name because he might have been used to eating a lot of Pipal, the fruit of the Pipal tree (the Indian Fig—*ficus religiosa*) or a

kind of long pepper called by this name. He was a great teacher of metaphysics, a master of the doctrine of the Upanishads, and one of the greatest exponents of their philosophy. He has taught many sages and seers of the period, such as Skaakalya, in Panch Brahm Upanishad of the Krishna Yajur Veda tradition wherein he describes the fundamental unity of creation and affirms that the five forms in which the Divinity exists are basically the revelation of the same Lord, and to the six sages in the Prashna Upanishad of Atharva Veda tradition wherein he answers their six questions to their satisfaction. He was taught about the spiritual wisdom pertaining to the spiritual aspect of life after death by Nachiketa who had himself got this knowledge from Yam, the God of death, as narrated in Katha Upanishad of Krishna Yajur Veda. Pippalaada was present on the bed of arrows on which Bhishma, the legendary patriarch of the epic Mahabharat period, lay prior to his death when he taught wisdom to Yudhisthir. [Refer Mahabharat, Shanti Parva, 47/9.] This shows that Pippalaad was a contemporary sage of the Mahabharat period.

When the two facts—one, that the Panch Brahm Upanishad was preached by him to Shaakalya who had died in the court of king Janak during a debate with the great sage Yagyavalkya when the latter cursed him for being arrogant and haughty of his knowledge and showing irreverence and impertinence as narrated in Brihad Aranyak Upanishad, Canto 3, Brahmin 9, verse no. 26 of the Shukla Yajur Veda tradition, and Yagyavalkya's annoyance with him as is evident in the preceding verses—3/9/18, 25, and second, that Pippalaad was present in the Mahabharat war period that occurred in the later half of the third era called Dwapar, the era of Lord Krishna, it is easy to conclude that this sage had a very long life, easily straddling at least two eras, i.e. the Treta (Ram's era) and Dwapar (Krishna's era) if not three, i.e. Sat Yug which was the first era, till Dwapar Yug which was the third era.

It is believed that he was the son of Dadhichi and his wife Suvarka. The wife of Pippalaad was called Padmavati. His son was known after him as Pippalaadi, and he was taught by the great sage Jabal which forms the text of the Jabal Upanishad of the Sam Veda tradition. It is a legend that he had ordained Shani, the malefic God who casts evil eye, to spare children below 12 years.

The Padma Puran describes another sage with this name who had become very arrogant because of special powers that he had acquired due to Tapa (severe austerity and penance), but later he was chastised by the creator Brahma. [Refer Padma Puran, Chapters 60-62.

It is narrated in the Brihajjabal Upanishad of the Atharva Veda tradition, in its Brahman 7, verse no. 5, that he had accompanied the learned king Janak to the abode of Prajapati Brahma, the creator of this world inhabited by living beings, to learn about the importance of wearing the Tripundra, the three lines made from a paste of the sacred ash taken from the pit of the fire sacrifice and worn by all the devotees of Lord Shiva as his symbol. After that, Pippalaad went to Vaikuntha, the abode of Lord Vishnu the sustainer of this creation to know more about this Tripundra and its esoteric secrets, metaphysical significance and mystical powers as narrated in Brahman 7, verse no. 6, and then to Lord Kalagnirudra, the form of Lord Shiva himself who had first revealed this Upanishad to one sage Bhusund (Brahmans 1-6), to learn more about it as narrated in Brahman 7, verse nos. 6-7.

The Par Brahm Upanishad, which is the twentieth Upanishad of the Atharva Veda tradition, was revealed to sage Shaunak by sage Pippalaad. Verse no. 1 of this Upanishad, in its opening stanza, says that Pippalaad was born in the lineage of sage Angiras.

The name of the sage appears in a number of Upanishads—viz. Atharva Shikha, Kandika 1, verse no. 1, and the Brihajjabal Upanishad, Brahman 7, verse nos. 5-7, besides the present Prashna Upanishad.]

2. Seeing their eagerness and sincerity, Pippalaad asked these six sages to spend one year in his hermitage, faithfully doing Tapa (observing the strict codes of austerity and penance) and diligently observing the principles of Brahmcharya (i.e. maintaining strict self control over the senses). He assured them that at the end of this period he would answer their questions or impart the knowledge which they seek if he knew the answer and was acquainted with that knowledge (2).

[Note—In earlier times this was a standard practice to make the disciple wait for some time before the teacher accepted him as his disciple. This was to test the person's sincerity and trustworthiness because during this time the teacher could closely observe the daily routine of the disciple, his behaviour and the level of his intellectual development, judge his character and general eligibility for acquiring metaphysical knowledge to decide whether or not he is competent enough to be able to understand correctly what would be taught to him. Some instances of this appear in the Upanishads themselves—for instance, sage Shukdeo was made to wait for twenty one days by Janak in Maho-panishad of Sam Veda, Canto 2, verse nos. 21-28; the wise and enlightened king of Panchal, named Pravahan, made sage Aaruni wait for some time before the king answered his queries as described in Chandogya Upanishad of Sam Veda, Canto 5, section 3, verse no. 6-7; and the creator Brahma made Indra, the king of Gods, and Virochan, the king of Demons, wait for thirty two long years before answering their question about the Atma (the pure consciousness). Indra was not satisfied, so he went back again and again to Brahma three times. Indra was made to wait for a total of a hundred years, all the while observing austerity, self-control and doing penance—refer Chandogya Upanishad, Canto 8, section 7, verse no. 3; Canto 8, section 9, verse no. 3; Canto 8, section 10, verse no. 4; Canto 8, section 11, verse no. 3.]

3. At the end of this period, the son of Katyan named Kabandhi went to Pippalaad and asked, 'Oh Lord! From whom is this Praja (the living creation or the living beings) born or produced or created?' (3).

4. Explaining the process of creation or the Genesis of creation, sage Pippalaad replied, 'Prajapati Brahma (the creator of this visible world inhabited by the living creature) did Tapa (to observe austerity, do penance and suffer hardship for some noble cause) with a desire to initiate the process of creation and propagate his subjects or off springs (i.e. to initiate the process of creation).

He created or produced a couple consisting of Rayi and Pran¹. He thought that these two off springs of his would fulfill his desire of creation or producing countless creatures of numerous species, of myriad qualities and character traits (4).

[Note—¹The word *Pran* refers to the life factors in creation, such as consciousness and the vital winds that infuse life and consciousness in the otherwise lifeless, inane and gross body of the creature. The word *Rayi* refers to the entity that harboured the Pran and helped it to manifest its stupendous quality of injecting life into this creation. Rayi was the dynamism of Pran on display. Thus, Rayi was synonymous with Prakriti or Nature. In the language of modern science, the Pran is likened to the latent energy in creation, while Rayi can be likened to the matter. It is the union or conjunction of the two, Pran and Rayi, or energy and matter that the entire visible world has come into existence.

The point to note here is that the concept of the 'couple' and the 'need for their union' or the need for intercourse was seeded by none other but the creator Brahma himself at the beginning of creation. In other words, the creatures that would come into being as a result of this initial seeding would also follow the same path—i.e. they would need a partner to multiply and propagate themselves.

According to the revered sage Adi Shankaracharya, the Pran was the latent fire element in creation, and Rayi was the food that harboured this Pran in its bosom and helped to manifest its stupendous life-creating and life-sustaining qualities when it was eaten by the creature. This was at the micro level of creation. At the macro level, the fire was represented by the Sun, the food was represented by the Moon because the latter is said to be a celestial pitcher of Som, the elixir that gives life and happiness. This is asserted in the next verse.]

5. [Verse nos. 5-8 are devoted to praising the Sun God who is regarded as a manifestation of the Supreme Being known as Brahm with all the divine glories, stupendous powers and magnificence that the Lord is renowned for, and which helps him inspire, sustain, develop and protect life on this earth. There are a number of Upanishads in honour of the Sun God, also known as Aditya—(a) Rig Veda = Aiteriyo-panishad, Canto 1, verse no. 4, Canto 2, verse no. 4. (b) Sam Veda = Chandogya Upanishad, 1/6/3, 5, 6; 1/10/7; 2/9; 2/14; 2/24/12-14; 3/1-11; 3/18; 5/13; 6/4/2 etc.; Savitri Upanishad. (c) Shukla Yajur Veda = and Brihad Aranyak Upanishad of Shukla Yajur Veda—2/1/2; 2/5/5; 3/7/9; 3/9/5; 5/15. (d) Krishna Yajur Veda = Akchu Upanishad, Cantos 1 and 2; Brahmo-panishad, verse no. 1; Taittiriya Upanishad, Valli 1, Anuvaak 1, verse no. 1; Valli 1, Anuvaak 5, verse no. 2; Shwetashwatar Upanishad, Canto 2; Naryan Upanishad, verse no. 1. (e) Atharva Veda = Prashna Upanishad, Canto 1; Surya Upanishad; Gayatri Upanishad.]

The Sun is a personification of Pran, while the Moon represents the Rayi. In this vast world, everything that is Murta (gross) and Amurta (subtle) are Rayi. Hence, a Murti (image) is Rayi personified (5).

[Note—The *Sun* is the source of light, heat and energy for this earth. The Sun regulates seasons and rains, it controls the cycle of day and night, thereby regulating all aspects of life on earth. It is a symbolic personified and visible form of Brahm, the sublime form of the Supreme Being also known as the Viraat Purush, the vast and infinite macrocosmic form of Brahm. No life is imaginable without the Sun. Therefore, it is Pran personified. The *Moon* is lighted because of the Sun; the Moon has no light of its own but shines due the light of the Sun falling upon it. Therefore, the Moon showcases the magical power of the Sun to light up even distant bodies which have no light of their own. In other words, this Pran element represented by the Sun is capable of injecting life in an entity which has no life of its own, here the instance of the Moon. Since the Moon is lighted due to the inspiration provided by the Sun, it is like the Rayi. The Sun is the inspirer, and the Moon is the inspired one.

The Sun is an excellent example of the gross and the subtle aspects of Brahm. The eternal fire that is burning inside the disc of the Sun is the subtle aspect of Brahm; it provides the power and energy to the Sun to shine and burn. This fire is the ‘inspirer’ of the gross aspect of Brahm. The disc of the Sun is the ‘inspired’—the heat, light and energy that the physical body of the Sun gives is due to the fire burning inside it, but no one can see this fire. The viewer sees the disc of the luminous Sun only which is the inspired aspect of the Sun. The hidden fire in the Sun is the Pran of the Sun because it lends the latter its worth and power to shine. This ‘Pran’ of the Sun, i.e. the fire burning inside the Sun is Brahm manifested in its subtle form. The visible disc of the Sun, with its dazzling brilliance and splendour, giving out heat, light and energy is the manifested aspect of Pran or Brahm; it is the gross body of Pran or Brahm. Hence, it is the Rayi of the Sun.

But the fire burning inside the Sun is not the complete picture of Brahm which is a transcendental entity that surpasses all definitions. At the most, the fire represents only one of the numerous virtues of Brahm. Therefore, to say that the hidden fire

inside the Sun is Brahm personified in a subtle form is only a 'part or fraction' of the entire truth. In fact, the fire is a 'subtle image' of Brahm just like the external luminous disc of the Sun is the 'gross image' of Brahm. The fire embodies some of the grand virtues and characteristics of Brahm. The fire is the 'inspired' aspect of Brahm, and hence it is the 'Rayi' of Brahm because it is inspired by Brahm to burn and give out light and heat. In the context of the Sun, this fire becomes the 'inspirer' and the Sun becomes the 'inspired'. The Sun being a visible manifestation of the stupendous glories of Brahm is therefore the 'inspired' aspect of Brahm. The 'inspirer' Brahm is invisible. So when one worships the Sun as a manifestation of Brahm, he does so both in its subtle ('Amurta') and gross ('Murta') forms as mentioned in this verse. When the gross is worshipped, the subtle is automatically deemed to be worshipped. They both represent the 'inspired' aspect of the sublime Brahm that transcends both the gross and the subtle. Brahm is the universal 'inspirer' of both.

The Sun is at the core of life on earth; it helps in producing food crops of all varieties such as cereals, pulses, vegetables etc. that are eaten by the living being to survive and gain energy and strength. Without the light, energy and heat of the Sun there would be no vegetation on earth. Hence, the Sun is the 'inspirer' and the 'food' that is produced by the grace of the Sun is the inspired. When the food is eaten it gives the creature energy, strength and vitality. Therefore, that secret and invisible aspect of food that is used by the creature to derive energy, strength and vitality is the Pran of the food, while its external form, its external body is the gross aspect of this Pran. When this food is eaten and digested by the eater, the Pran is transferred to the eater in the form of the latter's own Pran, and the strength, energetic activity and vitality that the body of the eater shows is the inspired aspect of this Pran. The food therefore is the Pran, and the eater is the Rayi.

All the units of Nature that depend upon some Principal, such as the Moon depending for its light on the Sun, are called Rayi. These units may be visible (having a gross form) or invisible (having a subtle form).

The Sanskrit word for the Sun God or Aditya is *Surya*. This word has three connotations—viz. (i) Sarteha—one who moves. This refers to the Sun because it moves constantly across the sky. It also refers to the supreme cosmic Consciousness that makes all movement possible. (ii) Sviryate—this means one who receives and accepts. This virtue refers to the fact that all offerings offered to the fire sacrifice are done in the presence of the Sun, and since the latter is the celestial cauldron of fire all the offerings are deemed to be offered to it. In another plane, it refers to the Jiva, the living being, who receives stimuli from the world and then accepts them and deduces that the world from where they originate is real and true. (iii) Suvateha—meaning one who shines. This is very obvious in the case of the Sun. This virtue refers to the supreme Self or supreme Consciousness that is self-illuminated and self-effulgent.

Sun God or Surya appears first in the Rig Veda, 1/50. He is one of the chief Gods that sustain life. He is closely related to the Fire God; the Sun is a visible manifestation of the fire element. The sun is regarded as the 'eye' of the Viraat Purush, and at the time of creation when this Viraat Purush revealed himself as the individual creature such as for example a cow, a horse and a man, the Sun God took up residence in the eye (refer Aitereyo-panishad of Rig Veda, Canto 1, verse no. 4, and Canto 2, verse nos. 3-4). He is also regarded as visible manifestation of the supreme transcendental Brahm (refer Brihad Aranyaka Upanishad, 2/1/2; 2/5/5; 3/7/9). The Sun God watched the deeds done by all the creatures (Rig Veda, 1/50/2). The Sun is like the Atma of all the creatures (Akchu Upanishad, Canto 1, verse no. 1; Rig Veda, 1/115/1; Shatpath Brahman, 14/3/2/9).

The Sun is the brightest, the most splendourous, the brilliantly radiant, the most majestic and grandest entity in the entire firmament. The whole length and breadth of the sky is lit with its light; all the objects present in the sky, visible or invisible, are illuminated by its light. It is the eternal and infinite celestial source of light, heat and

energy; it inspires, fosters, sustains and protects life in this world; it is synonymous with and a metaphor for life in all its dimensions. Its splendour and radiance makes it an apt metaphor for knowledge, wisdom, erudition, sagacity and enlightenment. As an embodiment of this virtue of knowledge, wisdom, erudition and sagacity he has been held in high esteem and as the great teacher and preacher of eclectic knowledge pertaining to the philosophy expounded by the Upanishads. He had assumed the form of a horse and revealed the Shukla Yajur Veda to the great sage Yagyavalkya. He was also the teacher of Hanuman, said to be incarnate Wind God and Lord Shiva, and who was the great, most ardent and the wisest devotee of Lord Ram.

From the physical perspective also, the Sun is regarded as a fount of light, energy and heat which supports life in all forms in this physical world. No life is imaginable without the presence of the Sun.]

6. When the Sun rises in the east at the end of the night, it accepts the Pran (forces of conscious life) present in this direction and lets this Pran dwell in the rays radiating out from its body. [The rays of the Sun carry the life giving energy, heat and light emanating from the Sun, metaphorically called the 'Pran' of the Sun, to all the directions where the rays of the Sun fall. The Sun brings life and cheer to this world with its rising; the rising Sun is a harbinger of new life and activity.]

The same Sun accepts and distributes the Pran (forces of conscious life) in all the directions of the celestial globe—the directions of the south, west, north, nadir and zenith as well as the center. It shines and illuminates all the directions with its rays. [In other words, the Sun uniformly inspires life on this earth. Its rays are the body which transfers its Pran and injects it in this world. The life that is sustained with the help of the Sun's energy, light and heat is the 'inspired' aspect of the Sun, while the Sun itself is the 'inspirer'. So, the Sun is the 'Pran' and the visible life in this world is the 'Rayi'; without the Sun the visible life cannot survive; the latter is the dynamism of the Sun on display. In the context of the rays, the life-sustaining subtle energy of the Sun that these rays carry is the 'Pran', while the visible dazzling light and scorching heat that the rays of the Sun display vividly are the 'Rayi' aspect.] (6).

7. The Sun God is a visible revelation of the 'Vaishwanar Agni', the all-pervading universal fire element.

He is 'Vishwa Roop'—i.e. he is revelation of the Viraat Purush who is the macrocosmic all-inclusive gross body of the supreme Brahm; it is from this Viraat that the entire creation has emerged.

And he is personified 'Pran'—the all-important life and conscious factors in creation represented by the heat, light and energy of the Sun, factors without which life is not tenable in this world.

These facts have been endorsed by the sacred hymns of the Vedas too (7).

8. The Sun God is an embodiment of all forms of life in this creation. He is the support, base and foundation of all life in this world. He is blessed with majesty, grandeur, radiance, splendour and magnificence. He is omniscient and all-knowing. He is steadfast in Tapa—i.e. he steadily continues to burn and suffer himself for the benefit of the rest of the creation. And that is why he has no match and parallel for him.

The Sun God who is endowed with millions of dazzling rays to highlight his glory and magnificence as he rises or reveals himself as the subtle Pran (conscious life) in all the living beings in this world. Hence, all the countless forms or species of life that exist in this creation are like the numerous rays of the same Sun God

manifested in these individual forms. Since the rays of the Sun are all equal in brilliance and magnificence, it shows that each living unit of this creation is equally important, and no one unit is less or more valuable than the other. Each is an equal manifestation of the same Sun God. [Since the Sun God is a manifestation of the supreme Brahm or the Viraat Purush, the Pran or life consciousness as well as of the Vaishwanar Agni or the universal fire element as mentioned in verse no. 7 above, it follows that the creatures of this creation are also manifestations of these divine entities.] (8).

9. [The following verses, nos. 9-10, 13-16 describe the destiny of the person which depends upon the type of desires he has while doing deeds. Refer also to the destiny of the creature which has been succinctly described, inter alia, in the following Upanishads—Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 4/3/33, 35-38, 4/4/1-14, 5/10-5/11, 6/1/1-6, 6/2/2, 14-16, etc.; Chandogya Upanishad, Canto 5, Section 3-10; Kaushitaki Brahmin Upanishad, Canto 1; Taittiriyo-pahishad, Valli 2, Anuvak 6; Katho-panishad, Canto 1, Valli 1, verse no. 20; Canto 1, Valli 2, verse no. 1-6; Canto 2, Valli 2, verse no. 6-8; Canto 2, Valli 3, verse no. 4-17; Subalo-panishad, Canto 11; Prashna Upanishad, Canto 3, verse no. 7, 9-10.

From the perspective of this Canto where the Sun God is regarded as the personification of the Supreme Being who is the primary creator of this entire creation, is its inspirer, motivator, nourisher, sustainer, protector, caretaker and Lord, the Sun God is deemed to be the 'Prajapati' as described here in this verse. The word Prajapati means one who is the Lord and Master, the 'Pati', of his subjects, the 'Praj'.]

The Samvatsar (a year consisting of the one full cycle of the summer and the winter solstices of the sun) is indeed the Prajapati. The two halves of the year, i.e. the summer and the winter solstices of the Sun are the two roads or paths through which this Prajapati moves. [The equinox point is the central dwelling place of the Sun God who is called the Prajapati here because the Sun looks after all the aspects of life on earth where all forms of living beings live. For one half of the year the Sun moves to the north of the equator, and for the next half to the south. These two directions are symbolically the two 'Ayans' or paths in which this Lord moves to oversee his subjects.]

Those persons who take the path of doing Karma (performance of deeds) in order to fulfill their desires or aspirations move to the abode of the Chandra (Moon) God¹ and enter the cycle of birth and death.

Hence, those Rishis (sages and seers or learned ones) who think of their subjects (such as family, kith and kin, friends, dependants, compatriots, peers, members of the extended family which includes the entire society) move in the south direction on the path called the 'Pitri Yaan Marga'—i.e. they become 'spirits' which are concerned about the welfare of their descendents. This path of 'Pitri Yaan' is the symbolic Rayi² (9).

[Note—¹The word 'Chandra' is derived from the root 'Chadi' meaning happiness, joy, pleasure and comfort. Therefore, those who desire worldly happiness, joy, pleasure and comforts spend the energy and strength of their Pran to fulfill their desires and achieve this aim while they are alive. Such persons are responsible for propagation of this creation consisting of the material world with its uncountable sense objects, wealth, prosperity, pomp and pageantry, and other attractions. They remain engrossed in it while alive, and aspire to redo it even after death. So they symbolically go the abode of the Moon or Chandra God who presides over such

worldly charms. It is these kind of people who help to propagate this world of living beings, and they hope to continue their mission even after death. So they become 'spirits' or 'Pitrs' to oversee the assets they left behind in this world. Their soul continues to remain hitched to this world instead of finding liberation and deliverance.

²Once they become 'Pitrs' they are motivated by the desire to take care of the welfare of their subjects on earth. They are always worried about their descendents and the assets left behind by them. They are inspired to look after this world even after they have left it. So they are called 'Rayi'—the eternally 'inspired' ones.]

10. Those who are wiser and more enlightened search for the truth about the Atma, the pure consciousness. While alive, they spend their time in doing Tapa (austerity, penance, sufferance of hardship for some noble cause), observing the strict codes of Brahmacharya (self control of the senses), develop Shraddha (faith, devotion, conviction) for the Supreme Being, and strive to acquire high quality Vidya or knowledge of this divine and eclectic Truth.

Such people go on the path leading to the north (symbolically meaning the path that is uplifting for the soul and helps them to elevate themselves from a lowly life of an ignorant mortal to an eternal life of enlightenment and wisdom). They go to the abode of the Sun God. [This means they come closer to the eternal fount of knowledge, wisdom and enlightenment represented by the brilliant shine of the Sun. It also means they come closer to the Supreme Being because the Sun is a manifestation of the latter.]

The Sun God is the sustainer and protector of the Pran (vital life consciousness in creation). He is fearless and gives fearlessness. He is imperishable and eternal. He is the supreme destination of exalted souls. [It must be remembered here that Sun referred to in these verses is not the physical 'sun' that is seen in the sky. The Sun is a metaphor for Brahm, the supreme transcendental Brahm; it is the eternal cosmic force that lights up the creation as its Pran or life consciousness; it is the power around which the entire edifice of this world revolves. The latter fact is symbolically depicted in the revolution of the planets of the solar system around the physical sun which is the hub of this system. Even as the gravitational pull of the physical sun keeps all the planets in their position in the vast void of space and prevent their scattering about in a chaos, the Brahm in the form of its dynamic counterpart called the Pran helps to bind the creation in one huge garland called the 'creation'.]

Hence, once the exalted soul (a wise and enlightened person) reaches this high abode of the Sun God, it does not have to come back again to this world. [That is, once true knowledge is achieved by a wise person, once he is enlightened about the grand Absolute Truth behind the external façade of this world, he realises where real happiness, joy, peace, comfort and bliss is to be found. He no longer would search them in this world of material objects, but in the Atma or pure consciousness. Such people stand in sharp contrast to those described earlier in verse no. 9. So, such people find liberation from the cycle of death and birth. They have realised that the world is perishable and transient, that therefore it cannot give them permanent peace and happiness, and that it is futile to search eternity and everlasting peace in anything that itself is perishable and impermanent.]

This axiomatic maxim is confirmed by the next verse (10).

[Note—There is another way of interpreting this verse. The Sun is a cauldron of eternal fire. It is like the celestial fire pit. A person who observes the codes of religious conduct as narrated in the first stanza, i.e. does Tapa, observes Brahmacharya, has Shraddha and acquires Vidya, and constantly thinks of the Sun

God, is symbolically doing the sacred fire sacrifice. He is offering his Pran as the ultimate sacrifice to the holy fire. Anything sacrificed in the fire is burnt down. Here it metaphorically means that the grossness of the person's 'self', his gross body with all its organs and never-ending desires, is burnt down to ashes. In such a situation, the 'self' or the Atma is permanently liberated and finds its deliverance. Since there is no body to come back to, there is no fear of taking birth again.

Further, during such fire sacrifices, one is expected to give away all his worldly possessions as charity. With no material objects and wealth left behind to act as an attraction or drag on the soul, the latter flies off to freedom with nothing to look back to again. It's true renunciation.]

11. Some scholars assert that this Prajapati (i.e. the Sun God) is the father of all creation. [This is because the Sun is at the core of life on earth; no life is imaginable without the light, heat and energy that the Sun provides.]

He has five legs¹ and twelve shapes or forms².

He lives in the middle of the sky, and bears the water. [This water refers to the fact that the Sun is responsible for the rainy season. The heat of the Sun evaporates water from the ocean which, in due course of time, is transformed into rain. The Sun controls the seasons and the movement of wind. The control over wind can be easily verified if one observes how the wind picks up speed as the Sun moves up in the sky during the hot summer days in the desert or the plains of northern India. The sky is calm in the morning, the hot wind gathers speed during the noon hours, and it subsides at dawn. The movement of the rain-bearing clouds is regulated by this flow of wind, and therefore the rain is directly controlled by the Sun. This fact is represented here by saying that the Sun bears the water.]

Some other experts say that the Sun God has seven rings or circles³, and six spokes⁴ (11).

[Note--¹The *five legs* are the five vital winds called the Prans. They may also refer to the five primary elements called the Bhuts which constitute the building blocks of life.

The five Prans are the following—(1) Pran— this is the main vital wind and usually refers to the breath without which life is not possible; it is the vital wind located in the upper part of the body. It is the wind that is exhaled as well as inhaled, and which is responsible for infusing and sustaining life in the body; it is considered the chief wind in the whole setup because without this wind infusing life in the body no other wind would be of any significance to the creature. It is present in the mouth, nose, heart, navel, big toe of the leg. (2) Apaana—this is the wind that passes down the intestines, and is responsible for ingestion of food, its digestion in the intestines and the final excretion of the waste product from the body—its grosser content through the anus and its fluid contents through the urinary system of the kidneys. This is the wind that moves down in the body and is chiefly located in the lower part of the body—in the intestines and anus, lower abdomen, thighs, knees. (3) Samaana—it is uniformly present throughout the body and as the name itself suggests it is responsible for uniform pressure and balance in the body besides equal distribution of nourishment throughout the body by maintaining proper circulation of blood. Therefore its functions somewhat resembles that of Vyan wind. It is said to be especially present in the ears which are said to be the specialized playing field for the Samaana wind as it helps maintain balance in the body through the semi-circular canals in the ears. It also helps to coordinate the ears and the intellect because the latter would base its decisions on what it hears with the aid of the ears. (4) Udaana— this is the wind that helps the body to rise and move about, it also helps the body to expel toxic waste gases through the nostrils and mouth in the form of exhalation and cough. It is predominantly present in the hands, legs and the various joints of the

body. (5) Vyan—this wind helps in maintaining equilibrium and pressure within the body as well as to ensure equal distribution of nutrients in the body by maintaining circulation. Hence, it works in close coordination with the Samaan wind. It also helps to control the functioning of the other winds. It is located in the ears, thighs, waist region, heals, shoulders and throat.

The five Bhuts are the following—sky or Akash, air/wind or Vayu, fire/energy or Agni/Tej, water or Aapo, and earth or Prithivi/Bhumi.

²The *twelve forms or shapes* refer to the twelve months of a year.

³The *seven rings or circles* are the days of the week.

⁴The *six spokes* are the six seasons—early winter (Nov.-Dec.), late winter or the season of snowfall (Jan.-Feb.), spring (March-April), summer (May-June), rainy (July-August) and autumn or fall (Sept.-Oct.). It must be noted here that verse no. 9 has already stressed that we are dealing with one full cycle in the life of a creature on earth as represented by the word ‘Samvatsar’ which is the very first word of this particular verse.]

12. Some say that Prajapati (the Sun God) is represented by the Months of the year. [This is extension of the concept of Samvatsar mentioned in the beginning of verse no. 9].

The Shukla Paksha (the bright lunar half of the month) represents the Pran aspect of this Prajapati, while the Krishna Paksha (the dark lunar half of the same month) is the Rayi aspect.

The wise Rishis (learned sages or seers as mentioned in verse no. 10) do their deeds with an intention of fulfilling their auspicious desires or wishes during the Shukla Paksha, while others (mentioned in verse no. 9) do their deeds during the Krishna Paksha with the intention that their wishes would be fulfilled¹ (12).

[Note—¹The light of the moon continuously increases during the bright lunar fortnight, the *Shukla Paksha*. This is symbolic of enhancement of spiritual energy and increase of wisdom, erudition and enlightenment for those who aspire for such noble aim in life as finding the reality and truth of existence, the fount of bliss, happiness and peace that is eternal and refreshing, and looking up to the source of light which would remove all darkness of ignorance and delusions, instead of down towards this world full of darkness of ignorance and delusions. The brightness and fullness of the disc of the moon goes on increasing by each passing day. This is a metaphor for the progress that such wise men make in their spiritual endeavours. They rise higher and higher till they reach their final goal of emancipation and salvation.

On the other hand, the light and the shape of the disc of the moon continue to decrease during the dark lunar fortnight, the *Krishna Paksha*. This is metaphoric way of saying that those who pursue this world, those who seek comfort and happiness in this world instead of the Atma and Brahm, are like the moon during the Krishna Paksha. Their glory and spiritual brightness gradually becomes mired in ignorance and delusions. It gets demoted and ultimately gets decimated. They enter the dark pit of this cycle of birth and death.]

13. Even the one single cycle of a day and a night symbolise this Prajapati. According to this view, the day is equivalent to the Pran, while the night is like the Rayi.

Those who have intercourse with a woman during the day time are harming their Pran (i.e. they are destroying their energy, strength and vital forces of life). On the contrary, those who approach the woman who is desirous of intercourse during the night time are deemed to be Brahmacharis, i.e. they are deemed to be the ones who have self control over their sensual instincts¹ (13).

[Note—¹The day time is meant for constructive activity as a selfless service to the Supreme Being, and not for indulging in pleasures of the senses. If one violates this

rule, he is demeaning his Atma and demoting it from its exalted stature. The Pran, which is synonymous with life consciousness, gets degraded and weakened.

On the other hand, if the same intercourse is done during the night and especially when the woman is willing and desirous, it becomes a duty to aid in the larger planning of the Supreme Being who had wished to keep the creation created by him going on perpetually (refer verse no. 15 below) as is established by the fact that he had created the couple consisting of the Pran and Rayi in the beginning of creation (refer verse no. 4), and therefore the Pran is not harmed. A person who fulfills his obligations in a dispassionate manner is deemed to be a Brahmchhari because he is not attached to the result of such deeds. In the present case, the sexual intercourse is done by the man to satisfy his partner and not to satisfy his lust. So it is as good as observing self control.

This verse indicates that there are certain times for certain things. One must obey the laws of Nature, for violation of them is full of hazards.]

14. The Anna or food is a manifestation of Prajapati, the creator. It is from the food that the sperms are created¹. It is from this sperm that all living beings are created (14).

[Note—¹The Pran or vital life forces present in the food eaten by the man are converted into his sperms. This sperm carries the Pran from the food to the next generation when this sperm is implanted in the woman. For this purpose intercourse is necessary, and that is why the intercourse described in verse no. 13 is not a sin but a carrying out of the divine mandate of the Lord. During the day time the Pran is busy in other activities, and it is only during the night that it finds time to rest. So, it is the best time when it can think of some creative activity out of the routine. Hence, it is during the night that this transplantation of the Pran from the male to the female by way of intercourse in which the Pran-carrying sperm is implanted into the female sex organs is prescribed in verse 13 above.]

15. Those who wish to fulfill the determination of Prajapati to create and propagate this creation of living beings (as mentioned in verse no. 4) involve themselves in the sexual activity (as described in verse no. 13-14). [Since such people wish to propagate this mortal world, they are like the ones described in verse no. 9. They remain indulgent in this world.]

Amongst them, those who seek the ‘truth’ and the auspicious path of spirituality do Tapa and observe Brahmacharya. They attain the Absolute Truth; they get established in this Truth. [These people are the ones described in verse no. 10.] (15).

16. Those who do not have such negative traits as wickedness, deceitfulness, conceit, falsehood, pretensions and lie—they find an abode in the untainted and uncontaminated world of Truth which is called the Brahm Loka, the abode of the supreme Brahm who is an embodiment of Absolute Truth.

-----*****-----

Canto 2 (Question 2)

1. The next question was asked by Bhargava, a resident of the country called Vidharva. He asked Pippalaad, ‘Oh Lord! How many Gods maintain or serve or are responsible for the subjects (creatures) of this creation? Who are the Gods in the

pantheon of Gods who illuminate the subjects (i.e. are able to reveal their glories and majestic virtues), and who is the senior most among them all?' (1).

2. Sage Pippalaad replied, 'The elements of Nature such as the Akash or sky, Vayu (wind or air), Agni (fire), Aapha (water) and Prithivi (earth) are all deemed to be Gods. [These are the five Bhuts or primary elements of creation from which the gross body of the creature and the rest of the physical world is made. They are called Gods because they were created by the Supreme Being known as Brahm himself in the beginning of creation and were empowered by him to carry on with certain designated duties on behalf of the Lord. Hence, these elements represented one or the other qualities or attributes of Brahm separated from one another with the intention that their efforts are not duplicated. They were Gods because they had certain superior qualities in them which the other units of creation lacked, and also because the rest of the creation depended upon their mercy and grace. These elements are universal; wherever there is life they must be present in some form or the other. It is out of them that the rest of the visible creation has been moulded. Even if one is removed, the edifice of the entire world as we know it to be would crumble. In effect, these elements represented the dynamic aspect of Brahm. This was the first instance of the concept of 'delegation of authority' or 'decentralization of power' for the express purpose of making the functioning of creation smooth and hassle free. It was done to avoid confrontation between various powerful forces of Nature so that calamity could be avoided.]

This is followed by the following Gods—Mana (mind), Vaani (speech), Chakchu (eyes) and Srota (ear). [These represent the five organs of perception and five organs of action.¹ These form the physical and visible aspect of the living body of the creature. Whereas the five primary Gods consisting of the Bhuts remain hidden, the entities mentioned in this stanza are the revealed forms of these primary Gods. The earth does not see or smell, but the fact that this element is astoundingly beautiful and produces myriad variety of fragrances is made vivid in the form of the faculty of sight located in the eye and the faculty of smell located in the nose. This logic can be extended to other Bhuts as well.]

All these Gods asserted that they were the ones who bear the body (representing the entire living world); that they were most important and responsible for creating and maintaining the body; that the body cannot survive without them; that the body itself is a revelation of their stupendous powers and potentials; that they are the primary cause for the entire creation coming into existence and depicting its glorious qualities (2).

[Note—¹The five organs of perception are eyes which see, the ears that hear, the nose that smells, the skin that feels, and the tongue that tastes. The five organs of action are the hands that accepts and do deeds, the legs that carry the body from one place to another, the mouth that eats and supports the other organs by providing them with food besides enabling the body to speak, the excretory organs that help eliminate waste, and the genitals that help to procreate.]

3. The chief amongst these Gods is Pran, and he admonished the other Gods, saying, 'All of you must stop bragging in vanity about your importance. The fact of the matter is that it is me who bears this body and give it protection with the help of my five manifestations¹ (3).

[Note—¹The five divisions or forms of Pran, the life consciousness that keeps the gross body of the creature alive are called Pran (breath), Apan, Samaan, Vyan and Udaan. These have been explained in note to verse no. 11 of Canto 1.

The superiority of Pran over all other patron Gods of the body have also been elucidated in the following Upanishads: Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 1, Brahman 3, verse nos. 2-27, Canto 6, Brahman 1, verse nos. 7-14; Chandogya Upanishad of Sam Veda, Canto 5, section 1, verse nos. 6-15.]

4. The numerous patron Gods did not believe this statement of fact made by Pran. To prove his point, Pran willingly decided to leave the body and began rising up (i.e. all the vital winds prepared to abandon the body and let the Gods defend the body's survival). As soon as this happened, the other life conscious factors in the different organs of the body, such as the faculty of speech located in the tongue and mouth, the faculty of sight in the eye, the faculty of intellect and thoughts located in the mind, and the faculty of hearing present in the ear too began to abandon the body along with the Pran. When the Pran stopped for a while, they too stopped.

This situation is like the queen bee and her retinue of worker bees. When the queen bee moves out, all the worker bees follow suit; when she sits down to rest, all the others too sit down to rest.

When the seniority of the Pran was irrefutably established, the rest of the patron Gods of the body offered their obeisance to it and worshipped it as their Lord. They accepted that Pran is the senior most amongst them all (4).

5. It is this Pran that burns or gives heat, light and energy in its manifestation as the fire. It is the Pran that is known as Surya (the Sun), Indra (the king of Gods and the chief of all the patron Gods of the organs listed in the previous verses), Parjanya (water), Megha (rain-bearing clouds), Vayu (wind or air), Prithivi (earth) and Rayi (the grosser aspects of creation; the inspired form of Brahm; the dynamic powers of Brahm).

If nothing exist that is not Pran, it naturally follows that Satya (truth), Asatya (falsehood) and Amrit (the elixir of eternity and bliss) is also nothing but Pran in these forms (5).

[Note—There is a special Sukta or hymn dedicated to the Pran in Atharva Veda. It is called *Pran Sukta*, and is the fourth Sukta of this Veda's 11th Chapter. This Pran Sukta is included in our present volume as appendix no. 2 at the end.]

6. Just like the spokes of a wheel are attached to the central hub, the hymns of the Rig/Rik Veda, the Mantras of the Yajur Veda and the Sam Veda, the two classes known as Brahmins and Kshatriyas, and the Yagya (fire sacrifices) are hooked or attached to or dependent upon the central axis called the Pran. [In other words, all these entities have any relevance only till the point there is life in the body. Pran is needed to recite the Vedas, Pran is needed to perform the fire sacrifices, and since the latter was financed and patronized by the Kshatriyas and actually performed by the Brahmins, they too depended upon the Pran.] (6).

7. [Verse nos. 7-13 are prayers offered to this supreme God known as Pran.]

‘Oh Pran! It is you who are Prajapati (the divine entity responsible for sustaining and giving protection to the world and its inhabitants). It is you who reside in the cosmic Mother's womb and take birth or reveal yourself in the mother and the father. [This stanza refers to the very beginning of creation. The ‘Pran’ here is the Atma or the cosmic Consciousness known as Brahm who transformed into the Hiranyagarbha, the cosmic egg. From the latter emerged the Viraat Purush who was the cosmic Father. From the latter emerged the Prakriti, the cosmic Mother in whose womb the rest of creation was conceived and manifested. According to another

interpretation of creation, we can say that the Hiranyagarbha was lodged in the womb of the cosmic Mother known as Prakriti, and the Viraat Purush produced the Maya (delusion creating dynamic powers of the Lord) which harboured the rest of creation in her womb.]

Oh Pran! It is you to whom all the living beings of this world (called 'Prajā' or subjects of the kingdom of the Supreme Being) offer sacrifices, because you preside or rule over the world of sense organs. [The body of the creature is a microcosm of the entire world. The external world is known by the medium of the organs of the individual's body, and therefore the prime cause of the existence of this world is the life consciousness that is present in the organs of the body. This factor of 'life consciousness' is the Pran referred to here. Since life is central to all forms of sacrifices and other forms of worship, and since offerings to the sacred fire are meant for the supreme Lord, it follows that they are actually intended for the Pran which is a manifested form of the supreme transcendental Brahm or cosmic Consciousness.] (7).

8. (Oh Pran!) It is you who is like the sacred fire for the Gods. [The offerings made to the fire during the fire sacrifice is meant as food for the Gods. The Gods accept this food for their survival. Hence, the sacred fire is like the life-giving Pran for the Gods; it sustains them. The Gods respect the Fire God as the most senior amongst them. The Fire God gives them protection against evil by acting as an impenetrable shield of fire around them. The Fire God gives them their splendour, radiance, magnificence and glory; these Gods shine and bask in the glory of the Fire God just like the moon and other planets shine in the light of the Sun.]

It is you who is like the Swadha for the Pittars (the spirits of dead ancestors). [The word 'Swadha' is pronounced when food offerings are made to the spirit of dead ancestors. So, Swadha sustains them. Hence, it is like the life-giving Pran for the Pittars.]

This fact has been proved by the two great sages named Atharva¹ and Angira² (8).

[Note--¹Sage *Atharva* is the ancient sage who first revealed the fourth Veda called after his name, i.e. the Atharva Veda. He was the son of Brahma, the creator, according to Vedic mythology. He first brought down fire from the heaven to earth, and hence was the first sage to have propagated the worship of the sacred fire. The word 'athar' is the absolute word for the fire element, and hence this sage was named 'Atharvan' to commemorate this auspicious deed of his. He made the supreme Fire God, who is synonymous with the dynamic powers of the Supreme Being called Brahm, make this earth as his habitat, thereby paving the way for the forthcoming generations to utilise the stupendous powers and potentials of this fire element in practical terms here on earth itself. Since he brought the fire down on earth, he was also the first to initiate the process of worship of this element, both in its sublime form as the Fire God and its more tangible and gross form as the sacred fire worshipped during formal ritual of the fire sacrifice as well as in other informal forms as done by various sections of society in their daily lives.

When he brought the Fire God in the form of the sacred fire from the heaven, he offered Soma (the extract of a herb called Som and used as a holy and sanctified liquid-offering meant to be offered to the Gods for their eternal life and sustenance) to him to please him and to show respect to this God who was now the guest of honour for Atharvan. In order to please him further while offering Soma to him, the sage chanted the hymns that he had learned from his father, the creator Brahma. This started the practice of offering of Soma to the sacred fire during the ritual of the fire sacrifice along with the chanting of hymns of the Atharva Veda.

According to the Purans, his earthly wife was Shanti, the daughter of Kardama Prajapati. He is regarded as a personification of the Fire God, and is often invoked in conjunction with another great sage named Angiras (who was another son of Brahma). In this form he is called 'Atharvangiras' (Atharvan + Angiras) and is regarded as the father of the Fire God to commemorate the fact that these two sages are responsible for the honour and exalted position that the Fire God occupies in the pantheon of Gods, and also the fact that they were responsible for propagating the worship of the fire as the most holy and the most sacred form of worship of the Supreme Being.

According to Mundakopanishad of Atharva Veda, Mundak 1, section 1, verse no. 1, Atharva is the eldest of the six mental-born sons of Brahma. Brahma had first taught him the best metaphysical knowledge called Brahm Vidya, and Atharva had later taught it to Angiras, his younger brother and first disciple (Mundakopanishad, 1/1/2). The descendents of Atharva came to be known as Atharvaan, and those of Angira as Aangiras.

Since sage Atharva had started the practice of worship of the Fire God in the form of the sacred fire of the fire sacrifice and had used the initial Mantras taught to him by his father Brahma, the Mantra of this Veda came to be known after him as 'Atharvaa', and since his brother Angira had carried forward this practice started by his older brother by actually invoking these Mantras during formal sacrifices held from time to time after the first exercise, the Mantras came to be known after both the brothers as 'Atharvaangiras'.

The Mantras of the Atharva Veda which were initially pronounced by sage Atharva came to be known after him as 'Atharvaa', and those by the two brothers jointly as 'Atharvaangiras'.

According to Mahabharat, the great epic related to Lord Krishna penned by sage Veda Vyas, Atharva had searched out the fire concealed in the ocean (Mahabharat, Vanparva, 222).

Another Upanishad of the Atharva tradition that is attributed to sage Atharva is the Atharva Shikha Upanishad.

²Sage *Angira*—This sage was associated with the branch of ancient sages who adored and worshipped the sacred Fire as a manifestation of the Supreme Being. A number of Vedic hymns are attributed to him. He is the sage who first started the ancient tradition of 'fire worship', was the first sacrificer and the forefather of sacred rituals. He had achieved such great mastery of the fire element that he could replace the Fire God and take over his duties during rituals if the latter did not oblige the worshipper. The Purans describe him variously as being the mental-born son of Brahma, the creator, and as having sprung forth from the sacrificial fire of the Varun God (the Water God; also sometimes referred to as the Sun because the latter is responsible for rains).

He is believed to have four wives who were actually personified eclectic virtues that he possessed rather than any physical woman—Vasuddhaa (personified absolute purity), Shraddhaa (personified faith and conviction), Svadhaa (personified self realisation and self restraint) and Sati (personified chastity and immaculacy). Brishaspati, the moral preceptor of the Gods, was one of his sons. The Pittars (the Spirits of dead ancestors) are also believed to be his sons. His daughters are the following—Raka, Sinivaalli, Kuhu which are actually phases of the moon rather than any physical lass.

He is lauded as the great teacher of Brahm Vidya, the metaphysical knowledge of Brahm, the supreme transcendental cosmic Absolute. This explains why he is associated with such prime and incorruptible elements of Nature as fire and light—the former is the great universal purifier and the infuser of life in this creation, while the latter is synonymous with truth, enlightenment, knowledge, erudition and wisdom. Being self-realised and a Titan amongst the great sages of his time who initiated the tradition of worship of fire and light, he is regarded as an embodiment of

illumination, and this is why he is visualised as being associated with illuminated objects in the dark sky, such as the planet Jupiter and a star in the constellation Ursa Major.

Being an exalted sage and seer, he is regarded as being one of the ‘Saptarishis’—the great seven Rishis of the first Manvantara (the age or era of Manu, the first Male of creation).

The disciples of Angira adopted his name as their surname or title, and hence came to be known as ‘Aangiras’—the descendants of Angira. They were Kshatriyas (the warrior class) by birth but Brahmins by vocation and practice. They were said to be experts in sacerdotal laws, performance of occult practices such as magic and holding traditional rites.

Angira is credited with authoring the book of Law, called Angiras Smriti, and a book on Astronomy. The Angiras Smriti is a short book having 151 verses and deals mainly with repentance of sins.

Sage Angira was the younger brother of sage Atharva who was the eldest son of Brahma. Brahma had taught the great metaphysical knowledge called Brahm Vidya, the knowledge that enlightens the creature about the supreme Brahman who is the ultimate Absolute Truth, the Reality and pure conscious cosmic Soul of creation, first to Atharva, and then Atharva had taught it to his brother Angira. These two brothers are credited with starting the practice of worship of the Fire God in the form of the sacred fire of the fire sacrifice as well as other forms of the fire as worshipped by different sections of the society.]

9. Oh Pran! You are Indra personified. [Indra is the chief God and their king. Hence, by comparing to Indra, this stanza implies that Pran is the chief amongst all the vital factors in creation that are responsible for life in this world. Just like the subjects of a kingdom depend upon their king, all other units of the living world depend upon Pran for their survival. It is the responsibility of a king to look after the welfare of his subjects and the kingdom at large in a dispassionate and judicious manner while being caring, compassionate and merciful towards all. Likewise, the Pran too is expected to behave similarly.]

You are like Rudra (the angry and ferocious form of Lord Shiva) and give us protection from all sides (like a shield of fireball). [Amongst the eleven forms of Shiva, Rudra is the most ferocious one. Anger and ruthlessness are associated with the word Rudra. So, Pran is uncompromising as far as its duties are concerned. It never lets those who worship it to suffer. It would protect them like a magical shield of fireball protects the worshipper of the Fire God. Refer invoking of the two sages Angira and Atharva in this context as narrated in note to verse no. 8 above.] (9).

10. Oh Pran! When you appear in the form of the rain-bearing clouds and come down to us mercifully in the form of the life-giving rains, the subjects (i.e. all the living beings) of this world become exhilarated and ecstatic in the hope of fresh growth of food (10).

[Note—Since food sustains life in this world, and since the growth of food heavily depends upon good rainfall, the advent of the rains is the time of cheer and rejoicing for the population. That is why food is directly related to life. Refer Taittiriyo-panishad of Krishna Yajur Veda tradition, Valli 2, Anuvak 2; Chandogya Upanishad, Canto 7, section 9, verse no. 1 of the Sam Veda tradition; Subalo-panishad, Canto 14 of the Shukla Yajur Veda tradition. The Taittiriyo-panishad, Valli 3, Anuvak 2, 7-9 affirms that food is the Pran of the creature, while Brihad Aranyak Upanishad of Shukla Yajur Veda, Canto 1, Brahman 3, verse no. 17-18 says that food is Brahman.]

11. Oh Pran! You are ‘Vratya’—i.e. one who does not need purification, improvement, refinement, consecration or baptism. No formal investiture ceremony needed to be performed for your initiation because you are eternally holy and divine. [The reason is the Pran was the first-produced God. When the creator created this world and the body of the creature, it showed no sign of life. The creator felt frustrated because all his efforts had gone to vain. So he created ‘Pran’, and all the other deemed Gods immediately sprang into life and activity. Thus, Pran was the only entity that made the Gods what they are worth; in other words the Pran is the God of all the gods. Since he is the first-born he is deemed to be immaculate and already baptized. Since there was no life before Pran came into existence, there was no contamination, corruption and all sorts of faults and impurities that tainted this world—these formed gradually as time passed and the creatures got involved in the activities of this material world.]

You are praised as the Fire God known as the ‘Ekarshi Agni’—literally the sage who represents the Fire God himself. [In other words, you are the ‘only’ (Ek) sacred entity worshipped by sages (Rishi) when they offer oblations to the sacred Fire God during the fire sacrifices. Here the reference is to the sage ‘Atharvaanigra’ (sages Atharva and Angira who personified the Fire God) as narrated in verse no. 8 of this Canto 2 above.]

You are the divine Being who accepts the offerings of food that we make to the fire sacrifice. [Here the reference is to the food eaten by the creature. The food eaten is meant to sustain life or Pran in the body. Since Pran and Atma, the pure consciousness, are synonymous with each other, and since the Atma is Brahm personified, the food eaten is the offering to the Supreme Being residing in one’s own self as the Atma and the Pran. Pran is Brahm personified as much as the Atma—refer Brihad Aranyak Upanishad, Canto 4, Brahman 1, verse no. 3. This is the best form of symbolic fire sacrifice as narrated in the Upanishads—refer Pran Agnihotra Upanishad and Shaarirak Upanishad of the Krishna Yajur Veda.]

You are the Lord of this creation. You are our Father, and it is you who moves in the sky as the semi-God known as ‘Maatarishwa¹’ in the form of the wind or air (11).

[Note—¹The *Maatarishwa* is the cosmic father of the Wind God.]

12. (Oh Pran)! Please calm down your auspicious form that lives in the form of speech (in the mouth and tongue) as well as in ears (as the faculty of hearing), in the eyes (as the faculty of seeing) and in the Mana (the mind and the emotional aspects of the heart). [In other words, let the all the sense organs find peace and rest; let their agitations subside; let me find tranquility, rest and peace. The sense organs are naturally restless, and so this prayer is to calm them down. Let these organs think, see, hear and talk about auspicious things instead of worldly things.]

You should not attempt to move out of the body. [In other words, let the life forces remain energized, active, strong, vibrant, pulsating and revitalized in the body. Let my body remain active, strong, agile and energetic. Let me not suffer from want of energy, strength and vitality. Let me have a long life, because as long as the Pran lives inside the body it would continue to live.] (12).

13. Oh Pran! Whatever that exists in this mortal world as well as in the world where the Trinity Gods¹ live is dependent upon you; all are supported, sustained and protected by you; you form their foundation and basis.

Give us your protection just like a mother protects her child. Bless us with ‘Sri’ (fortunes, wealth, prosperity, fame, glory, splendour, renown and all sorts of worldly accomplishments) as well as ‘Pragya’ (truthful knowledge, wisdom, erudition, sagacity and enlightenment)’ (13).

[Note—¹The Trinity Gods are the creator Brahma, the protector Vishnu, and the concluder Shiva. They live in the heaven.]

-----*****-----

Canto 3 (Question 3)

1. The third question was asked by Kausalya, the son of Ashwal. He asked Pippalaad, ‘From where is Pran born or what is the source of its origin¹? How does it enter the body, and how does it come out of the body? How does it wear (sustain or inspire or keep alive) the external (gross) body as well as the internal (subtle) body of the creature?’ (1).

[Note—The origin of the Prans have also been explained in the Paingalo-panishad of Skukla Yajur Veda, Canto 2, verse no. 3.]

2. Sage Pippalaad replied, ‘You have asked a very difficult question. But since you are sincere about your query and are steady in your pursuit of Brahm (Truth), I would answer it (2).

3. [This verse answers the first two questions—‘from where is Pran created and how does it enter the body’.]

The Pran has its origin in the Atma (the pure consciousness). Just like a shadow has its origin in the presence of the gross body of the creature, or is dependent upon such a body, the Pran too has its origin from the Atma and is dependent upon the latter for its survival. [The shadow is created because of the presence of the gross body; if the body is not there, the shadow would also be not there. The presence of the shadow proves the presence of the body. Likewise, the Pran is a shadow created by the consciousness residing in the body of the creature. Since the creator Atma is sublime and subtle, since the Atma is invisible, the shadow, the Pran, is also sublime and subtle, it also is invisible. If the Atma or pure consciousness leaves the body, the Pran would also leave the body. In other words, the presence of the Pran or life in the body of a creature proves that the Atma is still inside the body. They both stay and leave the body together.]

This Pran enters the body by the determination of the Mana. [When the Atma, which is the true ‘self’ of the creature, decides that it must make the body alive and active, it enters it, and in order to activate the lifeless body it pulls in the Pran alongside it to do what is needed. In other words, the Pran is the dynamism of the Atma in action.] (3).

[Note—The relationship between the Pran (vital airs) and the Atma has been elucidated in the Katho-panishad, Canto 2, Valli 2, verse no. 10 of the Krishna Yajur Veda tradition; the Brihad Aranyak Upanishad of Shukla Yajur Veda, Canto 4, Brahman 3, verse nos. 35-38; Canto 4, Brahman 4, verse nos. 1-2. The Brahm Vidya Upanishad of Krishna Yajur Veda, verse no. 17 affirms that Pran and the Atma are synonymous with each other.]

4. Just like a wise king appoints his ministers and other staff in all the districts and villages of his kingdom to carry out the work of administration smoothly, the chief

Pran (breath) appoints the other Prans (junior or subsidiary Prans) to carry out specialised functions in the various parts of the body¹. [The body is like the kingdom whose sovereign is the Atma. The Atma has the chief Pran as its chief minister to whom it delegates the power of running the routine affairs of the kingdom known as the body of the creature. This chief Pran is the breath as would be confirmed in verse no. 5 below. It appoints other Prans and sub-Prans to different duties and assigns them certain jurisdictions for fixing responsibilities. But they all obey the chief Pran and the latter obeys the call of the Atma. The Brihad Aranyaka Upanishad, 4/3/35 describes how the various Prans present in the various parts of the body as the Atma or consciousness prevailing in these individual parts follow the call of the enlightened chief Pran or the Atma and moves along with it.] (4).

[Note—¹According to Subalo-panishad, Canto 9, verse no. 1-14 of the Shukla Yajur Veda tradition, there are fourteen Prans or vital winds present in the body. It lists their functions as follows—(1) Pran—this controls eyes and the faculty of sight (verse 1); (2) Apaana—this controls ears and the faculty of hearing (verse 2); (3) Vyan—this controls nose and the faculty of smell (verse 3); (4) Udaan—this controls the tongue and the faculty of taste (verse 4); (5) Samaana—this controls the skin and the faculty of touch (verse 5); (6) Vairambh—this controls speech (verse 6); (7) Mukhya—this controls the hands (verse 7); (8) Antarayam—this controls the legs (verse 8); (9) Prabhanjan—this controls the anus (verse 9); (10) Kurma—this controls the genitals (verse 10); (11) Shyen—this controls the Mana or the thoughts and emotions (verse 11); (12) Krishna—this controls the discrimination, intellect and wisdom (verse 12); (13) Shwet—this controls Ahankar or the notion of ego, pride, arrogance, vanity etc. (verse 13); (14) Naag—this controls the ‘Chitta’ or the faculty of concentration, memory, sub-conscious, reasoning (verse 14).]

5. [This verse answers the third question—‘how does it move out of the body’, and partly answers the fourth one—‘how does it sustain the body’.]

The chief Pran itself moves out of the mouth and the nostrils, and establishes itself in the eyes and the ears. [This chief Pran is the first and foremost component of the vital winds present in the body. It is the breath that is being referred to here. It helps the creature to breathe, to see and hear.]

It appoints the Apaana Vayu (the second component of the vital winds present in the body, the component called Apaana) in the lower end of the body, i.e. in the anus and the genitals. [It regulates the excretory organs and the entire process related to conception).

The Samaana Vayu (the third component) is assigned the middle area of the body, the region of the abdomen. It is assigned the duty of distributing the food eaten by the creature (i.e. the nourishment derived from the food eaten) equally to all parts of the body.

It is from this Pran manifested in the form of Agni or fire (i.e. the energy, heat, strength, vitality and life consciousness that is derived by the digestion of the food eaten by the creature) that the seven flames (of life) are ignited and kept burning. [The seven flames or signs of life referred to here are the following—the two eyes and their ability to see; the two ears and their ability to hear; the two nostrils and their ability to smell; the tongue and its ability to taste. The total comes to seven.] (5).

[Note—Verse nos. 5-6 describe the location and function of the various Prans in the body. Refer also to Trishikhi Brahmin Upanishad of Shukla Yajur Veda, Canto 2, verse no. 79-82; Amrit Naad Upanishad of Krishna Yajur Veda, in its verse nos. 35-36; Dhyan Bindu Upanishad of the Krishna Yajur Veda, verse nos. 97-98.]

6. This Atma (pure conscious soul) lives in the subtle heart of the creature. There are one hundred and one Naadis or tubular ducts (nerves, veins and capillaries) in the region of the heart. Each of them has one hundred branches, and each branch gives out seventy two thousand finer Naadis. As a result, a fine and complicated network of Naadis is created (much like a wire mesh or matrix of wires in an electrical gadget) that spreads out from the heart to the remotest corners of the body.

The Vyan Vayu (the fourth component of the vital winds) is located in this network and moves along in it (6).

7. Out of these Naadis, one, the chief amongst them, is called the Sushumna Naadi¹ and it moves in the upward direction. The Udaan Vayu (the fifth component of the vital winds) moves along this Naadi, and it is this wind that helps the creature to rise higher in his noble pursuits and spiritual stature in life if he is inclined towards auspiciousness, righteousness and nobility, or degrades and pulls him down to be demoted to a lower form of life if the creature is inclined to be sinful, evil, wicked, deceitful, pervert and indulgent in this world of delusions and grossness.

It is this Udaan Vayu that decides whether or not the creature remains turning in the cycle of birth and death in this mortal world² (7).

[Note—¹The Yoga Upanishads deal extensively with this *Sushumna Naadi*. It is the main nerve originating in the lower end of the spinal column and passes through it right up to the top of the head. During Yoga, the practitioner is taught to direct his Prans through this Naadi so that they can reach up into the head. As these Prans move up they meet the Atma in the heart, and the latter accompanies the Pran and heads upwards. When they reach the region of the head, the region of the forehead, the area of the cerebrum, the practitioner is said to have developed the enlightenment because the ‘third eye’ located in the middle of the eyebrows and the root of the nose is activated. At the same time some secretions effuse from this area of the brain which gives him the eclectic feeling of exhilaration and ecstasy that is unmatched and cannot be defined. He has no longer any awareness of either his body or the external world. As the Pran and the Atma move ahead, they reach the area of the cranium where the Brahm Randhra, the hair-like slit in the skull, is located. As the Pran begins to circulate here, the titillation reaches a crescendo and the experience of bliss and ecstasy is complete. Once this exalted spiritual stage of ‘high’ is reached, no man in his senses would wish to revert back to the world of problems. So, the wise ascetic finally allows his Pran to escape through this slit and go out of the body. The Atma escapes too along with the Pran—that is, the ascetic finds what is called Kaivalya Mukti, the liberation and deliverance which is one of its kind and from which there is no coming back into the body. The physical body left behind disintegrates on its own. This is because the life giving Pran has abandoned it.

²However, if the person is interested in this world, this achievement would be exploited by him for personal gain such as fame and money. This is because success in Yoga gives him certain mystical powers, called the eight Siddhis, that help him perform miracles, and this ability draws in the crowd of people to him, and along with the crowd comes fame, wealth, prosperity, pomp and pageantry. But all this hullabaloo demotes his soul and binds it to this world of materialism.]

8. [This verse answers the fourth question—‘what is the external and internal forms of the body of the Pran’.]

The Sun is the external form of the Pran. The Sun obliges the Pran or consciousness that resides in the eye when it rises in the morning. [Since the Sun is high up in the heaven called the Duloka, the Pran wind has a natural tendency to move upwards. This is a metaphoric way of saying that the natural inclination of the

Pran or the Atma is to reach nobler and higher goals in life. When one fixes one's eyes on a noble target, the Pran feels excited and motivated to put in its best. Presently, the eyes can see anything only in the light of the Sun during the daytime. The faculty of sight located in the eye is useful and can become effective only if there is light in the world. Otherwise, even though the eye is there in the body the latter would not be able to see anything, and as far as the creature is concerned the existence of the eye that cannot see is as good as the body which has no eye. So, it is the Sun that obliges the eye in as much as the latter's value is established only due to light of the Sun. The eye is always eager to look forward to the presence of the Sun to provide it with light to see. Since verse no. 5 of this Canto 3 has established that the chief Pran activates the consciousness or life (faculty of sight) in the eye, and earlier Canto 1, verse nos. 5-8, 10 has already established that the Sun God is the life of everything that exists, it obviously follows that the Sun is the external form of the chief Pran that resides in the eye and which enables the creature to live a meaningful and fruitful life on earth.]

The patron God of earth, i.e. the God named Prithivi, attracts the Apaana Vayu, the wind in the lower part of the creature. [That is why the Apaana wind has a tendency to move downwards. The earth pulls it towards itself. The location of the Apaana wind in the anus is symbolic of the earth because all residue matter of the food is accumulated here, and this is why stool is called night 'soil'—implying 'earth'.]

The vacant space between the two, i.e. between the Sun and the Prithivi, is called the sky or Akash. It is here that the Samaana wind resides. [This is indicative of the sac-like abdomen located between the eye and the anus. Even as the sky harbours everything in existence, all the gross bodies of the solar system find their habitat in this space, the abdomen too harbours all the major organs of the body. Since the air is uniformly distributed in this sky, it is called 'Samaana'—literally meaning equal and even.]

Since the wind or air present in the sky is all-pervading and all-encompassing, it is called Vyaan (8).

9. The energetic and dynamic cosmic power called the 'Tej' (literally meaning energy, heat, light, radiance, strength, vitality and stamina) that helps the Pran to fly or keep afloat is called Udaan (literally meaning to fly and take off), and it is personified as the vital wind of this name inside the body. [That is, the Udaan wind personifies the glorious ability of the divine forces of Nature to provide the impetus, the energy, heat, vitality and strength to the entities of creation to lift themselves up from the lower level of existence and reach for higher goals in life. In other words, the Udaan wind is that aspect of the Pran which helps the creature to get up, to wake up and rise, or to lift his self and 'fly'. All the other vital winds keep on moving and performing their functions because they are empowered and energized by this hidden dynamic force called the Udaan. Since the Sun is a personified form of all the glorious virtues that the word 'Tej' stands for, such as energy, dynamism, heat, light, strength, vitality, stamina, the Sun is treated as being synonymous with Tej. It is the Sun God that inspires the Pran to do what it does.]

Hence, those persons in whom this Udaan wind dies down, calms down, loses its strength and energy, or gets dissipated, their sense organs do not show life and cannot carry on with their functions. In such a situation, these sense organs retract themselves and collapse into the Mana (the mind). In other words, since the desires of the sense organs are yet unfulfilled because of the inability of these sense organs to act as they had wanted to act due to the dissipation of the Udaan wind, the unrequited

desires, aspirations and hopes are ensconced in the Mana or mind, waiting for an opportunity to leap forward and regain lost territory¹.

So, this paves the way for the creature taking a new birth to fulfill his unfulfilled desires, wants, aspirations, hopes and expectations² (9).

[Note--¹The creature has a great desire to do something or achieve some target, but he has lost the energy, the strength, the vitality, the stamina and the ability of the vital winds to inspire and keep the sense organs working so that the aim can be achieved. In such a situation, the desires and aspirations remain unrequited and unfulfilled. In other words, the Mana or the mind continues to harbour these desires, aspirations, wants and yearnings. In fact, the inability to obtain something only goes to stoke the fire of desires more ferociously. They become fierce and stubborn. This compels the creature to continuously think about them while he is still alive, and at the time of death his Atma would yearn to acquire another body so that the unfilled task of the previous life can be completed.

²The concept of what happens after death or the destiny of a person has been explained in many Upanishads. The basic concept is that the creature attains that place which it desires for at the time of death—refer Brihad Aranyak Upanishad, Canto 4, Brahman 3, verse no. 12 which is very explicit on this point. Further, it also depends upon the creature's mental awareness and conception of the what constitutes the 'Truth'—refer Brihad Aranyak Canto 6, Brahman 1, verse no. 1-6.

The destiny of the person depends upon the type of desires he has while doing deeds in this world. This is stated in Prashna Upanishad of Atharva Veda, Canto 1, verse no. 9-10, 13-16; and in Brihad Aranyak Upanishad of Shukla Yajur Veda, Canto 4, Brahman 3, verse no. 33, Canto 4, Brahman 4, verse nos. 4-14.

The concept of death and what happens after that has been succinctly described, inter alia, in the following Upanishads—Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 4/3/33, 35-38, 4/4/1-14, 5/10-5/11, 6/1/1-6, 6/2/2, 14-16, etc.; Chandogya Upanishad, Canto 5, Section 3-10; Kaushitaki Brahmin Upanishad, Canto 1; Taaittiriyo-pahishad, Valli 2, Anuvak 6; Katho-panishad, Canto 1, Valli 1, verse no. 20; Canto 1, Valli 2, verse no. 1-6; Canto 2, Valli 2, verse no. 6-8; Canto 2, Valli 3, verse no. 4-17; Subalo-panishad, Canto 11.

What happens to ignorant people after death is explained in Brihad Aranyak 4/4/1.

The three great Truths to be remembered at the time of death have enunciated in Chandogya Upanishad, 3/17/6. They are—(1) You are eternal and imperishable; (2) You cannot be demoted, degenerate, become fallen and digressed; and (3) You are basically most sublime, subtle, atomic and a microcosmic image of the vast and macrocosmic supreme Brahm.

The metaphor of the tree has been brilliantly employed to explain 'what happens after' death in Brihad Aranyak 3/9/28, and in Chandogya 6/11/1-3.

Why does a creature take a new birth is also explained in Yogshikha Upanishad of Krishna Yajur Veda, Canto 3, verse no. 24.]

10. Whatever the Sankalps (determinations, volitions, resolutions, vows, promises) a creature makes or has at the time of death, he takes a new birth with the same sort of Sankalps. The new life is pre-conditioned and pre-programmed based on the Sankalps that the creature has at the time of his death. [In other words, the mental setup, the desires and expectations as well as the personality of the creature in his new life are initially based on the Sankalps of the pervious life. This is part of the concept of 'Praarabdha' or destiny of a creature. The other component of this destiny is the Karma or deed done by him in the previous life and their accumulated affects that are carried forward to the new life. These two components decide the initial conditioning of the Mana or mind of the new born infant. These would determine the child's initial

and spontaneous reactions to given set of circumstance or events in the new life. But since he is born as a human being, he has been given the special privilege to overcome the drag of these two components of his mind and personality by being able to decide for himself what to do and what not to. He can change or mould his destiny as he grows up because he has the power to read and understand, to think and decide, to analyse and discriminate—some of the grand opportunities the other creatures of creation lack.]

The Pran has the energy and the ability to take the creature (i.e. his Atma or soul) into that form which he desires at the time of death in order to fulfill his dreams that are yet unfulfilled¹ (10).

[Note—¹The Brihad Aranyak Upanishad, Canto 4, Brahman 4, verse nos. 1-4 very explicitly describes the detailed process by which the Pran leaves the old body and assumes the new body depending upon the desires of the creature.]

11. Those wise, erudite and enlightened ones who understand the importance and significance of Pran as narrated in this Canto are blessed with descendents or dependants who are never subjected to demotion or degradation. They obtain the elixir of eternity and imperishability. [That is, such people are knowledgeable about the truth and reality, and therefore like all learned people they do not waste their precious life in following falsehood and pretensions, in pursuing things that have no truth and substance. Instead, they spend their lives in fruitful activity. They gain steady fame and respect in society that lasts even after they leave this mortal world.]

This Shloka (verse) affirms this axiom; it reasserts this maxim (11).

12. A person who gets to understand comprehensibly the five aspects of Pran—viz. the origin, the arrival in this world, the abode or habitat, the distribution in an universal and uniform manner in this world, and the external as well as the internal forms of Pran—verily, such person is indeed able to obtain the exalted stature of eternity and imperishability. This is a certainty (12).

-----*****-----

Canto 4 (Question 4)

[This Canto describes the two primary states of existence of consciousness in a creature, called the Jagrat or waking state, and the Swapna or dreaming state.]

1. Next was the turn of the grandson of the Sun God, the sage named Gargya, to ask sage Pippalaad the following question—‘Oh Lord! In the body of the Purush (the man)¹ who (i.e. which organs) sleeps and who remains awake? Which God sees dreams and which God experiences happiness, pleasures and comfort? In whom are all these units of the body established (or who is the primary God who governs and controls them)?’ (1).

[Note—¹The reference to the ‘Purush’ to mean the body of all living beings is to symbolise the fact that the creature is a manifestation of the Viraat Purush, the all-pervading macrocosmic gross body of the supreme Brahm from whom the entire creation has emerged. According to the Aiteriya Upanishad of Rig Veda, Canto 1, verse nos. 3, the supreme Brahm created the vast universe and his image in the form of the Viraat Purush, and the Gods were created from this Viraat—Canto 1, verse no. 4. When the mortal world consisting of the visible world was created, the human

body was considered as the best image of the Viraat Purush, and thus all these Gods took up their residence in it—Canto 2, verse nos. 3-5. According to the Brihad Aranyak Upanishad of the Shukla Yajur Veda, Canto 2, Brahman 5, verse no. 18, it was this Viraat Purush himself that entered the body of all the creatures created.]

2. Sage Pippalaad replied—‘Oh Gargya! Just like the case of the rays of the sun collecting themselves and collapsing in the disc of the setting sun and re-emerging the next day when the sun rises, the various sense perceptions of the body relevant to different sense organs withdraw themselves and rest in the Mana or the mind of the Purush or the man (when he goes to sleep). Hence, in this situation he does not see, hear, taste, smell or feel (because the sense organs of perception related to these functions have become inactive), and neither does he speak (because the organ of action known as the mouth has become inactive), accept anything (because the organ of action known as the hand has become inactive), expels stool or other wastes from the body (because the organs of action concerned with these functions have become inactive), and enjoy anything (especially the enjoyment of sex and other sensual gratifications because the organs related to such enjoyments too have become inactive). In fact, he makes no effort of any kind.

This state of existence of the creature or his consciousness is called ‘sleep’ (2).

3. [Verse nos. 3 and 4 describe the symbolic fire sacrifice that the Atma, the pure ‘self’ of the wise and enlightened creature, continues to do even while he sleeps. This eclectic concept of doing a symbolic form of internal fire sacrifice which is continued uninterrupted and is therefore a superior form of worship of the sacred deity, the supreme Brahm revealed as the Atma or pure conscious ‘self’ of the creature, and as the Fire God who has manifested himself as the Pran of the creature, as compared to the formal forms of external fire sacrifice is endorsed in a number of other Upanishads, viz. Krishna Yajur Veda’s (i) Avadhut Upanishad, verse no. 7; (ii) Pran Agnihotra Upanishad, verse nos. 21-22; and (iii) Yog Kundalini Upanishad, Canto 1, verse nos. 3-4.]

During this state of sleep, the only entity that is awake in the body called the ‘Pur¹’ (or the city where the Atma or the pure ‘self’ of the creature lives in the central citadel of the heart) is the subtle form of the Pran (the vital winds which are synonymous with life consciousness) called Agni which is the latent fire with its life giving and life sustaining energy that is inherently present in the Pran². [The Pran is regarded here as a manifestation of the Fire God and is responsible for life in this world. This is a metaphoric representation of the fact that the Pran provides the seminal energy, impetus and vitality to the creature to survive. In the state of existence when the external body consisting of the gross organs of perceptions and actions is asleep and inactive, the creature is kept alive because the Pran, in its manifestation as the fire element, keeps the body energized and activated, or ‘alive’. This is why the body is uniformly warm even when the body is not doing any physical activity. Had it not been for the Pran and its inherent fire element, the body would have cooled down and died.]

In this state, the holy fire known as the Garhyapatya Agni³ is represented by the Apaana wind, and the holy fire known as the Ahawaniya Agni⁴ is represented by the Vyan wind. It is the Garhyapatya Agni that gives rise or ignites the Ahawaniya Agni⁵ (3).

[Note—¹The concept of the body as a *Pur* has also been elucidated in the Krishna Yajur Veda's Yogshikha Upanishad, Canto 1, verse nos. 72, 165; Canto 5, verse no. 2.

²This observation that the Pran is synonymous with fire is very interesting indeed. Let us examine how. Ordinarily, the wind representing Pran is inimical to fire or Agni—this is proved by the fact that wind can blow off any fire that burns; it is impossible for a candle to be kept lighted in a breeze. But when we examine the sleeping man, we observe that he breathes, or the wind/air element keeps blowing and aerating his body, while at the same time the body is kept warm, indicating the presence of fire element in it. So, both the Pran or wind and the Agni or fire co-exist. If we compare this sleeping man with a dead body, it is found that in both the cases the body is lifeless and no sense organs are functioning. The only difference is that the sleeping man breathes and is warm to touch, while the dead man stops breathing and his body is icy cold. Life and consciousness are equivalent to Pran, and therefore the subtle body of the sleeping man has Pran pulsating inside it along with the presence of the fire element. The Pran moves along the Naadis, the tubular ducts called the nerves and veins and capillaries present in the body while the man sleeps and his external organs are inactive—refer Shukla Yajur Veda's Paingalo-panishad, Canto 2, verse no. 12, and Brihad Aranyaka Upanishad, Canto 4, Brahman 3, verse no. 20; Krishna Yajur Veda's Dhyani Bindu Upanishad, verse nos. 58-60; Rig Veda's Kaushitaki Brahmin Upanishad, Canto 4, verse no. 19.

³The Garhyapatya fire is the sacred fire of the household hearth. It is the main fire of the formal fire sacrifice. It is the fire that every householder is supposed to keep alive and worship regularly and from which the first spark is taken for the rituals associated with religious ceremonies.

⁴The Ahawaniya fire is lit to invoke the Gods, to invite them to participate and accept the offerings made to them during a ritualistic fire sacrifice.

⁵According to Vedic tradition, the invitational fire, the Ahawaniya fire that is lit to invite or invoke the Gods, is started from a spark brought from the Garhyapatya fire of the patron who does the fire sacrifice or on whose behalf it is being done. If such a fire is not available with him, then it is brought from some other person's house who worships the sacred fire on a daily basis.]

4. The breath that is exhaled and inhaled is like the offerings made to the holy fire during the formal fire sacrifice.

Since these two aspects of the same breath called Pran are equal in importance, the wind that has this epithet of 'Samaan' or being equal and uniform (i.e. the Samaan Vayu) is like the priest that divides the offerings of the fire sacrifice in equal parts before making the oblations to the deity. [The Samaan wind is responsible for equal distribution of nourishment to all parts of the body as stated earlier in Canto 3, verse no. 5. The priest who is responsible for making the offerings is called the Ritwik, and so it is expected of him that he divides the offerings to be made in equal proportions so that all the oblations are of equal ratio. No one offering should be more or less than the other.]

The Mana, or the thinking mind and emotional heart, is definitely the patron on whose behalf the fire sacrifice is done, or the one who does the sacrifice himself, and is therefore the beneficiary of the rewards. [The Mana is the chief patron because it is the mind and heart of the person which make him decide to do an auspicious deed and then actually carry out his decision. The success in this venture depends purely in the involvement of both the mind and the heart, for if one dithers the other is bound to follow suit. The involvement of the heart is of great significance because the Atma lives in its subtle space—Canto 3, verse no. 6, and the Pran has its origin in the Atma—refer Canto 3, verse no. 3. Since the whole concept of the fire sacrifice

revolves around the Pran, the inclusion of the heart is absolutely essential. Wisdom and erudition require a coordinated effort of these two components of the Mana, and a person is deemed to be enlightened if he has realised that the Atma residing in his heart is the Supreme Being who is at the center of the entire structure of the body and is the deity who is being honoured by this method of internal fire sacrifice. The thinking mind is the aspect of the Atma which makes it distinguished and different from other entities in this creation, including the Pran and the Fire. They simply carry out the orders of the Mana—the complex consisting of the heart and the mind as explained here. So the Mana naturally is the ‘patron’ who is to benefit from the fire sacrifice.]

The desired fruit of the fire sacrifice is equivalent to the Udaan Vayu. It is this Udaan (the exalting and spiritually uplifting rewards of the auspicious fire sacrifice) that helps the Mana (as the patron of this auspicious activity) to get firmly established in the truth and existence of Brahm (the Absolute Truth in life). [The Udaan wind is associated with lifting of the creature from his lowly worldly existence and making him exalted and honourable, wise and enlightened—Canto 3, verse no. 7. Such a soul is indeed Brahm realised.] (4).

5. The exalted deity (i.e. the Consciousness or the Atma) experiences its glories and majesty made evident during the Jagrat or waking state of existence. [During the waking state, all the organs are active, and the creature’s true ‘self’, i.e. his Atma, can witness the stupendous achievements that the body can attain with the help of its sense organs. Since the Atma is the truthful identity of the person who makes the various achievements and obtains success in different fields with the help of the organs of the body while he is awake, it is therefore the Atma that is supposed to be the actual beneficiary of these achievements and successes. So, the Atma watches them with pride and feels satisfied.]

Now when the same deity sleeps, it recollects or remembers those things that it had seen or experienced while it was awake. It sees, hears and experiences those things once again during the sleeping state, not at the physical plane but at the subtle plane of the sub-conscious.

Not only limited to this, it can even see, hear and experience things that it could not see, hear and experience during the waking state because then it had to face the barrier of the limitations of the gross body and the gross physical world. Since this barrier is removed during the sleeping state and the subtle aspect of the body consisting of the mind and the sub-conscious are given freedom to fly according to their inclinations, the deity can even see, hear and experience things unimaginable during the waking state of its existence. It gets so involved in this scenario that it becomes a part of it much like it was the part of the waking world (5).

6. When the deity or Lord of the body (i.e. the Atma, the pure conscious ‘self’) withdraws itself into its own realm in the heart, it gets surrounded by ‘Teja’, the splendour and radiance that is natural to it and effuses out of it. In this condition it is deemed to have distanced itself from the Mana (which had made it see dreams as narrated in verse no. 5 above) and the Indris (the sense organs that had made it experience the world and interact with it). [This is because when the Atma, the deity of the body, comes to realise its own glorious nature, it finds true peace and tranquility, it feels exhilarated and happy so much so that now it forsakes the false notion of happiness and comforts that this physical material world and its counterpart seen in the dreams had presented to it to lure it in their snare. The Atma finds so much

spiritual solace and succour in the realisation of its own natural and inherent state of enlightenment, the state called Pragya which is glorious, radiant and splendorous, that it need not think or ever worry about the other two states through which it had passed, i.e. the two states of waking and dreaming, to reach this eclectic and exalted state when the Atma is surrounded by its own radiance and splendour. This divine and eclectic state of self realisation is called enlightenment and Pragya—the state of ‘truthful awareness’.]

Therefore in this state, the Atma, the deity, does not dream. It experiences true happiness, solace, comfort and bliss. It enjoys the peace and tranquility that this realisation gives it (6).

7. Oh Saumya (a pleasing and sober gentleman)! Just like all the birds come to take rest on a tree, all the elements¹ related to the perceptions and actions of the body, both at the gross level as well as at the subtle level, come to take rest in the Atma, the pure consciousness². They retire in the Atma at the end of their toil for rest and relaxation. [This refers to the Sushupta or deep sleep state of consciousness when the gross body and all its sense organs along with the subtle body consisting of the mind-intellect complex come to rest, or become inactive. In this state of existence, the Pran—the life consciousness of the creature—comes to take rest in its true ‘self’ or with the parent from whom it had emerged in the beginning. This situation is also like the case of a tired child who plays the whole day but comes to his parent’s home to rest and relax at the end of the day’s activity.] (7).

[Note—¹The ‘elements’ referred to here have been enumerated in detail in the next verse no. 8 below.

²An exactly similar idea has been expressed in the Brihad Aranyak Upanishad of Shukla Yajur Veda tradition, Canto 4, Brahman 3, verse no. 19.]

8. [This verse enumerates the ‘elements’ referred to in verse no. 7. These are the different organs of perception and action in the body. In this context, refer to the Shaarirak Upanishad of the Krishna Yajur Veda.]

All the different elements or individual units of consciousness that makes the creature aware of the world, interact with it, be charmed with it and remember it even while he sleeps (i.e. during the dreaming state) withdraw themselves (during the third state of consciousness called the deep sleep or Sushupta) and come to rest or retire in the Atma.

These elements that constitute the body of the creature are divided into the following categories—

[The five principal Bhuts or elements of creation.] (i) The earth and its perception in the form of smell (as all things that have the earth element as their ingredient have a natural tendency to emit a fragrance or smell, whether pleasant or otherwise); (ii) the water and its perception in the form of taste (because to taste anything the secretions of the taste buds need some fluid medium for its enzymes to interact with the chemicals in the thing tasted so as to create the sense of taste); (iii) the sky and its perception in the form of sound (because the sound waves need space to travel and the medium of the air to be generated and transmitted in the form of waves); (iv) the wind and its perception in the form of touch (as is evident when we can feel the soft touch of the breeze blowing against the face even though no one can see the wind); (v) the fire and light (collectively called Tej) and their perception in the form of shape and form (because only visible things can be seen, and the fire provides the light to make it visible along with the energy for enabling the creature to be alive

and see things—here the reference is to the sun in whose light the entire world assumes a definitive shape and form to enable it to be seen).

[The five principal organs of perception and their respective functions.] (vi) The eye and its function of perception in the form of sight or seeing things in this visible world (because it is only the eye amongst the various organs that is exclusively empowered to see anything); (vii) the ear and its function of perception in the form of hearing (because it is only the ear amongst the various organs that is exclusively empowered to hear sounds emanating from anything); (viii) the nose and its function of perception in the form of smell (because it is only the nose amongst the various organs that is exclusively empowered to smell anything); (ix) the tongue and its function of perception in the form of taste (because it is only the tongue amongst the various organs that is exclusively empowered to taste anything); (x) the skin and its function of perception in the form of touch or the sense of feeling (because it is only the skin amongst the various organs that is exclusively empowered to feel or touch anything).

[The five principal gross organs of action and their respective functions.] (xi) The hand and its function in the form of accepting or receiving anything worthy of accepting or receiving; (xii) the mouth and its ability to speak and express one's views about subjects worthy of speaking; (xiii) the genital and its function in the form of reproduction and sexual enjoyment; (xiv) the anus and its function in the form of expelling wastes from the body (which is stool); (xv) the leg and its function in the form of taking the creature or the other organs of the body to their desired destination.

[The subtle body consists of the following organs along with their respective functions.] (xvi) The Mana (mind) and its function in the form of thinking about things or subjects worth thinking about; (xvii) the Buddhi (intellect) and its function in the form of discriminating between the good and the bad, of thinking analytically and intelligently about things or subjects worth knowing about and worth pondering, contemplating, researching, analyzing, discussing and deciding about; (xviii) the Ahankar (the sense of pride and ego) and the object that breeds it along with its result (i.e. the thing about which the creature is proud, and the collateral consequences of being proud—to be arrogant and haughty); (xix) the Chitta (sub-conscious) and its object (i.e. the things that the sub-conscious mind remembers and which constantly keep on nagging the creature; the memory bank of the mind which plays a crucial role in his dreams and the way his subjective mind thinks naturally); (xx) the Tejas (the illumination in the form of wisdom, erudition and enlightenment which are the inherent qualities of the Atma) and the things or subjects that are illuminated (known, realised and understood) with the help of the light of wisdom, erudition and enlightenment; and (xxi) Pran (the vital winds in the form of life consciousness or the vital spark of life and its evident signs in the creature) along with all the elements or units that are dependent upon this Pran (i.e. the entire being of the creature except his pure 'self' known as the Atma).

Verily, all these units finally collapse and disappear into the Atma, the pure consciousness (8).

[Note—The relationship between the three basic units of creation—viz. the gross body that perceives or sees this world, the subtle body through which this perception takes place, and the actual perceiver, the Atma, can be understood with the help of a simple parable. Once a teacher asked his disciple—'Son, do you see anything?' The disciple answered—'Yes sir, I see'. The teacher—'By what light do you see?' The disciple—'Sir, by the light of the sun in the sky during the day time, and by the light of the lamp during the night'. The teacher—'By what light do you see these lights?' The disciple—'Sir, by the light present in my eyes'. The teacher—'By what light is

the eye enabled to see?’ The disciple—‘Sir, by the light provided by the mind’. The teacher—‘By what light do you know the mind, or what lights up your mind and enables it to see and interpret the sight?’ The disciple—‘Sir, by the light provided by my self, for no one else outside can empower my mind to think for me’. The teacher—‘Well, there you are. You are the light of lights’. The enlightened disciple exulted—‘Yes indeed sir, that is I; that indeed is me’.]

9. [This verse defines who this enlightened pure conscious ‘self’ is which carries out the various functions mentioned in verse no. 8, or on whose behalf they are being carried out.]

He is the one who sees, he is the one who touches, he is the one who hears, he is the one who smells, he is the one who tastes, he is the one who thinks and contemplates, he is the one who does various deeds, he is the one who becomes aware of anything or acquires knowledge, skills and expertise, and he is the one who is enlightened, erudite and wise. A person who becomes acquainted with who this esoteric, divine and eclectic entity addressed as ‘he’ is becomes established in the supreme transcendental Brahm in the form of Absolute Truth.

The ‘he’ is known as the Vigyan Atma—the wise, erudite, enlightened, omniscient and all-knowing ‘Purush’ who is a manifestation of the Supreme Being known as the imperishable and eternal Brahm. This ‘Purush’ is the pure consciousness known as the Atma or the true ‘self’ of the creature. A person who firmly knows this fact is undoubtedly established in the Absolute Truth (9).

10. Oh Saumya! A person who gets acquainted fully with this Supreme Being who has no shadows, who has no body, who is invisible, who is imperishable, infinite and eternal, and who is most auspicious and holy—such a man becomes all-knowing and omniscient; he reflects the grand virtues of being an image of this all-pervading and all-encompassing Lord. He literally embodies this Supreme Being and exhibits similar auspicious virtues.

Verily, all differences between such a person and the Supreme Being are erased, and he becomes one like the Lord himself. This is the great truth that this verse propounds and affirms (10).

11. Oh Saumya! A wise, erudite, self-realised and enlightened person who clearly knows about the enlightened and wise Atma, the pure consciousness representing the supreme transcendental cosmic Absolute Truth known as Brahm, in which all the Gods (the various dynamic forces and auspicious virtues of creation), all the Prans (the various aspects of life consciousness) and all the Bhuts (the elements and their various functions as enumerated in verse no. 8 above) are established and founded becomes one like this Atma himself—i.e. he acquires all the grand virtues displayed by the Atma. He is established in the Atma; he becomes indistinguishable from the Atma. [This is because he has realised that his true self is the Atma; he identifies himself with this divine Atma.] (11).

-----*****-----

Canto 5 (Question 5)

[This Canto is devoted to the worship of OM, the divine sound representative of Brahm, the supreme transcendental Divinity.]

1. The next turn was of the son of Shibi, named Satyakam¹, to ask Pippalaad—‘Oh Lord! Please tell us which world is conquered or attained by a person who spends his lifetime repeating the divine Mantra OM which relates to the supreme transcendental Brahm. [In other words, what is the destiny of the spiritually exalted person who worships the Supreme Being by constantly remembering him and continuously repeating the divine Mantra dedicated to the Lord of his life?] Please be kind enough to elucidate it and expound upon the subject’ (1).

[Note—¹A sage by the name of *Satyakam* appears in Chandogya Upanishad of Sam Veda tradition, in its Canto 4, section 4 wherein it is said that he was the son of a woman called Jabaalaa. This sage is also mentioned in Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 4, Brahman 1, verse no. 6, and in Canto 6, Brahman 3, verse nos. 11-12. He was taught by the Fire God himself as described in Chandogya Upanishad, 4/4-4/9, and was regarded as an expert in the fire sacrifice—Brihad Aranyaka Upanishad, 6/3/11-12. He had taught the enlightened king Janak as mentioned in Brihad Aranyaka Upanishad, 4/1/6.

But it is not clear whether the sage mentioned in these two Upanishads is the same one as the Satyakam mentioned in our present Upanishad. Presently it is said that he was the son of Shibi and not Jabaalaa.]

2. Sage Pippalaad expounded as follows—‘Oh Satyakam! This OM is verily the transcendental Brahm and the Supreme Being manifested or personified in the form of the invisible and all-pervading cosmic sound. Therefore, a wise man who comes to understand the grand significance of OM is able to attain either one of these two divine destinations (as described below) (2).

[Note—The two aspects of sublime Divinity mentioned here have only subtle difference; they are the same entity but vary only in the degree of subtlety. While the first aspect refers to the primary Brahm which is the Absolute Truth and the ultimate Consciousness that is the cause and the end of the entire creation, its slightly less subtle form as the Viraat Purush from whom the entire creation has come into being is the second form of this Brahm. It is like differentiating between the Pran, i.e. the chief vital wind called the breath, and the rest of its manifestations such as Apaana, Samaana, Vyan or Udaan. Is it actually possible to demarcate different types of winds? The different names are assigned to the same entity for the purpose of comprehension and to delineate the special functions it performs under different situations. Likewise, Brahm and the Viraat Purush are the two sides of the same divinity like we have the two sides of a coin. None is separated from the other. If this world is regarded as the revealed form of the Viraat Purush, then it is deemed to be a revelation of Brahm, because the Viraat Purush himself is a revealed form of Brahm at the cosmic level, though this form is invisible and indefinable like Brahm itself.]

3. If the aspirant meditates and contemplates upon only one Matra or aspect of OM, or worships OM with only one Matra, then he attains this world soon. This one Matra of OM is like the one Richa or hymn (of the Rig Veda, the ‘first’ of the Vedas).

Since he is worshipping a symbol of the supreme transcendental Brahm in this world (instead of other myriad symbols that only act as distracting factors in his spiritual progress and act as a drag on his Spirit) with devotion and faith, he is able to obtain the rewards of observing Brahmacharya (self control over the senses) and doing Tapa (observing austerity, doing penance and undergoing hardships for some noble cause). This establishes him in this world, and he acquires fame and respect in it. [This is because he is deemed to be wise and enlightened, and not deluded and perplexed by confounding interpretations and confusions created by dichotomies arising out of the numerous versions of the same Truth. He seems to be focused and

determined; he gradually comes to terms with the reality, and is able to separate the grain from the chaff. It is much like the case of a student who becomes skilled in a subject by being steady under the guidance of one expert teacher rather than running from one teacher to another and not getting anywhere. Fickleness of mind and uncertainties of the heart are removed only when one is focused on his objective, and knows what that objective is. In other words, by worshipping only one symbol of the supreme Brahm, the Supreme Being, he finds it easier to reach his spiritual goal.] (3).

[Note—The symbolism of worshipping only one Matra of OM and acquiring greatness in the world is to indicate the stupendous mystical powers of OM as a Mantra or a symbolic representation of Brahm. Though this person is not very enlightened and learned in the intricacies of metaphysics as he is only knowledgeable or aware of only one aspect or only one of the many virtues and glories of OM as a symbol of Brahm, but this is enough to give him great respect and glories amongst his peers. What if he had been enlightened about the principal whom this OM represents? He would have had a divine experience of the greatest sublimity and the highest order had he been acquainted with more divine aspects of Brahm, and with the Brahm itself!]

4. If the aspirant worships two Mantra or aspects of OM, i.e. he is more advanced in his knowledge and wisdom, then he is symbolically empowered by the Mantras of the Yajur Veda (the 'second' Veda) to attain the Som Loka in the Antariksha or the sky known as the heaven where the Gods who drink Som live. [The Som Loka is the realm of the heaven where the Moon God presides and where the Gods live. The Moon is the custodian of the elixir of astounding bliss and joy known as Som. That is why the Moon God is known as Som himself. The celestial moon is the pitcher where the Gods have stored this Som. During the formal fire sacrifice rituals, this liquid is drunk and offered to the sacred fire as oblations intended for acceptance by Gods. It is their food and invigorator. So, in essence, this verse means that those who worship OM with a better understanding of its metaphysical and spiritual importance obtain greater benefits. They get spiritual bliss, happiness, joys and contentedness. They can literally taste the heavenly nectar of bliss here on earth. They get the same benefit as the one derived by remembering and chanting the holy Mantras of the Yajur Veda.]

Such people go to this Som Loka, enjoy its charms and benefits, and then come back to where they started from, i.e. they come back to the mortal life on earth (4).

[Note—This stage is a notch higher and better than the first stage narrated in verse no. 3 above. The aspirant has progressed in his spiritual pursuit and has tasted the nectar-like bliss that comes with self and Brahm realisation. He has moved a step closer to the Truth. The reference to the Yajur Veda is just for symbolic purposes and not to demean the importance of the Rig Veda mentioned in verse no. 3. It only marks the second milestone in a person's knowledge as now he is learned in two Vedas—the Rig/Rik and Yajur.]

5. When an aspirant worships and meditates upon three Matras or aspects of OM, he is able to access the abode of the Sun God which is splendorous and radiant. Just like a serpent comes out of its cuticle and finds freedom from its earlier grossness, such a wise aspirant is freed from all sins and their consequences. He attains the Brahm-Loka with the aid of the Sam Veda Mantras.

He enters the inner chamber where the supreme Brahm resides—i.e. he is able to witness the presence of Brahm in his own subtle heart as the pure consciousness or the Atma. [The reference to the Sam Veda is symbolic here because this Veda is very

sweet to hear as it is sung most melodiously in a heart-warming manner, and not merely chanted in a staccato manner like the other Mantras or hymns of the other Vedas. Singing melodiously and soulfully requires the direct involvement of the heart, a metaphoric way of saying that the aspirant is talking directly to the Lord residing there in the core of his heart. He is not merely repeating some Mantra, but he is in direct communion with the Lord. Since Brahm is a splendorous and radiant divine entity, the Sun is always used as a metaphor for Brahm. Again, since Brahm is enlightenment and wisdom personified, or since these auspicious virtues are characteristics of Brahm, wherever they are found it is deemed that Brahm is also present. Since these grand virtues are like the 'light' that removes the darkness of ignorance, they are compared to the Sun which is the light of the world.]

These two verses (i.e. the current one and the one following next) are concerned with this eclectic concept as narrated herein above (5).

[Note—This verse marks the third milestone in his spiritual pursuit. He has risen a step higher than that achieved in verse nos. 3 and 4. Now he has seen the Atma first hand, and witnessed its radiance and splendour which matches that of the sun. It is so dazzlingly bright that the aspirant is just not able to actually see it but only experiences its presence indirectly in the reflected shine that is manifested in the form of enlightenment. Since the Sam Veda is sung melodiously rather than being simply chanted in a staccato manner, it implies that when the aspirant has witnessed the presence of Brahm more closely in his heart, and the latter's divinity has drenched him like rain from all sides, he experiences a surge of ecstasy that inspires him to sing merrily and soulfully. He has found extreme happiness and bliss that is un-inhibited and unbound, and this bursts out in the open when he begins to sing and dance in joy.]

6. The three components of OM (A, U and M) are inseparable and one, though they appear as independent units. [This is a very significant observation. It implies that though this creation appears to consist of countless independent units, but since they all have one origin in Brahm and the same consciousness radiating and pulsating in their veins as the Atma, they are fundamentally and essentially the same, and are simply various manifestations of the immutable and indivisible One known as the non-dual Brahm. Incidentally, according to the metaphysical interpretation of OM, its three letters A, U and M symbolically represent the initiation, the development and growth, and the conclusion of creation respectively. It is like a circle having no definable end or beginning; it is simply a continuous process.]

Hypothetically, these three units of OM have independent existence and therefore subject to death or end or conclusion. [Theoretically, there is a point where the creation started and the initial process stopped. This is its hypothetical end. Then the second stage of development and growth occurred. This also has a certain point from where it began and a certain point where it reaches its outer limit. The end is this outer limit beyond which development and growth is not possible. Then comes the conclusion—it begins at the point where growth stops and decline begins. It ends when nothing remains. Thus, each unit of OM has a beginning and an end. But this is only for the purpose of analysis and understanding of something that is very esoteric and mysterious. But otherwise it is a seamless sound; it is a monosyllabic word like we have individual alphabets in a language.]

All these units are used in meditation and are such that they always complement and supplement each other. They cannot be counter-acting, they do not oppose each other, or one cannot subvert the rewards obtained by successful employment of the other.

A wise practitioner uses them in all forms of worship and meditation—whether it is done externally, internally or a combination of both. [The external form of worship takes many forms, such as formal fire sacrifices with OM as the Mantra; the internal form of worship is doing Japa with OM, and the performance of the fire sacrifice internally in a symbolic manner with the Pran as an offering, and a combination is the use of both the methods. In terms of Yoga, this would mean exercises using the body, such as various Aasans, Mudras and Bandhas (postures and control of the body) as being equivalent to external worship (because it involves the external organs of the body), contemplation and doing Pranayam (internal holding of breath) for prolonged periods with the OM Mantra as the internal form of worship (because it involves none of the external organs), and a combination of both as the middle path.]

Such an aspirant becomes steady and firm in his spiritual path. [Obviously, Yoga and other forms of spiritual practices teach discipline and self-restraint to the aspirant—so it is natural that he becomes steady and firm in his spiritual pursuit.] (6).

7. The aspirant obtains access to this mortal world with the Richas or hymns of the Rig/Rik Veda (because they are like one Matra of OM or one aspect of Brahm; refer verse no. 3), the Antarisksha or the world in the sky where the Gods live in the heaven with the help of the Richas of the Yajur Veda (because they are like two Matras of OM or two aspects of Brahm; refer verse no. 4), and the higher world called the Brahm-Loka with the aid of the Richas of the Sam Veda (as narrated in verse no. 5).

It is with the aid of the eclectic Mantra OM that the spiritual aspirant achieves success in obtaining the supreme destination where the supreme Brahm resides. With this success, he is able to enjoy peace and tranquility; he becomes eternal and imperishable; he becomes freed from the fear (of death and miseries). This exalted existence is most sublime and divine in nature.’ [In other words, if one wishes to reach the pinnacle of spiritual awakening and Brahm as well as self realisation, he is required to use OM in a comprehensive manner, and not in a fractured manner. To draw an analogy, a man who eats all kinds of food, such as seasonal fruits, cereals, vegetables and dairy products, is able to get proper and balanced nourishment as opposed to a man who depends upon a limited variety of food either because of unavailability or due to his being a serf to his taste buds. Another example is of a student who studies different text books or reference books from a library to gain a comprehensive knowledge of his subject. By and by, he becomes an expert on this subject as compared to a student who has limited his study to just pass an examination.] (7).

-----*****-----

Canto 6 (Question 6)

[This Canto describes the 16 Kalaas of Brahm.]

1. Finally, the son of sage Bharadwaj, named Sukesha, asked Pippalaad—‘Oh Lord! I will submit before you the question asked of me by the prince named Hiranyanaab of the kingdom of Kaushalya.

Once he had come to me and asked, ‘Oh Bharadwaj! Do you know about the Purush with sixteen Kalaas (i.e. do you know the symbolic sixteen divine qualities or attributes of the Viraat Purush, the macrocosmic all-inclusive form of the Supreme

Being)?'. I replied, 'No, I do not know of him. Had I known of him, why would I not tell you? A person who says a lie gets demoted and discredited, which is equivalent to getting withered and dying out. Hence, I do not speak a lie and so cannot pretend to know the Purush you are talking of. So I cannot give you a wrong answer'.

Thereafter the prince said nothing and went back on his chariot. So please enlighten me about that Purush and where he lives?' (1).

2. The learned sage Pippalaad replied—'Oh Saumya (a gentlemanly person)! The divine Purush who possesses sixteen Kalaas or virtues lives in this body itself (2).

[Note—Refer Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 1, Brahman 5, verse nos. 14-15, Chandogya Upanishad of Sam Veda, Canto 6, section 7, Brahm Vidya Upanishad of Krishna Yajur Veda, verse nos. 18-19, and Kalisantarana Upanishad of Krishna Yajur Veda, verse no. 2.

The word *Purush* here refers to the Atma, the eternal Soul and the pure consciousness which is the true identity of the man. The word Purush itself means 'one who lives inside the body' (because 'Pur' means a city or dwelling place)—Brihad Aranyaka Upanishad, Canto 1, Brahman 5, verse nos. 14-15.

The word *Kalaa* has a wide application and briefly it refers to the a particular aspect or position or condition or situation of any entity. It is indicative of this entity's deeds which has led it into the present position or situation. It also refers to the special qualities, attributes, virtues, strengths, powers and potential possessed by it. other connotations include—(a) shape, form, contours of a thing; (b) special qualities, art, craft, skills, expertise, attributes etc. that one possesses; (c) a division, portion, fraction, phase or degree; (d) any kind of discharge; (e) brilliance, magnificence and grandeur; (f) fraud, deceit, pretensions and trick; (g) maverick and supernatural powers.

Verse no. 4 narrates the 16 Kalaas referred to in the present verse. However, there are other connotations of this term. Now, let us look into these various connotations and contexts in which the word Kalaa is applied in practice before reading verse no. 4 so as to get a comprehensive idea of the term.

The *16 Kalaas of a man*—In the context of the man, the word Kalaa represents the special qualities, art, craft, skills, expertise, attributes etc. that one must possess if he were to successfully reach his target in life. These different qualities and virtues present in a man symbolically make him perfect; they represent his various strengths and potentials, and they are said to be sixteen in number corresponding to and symbolised by the sixteen phases of the moon. Since a man is an exact replica of the 'Viraat Purush', who in turn is a subtle manifestation of the sublime Brahm, these sixteen qualities or attributes of a man refer to the sixteen qualities of Brahm himself that made him the Lord of creation. The presence of all these divine attributes makes a man complete and very powerful. Hence, these sixteen Kalaas represent all the magnificent good qualities that are present in this creation which enable a man to overcome all adversities, hurdles and ill circumstances. Since Brahm is the creature's only sincere well wisher and succour in times of distress and dismay, and since Brahm possesses all the exemplary qualities grouped under the single word Kalaa, a man who is blessed with them is regarded as being equivalent to Brahm. Or in other words, he personifies Brahm with all his dignified virtues that are needed by a man to complete and get across the cycle of birth and death without hurdles.

These sixteen Kalaas of creation that are present in a man refer to the sixteen elements or primary components that form the basis of a man's very existence and his nature and temperament. These are the fundamental building blocks of his subtle and gross body, its characteristic qualities as well as the world surrounding him and how the man lives in and interacts with it.

The sixteen Kalaas or aspects or facets of creation are described in verse no. 4 below.

In simple terms it means that a person's total composite personality, his characteristic attributes and individuality, his vitality and stamina, his prowess, powers and strength, his drive and vigour et al can be divided into sixteen parts.

The *Kalisantarna Upanishad* of Krishna Yajur Veda, in its verse no. 2 says that these sixteen Kalaas are like sheaths or veils covering the Atma or 'self' of the man, and he can realise this glorious divinity residing in his bosom only when these Kalaas which are like impediments or hurdles in self and Brahm realisation are removed. When this Upanishad describes them as 'hurdles or impediments' in realising the glory of the 'self' it implies that although all these sixteen qualities are related to achieving glory and majesty in the world, they have nothing to do with 'self-realisation' and 'Brahm-realisation' which is possible only by abandoning everything related to this world as well as the body both in its gross part and its subtle part.]

3. That Purush who dwelt in the body wondered—'Which is that entity whose exit from the body would also mean that I have to make an exit too, and whose retention in the body would mean that I too can live in it?' (3).

4. [The following narration outlines the Genesis of creation with a new perspective.]

That supreme Purush (i.e. the Viraat Purush, the invisible, macrocosmic and all-inclusive gross body of Brahm) created the Pran to begin with¹. From this Pran he then created successively the following elements of creation—Shraddha (the virtues of devotion, faith and belief), Akash (the sky or space element), Vayu (the wind or air element), Jyoti (the light and radiance personified in the form of the fire element), Aapah (the water element), Prithivi (the earth element), Indris (the different sense organs of the body), Mana (the thinking mind and the emotional heart), and Anna (the food that would sustain the other elements of creation which had combined to give shape to the creature).

From the Anna were created the following other units or elements of creation—the Virya (the sperm which is the carrier of life and the metaphor for valour, strength, stamina, vitality, vigour, energy, potentials etc.), Tapa (austerity, penance and sufferance for some noble and auspicious cause), Mantras (the different mystical formulas consisting of letters or words or phrases which encapsulated various dynamic forces of Nature which could be invoked and harnessed by the creature and help him to utilise the latent cosmic energy, strength and other magnificent powers incorporated in these Mantras for the benefit of creation at large), Karma (the ability to do deeds and take action; the strength, energy and stamina to perform even difficult tasks), Loka (the various worlds, such as the mortal world where the creature lived on the earth, the lower heaven called the Antariksha where the junior Gods and the Spirits of dead creatures would live, and the upper heaven or Brahm Loka where the Supreme Being lives; the different worlds as experienced during the waking state, the dreaming state and the deep sleep states of existence of the consciousness), and Naam (the name assigned to each independent creature).

These sixteen elements or units created by the Purush are the sixteen Kalaas or aspects or fractions of creation. In other words, this visible creation is made up of these sixteen units in different ratios just like a colourful picture in mosaic is prepared by an expert artisan from bits and pieces of glass or stone which are independent units in their own right but when incorporated in the mosaic that forms the colourful picture they become an inseparable and an integral part of the latter. Even if one piece is removed, the picture is disturbed (4).

[Note—¹Earlier in Canto 3, verse no. 3 it has been said that the Pran is created from the Atma, the pure consciousness. So, this Purush is the cosmic Atma or cosmic Consciousness that is the root from which the entire creation resembling a huge tree has emerged.]

5. Even as all the rivers having different currents, names, depths, widths, lengths and other characteristic features flow independently but ultimately fall into the ocean to become one with it and indistinguishable from it, thereby losing their independent existence and identity, in the same way the sixteen Kalaas of the supreme Purush spread out from him to expand and manifest themselves as the creation and its inhabitant creatures, but in the end they are withdrawn and collapse back into this Purush to become indistinguishable from him. They lose their independent characteristics and are then known only as Purush, the source and the single point of their origin¹ (5).

[Note--¹It is like the rays of the Sun spreading out from a single source, the brilliant disc of the Sun. When these rays are traced back to their origin, what remains is the Sun's disc. Also, when the Sun rises in the morning, these rays spread out from it to distant corners of the earth, but at the time of sunset they are withdrawn by the Sun, and these rays collapse into it to set with it. It is not possible for the rays to remain behind after the Sun has set; the rays have no independent existence without the Sun. Refer Canto 4, verse no. 2.

Likewise, the visible creation has no separate and independent existence from the Purush. This world, with its characteristic features and attributes, is a visible revelation of the sixteen Kalaas as listed in this verse. It is seen or perceived only in the presence of the Purush just like the case of this world being lighted by the light of the Sun and seen only in the latter's presence. Once the Purush decides to withdraw his Kalaas, the world would vanish just like the world becomes shrouded in darkness when the Sun sets and withdraws its rays.]

6. Just like the spokes of a wheel are attached to its central hub, all the different Kalaas that constitute this world are attached to and are dependent upon one single core called the supreme Purush (Brahm). [Earlier in verse no. 7, the Purush was treated as the Viraat Purush because the visible creation has come into existence from the latter. But since this Viraat Purush himself is created from Brahm who is the ultimate supreme transcendental cosmic Being, the cosmic Soul or 'Atma', the cosmic Consciousness, it follows that this Brahm is the actual 'hub' referred to in this verse as it is the central cause of everything in existence, including the Viraat Purush. It should be remembered here that Canto 3, verse no. 3 has already asserted that Pran was created from the Atma, and the Viraat Purush is not the Atma. This 'Atma' is the cosmic Consciousness known by the term 'Brahm'.]

Understand this fact and come to be acquainted with this Supreme Being so that the fear of death cannot haunt you. [This is because you would then realise that since your true 'self' is also the same Atma which is called the cosmic Consciousness, you too are immortal and free from the limiting notion of death or an end. This is because the Atma is eternal and imperishable. What would die is your gross body, but it is not your 'true self'. The death of the body is actually this Atma, or the Purush residing in this body, withdrawing its external Kalaas into its self before it decides to abandon the body. So it is the body that actually dies and perishes in a process that ignorant ones call 'death'.] (6).

7. Sage Pippalaad told the assembled sages that it is all he knew about the supreme Brahm. There is nothing else to be known (7).

8. All the assembled sages offered their obeisance to Pippalaad and submitted—‘You are our father because you have taken us across Avidya—i.e. you have removed our ignorance and shown us the light of true knowledge. You are indeed a great Rishi (a sage or seer). We repeatedly bow before you. Amen!’ (8).

Chapter 2

Mundak Upanishad/Mundako-panishad

This Upanishad belongs to the Shaunak branch of Atharva Veda. It has three Cantos called ‘Mundak’, and each Mundak has two sections. The word Mundak refers to shaving of the head, implying shedding of all ignorance and its attendant delusions from the Mana (thinking mind and emotional heart), and instead filling it with truthful knowledge of the Reality. It has been taught by sage Angira to sage Shaunak.

The first Mundak or Canto is related to the Paraa and Aparaa Vidya—the former being the knowledge pertaining to the supreme transcendental Brahm which is the ultimate and absolute Truth of creation, and the latter refers to that body of knowledge that is known and which can enlighten the aspirant about the Paraa Vidya which is the knowledge of the transcendental Brahm. In this second category come the four Vedas—the Rik, the Sam, the Yajur and the Atharva, and the fire sacrifices.

The second Mundak compares the creation of the multi-dimensional world from Brahm with sparklers springing out from a burning fire. It also describes the world’s end just like these sparklers dying off. It cites the analogy of the bow and arrow to describe how an aspirant can use the medium of OM, the bow, and his Atma, the arrow, to attain the knowledge of Brahm. The glorious virtues of Brahm and the importance of attaining the latter are also discussed.

The third Mundak compares the body as the tree on which two birds representing the Parmatma (the Supreme Being) and the Jivatma (the living being) are sitting. A similar analogy is cited in the Krishna Yajur Veda’s Rudra Hridaya Upanishad, verse no. 41, and Shwetashwatar Upanishad, Canto 4, verse no. 6-7. It goes on to stress that Brahm or the knowledge of the Absolute Truth is possible only when the inner-self of the aspirant is pure and cleansed of all evil thoughts and other worldly contaminants that act as millstones around the Atma. It concludes by enumerating the immense spiritual rewards obtained by diligently and honestly pursuing Brahm Vidya, the eternal and blissful knowledge of the truthful Brahm.

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of the Shanti Paath.

Mundak (Canto) 1

Section 1

1. Lord Brahma, the creator of this visible world, was the first God born. He is the creator of this world and the protector of all the fourteen Bhuvans¹ (or the fourteen divisions into which the entire creation has been divided for the purpose of administration).

He taught his eldest son named Atharva² the knowledge known as ‘Brahm Vidya³’ which is the grand, the best and the supreme knowledge pertaining to the Absolute Truth of creation known as Brahm. This Brahm Vidya is the foundation of all knowledge (that Brahma had revealed for the benefit of the creation created by him) (1).

[Note—¹The fourteen Bhuvans created by Brahma are the following— (A) The upper worlds called Urdhava Lokas (उर्ध्व लोक) are seven in number—(i) Bhu (भूः), (ii) Bhuvha (भुवः), (iii) Swaha (स्वः), (iv) Maha (महः), (v) Janaha (जनः), (vi) Tapaha (तपः), and (vii) Satyam (सत्यम्). (B) The seven nether worlds called Adhaha Loka (अधः लोक)— (i) Atal (अतल), (ii) Vital (वितल), (iii) Satal (सुतल), (iv) Rasaatal (रसातल), (v) Talaatal (तलातल), (vi) Mahaatal (महातल), and (vii) Paataal (पाताल). The total number of Lokas is, therefore, fourteen.

²A brief life sketch of sage *Atharva* has been given as note to verse no. 8 of Canto (Question/Prashna) 2 of Prashna Upanishad which is Chapter 1 of this volume.

³The *Brahm Vidya* has been elaborately explained in other Upanishads as well, notably the following which are exclusively dedicated to this theme—Krishna Yajur Veda’s Kaivalya Upanishad, Brahm Upanishad, Panch Brahm Upanishad, Akchyu Upanishad, Tejobindu Upanishad, Varaaha Upanishad, Canto 1-5, and Brahm Vidya Upanishad.]

2. The divine eclectic knowledge that Brahma had taught sage Atharva was subsequently taught by the latter to sage Angira¹ (who happened to be his younger brother).

Angira passed on this knowledge to the son of Bhardwaj, named sage Satyawaaha. The latter taught this knowledge to another sage called Angiras. [This sage is not to be confused by sage Angira who was the younger brother of sage Atharva and the son of Brahma. This second Angiras was one of the numerous disciples of the original teacher named Angira, and they all came to be known as ‘Angiras’ after they all assumed the name of their Guru Atharva as their surname like we have the family name in modern times.] (2).

[Note—¹A brief life sketch of sage *Angira* has been given in note to verse no. 8 of Canto (Question/Prashna) 2 of Prashna Upanishad which is Chapter 1 of this volume.]

3. The famous householder sage Shaunak¹ once went to sage Angiras (one of the senior disciples of sage Angira) with the intention of acquiring knowledge and approached him in the proper way².

Sage Shaunak requested—‘Oh Lord! Who (or ‘what’) is that by knowing whom (or ‘which’) everything worth knowing is known?’ (3).

[Note—¹Sage *Shaunak*—He was a wise and learned sage and derived his name after his father sage Shunak. He is regarded as an incarnation of Indra, the king of Gods. He was an expert on the Vedas, especially the Rik/Rig Veda and the majority of his works revolve around this particular Veda. They are known as ‘Anukramanika’ (indices). His magnum opus is the ‘Brihad-devta’ which deals with the deities of the

Vedas. He had a large following of disciples, the chief being Ashwalyaana. He appears in many ancient scriptures such as Shatpath Brahmin, 13/5/3/5; Brihad Aranyak Upanishad, 2/5/20; Chandogya Upanishad, 1/9/3; Kaushitaki Brahmin Upanishad, 4/7.

²The proper way to approach the learned Guru with the intention of accepting his discipleship is to first take a purifying bath and hold some Samidha, a token gift consisting offerings for the teacher's fire sacrifice, in hand as a sign that the teacher is being approached for knowledge. In this situation, the teacher is morally bound to teach the aspirant whatever he knows.]

4. Sage Angiras explained to sage Shaunak—‘Those who are experts in the supreme knowledge of the transcendental have asserted that it is called Brahm Vidya—the knowledge pertaining to Brahm. In this field, there are two main branches—viz. one is called ‘Paraa’ Vidya, and the other is called ‘Aparaa Vidya’ (4).

[Note—The word *Paraa Vidya* refers to that knowledge which is transcendental and beyond the normal field of knowledge that can be acquired in this mundane world by study; the knowledge which relates to the supreme ‘self’ or the pure conscious Atma; the knowledge of things that is beyond the range of bodily perception and comprehension. It is the knowledge pertaining to the supreme transcendental Brahm which is the ultimate and absolute Truth of creation. The *Paraa Vidya* relates to the invisible and unknown Divinity that is eternal, infinite and imperishable, and whose Mantra is OM.

On the other hand, *Aparaa Vidya* means that body of knowledge that is known and which can enlighten the aspirant about the *Paraa Vidya* which is the knowledge of the transcendental Brahm. In this category come the four Vedas—the Rik, the Sam, the Yajur and the Atharva.

These two forms of Vidyas have been described elsewhere also in the Rudra Hridaya Upanishad of Krishna Yajur Veda tradition, in its verse nos. 28-30.]

5. The ‘Aparaa Vidya’ is the knowledge enshrined in the four Vedas and includes the language necessary to read and understand them. The four Vedas are the Rig/Rik, Yajur, Sam and Atharva. The components of the language which must be mastered in order to be able to acquire this knowledge enshrined in the Vedas are called Shiksha (primary knowledge of the alphabets and basics of grammar), Kalpa (study of Vedic rituals), Vyaakaran (thorough knowledge of Sanskrit grammar), Nirukta (the exposition of the Vedas; commentaries on the scriptures), Chanda (poetry and its style of composition used in the scriptures), and Jyotish (astronomy and astrology based on mathematical calculations).

On the other hand, the knowledge which enlightens the aspirant about the imperishable and eternal Divinity and Truth known as supreme and transcendental Brahm is known as the ‘Paraa Vidya’ (5).

6. He who (or that which) cannot be seen, cannot be caught hold of or grasped, who (or which) has no Gotra (inheritance or lineage or family origin) or Varna (one of the four sections in which the society has been divided; complexion or colour; a specified or designated place in the hierarchy of creation), who (or which) does not require either the eyes and ears (to see and hear) or the legs and hands (to move and receive), who (or which) is always immutable and steady, all-pervading and omnipresent, all-encompassing and all-inclusive, and most subtle and sublime, who (or which) is imperishable and not subject to decay, ruin, decimation, termination, demotion or degradation, and who (or which) is the cause and the root from which all the Bhuts (primary elements) of creation have emerged—verily, those who are truly wise,

erudite and enlightened see that supreme transcendental Brahm everywhere without exception (6).

7. Just like the spider creates or produces the thread from its own stomach (body) to weave the cobweb and finally withdraws it (or eats it up) into its own stomach (body), just like the earth produces numerous herbs, and just like countless hairs are produced from the skin of the man—in the same manner this (perishable) world is created from Brahm who (or which) is primarily imperishable and eternal (7).

[Note—All the things cited here are perishable—the cobweb, the herbs and the hairs. They are produced and finally come to an end. But the ‘source’ from where they are created—i.e. the spider, the earth and the skin—can produce fresh supply of thread for the cobweb, the herb and the hair respectively. The producer (the spider, the earth and the skin) continues to produce or create (the cobweb, the herbs and the hair) endlessly. As compared to the limited life span of the produce, the producer is without such limits, is literally ‘eternal’. In the present verse, Brahm is the source like the spider, the earth and the skin cited who creates this mortal world, and numerous such worlds would be created by Brahm in the future also.

Refer Mundak 2, section 1, verse no. 1 also.]

8. When this supreme transcendental Brahm does Tapa (i.e. when he does some form of penance and austerity in order to fulfill some desire), he becomes a bit grosser (like the seed when it desires to generate a tree begins to show internal subtle activity by generating heat that aids in the division of cells and their multiplication which add to the seed’s weight and size, or it’s ‘grossness’).

As a result of this Tapa was produced the Anna or food (which is the ‘reward’ of the Tapa much like the seed sprouting into a sapling which would grow into a huge fruit-bearing tree).

From the Anna or food was created or produced the Pran—the vital life infusing and sustaining factors of creation which are necessary for the conception and support of life on earth.

From the Pran was created or produced the Mana—the thinking mind and the emotional heart. [The energy provided by the food eaten by the creature enables his mind to think and his heart to be active enough to exhibit emotions and sentiments, to have a liking or disliking for anything. A hungry and famished man would have no stamina and energy left to think about anything or be emotionally attached to anything. His whole being would be concentrated on acquiring food before he can think of anything else. This is the picture at the micro level of creation. The same thing applies at the macro level of creation. When the supreme Brahm who/which has been described as having none of the grossness associated with this world in verse no. 6 above begins to have desires, the chain reaction is set in motion, and one after the other all the units of creation come into existence.]

From the Mana is created or produced the Satya or the five primary Bhuts. [They are called ‘Satya’, literally meaning ‘truth’, because their presence in the forthcoming world would be undeniable. The ‘Bhuts’ are sky, air, fire, water and earth—obviously all of them are undeniably evident in this world. The world which would ultimately form out of their combination would be deemed to be true because it is visibly seen and verified. From the perspective of the genesis of creation, once Brahm produced the Mana, the latter spread out its tentacles and wished to create the world. For this purpose it needed the ‘bricks’, and these Bhuts were the so-called bricks of creation.]

From these Bhuts came into being the humans, along with the rest of the world.

From them arose the concept of Karma—doing of deeds and taking of actions, and this resulted in the production of fruits or results according to their nature. This fruit or result or consequence was like the succulent fruit that tastes sweet like nectar. [In other words, this world is driven by the theory of Karma—i.e. if one wants any rewards or wishes to achieve success in anything or wants to fulfill his desires, then he is obliged to do something, or initiate ‘Karma’. If he does not do any Karma, there would be no fruit, sweet or otherwise.] (8).

9. Someone who is extremely wise and enlightened does Tapa (some auspicious activity) with scruples, wisdom, correct knowledge, due seriousness and diligence. His Tapa has auspicious intentions and bears fruits commensurate with it. [In other words, the Tapa done by Brahm was not to fulfill some selfish desires or to satisfy some sensual urges. It was done with an auspicious intention of creating this world, and then taking due care of it.]

It is from such Tapa done by the supreme transcendental Brahm that this universe with entities having distinct names and forms were created, along with the food that would help to sustain it and make it self-sustaining and self-perpetrating (9).

-----*****-----

Mundak (Canto) 1

Section 2

1. During the earlier stages of creation, i.e. the during the Sata Yug (the first of the 4-era Hindu cycle of one round of creation and conclusion) when the Vedas were first revealed, the great, wise and learned sages and seers had the depth of knowledge and the insight to understand the ‘truth’ encrypted or implied in the hymns of the Vedas; they were able to decipher it. During the Treta Yug (the second era of the 4-era Hindu cycle), it was this ‘truth’ that expanded in countless ways and forms. [In other words, during the Treta Yug, the dominant feature was the prevalence of ‘truth’. Every phase of life and each deed were marked by truthfulness and honesty. It was during these two eras that the fire sacrifices were given preference over other forms of worship because the hymns of the Vedas were to be primarily used to offer worship to the supreme transcendental Brahm by the medium of the fire as the latter was considered as the purest, the most holy and the most potent and powerful of the elements created by Brahm. The ‘fire’ was a metaphor for purity, immaculacy, cleanliness, truthfulness and holiness, and therefore of Brahm. Anything offered to the fire was deemed to be offered to Brahm. The statement that the ‘truth’ expanded in numerous ways and forms refers to the fact that there were many ways of performing the fire sacrifice, many different hymns used during such rituals, many deities were apparently worshipped in these sacrifices, but all of them represented the ‘truth’ called Brahm. All worship and all rituals were basically meant for the ultimate Absolute Truth known as Brahm. The people were wise enough to realise this fact.]

You must follow them (i.e. the tenets and teachings of the Vedas which teach about the ‘truth’) with the intention of accessing the Truth. [Remember that Truth can be reached by following the correct path that leads to it, and not by following the misleading path of falsehood or the various paths of ‘pseudo truths’. In other words, if

you wish to learn about the spiritual truths then you must thoroughly study the scriptures and analyse them intelligently.]

In this world, this is the only auspicious and correct thing to do for your own spiritual welfare and true well being (1).

2. [The following verses describe how the offerings are to be properly made to the sacred fire of the sacrifice.]

When the sacred fire of the sacrifice (which accepts the offerings made to it on behalf of the Gods) is burning properly and the flames are leaping upwards, the oblations meant for the Gods are offered with immense faith and devotion in the middle of the ‘Aadhaar Bhaag’ and the ‘Aajya Bhaag’¹ of the sacred fire (2).

[Note—¹When fire sacrifices are done, the sacred fire that is lit to invite the patron God to the ceremony is called the Ahawaniya fire, or the invocational fire. The first offering is made to the north of it while pronouncing the Mantra ‘Agneya Swaha’. The second offering is made to the south of it with the Mantra ‘Somaaya Swaha’. These offerings consist of clarified butter. These are called ‘Aadhaar’ and ‘Aajya Bhaag’—the share of the Fire God and the Moon God respectively. Since Brahman 2, verse nos. 1-2 of the Brihajjabal Upanishad belonging to the Atharva Veda tradition asserts that Agni and Soma are virtually the two aspects of the same cosmic Divinity that creates and sustains life in this creation, the offering made to this Divinity or Brahm through the two Mantras mentioned above in this paragraph are the shares or ‘Bhaag’ that are offered to the fire located to the north and south of the main fire pit.

The central part of the fire between these two ends is called the ‘Awapasthan’. It is in this that the main oblations intended for the patron deity who is being invoked are made.]

3. Those who have not followed the sacrosanct scriptural rules regarding ‘Agnihotra’¹ (i.e. how and when the fire sacrifices should be done and how the offerings are to be made to the sacred fire) not only do this in vain but also destroy whatever auspicious rewards that they had accumulated as a result of the good deeds done by them in the past. [In other words, doing the fire sacrifice in the wrong way has a negative effect and is more dangerous than not doing them at all.]

In order to ensure that the Yagya or the fire sacrifice gives full rewards and proves to be auspicious, it should be done strictly according to the principles and guidelines set out for such sacrifices in the scriptures. There should be no violation of this rule. Hence, the Yagya should conform to the principles laid out for doing the following four types of fire sacrifices called the ‘Darsha Yagya’², the ‘Purnamaas Yagya’³, the ‘Chaturmaas Yagya’⁴, and the ‘Aagrayan Yagya’⁵ respectively.

Besides the above, there are certain general guidelines to be observed while doing the fire sacrifices. These are the following—all the guests should be welcome and given due respect, the sacrifice is to be done in the proper time and by the correct method, and there should be proper sacrifice. [Usually this word ‘sacrifice’ is interpreted as meaning an animal sacrifice, but its intention is not that though the sacrificing of animals had been part of the tradition of doing fire sacrifices. The word ‘sacrifice’ has a very broad and far reaching import than just killing an innocent animal. It implies that one offers to the raging fire all the Vasanas and Vrittis (latent passions, lusts and yearnings, as well as natural temperaments, habits and inclinations respectively) that are present in his inner self, that one burns all the numerous mental and emotional taints such as worldly passions and inherent evil tendencies that act as impurities that had been covering his inner self like a dark veil, that one burns his

Ahankar or the sense of ego, pride and vanity in the fire, that one offers to the fire all his worldly attachments and delusions to emerge non-possessed of any delusions pertaining to this material and artificial world etc. If this is not done then the entire exercise is just a formality to gain fame and name; it becomes perfunctory. On the other hand, if the fire sacrifices are done properly, they have the power and the potentials to give immense rewards to the aspirant. This is because the sacred fire is the most powerful representative of the supreme Brahm, the Lord of creation.] (3).

[Note—¹The fire sacrifices and the offerings made to the holy fire are collectively called *Agnihotra*. Usually, the fire sacrifice is done daily by a diligent householder who wishes to strictly follow the rules as sanctified by the scriptures for an auspicious and religious way of living. This *Agnihotra* therefore is done by him twice a day—the time when the day meets the night, i.e. during the evening at dusk, and the time when the night meets the day, i.e. at dawn.

²The *Darsha* is the fire sacrifice that is done on the Amavasya day, the last day of the dark fortnight of the month.

³The *Purnamaas* is the fire sacrifice that is done on the full moon day.

⁴The *Chaturmaas* is a fire sacrifice consisting of three independent sacrifices done at four-monthly intervals called the ‘Chatur-maas’ or a period of four months. Each sacrifice has an independent name, viz. Vaishwadeva, Varun-praghaasa and Shakamedh. Sometimes one more named Shunaashirya is also added if the Hindu lunar calendar shows an extra month. Each of these is performed on the full-moon day and mark the advent of a season—such as the Phalgun or Chaitra Purnamaasi (February-March or March-April), Aasaadh Purnamaasi (July), and Kaartika Purnamaasi (November). Sweet pudding or porridge and rice cakes are the main offerings.

According to the Shatpath Brahman, 1/6/3/36, the Chaturmaas Yagya is the fire sacrifice that is done on the full moon day, called the Purnamaasi day, at the culmination of each four-month period of the year consisting of a cycle of 3 four-month auspicious seasons. According to the Shatpath Brahman, 2/6/3/1, the auspiciousness and well being of those who perform the Chaturmaas Yagya become permanent. Similarly, the Shatpath Brahman, 2/6/4/9, asserts that those who do the Chaturmaas Yagya are able to obtain the best of spiritual destinations and an exalted stature in life.

⁵The *Agrayan* is the fire sacrifice done on the full moon day in the month of Basant or the spring season, and on the full moon day of Sharad or autumn/fall.]

4. The seven tongues of the blazing fire are called Kaali (i.e. as ferocious and merciless as a goddess of war by the same name), Karaali (i.e. most fierce and sharp), Manojavaa (i.e. one which is as restless and powerful as the mind), Sulohit (i.e. red complexioned), Sudhurma Varnaa (i.e. one who is of an auspiciously bright or brilliant hue), Sfulingini (i.e. one who gives out sparklers), and Vishwa Ruchi (i.e. the one who is dear to the world, indicating the fact that inspite of the ferocious nature of the fire it is adored by the world because no life is tenable without the existence and the assistance of the fire element) (4).

5. A wise aspirant who offers oblations to such a fire (burning brilliantly with seven tongues) in the proper way and time is deemed to be doing the fire sacrifice in the proper way. The satisfied sacred fire (representing the Fire God) takes such an aspirant astride the rays of the Sun (symbolically represented by the leaping flames and the sparklers emerging from the fire) to the abode (in the heavens) where the only Lord of Gods (known as Brahm, the Supreme Being) lives. [In other words, doing the fire sacrifice properly and in the sanctioned method is a medium by which the aspirant

can reach the 'heaven'—which is a metaphoric way of saying that all auspiciousness and all goodness is available to him. The fire sacrifice is a means of attaining the desired fruits in this world of mortal beings as well as the other world where the exalted immortal Gods live. The fire sacrifice gives him all the material things that he desires in this material world as well as provides him with the golden opportunity of having an easy access to the spiritual world of emancipation and salvation should he desire it.] (5).

6. The offerings made by an aspirant to the holy fire during the sacrifice act as escorts that accompany him as he rides the rays of the Sun on his way to the heaven. They are also like heralds or ushers who stand by to welcome him in the heaven. They say—'Come, come! You are welcome. This is the Brahm Loka (the abode of Brahm) which you have attained as a result of your auspicious deeds' (6).

7. The ritual of the fire sacrifice that is done with eighteen chief participants (one chief patron + his wife + 16 priests = 18) with some worldly desires and hope of their fulfillment as a reward of the fire sacrifice, the fire sacrifice that is done with hope or expectation of some worldly gain and fame, is verily unfruitful and demeaning for the august institution of doing a fire sacrifice. Such fire sacrifices give perishable rewards that are transient and temporary. Such fire sacrifices are simply mechanical exercises done merely as a formality to satisfy one's ego that accompanies the successful acquisition of material wellbeing and worldly fame and majesty, without understanding what the fire sacrifice actually signifies and stands for, what the immense spiritual benefits are that can be derived by the august institution known as the 'Yagya', or the sacrament of the fire sacrifice.

Those ignorant people who are foolish enough to describe such external forms of formal ritualistic fire sacrifices (as described above) as the best thing to do by an aspirant, fall in the trap of taking repeated births and then dying each time. [That is, such people never find the 'truth' referred to in verse no. 1 as enshrined in the Vedas which had devised these fire sacrifices as an easy medium of accessing it. Such people never find 'true heaven' which is the abode of Brahm and is tantamount to spiritual emancipation and salvation. On the contrary, they treat the word 'heaven' to mean the highest position in the hierarchy of visible creation where enjoyment of material comforts and pleasures is a permanent feature and a sign of success. This position is represented by heaven where Indra, the king of Gods, lives. It is this 'heaven' that such people aim for. Indra is depicted in the Purans as being very passionate and lustful, rolling in material comforts and pleasures of heaven which are simply extensions of what a rich and famous man is accustomed to in this mortal world. The only difference is that these comforts and pleasures of the 'heaven' where Indra lives are long-lasting as compared to their counterparts in the mortal world. So, when the fire sacrifice is done with this purpose it would indeed provide the fruit desired, but this is like bargaining solid gold for some trash. The real benefit should be the aim of finding liberation and deliverance from the vicious and never-ending cycle of birth and death, because this cycle keeps the soul trapped in the snare of miseries and pains. If this aim is not achieved, then the main purpose for which the sacrifices were designed by the Vedas is defeated. It should be noted here that in verse no. 1 above it is clearly stated the wise sages and seers who had started the system of fire sacrifices during the Treta Yug had seen or understood the 'truth' enshrined in the hymns of the Vedas, and had devised this system as a practical method of accessing this 'truth' and to derive a practical benefit from it. That this divine vision

degenerated with the passage of time into meaningless rituals and useless waste of time and resources is most unfortunate as is clearly affirmed and endorsed by the present verse. Such exercises give only superficial and pecuniary benefits, and nothing else of real substance.] (7).

8. Such people (as referred to in verse no. 7) live in utter ignorance. They are like those blind persons who attempt to take other blinds to their destination; none reach the desired destination. They roam about aimlessly like blind persons, and suffer many sorts of problems (8).

9. Those who are ignorant of the 'truth and reality' think, in their utter ignorance, that they are fulfilled and accomplished after having done the ritual forms of fire sacrifices. They think that by completing such formalities they have actually done something great and have performed a noble deed, and therefore are entitled to some great spiritual reward. They become proud of their achievement.

Since such people have not understood the truthful meaning of the fire sacrifice and its real intention, nor have they understood the esoteric meaning of the various hymns recited during such exercises, they are falsely proud of themselves and their achievement; they are living in a fool's paradise! They do the fire sacrifice with some worldly desires in mind, or with any desire at all for that matter. Therefore, they get the reward hoped for, they get the 'heaven' they aim for, but once the good effect begins to wear off they have to leave the heaven and come back to this world of miseries once again (i.e. they have to take birth again). Since the benefits derived from doing fire sacrifices with some worldly desires are short-lived, such people never find permanent peace and tranquility that their soul longs for. [People who do fire sacrifice with some desires in mind do get their desires fulfilled. But once the good effect wears off, they are back to square one. Then they would do more fire sacrifices in order to compensate for their shortfall of good deeds and their good effects that had forced them to abandon the comforts of heaven and come back to earth. They attempt to retrieve lost glory and the heaven they had been forced to abandon. This vicious cycle of doing fire sacrifices, attaining glory and heaven, falling back to the mortal world once the good effects wear off, and doing more sacrifices to regain the lost glory and paradise, results in their being trapped in the never-ending cycle of birth and death. On the contrary, those who have understood the real intention of the fire sacrifice as a means of honouring the Supreme Being do not expect any reward from it because it is a duty to pay respect to the Lord who have given them a life and has provided everything for their survival. It is to thank the Lord that such fire sacrifices are done. Then it is obligatory on the part of the Lord to take care of his devotee, and thus even without asking the Lord brings him nearer to himself. This is the bonus in the form of emancipation and salvation. Since the aspirant is not expecting any reward from the fire sacrifice, it is obvious that no results accrue for him, and therefore he does not get worldly comforts or reaches the lower heaven where the inferior Gods, such as Indra, live, but he is directly called in by the Supreme Lord. He gets that satisfaction and peace which is got by doing anything selflessly and with a charitable disposition. It is spiritually uplifting and exhilarating.] (9).

10. There are people who do fire sacrifice expressly with the intention of fulfilling certain worldly desires and aspirations. They are immensely stupid and fools of the highest order who think that there is nothing better or higher in this life than doing

the two types of Karmas (deeds)—viz. the ‘Ishta Karma’ which refers to the performance of rituals during the formal fire sacrifice with the specific purpose of fulfillment of certain desires, and the ‘Purta Karma’ which refers to such deeds as constructing wells, ponds and other such memorial landmarks to mark the successful completion of the fire sacrifice and to commemorate its performance.

These people are so ignorant that they regard the worldly rewards obtained by doing the fire sacrifice successfully as better than and superior to the eclectic reward that should be obtained by doing a fire sacrifice, which is to obtain an access to the higher heaven (or to the exalted state of spiritual liberation and deliverance from this cycle of worldly birth and death). Such people take birth repeatedly in this world or even are demoted to a lower form of life than the one they presently occupy (10).

11. [This verse describes those who are wise and enlightened, and their destiny.]

Those who lead a contented life living in the forest (i.e. living away from the glamour, pageantry, charms and deluding artificiality of the material world which would vex their spirits and snatch the peace of their mind and heart), those who do Tapa and observe other auspicious vows (i.e. do penances, observe austerity and the tenets of self control, suffer hardship for their spiritual welfare with stoic forbearance, and generally lead a religious way of life in the true sense), those who have faith and devotion in the spiritual truths as enshrined in the scriptures, and those who meet their daily needs for food and other necessities by begging (instead of hoarding and then worrying about the security of their hoard)—verily, such wise and enlightened men free themselves from all sorts of contaminants that taint the spirit of ordinary persons in this world and act as a stumbling block for their spiritual liberation and deliverance. Being freed from their cumbersome burden, they proceed on the lighted path of spiritual realisation and upliftment that is as brilliant and splendid as the light of the radiant sun.

They follow this path called ‘Surya Dwar’—the spiritually enlightened and liberating path that leads to the abode of the glorious Brahm who is eternal and imperishable, who is the Supreme Being represented by the splendid Sun in the heavens. [The word ‘Surya’ means the Sun, and the word ‘Dwar’ means a door. Hence, they enter the heaven through a path illuminated by the sun. That is, they find light instead of darkness; they are welcomed into the higher realms of the spiritual world instead of being forced to tread the path of darkness and ignorance that keeps them moribund to this deluding world. They indeed find liberation from this dark mortal world of delusions and ignorance which traps ordinary less-enlightened creatures in a vicious grip of birth and death; they are delivered from its torments and delusions by finding final emancipation and salvation for themselves which gives them spiritual eternity and imperishability, eternal peace and tranquility. This gain is tantamount to going to the abode of the supreme Brahm which is as splendid and brilliant as the realm of the celestial Sun, an abode from where there is no return—because no wise man worth his intelligence would like to abandon light in exchange for darkness!] (11).

12. Realising that the world and its attendant rewards (such as material comforts, pleasures, happiness and joys, as well as fame, name, lordship, power and authority) that are obtained by doing Karma (literally meaning doing deeds, but here referring to the doing of fire sacrifices with the aim of obtaining worldly rewards or gains) is transient and perishable, a wise, self realised and enlightened Brahmin, i.e. such a learned man who has this wisdom and foresight, inculcates or develops a natural sense

of deep renunciation and detachment from them. He realises the futility of such exercises that do not give permanent happiness or rewards.

Since it is not possible to attain eternity and imperishability by simply doing Karma (which is the performance of rituals and fire sacrifices), such wise men (who have understood this reality and are eager for finding the truthful way that would give permanent spiritual rewards) approach some learned and enlightened Guru (a moral preceptor, teacher and guide) who is not only well-versed in the ‘truth’ of Brahm as enshrined in the Vedas but is also a firm believer in this ‘truth’ known as Brahm and is a practitioner of this ‘truth’. It is only he who can show the spiritual aspirant the correct path leading to Brahm and teach him about the supreme knowledge of Brahm (12).

13. This enlightened and Brahm-realised Guru is obliged to welcome the aspirant, who is calm in his demeanours and has obtained full control over his sense organs, as his disciple. The teacher should teach him the divine and eclectic knowledge of Brahm, a knowledge called ‘Brahm Vidya’, so that the eager disciple can have a comprehensive knowledge of the truthful and eternal Brahm (13).

-----*****-----

Mundak (Canto) 2

Section 1

[This section follows seamlessly the last verse of Mundak 1, section 2 which says that the teacher should teach an eager disciple the knowledge of Brahm. Now therefore this section tells us who or what this Brahm is.]

1. Both the Brahm and this world are true just like the raging fire that produces countless sparklers and embers. [The fire is compared to Brahm, and the sparklers and embers to this colourful world showing astounding variety. The fire is the truth because it is burning right in front, and the sparklers and embers are true also because they are springing from the fire on the one hand, and on the other hand they have the same potentials as the parent fire as they can start another fire if they fall on an inflammable object. Similarly, Brahm is the powerful source from which this world of diversity and variety emerged. This world is self-sustaining—i.e. like the sparks and embers that can produce another fire independently after their origin, this world can replicate its self once it was created by Brahm. There can be no sparklers or embers without the fire, and similarly there cannot be a world without Brahm.]

Oh Saumya (a pleasant and dear person; a term of endearment)! It is from this Akshar Brahm, or the imperishable and eternal Divinity, that countless ‘Bhaavas’—i.e. the world with numerous forms and names and myriad characters—is produced. They originate in this Akshar Brahm and ultimately collapse and become one with it in the end¹ (1).

[Note—¹This is like the Sun spreading out its radiant and bright rays at dawn, and withdrawing then into its self at sunset. Refer also to Mundak 1, section 1, verse no. 7.]

2. This Brahm is self-illuminated, and without any forms and attributes.

Brahm pervades inside and outside of everything in existence as it is omnipresent and all-pervading—there is no spot where Brahm is not present.

Brahm has no birth or precedent.

Brahm has no Pran or vital life sustaining factors because Pran lives in a gross body in order to keep the body alive, and since Brahm has no physical gross body there is no need of Pran for Brahm.

Brahm has no Mana (the thinking mind and the emotional heart) because these are the subtle aspects of the gross body of a mortal creature, but Brahm is none of them.

Brahm is splendidous and radiant as it is self-illuminated.

The eternal and infinite Brahm indeed is far superior to the Atma, the pure consciousness that resides in the gross body of the mortal creature as his self (because the Atma is subjected to the limitations of the gross body in which it lives, and naturally influenced by the latter) (2).

3. It is from this imperishable and eternal Brahm that the Pran (the vital life sustaining forces of creation such as the vital winds), the Mana (the thinking mind and the emotional heart) and the various Indris (the sense organs—five of perception and five of action) are created.

It is from Brahm that the five primary elements Kham or Akash (sky), Vayu (air or wind), Jyoti (light, implying the fire element), Aapaha (water) and Prithivi (earth) which bears this world are created (3).

4. That whose head or crown is the fire element, the sun and the moon the two eyes, the directions the ears, the famous Vedas the speech, the air or wind the Pran (the vital life sustaining winds that keep the living being alive), the entire world the heart, and from whose legs the earth has been created—verily, that supreme cosmic transcendental Brahm is established as the Atma that resides in the inner self of all living beings in creation (4).

5. It is from this Purush (here referring to the Viraat Purush, the invisible, macrocosmic, all-inclusive gross body of the supreme transcendental Brahm) that the cosmic fire is created.

The Sun is like the Samidha (the firewood used during the fire sacrifice) of this Brahm. [This is because the Sun lights up the entire heavens with its light much like the fire sacrifice ‘lights up’ or opens the gate of heaven for the chief patron of the sacrifice.]

It is from this fire kept burning with the help of the firewood that the nectar-like Soma (the elixir of life) was created. And from this Soma was created the Parjanya or water from the heavens which comes down upon earth as rains. [This refers to the creation of rains due to the heat of the Sun. The rains are produced because the water is evaporated from the oceans due to this heat, and then in due course of time is converted into clouds that shower this evaporated water as rains back upon the earth. It is called Soma or the elixir of life because rains are very essential for crops and for taking water to distant areas of the earth where rivers and their like cannot reach. Rains bring cheer and joy to the creatures on earth who would have died for want of water, and it acts as a lubricant as well as a coolant to protect them against the unrelenting heat of the Sun. Had there been no rain, the earth would have scorched and turned into a parched dry terrain of lifeless rocks and withered shrubs. Hence, the rain is like the Soma that cheers the drinker.]

From the Parjanya (rains) was created the medicinal herbs—plants, trees, shrubs, creepers, and all other forms of vegetation that exist on earth.

These herbs create sperms in a man. When the man irrigates with the help of this sperm, the rest of the subjects (off springs) are produced. [That is, the plants when eaten as food in various forms support life in the man, providing the necessary nourishment, energy, stamina, strength and vitality to him. Even the animals depend upon plants for survival. It is the latent Pran or vital life supporting forces present in the food eaten that are extracted by the man and converted into his own life generating energy that is converted into sperms, the spark of life from which the next generation is born. In effect, the sperm is like the liquid Soma that produces life on earth when it irrigates the latter as rain. Likewise, the sperm irrigates the earth in the form of the female when the man transplants the sperm into the female, and this creates fresh life in the form of the off spring much like the rain creating fresh crops and new generation of plants on earth.] (5).

[Note—In the context of verse nos. 5-10 of the present section, refer also to the Prashna Upanishad, Canto 6, verse no. 4. This Upanishad is Chapter 1 of this volume.]

6. It is from this Viraat Purush that all the Richas (hymns of the Rig Veda), the Sam Veda and the Yajur Veda were created.

It is from him that the investiture and other religious ceremonies were created.

It is from him that the fire and other forms of religious sacrifices, all their accompanying formalities, and the obligatory charities that must accompany such exercises were created.

It is from him that the concept of Samvatsar (one full year consisting of all the seasons) originated. [That is, the entire concept of one cycle of life has its origin in the supreme Brahm. The Samvatsar is a metaphor of one cycle of origin and conclusion of the visible creation.]

It is from him that the Yajmaan (the chief patron on whose behalf the fire sacrifice is done; here also referring to the ancestors called the Prajaptis from whom this human race evolved) and the subjects of the vast kingdom, stretching as far as the rays of the moon go and the energy of the sun heats, were created. [The vast kingdom refers to the world that exists on earth because the rays of the moon are limited to lighting the earth and not the far reaches of the solar system. At the same time, it also includes all the planets of the solar system because all these planets are lighted by the energy of the sun which is transmitted in the form of sunlight. In the context of the fire sacrifice cited herein above, the vast kingdom is a metaphoric way of alluding to the numerous benefits that accrue as a result of successful completion of a fire sacrifice. When this kingdom is seen in the context of the Prajapati as the Yajmaan or the chief patron who presided over this great exercise of creation of this habitable world, it would obviously mean the off springs of Prajapati. These off springs are the living beings that inhabit every corner of this earth. In other words, whatever that exists in this visible world is a manifestation of Brahm in his macrocosmic all-pervading form known as the Viraat Purush.] (6).

7. It is from this Viraat Purush that the numerous Gods as well as the special Gods who are invoked during the fire sacrifices, along with the humans, the animals, the birds, the various life supporting vital winds such as Pran and Apaana etc., and the staple cereals such as rice and oat are created.

It is from him that the glorious virtues of Tapa (austerity, penance, sufferance for some noble cause), Shraddha (having faith, conviction and belief), Satya (truthfulness, sincerity and honesty), Brahmacharya (self control over the sense organs; continence and abstinence), along with the various laws and regulations that govern all phases of civil life, its ethics and morality were created (7).

8. It is from him (the Viraat Purush) that the seven grosser aspects of Pran were created. [These seven units of Pran are the two ears + two eyes + two nostrils + one tongue = seven. They are called 'Pran' because it is through them that the man is able to perceive the existence of the world. The ears help him to hear, the eyes to see, the nose to smell, and the tongue to taste.]

It is from these sense organs of perceptions that were produced the seven tongues of fire¹, the seven types of Samidhas or firewood², and the seven types of Homa or the offerings made to the fire sacrifice which are also classified into seven types³.

It is from the Viraat Purush that the seven Lokas or places inhabited by the creatures were created⁴. Besides these, the seven places where the Pran (life consciousness) finds its playing field, or the places which are kept alive by the Pran and where the Pran roams⁵ are also created from this Viraat Purush.

These seven units of creation are all established in the body of all living beings, and are created by the Purush who lives in its cave-like heart⁶ (8).

[Note—¹The *tongues of fire* refer to the sense of perceptions that are generated by each of the sense organs listed in this verse. The word 'tongue' has a metaphoric implication because one tastes anything with the tongue. Here it means that the man is able to 'taste' the irresistible charm and fascinating attractions of the material world only through the sense organs of perception. These perceptions light up the world for him and make him aware of its allurements. The seven tongues of the fire have been named in Canto 1, section 2, verse no. 4.

²The *Samidha* is the firewood that helps the fire of the sacrificial pit burning. This in the present context is a metaphor for the objects of the world that are relevant to each sense perception. For instance, the smells of the world are the firewood that keeps the fire of perception called smell burning; the sights of the world are the firewood that keeps the fire of perception called sight burning, and so on and so forth.

The seven types of Samidhas are firewood from seven types of trees are that used for this purpose as follows—Ashvattha (*Ficus religiosa*), Bilva (*Aegle marmelos*), Chandan (sandal wood), Devdaaru (pine), Khadira (*Acacia catechu*), Nayagrodha (Indian fig tree), and Palaas (*Butea frondosa*).

The wood from the following trees are not to be used for the purpose of Samidha—Bibhitak (*Terminalia bellerica*), Kapittha (wood apple), and Neem tree.

Each stick of the firewood should not be thicker than the thickness of the thumb, must have the bark on them, and should not be eaten by wood-worms or insects, or infected by any kind of germs—i.e. should be fresh.

³The *Homa* and *Yagya*—During fire sacrifices, Havi is offered to the consecrated sacred fire. This Havi is the material that is put into the consecrated sacred fire as an oblation during fire sacrifices. The process of offering is called Homa. Since Homa and Havi are an integral part of Yagya or the fire sacrifice, the latter is classified into seven types depending upon the type of Havi offered.

The Havis are generally the following things—(a) barley, rice and oat. (b) milk and clarified butter. (c) Juice of the Soma plant. (d) Besides these, animals were also offered as a sacrifice in earlier times.

Classification of Fire Sacrifice or Yagya depending upon the Homa used—

(i) Since doing Homa by the offering of a Havi is an integral part of Yagya or the fire sacrifice, the latter is classified into seven types depending upon the type of Havi

offered. If the Havi consists of rice, barley, oat, milk and clarified butter, then the seven types of fire sacrifices are called the following—Agnyaadheya, Agnihotra, Darshapuranmaas (also called the Prakriti or original fire sacrifice), Chaturmaas, Aagrayan, Niruddhapashubandha, and Sautraamani.

All these fire sacrifices are performed in the three main fires—viz. the Garhyapatya, the Dakshinagni and Aahavaniya.

(ii) If the Havi is the juice of the Soma plant, then the fire sacrifice is called the Soma Yagyas—so called because the extract or juice of the Soma plant is offered as an offering. These seven Soma Yagyas are the following—Agnisthoma, Atyagnisthoma, Ukthya, Shodashi, Vaajpeya, Atratra, and Aptoryaama.

(iii) Then there are seven special types of fire sacrifices called the seven Paak Yagyas. They are the fire sacrifices done for the purpose of worldly gains and material prosperity. They are also called Kaamyeshthi Yaga, or literally that which is done with the aim of fulfilling some specific desires or aspirations. They are performed in the Garhyapatya Agni or the fire of the household with cooked offerings such as boiled grains mixed with Ghee (clarified butter).

These seven Paak Yagyas are the following—Huta, Prahuta, Aahuta, Shulagava, Baliharana, Pratyavarohana, and Ashtakaahoma.

The Homa in the present context is the knowledge of this world and the belief that it is the reality and one that is worth acquiring. This is likened to the offering made to the fire sacrifice because when one makes such offerings to the sacred fire, he is aware of the results that would accrue to him if the sacrifice is completed successfully. He keeps in mind the objective of making such offerings while going through the elaborate rituals. He is sure that the desires would be fulfilled. Likewise, the knowledge of this world motivates the man to divert his sense organs and their efforts towards his objective—which is getting access to the charms and material benefits that have their presence in the world. He does everything with only one aim in mind, and that is the fulfillment of his desires pertaining to the specific object that he finds charming, attractive and meaningful. This diversion, concentration and putting to use of all available resources towards achieving success in the fulfillment of one's desires pertaining to this material world is like offering Homa or oblations to the fire sacrifice with great devotion and diligence. No efforts are left undone to achieve success in the fire sacrifice.

Since such fire sacrifices are done with the desire of attaining worldly successes, the reward is also commensurate with it. In other words, the reward is worldly prosperity, wealth, fame, name, glory and majesty. In the context of the genesis of creation in which the Viraat Purush was involved, the reward was the creation of the Lokas as mentioned in this verse.

⁴The *seven Lokas* that were created as the result of the fire sacrifice, according to Brahmaand Puran (BP) and Vaaman Puran (VP), are the following lokas-- 'Bhu' (भूः) or earth [BP-3,4,2-18]; 'Bhuvaha' (भुवः) or the space between the earth and the heaven [BP-3,4,2-19]; 'Swaha' (स्वः) or the heavens known as Brahma's abode; the space beyond the earth's atmosphere; cosmic wind represented by the solar wind blows here [BP-3,4,2-20]; 'Maha' (महः) or the world created by Brahma pronouncing the divine word Maha meaning the great heaven or the outer space; it is believed that great sages and seers stay here; it is 1000 Yogans or appx. 8000 miles away from the Swaha Loka [BP-3,4,2-21; VP-52,21-22]; 'Janaha' (जन्मः), so called because it was to be inhabited by the humans and the cows [BP-3,4,2-22; VP-52, 22]; 'Tapaha' (तपः) or the Loka where great amount of austerity and penances are done; it is said to be 60 million Yojans or appx. 60 x 8 miles away from the Janaha Loka [BP-3,4,2-24; VP-52, 23]; and 'Satyam' (सत्यम्) or the truthful heaven where the supreme Lord has his abode; it is 300 million Yojans or appx. 300 x 8 miles beyond the Tapaha Loka [BP-3,4,2-25; VP-52, 24].

The seven Bhuvans or Lokas according to the view of this Upanishad as narrated above are the following—the seven organs of perception situated in the region of the head—viz. the two eyes + two ears + two nostrils + one tongue/mouth = seven. These are called the ‘Lokas’ because it is through them that the man becomes aware of the existence of the world.

⁵The seven *places where the Pran or life consciousness moves* are the following—the five organs of action such as the legs, hands, mouth, excretory and genitals, the thinking mind and the emotional heart = seven units. In other words, these organs of action along with the mind and the heart help the man to carry out his desires effectively. Once the organs of perceptions find out about the world and its charms, success in obtaining access to it would depend upon these organs of action aided and abetted by the mind and the heart.

These organs are included in the overall picture of the manifestation of Brahm as the world and its inhabitant creatures because the body of the creature is an image of the Viraat Purush, and as such to limit the existence of the vital life giving consciousness called Pran only to the organs of perception, and excluding the other organs such as the organs of action, the mind and the heart which nevertheless are equally important, would only distort the comprehensive picture of Brahm that the Upanishads attempt to depict.

⁶This ‘Purush’ is a clear reference to the Atma, the pure consciousness that resides in the subtle space of the creature’s heart. Brihad Aranyak Upanishad, 1/4/1 affirms that the Purush is the Atma which is absolutely immaculate and sinless, and in 2/5/18 says that someone who resides in a ‘Pur’ or city (the ‘body’) is called a Purush. This resident is the Atma. See also verse nos. 9-10 below which are very clear in this. Since the Atma is the Sovereign of the body, all the organs of the body and all its activities are like the functioning of the different state organs for the purpose of administration of the kingdom whose king is the Atma. In other words, those who are wise and self-realised do not think that ‘they’ are the doer of any fire sacrifice or any other form of deed in this world. They firmly believe that it is their Atma that is doing these deeds in order to keep the wheel of creation turning on behalf of Brahm. Here the word ‘they’ is the plural for the individual person who usually is identified by the physical body in this world which recognises forms, names and attributes as the identity of the creature instead of the Atma. Refer verse no. 1 of this Canto in this context.]

9. It is from the Viraat Purush that all the oceans, the mountains and the rivers of different names are created.

It is from him that all the medicinal plants (herbs) and their essence or juices are produced.

It is this Viraat Purush that lives in all the living beings as their Atma that resides in their inner self¹ (9).

[Note—¹Refer Brihad Aranyak Upanishad of Shukla Yajur Veda, Canto 1, Brahman 4, verse no. 1, and Canto 2, Brahman 5, verse no. 18 which also endorse exactly the same idea.]

10. Oh Saumya! The entire Vishwa (universe), all the Karmas (literally meaning the deeds, but here referring to the fire sacrifices), and the Tapa (austerity, penance and suffering of hardship for some noble cause)—verily, all of them are manifestations of the supreme Brahm.

That Brahm is the ‘absolute reality’ of creation, and is the ‘truthful essence’ which is like nectar of creation.

A wise and enlightened aspirant who knows that this Brahm is established in the subtle heart of all living beings (as their Atma, their pure conscious self) is able to

dismantle all the knots of ignorance in this world. [That is, he attains supreme knowledge of the Truth that is absolute and like nectar.] (10).

-----*****-----

Mundak (Canto) 2

Section 2

1. That (supreme transcendental Brahm) is self-illuminated, is all-pervading and omnipresent, is a resident of the subtle space of the heart of the creature, and is most holy, divine, honourable and exalted.

All forms of living beings that move, breathe and blink eyelids are incorporated in this Brahm, are an integral part of Brahm, and are an extended manifestation of the same Brahm that is a universal entity present in each minutest unit of creation. In fact, there is nothing that is not Brahm.

Know that supremely divine and holy Lord (Brahm) who is beyond the doubts and confusions created by the dual concept of truth and non-truth, who is worth honouring, accepting, admiring and worshipping, who is supreme and most exalted, and who is beyond the reach of the mind and intellect of all living beings (1).

2. That Brahm is splendorous and brilliant, is finer or smaller than the finest or the smallest atom, and is the one who harbours all the worlds and their inhabitants, and therefore is larger than the largest of anything that has ever come into existence.

Indeed, it is this Brahm that is eternal and imperishable. It is the same Brahm that is called the Pran or the vital life consciousness of creation, the Vani or the faculty of speech that enables the creatures to speak and express themselves (or the Pran to express itself, because it is the vital winds present in the body of the creature which enables the latter to speak and show other signs of life), and the Mana or the thinking mind as well as the emotional heart (because only a living and conscious creature can have a mind and heart that helps it to think and exhibit emotions respectively).

It is this Brahm that is a personification of Truth and Amrit (the essence, the nectar or the elixir of life).

Oh Saumya (gentleman aspirant—sage Shaunak)! This Brahm can be known and accessed only with the help of concentration of the mind, with diligent contemplation and deep insight (i.e. with the concentration of the various faculty of the intelligent and analytical mind). Hence, concentrate your mind and its faculties on Brahm (2).

3. [Verse nos. 3-4 describe how the teachings of the Upanishads and the divine Mantra OM can be used by a wise and enlightened spiritual aspirant to obtain success in realising Brahm.]

Use the teachings of the Upanishad as an infallible weapon called the bow, and mount it with the arrow sharpened and made effective with constant contemplation and thoughts of the target (of Brahm). Pull the strings of the bow with full devotion, conviction and faith, and you would definitely pierce the bull's eye or the target, which in this case is the attainment or realisation of the Brahm that is imperishable and eternal by nature. [That is, if you follow the instructions of the

Upanishads faithfully and practice them in your life, it is certain that you would become enlightened and Brahm-realised.] (3).

4. Pranav (the Mantra OM representing Brahm) is the bow, the Atma is the arrow, and Brahm is regarded as the target. [The main aim of all spiritual endeavours is to obtain the knowledge of the Absolute Truth known as Brahm. Since the Atma is the pure conscious ‘self’ of the aspirant, it is the one that aims to become Brahm realised—or realise Brahm, attain Brahm, or reach Brahm. In other words, the Atma is able to understand the Absolute Truth that is taught by the Upanishads. The vehicle for this is the Mantra OM because this Mantra relates directly to Brahm, and therefore is clearly the best medium by which Brahm can be accessed. Just like a man responds when he is called by his personal name, Brahm would respond more quickly and easily when called by this Mantra of OM. This Mantra is used as a medium during meditation and contemplation by the spiritual aspirant; it is used in Japa or constant repetition in order to enable the mind to remain focused on its target of Brahm realisation. Hence, the bow is both the teachings of the Upanishads as mentioned in verse no. 3 as well as the OM as said in this verse no. 4.]

A man who has conquered lethargy and indolence, a man who is alert, vigilant and agile, and a man who is attentive and focused—only such a man can ever hope to pierce the target with the arrow. [That is, these virtues are necessary if one wishes to reach one’s aim in this world, and in the present context, to have Brahm-realisation.]

One should concentrate upon the arrow (the Atma) and be focused on the target (Brahm) in order to pierce (reach) it (i.e. become Brahm-realised). [Inculcating the grand virtues enumerated above is simply like the bow that is properly strung as these virtues can aid an aspirant to reach his sought-after spiritual target. But it is the aspirant himself who must reach the target and enjoy its rewards. Since the Atma or the pure conscious ‘self’ is the true identity of all living beings, it is said here that the Atma is the ‘arrow’ because it is the Atma that attains Brahm and becomes one with Brahm; it is the Atma that becomes ‘Brahm-realised’ when it is said that the creature has become ‘Brahm-realised’. After all, the gross body of the creature is not his ‘true self’, so when it is said that the creature has realised his goal of attaining Brahm, it is actually his Atma that does so.] (4).

[Note—The Rudra Hridaya Upanishad of Krishna Yajur Veda, verse nos. 38-39 uses the metaphor of the bow and the arrow to describe how the Atma of the creature can reach Brahm.]

5. That eclectic and enigmatic divine entity in which the Duloka (representing the heavens where the immortal higher Gods live), the Prithivi (the earth representing the terrestrial world of mortal beings), and the Antariksha (the sky and its upper reaches where the Spirits and junior Gods live, representing a realm in between the mortal world and the immortal world) along with the Mana (the thinking mind and the emotional heart) are established (or the eclectic and enigmatic entity from which all these units of creation have emerged or created)—verily, it is the Atma. This Atma is unique and non-dual.

Free yourself from all dichotomies and confusions in this matter that would only vex you and leave you perplexed. Instead, be firmly convinced that it is the only Truth worth pursuing if you wish to obtain the Amrit (elixir) known as Brahm (the Absolute Truth) (5).

[Note—In this verse, the Atma and Brahm are treated as being synonyms. The only probable difference between them is the plane in which they are usually understood to exist. For instance, when one says the ‘Atma’, it is usually at the

microcosmic level of existence that one refers to, while the term 'Brahm' applies to the same entity at the macrocosmic level. In reality, both are the two aspects of the same universal 'consciousness' that exists in this creation; they are like any 'truth' which is fundamentally unchangeable and immutable.]

6. Just like the spokes of the wheel of a chariot are fixed to its central hub¹, and the various Naadis (veins, arteries, capillaries and nerves) are centered around the heart², in the same way the supreme Brahm (i.e. the cosmic Consciousness) that has manifested in numerous ways finds its abode in the heart of the creature (as his Atma, the pure conscious soul which is the truthful 'self' of all the living beings) in this world³.

That supreme transcendental Brahm should be remembered, worshipped, honoured, meditated and contemplated upon through the medium of the divine and eclectic Mantra exclusively dedicated to it, and this Mantra is OM⁴.

It is absolutely imperative to do so if one wishes to go across the darkness of ignorance (regarding the spiritual truth) in this world (6).

[Note—¹Refer also (a) Atharva Veda = Prashna Upanishad, Canto 1, verse no. 11; Canto 6, verse no. 6. (b) Krishna Yajur Veda = Shwetshwatar Upanishad, Canto 1, verse no.4, 6; Canto 6, verse nos. 1-3. (c) Shukla Yajur Veda = Paingalo-panishad, Canto 4, verse nos. 3-4.

²Refer also Atharva Veda's Prashna Upanishad, Canto 3, verse no. 6.

³Refer also Atharva Veda's Prashna Upanishad, Canto 3, verse no. 6; Krishna Yajur Veda's Panch Brahm Upanishad, verse no. 40; Brahmo-panishad, verse no. 4. Refer also to Mundak 2, section 1, verse no. 10, and verse nos. 7-9 of the present section 2 of this Mundak Upanishad.

⁴OM—It is the nearest analogue to Brahm, and is the universal Mantra dedicated exclusively to Brahm. OM is regarded as being synonymous with Brahm.]

7. Brahm that is supreme and transcendental, that is all-knowing and omniscient, that is all-pervading and omnipresent, and whose glories, majesties and magnificence is well known and revealed everywhere in the form of this creation itself—verily, that Brahm is established in the divine 'Brahm Pur' located in the sky represented by the subtle space of the heart of the creature. In other words, the supreme Brahm who is none else but the cosmic Consciousness pervades throughout the length and breadth of this creation in his macrocosmic form, and at the same time he lives as the Atma or the pure conscious 'self' of all living beings in their heart. [The word 'Pur' means an abode.]

This Brahm in the form of the Atma lives in the subtle sky of the lotus-like heart of the body which has two major components—viz. the subtle body called the Mano Maye Kosh or the mental sheath, and an outer gross body called the Anna Maye Kosh or the food sheath¹. It is through the Mana that the Brahm residing in this lotus-like heart of the body of the creature controls all its functions along with the movement of Pran (the vital winds that not only keep the body alive and active but also control each activity of the gross body)².

This Brahm, the Supreme Being, who resides in the lotus-like heart as the Atma is an embodiment of Anand—i.e. it is personified bliss and ecstasy; it is an embodiment of Amrit—i.e. it is personified elixir that gives not only bliss and ecstasy but is the essence that is at the core of this creation.

This Brahm shines or is revealed everywhere with full glory, splendour and magnificence. Those who are truthfully Brahm realised, enlightened and wise, see,

experience and witness this Brahm everywhere, in each unit and direction of creation (7).

[Note—¹The gross body of the creature is like a wheel consisting of five rings or Koshas which are like cells or sheaths or layers that surround the central hub represented by the heart where the Atma lives. Just like a wheel that depends upon the hub to remain intact and maintain its form, shape and existence, the body too depends upon the Atma for its survival. Again, just like the hub is the central point around which the wheel rotates in order to take the chariot forward, the Atma is the central core around which the entire edifice of creation revolves.]

²Since the Atma itself does not do anything like the Emperor who does not carry out the daily routine affairs of the empire himself but depends upon his trusted prime minister, the Atma too depends upon the Mana or the intelligent mind and the emotional aspect of the heart to help it carry out the various deeds of the body. It is the mind through which the Atma regulates everything in this world. If the mind is disturbed or sick, all the activities are adversely affected.]

8. When a man comes to be acquainted with the truth and reality of this Brahm, all the Granthis or knots (tantamount to various spiritual impediments, hurdles, corruptions and taints) of his heart are ruptured, vanquished, untied or unknotted (or are dispelled and overcome)¹.

All his doubts and confusions are dispelled. All the accumulated consequences of his past deeds as well as the chances of accumulating fresh consequences are done away with. [This is because once he has realised the Truth about his own self as well as the body, he understands that they are two different entities, and that it is the body that does the various deeds and not the Atma which is only a dweller in this body for a certain time, and would have to ultimately abandon it when the body becomes old and dies. This Atma is divine, eternal, imperishable, immaculate and free from all worldly taints; the body possesses none of these grand virtues. Becoming self and Brahm realised is the pinnacle of spiritual knowledge that bestows natural wisdom and enlightenment to the aspirant.] (8).

[Note—¹Refer also to Mundak 3, section 2, verse no. 9. Such a person is able to overcome all the numerous spiritual hurdles that ignorance of the truth of Brahm puts in his way of finding liberation and deliverance as well as finding permanent peace and tranquility. The numerous emotional, sentimental and spiritual hurdles that an aspirant faces are referred to as the *Granthi* because they are like the hard shell of the nut which is difficult to crack. Only when this shell is cracked can one find the nut. Similarly, only when one overcomes the numerous obstacles and hurdles faced by him in his spiritual pursuit that it is possible for him to have access to the fount of eternal bliss and peace that comes with realisation of Brahm, which in essence is being aware of the Absolute Truth of existence. These Granthis are called Hridaya Granthis because they shackle the Atma and prevent its liberation and deliverance; they stand in the way of a man obtaining freedom from his fetters, and keep him tied to this world. Once he is able to rupture them or overcome them, he finds liberation even while he is still alive in this world. This is known as 'Jivan Mukti'. This fact has been clearly emphasized in Katho-panishad, Canto 2, Valli 3, verse no. 15 of Krishna Yajur Veda tradition.]

9. The supreme Brahm lives in the subtlest Kosha or the inner-most cell of the creature's body. This Kosha is illuminated, and therefore called 'Hiranymaya'. It is illuminated because of the presence of this self-illuminated Brahm in its core. This Kosha becomes inseparable from Brahm and acquires the shine of Brahm residing inside it. It is therefore called the 'Hiranyamaye Kosha'. It is the body's hub and the core of its life. This Kosha is the subtle heart where this Brahm—who is immaculate

and pristine pure, who is without any attributes and forms—lives. [This inner most cell of the body is called the ‘causal body’ because the very ‘cause of existence’ known as the pure conscious Atma lives in it. This Atma is the microcosm of Brahm.]

This Brahm is at the heart or core of all that is illuminated, glorious, splendorous, radiant and magnificent. [That is, if anything has these virtues it is because of the presence of Brahm—or the Absolute Truth—in it. In other words, Brahm—or Truth—is a personification of these eclectic and divine virtues.]

Those aspirants who are self realised, wise and enlightened know about this Brahm (9).

10. In this Brahm Loka the sun does not shine, nor does the moon or the stars. The electric or lightening too does not shine or dazzle there, say how then can the fire be lighted there? The fact of the matter is that all these entities are illuminated because of the illumination and light provided by Brahm as they do not have their own light.

It is this single Brahm’s light that is reflected in all of them; it is when Brahm shines that all these entities begin to show light¹ (10).

[Note—¹This observation can be understood by a simple example. When the Sun is shining brightly at its best, the flame of a lighted lamp or candle become virtually ‘lightless’, loses its brightness and glow, and becomes redundant or irrelevant as far as illuminating the surrounding area is concerned. Seen from a distance one would not be even able to make out whether the candle is lighted or not, so luster-less does its flame becomes. Similarly, when Brahm is present, all other lighted entities such as the sun, the moon and the stars become inconsequential and redundant. Even the ‘fire’ makes no impact because the glare and dazzle of the illumination of Brahm is extremely bright so as to dwarf the glow and brightness of fire into nothingness. The illumination emanating from Brahm is of such an astounding dimension and intensity that it nullifies the light of all entities that have a shine.

In other words, when a man becomes enlightened about Brahm, he attains such glory and wisdom that he becomes a living embodiment of the Sun on this earth. He acquires such stupendous mystical powers and spiritual majesty that he outshines all other human beings in this world.]

11. [What is that Brahm?] That Brahm is Gyan or truthful knowledge, wisdom and enlightenment personified. This Gyan is like Amrit, or the quintessential knowledge of Brahm is the essence of all knowledge, and is the elixir of Truth. [That is, nothing is superior to the knowledge about the ‘Absolute Truth’.]

It is Brahm everywhere—on the left and right, above and below.

Indeed, this world is nothing but this eclectic and magnificent Brahm revealed in its form (11).

-----*****-----

Mundak (Canto) 3

Section 1

1. Two friendly birds live on the same tree¹. Out of these two, one enjoys the fruits of the tree while the other fasts and watches everything in a dispassionate and neutral way² (1).

[Note—¹This analogy of the tree and the bird has been cited in Krishna Yajur Veda's Shwetashwatar Upanishad, Canto 4, verse nos. 6-7; Rudra Hridaya Upanishad, verse no. 41.

²The tree is compared to the world, while one of the birds represents the creature who remains engrossed in enjoying the world and its pleasures and comforts symbolised by the fruits of the tree, whereas the other bird is like the enlightened creature who has become detached from it and is not attracted by the fruits of the tree representing this colourful and attractive world with its innumerable comforts and pleasures of the sense organs.]

2. When the Purush or the living being (represented by one of the birds who remains engrossed in eating the fruits) who lives on the tree (i.e. in the world of sense objects) surrounded by ignorance and overcome by delusions (about his exalted heritage and lineage traced back to Brahm, the Supreme Being), he becomes helpless and is at the mercy of the world. He remains engrossed in endlessly pursuing it and is submerged in all sorts of pains and miseries pertaining to this world¹.

On the other hand, those wise ones who have become aware of the fact that there is a divine and holy entity that is distinct from their body as well as the world, an entity that is served, worshipped, honoured and sought to be accessed by learned and wise sages, seers and ascetics—such people become freed from all miseries² (2).

[Note—¹The foolish bird thinks that this 'tree' has produced 'fruits' for it, that this tree is its eternal home, that this tree belongs to it, that the other inhabitants of this tree are its competitors, and so on and so forth. When this is applied to the stupid man who is ignorant of the fact about his 'true' self, who thinks that the body is his 'self' instead of the Atma, who treats this world as his permanent home, who selfishly guards his worldly assets and material gains, who spends his entire life-time in remaining engrossed in pleasing this or that sense organs or this or that friend and family member, who is never satisfied with whatever he has and has a constant desire for more, who thinks that this world is meant to be enjoyed, that there is no such thing as the soul or the Atma, that there is no such thing as spiritual liberation and deliverance or emancipation and salvation—such ignorant people remain perpetually hooked or attached to this world and continue to enjoy as well as suffer in it. They suffer because they are never satisfied and contented with what they have; they see their peers having this and that material successes and start hankering after it. They land in the grip of the vicious cycle of wants and more wants. This situation can never be conducive to peace and happiness. They are like the bird that spends its time in the pursuit of enjoying the fruits of the tree. This bird hops from one branch to another, nibbling endlessly at the fruits, eating a bit of this and a bit of that, jumping from fruit to fruit in the false belief that the other one is sweeter than the first. But as it turns out, this stupid bird not only ruins all the fruits of the tree, create a lot of noise by its incessant chirping, litters the whole place with half-eaten and half-chewed pieces of fruits and its excreta, but also gets tired and worn out itself by the end of the day due to its restless and fickle nature, besides never being able to satisfy its hunger and ruining its appetite and general health in the long run. This bird not only causes havoc to the tree and its fruits, but also to its own peace of mind.

On the other hand is the bird that remains silently perched on any one branch, eats its fill on one fruit, and spends the day quietly observing the nuisance created by its friend and pondering at the latter's lack of wisdom. At the end of the day, this second bird is rested and relaxed; it does not ruin the tree and its fruits, it does not litter the surrounding area, and does not create nuisance by constant chirping and hopping around.

In this scenario, obviously the first bird would be regarded as stupid and the second as wise. The first bird is a metaphor for the stupid, deluded and ignorant man who remains engrossed in the pursuance of the material world of sense objects and

spends his time in seeking gratification for his sense organs. On the other hand, the second bird is like a wise and erudite man who is eternally contented with whatever he has, is never attracted by the temptations of this deluding world, and is ever calm and rested.

²Wise, intelligent and self-realised people understand that the ‘truth’ is neither the body nor the visible world and its numerous charms. This world is not their destination, and neither is the body their permanent habitat. Both are perishable and transient. All the pains and enjoyments are likewise transient and impermanent. Then there must be something that is true, permanent and the real destination. Like a man who does not know about anything looks upon his seniors for guidance and help, such a man would look up and observe how the learned sages, seers and ascetics behave. He discovers that they remain totally dispassionate towards and detached from this material world, its sense objects and charms. Obviously he begins to wonder about the reason for such calm and neutral demeanours of these people because they are learned, wise and experienced. Like a faithful student who follows his learned teacher, they emulate them and inculcate the same virtues of dispassion, detachment and renunciation that is characteristic of such exalted people. Such people are like the second bird who sits dispassionately on the tree, watching everything in a neutral and disinterested way.]

3. When a wise and Brahm realised man is able to see or become acquainted with the supreme Brahm who is the neutral and dispassionate witness to all and everything in this creation, who is self-illuminated, who is the Supreme Being, and who is the supreme creator and the ultimate progenitor of the entire universe, including Brahma the creator (who created this visible world where the mortal creature lives)—it is then that such a wise and enlightened man abandons all sorts of involvements in any kind of thing, whether it is auspicious or inauspicious. [That is, he does not get sucked in the vortex of getting mentally and emotionally involved in doing worldly deeds at all. He does them but with total detachment from them, and with a sense of non-involvement in their fruits or rewards.]

Such a man attains the eclectic stature of being calm and equitable in his approach to life. He becomes pure and untainted as his inner self is not polluted by any of the contaminants or impurities that are by-products of getting engrossed in this world. (3).

4. [This verse clearly asserts that a truly wise and Brahm realised person is one who continues to do his duties in this world without getting involved in them. This gives him honour and an exalted place amongst those who are called Brahm realised.]

The supreme Brahm is the one who is revealed in the form of Pran or life consciousness in all the living beings¹. A person who knows this universal truth has no sense of Ahankar, or ego and self pride in him. [This is because he realises that whatever the body does is not as a result of his own effort but due to the fact that the Pran that lives in this body is making the body do what the latter does, and this Pran is Brahm personified. So, there is no scope of ‘his’ being proud of anything because ‘he’ is not the doer. ‘He’ is not the one who is empowering the body to do anything, but it is some different mystical power that is known as Brahm that empowers the body.]

Such a wise and erudite person who knows the eclectic truth about the Atma, i.e. about the supreme Brahm residing in his own bosom as the pure consciousness and his true ‘self’, knows that it is this Brahm in the form of the Atma that drives the body and all its activities². It is the Brahm that is the Pran or life consciousness in the body of all living beings.

Such a person is called 'Brahm realised'. He continues to do his duties in this world and acquires an exalted and honourably position in the society of learned and enlightened men who are categorized as Brahm realised³. (4).

[Note—¹Some of the other Upanishads that affirm that the Pran is a manifestation of Brahm—Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 4, Brahman 4, verse no. 17; Taittiriya Upanishad of Krishna Yajur Veda tradition, Valli 3, Anuvak 3.

²It is the reason why the Kosha or cell where the Atma lives in the body, i.e. the subtle heart, is called the 'causal body' because it is the 'cause' of everything in this world. Refer verse no. 9 of Canto 2, section 2 of this Upanishad above.

³That is, a wise person does not run away from the world or from doing his duties, but his attitude changes. Instead of getting neck-deep involved in the deeds and their results, he does them in a dispassionate and detached manner. He does not get hooked to the deeds and their results; he does not bother what the world says or whether or not success is attained. He does the deeds absolutely dispassionately and in a neutral fashion. This is the eclectic theory of selfless and dispassionate Karma.

This concept of *Karma* or deeds has been explained in a number of Upanishads. For instance, the Saraswati Rahasya Upanishad, verse no. 67 describes succinctly how Karma or deeds and their consequences can be overcome. The Varaaha Upanishad of the Krishna Yajur Veda tradition, in its Canto 2, verse no. 48, and Canto 4, verse no. 35 describe the relationship between the deed, the doer and the cause. The Adhyatma Upanishad of Shukla Yajur Veda tradition describes the concept of doing deeds and its effect on the spiritual liberation or bondage of the creature in fine detail in its verse nos. 49-60.

The Kathrudra Upanishad of Krishna Yajur Veda, in its verse no. 13 asserts that the supreme transcendental Brahm or the quintessential spiritual Truth of creation as well as Mukti or liberation and deliverance is not possible by merely doing various deeds in this mortal world. This same idea is endorsed in Rudra Hridaya Upanishad of Krishna Yajur Veda tradition, in its verse no. 35, which asserts that deeds or Karma do not provide the Atma of the creature with liberation and deliverance from this world, but it is Gyan (truthful knowledge of the spiritual truths) that does so.

The 'Karma Chakra' or the giant wheel of deeds and their consequences has been described in the Shwetashwatar Upanishad of Krishna Yajur Veda, in its Canto 6, verse no. 3. The three Paths followed by a creature according to the deeds done by him are referred to in Shwetashwatar Upanishad, 4/7. The Varaaha Upanishad of Krishna Yajur Veda, in its Canto 2, verse no. 48 describes how one can become free from the fetters created by 'deeds'. The Niralambo-panishad of Shukla Yajur Veda, in its verse no. 11-12 describes the concept of Karma. The Sarwasaar Upanishad of Krishna Yajur Veda, in its verse no. 6 describes the concept of how and why the creature becomes the doer of deeds

What happens to ignorant people after death is explained in Brihad Aranyak 4/4/1. The Trishikhi Brahmin Upanishad of Shukla Yajur Veda tradition, in its Canto 2, verse nos. 23-26 defines what constitutes of true 'Karma Yoga'. The Mandal Brahmin Upanishad of Shukla Yajur Veda, 2/4/2-3 describes the philosophy of Deeds. The Saraswati Rahasya Upanishad, verse no. 67 describes succinctly how Karma or deeds and their consequences can be overcome.]

5. That Brahm who is manifested as the pure conscious Atma (which lives in the body of the creature as his 'true self') can be known by regularly and consistently following the path of speaking the truth and nothing but the truth, doing Tapa (observing austerities, doing penances and suffering hardship for some noble cause), acquiring correct and comprehensive knowledge about the Truth, and observing the principles of Brahmacharya (full control over the sense organs and their wayward tendencies).

Indeed, this glorious, splendid and magnificent Brahm lives inside the body of the creature in the form of his Atma, the pure consciousness¹. [In other words, if one wishes to search for Brahm, he need not go out into the forest or numerous pilgrim sites because the Supreme Being is to be found in one's inner self only.]

This indwelling Brahm can be seen or known or realised by only those ascetics who have cleansed themselves of all impurities and contaminations. [This is like the case of one viewing one's face in the mirror. If the mirror is tarnished or not properly made, the picture would be hazy and distorted. Likewise, only those who inculcate the virtues enumerated herein above are qualified to experience Brahm in their inner self.] (5).

[Note--¹Refer Mundak (Canto) 2, section 2, verse nos. 6-9.]

6. It is the 'truth' that alone wins, and not 'falsehood'. The path in which the exalted Gods move is marked by 'truth'. [That is, it is the 'truth' that is the characteristic feature of all the auspicious and noble virtues that give glory to the creature. The Gods personify these virtues and the path of truth is what they follow. Therefore, if someone follows the path of complete 'truth' he is no less exalted than any of the Gods.]

By following this path of 'truth', wise and selfless sages and seers reach that exalted abode or attain that auspicious stature which is equivalent to having reached the holy abode of the Supreme Being who is the best example of 'truth'. Indeed, the Supreme Being (Brahm) is the Absolute Truth personified (6).

7. That Brahm (Supreme Being) is most grand, splendid, majestic, divine, sublime and supreme. He is beyond the reach of normal thoughts and perceptions. He is most subtle, enigmatic and esoteric. He is most miniscule and fine. He is further than the farthest point of creation on the one hand, and on the other hand he is nearer than the nearest as he resides inside the body itself, in its very center in the heart as the pure conscious Atma of the creature.

For those who are truthfully wise, erudite and Brahm realised, Brahm is experienced by them in the cave-like heart as the Atma as well as in the form of the grand faculty known as the 'Buddhi', or the faculty of intelligence, analytical thinking, research, discrimination and rationality etc., that are present in the mind (7).

8. That enigmatic, esoteric and mystical Brahm (and its manifestation as the Atma) is not seen by the eyes (as it does not have any physical form, colour and contour), is not understood or grasped by the speech (i.e. it is not possible to describe or learn about Brahm with words), is not perceived by any of the other sense organs of perception (such as the ear, nose, tongue and skin—i.e. it is not possible to learn about Brahm's existence by hearing Brahm, by smelling Brahm, by tasting Brahm or by feeling or touching Brahm).

That Brahm is not accessible either by doing Tapa (austerity, penance, sufferance) or doing Karma (literally deeds, but here referring to the performance of fire sacrifices—refer Canto 1, section 2, or doing numerous other auspicious deeds such as making charities, going on pilgrims etc.).

[Then, how is it possible to access Brahm? It is being narrated now--] That Brahm who has no attributes and aspects that can be ordinarily discerned is accessible to only those wise ones who have cleansed their inner self of all evils, contaminations and impurities, and then meditate and contemplate diligently and sincerely upon Brahm, the 'Truth', with great conviction, devotion and firmness of faith (8).

9. The subtle form of Brahm called the Atma, the pure consciousness that resides in the body of the creature consisting of the five forms of Prans or vital winds¹, is known, experienced, witnessed or realised by the medium of the Mana (mind).

It is only when this instrument of the mind is thoroughly cleansed and scrubbed of all taints that the creature is able to witness the presence of the glorious Atma representing Brahm in his inner-self because then this self-illuminated entity begins to shine through. [It is like the case of the mirror being cleaned in order to see one's face. The 'mirror' here would be the mind, and the 'face' would be the reality of one's self as the Atma. The 'shining' would then be equivalent to being aware of or being acquainted with the truth of the Atma and its divine nature which is pure and self-illuminated. It is also like the case of the glass chimney of a wick lantern being cleaned thoroughly, because it is then that the light of the flame can be clearly seen and would properly illuminate its surrounding.] (9).

[Note—Refer Mundak 3, section 2, verse no. 3 below. The five vital winds referred to here are Pran, Apaana, Vyaana, Samaana and Udaana. Please refer to the Prashna Upanishad, verse nos. 4-5 of its Cantos (questions) 1, 2 and 3, and verse no. 4 of Canto 4.]

10. A person who sincerely wishes to have access to anything or any world, if his desire is honest and true, then it is certain that he would have access to the desired thing or world. Therefore, since a wise and enlightened aspirant would always aspire for higher objectives in life and aim for the exalted stature of obtaining the Truth, he is easily able to do so. In other words, a person who has a cleansed 'inner self' becomes so spiritually powerful that he is able to have access to any of the worlds he wishes to have access to, or attains anything that he wishes to have. [It must be noted that a wise and enlightened man would surely not wish to have worldly material objects or fame and material prosperity. What is intended here is to emphasize the fact that real peace, happiness and bliss comes with true contentedness that comes when one has acquainted himself with the 'truth' of this world and renounces its false charms. It is obvious that such a man would never hanker for worldly things. Obviously, he would be at peace with himself much like the second bird cited in verse nos. 1-3 above.]

Hence, those who wish to have truthful fame and glory should follow such enlightened and wise men. [That is, those who wish to free themselves from a false sense of achievement by not striving for acquisition of worldly things and fame, but endeavour to find spiritual liberation and deliverance, spiritual emancipation and salvation, and spiritual contentedness and peace, should follow the example set by wise, enlightened and Brahm-realised souls.] (10).

[Note—Refer Mundak 3, section 2, verse no. 2 below.]

-----*****-----

Mundak (Canto) 3

Section 2

[This section outlines the method by which the Atma and Brahm can be realised by a spiritual aspirant.]

1. [Verse nos. 1-2 outlines why a man takes a birth, and how he can obtain freedom from the cycle of birth and death.]

A wise, enlightened and self realised aspirant is able to know about that majestic and splendorous Brahm who is supreme and transcendental, who is the only foundation and the universal basis of the entire creation, and who pervades throughout it uniformly.

The spiritual aspirant who worships and serves this Brahm selflessly, without expecting anything in return, is indeed able to break free from this seemingly endless cycle of birth and death (1).

[Note—Refer also to Mundak 1, section 2, verse no. 12, and Mundak 3, section 1, verse no. 6.]

2. A person who has any kind of desire, aspiration, hope and expectation in his heart and mind, and wishes them to be fulfilled, such a person finds a destination (or takes a new birth) accordingly. [In other words, if a man worships the Lord with some rewards in mind, the Lord would definitely oblige him by giving him his desired reward. But this would entail being born again in order to enjoy this reward, and this prevents the aspirant from finding liberation and deliverance from the cycle of birth and death. It also means that if a man is not able to fulfill his desires in this life and dies, he has to take another birth to that his unrequited desires can be addressed and realised. But as it happens in practice, this is like pursuing a mirage in a desert in search of water which eludes the thirsty man. In the new birth, the man gets entangled in a new set of wants that are a natural consequence of living in a material world, especially when the man has no control over his natural instincts, resulting in the setting in motion of a new chain of desires that remain unfulfilled by the time the body gets worn out and collapses due to old age, and dies. As is obvious now, the only way to clear this burden is to disengage from the world and its entrapping attractions by not having any desires whatsoever.]

Therefore on the other hand, a person who is completely contented and has no desires, hopes, expectations, yearnings or aspirations left in him that require fulfillment, he would naturally not worship the Lord with the hope and expectation of getting them fulfilled. He would not worship the Lord to seek favour from him with the view of fulfillment of his desires, but his worship now would be for the purpose of simple selfless thanksgiving-worship to express gratitude and thank the Lord for all that he has showered as blessings upon the aspirant. For such a person there is no new birth, and when he sheds the body it is his final liberation and deliverance from the cycle of birth and death. He will not have to take a birth again (2).

[Note—Verse nos. 1 and 2 effectively say that if a person worships the Supreme Being selflessly, i.e. with no rewards for such worship in mind, he is able to break free from the cycle of birth and death. Similarly, if a man has no desires or wishes unfilled, i.e. a man who is fully contented, would not have to take a birth again, while a person who has unfulfilled desires would take a new birth according to the type of desires he has left un-realised at the time of death. Refer also to Mundak 3, section 1, verse no. 10.]

Other references:—The concept of *death* and *what happens after that*, the *destiny* of the creature, has been succinctly described, inter alia, in the following Upanishads—

(a) Rig Veda = Kaushitaki Brahmin Upanishad, Canto 1.

(b) Sam Veda = Chandogya Upanishad, Canto 5, Section 3-10.

(c) Shukla Yajur Veda = Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 4/3/33, 35-38, 4/4/1-14, 5/10-5/11, 6/1/1-6, 6/2/2, 14-16, etc.; Subalopanishad, Canto 11.

(d) Krishna Yajur Veda = Taittiriyo-panishad, Valli 2, Anuvak 6; Kathopanishad, Canto 1, Valli 1, verse no. 20; Canto 1, Valli 2, verse no. 1-6; Canto 2, Valli 2, verse no. 6-8; Canto 2, Valli 3, verse no. 4-17; Yogshikha Upanishad of Krishna Yajur Veda, Canto 3, verse no. 24.

(e) Atharva Veda = Prashna Upanishad, Canto 1, verse no. 9-10, 13-16; Canto 3, verse no. 7, 9-10.

The basic concept is that the creature attains that place which it desires for at the time of death—refer Brihad Aranyak Upanishad, Canto 4, Brahman 3, verse no. 12 which is very explicit on this point. Further, it also depends upon the creature's mental awareness and conception of what constitutes the 'Truth'—refer Brihad Aranyak Canto 6, Brahman 1, verse no. 1-6.

The *destiny* of the person depends upon the *type of desires he has* while doing deeds in this world. This is stated in Prashna Upanishad of Atharva Veda, Canto 1, verse no. 9-10, 13-16; Canto 3, verse no. 7, 9-10; Brihad Aranyak Upanishad of Shukla Yajur Veda, Canto 4, Brahman 3, verse no. 33, Canto 4, Brahman 4, verse nos. 4-14.

What happens to *ignorant people* after death is explained in Brihad Aranyak 4/4/1.]

3. [Verse nos. 3-4 describe how the spiritual aspirant can obtain knowledge of the Atma.]

The pure conscious Atma (which is the supreme Brahm personified; it is the cosmic Consciousness residing in one's own inner self in the subtle space of his heart) is not accessible or known by giving or hearing discourses and lectures, or by relying solely on the ability of the mind to think intelligently and analytically, or by hearing about it repeatedly over a long period of time from different sources. [This statement is not intended to undermine the valuable contribution of these instruments in realising the Atma, but their role is very limited as is made clear below.]

The Atma is accessed (witnessed, experienced, known and realised) only by a sincere desire and a firm determination for it. For such a sincere aspirant, the Atma reveals its glory spontaneously for him. [That is, if one sincerely wants to know about the Atma it is only then he would pursue his objective relentlessly, would overcome all hurdles that come in his way, and would take the help of all the instruments enumerated herein above to reach his goal. He would not rely only on, say, discourses or reading of scriptures and trying to decipher their teachings by applying the rational and intelligent mind to know the Atma, because then he would fail to reach his objective. He must have faith in the 'truth' of the Atma, for otherwise he would begin to have doubts and confusions as the path of finding the Atma is not easy as it seems. It is an extremely arduous journey in un-chartered territory, but it is nevertheless very rewarding and spiritually enlightening as well as exhilarating. The realisation of the Atma is a sudden event just like the sun breaking from behind the curtain of dark clouds to show its bright light, its brilliance and dazzling radiance. The glory of the Atma, the pure consciousness, likewise reveals its self and illuminates the inner-self as well as the mind of the aspirant with what is known as 'enlightenment'. Just like it is impossible to describe in words what the 'light of the sun' is like except to say that it removes the darkness of the night and shows the world to the creature by illuminating things around, it is also impossible to find words to describe exactly what the Atma is like, and what does it feel when one accesses or realises this glorious and divine entity known as the Atma.] (3).

[Note—Refer Mundak 3, section 1, verse no. 9 above.]

4. The Atma is not attainable by a weak person, or by him who is careless, lazy and indolent, or by simply doing Tapa (austerity and penance) that is bereft of knowledge of the Truth. [That is, a person who is mentally unsteady, is not certain of what he is doing, what he should do, or the real aim of what he is doing, is unable to reach his target. He would be confused and an easy prey for misconceptions, diversions and delusions. Similarly, laziness and lethargy are not conducive to one realising his dreams in life in any field, let alone the spiritual field which specially requires great effort and diligence. Simply torturing the body in the name of doing Tapa is a stupid thing to do just like the case of a student who would do better in a short time if he studies his subject with proper understanding and concentrates his attention and energy on the book he reads instead of spending hours reading many books without understanding them, or just learning by rote.]

A wise and enlightened man who aims at attaining this Atma with due diligence and sincerity, who does Tapa correctly (i.e. who understands what he is doing and what the aim is), this Atma is not only accessed by him but it also enables him to enter the exalted state of Brahm realisation. [In other words, when one realises the pure consciousness residing in his inner self as the Atma, he becomes truly 'self-realised' and 'Brahm realised'. He would have accessed the spiritual Truth that immediately lifts him to an exalted state of enlightenment and spiritual liberation. He would have accessed the fount of nectar that gives steady peace and bliss. All the darkness caused by spiritual ignorance and delusions would be dispelled, and just like the brilliant light of the sun breaking through from behind the dark bank of clouds to illuminate the entire world, such an enlightened man would at once become 'enlightened' spontaneously. Darkness and light can't co-exist. Once the Atma or the pure consciousness is realised, everything else that is 'non-Atma' perish automatically.] (4).

5. [Verse nos. 5-9 describe how Mukti or spiritual liberation and deliverance from the cycle of birth and death can be obtained by a spiritual aspirant.]

Upon having realised the truth of the Atma which is the pure consciousness, Rishis (exalted sages and seers) who are wise and discriminating become enlightened and self-realised. With the eclectic knowledge of the divine Atma, they become fully contented and fulfilled; no desires, yearnings and passions are left in them. They become dispassionate towards and detached from everything in this world. As a result, they become fully rested, calm and peaceful; all their restlessness, confusions and agitations are eliminated. [Just like a man who has tasted nectar not wanting to drink ordinary water, a self-realised and enlightened man who has accessed the Atma would no longer have any interest in any of the grosser things or aspects of life.]

Such wise and self-realised persons who have experienced the glorious Atma are able to see the supreme Brahm representing the Absolute Truth and the cosmic Consciousness everywhere in this creation, because Brahm is omnipresent, all-pervading and a universal divinity that has revealed itself uniformly in all forms that this creation has taken. That is, such persons truly and honestly become wise, knowing, erudite and enlightened.

With this holistic all-inclusive view of Brahm, such wise men (as described herein above) become indistinguishable from Brahm and ultimately merge in Brahm to become one with this cosmic Consciousness and the Absolute Truth that is known as 'Brahm'. They would have realised that since their 'true self' is the pure

consciousness known as the Atma, and the latter is no other entity but the supreme transcendental cosmic Consciousness known as Brahm itself personified, it is natural that they would see no distinction between their individual 'self' and Brahm, the supreme 'Self'. Therefore, they become one like Brahm, the Supreme Being, himself. [Refer verse no. 6 below.] (5).

6. Those who have fully understood the teachings of the Upanishads and have determined the aim of their spiritual pursuit based on these teachings, those who have cleansed their inner self (of all kinds of desires and worldly attachments) by inculcating the grand principles of Vairagya (renunciation), and have empowered themselves by practicing Yoga (meditation and contemplation) in a holistic manner—such wise and enlightened spiritual aspirants obtain the exalted Brahm Loka at the time of discarding their mortal body. [That is, such wise men find Mukti or spiritual liberation and deliverance from the cycle of birth and death when they die. They find entrance in the divine abode of the Supreme Being which is a metaphoric way of saying that they get emancipation and salvation, and reach an exalted stage from where they would not have to re-enter the mortal world characterized by incessant birth and death. They would have found permanent peace, tranquility and bliss for their souls. Refer verse no. 5 in this context.] (6).

7. For a self and Brahm realised person, all the fifteen Kalaas¹ (or various aspects of life) merge into one, and the different Indris (the sense organs) withdraw themselves and merge with their primary Gods² (representing the primary forces and energy of Nature that have revealed themselves in these divine forms in order to carry out different functions of life in this creation). At the same time, he has no Karma (deeds) left to be done (because he is fully contented and has no need for doing any worldly deed in order to fulfill his desires), and no more Gyan (knowledge) left to be acquired (because he has already known the 'truth' pertaining to the pure conscious Atma that is his 'truthful self' as well as the cosmic Truth known as Brahm that is the same 'consciousness' prevailing in the entire universe and whose reflection the individual Atma is). This knowledge is the ultimate knowledge that one can ever hope to acquire, and the best part is that is the 'truthful' form of knowledge of the Reality that is Absolute.

Hence, such an enlightened person merges himself inseparably and irrevocably into the supreme Brahm (at the time of death—thereby obtaining Videha Mukti, and even while he is alive—thereby obtaining Jivan Mukti) (7).

[Note—¹The *fifteen Kalaas* have been enumerated in Prashna Upanishad of Atharva Veda tradition, in its Canto 6, verse no. 4. These are the various units of creation—viz. the 5 elements such as sky, air, fire, water and earth + Anna (food) + Virya (sperm) + the 5 Indris or sense organs + Mana (the thinking mind and emotional heart) + Sraddha (the virtue of faith and devotion) + Tapa (austerity, penance and sufferance of hardship for some noble cause) + Mantra (divine formulas or key to any body of knowledge) + Karma (deeds) + Loka (the different worlds) + Naam (name, and this implies a form because only things with a form can be assigned a name) = 15.

Refer also the Brahm Vidya Upanishad of Krishna Yajur Veda, verse nos. 33, 37-40 which describe the concept of 'Kalaa' vis-à-vis the living creature.

²The *Indris* are the five sense organs of perception with which the creature knows or becomes aware of the world—the eyes which see, the ears that hear, the nose that smells, the tongue which tastes, and the skin which feels.

³The Aiteriyo Upanishad of Rig Veda tradition, in its Canto 1, verse nos. 1-4 describes how the Supreme Being (Brahm) created the universe from his own self and then decided to create the principal *Gods* of creation from his own cosmic body to oversee the functioning of the various aspects of creation, and in its Canto 2, verse nos. 1-4 it describes how the various creatures were created and then how these cosmic Gods took up their residence in the different organs of the creature. Thus, the eye became the abode of the Sun God, the mouth of the Fire God, the nose of the Vayu or Pran God, the ear of the custodian Gods of all the directions represented by the sound element, the Mana or heart of the Moon God, the skin the Earth element which generated hair representing the trees and plants, and fluid part of the body such as sperm, blood, mucous etc. of the Varun or the Water God. When the body disintegrates into its primary elements such as the earth, water, fire, air and sky, these Gods find themselves released and they go back to their parent, the Supreme Being. The entire process can be simplified and said that when the wise man who knows this entire process dies, he goes back to assume his primary form—and it is Brahm, the Supreme Being from whom the independent units that formed the composite identity of the individual creature had emerged at the very beginning.]

8. Just like the many rivers with different names and following different paths fall into the ocean to lose their independent existence and instead become one with the ocean, the wise and enlightened man is freed from the limiting effects of name and form to become one with and indistinguishable from the supreme Purush, the universal, all-pervading divine, sublime and transcendental Brahm. They lose their independent identity and surrender to this Supreme Being (8).

[Note—An exactly the same idea has been proclaimed in the Prashna Upanishad of Atharva Veda, in its Canto 6, verse no. 5. This Upanishad is Chapter 1 of this volume.]

9. A wise and enlightened spiritual aspirant who becomes knowledgeable about Brahm becomes one like Brahm. No one in his family remains bereft of Gyan or knowledge of Brahm. [It is like the case of the sun lighting up all the planets that revolve around it. All the family members who come in contact with such an enlightened man are bound to be affected with the illumination of spiritual knowledge that effuses from him like the light from the sun. They cannot remain immune to it. They would watch him and his life at close quarters, and would obviously see the level of contentedness and peace that he has obtained. This would also motivate them to acquire the same knowledge so that they can also get the same sort and level of peace and happiness.]

Such a wise and enlightened man who has become self and Brahm realised is not only freed from the evil effects of sins but also gets rid of or overcome all sorts of torments and miseries which are so much part of this mundane world and mortal life in it.

He is able to crush all his Hridaya Granthis¹ (i.e. he is able to overcome all the emotional hurdles that act like knots and create an obstacle in his spiritual progress). As a result, he finds eternity and bliss (9).

[Note—¹The concept of Hridaya Granthis have been explained in Mundak 2, section 2, verse no. 8 and its accompanying note.]

10. The wisdom enunciated above has been reaffirmed in the following verse also.

This eclectic and sublime knowledge pertaining to the divine Brahm, called the 'Brahm Vidya', should be given or taught to only those persons who have the following virtues in them—(i) they do deeds selflessly (refer verse 1/2/12 and 3/2/1),

(ii) are well-versed in the scriptures such as the Vedas and the Upanishads (refer 1/1/4-5, 2/2/3 and 3/2/6), (iii) are devoted to and sincere worshippers of Brahm (refer 1/2/11, 2/2/4, 3/1/3-6, and 3/2/1, 5-9), (iv) offer oblations to the sacred fire (refer 1/2/1) called the Ekarshi Agni (so-called because this procedure of worshipping of the Fire was initiated by sage Angira as stated in verse no. 11 below) themselves (instead of hiring priests), and (v) have observed all the tenets and vows of auspiciousness, righteousness, probity and propriety themselves (instead of simply lecturing others about it but not following what they preach—refer 1/2/11-12, 3/1/6, and 3/2/1, 5-9) (10).

11. It was the sage Angira¹ who had first revealed the truth of Brahm. Those who have not observed the principles of Brahmacharya (total self-control over the sense organs) cannot hope to know about Brahm.

We pay our deepest respects and obeisance to such Brahm realised persons. Amen! (11).

[Note—¹Refer Mundak 1, section 1, verse no. 2.]

-----Shanti Paath-----

-----*****-----*****-----

Chapter 3

Mandukya Upanishad/Mandukyo-panishad

In this Upanishad belonging to the Atharva Veda tradition, the greatness and divinity of the ethereal word OM has been described. It is proclaimed here that OM is the best and the most honoured address for the supreme transcendental Brahm, the Supreme Being. The Upanishad describes the various subtle and sublime aspects of OM, and how it relates to the various aspects of creation. It goes on to describe the world as the visible manifestation of the invisible Brahm who has no attributes. The entire creation is the habitat of the cosmic Brahm, and the seven Lokas (divisions of the world) are its seven aspects or branches or manifestations. In this revealed form, Brahm's mouth are the various Indris (sense organs of the body of the creature), the Pran (the vital winds representing the life consciousness in this body), the Antahakaran (the inner self and the subtle body) etc.

-----*****-----

-----Shanti Paath-----

Please see appendix no. 1 for the meaning of this Shanti Paath.

1. The esoteric, enigmatic, ethereal and sublime 'Akshar' OM (literally meaning the 'word OM', but also implying an entity that is imperishable and eternal, which is the supreme transcendental Brahm to which OM actually refers) is all there that exists in this creation. All that existed in the past, exists in the present, and would come into existence in the future—they are all manifestations of OM, they are all elaborations of

OM because they define and reveal OM in various forms. [This word OM is a sort of name of Brahm; it is a representative of Brahm. Since everything in existence has emerged from Brahm, it follows that everything is a revelation of OM as a representative of Brahm. Therefore, this world reveals and makes the astounding glories and magnificence of OM representing Brahm clear for every creature to see and understand.]

Not only this world but whatever that exists that is beyond its limit and is beyond the imagination of the mind is also OM personified or revealed in that form. [And since OM is a name assigned to the Supreme Being known as the Brahm, the cosmic Consciousness and the Absolute Truth of creation, it follows that this entire creation is Brahm manifested in its form.] (1).

[Note—The concept of OM is described in a number of Upanishads in all the Vedas. An indicative list is as follows—

(a) Rig Veda—Naad Bindu Upanishad.

(b) Krishna Yajur Veda—Taittiriya Upanishad, Valli (Canto) 1, Anuvak (sub-canto) 8; Amrit Naad Upanishad, verse no. 2, 4, 24-25, 31-32; Dhyani Bindu Upanishad, verse no. 2, 9-18 (which narrates how each letter of OM stands for different aspects of creation), 37, 102; Tejobindu Upanishad, Canto 1, verse nos. 1, 6; Yogtattva Upanishad, verse nos. 136-139; Brahm Vidya Upanishad, verse nos. 2-12, 69-71 ½ which narrates how each letter of OM stands for different aspects of creation; Varaaha Upanishad, Canto 4, verse nos. 1.11—1.34, and Canto 5, verse no. 70; Shuk Rahasya Upanishad, verse no. 20 describes how OM is used for the purpose of ritualistic worship according to the Tantra philosophy involving Anga Nyas, Shandanga Nyas etc.; Akchu Upanishad, Canto 2, verse nos. 42-43 ½ describe how the three states of existence (waking, dreaming and deep sleep) and the three types of bodies (gross, subtle and causal) came into existence as manifestations of the three letters A, U and M of the word OM; Rudra Hridaya Upanishad, verse no. 38.

(b) Shukla Yajur Veda—Taarsar Upanishad, Canto 2, and Canto 3, verse nos. 1-7; Hans Upanishad, verse nos. 6-17.

(c) Sam Veda—Yogchudamani Upanishad verse no. 74-81, 85-88; Pranava Upanishad which has only 13 verses dedicated to OM.

(d) Atharva Veda—Ram Tapiniopanishad, canto 3, verse no.5-9; Prashna Upanishad, full Canto 5; Mundak Upanishad, Canto 2, section 2, verse no. 4, 6.]

2. Indeed, this entire world is nothing but Brahm manifested in this form. Similarly, the Atma, the pure consciousness or the ‘self’ of the living being, is also nothing but Brahm.

That Brahm (at the cosmic level) and this Atma (at the individual level) both have four aspects called the ‘Paads’ (literally meaning step or foot) (2).

3. [Verse nos. 3-7 describes the four states in which Brahm exists. These are the four ‘Paads’ or literally the legs, aspects or revelations of Brahm. These four states of existence of creation representing the supreme transcendental Consciousness known as ‘Brahm’ have been explained with a different perspective in Sam Veda’s Chandogya Upanishad, Canto 3, section 18, verse nos. 2-6, Canto 4, Section 5, verse no. 2, Canto 4, Section 6, verse no. 3, Canto 4, Section 7, verse no. 3, and Canto 4, Section 8, verse no. 3; and in Krishna Yajur Veda’s Brahm Upanishad, verse no. 1.]

The first ‘Paad’ or aspect of Brahm and Atma is called Vaishwanar¹. This aspect of Brahm known as the Vaishwanar is the revealer and regulator of the visible world as it corresponds to the waking state of consciousness. It is this gross aspect of Brahm that makes the creature’s Atma (i.e. his true conscious self) become aware of the

visible world. It therefore corresponds to the Jagrat or waking state of consciousness² which makes the creature aware of the external world.

This gross aspect (i.e. gross body) of Brahm (in the form of this vast world) has seven 'Angas' or body parts or units or divisions³, and nineteen 'Mukhas' or mouths⁴.

This form of Brahm is the enjoyer and consumer of all the material things in this world (because it is able to perceive this world with its material sense objects and get enticed by their charms).

This form of Brahm is called the 'Vishwa' or the physical gross and visible world in which the creature lives and with which he interacts. [It is from this word 'Vishwa' that the term Vaishwanar is derived.] (3).

[Note—¹The concept of Vaishwanar Brahm and Atma have also been explained in the Nrisingh Upanishad, Canto 4, verse no. 4 which is Chapter 7 of this volume, as well as in the Krishna Yajur Veda's Brahmo-panishad, verse no. 21, and Pran Agnihotra Upanishad, verse no. 15.

The term *Vaishwanar* in simple words means the form of Brahm that is as large and as vast as the universe, enclosing it from all sides like a moat of a fort, and even existing beyond it. This all-inclusive, all-pervading and all-encompassing macrocosmic form of Brahm is the *Vishwa* or the vast physical world of infinite dimensions, because this world is a manifestation of Brahm, it is Brahm revealed in its myriad and diverse forms, and it is the glory of Brahm on display. In fact, if one wishes to witness Brahm, he must observe Brahm at play in this world itself. The physical aspect of Brahm in the form of the visible world is equivalent to the Jagrat state of consciousness because it is in this state that the creature sees or perceives the physical presence of the world. Here the word 'creature' refers to his Atma or soul which is pure consciousness and his true self. This Atma is called Vaishwanar because, like Brahm, it is manifested as all forms of life in this world.

²The 1st stage is called waking or *Jagrat*. During this state, a creature's sense organs that constitute its gross body are active and they receive inputs from the physical material world outside which they in turn transfer to the mind which forms the creature's subtle body. This mind then filters through the clutter of information, then either orders the organs of action to respond accordingly, or it consults its supervisor, the intellect, for advice. Meanwhile, the mind stores all the information in its data bank for future reference much like the record room of an office. The true self of the creature, the pure conscious Atma, is like the King in whose secretariat the mind and intellect work, and therefore the Atma is the final Authority which takes the final decision and is responsible for all the things done by each of these individual entities. Even as the King cannot absolve himself for the sins committed by his subjects during his rule or plead ignorance of whatever is happening in his kingdom though he is not directly involved in them or in the day to day routine work of the kingdom as he stays in his palace and cannot be practically expected to control each movement in his kingdom, but he is morally responsible for them and cannot deny this responsibility. Similarly, the Atma of the creature is responsible for each and every thing that the creature does though the Atma is limited to its palace-like residence in the heart of the creature. So, the otherwise immaculate Atma is accused of things that body or mind of the creature does because the Atma is at the helm of affairs.

During this Jagrat state, the Atma interacts with the outside world through the medium of the sense organs of the gross body (i.e. the physical body). The sense organs of perception of the body collect information from the external world and pass them over to the mind, which in turn processes them and passes necessary instructions to the organs of action on the one hand, and files data for future reference in its memory bank on the other hand. The mind would also refer to the intellect those things which are not routine in nature. It is the transcendental state of supreme enlightenment and self-realisation.

The Jagrat state is when the consciousness is aware of the external world of material objects, and this is made possible through the medium of the sense organs of perceptions such as the eye, ear, nose, tongue and skin which enables the creature to respectively see, hear, smell, taste and feel this world. The creature's responses are carried out with the help of the organs of action such as the hands which receive, the legs that take him to the desired place, the mouth that helps him to speak and eat, the excretory organs that helps it to eliminate waste from the body, and the genitals which helps him to recreate and enjoy the sensual pleasures of the world. These organs are located in the gross body, and since the world is experienced through them, the latter is also deemed to be gross. The coordination of all the perceptions and actions is done by the mind-intellect which is the subtle part of the body.

This Jagrat state has been explained in Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 2, Brahman 1, verse no. 20; Canto 4, Brahman 3, verse nos. 16-19, 31, 34-35.

³The *seven parts* of the Vaishwanar Brahm's body have two interpretations. One way of considering them is related to the seven Lokas or subtle worlds that exist. These seven worlds are the following—The *seven Bhuvans* or Lokas according to the Purans are the following:--According to Brahmaand Puran (BP) and Vaaman Puran (VP) there are the following Lokas-- 'Bhu' (भूः) or earth [BP-3,4,2-18]; 'Bhuvaha' (भुवः) or the space between the earth and the heaven [BP-3,4,2-19]; 'Swaha' (स्वः) or the heavens known as Brahma's abode; the space beyond the earth's atmosphere; cosmic wind represented by the solar wind blows here [BP-3,4,2-20]; 'Maha' (महः) or the world created by Brahma pronouncing the divine word Maha meaning the great heaven or the outer space; it is believed that great sages and seers stay here; it is 1000 Yojans or appx. 8000 miles away from the Swaha Loka [BP-3,4,2-21; VP-52,21-22]; 'Janaha' (जनः), so called because it was to be inhabited by the humans and the cows [BP-3,4,2-22; VP-52, 22]; 'Tapaha' (तपः) or the Loka where great amount of austerity and penances are done; it is said to be 60 million Yojans or appx. 60 x 8 million miles away from the Janaha Loka [BP-3,4,2-24; VP-52, 23]; and 'Satyam' (सत्यम्) or the truthful heaven where the supreme Lord has his abode; it is 300 million Yojans or appx. 300 x 8 million miles beyond the Tapaha Loka [BP-3,4,2-25; VP-52, 24].

The seven Bhuvans or Lokas according to the Vedantic view are the following:--the seven organs of perception situated in the region of the head—viz. the two eyes + two ears + two nostrils + one tongue/mouth = seven. Refer *Mundak Upanishad* of Atharva Veda, Canto 2, section 1, verse no. 8.

Another way of interpreting the seven parts of the Vaishwanar's cosmic body are the following units of creation—the Duloka or the heavens is its head, the Sun (representing the fire element) and the Moon (representing light) are its two eyes, the Vayu or the air element is its Pran or vital life giving winds with which it breathes and which infused life in the units of its cosmic body, the Akash or the sky is its abdomen in which all the organs of the Vaishwanar's body are located just like the man's abdomen encloses all his organs, the Aapha or water is its fluid part such as its blood, mucous and semen, the Anna or food produced in the world is its intestines and rectum (as it is the food that is digested in the intestines to sustain the body and its residue is collected in the rectum before being expelled from the anus), and the Prithivi or earth is its two legs.

⁴The *nineteen mouths* of the Vaishwanar Brahm are the following—10 sense organs consisting of five organs of perception (eye, ear, nose, tongue, skin) and five organs of action (hand, leg, mouth, excretory, genitals) + 5 Prans (or the vital winds such as Pran or breath, Apaana, Samaana, Vyana and Udaana) + 1 Mana (mind) + 1 Buddhi (intellect) + Ahankar (ego, self pride) + Chitta (sub-conscious) = 19. These are the components through which the creature interacts with the world—or 'sees' the visible world during his Jagrat or waking state of consciousness.]

4. The second 'Paad' or aspect of Brahm and the Atma is equivalent to the Swapna or the dreaming state of consciousness¹. It is a subtle form of existence of Brahm and it refers to the world that is not visibly manifested and tangible, that has no physical existence but is nevertheless perceived to be there at the mental level just like the world of dreams (which the creature thinks to be real as long as the dream lasts).

Thus, that aspect of Brahm or cosmic Consciousness by which subtle things which are not physically visible or perceptible can become known, or that aspect of existence in which the creature can see and visualise things that have no gross forms, is called the dreaming state of existence. It is also called the 'Taijas'² form of Brahm.

(Like the gross form of Brahm as described in verse no. 3—) This form of Brahm also has a body, albeit a subtle one, having seven parts or components as well as nineteen mouths. [These have been enumerated in note of verse no. 3 above.]

Brahm (or the cosmic Consciousness existing at the vast macrocosmic level of creation) and the Atma (or the Consciousness existing at the individual microcosmic level of the individual creature) in this second Taijas form enjoys the material things of the world, but at a subtle level of existence. [This refers to the state in which the creature dreams. For all practical purposes, the world of dreams and its material objects appear to be real for the creature as long as he dreams, and he enjoys them just like he would have enjoyed them in the world when he was awake. There is no difference between how a creature would respond to a given situation, how he would desire to obtain a particular thing, or how he would enjoy the material things of the world that he encounters while he is awake or while he dreams. The only difference is the level in which the consciousness exists—for in the waking or Jagrat state of consciousness the gross body is active and it helps the Atma of the creature to actually perceive and interact with a gross world having a physical existence, while in the Swapna state the same situation is converted into a subtle level.] (4).

[Note—¹*Swapna* or dreaming state is the 2nd state of consciousness when the latter has withdrawn its self from being actively involved in the outside world through the medium of the sense organs of perception and action. But the mind does not sleep and remains active as before, though this activity is at the subtle level of the sub-conscious. Here, the consciousness remains active through the medium of the vital winds, called the various Prans present inside the body, and moves in the different Naadis (tubular ducts in the body, such as the nerves and veins etc.) which keep the mind working. Refer Shukla Yajur Veda's Paingalo-panishad, Canto 2, verse no. 12, and Brihad Aranyaka Upanishad, Canto 2, Brahman 1, verse no. 18; Canto 4, Brahman 3, verse no. 20; Krishna Yajur Veda's Dhyan Bindu Upanishad, verse nos. 58-60; Rig Veda's Kaushitaki Brahmin Upanishad of Rig Veda, Canto 4, verse no. 19.

This Pran is deemed to be synonymous with the life factors and consciousness in the body as well as with the latent fire element present inside the body which gives the energy, strength and vitality to the body to live and remain active. If it were not for the fire element (Tej) and the wind element (Pran), the consciousness (Atma, the 'self') would have found it difficult to live in the body. In fact, the Prashna Upanishad of Atharva Veda, Canto 4, verse no. 3 clearly states that the Pran in its manifestation as Agni or fire.

Since no external stimuli is being received from the outside world, the mind begins to replay what is stored in its memory bank and uses its stupendous abilities to imagine and recreate situations and circumstances in an imaginary world of dreams. Since the Atma living in the causal body depends upon the mind living in the subtle body to feel or sense anything pertaining to this world, for all practical purposes therefore the Atma begins to live in this new world of dreams conjured up by the mind and gets as involved in it as it was during the waking state. Since the mind is

active here, the man remembers some of his dreams even when he wakes up. So as far as the Atma is concerned, the two states of waking and dreaming means the same—the world exists for it in both these two states.

²The word *Taijas* refers to the inherent light of conscious that is present in an entity that makes it aware of anything because of this 'light'. *Taijas* means energy, light, radiance, vigour and vitality. A dead entity would not see and feel anything, and hence a dead body has no *Taijas* in it. The dreaming state is compared to the *Taijas* because for all practical purposes the creature's gross physical body appears to be lifeless and dead from the outside as it shows no sign of life. But this apparent lifelessness is only skin deep as the consciousness is very much alive and active inside the body because the creature is dreaming and actively participating in the world of his dreams. This world is subtle because it has no physical gross existence.]

5. The third 'Paad' or aspect of Brahm and the Atma is equivalent to the Shusupta or the deep sleep state of consciousness¹. It is a subtler form of existence of Brahm or consciousness and it refers to the state when the creature does not even dream. Since in this state of existence the world has ceased to exist and the mind which actually makes the Atma aware of the world and its material objects too ceases to exist, the creature has no desires or wants left in him. This gives the Atma of the creature complete rest, peace and tranquility; it marks the state of existence where there is bliss and contentedness because of the simple reason that there is nothing to disturb the natural state of blissfulness and tranquility that the Atma possesses.

In this third state of existence the creature's Atma, his pure conscious 'self', has nothing to distract it. It exists in its primary form of being enlightened. This is being aware of the highest form of spiritual knowledge of the 'self' in the form of the pure consciousness that wants nothing, that remains ever contented, that is blissful and is at peace with itself.

This eclectic and divine form of the Atma that exists in this third state of Sushupta is therefore ever blissful, contented, tranquil and peaceful. The Atma that is consciousness personified enjoys its natural state of inherent blissfulness and peace.

Since the eclectic Atma becomes aware of its conscious and blissful state of sublime and exalted existence, it is called 'Pragya'—meaning knowing, enlightened and wise. Indeed, this is the third aspect or step of Brahm in which the latter's primary form of being all-knowing and all-wise comes to the fore. [Brahm and the Atma are synonymous with each other—the only apparent difference being in the level in which the cosmic Consciousness exists. If we think of this Consciousness at the level of the individual creature, it is called the Atma, and if we think of it at the vast level of the creation, it is called Brahm.]

The creature comes in close contact with his 'true' form as the enlightened Consciousness when he transcends the first two states of Jagrat and Swapna, and reaches the third state of Sushupta (5).

[Note--¹Beyond the second state of existence of consciousness is the third eclectic state called the *Sushupta* or deep sleep state. This has been elaborately dealt with in the Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 2, Brahman 1, verse no. 19; Canto 4, Brahman 3, verse nos. 14-15, 19, 21-30. During this stage the creature does not dream.

The Sushupta or the deep sleep state of consciousness is the 3rd state in which the mind has also become defunct, and the Atma has withdrawn itself into the exclusive domain of the causal body and lives in seclusion, disconnected with the external world because of the non-involvement of either the gross body or the subtle body. Here it is surrounded by the space of the subtle sky around the heart, called the Hridya Akash. During this state of existence, the vital winds, called the Pran or 'life'

of the creature, keep on moving in the different Naadis (various ducts such as nerves and veins etc.) as during the dreaming state so as to keep the body alive as is evident from the fact that all the subtle and imperceptible functions of the inner organs of the body such as the liver, kidneys, heart, pancreas, digestive organs, lungs etc. continue uninterrupted as before, because if they cease to function the body would die. It is the mind now that has gone in a defunct state. But this phase is temporary and shows the true nature and fundamental characteristic of the Atma, which is blissful and peaceful, contented and fulfilled, not feeling restless and perplexed in any manner whatsoever because it is now not being disturbed by the mind's constant nagging. That is why a sound asleep man does not want anything, he does not feel anything, he is not worried about anything, he is not concerned about anything, and he does not remember anything. That is also why one feels very relaxed and refreshed after even a short deep sleep when the mind and the body both find their rest.

The Prashna Upanishad of Atharva Veda tradition, in its Canto 4, verse no. 6, and Varaaha Upanishad of Krishna Yajur Veda tradition, in Canto 2, verse no. 62 describe in clear terms why a creature stops dreaming.]

6. Brahm is the supreme Lord of all, is all-knowing and omniscient, is a resident in the inner self of all living beings as their Atma or their true self, and is not only the primary cause for this creation coming into being but is also the cause for its remaining in existence and for its conclusion. [In other words, being the supreme Lord of the world who knows everything inside out, it is Brahm who decides when to create this world, how to maintain it, and when to conclude it.] (6).

7. That enigmatic, most esoteric and mystical entity which has paradoxical qualities such as it being neither enlightened or aware of anything nor being ignorant or not enlightened about it, an entity that is both enlightened and not enlightened, and hence deemed to be absolutely neutral so much so that it has no concern for or awareness of what is inside or what is outside, an entity that is neither understood or discerned by the organs of perceptions nor approachable or accessible by the organs of action, an entity that does nothing (as it does not need to do anything), an entity that has no parallel and comparisons or symbols, an entity that is beyond the reach of thoughts and speech (i.e. that cannot be thought of, cannot be even imagined, and cannot be spoken about or explained), an entity that is only accessible or witnessed by personal experience, an entity that is the point where everything in existence would ultimately collapse and conclude, an entity that is an embodiment of such divine virtues as being peaceful and tranquil, being auspicious and holy, and being non-dual and unmatched—verily, this entity is known as Brahm, the supreme transcendental Divine Being. And the state of its existence as described herein above, the state in which it exhibits these grand qualities is called the fourth aspect or Paad of Brahm.

This fourth state of existence of the cosmic Consciousness is called 'Turiya'¹—literally meaning the state that transcends the usual three levels in which an ordinary creature lives in this world. Indeed, this is the truthful form of the Atma that is worth knowing (as it represents the real and truthful nature of the soul of the creature). [In other words, the Atma exhibits these characteristics if it is left alone. Since the Atma is the microcosmic form of Brahm, it follows that these eclectic qualities are also the qualities of Brahm.]

Verily, this is the fourth 'Paad' or aspect of Brahm (7).

[Note--¹Then comes the 4th state of existence of the Atma, and it is known as *Turiya* state. This state is reached when the third state becomes a perpetual phenomenon instead of being only a temporary phase. Once this state of Turiya is reached, then even though the man might wake up from sleep and appears to be going

about his normal duties in a routine manner in this world, his pure consciousness remains aloof and distanced from the sense organs of perception and actions as well as from the mind. This is the 'transcendental state' of existence of consciousness, and it goes beyond the third state of Sushupta or deep sleep state of consciousness. Here the spiritual aspirant lives in a state of perpetual Samadhi. That is, he remains in a constant state of blissfulness and meditation though he lives in this physical world and goes about his normal affairs like an ordinary man.

During this 4th state called 'Turiya', the Atma acquires all the characters of the earlier three stages, viz. the waking, the dreaming and the deep sleeping states in their individual form as well as in a combined and composite way. In this state of spiritual existence, the consciousness exhibits all the traits of the earlier three states at the same time along with the unique traits which would obviously be a net result of the combined affect of all the individual traits that are so unique to each of the three earlier states of existence consciousness—viz. the waking state, the dreaming state, and the deep sleep state.

The 4th state of existence of the consciousness or Atma is also called the 'Turiya Chaitanya state'. In this state, the creature exists in its purest form as the pure consciousness which is undiluted, uninterrupted and unpolluted by any impulses or inputs from the external world. This results in its pristine and immaculate form as 'consciousness' to shine through (much like the flame of the candle which shines with all its brightness and splendour once the tainted glass covering around it is removed). This consciousness is the true 'self' of the creature and its real identity.

Thus, it is the Atma or the pure consciousness as the true 'self' of the creature that is the witness of the existence of the other three states in which the creature lives. This 'self' or Atma is imperishable and without a birth or beginning. This is because the other three states continue to appear and disappear in a rhythmic cycle as the creature wakes up to face the world after his phase of sleep is over, only to go back to sleep again when it is exhausted, and wake up again refreshed and rejuvenated from sleep. But the fourth state is like the Sun in the sky which is steady and shines constantly upon the world and lights it up. This Sun is unaffected by anything happening in this world and to this world, and remains completely dispassionate and detached from anything mundane and terrestrial. Nights and days appear and disappear in a cyclic manner, but the Sun remains the same. During the night it is erroneously assumed that the Sun is no more, but as science has proved the Sun is there in the sky though it might not be visible to the creature during that period of time called the 'night' as it is shining on the outer side of the globe. The day is comparable to the waking state of consciousness, the moon-light night to the dreaming state of consciousness when a man is able to see this world but with a different light, while the dark night when nothing is visible is comparable to the deep sleep state of consciousness when nothing of the external world is visible.

The Varaaha Upanishad of Krishna Yajur Veda, in its Canto 2, verse no. 64, and Subalo-panishad of Shukla Yajur Veda tradition, in its Canto 9, verses 1-7 describe what the practical implication of this Turiya state of consciousness is.

According to Brahmo-panishad, verse no. 1 of Krishna Yajur Veda tradition, these four states of existence represent Brahm in his different divine manifestations. The same Brahmo-panishad, in verse no. 21 describes the presence of the Atma in the four states of consciousness.]

8. [Verse nos. 8-12 describe the four aspects of creation in relation to the three letters of OM, viz. A, U and M, and the complete word OM.]

That transcendental cosmic all-inclusive and all-pervading Brahm, and its counterpart in the form of this individual creature's Atma are both in the form of the Akshar OM. [The word 'Akshar' literally means something that does not decay and is imperishable. It also means a letter of the alphabet. Since OM is an ethereal word

representing both the supreme Brahm and the pure conscious Atma, both of which are eternal and imperishable entities, it is called 'Akshar'. Since it is a monosyllabic word pronounced in one single breath as OM (as in *roam*), it is equivalent to one letter in spite of the fact that it actually consists of three independent letters A, U and M.]

(Like in the case of Brahm and the Atma having different steps as narrated in verse nos. 3-7 above—) This OM has three steps or letters that constitute its body. They are not separable from OM and from each other. In other words, they merge seamlessly in one another. It is not possible to have OM devoid of any one of its units (just like it is not possible to separate the Atma from Brahm, or the world from either of them).

These three aspects or constituent parts of OM are the letters or Akshars 'A', 'U' and 'M'. [The combined word that is formed is A + U + M = Aum or OM as in *roam*.] (8).

9. [Verse nos. 9-11 describe the three aspects of OM corresponding to the three 'Paads' or aspects of creation—viz. initiation, development and conclusion which are called the Vishwa, Taijas and Pragya respectively, and are equivalent to the Jagrat (waking), Swapna (dreaming) and Sushupta (deep sleep state) of existence. Finally, verse no. 12 describes that state of existence that transcends these three states and is called Turiya. It is likened to the closing of the mouth after the word OM is pronounced. This last is the fourth Paad or aspect of OM.]

The first 'Paad' or aspect or leg of OM corresponding to the first letter 'A' of the ethereal word OM is the Vaishwanar form of Brahm and the Atma that is the primary cause of creation of this visible world, and is therefore equivalent to the Jagrat or waking state of consciousness (as described in verse no. 3). [It is this waking state when the creature is aware of the world around him. He can physically interact with this world. Since this state of consciousness is the initiator and progenitor of this 'Vishwa' or this visible world, it is like the first letter 'A' of the series of alphabets because it is the basic vowel sound upon which all other sounds are based and which precedes all the other alphabets. When one starts counting the alphabets, he starts with the first letter 'A'. Hence, for all practical purposes, 'A' is the foundation upon which the entire edifice of alphabets, and as a natural corollary, the whole language rests because the language is based on words made up of alphabets. Similarly, the whole edifice of this creation rests upon the first letter or syllable 'A' of the word OM standing for Brahm.]

A man who is acquainted with this fact is regarded as wise and learned, and consequentially he gets respect and honour in this world and is able to fulfill all his desires and wishes. [Since all desires and wishes are fulfilled in this visible, physical world by taking relevant actions and doing necessary deeds, which in turn require diligent efforts and involvement of the various faculties of the physical body, along with faith, devotion and sincerity of purpose for the job at hand, as well as the acquisition of corresponding skills and having relevant knowledge of the world, this waking state enables the man to achieve success in fulfilling his desires and wishes. A man who has attained success would naturally find respect in society.] (9).

[Note—It must be noted here that the entire gamut of creation, right from its initiation through its development and till its conclusion, is visualised as being represented in the three letters of OM. This visualization is based on the premise that the word OM is a complete symbolic representation of Brahm in its entirety. Since the creation is a revelation of Brahm, it follows that it is also a revelation of OM. Therefore, the three constituent letters of OM, viz. A, U and M, represent the three phases of existence—

viz. the Jagrat, the Swapna and the Sushupta as explained in verse no. 9, 10 and 11 respectively.]

10. The second 'Paad' or aspect or leg of OM corresponding to the second letter 'U' of the ethereal word OM is the Taijas form of Brahm and the Atma that is equivalent to the Swapna or dreaming state of existence of consciousness. This dreaming state is in between the Jagrat or waking state and the Sushupta or deep sleep state. Hence it forms the middle part of OM. Just like a man can dream things much beyond what is actually possible in the practical life of the waking state, or it is in this dreaming state that his imaginations can stretch to infinity, it is the second state of creation in which the already initiated world (of the first state as narrated in verse no. 9) develops, grows and blossoms in infinite varieties of shapes, colours and forms. It represents growth, development and expansion.

A man who is acquainted with this fact is regarded as wise and learned, and he always remains calm and unruffled. He has equanimity of demeanour and treats everything and everyone equally without any discrimination. [Since he is wise and enlightened about Brahm and the reality of this world, his behaviour, outlook and temperament would reflect his exalted mental state. Since he would have realised that whatever that is seen is actually an expansion of Brahm or a revelation of Brahm, he would see no distinction between any two units of creation. He would treat every creature alike, and would be neutral towards everything in this world. For him, pain and suffering as well as joys and happiness are the same; duration of none of them either bothers him or makes him elated or depressed in the least.]

No one in his family remains devoid of the knowledge of Brahm. [Obviously, with such a wise man amidst them, it is natural that those who live with him are bound to be affected by his life, teachings and thoughts. As it is not possible for darkness to exist in the sunlight, it is not possible for ignorance to survive in the vicinity of light of knowledge that such a Brahm-realised man symbolises.] (10).

11. The third 'Paad' or aspect or leg of OM corresponding to the third letter 'M' of the ethereal word OM is the Pragya form of Brahm and the Atma that is equivalent to the Sushupta or deep sleep state of existence of consciousness. This third state of existence of consciousness is equivalent to the conclusion of creation because the mouth has to be closed when one pronounces the letter M (as in *come*; *mum*). The 'closing' of the mouth is a metaphoric way of saying that the man has concluded or ended what he wished to express. [To think what to speak is equivalent to the first state of initiation of creation, the expression of this thought is like the unfolding, spreading and extension of this creation, and ending the speech by closing the mouth is like the conclusion of creation. Since the mind is the entity that creates this world and expands it, it is the mind that can conclude it too. So, the third letter M of the word OM marks this third phase of conclusion of creation. It is 'Pragya' because when a man completes what he wishes to say, it becomes fully known to others what his thought was. It is not possible to know completely what he wants to say either before he starts to speak or during the middle of his speech. Therefore, the conclusion of the word OM symbolically represents not only the conclusion of creation but also the extent and depth of the knowledge that the speaker has.]

A man who knows this secret of OM, who has the depth of wisdom and scale of learning to understand and grasp the great metaphysical import of this knowledge develops the ability of withdrawing everything into himself, or accepting everything as they are, but remaining calm, poised and unruffled. He has virtually dissolved

himself into nothingness. [In other words, he stops to be perturbed or disturbed by anything in this world. He becomes calm and rested. He develops an exemplary sense of equanimity and indifference to everything. He stops to talk unnecessarily and indulge in unnecessary activities. He goes about his duties in this world silently, rarely if ever speaking. He remains perpetually engrossed in contemplation and meditation even while appearing to be doing so many things in this world. Whatever comes his way is accepted by him because he sees Brahm in everything. Thus for all practical purposes, he has become non-existent as a separate individual that is distinct from Brahm. Or in other words, he has dissolved himself into nothingness! In practical terms also, the less a man speaks the more relaxed and energized his mind and body feel. Speaking draws energy from the body and it is an unnecessary distraction for the spirit, creating more vexations than removing them. Going about one's job silently helps one to concentrate all his energy and faculties on it, and the result is all the more better than that obtained when one is incessantly talking nonsense. The faculty of speech is helpful to him to enquire about the correct path to be followed, but once his destination is determined he is well advised to tread it quietly and in solitude of the mind. Such a spiritual aspirant is able to easily and more quickly able to obtain Mukti or liberation and deliverance for himself.] (11).

12. The fourth 'Paad' or aspect or leg of OM corresponds to the Turiya state of existence. It is that stage when the word OM is completely pronounced and the speaker falls silent. It symbolises that calmed and tranquil aspect of Brahm or Atma that has eliminated all the delusions, doubts and confusions that arise in this material world of sense objects. It is an auspicious state of existence that is non-dual or Advaitya. [Since there is no delusion, doubt or confusion, there is no possibility of the man being torn between two options. He has for instance not to decide what to say or what not to say, what to see and what not to, what to hear and what not to, what to taste and what not to, what to touch and what not to, where to go and where not to, what to accept and what not to etc. In other words, both the gross body of sense organs and the subtle body of the mind become redundant and irrelevant. This is like the man actually reaching his chosen destination when he finally sits down to relax and revitalize himself. It is upon reaching his final destination that he feels accomplished and fulfilled, and is overcome with extreme happiness and joy. It rids him of all the worries about the uncertainties that lay before him, which in turn created consternation and perplexities in his mind till the time he has actually reached his destination and found his final peace. He is finally liberated from all the worries that had been dogging him since time immemorial, and delivered from all the consternations and uncertainties that had been the cause of all his torments. In the spiritual field, he has sort of 'arrived' at his destination. He has attained Mukti or Moksha—liberation and deliverance; emancipation and salvation.]

An aspirant who is wise and enlightened enough to have learnt the secret of this esoteric knowledge (as described in this Upanishad) is able to merge his own Atma with the supreme Brahm. In other words, he reaches the exalted state when non-duality becomes an all-pervading reality for him. [This is because he would have realised that the Atma and Brahm are essentially the same non-dual entity known as Consciousness. Everything in the world which shows life in it is basically the same Atma in all these forms, and therefore Brahm in these forms as Brahm and the Atma are one and not two separate things. He is completely 'enlightened'.] (12).

Chapter 4

Atharvashir Upanishad/Atharvashiro-panishad

This Upanishad belonging to the Atharva Veda tradition has seven Kandikas or short Cantos. It is a sort of dictionary or ready reckoner which succinctly defines the various epithets or adjectives that are used to describe the glorious and magnificent virtues of the Supreme Being also known as Brahm. Here, the Supreme Being is named Rudra which also happens to be one of the names of Lord Shiva, but as Kandika 4 explains, the word Rudra refers to a divine entity whose most sublime and eclectic form is known easily to enlightened, wise and realised souls, but which is very inaccessible for all others.

In Kandikas 1 and 2 as well as in Kandika 3, stanzas 1-2, Lord Rudra himself declares that he is the supreme Lord of creation, and as such each unit and phase of creation such as the Sun, the Moon, the Gods (representing the various forces of Nature), the Bhuts (the primary elements), the animate and the inanimate things, the visible and the invisible, all the worlds such as the terrestrial, the nether and the heavenly, the minutest and the most colossus, the most humble and the most powerful, as well as the past, the present and the future and beyond are all manifestations of Rudra. In fact, the entire creation is a vivid depiction of the magnificent glories and stupendity of Rudra. It is Rudra who gives each unit of creation its glory, magnificence, virtues and worth.

Kandikas 2 and 3 are in the form of liturgical hymns sung by the Gods in honour of Rudra who is a personification of the dynamic aspects of the supreme transcendental Lord known as Brahm wherein the greatness and divine virtues of Brahm are outlined.

Kandika 4 defines all the epithets used to describe the Supreme Being, such as the terms OM, Pranav, Sarwavyaapi (all-pervading), Anant (endless), Tarak (one which gives emancipation and salvation), Shukshma (minute; subtle), Shukla (lighted; white), Krishna (dark; hidden), Vidyut (electric; light; energy), Param Brahm (the Supreme Being), Ek (the only one), Rudra, Ishan (the Lord), Indra (the king of the patron Gods of creation), Maheshwar (the great Ishwar or Lord) etc.

Kandika 5 essentially outlines the all-inclusive nature of Rudra who is Brahm, the Supreme Being, personified.

Kandika 6 outlines the genesis of creation and establishes that this creation has emerged from one supreme transcendental Brahm known as Rudra.

Finally, Kandika 7 extols the importance of grasping the teaching of this Upanishad because it briefly and precisely enlightens an aspirant about the divine virtues of the Supreme Being.

Some of the other Upanishad which have an uncanny resemblance to our present Atharvashir Upanishad are the Shukla Yajur Veda's Niralambo-panishad, Subalo-panishad and Brihad Aranyak Upanishad (specifically, its Canto 1, Brahman 2 and 5), as well as Krishna Yajur Veda's Rudra Hridaya Upanishad, Rudra Upanishad, Dakshin Murti Upanishad, Sarwasaar Upanishad and Skanda Upanishad.

-----*****-----

-----Shanti Paath-----

Please refer to appendix no. 1 for the meaning of this Shanti Paath.

Kandika 1

[Some of the Upanishads having great relevance to this present Atharvashir Upanishad are the Krishna Yajur Veda's Rudra Hridaya Upanishad, Rudra Upanishad, Dakshin Murti Upanishad, Skanda Upanishad and Sarswasaar Upanishad, as well as Shukla Yajur Veda's Niralambo-panishad, Subalo-panishad and Brihad Aranyak Upanishad (specially its Canto 1, Brahmans 2 and 5.

Close examination of the various epithets used to describe the virtues and glories of the supreme transcendental Brahm by Lord Rudra, one of the many forms of Lord Shiva, himself clearly shows that he is actually describing the Supreme Being when he says that he possesses these qualities. In other words, this Upanishad establishes that Rudra and Brahm are the two names of the same Divinity.

In Kandikas 1 and 2 as well as in Kandika 3, stanzas 1-2, Lord Rudra himself declares that he is the supreme Lord of creation, and as such each unit and phase of creation such as the Sun, the Moon, the Gods (representing the various forces of Nature), the Bhuts (the primary elements), the animate and the inanimate things, the visible and the invisible, all the worlds such as the terrestrial, the nether and the heavenly, the minutest and the most colossus, the most humble and the most powerful, as well as the past, the present and the future and beyond are all manifestations of Rudra. In fact, the entire creation is a vivid depiction of the magnificent glories and stupendity of Rudra much like it is that of the supreme Brahm. It is Rudra who gives each unit of creation its glory, magnificence, virtues and worth.]

1. Once, all the Gods approached Lord Rudra¹ and asked—‘Who are you?’

Rudra replied—‘I am one and non-dual. I am the past, the present and the future. There is nothing in this creation besides me.

It is me who is established in the inner most chamber and in the minutest core of everything in existence, and am also present uniformly in all the directions of the universe.

I have stunning paradoxical qualities (making me a unique and indefinable entity) such as being Nitya (steady, constant, always, routine and eternal) as well as A-nitya (the opposite of Nitya), as being Vyakta (manifested, revealed, vivid and articulate) as well as A-vyakta (the opposite of Vyakta), as being Brahm (supreme and transcendental) as well as A-brahm (the opposite of Brahm). [Refer verse no. 1 of Kandika 3.]

It is me who is (or who has revealed myself or has established my self as) the Prachi (east) and Pratichi (west), the Uttar (north) and Dakshin (south), and the Urdhva (zenith, up) and Adha (nadir, bottom).

It is me who is the Puman (man), the A-puman (the neutral sex), and the opposite of Puman or the woman.

It is me who is Gayatri, Savitri and Saraswati. [These three are Goddesses who are personified forms of the three divine and dynamic virtues of Brahm by which the Lord of creation established knowledge in this creation. Thus, Gayatri represents the poetical style in which knowledge was revealed in the form of the hymns of the

Vedas, the Savitri is the ray of the Sun symbolising the light of wisdom and enlightenment that the knowledge of the Vedas spread, and Saraswati is an embodiment of knowledge as a Goddess who presides over the faculty of speech as well as knowledge, erudition and wisdom.]

Similarly, it is me who is (or who has revealed knowledge in the form of the Vedas composed in other poetical styles such as) the Trishtup, the Jagati and Anushtup Chandas².

It is me who is the three forms of the divine Fire such as the Garhyapatya, the Dakshinagni and Ahavahaniya³.

It is me who is indeed the Satya (the Absolute Truth), the Gau (the holy cow), Gauri (Goddess Parvati, the divine consort of Lord Shiva and the Mother of creation), the Jeyshta (the eldest and the senior most in creation), the Sreshtha (the best, the most exalted and the excellent one), and Varishtha (the highest, the chief, the senior most, the most established, honoured and revered).

The Apaha (the water element) and Teja (the fire element) are also none but me. [These are the two most essential entities for life to become a reality in creation. Water is the quintessential elixir of life, and fire is the eternal source of heat, light and energy. Hence, whatever that has life is Rudra or Brahm revealed in its form.]

It is me who is revealed in the form of the four Vedas, viz. the Rig/Rik, the Yajur, the Sam, and the Atharva.

It is me who is both the Akshar (imperishable, infinite and eternal) as well as Kshar (that which perishes and comes to an end). [This is because while I am eternal as the supreme Truth in creation and its Lord, my revealed form as the mortal world and its creatures continue to die every day. Nothing that has come into being would last for eternity even though it is my revealed form which is eternal and imperishable.]

Likewise, I am both Gopya (something that is concealed) and Guhaya (secret, mysterious and esoteric). [In other words, I am an entity that is difficult to understand and explain.]

It is me who is the Aranya (the forest where ascetics go in search of the Supreme Being by doing Tapa or penances and austerities), the Pushkar (name of a pilgrim city, but here meaning all places where one goes to do auspicious deeds), and the virtue of Pavitra (the most holy, pure, uncorrupt and clean). [In other words, various pilgrim cites and the serene places such as forests are important for the creature because they find a pure and holy environment representing the purity and holiness associated with Divinity there. If this is not there, then there are just like other towns and picnic spots.]

The life energy and its manifestation in the form of light that is present in the ten directions of this world, such as in the front (north), the middle (the atmosphere of the earth and the sky of the solar system), the outer (the periphery or the sky beyond the solar system), the Purastad (east) etc. are all my forms. All the directions should be regarded as being established in my cosmic all-pervading and all-inclusive form.

A wise person who is enlightened and erudite enough to know my all-inclusive and all-pervading macrocosmic form as narrated here is indeed the one who knows about all the Gods and all the branches of the Vedas. [This is because all of them are revelations of my form, and when one knows the essence, when one holds the 'key', he can know everything that is worth knowing. It is like having a master key that can unlock all the locks. It is also like some master formula of science or mathematics—if one knows the secret of it he can solve any problem that comes to him. Such a possibility is not mere conjecture but there are instances of people who

have become ‘master solvers’ of long and complicated mathematical problems, or can do many mental tasks like recalling long list of names or digits instantaneously, so fast that they can even compete with the fastest of computers.]

It is me who gives the cows their holiness, the Brahmins their greatness, the Havi (the offering made to the fire sacrifice) its sanctity and power, the creature his age (i.e. it is me as the vital life force that decides the age of all living beings), the virtue of Truth its great value, significance, importance, respect and honour, and Dharma (righteousness and auspiciousness) its traditional importance and value.’

When Rudra had emphasised his divine virtues as the supreme Lord, all the assembled Gods closed their eyes and began meditating upon this divine form of Rudra. They raised their hands and paid obeisance to the Lord in the following words (as narrated in Kandika 2).

[Note—¹Though Lord *Rudra* refers to one of the names of Lord Shiva, but it is deemed here that he is none other but the supreme transcendental Brahm who is the Supreme Being in this creation. The divinity and the supremacy of Rudra as the senior most Lord has been narrated in the Krishna Yajur Veda’s Rudra Hridaya Upanishad, Dakshin Murti Upanishad and Rudra Upanishad.

²The *Chanda* is the poetical style in which the hymns of the Vedas are composed. The ones listed here in this Kandika are Gayatri, Trishtup, Jagati and Anushtup. (i) The *Gayatri Chanda* has 24 letters and syllables in all which are divided into 3 steps or stanzas of 8 letters or syllables each. Hence the total is $3 \times 8 = 24$. (ii) The *Trishtup Chanda* is a verse of 4 lines in which each line has 11 letters; $11 \times 4 = 44$ letters in all. (iii) The *Jagati Chanda* is a verse of 4 lines with 12 letters in each line, bringing the total number of letters to 48. And (iv) The *Anushtup Chanda* is a verse with 4 lines, each line having 8 letters = total 32 letters. It was first conceived by an ancient sage named Anustuv, hence it bears his name.

³The *Garhyapatya* fire—This is the householder’s fire. A householder has land and farm representing ‘earth’ in which he grows food. This food is grown with the help of the light of the Sun, and it is cooked in the fire of the fire place in the house. Hence, the Garhyapatya fire, or the householder’s fire, is intrinsically present and is implied in these four entities. It is an integral part of these four. The earth has the ‘fire element’ because without heat and warmth, no seed would germinate and no life can survive on this earth. The food has fire present inherently in it because it is the energy inherent in food which helps to energise the creature that eats it. The presence of heat in the sun does not need to be explained because it is very evident.

The fire was the central piece of all religious life in early times of the Vedic period when a fire sacrifice was deemed to be the best religious activity that a righteous man can expect to do. In this context, the Garhyapatya fire is the main fire lit during such formal fire sacrifices. The fire pit was either square-shaped or rounded. In the context of the fire sacrifice, it was used for the purpose of daily rituals, cooking or warming the offerings, heating of the vessels, to perform circumambulation, to act as a main cauldron or reservoir of the sacred fire which was to be kept perpetually burning throughout the life of the householder once it was lit.

The *Dakshinagni* fire—This fire is a witness to making of charities when some water is poured as libation to the Gods. It signifies that the Gods are offered water to drink. To give water to the thirsty is the greatest form of charity. Therefore, this fire is symbolically present in water, and when it is poured, it signifies that the heat produced by sins committed by the person has been doused. Charities and donations make a man famous and renowned, hence the allusion to directions of the earth. His glory shines like the bright moon and he is called a star among human beings. He is the most exalted amongst his peers and compatriots even as the moon is most prominent amongst the stars in the sky.

Like in the case of the Garhyapatya fire, the fire that was lit in the main sacrificial shed or site just near the main fire pit but to the south of it and where donations and

charities were made was called Dakshinagni fire. The fire pit for this fire was semi-circular or bow-shaped.

The *Ahawaniya* fire—This fire is lit to invoke the Gods, and the Gods live in the heaven; hence the reference to the sky, heavens and electric. Since Pran is the best form of the vital winds, the allusion means that the Gods are the most exalted forms that exist in creation. The ‘electric’ is a metaphor for immense strength, potent and power, which of course the fire possesses. This inherent quality of Electric that it possesses most stupendous powers and strength is likened to the presence of Brahm in it even as the great power and strength present in a man is due to the Atma or Pran present in him. Even as a man is useless without the presence of Pran in him, the Electric would lose its importance if there was no Brahm present in it which gives it its punch and strength.]

-----*****-----

Kandika 2

[This Kandika marks the glories of Rudra, the Supreme Being, as defined by the Gods to pay their respects to the Lord. It has 32 short verses in the form of liturgical hymns sung in honour of the Lord.]

1. ‘OM Salutations! Oh Lord Rudra! You are personified form of Brahma, the creator. We bow before you most reverentially (1).
2. Oh Lord Rudra! You are personified form of Vishnu, the sustainer and protector of creation. We bow before you most reverentially (2).
3. Oh Lord Rudra! You are personified form of Skand (an epithet of Lord Shiva). We bow before you most reverentially (3).
4. Oh Lord Rudra! You are personified form of Indra (the king of Gods). We bow before you most reverentially (4).
5. Oh Lord Rudra! You are personified form of Agni (the Fire God). We bow before you most reverentially (5).
6. Oh Lord Rudra! You are personified form of Vayu (the Wind God). We bow before you most reverentially (6).
7. Oh Lord Rudra! You are personified form of Surya (the Sun God). We bow before you most reverentially (7).
8. Oh Lord Rudra! You are personified form of Soma (the Moon God). We bow before you most reverentially (8).
9. Oh Lord Rudra! You are personified form of the Astha Graha (the eight planets that find importance in astrology). We bow before you most reverentially. [The eight Grahas according to Hindu mythology are the following—Sun, Moon, Mars, Mercury, Jupiter, Venus, Saturn, Rahu and Ketu. The last two stand for the ascending

and descending phases of the moon, and therefore counted as one and not two independent planets.] (9).

10. Oh Lord Rudra! You are personified form of the eight Pratigrahas. We bow before you most reverentially. [The word Pratigraha means to give Daan, or to give charity or donation or alms in the form of a selfless gift. It has the following eight types—(i) Vidya Daan meaning gift of education, (ii) Anna Daan meaning gifting of food to others in need or those who are hungry, (iii) Vastra Daan meaning gifting of clothes, (iv) Abhay Daan meaning gifting of fearlessness, (v) Swarna Daan meaning gifting of gold and other valuables (especially to Brahmins), (vi) Gau Daan meaning gifting of cows, (vii) Bhu Daan meaning gifting of land (for charitable purpose), and (viii) Kannya Daan meaning giving a girl in marriage to the groom.] (10).

11. Oh Lord Rudra! You are personified form of Bhu (the first mystical word pronounced by the creator Brahma from which the mortal world came into being, such as the terrestrial world). We bow before you most reverentially (11).

12. Oh Lord Rudra! You are personified form of Bhuvaha (the second mystical word pronounced by the creator Brahma from which the world above the Bhu came into being, such as the world of flying creatures in the sky where Spirits live). We bow before you most reverentially (12).

13. Oh Lord Rudra! You are personified form of Swaha (the third mystical word pronounced by the creator Brahma from which the heavenly world came into being where the Gods live). We bow before you most reverentially (13).

14. Oh Lord Rudra! You are personified form of Maha (the fourth mystical word pronounced by Brahma representing the universe beyond the solar system; the 'greater world' which is the habitat of the Supreme Being; the world incorporating even the outer most part of creation). We bow before you most reverentially (14).

15. Oh Lord Rudra! You are personified form of Prithivi (the earth element). We bow before you most reverentially (15).

16. Oh Lord Rudra! You are personified form of Antariksha (the sky where the planets are located). We bow before you most reverentially (16).

17. Oh Lord Rudra! You are personified form of Duloka (the heaven; the deep space of the sky beyond the solar system). We bow before you most reverentially (17).

18. Oh Lord Rudra! You are personified form of Aapha (the water element). We bow before you most reverentially (18).

19. Oh Lord Rudra! You are personified form of Teja (the fire element). We bow before you most reverentially (19).

20. Oh Lord Rudra! You are personified form of Akash (the sky element). We bow before you most reverentially (20).

21. Oh Lord Rudra! You are personified form of Kaal (the factor of time and era; the myriad number of circumstances and uncountable variations of situations; the Death God). We bow before you most reverentially (21).

22. Oh Lord Rudra! You are personified form of Yam (the God of death and destiny; also meaning the eclectic virtues of self control in all forms). We bow before you most reverentially (22).

23. Oh Lord Rudra! You are personified form of Mritu (the end or conclusion of anything; death and termination of existing life; another name for the Death God or 'death' personified). We bow before you most reverentially (23).

24. Oh Lord Rudra! You are personified form of Amrit (the elixir of eternal life and bliss). We bow before you most reverentially (24).

25. Oh Lord Rudra! You are personified form of Vishwa (the entire universe; also meaning the waking state of consciousness). We bow before you most reverentially (25).

26. Oh Lord Rudra! You are personified form of Sthul (the gross aspect of creation). We bow before you most reverentially (26).

27. Oh Lord Rudra! You are personified form of Sukshma (the subtle aspect of creation). We bow before you most reverentially (27).

28. Oh Lord Rudra! You are personified form of Shukla (the white or lighted aspect of creation; that which shines and gives light such as the sun as well as the bright half of the moon; the bright lunar fortnight). We bow before you most reverentially. [There are certain fire sacrifices that are done on the full moon day. They are called the Purnamaas Yagya. Hence, Lord Rudra personifies the Lord who presides over this fire sacrifice. The word Shukla also means knowledge that is 'lighted', i.e. that is out in the open and can be easily accessed, knowledge that is empowering and enlightening.] (28).

29. Oh Lord Rudra! You are personified form of Krishna (the dark aspect of creation). We bow before you most reverentially. [The word Krishna refers to the dark half of the lunar fortnight. The fire sacrifice that is done on the Amavasya day, i.e. the day of the dark moon. It also means that body of knowledge that is esoteric and hidden and requires great effort to learn.] (29).

30. Oh Lord Rudra! You are personified form of Kritsnam (i.e. you are all and everything mentioned in this hymn at the same time; you are all-encompassing and all-inclusive). We bow before you most reverentially (30).

31. Oh Lord Rudra! You are personified form of Satya (the Absolute Truth). We bow before you most reverentially (31).

32. Oh Lord Rudra! You are indeed everything that exists in this creation. Nothing is beyond you. That is why you are honoured by the epithet of 'Sarwam' (meaning all, everything without exception). We bow before you most reverentially (32).'

-----*****-----

Kandika 3

[Kandika 3 is in effect a continuation of Kandika 2 as the Gods are continuing with their prayer in honour of Lord Rudra. It has three stanzas.]

1. 'Oh Lord! The three worlds represented by the primal words Bhu (terrestrial), Bhuvaha (sky) and Swaha (heaven) are in effect your lower, middle and upper parts.

You are a personification of this universe and the supreme transcendental Brahm who is one and non-dual. But it is out of ignorance and delusions that you appear to be bound in the erroneous concept of being two (dual nature of creation—such as gross and subtle), three (triad of creation—such as God, Jiva and world) and countless (an extension of the earlier two forms in multiples)¹.

You are an embodiment of such glorious virtues as calmness, peace and tranquility (Shaanta). You are robust, strong, bold, stout, sturdy, ever youthful, invigorated and invigorating, ever fresh and restorative (Pushta).

You are an enigmatic and mysterious One who exhibits paradoxical qualities and apparently opposite characteristics—such as being Huta and A-huta² at the same time, as being Datta and A-datta³, as being Sarwa and A-sarwa⁴, as being Vishwa and A-vishwa⁵, as being Krit and A-krit⁶. [Refer verse no. 1 of Kankika 1 also.]

You are not only supreme but transcendental as well. You are the unknown as well as the known (Paramaparam). [In other words, you are the supreme transcendental Brahm who is invisible and unknown on the one hand, and on the other hand you can be known by studying the scriptures which are your manifestation as knowledge, and by analyzing the truth of the visible physical world which is your living manifestation.]

You are involved in everything in this creation and are a part of it (Paraayan).

You have made us, the Gods, immortal by making us drink Soma, the ambrosia of eternity. It is by your grace that we, the Gods, have acquired illumination (or magnificence and glory, supernatural powers and potentials, exalted stature and honour) in the form of knowledge of the truth, wisdom and erudition. As a result, such enemies as Kaam (passions, lust and desires) cannot harm us. [That is, no negative traits can ever pull us down from our high moral state of existence as Gods.]

Indeed, you are like Amrit—the nectar that provides liberation and deliverance from all torments, miseries and sorrows—for all mortal (human) beings (1).

[Note—¹This refers to the astoundingly diverse forms in which the creation exists. No 'two' or 'three' units of this world are alike. Even twin children are not exactly alike, and neither are two flowers or leaves or fruits on the same branch of a tree. It is said that everything in creation is a revelation of Brahm who is one and not two, then why is there so much diversity? This statement answers precisely this question—it is out of delusions and ignorance of the truth. We see the exterior and decide the identity of anything, but the concealed factor of 'life' in all of them is the same. The apparent diversity is only external and superficial; it is not internal and real. When one begins to judge Brahm based on the external façade, he would see hundreds of Gods, while if he understands that all of them are essentially the same Divinity having assumed different forms in order to carry on the diverse functions of creation—a clear case of delegation of authority—he would realise that they are fundamentally the same Brahm in all their forms.]

²The term 'Huta' refers to the sanctified offerings made to the sacred fire during fire sacrifices. Hence, here 'Huta' means everything that is holy and sanctified and can be offered to the Gods, as well as everything that is not so, i.e. is 'A-huta'.

³The term 'Datta' refers to donation and gifts. Hence, here 'Datta' means everything that is worth giving as well as other things that are not worthy to be donated or gifted, i.e. are 'A-datta'.

⁴The term 'Sarwa' means all and everything. In other words, Lord Rudra on the one hand personifies everything in existence as he is 'Sarwa', and on the other hand none of these things is a true form of Rudra or 'A-sarwa'. Rudra is far beyond the purview of definition that applies to anything in existence.

⁵The term 'Vishwa' means the universe. Hence, Rudra is 'Vishwa' personified, i.e. he is the embodiment of the whole universe; the universe is Rudra's body. On the other hand, to say that even the evil and gross world is Rudra is a false statement because Rudra is holy and pure. Hence Rudra is 'A-vishwa'.

⁶The term 'Krit' means the result of a deed or action. Hence, everything is the result of whatever Rudra does as Brahm, i.e. as the Atma of creation. But at the same time the Upanishads assert that the Atma does not do any deed as all deeds are done by the body and not the soul. So Rudra is 'A-krit'—he does nothing.]

2. Oh Lord! You are the most esoteric and mysterious One who preceded the Sun and the Moon. [That is, you predate the world.]

You provide auspiciousness, well being and welfare to the whole world. [That is, you are a most benevolent, munificent, merciful, kind, graceful, loving and an obliging caretaker of this creation.]

You are 'Akshar'—in other word you are the imperishable and infinite divinity on the one hand, and are represented by the monosyllabic ethereal word OM on the other hand. [Refer Kandika 4.]

You are the Prajapati, the Lord of your subjects in the form of this creation, who is greatly honoured and given the highest respect by them. [This is because you take good care of them.]

You are subtle and sublime. You are the gentlest Purush. [Like the word 'gentleman', the epithet 'Saumya' refers to the most polite and graceful nature of the Lord. The word 'Purush' literally means a man, but here it refers to the Viraat Purush who is the macrocosmic first invisible and all-inclusive form of Brahm that came into being in the very initial phases of creation when Brahm decided to start the process of creation. It is from this Viraat Purush that the rest of creation came into existence.]

You are the cosmic consumer who consumes everything in existence, employing the same quality and virtue as the thing consumed because you have it in greater and more intense strength. [This is like the case of a strong magnet attracting the weaker magnet towards itself. Brahm or Rudra has all the qualities that are imaginable in creation, but have it in abundance and in a more intense degree and form. So the Lord attracts everything towards himself, thereby metaphorically becoming the cosmic consumer. It is also like the black hole in space which pulls in even light and prevents its escape.]

Such as for example:—You can attract and grasp anything that is not accessible very easily because you are more inaccessible than anything in this world. You can consume (grasp or control) all sorts of thoughts, sentiments and emotions by the same virtues present more intensely in you. You can similarly attract towards yourself all those who are gentle and humble by these virtues that are in a more robust form in your self. [That is why the world gives you so much respect and bows reverentially before you.] You can consume the subtle by more strong subtle and sublime virtues in you. You can hold the movement of Vayu or wind, or consume its

energy and strength so that it stops its movement, by the more powerful force that you possess. [Thus, you are the great universal consumer.]

We, the Gods, offer our respectful obeisance to you, the greatest universal consumer of everything.

It is you who lives in the heart of all the Gods (as their Atma or soul which is the pure consciousness and the true identity of these Gods), and it is you who are their Pran (or life) (2).

3. Oh Lord! While living in the subtle space of the heart, you transcend all the three Matras or phases or aspects of creation. [The three phases are the origin, existence and conclusion of creation; or the waking state, the dreaming state and the deep sleep state of existence. Brahm transcends them—i.e. Brahm was present even before the creation was initiated, and would be present when the creation comes to a conclusion. Even during its existential phase, no one can judge Brahm and it is the latter that controls every instant of life.]

This form of Brahm or Rudra that lives in the heart (as the pure conscious Atma) has his head in the upper side and the leg in the lower side. [This obviously refers to the gross body of the creature who has the heart in the central part of the body with the head towards the upper side and the leg towards the lower side. In fact, the body of a creature is a manifestation of the Viraat Purush—refer Aiteriyo Upanishad of Rig Veda, Canto 2; Brihad Aranyak Upanishad, 1/4/1 and 2/5/18 of Shukla Yajur Veda.]

That which resides in the upper region or that which occupies an exalted position in the body is known as Omkar represented by the monosyllabic word OM. OM is called Pranav, and Pranav is the divine entity that is universal, omnipresent, all-pervading and all-encompassing. [In other words, Pranav is Brahm. Refer Kandika 4 which defines these terms.]

This universal Pranav (or the supreme transcendental Brahm known by the name of Pranav, the cosmic sound represented by OM and Naad) is Anant (endless, infinite, measureless and fathomless).

That which is Anant is also the Tarak (the provider of liberation and deliverance; the one who gives emancipation and salvation to the creature's soul).

That which is Tarak is most Sukshma (most sublime and subtle).

That which is Sukshma is Shukla (white, illuminated, bright, vivid, clear, wise and knowledgeable). [That is, the sublime and subtle Brahm, or the knowledge of this Brahm that is very sublime and subtle besides being extremely esoteric, mystical and incomprehensible is most illuminating and enlightening for the creature's soul. This Brahm is self-illuminated and brilliant like the white light—'Shukla'—of the sun.]

That which is Shukla is Vidyut (or 'electric', representing the grand virtues of being energetic, powerful, effective, potent and vigorous). [In other words, Brahm and knowledge that is enlightening and spiritually elevating are both as potent and powerful as the electric.]

That which is Vidyut is the supreme Brahm. It is this Brahm that is one and non-dual. [An entity that is endowed with the glorious virtues symbolized by 'electric' is none else but the supreme cosmic Consciousness as well the universal Absolute Truth and Reality of creation known as Brahm.]

That which is one and non-dual is also known as Rudra. [In other words, Lord Rudra is none but Brahm, who is one and non-dual, personified.]

He who is Rudra is also known as Ishan (Lord of all).

He who is known as Ishan is also known as Maheshwar (the great Ishwar or the great God or the great Lord of all). [Obviously, Brahm is Maheshwar besides being Rudra and Ishan as he is the supreme Lord of creation, as he is the Supreme Being.] (3).

-----*****-----

Kandika 4

[This Kandika explains the terms used to define Brahm, the Supreme Being. It is in continuation of Kandika 3 has used these terms when the Gods prayed to Lord Rudra.]

Why is the word OM so famous as a synonym of Brahm, and is spiritually uplifting? It is because when one pronounces this word in the proper way, he has to pull the Pran or the vital winds upwards. This upwardly mobile Pran representing the vital life forces in the creature's body is a metaphoric way of indicating his spiritual progress from the lower rung of life to an exalted state of enlightenment which leads to Brahm realisation or attainment of the citadel of divinity. [Yoga Upanishads describe in detail how this word OM is used during breath control exercises known as Pranayam in which all the vital winds of the body called Pran are made to enter the Sushumna Naadi in the spinal cord and reach the top of the head in the region of the cerebrum where the practitioner can witness a fount of scintillating and sparkling light used as a metaphor for 'enlightenment'. Further ahead, the Pran enters the cranium and ultimately escapes through the Brahm Randhra, the hair-like slit on the top of the head where the two halves of the skull are joined, to find final and ultimate liberation from the fetters of the gross body. This is tantamount to 'Brahm realisation' because this term refers to a creature's final emancipation and salvation. OM is the Mantra that is used as an aid in this process of Brahm-realisation obtained by controlling and harnessing the vital winds by the method of Pranayam. So if one employs OM for his spiritual progress, one would get direct access to Brahm in the form of Brahm-realisation. This is the climax of spiritual enlightenment.]

Why is OM called Pranav (a word used as a synonym for Brahm, the Supreme Being)? It is called Pranav because it is used as a salutation for the Supreme Being, as the Lord's divine name and an honourable form of address for the Supreme Being known as Brahm while reciting the Rig/Rik Veda, the Sam Veda and the Yajur Veda, as well as while giving respects to the priests known as Atharvangiras (who perform the fire sacrifices using the hymns of the Atharva Veda) and other Brahmins, the learned ones, who are deemed to be experts in the Vedas.

Why is it (i.e. Pranav or Brahm, the Supreme Being) called 'Sarwavyaapi' (literally meaning 'one who is all-pervading and omnipresent')? It is because it (Pranav/Brahm) is an integral and inseparable part of this creation, being all-pervading, all-encompassing and omnipresent, though it is not apparently visible just like oil that is inherently present in a hidden form in the sesame seed (or the mustard seed) but cannot be visibly seen or felt or known by any ordinary means from the outside.

Why is it (Pranav/Brahm) called 'Anant' (literally meaning 'endless and infinite')? It is called Anant because when the word OM representing it (Pranav or Brahm) is pronounced there seems no end to it in any of the directions—the top, the bottom or in any of the angular directions. [The word OM is a monosyllabic word and is hummed continuously and seamlessly without break. OM represents the cosmic

background that continuously reverberates in the cosmos. In the higher stages of Yoga or meditation, this sound reverberates in the entire being of the practitioner of Yoga. In the context of the creation and the cosmos, this sound of OM completely fills the entire space of the sky. Since each individual unit of creation is envisioned as having its origin in this sky, developing and growing in the sky, and finally collapsing and disappearing in the same sky, it follows that they have their origin, development and end in OM. In other words, the sound and reverberation of OM both precedes and follows this creation. Everything has its origin in OM—refer Mandukya Upanishad, verse no. 8-12 which is Chapter no. 3 of this volume. Being the filler of the space of the sky element, OM is infinite, endless and measureless as the fathomless bowls of the sky. It is like a circle which has no end. That is to say, Brahm, the principal entity represented by OM, is also without an end. There is no direction of creation where there is no Brahm. Hence it is endless and seamless or ‘Anant’. Brahm is Anant because it is characterized, inter alia, with the virtues of being endless, infinite, measureless, fathomless, imperishable etc.]

Why is it (OM) called ‘Tarak’ (literally meaning ‘one that delivers or takes across’)? It (OM representing Pranav/Brahm) is called Tarak because it has the mystical and overriding authority, ability and potentials, like the principal Brahm it represents, to deliver or give fearlessness to a creature from the numerous horrors, torments, pains and fears that makes him suffer in a mother’s womb, or during and after birth, or while suffering from various diseases and other bodily problems that are a part of his worldly life, or during his old age when the body declines, becomes infirm and the strength wanes, or at the time of his death. [In other words, this divine word Mantra OM can give him final liberation from the cycle of birth and death so that he would not have to take a new birth and enter a mother’s womb in the process, followed by a new cycle of torments that he was fed up with in his previous life. This is because by meditating and doing contemplation with the help of OM as a tool to attain self and Brahm realisation, the spiritual aspirant would be able to find permanent liberation from the fetters of this gross body and achieve deliverance of his ‘self’ from the bondage of this world. Constant practice would help him find enlightenment and realisation of his spiritual goal, and this would naturally free him from such fears because, for one, he would have realised that the Atma or soul which is his ‘true self’ never suffers, and that it is distinct from the gross body which is the entity that actually suffers. With this wisdom ‘he’ (the true self, the Atma, the soul) would not be involved in doing any deeds as they are done by the body and not the soul. This would have a natural liberating effect, because now ‘he’ would be freed from having to bear the consequences of doing deeds as ‘he’ has not done them at all, and therefore he would not have to either suffer from the consequences of the deeds or have to take a new birth again. Further, a wise man would not have any desires left unfulfilled in him, and so would have no cause for taking a new birth again to fulfill them. According to the adage ‘one becomes what one thinks or the company one keeps’, such an enlightened aspirant would have found Brahm, the Supreme Being, because constant remembrance of OM would draw him closer and closer to Brahm till the time he merges in and becomes one with Brahm. At the height of meditation, the sound of OM and its accompanying vibrations reverberate through each pore and nerve of the practitioner’s body so much so that he virtually drowns in the waves of this cosmic sound overflowing his inner being. It titillates his nerves to such an extreme end that he feels ecstasy and exhilaration of the highest and purest form. The practitioner experiences a surge of emotions that are described as bliss and ecstasy that have an indescribable dimension to them. This eclectic state of existence of the

consciousness is tantamount to Brahm-realisation. From the broader perspective, this is also tantamount to 'self-realisation' and enlightenment as well as to Mukti or liberation and deliverance.]

Why is it (Pranav/Brahm) called 'Shukla' (literally meaning 'white, bright, illuminated, lighted, radiant, splendorous')? It is called Shukla because it is self-illuminated and self-radiant. Not only this, it lights others with its own splendorous light. [The word 'light' is not restricted to the physical aspect of light but implies such glorious virtues as wisdom, knowledge, erudition and enlightenment. Anything that removes the darkness of spiritual ignorance and delusions, anything that gives the light of knowledge and makes the aspirant aware of the 'truth' is Shukla.]

Why is it (Pranav/Brahm) called 'Sukshma' (literally meaning 'subtle, microcosmic, microscopic, minutest, atomic and fine', and therefore invisible and indiscernible)? It is so-called because it resides in a microscopic or atomic form in the body of all living beings in creation (as their Atma, the pure consciousness that keeps the gross body alive, and which gives the creature his identity).

This divine entity that lives in the body is called a 'Purush'—literally a man but actually meaning the Viraat Purush, the macrocosmic form of Brahm that has taken up its habitat in the gross body of the individual creature. [The word 'Purush' means one who lives in a city or citadel. The Viraat Purush had revealed this creation from his body and created man in his own image, and then had taken up his residence in this man's body. Being a resident of the body, the otherwise unbound Brahm became a resident bound and butted by the body. From the macrocosmic perspective, the word Purush would refer to that aspect of Brahm who lives inside the gross body of a living being, and from the cosmic perspective at the macrocosmic level of existence, this word would refer to Brahm who pervades uniformly throughout the length and breadth of the entire creation. This word has been explicitly defined in the Brihad Aranyak Upanishad of Shukla Yajur Veda, Canto 2, Brahman 5, verse no. 18, and the Mundak Upanishad of Atharva Veda, in its Canto 2, section 1, verse nos. 9-10.]

Why is it (Pranav/Brahm) known as 'Vidyut' (literally meaning 'electric' and implying the stupendous dynamic powers and potentials that electric possesses)? It is because even when the aspirant is surrounded by grave darkness of ignorance when there is no hope of his salvation, the word OM, when constantly and persistently repeated by him as a symbol for the supreme Brahm, enlightens him about the latter. When the aspirant has accessed this eternal fount of brilliance and light, darkness obviously cannot survive. When the spiritual aspirant uses the method of constant repetition of OM as a means to attain Brahm who is self-illuminated and an eternal fount of light that lights up its surroundings much like the Sun in the heaven illuminating everything in this world, it is natural that this light would also light up the inner self of the aspirant by the virtue of the light of enlightenment about Brahm that is kindled by being constantly and persistently associated with OM. When this happens, when the aspirant attains self and Brahm realisation, i.e. when he becomes 'enlightened', his body begins to radiate a divine halo of light much like the glass covering of the lantern which begins to glow when the wick inside it is lighted. [Brahm has the power, shine and dynamism that are the inherent virtues of 'electric'. There is no other single entity in this creation that has the blinding dazzle and splendour of raw electric, so Brahm is likened to electric as the former possesses all these virtues besides countless others. This is also why Brahm is honoured by the other aspect of electric, i.e. 'Tej', which means energy, dynamism and heat as well as radiance, splendour, glow and brilliance. Brahm in brief displays all the virtues so

characteristic of electric, but Brahm is not electric. Since Brahm displays the radiance so synonymous with electric, it explains why a divine halo surrounds a self and Brahm realised man who is 'enlightened', or 'empowered with the light of Brahm', even though he might not have been formally educated in the scriptures and be otherwise like other ordinary men having a gross body and an ordinary life. This is because a 'Brahm-realised' person understands that his 'truthful self' is not the external or internal gross aspect of the body, but the pure consciousness known as the Atma which is none other than Brahm personified. It means that Brahm lives inside his inner-self, and therefore the light of the self-illuminated and radiant Brahm effuses out of a Brahm-realised person much like the light shining from a wick of a lighted lamp or a lantern here on earth, or from the disc of the self-illuminated Sun in the sky. In other words, even though an aspirant might not have been fortunate to have studied the Vedas and other scriptures to remove the darkness of spiritual ignorance that submerges him and his other brethren in this humdrum world, but if he has taken refuge of OM as a tool for Brahm-realisation, then in due course of time the light of spiritual enlightenment that is synonymous with Brahm, and which has the potential to dispel darkness of spiritual ignorance, would automatically dawn upon his mental horizon much like the celestial Sun rising at dawn over the earth's horizon. This ability of OM to give enlightenment and help the aspirant in self and Brahm realisation is like the stupendous power inherent in the 'electric' to light the environment around it. In fact OM is compared to 'electric' because of its stupendous powers and potentials which are as powerful, dynamic, effective and strong as the electric. A Brahm realised person becomes very powerful and authoritative even though he might look thin and physically famished. It is his inner soul that shines with the glory of Brahm and becomes as powerful as the Lord of creation himself.]

Why is it (Pranav/Brahm) called 'Param Brahm' (literally meaning the 'supreme Brahm')? This is because there is nothing superior to Brahm, nothing that transcends Brahm, nothing that goes beyond the parameters of Brahm. In fact, Brahm is the divine entity that is not only enigmatic and mystical but is also all-encompassing and all-pervading in this creation. Nothing exists in this creation which is devoid of Brahm, nor is there anything that is outside the ambit of Brahm.

It is a paradoxical entity because on the one hand it is known as the 'Paraa', and on the other hand it is also known as the 'A-paraa'. The term 'Paraa' refers to an enigmatic and esoteric entity which is beyond knowledge, beyond perception and beyond comprehension, that which is invisible and cannot be grasped, and that which is not revealed and clear. The term 'A-paraa' however applies to an entity which can be known, that which is revealed, that which can be understood by applying the mind and intellect, and that which is within reach, that which can be accessed, known, researched and analyzed, such as the knowledge contained in the Vedas and other scriptures, or as perceived in physical terms in this visible world and therefore can be witnessed, researched, analyzed and understood. These two aspects of Brahm, i.e. Paraa and A-paraa, are complimentary to each other—for the latter helps one to know the former, and the former is the supreme Authority that is attempted to be known by the latter. It is the supreme Brahm that is transcendental and beyond ordinary comprehension which is the object of teaching of all the scriptures, and it is these scriptures that establish the greatness and divinity of Brahm who would have remain obscured and unknown had it not been for them¹.

Since Brahm is very much involved in this creation right from its conception through its birth, development, growth and right up to its conclusion, Brahm is also called 'Paraayan'—that which is fully involved in something and devoted to it². It is

because Brahm is the 'Prajapati', the supreme caretaker of this world. Brahm is responsible for everything and every aspect of creation, being the Supreme Being and the supreme Regulator of this creation. In other words, Brahm is the 'supreme commander and Lord' of this creation; he is the supreme Authority and Emperor of this creation; there is nothing that goes beyond Brahm or nothing that can supersede him. Hence, Brahm is honoured by the epithet of being 'Param'.

Why is it (Brahm) known as 'Ek' (literally meaning 'one and non-dual')? This Brahm is called 'Ek' because while it remains one, immutable, constant, unchanging and steady itself, it constantly and continuously devours all things in creation and creates them anew. [That is, unlike everything else in creation that has a beginning and an end, things that constantly go through different phases of change, this Brahm remains unchanging, immutable and constant under all circumstances and phases of time such as the past, the present and the future. Not even a minute trace of change ever occurs in Brahm.]

This 'Ek' principle known as the divine Brahm is present in all the pilgrim sites. People go to different pilgrim sites located in the north, the south, the east and the west, but in all these places it is this same Divinity which is known by the title of 'Ek' that gives them the power to bestow spiritual solace and succour to the pilgrim³. [In other words, a wise man is one who would not require going to many pilgrim sites for finding emancipation and salvation because he would have realised that the divine entity which he hopes to experience there is present in his own inner self. Merely by roaming in different pilgrim sites one cannot ever hope to find emancipation and salvation. The underlying idea is that the Supreme Being is present everywhere in equal measure. There is not a single place that he is not present in. It is not that, say, a site 'A' has more powerful presence of Brahm as compared to the site 'B'. Therefore, according to the philosophy of the Upanishads, there is no actual need to go on pilgrimage if one does not understand who or what Brahm is; such visits devoid of this knowledge are no more than picnics. A wise man should be able to see his Lord everywhere, and not only limited to a holy pilgrim site. Visiting religious sites in the hope of finding emancipation and salvation is an exercise in futility—refer Narad Parivrajak Upanishad, Canto 3, verse no. 75, Canto 5, verse no. 20, Canto 6, verse nos. 7, 37-38, 42, and Canto 7, verse no. 1. This Upanishad is Chapter 8 of the present volume.]

Why is he (Brahm) called 'Rudra'? [Kandika 5 of this Upanishad elaborately explains this particular question.] It is because the esoteric and secret form and nature of Brahm which is most enigmatic and difficult to understand is easily known by enlightened and self-realised Rishis who are exalted and wise sages, seers and ascetics; the knowledge of Brahm as Rudra is within their easy reach and grasp. On the other hand, this knowledge is very difficult for others to access. [It must be noted here that the difference between the two terms 'Brahm' and 'Rudra' lies in the degree of subtlety. While Brahm is the neutral divinity, its active and dynamic manifestation, or its dynamic and active principle is known as Rudra. Brahm in itself does not do anything, and being a neutral entity is best addressed by the pronoun 'it' just as we would address light, electric, sky, air, water, fire, earth etc. with the pronoun 'it'. On the other hand, when this Brahm lost its neutrality and got engaged in activity of creating this world and regulating it, Brahm's manifestation as 'Rudra' came into being. This Rudra is the dynamic form of Brahm. Rudra is less subtle as compared to Brahm, but otherwise they refer to the same divine Being who is supreme and transcendental in creation. Since Rudra is deemed to be 'male' aspect of creation—not because of any gender superiority or gender bias but because the initial 'spark' of

life in the form of a 'sperm' can only be provided by a male—he is addressed as 'he' and not as 'it'. Rudra is one of the names of Shiva, and this Lord is the patron God of Rishis who do meditation. Shiva is the greatest moral preacher, teacher and preceptor of spiritual knowledge⁴. Shiva is an exemplary renunciate and he himself remains eternally engrossed in meditation and contemplation. He teaches the Rishis who spend their time in meditation and contemplation about the Truth of Brahm. These Rishis repeat the Mantras of Brahm known as OM while meditating, and this brings them closer to the principal entity that this OM represents. They are totally immune to and free from all sorts of spiritual contaminations and hurdles that an ordinary man faces while remaining engrossed in the affairs of the material world and the temptations proffered by its sense objects which are hard, if not impossible, to resist. That is why the term 'difficult' is used for ordinary creatures when it comes to their realising the truth of Brahm—i.e. though it is not impossible it is nevertheless hard and difficult.]

Why is he (Brahm in the form of Rudra) known as 'Ishan' (literally meaning the 'Lord' and his 'insignia or authority')? It is because he (Rudra) has full control over all the Gods, and over their powers and authority. Ishan signifies the Lord's overriding authority and complete control over all the aspects of creation that are individually controlled by these Gods who actually act on behalf of Rudra representing the dynamic form of Brahm. These Gods are nothing but the different forces of Nature personified. But the supreme Authority is Brahm in its dynamic form known as Rudra to whom all the Gods are subservient, whom all the Gods obey, and who is the most senior God in creation.

Therefore, oh Lord Rudra, we pay our obeisance to you and attempt to please you just like one attempts to please the cow before milking it. [In other words, we plead with you to bless us and show grace upon us. We are all dependent upon you and your benevolence.]

It is you who controls this entire creation as Indra, the king of Gods; it is you who controls the organs of the creature's body over which these Gods rule. That is also why you are called 'Ishan'. [Refer Kandika 5, stanza no. 2.]

Why are you (i.e. Rudra, who is a manifestation of Brahm) called 'Maheshwar' (literally meaning 'the great Lord')? It is because you show your benevolence and grace upon those devotees who worship you selflessly in order to attain Gyan or true knowledge. [As the greatest teacher and preacher in creation, it is you who alone can give the knowledge of the Truth. This knowledge is known only to you. Hence, you are great amongst even the Gods who are supposed to be wiser and more knowledgeable than ordinary mortals. When the other Gods need clarification on some thing, they approach you, thereby proving that your knowledge and wisdom is superior to theirs, and that you are senior to them as well because one would go to his senior when in doubt. This is precisely the reason why you are honoured by the epithet 'Maheshwar'—the great God, or 'Ishwar'—the supreme God himself.] It is you who empowers the faculty of speech to speak and express this Truth. It is you who inspires the mind and the intellect towards acquisition and use of knowledge, wisdom, erudition, sagacity and skills. It is you who provides enlightenment to all the Gods as well as the rest of the fortunate creatures who have known who you actually are. Indeed, you are the patron deity for the grand virtues that are compositely known as 'Gyan'. You have forsaken all sorts of delusions and overcome all ignorance, and instead remain steady and unwavering in the knowledge of Truth that you have acquired. You are self realised and most wise and enlightened. This gives you immense fame and honour; it establishes you as the greatest enlightened One in creation. This is why you are called Maheshwar.

This is how the divine characters and virtues of Rudra have been outlined here in this Upanishad.

[Note—¹References: for the two terms ‘Para’ and ‘Aparaa’—Rudra Hridaya Upanishad of Krishna Yajur Veda tradition, verse nos. 28-30; Mundak Upanishad of Atharva Veda, Mundak (Canto) 1, sections 1-2.

²For the term ‘Parayaan’—Kandika 3, verse no. 1 of the present Atharvashir Upanishad.

³The concept that the body is the best site to find Brahm, and it is futile and waste of time searching for Brahm in external places, including in temples and idols, has been endorsed in a number of other Upanishads as well—viz. Maitreyu-panishad, Canto 2, verse no. 21, 26; Jabal Darshan Upanishad, Canto 4, verse nos. 50-59; and Sanyaso-panishad, Canto 2, verse no. 74-75, 97.

External forms of worship have been literally prohibited in—(a) Krishna Yajur Veda’s following Upanishads—Pran Agnihotra Upanishad; Varaaha Upanishad, Canto 2, verse no. 69, 74; Canto 3, verse no. 26, 29-30; Tejobindu Upanishad, Canto 6, verse nos. 21-24. (b) Shukla Yajur Veda’s Advai Tarak Upanishad, verse nos. 5, 10, 13.

The Body as a Holy City or Pilgrim Site or Temple has been proclaimed in numerous Upanishads as follows—

As an *abode of Lord Shiva*—(i) The Krishna Yajur Veda’s Yogshikha Upanishad, Canto 1, verse nos. 72, 165-168, Canto 2, verse nos. 6-10, 20, Canto 3, verse nos. 1-15, and Canto 5, verse nos. 2-5, 13-16; Canto 6, verse nos. 32-33, 47; and Skand Upanishad, verse nos. 10-11. (ii) Sam Veda’s Jabal Darshan Upanishad, Canto 4, verse nos. 48-59.

Body as an abode of Shakti (Goddess) and *4 Peeths*—Krishna Yajur Veda’s Yogshikha Upanishad, Canto 5, verse nos. 6-12.

Body as an abode of Shiva and Shakti—Krishna Yajur Veda’s Yog Kundali Upanishad, Canto 1, verse no. 75; Yogshikha Upanishad, Canto 5, verse no. 4.

Body as a city—(a) Krishna Yajur Veda’s Yogshikha Upanishad, Canto 1, verse nos. 72, 165; Canto 5, verse no. 2. (b) Atharva Veda’s Prashna Upanishad, Canto 4, verse no. 3.

Importance of the *body as a medium of obtaining Siddhis* (mystical powers)—Krishna Yajur Veda’s Yogshikha Upanishad, Canto 5, verse no. 4.

Importance of the *body as a Linga* (symbol of Brahm and the Atma)—Krishna Yajur Veda’s Yogshikha Upanishad, Canto 2, verse no. 10.

Body as a pilgrim site called ‘Triveni Sangam’—Krishna Yajur Veda’s Yogshikha Upanishad, Canto 6, verse no. 30.

The body has *four Peeths* symbolising the abode of divine Shaktis or Goddesses—Krishna Yajur Veda’s Yogshikha Upanishad, Canto 1, verse nos. 170-175, and Canto 5, verse nos. 3, 8-12.

⁴The fact that Lord Shiva is the greatest teacher of spiritual knowledge is affirmed in Dakshin Murti/Mukhi Upanishad of the Krishna Yajur Veda tradition.]

-----*****-----

Kandika 5

[Kandika 5 essentially outlines the all-inclusive nature of Rudra who is Brahm, the Supreme Being, personified. Refer also to Kandika 2-4 in this context.]

There is only one such Deva or Lord God (referring to the Supreme Being known as Brahm in his passive role, and as Rudra in his active role) who is universal, and who pervades or resides in all the directions of this creation uniformly. It is he who

preceded this creation; it is he who is in the middle of this creation and in its end. It is he who is actually born in the form of this creation, and would continue to do so in all time in the future. [That is, this creation is a revelation of this Deva, or Brahm.]

Nobody else but it is Rudra who is controlling this creation. It is in him that all the living beings find their sustenance and abode, and it is in him that they all collapse at the time of their conclusion. [This refers to the all-encompassing form of Brahm. Since everything has come into being from Brahm, since Brahm is the all-enclosing envelop that acts as the cosmic bowl represented by the sky element in which everything that exists has its base and foundation, and since Brahm encloses this sky from the outside like a moat around a fort, nothing in existence can live outside of Brahm. Therefore, everything is born in the cosmic bowl of Brahm, and dies in it.]

It is he (Rudra) who is the great creator of this world, and is its sustainer and protector (in his role as Prajapati Brahma and Vishnu respectively).

It is he (Rudra) who lives in all the creatures to give them life (as their Pran or life consciousness), and it is in him that all the living beings live (because he is their Pran or life support system, and they cannot survive without Pran).

A man can find the source of eternal peace and tranquility by meditating and contemplating upon this Ishan, the Lord of all the Gods. By dispelling all sorts of ignorance and their accompanying delusions which are at the root of all spiritual troubles of the creature and compels him to remain shackled in the myriad web-like problems associated with this artificial world of material sense objects, and by offering all the deeds along with their rewards selflessly to Lord Rudra, it is possible to obtain oneness with the Supreme Being. This is achieved by proper application of the various faculties of the mind and the intellect. [That is, it is by inculcating correct and proper wisdom, by analyzing facts and using the power to discriminate between the truth and the false, between the good and the bad, that a wise, learned, erudite, intelligent and skilled aspirant is able to overcome all sorts of falsehoods and ignorance based upon delusions, and instead find the spiritual 'truth' which only can give him peace of mind and bliss. A wise and learned man would have understood that there is no Lord except Rudra who is none else but a dynamic form of Brahm. He would also have understood that as a human being it is not possible for him not to do anything if he has to live and survive in this world which revolves around the philosophy of doing deeds. So the best way is to do the deeds as and when they come along and in accordance to the call of duty, but not to get hooked to either the deeds or their rewards. In other words, the deeds are to be done and actions to be taken in a complete dispassionate and neutral manner, having no trace of mental or emotional involvement or attachment. One should ideally not have any expectations from the deed and actions, either favourable and good, or unfavourable and bad. This is achieved by thinking that all the deeds are done as duty towards the Lord and as an offering in the holy fire sacrifice to honour this Lord. When there is no attachment to the deeds or expectations of any rewards from them, it is natural that the man is freed from the vicious trap that these deeds lay for an ignorant and unaware man. Since all activities are governed by the mind, the latter's help and role can never be overstated to achieve the enlightened state of existence.]

It is this most ancient Lord, praised even by the Purans (ancient mythological histories of Hindus), who has created Anna, or food, to sustain, nourish and protect all the subjects of his creation from the fear of death. In other words, the Lord has created food to ensure that the creature is freed from the clutches of death. [This is because without food all the living beings would die; life is directly dependent upon food. In fact, the gross body of the living being is known as the 'Anna Maye Kosh'—or the

food sheath that encloses the Atma, the pure consciousness that is the true identity of the creature.]

It is this supreme, transcendental and mystical Divinity that represents the fourth Matra or aspect of OM¹ which gives the knowledge of the ‘self’ to the aspirant besides bestowing him with spiritual peace, tranquility and bliss along with liberation and deliverance. [The fourth Matra of OM refers to the fourth state of existence of consciousness called the Turiya state. It is that state which exists beyond the first three states of existence, viz. the Jagrat or waking, Swapna or dreaming, and Sushupta or deep sleep. In the Turiya state, the consciousness is freed from all interferences from the mind-intellect which is the subtle body of the creature, as well as from the various perceptions originating from the gross external world and perceived by the various organs of the body which too are gross in nature. Being thus freed from all naggings and distractions, the Atma or the true ‘self’ of the creature is able to concentrate more fruitfully and effectively on its natural state of existence which is its reality and true form. This state is marked by complete tranquility, peace, bliss, felicity and beatitude. An aspirant who is able to make this state a permanent feature of his existence has indeed broken free from the fetters of this gross body and the surrounding world which is equally gross, and which never lets him rest in peace. This concept is explained in numerous Upanishads in the context of Mukti—meaning liberation, deliverance, emancipation and salvation.]

The first Matra or divine aspect of Rudra (who is manifested Brahm; the Supreme Being) is equivalent to or manifested in the form of Brahma, the creator of this visible world. Its colour is red, and by meditating upon this aspect of divinity, the aspirant is able to attain the stature similar to the one occupied by Brahma.

The second Matra or divine aspect of Rudra is equivalent to or manifested in the form of Vishnu, the sustainer and protector of this visible world. Its colour is dark or Krishna, and by meditating upon this aspect of divinity, the aspirant is able to attain the stature similar to the one occupied by Vishnu.

The third Matra or divine aspect of Rudra is equivalent to or manifested in the form of Ishan, the controller of this visible world. Its colour is yellow, and by meditating upon this aspect of divinity, the aspirant is able to attain the stature similar to the one occupied by Ishan. [Ishan is Indra, the king of Gods and the living world—refer Kandika 4.]

The one half of the fourth Matra or divine aspect of Rudra is equivalent to or manifested in the form of all the Gods who roam in the sky in invisible form. [These Gods are junior to Indra and have specific duties and area of control.] The colour of this aspect is like crystal (clear and transparent), and by meditating upon this aspect of divinity, the aspirant is able to attain Mukti—i.e. liberation and deliverance from this world. [That is, he develops the same mystical powers as possessed by the Gods which gives him the ability to live even without the need of having a gross body. Being freed from this cumbersome necessity of having a gross body, his soul can live a freed life and roam at will like the Gods. Since the soul is an invisible ethereal spirit, there is no difference between such an exalted aspirant and the Gods who are also in a disembodied Spirit form.]

Those who are wise, erudite, experienced and enlightened advise that it is always preferable to worship and meditate upon this one half of the fourth Matra of Rudra as it helps to break all the fetters and give the aspirant access to Mukti, or provides him with liberation and deliverance from the grossness associated with the body and the world.

The auspicious and noble path to adopt and follow is the one which is followed by the Gods, the Pittars (the spirit of dead ancestors) and Rishis (enlightened sages, seers, ascetics, hermits etc who have become self and Brahm realised). It is called the 'Uttaraayan Marg' or the path of the Gods that symbolically goes 'northwards' or upwards—i.e. it is always spiritually uplifting and elevating for the Atma (the soul, the 'self', the Spirit) of the creature. [It liberates the creature from the grossness of the world, and he can metaphorically become so light and subtle that he can literally float in thin air in an invisible form as the Spirit.]

This is the path that is also called the 'Paraa', 'Aparaa' and 'Paraayan' because it gives the knowledge of all these three aspects of Brahm and creation at once. [Refer Kandika 4. In other words, a man who follows the auspicious path followed by the Gods and Rishis becomes enlightened about the supernatural along with the natural. Nothing remains secret or unknown for him. Or it can be said that the truth of the 'Atma' becomes known to him, and this is the reason he finds Mukti or freedom from the fetters that tie an ordinary creature, who is not aware of what the Atma is, to the body and the world.]

The supreme Deva (Lord God known as Brahm) is as fine as the tip of the hair follicle. He resides in a most subtle form in the equally subtle aspect of the heart of the creature, and he is manifested as the entire world or creation that includes all the invisible immortal Gods as well as all the other visible mortal living beings. Those who are wise, erudite, learned and enlightened enough to see, observe, experience and witness this supreme Divinity in their own inner self (and not in the external gross world) are the ones who find real peace, tranquility, serenity and bliss. This opportunity is not available to others. [This statement stresses the importance and significance of 'self realisation' as a means of obtaining enlightenment.]

It is by eliminating all the negative traits such as Krodha (anger) and Trishna (worldly yearnings, passions and lust) etc. that taints one's inner self along with offering selflessly to Lord Rudra (Brahm) all the accumulated effects of deeds done in the past can one hope to establish himself in the divinity known as Rudra. [It must be noted here that this divine entity known as Rudra is none other than the supreme Brahm, and in the previous statement it has been said that this Brahm lives in the inner self of the aspirant himself, and not outside of him. So, true calmness and peace is obtained only when one abandons all sorts of negativity that are associated with life in a world full of delusions and materialism, a world in which people think that this life is the only life that exists and therefore it must be enjoyed to the hilt by indulging in material sense objects like a fish taking to water. They lunge head over heels over limited resources, and then become jealous of each other and get at each others throat to protect their possessions in the hope that they would never die. Such a situation breeds Krodha or anger and Trishna or yearnings etc. as noted in this stanza. Then again, in order to attain success in this world, the man remains engrossed in doing deeds. These two aspects of this world are like two chains attached to the two feet which keeps the man bonded forever, and hence tormented. Obviously such a situation can never give peace to the soul.]

Verily, it is Rudra (the dynamic form of Brahm, the active form which controls everything in this creation) that is true and eternal; it is ancient and the one praised by the Purans. [The Purans are full of mythological stories of various Gods and Goddesses. Actually, all these entities are none but the supreme Brahm operating in these forms in order to keep the wheel of creation moving ahead. To think them to be independent Gods and Goddesses having independent existence, powers, domains and authority is a stupid thing to do. All these divine entities are actually the same

non-dual Brahm in these forms. All of them are the same universal supreme Brahm playing different roles. It is a clear case of delegation of authority by the Supreme Being in order to keep the administration of his realm known as the creation running smoothly. This is what is meant here.]

He (Rudra/Brahm) rules over and controls everything and everyone in this creation by the virtue of his supreme authority and overriding powers as well as the Tapa (austerity, penance and hardships endured for some noble and auspicious task) that he does.

All the primary elements of creation, viz. sky, air, fire, water and earth, all of them are essentially 'Bhasma'²—literally meaning 'ash' and signifying the fact that all of them have no independent importance, worth and life in them, but it is this Rudra or the dynamism of Brahm that has injected each of them with the magical ability to become powerful forces in creation so much so that without them this creation cannot be imagined. [This word 'Bhasma' also literally refers to the sacred ash of the holy fire sacrifice that Lord Rudra smears on his body, and this is replicated by ascetics to indicate that they are enlightened enough to realise that there is no difference between them and Lord Rudra. Since Bhasma means ash, the implication here is that a wise and enlightened man understands that all the signs of life in this gross and artificial world consisting of the five elements are essentially like a mirage seen in a hot desert; they have no reality and substance in them. The prime entity that actually has any worthwhile meaning is the cosmic Consciousness known as Brahm. Such people treat the material world moulded out of the five elements called the Bhuts to be as worthless and lifeless as the ash known as Bhasma. They therefore have no compunctions in renouncing the falsehoods of the world, and instead concentrate themselves in realizing the Truth that lies beyond these elements.]

Indeed, the body of a creature which has not touched or is not smeared by the Bhasma worn by Lord Pashupati (literally meaning the Lord of animals but implying Lord Rudra who is the Lord of all the living beings belonging to the animal or the zoological kingdom) is like ash; it is worthless, lifeless and useless. [There is symbolism here. The smearing of the sacred ash is to purify the body just like one uses soap and water. The presence of the ash on the body symbolically establishes the sacredness of the sacrificial fire on the individual's body and acts as a shield that protects the body and the individual from all taints and evil effects that are generated in the course of daily life of constant interaction with this material world of sense objects and their accompanying temptations. It's a sort of 'sun-screen' that people use to protect themselves from the harshness of the sun's rays!]

In this symbolic way, the ash representing enlightenment about the 'truth' of Pashupati Rudra as personified supreme transcendental Brahm who is the undisputed Lord of all living beings is able to break all the fetters that shackle these 'animals' or creatures of the animal kingdom and prevent them from finding Moksha or spiritual freedom.

[Note—¹The four *Matras of OM* have also been dealt with in detail in Mandukya Upanishad of the Atharva Veda, and it is Chapter 4 of this volume.

²The Bhasma Jabal Upanishad of the Atharva Veda tradition explains the concept of *Bhasma* in detail. It is Chapter 24 of this volume. It will be noted in the present case that the Bhasma has been employed to denote two aspects of creation—viz. the first aspect is the fact that everything except Brahm is worthless like the ash formed after all things worthwhile have been burnt by a raging fire, and the second aspect is that the ash of the sacred fire sacrifice is a holy entity having all the goodness associated with the fire sans its scorching effects. In other words, a wise man is one who first realises that this world is worthless and false, and then continues to live and

enjoy it with total detachment as one has for the original material things that were put into the fire before they were reduced into ash. He must be wise enough to penetrate deeply and realise the symbolic and metaphoric meaning of wearing the Bhasma if he has to actually benefit from its usage. Otherwise it is reduced to a mere meaningless ritual and formality. He must inculcate profound mental renunciation, treating the world as no better than ash. The smear of the ash on his body is like his wearing a protective cream on it, as this ash constantly reminds him of the futility of this world, thereby inspiring the virtues of strong renunciation, detachment and dispassion, along with the fact that this body is the holy abode of the Atma representing the supreme Brahm that resides in it.]

-----*****-----

Kandika 6

[This Kandika first outlines other grand virtues of the supreme transcendental Brahm, and then goes on to briefly sketch the Genesis of creation.]

The Rudra principle (i.e. the dynamic and energizing life forces of creation that inject the fundamentals of life, vigour, vitality, strength, stamina and such other active principles of life that are variously called Atma and Pran of everything living in this creation) that inherently resides in Agni (fire) and Aapaha (water) to give them their astounding life-supporting abilities is also present in medicinal herbs and all forms of vegetation. [That is, the vital life giving dynamic forces that are secretly present in the elements ‘fire’ and ‘water’, giving them their unique ability to sustain life in all its forms in this world, is the same force that is also present in the medicinal herbs so that they have curative properties, as well as in numerous plants and trees that produce a wide variety of fruits, cereals, pulses and vegetables that are eaten by all living beings to survive in this world. This is called the Pran or the Atma of these entities because they form their core values and give them their importance and significance vis-à-vis this creation. If the fire did not have heat, energy and light so necessary for life in this world, it would have been useless because otherwise its only characteristic would be to burn which is obviously a negative character. Similarly, if the water could not harbour life, if it could not act as a universal elixir and a lubricant that takes the role of a buffer or a balm to soothe the scorching effects of the heat of the fire, it would have been only disastrous for this creation as is evident during the deluge that happens at the time of dooms-day, or when the river is in spate, drowning and washing off large inhabited areas on earth. The fire and water are very dangerous elements because both can produce catastrophic effects—the fire can burn everything to ashes, and the water can submerge the whole earth and annihilate life. But inspite of these negative traits, it is the ‘Rudra principle or element’ present in them which makes them so vital for life and so dear to the creatures. That is, it is the subtle presence of Brahm in both the fire and the water elements that prevents them from showing their negative and ugly side of causing havoc and terror, and instead inspires them to show their benevolent side and play a positive role to help sustain creation in the best way they can. Likewise, all members of the plant kingdom would have been a worthless growth of impregnable and intractable dense forests that would have choked this earth and stifled life had it not been for this Rudra principle living subtly inside these members of the plant kingdom as their inherent life sustaining properties—this is obvious from the fact that all the members of the animal kingdom survive directly or

indirectly on the members of the plant kingdom. Plants and the verdant forests are regarded as the ‘lungs’ of earth as they replenish the oxygen consumed by members of the animal kingdom; they help the earth to breathe.]

We (the Gods who are offering this prayer to Rudra) bow most respectfully to Rudra who has manifested himself as the Agni (the fire element) from which this creation has come into being. [This is because life without fire is unimaginable and untenable. Heat, light and energy that are so characteristic of the fire element are the basic requirement for life to come into being and its subsequent survival. This importance of the fire element as being the most vital factor in life, and that its absence would not have created life in the first place, is amply proved by the fact that if there is no warmth and heat, if there is no light and energy in this world, life would cease to exist. The Sun’s absence would freeze the earth to death even though the vast reservoir of water in the form of ocean would be very much here. Even growth of crop, cooking of food, its digestion, absorption and elimination of waste from the body, and its ultimate disintegration into the basic elements depend upon heat and warmth. The energy that sustains life inside the creature, the energy that drives every aspect of life is nothing but a revelation of the life-sustaining property of the fire element. It is well known and established that life is annihilated in frigid conditions where temperatures drop to minus degrees.]

We bow most respectfully to Lord Rudra who lives in the fire, the medicinal herbs and the vegetation or plants as their natural life-sustaining virtue, and who has created and sustained the entire universe and all forms of life in this world.

We bow most respectfully to Lord Rudra who lives in the water, the medicinal herbs and the vegetation or plants as their natural life-sustaining virtue, and who bears this entire universe and all forms of life in this world.

We bow most respectfully to Lord Rudra who exercises control over this earth and life on it in his two subtle forms known as ‘Dwidhaa’ (i.e. as the cosmic male known as Shiva, and the cosmic female known as Shakti) and ‘Tridhaa’ (i.e. the three Gunas or inherent qualities in creation such as the Sata Guna which is the noblest and the most auspicious quality, the Raja Guna which is medium quality and creates the tendency to be interested in the world and its affairs, and the Tama Guna which is the meanest quality and produces negative and evil traits in the creature).

We bow most respectfully to Lord Rudra who has enabled the ‘Naags’ (literally meaning legendary serpents but here referring to the Spirits) to live in the Antariksha or heavens.

Those aspirants who worship Rudra in the form of the exalted Pranav or the supreme Brahm are able to access the acclaimed stature of excellent existence that was attained by sage Atharva¹, while those who do not do so (or those who do not understand that there is no difference between Rudra and the supreme transcendental Brahm who is the Supreme Being of creation) are condemned to a lower form of existence (i.e. they continue to take birth and die like other mortal creatures). [This is a very important observation. It is very important to properly understand what one does and with what purpose it is being done to actually reap any desired reward from any activity. For instance here, the same Rudra is being worshipped but with different understandings of who he actually is. A wise and enlightened man who worships Rudra as Brahm is rewarded with the glorious stature that comes with worshipping the supreme Lord of creation himself—i.e. he finds his reward in the form of liberation and deliverance upon death, and even while alive he occupies an exalted stature as was obtained by sage Atharva cited here. In fact, sage Atharva was considered as the Fire manifested, so pure and holy he was. On the other hand if he

worships Rudra as a God who is revealed as Dwishaa and Trividhaa as narrated in the previous stanza would remain circling in the cycle of birth and death. This is because Dwidhaa and Trividhaa refer to the powerful forces of Nature responsible for creation of this physical mortal creation, and as such the aspirant gets the desired reward in the form of being a part of this mortal world.]

Lord Rudra is a symbolic form of ‘head’ of all the Gods. [Since the ‘head’ is the highest point in the body, this term means that Lord Rudra symbolizes all the grand and noble virtues that the Gods stand for. Rudra represents all that is auspicious, noble, holy, divine and sublime in creation. Rudra is most wise, enlightened and erudite amongst all the Gods as the head is the part of the body where the mind and the intellect are located. Since the word ‘head’ also means a ‘chief’, Lord Rudra is therefore the ‘chief God’ or the chief amongst the pantheon of Gods. It is to be noted here that each organ of the body has a patron God symbolizing that organ’s functions vis-à-vis the rest of the body. For instance, the eye is the abode of the Sun God as it is the eye that lights up the world for the creature to enable the latter to see it by the virtue of the faculty of sight present in the eye that enables one to see just like the sun in the sky lighting up the world to make it visible to the creature. All these organs function under the command and control of the mind and intellect, and the latter have their location in the head. Therefore, since Brahm represented by Rudra is the supreme commander, regulator and controller of creation, it is metaphorically depicted here as Rudra being the head of Gods.]

It is Rudra who protects the Pran (life), Mana (mind) and Mastak or Buddhi (intellect) of all the Gods. These Gods, left on their own abilities, are not competent and able to give protection to the earth, the sky or the heavens. [That is, it is Brahm, in the form of his dynamic counterpart known as Rudra, who is actually the supreme protector of these Gods who mistakenly think that they are responsible for protection of this world. These Gods cannot protect the mortal creatures who are bound to earth, or those who can fly in the sky, or even the Spirits who live in the heaven. They don’t have any original powers of their own, but derive them from Brahm. In other words, Pran wrongly thinks that it sustains and protects life inside the body of the creature, as it is Brahm, the cosmic Consciousness, residing in this body that actually keeps the body alive and active. This Brahm is so magnanimous and benevolent that inspite of doing everything himself he allows Pran to hog the limelight as being the caretaker of life. This also applies to the mind and the intellect. These two units of the creature’s body think that they are vital for survival and the creature becoming aware of the world and the reality of his surroundings. But the fact is that the same mind living inside a body from which ‘consciousness’ has left remains useless for the creature proves that there is some entity superior to the mind and the intellect. Therefore we conclude that the entity known as the Rudra principle that stands for the cosmic Brahm, the cosmic Consciousness, is indeed a far superior entity than Pran, Mana and Buddhi vis-à-vis life in this creation is concerned. It is this Rudra that empowers these three units of creation, viz. Pran, Mana and Buddhi to display their stupendous and matchless abilities to sustain life everywhere. Indeed, their powers and authority comes from Brahm. Actually, these Gods represent the various faculties of the creature’s body. The gross body, left to its own accord, would not be able to do anything if it were not for the Pran as well as the mind-intellect complex residing inside it as its subtle components, inspiring the gross body to do what it does. But the ability of Pran, Mana and Buddhi to carry out their respective functions is due to the presence of some hidden dynamic force or power within them, or within the body of the creature—as is evident from the fact that a dead body from which consciousness

has gone is good for nothing inspite of having the grosser aspect of the vital winds present in it as well as the physical structure known as the brain which is the site of the thinking mind and discriminating intellect. Evidently therefore, these units of creation, i.e. Pran, Mana and Buddhi, should not boast that they are independently able to do anything, because it is the subtle Brahm, known as the Rudra principle in this Upanishad, residing inside them that actually enable them to carry out their respective functions.]

Indeed, everything is incorporated in Lord Rudra; there is nothing beyond Rudra; there was nothing before Rudra. There was nothing in the past before Rudra, and there would be nothing in the future also after Rudra.

It is this Rudra having thousands of legs and one head who lives or pervades uniformly in all the Bhuts or living beings in this world. [Thousands of legs is a metaphoric way of saying that the same Brahm lives in the form of countless mobile creatures of this creation, and his having one head implies that all these creatures have only 'one head' or 'one chief' or 'one Lord'. It also means that self-realisation and Brahm-realisation that comes with enlightenment is always of one kind, and it never varies from man to man though other characteristics differ between any given two individuals.]

It is from the 'Akshar' that Kaal came into existence. [The word 'Akshar' means something that is imperishable, that does not decay and die, that is infinite, timeless and eternal, while the term 'Kaal' means the factor of 'time', a factor which implies imposition of limits because it also means an era or phase which must come to an end to pave the way for the next era or the next phase, and it also means 'death' because anything that is limited by time must come to an end or die, a situation which is the opposite of being imperishable and eternal. In other words, it is from the infinite, eternal and imperishable Brahm that this finite, mortal and perishable world came into being. This is because the world 'has a beginning' while Brahm has 'no beginning'. It is like the case of a huge wave arising from the surface of the vast ocean, running its course and finally collapsing back on the surface of the ocean. Numerous waves appear from and disappear into the fathomless ocean, but do any of them affect the ocean? The wave has a limited life span, but is the ocean also subjected to this limitation of time? The answer is an unequivocal 'no'. This applies also to Brahm which is like the cosmic ocean from which the numerous worlds have arisen, and in which they would vanish at the end of their life spans. 'Akshar' also means a letter, here indicating the ethereal word OM which stands for cosmic sound indicating the presence of vibrations in the cosmic ether symbolising primal life in the universe. Anything that is born must come to an end. It is something which is not born that is not subjected to death. Sound had its origin in the cosmic ether because of some 'vibrations' produced in it, and therefore there must be some dynamic energy that must have produced these vibrations in the first place. The unknown and mystical source of this energy that generated the primary vibrations in the cosmic ether, vibrations that lay the foundation and the plinth of the grand structure known as the 'creation', is Brahm. It is from this Brahm that Akshar (the eternal ethereal sound) was produced, and it is eternal and infinite because it would survive the end of this world as the background vibration in ether. It is from this Akshar that the new generation of world would evolve. Hence, the perishable creation that is subjected to 'Kaal' is created from the imperishable 'Akshar'.]

It is because of this fact that Akshar (i.e. Brahm) is said to be eternal, infinite, all-pervading, omnipresent and all-inclusive. [The wave arising on the surface of the ocean is essentially water of the ocean and nothing else. Ocean from which the wave

is created is itself water and nothing else. If there was no water, there would be no ocean, and hence no wave. So it can be safely said that the wave is a representative of the ocean. Or, that the ocean, in its basic form as 'water', is present in all the waves that arise in all the parts of the ocean. Therefore, all the waves are basically and essentially the same thing having different existences and different locations in different periods of time. Similarly, it is the Akshar or letter that is present in all languages and tongues by which the world acquires knowledge, by which the scriptures were revealed, by which the individual creatures interact with each other, by which one expresses one's thoughts, and which is a vivid sign of life in this world. Existence of life somewhere can easily be deduced on the basis of sound even though neither the former nor the latter can be physically seen, smelt, touched and tasted. This is proved by the fact that scientists train their radio telescopes to distant corners of the universe to catch any bleep of sound, say in the form of radio waves emanating from remote corners of the universe, to determine the existence of life there. In modern medicine, sound is used to determine the state of internal organs and diagnose diseases inside the body of a patient, in a process known as the Ultrasound technique. Sound is used in oceanography to research what lies in the deep bowls of the vast ocean, thousands of feet below its surface where it is impossible for man to go physically. Similarly, we can determine that there is someone behind the wall if we hear him speak or some noise is heard even though we cannot see, touch, smell or taste the source. In the present case, it is Brahm that is the timeless 'Akshar' which is essentially present in all the entities called 'Kaal' that are limited by the factor of time.]

When this magnificent and glorious Rudra, who is all-pervading, all-encompassing and omnipresent, sleeps, it is then that all the creatures come to an end (i.e. the entire creation is concluded). [From the metaphysical perspective, this 'sleep' refers to the Sushupta or deep sleep state of existence of consciousness. During this stage, both the external gross world of material objects as well as the subtle world seen in one's dream ceases to exist. This is like both of them coming to an end. But when the consciousness reverts from the Sushupta state back to the Swapna state of dreams it begins to dream once again, or when the man wakes up from sleep into the Jagrat state of wakefulness he begins to see and interact with the gross world once again. This would be akin to a new phase of creation after its annihilation during the Sushupta state. Since Rudra is personified Brahm in his macrocosmic form as the Viraat Purush, as well as the individual creature in his microcosmic form, this stanza can be applied to both the levels of existences.]

When Rudra breathes, Tama (the lowest category of Guna or quality representing grossness) is created. From the Tama is created the Aapaha (water) element. When this Aapaha is rubbed (by Rudra) with the finger, it becomes thicker and is called 'Sishir'. [Literally, the word 'Shishir' means the winter season, so it refers to viscous form of water that took the shape of cosmic 'semen'.] When this Shishir is churned, it produces froth. This transforms into the (cosmic) egg. And it is from this egg that Brahma the creator of the visible world was created.

From Brahma (the creator of the visible world) is created Vayu (the air or wind element). From Vayu is created the Omkar or the cosmic vibrations that translates into sound represented by the word OM. It is from this OM that Savitri (the 'brilliant rays' of knowledge) is born. From Savitri was born Gayatri (the first style of composition of verses in which the first hymns of the Vedas were revealed). And it is from this that the different Lokas or worlds were born. [Brahma wished to create he world and make it visible. He not only created but wished to ensure that it endures.

That is, after the initial phases when he started the ball rolling, he wanted this creation to be self-sustaining and self-perpetrating. For this purpose, he needed to disseminate information and the secrets of creation. That is, he needed a medium to spread his knowledge by speaking about it. So he first created the air. Then he shook the air to create waves of wind. Friction between these waves created the sound which traveled with the help of the wind moving in waves. This helped Brahma to spread the knowledge he had to the remotest corners of his creation in the form of ‘rays of knowledge’ personified as the goddess called Savitri. But knowledge needed a language and its grammar to be comprehensible. So he created the Gayatri—the compositions that came to be known as hymns. And this knowledge empowered Brahma to spread his knowledge of ‘creation’ far and wide, creating many worlds. This term ‘many worlds’ implies that the same knowledge was interpreted differently by different people who would create a world or theory of their own. Some of it would be destructive indicating the dominance of the factor of ‘Kaal and Tama’, while others would be constructive indicating the predominance of ‘Akshar’ or the grand virtues that provided eternity and imperishability.]

When Rudra does Tapa (i.e. when he involves himself in doing penance and austerity), honey in the form of Satya, or truthfulness that is eternal, immutable, steady, non-changing and imperishable, drips from him. [It is like the case of ripe honeycomb from which honey begins to drip if the temperature is warm. Tapa means severe penances and austerities, and therefore when Rudra did Tapa, the virtue of Satya stored in his inner being began to effuse out like sap from a tree or honey from the honeycomb.] When this happens, it is said to be the best form of Tapa. [That is, when the creature takes the vow of truthfulness in all spheres of his life, he is doing the highest form of sacrifice which is like doing Tapa in practice. This is because being truthful is not always easy. He would have to suffer harsh circumstances or consequences due to this vow of truthfulness, but that is his litmus test.]

Verily, we pay our obeisance to and bow reverentially before the supreme transcendental Brahm who is revealed in the form of Aapaha (water element), Jyoti (fire element that gives light, energy and heat), Rasa (juices of life; nectar and essence of fruits, vegetables etc.), Amrit (elixir of life; the ambrosia that gives eternity and imperishability), Brahma (the creator), Bhu (the primary world of mortal creatures bound to this earth), Bhuvaha (the sky and the primary world where junior Gods and lower forms of spirits as well as the creatures that can fly, such as the birds, live), and Swaha (the heaven where the senior Gods live).

[Note—¹Sage *Atharva* was the first son of the creator Brahma, and when he came down on earth he started the practice of worshipping the Fire God. He was directly taught by his father Brahma, and so was the most wise, learned and enlightened sage who had knowledge of Brahm in right earnest. The Mantra of the Atharva Veda are attributed to him, and this Veda is known after him. Some of the Upanishads taught by sage Atharva are the following—Atharva Veda’s Prashna Upanishad, Mundak Upanishad and Atharva Shikha Upanishad. A brief life-sketch of sage Atharva is given as a note of Canto 2, verse no. 2 of the Prashna Upanishad which is Chapter 1 of this volume.]

-----*****-----

Kandika 7

[This Kandika extols the glorious benefits that come with reading and understanding this Upanishad.]

A Brahmin (a learned person) who studies this Upanishad is called a 'Srotriya', or a person who is deemed to have studied all the Vedas even if he has actually not done so.

A person who studies this Upanishad gets the reward of wearing the sacred thread or is deemed to have worn it inspite of his actually not having done so.

A person who studies this Upanishad becomes as pure as the Fire element, the Wind or Air element, the Sun, the Moon (also called Soma), and Satya which the universal element of Truth personified. [That is, he acquires such stupendous powers and potentials, such divinity and holiness, such glories and magnificence that he becomes a personified form of the entities listed here. All of them are powerful forces of creation and symbolise Brahm in their individual forms. In other words, such a person becomes Brahm-realised.]

A person who studies this Upanishad becomes an expert in the knowledge pertaining to all the Gods, is deemed to have studied and be an expert of all the Vedas and their tenets, is deemed to have been to all the pilgrim places and knows fully about them, is deemed to have acquired the auspicious rewards of having done all the Yagyas or fire sacrifices, and is deemed to have done Japa (constant repetition of holy Mantras) of sixty thousand Gayatri Mantras. [This Gayatri Mantra is dedicated to the Sun God and is regarded as the best Mantra.]

A person who studies this Upanishad gets the benefit of having read the Itihasas and Purans (mythological histories of the Hindus which tell the stories related to various manifestations of Brahm in the form of various Gods and Goddesses), of having done Japa with one hundred Mantras of Rudra, as well as with the Mantra of Pranav, which is OM. People become holy and purified by his mere sight. He is able to provide deliverance to seven generations of his forefathers.

The Lord has declared that by reading (attentively though) this Atharvashir Upanishad even once, an aspirant becomes purified and cleansed so much so that he becomes eligible to do religious ceremonies and attend to other auspicious activities that require ritualistic cleansing before one commences to perform them.

If he reads it twice, then he attains the exalted stature of being honoured as the chief amongst other creatures.

And if he reads it thrice, then he attains the exalted and most honourable state of being one with OM. That is, he realises the supreme Brahm because this word OM represents Brahm, and having done so he merges in the latter to become indistinguishable from Brahm.

Indeed, this OM or Pranav or Brahm is the Absolute Truth. One should be enlightened about this eclectic fact. Amen!

Chapter 5

Atharva-shikha Upanishad/Atharvashikho-panishad

This Upanishad is entirely dedicated to the theme of OM. OM is a synonym of the supreme transcendental Brahm as well as is the greatest of Mantras that is used as a standard medium for meditation and contemplation that aid in one's spiritual progress. This Upanishad builds upon the Atharvashir Upanishad in as much as it describes more finely the various components of OM, the ethereal word representing Pranav or the supreme Brahm. It elaborately deals with the concept of OM in a comprehensive manner. Kandika 1 elaborates upon the concept of OM by describing all its components along with the relevant Vedas, the patron Gods, the Chandas or style of composition (metres), the sacred fires, and the symbolism of colours. In effect, it outlines the genesis of creation in the context of the primordial sound of OM. Kandikas 2 and 3 elaborate upon other divine and glorious virtues of OM, such as it being the illuminator of the spiritual path of a seeker, as representing all the four states of existence of consciousness, as a bestower of mystical powers, as an infallible instrument for the realisation of Brahm and the true 'self', as the progenitor of the entire creation, including all the Gods, and such other concepts with special emphasis on their metaphysical connotations.

In effect, this present Atharva-shikha Upanishad marks the culmination of meditation and contemplation or Yoga involving the use of the divine Mantra OM when the spiritual aspirant has attained perfect and exemplary quietude and blissfulness. He is then deemed to have attained Shambhu or Brahm-hood. It is a natural progression from the earlier stages of enlightenment when he had realised Brahm in his form as Rudra and Ishan that has been narrated in Atharvashir Upanishad.

So we can safely conclude that this present Atharva-shikha Upanishad is the 'tip or head' ('Shikha') of that body of knowledge which was initiated by its cousin Atharvashir Upanishad. In a sense, this Atharva-shika Upanishad rounds off the teaching of the previous Atharvashir Upanishad.

-----*****-----

-----Shanti Paath-----

Kandika 1

1. Once, sages Pippalaad¹, Angiras¹ and Sanatkumar² approached the great sage Atharvan¹ and asked—'Oh Lord! Which is the highest form of meditation and contemplation that you have preached? What does it consist of, and what are its four steps? Who is the meditator? What is the object of this meditation or the reward of such meditation?'

Sage Atharvan replied—'Well, the ethereal word OM representing Pranav or the transcendental Brahm, the Supreme Being, is always present. It was present before even the Vedas symbolising knowledge came into being. It is this OM that should be meditated upon. [Since OM represents Brahm, the supreme Creator and the progenitor of all knowledge represented by the Vedas, it is their de-facto parent. It is this reason why OM is always said before recitation of the hymns of the Vedas is commenced. It

is a prefix of the hymns and reminds the aspirant of the supreme Brahm who these Vedas refer to, and who was existent even before these Vedas came into being. In other words, if the Vedas are revered and honoured, then their source, the spring-board from where they originated, i.e. Brahm represented by OM, the sound symbol of Brahm, should be given more respect. This is because OM representing Brahm is like the 'parent' of the Vedas. Brahm is more exalted than and superior to all the hymns of the Vedas put together just like the father who is shown more respect than the off spring. Further, since the hymns of the Vedas are 'chanted or said' using letters and words which are spoken by the medium of speech, an aphorism for sound, it follows that OM, the ethereal sound, is a pre-requisite for the revelation of the Vedas. Without sound there can be no spoken word. In fact, the spoken word is a manifestation of sound having 'life' in it in the sense that the word has a meaning which lends it its importance and value. If the spoken word has no meaning, it is a lifeless jumble of sounds which are nothing but a nuisance. Without words the Vedas can't be either revealed or transmitted from one generation to another. Since the Vedas are the first and the primary body of knowledge, their origin in the primordial and primary form of sound known as OM is easy to conceptualize and understand.]

All the four Vedas are the four Paads or legs or aspects of OM (representing the supreme divinity known as Brahm). The first Matra or letter that is equivalent to its first Paad is 'A'. It represents the Prithivi or the earth. It is from this 'A' that the first of the Vedas, i.e. the Rig/Rik Veda and its Richas (hymns) were created. The creator of the visible world, i.e. Lord Brahma (the first of the Trinity Gods), the different Vasus³ (assets or wealth that was created in the beginning to sustain life on earth), the Gayatri Chanda⁴ (the first poetical metre in which the hymns of the Vedas were pronounced), and the sacred fire called the Garhyapatya Agni⁵ (the householder's fire) were also created.

The second letter 'U' of the ethereal word OM represents the second Paad or leg of Brahm and the second Matra or aspect of OM. It gives rise to the Antariksha (the vast space of the sky above the earth), the Yajur Veda containing the Mantras called Yajus needed to perform the sacrifices during fire sacrifices, Lord Vishnu the sustainer and protector of creation (the second of the Trinity Gods), Lord Rudra who is none but the supreme Brahm personified (as affirmed in the Atharvashir Upanishad, and therefore refers to the Viraat Purush whose manifestation is Lord Vishnu)⁶, the Trishtup Chanda⁷, and the second type of holy fire called the Dakshinagni⁸.

The third letter 'M' of the ethereal word OM represents the third Paad or leg of Brahm and the third Matra or aspect of OM. It is from this that the following units of creation were created—the Duloka (the heavens), the melodious hymns of the Sam Veda, the brilliant Aditya or the Sun God, the Rudra (that aspect of Brahm which helps to conclude the creation; the third of the Trinity Gods), the Jagati Chanda⁹, and the third holy fire called Ahawaniya¹⁰.

The fourth Matra of OM is called the 'Ardha Matra' because it is half a syllable, and is placed at the end of the letter 'M' (sound of M) and is a fragmented form of 'M'¹¹. It is this aspect of OM from which the Moon God (the Soma Loka), the Atharvan Mantras of the Atharva Veda, the Samvartak Agni¹² (which is the universal fire of destruction), the Maruts¹³ (the winds; the howling wind that blows during the doomsday), the Viraaj/Viraad¹⁴, and the most brilliant and self-illuminated element which has the dazzle of 'electric'—which implies the eternal and universal fire element.

[Now the colours of the four syllables are being described. The Sam Veda's Yogchudamani Upanishad, in its verse nos. 75-78 also describes the colours of the

syllables.] The first Matra of OM, i.e. the letter 'A', represents the colour red and yellow. Its patron deity is Brahma, the creator of this visible world.

The second Matra of OM, i.e. the letter 'U', represents the dark colour. Its patron deity is the self-illuminated and splendorous Vishnu, the sustainer and protector of creation.

The third Matra of OM, i.e. the letter 'M', represents the colour white. Its patron deity is Rudra who is both the auspicious form of Brahm and the annihilator of creation. [Rudra as being a dynamic form and a synonym of Brahm has been proclaimed by the Atharvashir Upanishad—this is his auspicious and benevolent form. Rudra is also known as the angry form of Shiva who is responsible for conclusion of creation—this is the annihilating role of Rudra in creation. There is no confusion in this apparent opposite and discordant role because 'Brahm' plays *all* the roles in creation, not only as concluder but even as the creator and sustainer of creation. This is because Brahm is the Supreme Being, and as such is responsible for all that is happening in this creation. Nothing happens without his knowledge, consent and order.

The fourth Ardha Matra of OM, i.e. the sound that follows the pronunciation of the third letter 'M', represents an admixture of all the colours. Its patron deity is the glorious and majestic Viraat Purush, the all-pervading, all-encompassing invisible form of Brahm that is the macrocosmic gross body of the Supreme Being.

[This is a symbolic way of saying that whatever that exists in creation, or whatever that happens in creation is due to the Viraat Purush. In fact, this creation is a gross manifestation of the Viraat Purush who lives in his own creation and governs it from the inside like a great king who first founds a dynasty and then rules it as its supreme ruler. The primary form of the Viraat Purush would incorporate all the known forces of creation, all the myriad variations in which this creation exists. A simple example would illustrate this phenomenon. The light of the sun is known to have seven colours of the rainbow inherent to it—i.e. the colours of violet, indigo, blue, green, yellow, orange and red, but the sunlight itself appears to be white; it does not indicate on the surface that all these colours are hidden inside it. Similarly, the Viraat Purush hides the entire creation in his bosom; he incorporates the entire gamut of creation in his being, but when the creation is actually revealed it begins to show no semblance of similarity to its parent, the Viraat. But when analyzed intelligently one comes to the conclusion that the creation actually depicts the countless virtues of the same divine entity revealed in myriad of forms.]

In this way, the ethereal word OM representing the supreme Divinity has four Paads or aspects symbolised by its four letters or syllables. This form is a gross form of Brahm and has three types of existence symbolized by the three types of pronunciations of OM—viz. the short, the medium and the long.

By saying OM three times, each for a longer duration than its previous utterance, and rounding it off with the longest humming of the letter 'M', the aspirant finally becomes silent and calmed down. By pronouncing OM with the longest sound (i.e. with a prolonged humming following the uttering of OM), the spiritual aspirant is able to experience the light of pure consciousness called the Atma residing in his inner self—that is, he becomes enlightened.

[In the beginning, the first utterance is of a comparatively short duration to indicate the preparatory stage. The second utterance is of a longer duration than the first, followed by the third utterance which is the longest. The first two utterances correspond to the letters A and U respectively, whilst the last and the third utterance culminating in complete silence represents the third letter M, which is then followed

by the Ardha Matra that indicates the conclusion of utterances symbolizing the calming down of the senses and nerves. In other words, there are three ways to say OM. The first way is to say the word OM once, and then talk about something else. The second way is to repeat OM for some time, but not in a sustained manner. And the third is to repeat OM continuously so much so that one is completely drowned in the vibrations produced by it in the inner-self of the aspirant. The last way is the best way for honest and faithful spiritual aspirants, and the resultant calmness and bliss that is experienced by him is tantamount to the conclusion of this creation because it helps him to shut off the deluding and distracting external world from his mental screen. An aspirant constantly repeating OM has no awareness of the outside world, and so for all practical purposes the latter is as good as not being there.]

That mystical word which has the magnificent and magical power to lift the aspirant spiritually upwards or make his vital winds or Pran upwardly mobile (as done during Yoga or meditation exercises) even by pronouncing it once is called OM. [That is, OM has an inherent power built in it which lifts all those who associate themselves with it spiritually upwards just like Helium gas which has a natural tendency to lift all things filled with it upwards as opposed to other gases and ordinary air which keeps them moribund and earth-bound.]

Since OM has the astoundingly magical power to bring about a merger of all the five chief Prans or vital winds present inside the body (such as the Pran or breath, Apaana or the wind that moves in the intestine, the Vyan which helps maintain equilibrium, the Samaana which helps in distribution of nourishment equally in the body, and the Udaan which helps in lifting the body), it is called OM.

[This refers to the fourth stage corresponding to the Ardha Matra which symbolises the conclusion or dissolution of existence. This corresponds to the fourth state of existence of the consciousness, known as the Turiya state. During Yoga, which relies upon OM as the Mantra or formula to achieve success in concentration of mind (Dhyan) and control of breath (Pranayam), it is this merger of all the Prans and making them upwardly mobile through the Sushumna Naadi (the central nervous system), and their final reaching the top of the head where enlightenment and Brahm-realisation is experienced by the practitioner that is being referred to here when the 'merger of Prans' is cited as the reason of honouring the word OM with its divine powers.]

OM is called 'Pranav' because it enables all the vital life forces of the body called the Prans to bow down and surrender themselves to the 'self' or the Atma which is Brahm personified. Hence, it is called Pranav—literally meaning to respectfully bow down.

[It is called Pranav for other reasons as well. Such as for example, OM helps to attain the supreme state of realisation where the spiritual aspirant becomes self and Brahm realised. OM helps in reaching Brahm, also known as Pranav, and merger of the individual's Atma with the cosmic Atma by the process of deep meditation and contemplation, a process commonly known as Yoga, and hence it is called Pranav. OM helps one to overcome his ego and false sense of pride by helping him concentrate his energy to attain a higher state of existence, rather than remaining a slave of the body and its sense organs, by exercising rigorous control over them through various meditation techniques, hence it is called Pranav—to become humble and surrender one's self to the Supreme Being instead of thinking oneself as being the Master and Lord of this world and its material sense objects.]

The complete word OM represents the fourth state of consciousness called the Turiya state (which is marked by peace, tranquility, serenity and bliss), and since the Gods exist in this state it is a comprehensive metaphor for all the Gods taken together.

Since everything in existence is incorporated in the three letters A, U and M of the word OM, it is a representative of Pranav or Brahm.

[This is because, as explained earlier in this Kandika, these three letters represent all the three phases of creation—viz. A stands for creation coming into being because Brahma is its patron deity, U represents the expansion and perpetration of creation because Vishnu is its patron deity, and M represents the conclusion of creation because Rudra is its patron deity. Since everything in creation is a manifestation of Brahm who is also known as Pranav, or better still, since Brahm or Pranav has revealed itself in the form of this creation, each unit is Brahm or Pranav in some way or the other. Therefore, the entire creation is OM personified because it is a representative of Brahm or Pranav which are the two names of the Supreme Being.]

Since OM exists in four subtle aspects which cannot be separated from one another, it represents the four Vedas (Rig/Rik, Sam, Yajur and Atharva) which though appearing to be separate are basically inalienable and one single unit. [The four subtle aspects of OM have been fully described in the earlier part of this Kandika.]

It is a representative of all things that have a name and can be known. [For example, the knowledge is given name as the four Vedas. This knowledge can be grasped and understood. Hence, it represents OM. On the other end of the spectrum we have the incomprehensible and most enigmatic divine entity known as ‘consciousness’ or Atma which cannot be taught and understood like the knowledge of the Vedas, but can be experienced only. It cannot be taught like the Vedas but has to be witnessed personally in the form of ‘self-realisation’, or understanding what is the true meaning of the term ‘self’. This is known as ‘enlightenment’. Hence, both the aspects of existence—the gross as well as the subtle—represent OM.]

[Note—¹A brief introduction of these sages are given in the Prashna Upanishad of this volume—(a) *Pippalaad*—Prashna Upanishad, Canto 1, note of verse no. 1. (b) Sages *Atharva* and *Angira*—Prashna Upanishad, Canto 2, note of verse no. 8.

²Sage *Sanatkumar*—This Sage is considered as one of the four Manas Putras or the mental-born sons of the creator Brahma. The other three are Sanak, Sanatsujat and Sanandan. They are regarded in a perpetual state of boyhood. Together they are called ‘Sanakaadi Rishis’. According to Kalagni Rudra Upanishad of Krishna Yajur Veda, Sanatkumar was taught how to wear the Tripund, the three lines marked on the forehead of all Hindus, by Lord Kalagni Rudra, a form of Shiva, himself. Sanatkumar had taught the greatness of Vishnu to demon Vrittaasur, the enemy of Indra, the king of Gods. He also taught spiritual wisdom to sage Narad, the celestial sage.

Sanatsujat taught spiritual wisdom to Dhritrashtra who was the blind father of the Kauravas of the epic Mahabharat fame. Sanak is said to an eternal companion of Lord Vishnu. Sanandan is regarded as the ancient preacher of the Sankhya Shastra, even more ancient than Kapil.

Sanatkumar, along with sages Pippalaad and Angira, had approached sage Atharva to ask him about the highest form of meditation, the different aspects of OM and the culmination of spiritual journey by realising Brahm in the form of Shambhu, one of the names of Lord Shiva, in Atharva Veda’s Atharva-shikha Upanishad.

It is narrated in the Brihajjabal Upanishad of the Atharva Veda tradition, in its Brahman 7, verse no. 8, that he had gone to Lord Kalagnirudra, one of the forms of Lord Shiva and who had first revealed this Upanishad to one sage Bhusund (Brahmans 1-6) to learn about the metaphysical importance and spiritual value of the Rudraksha beads. [Rudraksha beads are the seeds of the tree *Eleocarpus ganitrus*.]

According to Kalagni Rudra Upanishad of Krishna Yajur Veda, Sanatkumar was taught how to wear the Tripundra, the three lines marked on the forehead of all Hindus, by Lord Kalagnirudra himself.

The Sharav Upanishad of Atharva Veda, in its verse no. 22 stresses the greatness of Lord Shiva known as Maheshwar by saying that even such great sages as Sankaadi and Sanatsujat (i.e. sages Sanatkumar and others collectively called the Sankaadi Rishis) had praised and prayed to the Lord, implying that if these great sages had worshipped Shiva then the latter must surely be a great Lord.

³The *Vasus*—There are eight *Vasus* who are the various patron Gods who preside over the essentials of life—Vishnu who is the sustainer, Shiva who is the annihilator, Kuber who is the treasurer of the wealth of the Gods, the Sun, Water, Fire, Wealth represented by gems and gold, and ‘Ray’ representing glory and fame. The element ‘Fire’ is the most potent, prominent and essential force in creation, because without fire the world would freeze to death. Hence, the Fire-God is said to be the chief amongst the Vasus. The ‘fire’ element is the active force in creation and is primarily responsible for kindling the cosmic cauldron that set in motion the process, and once having set it in motion it then sustained it and would finally annihilate it by burning it to cinders. On the other hand, Lord Vishnu is the passive force of creation represented by his other form of Viraat Purush which is the primary male aspect of creation. Lord Vishnu, who is the sustainer of the creation, is the Lord of Laxmi who is the Goddess of wealth, and is the supreme creator because Brahma, the old patriarch of creation who created the visible world and its creatures, was himself born atop the divine lotus that emerged from the navel of Lord Vishnu. Lord Vishnu utilizes the services of Laxmi who is the personification of the active forces of creation to create, sustain and annihilate the world. The Vasus are symbolic Gods who represent those essentials aspects of creation without which life would be difficult to conceive and sustain and finally conclude.

The eight Vasus are the patron Gods who provide succour and a dwelling place for the whole creation. They symbolise those primary necessities of life without which existence is not possible. They are— (i) Kuber (the God of wealth and prosperity), (ii) the Sun God (who provides energy and food) and his rays and radiance (i.e. sunlight and the energy that it provides), (iii) Shiva (the concluder or annihilator of the creation), (iv) Vishnu (the sustainer), (v) the Water God (called Varun), (vi) the Fire God (called Agni), (vii) any body of water such as a pond, a river etc., and (viii) holy and pious people (who give advice and guidance to the creatures of the creation). According to Brihad Aranyak Upanishad 3/9/3, the Vasus are the following—Fire, Earth, Air, Antariksha (the space of the solar system), Aditya (Sun), Duloka (heavens), the Moon, and the Nakshatras (the stars and the planets).

According to Purans, the eight Vasus are the following-- Dhruv, Dhar, Som/Soma (the sap of an elixir-providing plant called Som/Soma which is used during religious ceremonies as sanctified liquid offered to the Gods), Aapha (water), Anil (wind), Anal (fire), Pratush and Prabhaas.

These eight Vasus are the semi-Gods who symbolise the various types of assets needed to sustain this world. They therefore represent such assets as jewels, precious stones and gems, gold and other forms of wealth and property. Vasus also refers to the fire and water elements as well as their grosser forms as the terrestrial fire and water bodies such as ponds and lakes; to the virtue of radiance, splendour and glory; to the ray of light; to Kuber (the treasurer of Gods), Shiva, Sun, Vishnu, and a simple and pious gentleman.

The Ekakchar Upanishad of Krishna Yajur Veda, in its verse no. 7, says that these Vasus are manifestations of Brahm in order to provide the creation with the necessities of life.

⁴The Gayatri Chanda— The *Chandas* are a poetic style in which the verses of the Vedas were composed. These compositions rendered the sacred hymns or psalms of the Vedas with the melody of poetry which, in turn, symbolise the skill one has with

words as well as the literary genius, erudition, scholarship, learning and wisdom of the ancient sages who first inhabited this earth. Since knowledge had to be preserved and transmitted orally, it was thought prudent that lines that rhymed like a poem and which could be sung were easy to remember than paragraphs after paragraphs of dry prose. That's why, in ancient times, poetry was the usual and most accepted medium of disseminating knowledge and information. Hymns that could be chanted with a particular beat and rhythm were more acceptable than a monotonous dry prose. The Vedas stand for wisdom and enlightenment, knowledge and information. The knowledge or the science of creation and Nature needed words to be understood and explained to others, giving rise to the need for a system or style of narration called 'Chandas' which were poetic narrative styles. The word 'Chanda' means—a poetic composition, rhyme, a metre or stanza in poetry, a measure in music, or hymns or psalms of the Vedas.

The Chandas are a special type of poetic composition used by Brahma to create the texture of the fabric of knowledge in the form of the Vedas. The material used to make this fabric was the profound wisdom and the essential truths of creation as enshrined in the Vedas. This system of composing the religious text of the scriptures is in vogue since earlier times and such verses are called hymns as they are dedicated to the offering of prayers and honouring the chosen deity for which the particular hymns is meant. These hymns are also called Mantras because they are like mystical formula specific to that deity; they help the worshipper to activate the dynamic forces of Nature and creation as represented by this deity who is actually a personified form of these forces. Each deity had a particular hymns dedicated to it much like we have specific formulas in science or mathematics to solve specific problems. No one formula applies to all the problems in a universal manner, though there are some universal ones also which can be applied to all the cases, such as the Mantra OM which is used equally for all the deities. The reason is that OM represents the supreme transcendental Brahman whose manifestations all these individual deities or Godheads are. This is like the case of one listening to a particular radio station of his choice when he must tune-in to the particular frequency in which that radio station broadcasts.

The *Gayatri Chanda* has 24 letters and syllables in all which are divided into 3 steps or stanzas of 8 letters or syllables each. Hence the total is $3 \times 8 = 24$.

Amongst the Chandas, the Gayatri Chanda is considered the best and the most ancient because it was in this style that the creator Brahma had first revealed the primary hymns of the Rig and other Vedas. This fact is corroborated by the Gayatri Upanishad which is actually the Atharva Veda's eight Kandikas (sub-sections), from 31 to 38, of the Gopath Brahman which are collectively known as the Gayatri Upanishad. A famous Mantra dedicated to the Sun God is also called Gayatri Mantra because of the fact that it was the first such Mantra revealed by the creator Brahma in the composition style called Gayatri and became synonymous with it.

⁵The *Garhyapatya Fire*—Refer Chandogya Upanishad, 2/24/3-6, 4/11/1-2, 4/17/4. It is the fire of the household hearth; the main fire of the formal fire sacrifice; the fire that every householder is supposed to keep alive and worship regularly and from which the first spark is taken for the rituals associated with religious ceremonies. A householder has land and farm representing 'earth' in which he grows food. This food is grown with the help of the light of the Sun, and it is cooked in the fire of the fire place in the house. Hence, the Garhyapatya fire, or the householder's fire, is intrinsically present and is implied in these four entities. It is an integral part of these four. The earth has the 'fire element' because without heat and warmth, no seed would germinate and no life can survive on this earth. The food has fire present inherently in it because it is the energy inherent in food which helps to energise the creature that eats it. The presence of heat in the sun does not need to be explained because it is very evident.

⁶Lord *Vishnu* and *Rudra* symbolise two dynamic aspects of Brahman. The former is the sustainer and protector of the visible world that Brahman the creator created, while the latter is the Viraat Purush who is the macrocosmic gross body of the Supreme Being and a sublime form of Vishnu. In fact, Vishnu and the Viraat Purush are usually treated as one deity called by these two names according to the context. The synonymous nature of Rudra and Brahman has been the subject of the entire Atharvashir Upanishad which is Chapter 4 of this volume.

⁷The *Trishtup Chanda* is a verse of 4 lines in which each line has 11 letters; 11 x 4 = 44 letters in all.

⁸The *Dakshinagni Agni*—Refer Chandogya Upanishad, 2/24/7-10, 4/13/1-2, 4/17/5. This holy fire is a witness to making of charities when some water is poured as libation to the Gods. It signifies that the Gods are offered water to drink. To give water to the thirsty is the greatest form of charity. Therefore, this fire is symbolically present in water, and when it is poured, it signifies that the heat produced by sins committed by the person has been doused. Charities and donations make a man famous and renowned, hence the allusion to directions of the earth. His glory shines like the bright moon and he is called a star among human beings. He is the most exalted amongst his peers and compatriots even as the moon is most prominent amongst the stars in the sky.

Like in the case of the Garhyapatya fire, the fire that was lit in the main sacrificial shed or site just near the main fire pit but to the south of it and where donations and charities were made was called Dakshinagni fire. The fire pit for this fire was semi-circular or bow-shaped.

⁹The *Jagati Chanda*—is a verse of 4 lines with 12 letters in each line, bringing the total number of letters to 48.

¹⁰The *Ahawaniya fire*—Refer Chandogya Upanishad, 2/24/11-16, 4/14/1-2, 4/17/6. The Ahawaniya fire is lit during the fire sacrifices to respectfully invoke Gods, and invite them to come and participate in the sacrifice and accept offerings made to them. The word 'Aavaahan' in Sanskrit means to invite, invoke, to pray respectfully with the intention of welcoming. Since one uses one's mouth for these purposes, the fire in the form of the strength, energy and vigour of the spoken word and the power of speech residing in the mouth is called Ahawaniya fire. This fire was lit to invoke the Gods, and the Gods live in the heaven; hence the reference to the sky, heavens and electric. Since Pran is the best form of the vital winds, the allusion means that the Gods are the most exalted forms that exist in creation. The 'electric' is a metaphor for immense strength, potent and power, which of course the fire possesses. This inherent quality of Electric that it possess most stupendous powers and strength is likened to the presence of Brahman in it even as the great power and strength present in a man is due to the Atma or Pran present in him. Even as a man is useless without the presence of Pran in him, the Electric would lose its importance if there was no Brahman present in it which gives it its punch and strength.

In ancient times it was an established belief and tradition that the way to attain heaven was through the path of the fire sacrifice. The fire sacrifice was in effect a method to harness the spiritual energy inherent in the all pervading fire element which would sufficiently empower the person performing the fire sacrifice to achieve his goal. The sacrificial pit and the heat generated from it reminds one of the modern day nuclear reactors. Even as the strength and energy and powers of the atom can be harnessed for beneficial or ruinous effects through the nuclear reactor, depending upon the temperament and mental setup of the person who masters the science of atomic energy, the fire sacrifice could be similarly used either for auspicious purposes such as attaining eternal peace and tranquility for the tormented soul, or for attaining worldly glory and conquest. Harnessing of nuclear energy requires expertise, knowledge and skills not easy to master and not accessible to all. Building and operating a nuclear facility also is a daunting and elaborate job. Similarly, the ancient fire sacrifices required special skills and expertise, and it was not simply lighting any

odd evening village community bonfire to the merriment of all those who sit around it to gossip about the day's events.

¹¹The *Ardha Matra* refers to a half-syllable. Normally, the letter 'M' of the word OM is to be hummed in a prolonged sound stretching into infinity. But since it is not done and the worshipper becomes silent, it is called 'half Matra' or half syllable. It is tantamount to conclusion of the word OM, and since OM is envisioned as representing the whole gamut of creation, this *Ardha Matra* is symbolic of conclusion of creation. That is why it is accompanied by the universal fire of destruction called the *Samvartak Agni*.

¹²The phrase *Samvartak Agni* refers to the fire that engulfs the earth at the time of dooms-day, because the word 'Samvartak' means the end of an era or a period of time, and *Agni* means fire. It also has two other connotations—viz. (1) The dooms-day cloud, because at the time of conclusion of one cycle of creation and destruction there is torrential rain which causes a deluge that drown the entire habitation on the surface of the earth. In this scenario, only certain forms of aquatic life survive, and from it the seed of the next cycle of creation is sown. (2) The fire burning under the bed of the ocean and in the bowls of the earth which keeps the water of the ocean as well as the underground springs warm. This fire is called 'Barwaanal' or 'Badvaanal'. In the present verse, this fire has been personified as the sage who first conceptualised this Upanishad.

¹³The *Maruts* are the various names given to the Wind God. There are said to be 49 in number, and are the Wind-Gods mentioned in Rig Veda, 1/37-39 and 1/165/3, 5, 7, 9. They are regarded variously as—(i) sons of Indra and Vrishni (Rig Veda, 2/34/2), (ii) Sons of Rudra (Rig Veda, 2/33/1), (iii) similar to the Fire-God (Rig Veda, 6/66/2), and (vi) Indra God (Rig Veda, 1/165, 171). The Purans call them sons of sage Kashyap and Diti.

¹⁴The word *Viraaj* or *Viraad* has two connotations. One, it refers to the *Viraat Chanda* which is a verse that has four lines each having ten letters, bringing the number of letters to 40, and two, it means the eldest son of Brahma the creator. If the second connotation is to be considered then the *Maruts*, the various Wind Gods would deem to be the *Viraad*.]

-----*****-----

Kandika 2

1. OM is honoured by the epithet 'Tarak' (one that takes across or gives liberation and deliverance to the soul) because it gives freedom to all the humans and the Gods from their innumerable torments such as various forms of sorrows, miseries, grief and fears. [OM provides the soothing balm to their tormented souls and provides them with spiritual solace and succour.]

Since all the Gods are included in OM, it is called Vishnu. [It must be remembered here that OM is used as a synonym for Brahm or Pranav. Brahm, the cosmic Consciousness, is the 'cause' of everything. Hence, Brahm is the cosmic 'causal body'. Its next form is known as *Hiranyagarbha* which would be the 'cosmic subtle body' of creation. And its third form is the 'cosmic gross body' known as the *Viraat Purush*. These terms have only a relative nature and symbolic value, because Brahm is essentially one and immutable, having no physical delineations, limitations and dimensions. Since everything in this creation has its origin in the *Viraat Purush*, even the Gods owe their existence to the latter as clearly affirmed in the *Aiteriyo-panishad* of Rik Veda. Since Vishnu is another name of this *Viraat Purush* in his capacity of being the sustainer, nourisher and protector of creation, and since

everything in existence is within the body of this Viraat Purush, it is natural to say that all the Gods are included in OM because OM is the word synonym for Brahm whose cosmic manifestation is known as the Viraat Purush.]

Since OM gives importance to all and enhances their stature, since it gives enlightenment, and is a revelation of the glory of Brahm, it is equivalent to Brahma the creator. [Brahma had revealed this visible creation which would have otherwise remained concealed in the deep and fathomless recesses of the cosmic bowl of Brahm. Likewise, OM has revealed Brahm in the form of the sound, and has consequentially brought Brahm, the invisible, incomprehensible and intractable cosmic Divinity that is extremely enigmatic, esoteric and unknown, within reach of the spiritual aspirant through meditation and contemplation done by the medium of the word OM.]

Since OM illuminates the inner self of all the creatures as their pure consciousness known as the Atma (when they attain self realisation), and since it illuminates (shows and paves) the path of salvation and emancipation for all the creatures, it is called 'Pradip' or the illumination of a lighted lamp. It is therefor the 'illuminator' (of the spiritual path).

Since OM is self-illuminated, and when meditated upon fills the inner self of the creature with its inherent natural light which is sparkling, dazzling and splendorous, it is likened to the Vidyut or electric which has its own light and does not need any external source to light it up.

Since OM as the all-pervading cosmic ethereal sound element that fills all the directions and corners of creation (world), it is called 'Sarwavyapi'—meaning an entity that is all-prevailing and omnipresent. Hence, it is also called 'Mahadeva' or the Great God because only the supreme Lord can be present everywhere at the same time.

-----*****-----

Kandika 3

1. The first Matra or letter or aspect of OM, i.e. 'A', corresponds to the Jagrat or waking state of existence. The second Matra or letter or aspect of OM, i.e. 'U', corresponds to the Swapna or dreaming state of existence. The third Matra or letter or aspect of OM, i.e. 'M', corresponds to the Sushupta or deep sleep state of existence. The fourth Matra or letter or aspect of OM, i.e. the Ardha Matra, corresponds to the Turiya state of existence which is also called the state of Samadhi, the trance-like state of peace, tranquility, serenity and bliss.

All these aspects or Matras of OM are seamlessly merged or united with one another, and they are inseparable or inalienable from each other. [That is, it is not possible to consider OM in a fractured form.] That is why OM is also called 'self-illuminated' or 'self-sustained and self-sufficient' like the supreme Brahm. [This is because Brahm is an immutable, indivisible, eternal, infinite and non-dual divine entity. It is like a round ball which has no front or rear side; all the sides are equal and indistinguishable from one another. Brahm does not need some support to prop it up. There is no such thing as a beginning, middle or an end of Brahm. Therefore, there is also no such concept applicable to OM as well, and this is why OM is regarded as being a monosyllabic sound. All the individual sounds that constitute OM are an indivisible part of OM just like all the manifestation of Brahm, viz. the causal body, the subtle body and the gross body of creation, are an inseparable part of Brahm. The

four parts of OM, viz. the letters A, U, M and the Ardha Matra, have been visualized just for the sake of understanding and analyzing the profound importance of OM from the metaphysical perspective just like one understands the chemistry of water by analyzing its molecules which consists of two atoms of Hydrogen and one atom of Oxygen, but that does not mean that Hydrogen and Oxygen exist separately, that none of them would equal water in its grand life-sustaining virtues, and that understanding the value of water vis-à-vis the creation has anything to do with these two gases the atoms of which constitute the molecule of water. Thousands and thousands of bits and units of sound are created every moment, but they all merge seamlessly in the cosmic sound of OM. When one goes higher up in the earth's atmosphere, all that he hears is complete silence inspite of the cacophony and ear-splitting noises prevailing on the surface of earth. In other words, as one rises higher in his spiritual pursuit, he experiences complete tranquility when everything dissolves into nothing. This is the state of Turiya representing the Ardha Matra of OM.]

OM is a provider of all Siddhis or mystical powers. Hence it is the prime object of meditation and contemplation, and is worth pursuing diligently.

OM helps to control all the sense organs and their restlessness by helping the mind to be focused in meditation and contemplation as well as by controlling the Pran (the vital airs or winds) and their movement in the body.

OM is worthy of pursuing as an object of meditation and contemplation because it represents Brahm. At the same time, it is a means or an instrument or a medium of attaining Brahm because it is used as a Mantra to focus one's mind and energy, to control one's sense organs, and to do meditation and contemplation so that self and Brahm realisation can be achieved. And it is the culmination of spiritual practices because when successfully mastered it gives complete tranquility, peace, serenity and bliss that is equivalent to the Turiya state of existence which is also called the state of Samadhi, the trance-like state of complete peace and tranquility when the creature is blissfully unaware of the body and the external world.

The spiritual aspirant should control all the sense organs and the various Prans (vital winds) and gradually establish them in the Mana (mind) through the well-established practice of meditation and concentration (i.e. Yoga) that is done by employing the Mantra OM. When he successfully does so, he becomes one like Lord Vishnu because all the Gods are said to be established in Vishnu. [See Kandika 2.]

When all the vital winds (Prans) and the sense organs (Indris) as well as the mind (Mana) are merged into one another by the process of meditation and contemplation using the Mantra OM, the reverberations of this ethereal sound overwhelms the aspirant as it begins to resonate throughout his being. This is his state of having realised the Supreme Being in the form of bliss, ecstasy, peace and tranquility. It is the eclectic state of self and Brahm realisation; it is the state of enlightenment.

This OM is the cause of coming into being of all the senior Gods of the Trinity such as Brahma, Vishnu and Shiva, as well as all the other junior Gods presiding over the various sense organs of the body along with all the Bhuts such as earth etc. (the others being water, fire, air and sky). [This is true because OM is a name for Brahm, and the entire creation has emerged from Brahm which is cosmic Consciousness. Refer Kandika 2.]

Hence, OM is the supreme entity (because it is the divine Brahm personified); it is the 'Sarveshwar' of the Lord of all (for the same reason); it is endowed with all the glorious virtues and magnificent sublime qualities possessed by the highest

Authority in creation (as Brahm personified). And that is why it is honoured by the title of 'Shambhu'.

By concentrating and meditating upon OM, the spiritual aspirant gets immense benefit in the way of attaining the highest stature of existence marked by steadiness, calmness, infinity, eternity and imperishability symbolised by his attaining access to the high heaven beyond the Polar Star (the North Star) called the Dhruv Star. [The symbolism lies in the fact that this Star does not change its position in the sky like all the other stars and planets, including the Sun and the Moon which are the two most luminous bodies in the sky symbolising a high stature amongst their peers. So, the aspirant who takes the shelter of OM, or relies upon it for his spiritual progress, becomes as steady, eternal and imperishable as the Polar Star that remains steady and constant in its position. He is looked upon for guidance and support by navigators who refer to the Polar Star to decide their location when traveling without the compass.]

Besides the above, such a spiritual aspirant gets the benefit of doing a hundred fire sacrifices which reward the person who does them by enabling him to go and reside in the heavens for a long period of seventy-four Yugs. [1 Yug is equivalent to one-fourth of the 4-Yug celestial cycle of birth and death according to Hindu belief.]

According to the Vedas, the best path to be followed to achieve all spiritual success and be rewarded for doing Dhyān (contemplation), Yoga (meditation) and Gyan (acquisition of knowledge or attaining enlightenment and spiritual wisdom) is the path of worshipping OM and having faith and devotion for it. [Of course, worshipping etc. of OM implies doing Dhyān and Yoga using OM so that Gyan of Brahm can be successfully attained. It ought to be noted here that when one worships OM, he is actually paying his respects directly to Pranav, the cosmic Consciousness that is also known as Brahm, and which is represented by the word OM that is specific to it.]

This is the only auspicious and beneficial path for all spiritual aspirants seeking enlightenment as well as self and Brahm realisation. A wise man should discard all other Mantras (paths for spiritual enlightenment) and follow this single Mantra of OM as the best Mantra amongst all the Mantras of the Atharva Veda. One should study about this OM as described in this Atharvashikha Upanishad exclusively. This entitles the wise and learned aspirant to be freed from having to enter another womb again—i.e. he would not have to be born again as he will find liberation and deliverance for himself as a reward for submitting himself to OM representing the supreme transcendental Brahm, the Lord of creation. He would have become Brahm realised, and hence would find Mukti or emancipation and salvation. He indeed finds Mukti or emancipation and salvation. This is the declaration of this Upanishad. Amen!

Chapter 6

Brihajjabal Upanishad/Brihajjabalo-panishad

This Upanishad describes the Tej or the radiant splendour and divine glory of the supreme transcendental Divinity known as Brahm, the Absolute Truth, besides which there is nothing in this world. The very thought that there can be something else besides this Absolute Truth (Brahm) is itself a delusion arising out of extreme ignorance of its reality. This Brihajjabal Upanishad is equivalent to the tip or head or the citadel of all Vedic teachings because it removes all shades of ignorance and delusions. It has eight Brahmanas or Cantos.

Brahman 1 describes how the creator Brahma desired to create, and how this basic notion of having a 'desire' was at the root of Brahma getting embroiled in the cumbersome and entangling process of the affairs of creation. This is followed by a conversation between sage Bhusund and Lord Kalagnirudra, one of the divine forms of Lord Shiva, in which the Lord outlines how the creation came into being from the five symbolic dynamic but subtle forms of the Supreme Being. He describes how the five primary elements, the five types of cows and the five forms of 'Bhasmas' or sacred ashes that are metaphors for five qualities in creation have come into existence.

Brahman 2 elaborates upon two primary concepts of metaphysics and how they form a couple that compliment and supplement each other. One is the concept of Agni or the fire element and the Soma or the elixir of life known as the water element without both of which life would not have come into existence, and the other is the concept of Shiva and Shakti, the cosmic Consciousness and its dynamic aspect respectively. It describes the various connotations of these four units and the finer nuances of meaning attached to them. Besides this, the significance of the term Bhasma (ash) is very succinctly described in this Canto.

Brahman 3 is an exposition, first, on the proper way to produce the sacred Bhasma (ash) and in this it bears close resemblance to two other Upanishad of this genre—i.e. the Kalagnirudra Upanishad of the Krishna Yajur Veda, and Bhasma Jabal Upanishad of the Atharva Veda traditions, second, on the religious importance and significance of the cow and answers the confounding question why the Hindus regard the cow as holy, and third, it describes in detail the process of doing the fire sacrifice using the holy cow's dung as an offering to the consecrated fire of the sacrifice as an oblation.

Brahman 4 and 5 are an extension of Brahman 3 and they describes in minute detail how, when and by whom the Bhasma, the sacred ash, is to be worn on the body in the form of the Tripundra—the three lines marked on various parts of the body, especially the forehead. This Tripundra is a symbol worn by the worshipper as a token of his having accepted the supreme transcendental Brahm, in his manifestation as Shiva, as his primary deity and Lord, as well as a sign of his own purification, his vanquishing of sins and protection from their evil consequences, and his initiation into the fold of seekers of Mukti (liberation and deliverance) by symbolically establishing the mark of the Lord on his own body. The immense spiritual rewards of wearing the Tripundra on the body by the worshipper are outlined in Brahman 5.

Brahman 6 describes five astounding mystical powers of the sacred Bhasma (the holy ash of the fire sacrifice) by illustrating them citing a story from the Purans. Each power is like an honoured title or an epithet assigned to the Bhasma. Hence, this Brahman describes the 'Naam Panchak' or the five names by which the Bhasma is

known. For instance, the first power is its ability to give life to a cursed man who is condemned to death. This is described in verse nos. 1-4. The second is its power to eliminate the curse of horrific sins. This is narrated in verse nos. 5-6. The third is its power that established a unique similarity between Lords Vishnu and Shiva and to provide all round welfare and auspiciousness to a devotee. How this came to happen is narrated in verse nos. 7-11. This power is endorsed by Lord Vishnu himself. The sacred Bhasma is so powerful that various Gods stand around to attend to the devotee who wears it, and it is also a bestower of wisdom, erudition and knowledge to its wearer—these two additional facts, bringing the total number of glorious virtues of Bhasma to five, have been outlined in verse no. 12.

Brahman 7 describes two things—one, the importance of the Bhasma and the Tripundra as revealed to king Janak by Brahma, and to sage Pippalaad by Vishnu and Kalaghirudra (from verse nos. 1 to 7), and two, the importance of the Rudraksha beads as revealed to sage Sanatkumar by Lord Kalagnirudra (in verse no. 8).

Finally, Kalagnirudra enumerates the profound metaphysical and spiritual importance and significance of Brihajjabal Upanishad in Brahman 8.

This is one Upanishad which highlights why the cow is held in high esteem and treated as sacred by the Hindus. In this context, Brahman 1 and 3 are very explicit.

-----*****-----

-----Shanti Paath-----

Please see appendix no. 1 for the English of this Shanti Paath.

Brahman 1

1. The entire world, the visible and the invisible, is not true; it is a falsehood and artificial. In the beginning everything was water and dissolved in it. The first to come into existence was Prajapati Brahma who was born atop a divine Lotus flower. He desired in his Mana (mind) to create something (i.e. to build or fashion an enigmatic entity that would eventually come to be known as the 'world'). A creature says or expresses what his mind desires or wishes, then he goes about doing relevant deeds that are in accordance to his wishes so that they can be fulfilled or realised.

'Prajapti Brahma had a desire', so this element called 'desire' assumed a personified form and presented himself before Brahma. Thus, the first appearance of 'Ichha' or having a first desire, a first wish, a first aspiration or a first yearning is the mind's first dynamic form (i.e. it is like the seed of the mind that would sprout to produce a huge tree known as the world around the otherwise neutral creature who was completely at peace with himself prior to having a desire, because it is from here the rest of the chain of deeds and actions, successes and failures, desires and more desires, worries and miseries, pains and joys etc. would be set in motion).

Brahma wished to have a companion or helper to aid him in this endeavour. The concealed desires, wishes or aspirations that are hidden in the people's heart are reflected in their intellect called the Buddhi. It is the secret desire or wish or aspiration of a person that inspires him and influences his mind and the intellect to make certain decisions and act accordingly so that what he desires can be fulfilled, attained and realised. [That is, though the intellect is supposed to be neutral, analytical and clinical

in its approach to things, arriving at deductions and helping the man take wise and intelligent decisions, yet it becomes conditioned by the man's hidden desires. These desires would prevail on the intellect and influence its advice given to the grosser aspect of the mind which would then impel the man to act in a certain way.]

With this desire in mind (that he would 'create'), Brahma did Tapa (i.e. he made hard effort to fulfill his desire, and it was in the form of severe penance and austerity and its accompanying sufferance).

*It was at this time that sage Bhusund¹ (a disciple of sage Jabal) went to Lord Kalagnirudra (one of the names of Lord Shiva indicating his form that concludes this creation; the annihilator Shiva; the word itself means that ferocious form of Shiva which resembles the fire of the doomsday) and asked him about the importance and significance of 'Bhasma' (the ash of the calmed-down fire sacrifice in which the dried cakes of cow-dung are used as fuel as well as an oblation to the sacred fire, and which is smeared by ascetics on their bodies as a sacred symbol of Lord Shiva)².

Lord Kalagnirudra replied—'What should I say in this matter. Sage Pippalaad has already expounded upon the importance of Vibhuti (the ash of the sacred fire; the Bhasma) as well as Rudraksha³ (beads used to make a prayer rosary from the seeds of the Rudraksha tree called *eleocarpus ganitrus*). What more is to be said on this subject'?

Then sage Bhusund requested him to preach about the Brihajjabal Upanishad that teaches how to obtain Mukti (spiritual liberation and deliverance).

Upon this, Lord Rudra preached the eclectic knowledge of the Divine, the knowledge that is most sublime and holy, as enshrined in the Brihajjabal Upanishad in the following manner.

It was first expounded and elucidated by sage Jabal (and hence bears his name). [The word 'Brihat' means large and wide in scope. So the knowledge preached by sage Jabal that is contained in this Upanishad, being of vast spiritual importance and having a great import on the spiritual well being of all seekers of knowledge of the Absolute Truth, is called Brihajjabal Upanishad in honour of the sage, and to indicate its importance.]

When there was only water everywhere, it was from the Shakti or dynamic powers of Brahm in his cosmic first subtle form as Saddyojaat Shiva⁴ that earth came into existence. The earth emerged from this all-encompassing fluid water as a solid ground.

Upon this earth was then created the benevolent and merciful cow known as 'Kapilaa'. This is because her skin was reddish-brown with white spots, and also because she was most docile, simple, humble and harmless. It is from its dung that the 'Vibhuti' was created. [The word *Vibhuti* has two meanings—one refers to the ash of the fire sacrifice, and the second refers to the virtues of excellence, dignity, majesty, glory, prosperity, wealth, riches, and supernatural powers such as the many Siddhis etc. that made their appearance on earth at the beginning of creation. According to the first meaning, the cow produced dung which upon drying up was reduced to coarse powder because of the natural disintegration process. This was like the ash of the sacrificial fire-pit. According to the second interpretation, the word *Vibhuti* would mean the virtues mentioned above. The sacred cow represented all the excellent things that the creator was so considerate to create before he created other living beings so that when they were eventually born they would have no shortage of anything. As an example he gave milk to this cow so that before the creature learnt to hunt for food he would have a ready-made, wholesome and abundant supply of nourishment for his survival. This is the reason why the cow is so revered amongst the

Hindus because of the fact that not only was it first born or preceded human beings, thereby becoming their ancestor, but also because it embodied or personified all the glorious virtues that were ever created on earth. The cow symbolized the virtues of the creator whereby he provided for the comprehensive nourishment of his subjects because the milk of the cow is a complete and wholesome food all by itself. Besides this, the dried-up and naturally disintegrated dung of the cow was the first ash created prior to the advent of the system of doing fire sacrifices using firewood. In fact, the cakes made from the dried-up dung of the cow were the first fuel used for such fire-sacrifices.]

The second subtle form of Shiva is called Vamdeo who produced a sweet fluid which was like sweet water, and the earth was floated on it. [In other words, the first 'primordial water' from which the earth emerged refers to the vast cosmic ether that is symbolised by the salty ocean, and this second 'sweet water' refers to the underground water that is found under the solid surface of the earth, and it is sweet by nature. It is this sweet water that is found in wells and springs. Since it surrounds the earth as a ring underneath the surface, the solid outer surface of the earth where terrestrial creatures and trees grow is virtually floating on this inner ring or layer of sweet water. The salty water of the ocean floats on the surface of the earth. The earth's surface where creatures live, and where this visible salty ocean is located, actually floats on the inner ring of underground sweet water that exists below the thick layer of rock beneath the surface of the earth.]

The next to come into existence was the cow with a dark skin, and it was called 'Bhadraa'. [The word Bhadraa refers to the female gender and implies a creature that is most gentle, courteous, noble, calm, poised, sober, modest and humble.]

It was from the dung of this cow that 'Bhaasit' (dried form of the dung which has naturally disintegrated into a coarse powder symbolizing the sacred ash of the fire sacrifice) was created. [This is the second type of ash. The word 'Bhaasit' means 'to evolve, to become visible, to be brilliant'. Hence, Bhaasit refers to the fact that the brilliant ash evolved automatically when the dung was dry.]

From the third subtle form of Shiva known as 'Aghor' ('the fierce One') was created the Agni or the fire. He produced 'Vidya' or knowledge and the cow with a red (copper-coloured; dark brown) skin. The Bhasma (ash) was produced by its dung when its dried cakes were used as fuel as well as an oblation to the consecrated fire to do a sacrifice. [This is the third type of sacred ash. Prior to the practice of doing fire sacrifices which produced ash when the fire calmed down in the pit, the dried and disintegrated dung of the cow was used as ash for religious purposes.]

From the fourth subtle form of Shiva called the 'Tat-Purush' ('that Lord'; the cosmic form of Shiva as the Viraat Purush) was created the 'Vayu' or the air or wind. From the air/wind was created the virtue of 'Shanti' (meaning peace, calmness, restfulness and tranquility), as well as the next form of cow with a white complexioned skin. This cow was called 'Sushila'. [The word Sushila is the female gender of the virtues of being sober, courteous and pleasant in one's demeanours; to be gentle, amiable, affable, modest, polite, suave, obliging, cordial, and being naturally good.]

It is from her dung that saltiness and alkaline things (chemical) called 'Kshar' were created.

From the fifth form of Shiva called the 'Ishan' ('the Lord high up in the heaven') was created the sky. He also produced 'Shakti', or the dynamism that could overcome 'Shanti'. [In other words, peace and tranquility can be disturbed by use of

force. From the metaphysical perspective it implies that the inherent 'Shanti', or peace and calmness of the soul or the Atma is disturbed when the 'Shakti', or the dynamic forces of the 'Mana', the mind and the heart combine, is allowed to interfere with the natural state of tranquility of the Atma. In other words, Shanti and Shakti can not co-exist; one would disturb the other. When the supreme Brahm decided to initiate the process of creation, he had employed his Shakti, or the dynamic power of creation that he possessed. But though he was successful in rolling forward the wheel of creation, he lost his Shanti or peace of mind, because the creation that he produced was more of a headache for him as it robbed him of all his peace and bliss. Now the Lord had not only to take care of his own produce, worry about its nourishment, development, wellbeing and general upkeep, but also to tackle the waywardness of his off-springs who more often than not pulling each other by their hairs in the opposite directions, and were at each other's throat most of the time!] The next cow having multi-coloured skin was then created. Her dung produced 'Rakshaa'—literally meaning the capacity to give protection. [The significance of the 'ability to protect' having its origin in the cow of 'multi-coloured skin' is that only a society with versatile qualities and abilities would be able to protect itself and survive in the face of harsh existential conditions. It also means a society that is multi-racial, multi-coloured, multi-cultured and multi-ethnic, and tolerant and accepting to such virtues, would prosper in this world. Otherwise, the world would be torn asunder in ethnic strife, jealousy, hatred and animosity. Diehard fanatics and dogmatic individuals cannot act as protectors of the Lord's creation. The cow does not distinguish between two individuals who serve her, feed her or drink her milk. She is equally benevolent to both of them. Therefore she personifies the virtue of 'Rakshaa'.]

Thus, this answers your (Bhusund's) question about the sacred ash called Bhasma or Vibhuti. The five names of the sacred ash are the following—Vibhuti, Bhaasit, Bhasma, Kshar and Rakshaa.

Since all these forms of the sacred ash have glorious virtues and immense spiritual value, they are all honoured by the title of 'Vibhuti'—something that is endowed with supernatural powers, and something that is majestic, exalted, honourable and excellent.

Since they can devour or annihilate or eliminate or reduce to an ash all sorts of spiritual shortcomings and faults of the creature who wears them, they are called 'Bhasma'—the one that burns and reduces all impurities to ash.

Since they are visibly seen and reveal the magnificent glories and divine powers of Brahm (as manifested in the form of this stupendous creation), they are called 'Bhaasit'—something that is seen and is self-evident.

Since they cut through or eliminate all the troubles of the spiritual aspirant, they are called 'Kshar'—something that is caustic in nature and can cut through or burn through troubling issues and hardened crusts representing all the spiritual troubles faced by the aspirant.

And since they give protection to the wearer from the fear of delusions represented by phantoms and ghosts, as well as evil spirits such as demons, they are called Rakshaa—literally meaning to give protection.

[Note—*There appears to be a sudden change of tracks while this Brahman is being narrated. First we are told about Brahma having a desire of creating and doing Tapa for this purpose, and then the narration suddenly jumps to the conversation between Bhusund and Kalagnirudra.

The probable reason is that Kalagnirudra is the Lord who had annihilated the previous creation, and it is he from whom the present creation started to evolve. Lord Rudra is none but the supreme Brahm himself. It is from the latter that Brahma the

creator of the visible world was created. Further, Rudra, in his form as Shiva, is the patron deity of ascetics who wear the sacred ash on their body. Hence, Rudra is the most competent Authority to expound on these two subjects—viz. the process of creation as well as the various forms of the sacred ash known as Bhasma, along with its metaphysical and spiritual value and importance.

¹Sage *Bhusund*—It is not certain which sage was this, but a sage by the same name of *Jabal Bhusund* appears in the Bhasma Jabal Upanishad of the Atharva Veda tradition, Canto 1, paragraph no. 1 opening lines. Bhusund is known as ‘Jabal Bhusund’ because he was a disciple of the great sage Jabal/Jaabaal and took up the name of his Guru (moral preceptor, teacher and guide) as his surname. In this Upanishad named after him, the sage Jabal Bhusund approached Lord Shiva and asked the latter to fully enlighten him about the ‘Bhasma’ (the sacred ash of the fire sacrifice), what are its usage, along with the complete metaphysical and spiritual importance and significance of Bhasma which enables the wearer to obtain Mukti (liberation and deliverance).

Another place where sage Bhusund is mentioned is in the epic Ramayana that describes the incarnation of Lord Vishnu as Lord Ram. He was a great devotee of Lord Ram in the form of a crow. His life is presented in the epic Ramcharit Manas written by the great poet-sage Goswami Tulsidas, in its 7th Kanda (Chapter), from Doha no. 105 to 125.

Earlier in his previous lives he was a human being. He used to stay in Ayodhya, the capital city of Lord Ram and was a great devotee of the Lord. But time became unfavourable for him and due to misfortunes that befell him he went to Ujjain, a famous pilgrim site. There he used to worship Lord Shiva and was given the Lord’s Mantra by some Brahmin. Bhusund used to repeat this Mantra of Lord Shiva in a temple. Once, the Guru summoned him and advised that the reward of worshipping Lord Shiva is to have steady and unflinching devotion for Lord Ram, the incarnation of Lord Vishnu. This did not go down well with Bhusund who thought that the Guru is misleading him and causing an insult to Shiva. So, once when his Guru arrived in the temple where Bhusund was meditating upon Shiva with the relevant Mantra, he did not show due respect to the Guru. This audacity and irreverence annoyed Lord Shiva and he cursed him to go to the worst type of hell and be born as a reptile (a serpent). The merciful Guru intervened on behalf of Bhusund and pleaded with Shiva to forgive him. At his intercession, Shiva blessed Bhusund that though he would have to be born as low forms of life to suffer for his misdeed, he would always be wise and enlightened amongst all such life forms; Gyan would always stand him in good stead, and as a result he would be elevated to a higher birth each time he was born again to progress rapidly in the evolutionary hierarchy to finally become a human once again. As a human he would become a Brahmin, the highest stature in this form.

As a result of this incident Bhusund became a serpent, and subsequently had to take birth in many low life forms. Finally he became a Brahmin. He was so much inherently devoted to Lord Ram that even as a child he used to enact incidents from the Lord’s life on earth. The learned father’s repeated attempts to teach him in the traditional method of education that was in vogue for learned Brahmins failed to enthuse the child Bhusund, and when the parents died he went to the forest as a mendicant. He roamed in the numerous hermitages of sages and seers, seeking knowledge of devotion for the Lord because he was charged with a strong longing to find his Lord Ram. By and by, he came to the hermitage of sage Lomas who used to live on the top of Mt. Meru. The sage, like so many previous sages, attempted to teach metaphysics and philosophy to the young Bhusund, but again the latter had scant attention for such things. While sage Lomas persistently espoused the cause of formless Divinity or the Nirguna Brahm, Bhusund persisted with his quest for the formed or Saguna Divinity in the person of Lord Ram, the form which was very dear and close to his heart. His persistence peeved the sage and he cursed him to be born as a crow, the scavenging bird. Bhusund took this not as a curse but as a blessing of

his Lord Ram. The sage too repented at his anger and was very moved by the innocence of Bhusund. He relented and reassured Bhusund that though he would have to become a crow as result of the curse but he would be the wisest bird in creation. The sage gave him the Mantra of Lord Ram. He kept Bhusund in his hermitage for some time and taught him the story of Ram, called the Ramayan. The sage divulged the secret that this divine story was revealed to him by Lord Shiva himself. He also blessed Bhusund that he would live as long as he wished, and death would not affect him; he would die only when he wished. The hermitage where Bhusund would establish himself would be glorified and no ignorance would ever come within one Yojan (roughly equal to 8 or 16 miles according to different measures) of it. Immediately there was a voice from the heaven which endorsed the sage's blessing and confirmed that Bhusund was indeed a great devotee of the Lord.

Then Bhusund went to Mt. Neel in the northern Himalayan ranges and established his hermitage there. It is here that once Garud, the legendary vehicle of Lord Vishnu, had gone for enlightenment on the advice of none other but Lord Shiva himself when he was overcome with delusions about the true nature of Lord Ram. At that time, Bhusund had already spent seven hundred and twenty Kalpas* worshipping and meditating upon Lord Ram. Whenever Lord Ram took birth as a human in each Treta Yug of the celestial cycle of four Yugs, Bhusund would go and visit the Lord to play with the child Ram. [Note—* 1 Kalpa is equivalent to 1 day in the creator Brahma's total life span of 100 years. Each Kalpa consists of 1000 four-Yug cycles, called the 'Chatur Yugs'. The visible creation's one life-span consisting of this four-Yug cycle called the 'Chatur Yugs' is this one day of Brahma. At the end of this Chatur Yug, there would be dissolution or the so-called 'dooms-day' when everything would be submerged in water. Then the next phase of life consisting of the next four-Yug cycle would start.

²The 'Kalagnirudra Upanishad' of the Krishna Yajur Veda tradition precisely deals with this subject. It is published as Chapter 10 of the fourth volume in this series dealing with the Upanishads of this Veda. The word 'Kaal' means end or conclusion, the word 'Agni' means the fire, and 'Rudra' refers to the angry form of Lord Shiva when he burns everything to ashes at the end of a cycle of creation.

³Refer 'Rudraksha Jabal Upanishad' of the Sam Veda tradition.

⁴The *five forms of Shiva* listed in this Upanishad are Saddyojat Brahm/Shiva, Aghor, Vamdeo, Tat-purush and Ishan. It ought to be noted here that Shiva or Rudra are regarded by the Upanishads as being synonymous with Brahm, the Supreme Being. The Panch Brahm Upanishad of the Krishna Yajur Veda deals with the concept of the 'Panch Brahm', or the five symbolic forms of Brahm, in its entirety. The fact that Brahm, Shiva and Rudra are the same Divinity known by different names because they perform different functions in creation has been expounded in the following Upanishads— *Varaaha Upanishad*, Canto 4, verse no. 32, *Dakshin Murti or Dakshin Mukhi Upanishad*, *Rudra Hridaya Upanishad* and *Skanda Upanishad* of the Krishna Yajur Veda, and the Atharva Veda's *Atharva-shir Upanishad*.]

-----*****-----

Brahman 2

1. Kalagnirudra personifies the Fire element and the Soma element simultaneously. [The Fire represents dynamism, heat and energy, while Soma represents the soothing elixir that acts as a balm for the scorching heat of the fire. Thus, the Lord is severe and ruthless on the one hand, and soothing and calming on the other hand. The sacred ash that Lord Shiva smears over his body represents the calmed-down fire, i.e. though it has its origin in the hot fire it has become finally cool. This implies that though the Lord becomes angry at times when he watches the creation going out of hands and

wayward to the extreme, needing to be wiped out so that the slate can be cleaned for a fresh start, he soon becomes absolutely calm and tranquil, re-submerging himself in deep meditation.]

Sage Bhusund asked him to elaborate upon the Bhasma (sacred ash) further and how to smear it on the body in order to purify the latter (just like one takes a purifying bath in the water of a holy river).

(Upon this request, the Lord replied—) ‘There is only one Fire, and it enters every unit of creation to assume the form of its latent heat, energy and warmth which acts as the concealed fuel or the inherently inflammable nature of everything in existence. The fire element is in-built into the fundamental structure of everything in existence¹.

In a similar way, the ‘Bhasma’ in its symbolic form (as described in the concluding part of Brahman 1) is present in the inner self of all the living beings as well as in the external world².

The whole world is created from the Fire and Soma. [That is, the world needs heat and energy in the form of the fire element to exist, and water element is also required for existence as the great elixir of life that provides nourishment, acts as a lubricant, and has a cooling and soothing effect. Water is represented by ‘Soma’ because the latter term applies to the cool juice extracted from a plant of the same name that is used during fire sacrifices as a cool drink offered to the Gods. The moon is also known as Soma because it is the heavenly pitcher of Amrit, which is the elixir of life stored for the use of Gods. Both the fire and the water were the primary ingredients needed to start the process of creation—the former provided the heat and energy, and the latter acted as the liquid that nourished life in its bosom and acts as a general soothing balm for the incumbent nascent creation. No life is imaginable without both these elements.]

The fire element represents Lord Rudra’s astounding ‘Teja’, or his stupendous glory, majesty, grandeur, radiance, splendour, cosmic powers, potentials and authority. When these virtues are revealed in the form of the burning fire and its leaping flames, they are Rudra’s dynamism on display, and represent the physical form that this element of Teja took. Therefore, ‘Tej’, in the form of the dynamic aspect of the fire element, is the sublime and subtle Rudra’s gross body which is called Raudri³. [In other words, ‘Raudri’ is the dynamic face of Rudra just like Sita is the dynamic face of Brahm—refer Sita Upanishad which is Chapter 9 of this volume.]

Soma is the personified form of the grand quality of Rudra that takes care of the creation by providing it with the soothing and rejuvenating elixir of life in the form of the water element. Once the creation started to be formed as a result of the efforts made by Rudra (Brahm), he created Soma (the water element) to harbour and nourish the nascent creation (or the embryo) and take care of it when it was born (or matured). It is this Amrit or Soma that gives perpetuity to life and its various ingredients. Therefore, Soma is the personification of the sublime mystical power of Rudra to create and sustain life in all its forms. It is therefore the symbolic gross body of these subtle and sublime virtues of Rudra⁴.

The stupendous powers and dynamism that Rudra possesses is manifested in the form of ‘Tej’ or the fire element which is symbolised by the power of ‘Vidya’ (knowledge, wisdom, enlightenment), or the power and authority that comes to a creature when he has knowledge. [Since knowledge is ‘enlightening’ and it ‘lights up the truth’ for the spiritual aspirant, it is like the Sun which lights up the world with its light and removes darkness represented by ignorance and its attendant delusions. The Sun is also the heavenly cauldron of fire, and is a vivid symbol of the eternal fire

element present in this creation. Even when the entire earth is drowned in the doomsday water, the Sun continued to maintain its fire that would eventually provide the heat and the energy that is needed for the next phase of creation. In fact, the Sun is regarded as the most magnificent and undeniable visible form of Brahm. The relation of the Sun representing the 'Tej' and the Moon representing the 'Soma' has been explained in note no. 6 appended to this verse.]

On the other hand, the 'Kalaa' that the creature exhibits—i.e. the variables of character, temperament, inclination and basic nature that characterizes all the individuals in this creation, and which not only vary from one situation to another in the same individual but are never alike in any given two individuals—is a symbol of the Soma aspect of Rudra. [The word 'Kalaa' is usually used in regard to the changing shape of the Moon's disc. The Moon continues to change every night. Each shape of the Moon is called its one Kalaa. Though the Moon is the same entity, but it is never the same on any two given nights. Likewise, a wise person who has seen the light of true knowledge, or has become enlightened realises that though the same Atma or the pure consciousness resides in all living beings, their gross bodies, inherent nature and character traits are never the same in any two individuals. This realisation has a calming effect on the restlessness of the mind of the wise man as now he becomes firmly established in the eclectic concept of 'non-duality' which stresses that inspite of what appears on the surface, the real truth about this creation is one. He sees the Moon change every night but knows for certain that the external view is not the correct thing as the actual Moon does not change at all. With this wisdom, he becomes steady in the knowledge of the universality of the Atma, the pure consciousness and the true 'self' that is a universal and immutable divine entity that is the only constant in this variable, fickle and ever-changing creation.

Now, when the term Kalaa, literally referring to the changing faces of the Moon, is linked to Soma, it acquires a different connotation. The Moon itself is also known as Soma as it is the storehouse of the heavenly elixir meant to give eternity and bliss to the Gods. Therefore, the term Soma refers to the liquid that is cool and invigorating, that provides life and bliss to the creature, qualities which are the characteristic virtues of water. It is exactly opposite of Tej, or the fire, that burns and scorches.

In iconography and mythology, the Moon is shown as being tucked in the lock of hairs on the head of Shiva. In other words, while Shiva acts as Rudra in his ferocious form as the concluder of creation, a form synonymous with the 'fire element', he is also the benevolent and merciful Lord of creation who takes care of the world and provides for its happiness and welfare, a fact that is symbolized by the presence of the Moon as an ornament on his head. This is also why ascetics experience the bliss of self-realisation that is like tasting nectar dripping from the head when they meditate, because their patron God is Shiva who carries the heavenly pitcher of Amrit, the nectar of Gods, on his forehead, and pours this nectar for the benefit of his devotees, the ascetics.]⁶ (1).

[Note--¹The 'fire' need not be in the form of a leaping, blazing, scorching flame. All forms of energy are basically the fire element in their forms. There are numerous types of energy that we have—such as for instance light energy, heat energy, kinetic energy, wind energy, electric energy, water energy, atomic energy etc. All of them are one or the other form of the fire element or the 'Tej' element because all have dynamism in them. It is a well established principle of physics that energy can change its form but still retain its primary name of 'energy'—viz. electric energy is converted into light and heat energy in the electric bulb; the heat energy of coal or the kinetic energy hidden in the running water of rivers is converted into electric energy in

power houses, and so on and so forth. Further, the atom is the fundamental unit of all things in this world, and since this atom harbours the fire element inherently in its electrons as the 'atomic energy' which is scientifically proved to be the most powerful form of energy known to mankind, it follows that everything that would have an atom as its basic building block would also conceal the fire element in it in a latent form. That is why it is said in this Brahman that the fire element is in-built in the structure of all things in existence.

In other words, it is the hidden 'fire element' present in everything in existence that not only gives it its inherent energy, heat, warmth, strength and vitality to retain its originality and natural character by helping it to keep its structure intact but also helps this creation to be energized and active. Even the coldest of the elements such as water secretly harbours the fire element in its bosom. This is proved by the fact that water can absorb heat and get warm, it boils and then becomes very scalding like the actual fire, it produces steam not only when it is boiling but also when it is in the form of solid ice as fumes of condensed air can be observed over large ice blocks, and it is an established fact of physics that ice is formed when water gives out its latent heat and cools down. Frozen water just cannot harbour any life; it is only when it is 'warm' that water can be expected to sustain life. Hence, it is correct to say that water also harbours the fire element latently in its bosom.

The air is hot as its movement creates friction which brings out or squeezes out the hidden fire element inside it. Since the sky is filled with this air and also harbours the greatest fire-ball of fire known as the Sun, it is too deemed to be an all-inclusive receptacle of the fire element. The earth is warm and that is why it harbours life in the first place inspite of the fact that a vast reservoir of the natural coolant, the water, covers almost three-quarters of its surface as the ocean, seas, rivers, lakes and other bodies of water. As we go deeper into the bowls of the earth, temperatures rise exponentially. The solid-looking metals become hot and melt on being heated, the rocks get scorching hot in the sunlight and retain their heat even after sunset, and coal, the most vivid and day-to-day proof of fire element being latently present in solids, is found endlessly inside the earth itself. Even the disintegration process of otherwise dead entities which have no apparent trace of fire in them, such as for instance a dead body of a man, is dependent upon warmth as is proved by the fact that if the same body is put in a freezer it would stop decaying. The process of fermentation and decay are directly dependent upon the fire element, and therefore they produce heat.

In short, there is nothing that remains aloof from the effects of the fire element, and there is nothing that can exist without the benevolent intervention of the fire element in one form or the other.

²This refers to the metaphoric significance of the term Bhasma as described in the concluding part of Brahman 1 above. The various characteristic qualities that determine the nature and temperament of the creature as well as the world in which he lives are the Bhasma referred to here. Further, it signifies that a wise and self-realised man realises the futility of pursuing and remaining engrossed in the external world, and therefore is motivated to burn all his desires for it—that is, he reduces all his desires for this world to ash; he eliminates the world itself by symbolically burning to ash all his desires for its charms and attractions. For him this world of material sense objects of pleasure and comfort are as good as Bhasma or the ash. He offers everything, including all the deeds done by him in the course of his daily life as he interacts with the external world as well as his desires and passions, as an offering to the supreme Brahm. This approach to life reduces everything to ash in the sense that no consequences of the deeds done by him accrue for him, and he is thereby freed from the horrible fate of having to suffer from the result of his deeds. He does not have to take a new birth because he has already burnt his ego and desires to 'ash', and with no fresh desires to be fulfilled and no ego to be satisfied, there is nothing to

drag him in this world and force his Atma to assume new body or take a new birth upon the demise of the gross body.

This is a metaphoric way of saying that everything is reduced to a Bhasma or the sacred ash for an enlightened man. He lives and enjoys the world with total dispassion which is symbolized by his wearing the Bhasma on his body. He is in close contact with the world just like his body is in close contact with the Bhasma, but for all practical purposes he knows that the world has no life and substance in it just like the Bhasma which is the burnt-out residue of things of value put into the raging fire. Firewood may have some value, but its ash is of no value whatsoever.

³The 'fire' represents the Supreme Being's stupendous dynamic ability to generate something from virtually nothing, and then to maintain it. This required exemplary effort as well as a high input of determination, energy, strength and vitality. This was represented by the fire element. Brahm forged together an alliance of apparently opposing factors and brought them together on the same platform so that they forgot their inherent animosity and begin to cohabit. Such as for example bringing water and fire together in the bowls of the earth or the body of the creature which is warm, indicating the presence of the fire, and has liquid contents in the form of blood, urine, mucous and other things indicating the presence of the water element. Brahm has brought the fire and the wind together as both co-exist in the creature's body as the warmth and the vital winds present inside it, as well as in the sky where air is the all-pervading entity but the leaping flames of the fire and the flying sparks of the fire are also present. Brahm allows the earth and the water elements to co-exist amicably as is clear when we observe that that water of the ocean is prevented from overflowing and submerging the earth though the ocean forms three quarters of the earth's surface, while at the same time reining in the earth and preventing it from soaking up water like dry sponge does. Brahm inspires the sky to become magnanimous enough to keep the elements formed as a result of this alliance in their respective places, and not let them collide with each other and be self-destructive; the invisible binding effect of the sky prevents all the entities embedded in its bowls from floating away into its endless bowls to be lost for ever. This forging and welding together of the most delicate and formidable alliance and keeping it in place for eternity is not a joke, and it required astounding effort on the part of Brahm, depicted in the form of his dynamic powers that are revealed as the heat and energy—the 'fire'—that could actually enabled Brahm to bring this marvelous feat into effect.

It must be noted here that the term 'Rudra' is not limited to being Lord Shiva's one form, but it applies as well to the supreme transcendental Brahm in the latter's dynamic form as is clearly stressed in a number of Upanishads, chiefly the Atharvashir Upanishad of the Atharva Veda. Therefore, the fire element is the dynamism of Brahm on display. It is through this element that the creative energy of Brahm was able to carry out the process of creation.

⁴Now, Brahm, the Supreme Being, needed water to cool down the cosmic cauldron just like we have heavy water to cool down nuclear reactors which would melt if there was no coolant. He also needed some fluid medium to carry the delicate embryo of creation and to nourish it in its nascent stage before it became self-sustaining. So Brahm created water or Soma—the cosmic elixir of life that provides nourishment to all the creatures of this world.

⁵The word Tej means glory and radiance. Obviously, knowledge and wisdom gives the person immense glory and fame. His knowledge makes him shine in this world, and also become a source of light symbolizing knowledge for others. Hence, a wise, erudite and learned man has the fire element in him as his self-illumination known as the 'Tej' which stands for the intensity of his wisdom, erudition, knowledge and spiritual illumination.

Similarly, each individual has his individual character which differs from the other. This is like the many facets of the fire which constantly changes in shape while burning. The flame is never steady but always flickering; its colour, type and contour

are never the same on any two occasions. This is the varying Kalaa of fire that is reflected in the creature's behaviour, temperament, nature, thinking process and emotions etc. which undergo change under different set of circumstances, and are different in different creatures.

⁶The concept of the Sun and the Moon as two aspects of Rudra helps to link the two entities in the metaphysical context. When the brilliant light of knowledge represented by the splendour of the Sun shows the true and correct path to the spiritual aspirant, when this knowledge begins to shine in his inner self, he would become self and Brahm realised. The light radiating out from the inner-self of the wise, enlightened, self-realised and Brahm-realised man makes him effuse a divine halo around his body much like the shining disc of the moon. Just like the moon reflecting the light of the sun, this divine halo around the enlightened man and the holiness and aura that surround him are the reflection of the glory of the self-illuminate brilliant Brahm residing in the inner-self of such a man. The high spiritual stature of his is reflected in all his habits, his nature and temperament, his thoughts, behaviours, actions and deeds etc.

Such a wise and enlightened man would also realise that though the numerous creatures have different bodies and show various character traits, they are in fact the numerous versions of the same divine Brahm revealed in each of their forms. This is because though the external features of the Moon appear to change every night, basically the entity that is called the 'Moon' is the same. Likewise, all living beings are basically the same Atma revealed in their individual forms though these forms may be widely different from one another. The gross body and its external characteristic features, as well as the mind-intellect that forms an inseparable component of this body though at the subtle level, may differ from creature to creature, but the basic identity known as the consciousness or the Atma that resides in this body would be the same in all the creatures of this creation.

The Sun represents the fire's heat, light and energy—i.e. it stands for the Tej, or the magnificent glory and the radiant splendour of the fire on display. In fact, the Sun is the fire element visibly seen in all its splendorous glory; it is fire personified. On the other hand, the Moon represents the light and life-support virtues of Brahm that are soothing and balm-like instead of the scorch usually associated with the fire.

In other words, the power of knowledge is that light which not only illuminates the bearer of this knowledge as represented by the Sun, but it can also light up or enlighten others like the Moon being lighted by the light of the Sun though the Moon has no light of its own. In other words, keeping company of wise and enlightened men would have its great positive affect on ordinary mortals so much so that eventually they would also inculcate the same degree of wisdom and enlightenment as the master they held in great esteem.

There is another spin to this connotation. Though the light given by the Sun is the same every night, the Moon does not reflect this light equally, for it changes its shape every night. This means that though knowledge is equally empowering and enlightening, different creatures accept and use it differently. That is why everyone does not benefit from reading the scriptures. The same body of knowledge would benefit different creatures in different ways and degrees.

The Moon represented by the terms Kalaa and Soma also symbolises the calmed-down aspect of the fire element as the light of the Moon is cool as opposed to the same light of the Sun which is hot.]

2. The Sun and the Moon are manifestations of the stupendous powers and dynamism that Rudra possesses as manifested in his two creations, the fire and the water elements called the Tej and the Soma respectively. In fact, the sharp and powerful dynamic aspect of the Rudra in the form of the Tej or the fire element and its powerful Shakti representing the energy, heat and light inherent to the fire is

represented by the Sun, and Rudra's calmer form or aspect, his soothing and healing power, his ability to rejuvenate and revitalize are revealed in the form of the Soma as represented by the Moon (2).

3. The Tej or brilliant and radiant aspect of the fire element is represented by the Electric, while the Soma or the life-sustaining elixir aspect of the water element is represented as the various types of Rasas or juices and their inherent six types of tastes¹ that are present everywhere in this world (3).

[Note—¹The six types of tastes are the following—sweet, salty, sour, bitter, pungent or hot, and astringent. Sometimes acidic (vinegar) and bland are also regarded as separate category of tastes. Refer Garbho-panishad, verse no. 1 of Krishna Yajur Veda tradition.]

4. The Amrit (the elixir of life) is produced from the Agni (the fire), and the latter is enhanced by the former. Hence, this world is a manifestation of both the Amrit and the Agni (because it is created out of them as stated in Brahman 1, and both are necessary for its survival). Both of them are therefore like oblations made into the sacrificial fire (4).

[Note—The word Amrit refers to the ambrosia of life in all its many variations and connotations. It is a metaphor for life in all its colourful, dynamic, vibrant and lustrous form. The opposite of Amrit is 'Jahar' or the poison that snuffs life out.

Since 'life' itself depends upon the warmth, energy, heat and light provided by the fire element, it is appropriate to say that Amrit, a symbol or metaphor of life, was created from Agni or the fire. Again, the virtues of fire such as heat, energy, warmth and light are needed to produce food, procure and cook it, then digest it and make its nourishment available to the body to help it survive. So, Agni is akin to the elixir called Amrit that sustains life on this planet. Only a living world engages in dynamic activities and makes vigorous efforts in many ways. Any activity generates energy and heat as is evident in all spheres of daily life; a man sweats when he does a strenuous exercise because his body gets hot and requires cooling by perspiring; the rubbing together of any two objects causes friction and this generates heat and even a spark of light which is like the self-generated 'electric' mentioned earlier. If there was no life in this world, it would be like being in the 'ice age' when there was no fire evident on the earth and everywhere it was ice and more ice. Thus, the world as we know it today is a visual embodiment of these two primary elements of creation—the Agni and the Amrit. They are like oblations made to the sacred fire because this whole exercise is undertaken by the Supreme Being himself, and a wise man regards all the activities as an obligatory deed done to carry forward the mandate passed on to him by the Supreme Being to help perpetrate this creation. Hence, all forms of exercises that sustain life in the form of the Agni and the Amrit are like oblations offered to the deity known as Brahm, the Supreme Being.]

5. The Soma has an elevating and uplifting tendency as it makes a man look upwards, while the Agni has an inherent tendency to make him look downwards. This known world is situated between these two (5).

[Note—The Moon representing Soma, which is another name for Amrit, the elixir of life, is so soothing, revitalizing and energizing that one wishes to look up at it after a day's hard sweat and toil. A man would lie on grass and gaze endlessly at the moon to calm down his nerves. This is a symbolic way of saying that the Soma is uplifting for his spirits. On the other hand, the Agni represented by the scorching and blindingly dazzling Sun makes a man wince and look down to avoid its glare. A hot day knocks him down and he feels tired and low on energy. This is a symbolic way of saying that the Agni makes him look down. Again, remaining engaged in the

activities of the world is like being near the Agni because this world never gives peace and bliss and keeps the man agitated and restless as compared to being aloof from it and remaining engrossed in one's own inner self or doing meditation which is always rejuvenating for the soul like one lazing on the grass and looking up at the Moon which is regarded as the heavenly pitcher of Amrit, and hence called Soma.

The whole world lies in between these two extreme states of existences. On the one hand is the man who is neck-deep involved in the affairs of the world and retires in the night completely worn out, only to rise up the next day and repeat the cycle, and on the other extreme end is the man who is totally unconcerned with the world around him and lives a life of total detachment, remaining completely indifferent to and dispassionate towards everything. The first state is akin to the Jagrat or waking state of existence of consciousness, while the second is like the Sushupta state of deep sleep marked with complete indifference and blissful state of consciousness. The entire world oscillates between these two states—a man remains engaged in the activities of the world, goes off to sleep and begins to dream, then goes on further to snatch perfect rest in the deep sleep state, and reverts back by the same path to wake up in the world again. This situation is metaphorically stated in the statement that the entire world exists between the Agni (the Jagrat state of activities requiring heat, energy and light) and Amrit (the totally indifferent state of bliss obtained in the Sushupta state). Since the intermediary state is called the 'dreaming state of consciousness', it follows that the world in which a creature lives is also like a dream—i.e. it has no reality, and is deluding. In fact, like the dream itself, the world is the creation of the mind, a pictorial depiction of what the mind thinks and imagines. Refer Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 4, Brahman 3, verse nos. 9-18.

Another interpretation would be the fact that the entire world lives between the two aspects of existence—i.e. the 'day' symbolised by the Agni because it is during the day that the Sun, a visible emblem of the Fire God, shines, and the 'night' symbolised by the Moon which is regarded as the heavenly pitcher of Soma or Amrit.]

6. The Agni element has a pulling-down effect on the Amrit that drips from the Soma element. In other words, the aspect of creation that is represented by the Agni or fire element acts as a drag on the creature's spiritual progress in the upward direction symbolised by the experiencing of bliss and restfulness that comes with having tasted the nectar of Soma element (6).

[Note—When the aspirant has tasted the spiritual bliss that comes with self-realisation which is likened here to having tasted the nectar of Soma, the compulsion to engage in the affairs of the material world is like him being forcibly pulled down into the hellish fire of Agni. He feels tormented and scorched; all his peace and bliss are reduced to ashes. The Agni symbolising the vicious form of this world acts as a drag on his blissful state of having drunk the Soma, the ambrosia of self-realisation.]

7. While one aspect of the Agni element (representing the various aspects of this material world and the desire to remain engaged in them and doing deeds to enhance one's material well being) that acts as a drag on the creature and pulls him down is like the Kalagni or the fire of the dooms-day (that would kill or ruin him), the other aspect of the Agni element (representing the virtues that lift him spiritually just like the hot air that can lift the balloon) is like the Soma which is uplifting for his soul instead of pulling it down asunder.

Thus, the same Agni can be both uplifting as well as degrading¹ (7).

[Note—¹If the man is wise enough, he would use the opportunity of having got the body of a human being in striving to do noble and auspicious deeds, doing

contemplation and meditation, and generally endeavouring to acquire knowledge of the reality of this world and his 'self', as well as to learn the ultimate spiritual Truth intelligently so that he can break free from the endless cycle of birth and death, because it is only possible to do so as a human and not in other forms of births as animals, birds, insects etc. The reason is that only a human being can think intelligently and decide his fate, only he can research and choose from the various options open to him, only he can read, enquire, discuss and deduce, only he can keep company of those who are wise and enlightened, only he can meditate and contemplate, only he can regulate his deeds and actions, and only he can help himself to break free from the chain of birth and death. In fact, every man is able to decide for himself whether or not he would like to break free from all the spiritual fetters that shackle all living beings in this creation; he is the one who is actually able to do so amongst all the living beings because he can exercise control over his natural instincts and habits, he can actually control his sense organs, and he can actually distance himself from all the temptations of this world.

Naturally, this would be uplifting and liberating for his soul—symbolised by the Agni or fire, because its flame always rises up, and because it is a treasury of dynamic power and force that is translated into strong will-power of the man and his diligence and sincere effort that actually helps him to attain his spiritual objectives. Further, this is like Soma because it provides eternal bliss and happiness to an attained and self-realised man, an enlightened and wise man. The efforts that a wise man makes for his spiritual upliftment is a manifestation of the Agni element that is latently present in his inner self acting as the force that thrusts him upwards or aids in his spiritual upliftment.

On the other hand, if a man is stupid enough to waste his energy and strength—forms of the Agni latently present inside him—in pursuing this world and remaining ever-engrossed in its activities, it is tantamount to the Agni pulling him down. If he remains pervert and engaged in enjoying the urges of the sense organs, if he spends his stamina and energy in pursuing this world and its sense objects, then he would be consuming his latent energy for lowly purposes, which means that his innate energy and dynamism has ruined him, has led to his downfall, instead of lifting him up.

To illustrate this idea, let us understand that while the flame has a natural tendency to rise and move upwards, it pulls down anything that it comes in contact with by burning them and reducing them to ashes. Tall trees are reduced to ash, and huge buildings are reduced to rubble once they catch fire, though the flames leaping through them always go skywards. The same fire can throw sparklers high up in the air while pulling down erect structures, such as a canopy, that stand over it.]

8. [Verse nos. 8-9 describe how the same 'Shakti' (power, energy and knowledge) can be the 'Adhar' (base) that produces two different results depending upon how one handles it. On the one hand is the spiritually uplifting Shakti or dynamism of Shiva, the cosmic Consciousness, which is compared to the Soma, the elixir of eternal life, that forms the Adhar or basis of a person's spiritual elevation and ultimate liberation and deliverance, and on the other hand is the denigrating and demoting aspect of the same Shakti which proves to be like the dooms-day fire of hell, called the Kalagni, that would pull him down to this world of delusions and ignorance and keep him ensnared there if the man is careless and falls prey to temptations.]

The divine and sublime form of the Kalagni (here representing Lord Kalagnirudra himself personified; the spiritual energy of cosmic Consciousness that comes with self-realisation that is a metaphor for Lord Shiva) that is responsible for the (spiritual) upliftment of the creature is based on the 'Adhar Shakti*' symbolised by the Soma

located in the lower end (of the body). So, while the Kalagni refers to Lord Shiva, the Soma is a symbolic form of his divine Shakti (8).

[Note—We observe here that the same word Kalagni represents at once the doomsday fire that is ruinous for the creature as well as Lord Shiva in his powerful, spiritually liberating form. Similarly, Shiva's dynamic form as Shakti also has a double role to play—either as an uplifting force for the spirit that would pave the way for the creature's liberation and deliverance, or a degrading force by engulfing the creature in enjoyment of material comforts and sensual pleasures of the world that would bog him down forever in the quagmire known as the 'world'. The word 'Adhar' means the base upon which something rests or relies. Hence, the entire exercise of self realisation and enlightenment is based on the premise that it gives immense peace, tranquility, bliss and happiness to the creature which is equivalent to his Mukti, or his freedom from all fetters related to the body and the world. It is this power or 'Shakti' that keeps him going; it is the 'Adhar' or foundation upon which self realisation and enlightenment on the one hand, and the creature's final liberation, deliverance, emancipation and salvation on the other hand depend. This is because the natural tendency of every creature is to swerve towards things that would give him peace and bliss as opposed to things that would be the cause of his sufferance and pains. When a wise man discovers that meditating upon the Truth or Shiva is a provider of eternal bliss and tranquility to him as compared to the pursuing of the material world which gives only transient happiness, it is natural for him to follow that path which leads him upwards instead of the path that would bog him down in this world.

The Tantra philosophy and the Upanishads that deal with Yoga based on this school of thought says that there are various Peeths or seats of divine energy inside the body where both Lord Shiva and his dynamic form Shakti are established. During the process of Yoga, the vital winds or Prans are made to pierce through these centers on its way up to the top of the head where Lord Shiva's enlightened form symbolically resides. The symbol of Shiva, the Shiva Lingam, is said to be established in the Mooladhar Chakra located in the lower part of the abdomen where the genitals are located. The bliss that the practitioner of Yoga experiences when this area is titillated as the Pran rubs against it en-route upwards towards the head is like enjoying the ecstasy of drinking the intoxicating liquid called Soma. So, the 'fire' that kindles self realisation and enlightenment is at once spiritually uplifting for the creature as well as a provider of great bliss and happiness to him.

There are many Upanishads that endorse this view point. For instance, the fact that the body is an abode of Shiva has been endorsed in the following Upanishads—(a) Krishna Yajur Veda's Yogshikha Upanishad, Canto 1, verse nos. 72, 165-168, Canto 2, verse nos. 6-10, 20, Canto 3, verse nos. 1-15, Canto 5, verse nos. 2-5, 13-16, and Canto 6, verse nos. 32-33, 47; and the Skand Upanishad, verse nos. 10-11. (b) Sam Veda's Jabal Darshan Upanishad, Canto 4, verse nos. 48-59.

Similarly, the fact that the body is an abode of Shakti (the dynamic manifestation of Shiva and revealed as a divine Goddess) and the location of the four Peeths or seats where it is established is narrated in the Krishna Yajur Veda's Yogshikha Upanishad, Canto 5, verse nos. 6-12.

The fact that the body is an abode of both the aspects of Lord Shiva—i.e. as his neutral form as Shiva and his dynamic form as Shakti—is expounded in the Krishna Yajur Veda's Yog Kundali Upanishad, Canto 1, verse no. 75, and the Yogshikha Upanishad, Canto 5, verse no. 4.

The Krishna Yajur Veda's Yogshikha Upanishad, Canto 2, verse no. 10 describes the establishment of the Shiva's symbol, the Shiva Lingam, in the body.

*See note no. 1 of verse no. 9 below.]

9. While the sublime and enlightened form of Shiva is located upwards (in the head), his more mundane and grosser form as the Shakti is located downwards (in the lower part of the body)¹.

The entire world is situated between these two. It is Shiva and Shakti that rule over this world² (9).

[Note--¹This observation has different connotations. One is that 'Shiva' refers to the sublime and subtle aspect of consciousness symbolised by its location in the head which is a metaphor for crown or citadel, or the highest stature of wisdom and enlightenment that a creature can achieve, while 'Shakti' here refers to the grosser aspect of the same consciousness that pulls the aspirant down from his exalted stature and keeps him bound to lower aspects of life that are symbolised by the Shakti's location in the lower part of the body. It ought to be noted here that intelligence and noble thoughts have their center in the head, it is in the head that the mind and intellect are located which help one to become enlightened, wise and erudite, it is the mind that helps one to discriminate between the good and the bad, to decide and analyse and select what is to be accepted and what is to be rejected because it is the mind that makes the difference between a wise man and a criminal or an animal, while sensual indulgences and pleasures of the sense organs are metaphorically depicted as being located in the lower part of the body, such as the abdomen where all the organs of digestion, excretion and reproduction are located which indicate constant desire for indulgences and gratification of the sense organs, such as eating, drinking, sensual pleasures, merry-making and generally remaining engrossed in satisfying one's natural instincts. It is the head that can inspire a man towards nobler goals in life, whereas the lower part of the body would only make him seek comfort and pleasure from day to day.

The second interpretation is that the dynamic power of consciousness represented by Shiva's Shakti is needed by an aspirant to succeed in his spiritual endeavour. Earlier, verse no. 8 has called this reliance on Shakti as the 'Adhar' or base.

This Shakti is like the fire of the oven which is always lighted below the grate in order to cook food placed on top of the grate. It is the Adhar or basic requirement for cooking food and the very heart of the oven because if this fire is extinguished the oven would be worthless and the food cannot be cooked. Similarly, the fire burning in the household hearth helps in ventilating the house as the hot air rises above the chimney and fresh air is drawn in from the outside through the doors, windows and ventilators.

When these two instances are applied to the process of Yoga, the symbolism becomes very obvious. During Yoga exercises, great strenuous effort is made to lift the Pran, the life conscious factors, from the lower part of the body, and make it travel to the head where the practitioner experiences the thrill of self-realisation and the ecstasy of enlightenment. The entire process involves a number of steps and all of them rely upon Shakti or the dynamic forceful powers of consciousness to succeed.

In the context of Yoga, great amount of energy or 'Shakti' is needed to control the Pran, the vital winds, by means of doing Pranayam (breath control exercises), Dhyana (concentration of the mind), as well as various other exercises such as Aasanas (sitting postures), Bandhas (closure of various openings of the body such as the anus) and Mudras (general postures of the hands, legs, head, fingers etc.) so that the Pran (life consciousness represented by the vital winds) can be diverted from the lower part of the body and made to go upwards to attain enlightenment after overcoming many hurdles, such as overcoming the various Granthis or knots present in the body, not to mention the strenuous effort that is needed to activate the Kundalini (the coiled subtle energy center located in the lower end of the spine) and the Chakras (the whirling energy centers of the body) that together help in successful completion of Yoga. Since the muscles of the abdomen are involved in the entire exercise, and the fact that Kundalini and the clutch of important Naadis (nerves) through which Pran is

made to move upwards to help in obtaining success in Yoga are located in the lower end of the body, it is said here that the dynamic aspect of Shiva as represented by the Shakti is present in the lower part of the body. All these have been elaborately dealt elsewhere in the Upanishads that deal with the concept of Yoga.

When Yoga is successful, the ascetic experiences bliss of self-realisation, and this happens when the Pran reaches the forehead. That is why Shiva's sublime form is said to be located in the upper part of the body, i.e. in the head. Besides this, Brahm is also said to reside in the top of the head in the region called the Brahm-Randhra which is the hair-like slit on the top of the cranium.

The location of Shiva in the head refers to the fact that the symbolic third eye of wisdom is located in the forehead. Lord Shiva is regarded as the wisest and the most enlightened God, and his exalted seat is in the head symbolised by this third eye. It is here that the ascetic experiences the bliss obtained by self-realisation; it is in the head that the grand virtues of wisdom, erudition, knowledge and enlightenment symbolised by Shiva are located. It is in the head that the brain is located, and it is the thinking power of the brain and its ability to control the functioning of the rest of the organs of the body of the creature that makes the head so exalted and honoured in the scheme of things vis-à-vis this creation. An ascetic endeavours to concentrate his vital Pran and its energy here in order to experience the ecstasy of self-realisation, it is here that enlightenment has its exalted seat. On the other hand, the mundane aspect of conscious life as lived in the gross world of material sense objects and symbolized by enjoyment of the sensual pleasures of the body as well as the material objects of the world are demeaning for the spirit of the ascetic. Hence, they are said to be located in the lower part of the body where his genitals and excretory organs along with the other organs related to his ordinary life spent in sustaining his body are located. A lowly and fallen man would spend his Shakti or vital energy or Agni inherently present in his body in pursuing sensual enjoyments, and in eating and drinking.

²The world of the living creature metaphorically lies between these two extremities of the body—one is the lower part symbolising his tendency of enjoying the world and its sense objects and sensual pleasures, and the upper part symbolising his tendency to acquire knowledge, seek the truth and achieve higher and nobler goals in life. As the former pursuit would pull a man down from his natural exalted stature, it is said to be symbolically present in the lower part of his body, and since the latter pursuit is uplifting for his soul, it is symbolically said to be located in the upper part of the body.

Another way of interpreting this verse is to say that the entire existence of a creature is marked by two milestones in his life—one is his involvement in the world which leads to his spiritual downfall, and the other is that which gives him a level of wisdom and enlightenment that leads to his spiritual upliftment. While the former would be equivalent to the lower form of Shiva's dynamic power that is responsible for keeping the creature moribund and engrossed in this artificial world by pulling him down, the latter aspect would be Shiva's higher form of dynamic power that is uplifting for the soul. All creatures fall within this parameter—there are either spiritually enlightened or are engulfed in the darkness of ignorance and delusions. These are like the two outer pegs that mark the boundary within which the world lives.]

10. [Verse nos. 10-16 define the true meaning of the term Bhasma which literally means the physical ash that is produced by burning anything, but in metaphysical context it has a very broad import. There are two other Upanishads which deal with the concept of Bhasma—one is the Bhasma Jabal Upanishad belonging to the Atharva Veda tradition, and the other is the Kalgñirudra Upanishad of the Krishna Yajur Veda tradition which bear an uncanny resemblance to the theme of Bhasma and how to prepare it, how to wear it, what is its true meaning and significance etc.]

The world is repeatedly reduced to Bhasma (ash), i.e. annihilated or eliminated or decimated by the Agni (or the ruthless form of Rudra as the Kalagni; or the enlightened form of Rudra as the Shiva principle). This Bhasma is the Virya or the symbolic sperm (product; result; reward) of Agni. [Refer verse no. 11 below.] (10).

[Note—The simple meaning here is that an enlightened man who has known the spiritual truth, who is aware of the falsehood and grossness of the material world as well as his own body, who has become self-realised, and who understands the reality of Shiva principle—such a man would burn all his desires and wants for good; he would literally reduce them to ashes. With all desires and wants eliminated, the material world is also eliminated or reduced to ashes. This is the height of spiritual awakening for which the term Shiva is a metaphor and an aphorism.

There are other ways of interpreting this verse also. One is that Lord Shiva in his ferocious form as Rudra reduces this world to ashes when evil and perversion have reached the climax. The Virya or sperm here in this context would mean indulgences in sensual pleasures and engaging in all sorts of perversions and evil deeds in order to satisfy the desires of the body and its sense organs. This is not only demoting for the spirit but also exhausting for the vitality and strength represented by the Agni or the fire element that is present in the body of the creature. This indulgence incites or stokes the fire of passion and lust that consumes the body fast and reduces it to Bhasma or sacred ash. All the energy, strength and vitality are sapped and exhausted by a man who indulges in this world and its uncountable temptations.

The second interpretation would be that a wise, self-realised and enlightened man is one who has realised the Shiva principle—i.e. the Truth and the Reality that exists behind the façade of falsehood and half-truths. He is the one who has experienced the spiritual Truth and the bliss that inherently accompanies it. This fills him with ecstasy and he does not bother to find enjoyment by getting indulged in the transient comforts and pleasures of the material world and its sense objects. For him this world is as good as non-existent. In other words, he has burnt all his desires for seeking gratification for his senses and acquiring the numerous pleasures and comforts that this world has to proffer to him. For all practical purposes, the Agni or the fire of the Shiva principle (i.e. the fire of renunciation that is kindled by Self realisation and Truth realisation that is known as the Shiva principle) has reduced everything to Bhasma or ash. No desires, wants, aspirations etc. are present in the creature who has reached this exalted state of existence. The Virya or sperm in this context would be the reward of his realisation of the Shiva principle or the awareness of the spiritual truth of his ‘self’ and the falsehood of the world that kindles renunciation as well as enlightenment.

The word ‘Virya’ is derived from the root ‘Vir’ meaning strong, powerful and vigorous. Therefore, Virya is the entity that possesses the essence of these glorious virtues that are deemed to present in a creature; it embodies these powerful and dynamic forces of creation. It is an essence of the Agni or the fire element because the sperm is generated by the nourishment that the body extracts from the food eaten by the creature, and it represents all the strength, vitality, vigour, power and stamina that the creature possesses. Since a new generation is produced when this sperm is ejected in a fit of ‘heat’ (passion) and implanted in the female who is ‘hot’ (sexually excited), it is used as a metaphor for Agni.]

11. [This verse defines the term ‘Bhasma’ as well the Mantra used to invest and empower it with stupendous spiritual and mystical powers.]

The term Bhasma (ash) means to reduce all the sins or misdeeds and their negative consequences to ashes. [The Bhasma of the sacred fire has the magical ability to eliminate all sins and their negative affects, and thus pave the way for the aspirant’s

spiritual welfare. However, it must be noted that the present Upanishad uses the term Bhasma to mean the ash that is produced by using dried cakes of the cow-dung for the purpose of fuel to the exclusion of all other types of fuels. Refer Brahman 1.]

Hence, those who understand its true meaning utter the Mantras ‘Agniriti Bhasma¹’ etc. as prescribed in the Vedas to invest the Bhasma (the sacred ash) with stupendous spiritual and mystical powers so that when the empowered Bhasma is applied on the body, it can cleanse it or purify it of all the worldly taints in the true sense² (11).

[Note—¹The Mantra ‘Agniriti Bhasma’ in the present context would mean that the proper way to worship the sacred Agni or the fire is to understand the importance of the Bhasma or the ash produced by it. This Bhasma is the essence or the Virya of the Agni as stressed in verse no. 10 above. It embodies all the dynamism, virtues and glories that are the characteristic attributes of the fire element as narrated in the preceding verses, qualities for which the fire is not only so much feared but also as much revered, honoured and welcomed in this world.

The destructive power of the fire to burn and reduce to ashes whatever it touches or whatever is put into it is ‘feared’, but it is only feared by ignorant people who do not understand that this negative trait of the fire is a boon in disguise because this quality enables the fire to destroy all the sins and their consequences as asserted in this verse. The fire helps to purify by burning and reducing to ashes all the negativity in the man.

So the term Bhasma assumes two distinct meanings here—one is to understand that this ash embodies all the positive, laudable, glorious and powerful virtues of the fire element but excludes its negative aspects such as its excessive heat and scorching nature, and the other is to understand this ash symbolically stands for the power of the fire to reduce to ashes all the impurities and negative traits that are present in a creature.

To wear the Bhasma on the body also has two interpretations—One meaning is to symbolically accept all the virtues of the sacred fire and declare that the wearer (the spiritual aspirant) has now onwards become a flag bearer of these virtues that he vows to uphold. He in fact declares that by accepting the ash he has become as pure as the fire element itself, and that he has put his sinful past behind him. The second interpretation is that he has burnt to ashes his ego, desires and attachments with the material world and its inherent falsehoods, and instead has become enlightened enough to de-link and distance himself from them. He has symbolically burnt the world and its myriad temptations and charms to ash, thereby freeing himself from the fetter of worldly attachments, involvements and compulsions. This ash on the body would be a constant reminder to him of this state of his exalted existence.

²This is in contrast to ignorant people who think that the term Bhasma has only a physical dimension meaning ‘ash’. They forget that the fire sacrifice itself is a symbolic way of burning everything to ashes. This ‘everything’ does not mean only physical offerings of material things to the fire but has a wider metaphysical import to include one’s negative temperaments, worldly attachments and desires, and all shades of Vasanas and Vrittis (desires, passions, lust, natural inclinations and habits) which affect the purity of the ‘self’ of the spiritual aspirant. They are all supposed to be reduced to ashes in the fire of renunciation, detachment and dispassion that is kindled by the knowledge of the ‘self’ which is pure consciousness and the awareness of the Absolute Truth known as the Shiva principle.

Smearing of this ash is treated as being equivalent to having a ritualistic purifying bath in some holy river because if the ash is smeared with proper wisdom and understanding it has a profound symbolic cleansing property that supersedes the cleaning affect of the river, because while the latter can only wash the dirt of the external body which however is gross and perishable and not the ‘true identity’ of the aspirant, it can never clean or wash the inner self which is the entity that requires the

actual cleaning and washing. In contrast, if the Bhasma or ash of the sacred fire sacrifice is worn with proper wisdom, it can accomplish this inner cleaning, the inner purging.

Thus, the symbolic bath taken by the way of wearing of the ash on the body by the aspirant with proper wisdom and knowledge is far superior to any other forms of purifying one's self.]

12-13. When this Virya (or the essence) of the Agni (or the fire element), i.e. the Bhasma (the ash of the sacred fire in which dried cakes of the cow-dung are exclusively used as fuel as well as an oblation made to the consecrated sacred fire) is symbolically mixed or conjoined with the Soma (or the elixir of eternal bliss represented by the ecstasy and spiritual well being that comes upon self-realisation and attainment of the Shiva principle)¹, it produces the same eclectic effect and rewards the aspirant with the same benefits that are produced or achieved by doing holistic Yoga, complete with all its eight limbs (called the 'Ashtang Yoga'—or the eight-fold path of Yoga)², and being successful in it. [In other words, the spiritual benefits of wearing the sacred Bhasma are equivalent to following the rigid principles of the eight-fold path of Yoga, which is a very strenuous and a difficult proposition, and obtaining success in it.]

In fact, these eclectic benefits are available to the aspirant who wears the sacred Bhasma even without his taking the trouble of doing the Ashtang Yoga. The sacred Bhasma empowers him to obtain control over Nature and attain super-natural powers called the various Siddhis³. [These same mystical powers are available on success in Yoga and have been listed in the Upanishads dealing with this philosophy.]

The sense of spiritual upliftment, fulfillment, contentedness, peace and bliss that comes by wearing the sacred Bhasma after fully understanding its metaphysical significance is akin to being successful in Yoga. This is because the word Yoga literally means 'bringing about a union or fusion', and the Bhasma brings about a union between the soul of the individual creature involved in this world and living in a gross body, and Shiva, the cosmic Soul. [The term 'Shiva' is very relevant here as this Lord is the patron deity of those who do Yoga. Besides this, Shiva represents the Supreme Being known as Brahm.]

A man who wears the Bhasma wisely is doing a symbolic form of Yoga. This is because he goes about his routine life in the normal manner but remains profoundly detached from everything he does. That is, he is able to establish a most unusual union or fusion or coordination between two most unlikely and contradictory situations—on the one hand he lives in a materially oriented world of sense objects, remains involved in its activities and continues to enjoy the world normally, and on the other hand he is able to remain completely detached from them and non-involved in same sense objects, he is able to maintain a safe distance between his inner self and the external body that is actually concerned with worldly involvement. He maintains his internal poise and calm inspite of all the turmoil that overwhelms his existence externally in this world. This is a great achievement that is tantamount to his doing Yoga comprehensively with all its eight disciplines (12-13).

[Note—¹When renunciation and dispassion representing the essence of understanding the true meaning of the fire sacrifice is self-generated as result of kindling the fire of self-realisation and enlightenment that comes with proper understanding of the Shiva principle, it gives genuine bliss, peace, calmness and tranquility as well as steadiness, contentedness and a sense of fulfillment to the spiritual aspirant. These latter virtues are metaphors for Soma because literally the latter refers to the extract of the Soma

plant which has an intoxicating, stress-reducing and bliss-inducing effect on the drinker.

This achievement is also obtained by being successful in Yoga—the successful Yogi (one who practices Yoga) also experiences true spiritual bliss and tranquility along with becoming enlightened.

²*Ashtang Yoga*—The eight paths or steps are the following:-

(i) *Yam**—broadly meaning self restraint and it covers such virtues as non-violence (*Ahinsa*), honesty and truthfulness (*Stya*), abhorring theft (*Asteya*), abstinence, celibacy and detachment from passions (*Brahmacharya*), and non-accumulation and non-possession (*Aparigraha*).

(ii) *Niyam**—or observance of principles or codes of conduct in a religious pursuit. Such as having good habits and contentment, observing austerities and penances, self-study of scriptures, following a righteous, virtuous and noble way of life etc.

According to *Skanda Puran*, the ‘Yam and Niyam’ mentioned above are ten, and they have been described in *Skanda Puran* in these words:-

सत्यं_क्षमाऽऽर्जवं_ध्यानमात्स्यमहिंसनम्॥ दमः_प्रसादो_माधुर्यं_मृदुतेति_यमा_दश।
शौचं_स्नानं_तपो_दानं_मौनेज्याध्ययनं_व्रतम्॥ उपोषणोपस्थदण्डौ_दशैते_नियमाः_स्मृताः॥__
(स्कन्दपुराण, ब्रा० ध० मा० ५/१९-२१) _

The ten ‘Yams’ are—truthfulness, forgiveness, simplicity, Dhyān (meditation, concentration of the mind), lack of cruelty (or presence of compassion and mercy), forsaking violence, restraint of mind and sense organs, pleasant demeanors and sweet towards all).

The ten ‘Niyams’ are—cleanliness/ablution, bath (purification of body), Tapa (austerities, penances, sufferings), alms and charities, keeping silence, Yagya (sacrifices, religious rituals), self study, observance of vows, keeping fasts, celibacy. (*Skanda Puran*, Bra. Dha. Ma. 5/19-21).

*The 10 Yams and 10 Niyams—The *Varaaha Upanishad* of *Krishna Yajur Veda* tradition, in its Canto 5, verse nos 11-14 lists the ten Yams and ten Niyams.

(iii) *Aasan*—the various postures of the body adopted while doing Yoga or meditation. This is the physical aspect of Yoga. The various postures are designed to free the body from toxins, and they calm down the body as well as the mind which is trained to focus on *Brahm* or *Atma*, which is pure and infinite consciousness and a fount of light and enlightenment, instead of wandering aimlessly and getting entangled in a web of miseries and confusions represented by this world. Some of the *Upanishads* that describe the various *Aasans* are the following—(i) *Shukla Yajur Veda* = *Trishikhi Brahmin Upanishad*, Canto 2, verse nos. 35-52 describes seventeen *Aasans*; *Mandal Brahmin*, *Brahman* 1, section 1, verse no. 5. (ii) *Krishna Yajur Veda* = *Varaaha Upanishad*, Canto 5, verse no. 15-17; *Yog Kundali*, Canto 1, verse nos. 5-6; *Yog Tattva*, verse no. 29; *Yog Shikha*, Canto 1, verse no. 84. (iii) *Sam Veda* = *Jabal Darshan Upanishad*, Canto 3, verse nos. 1-13.

(iv) *Pranayam*—the control of the life-giving fresh breath or the vital wind force of life called *Pran*. It helps remove distractions and agitations of the mind, removes the various toxins present in the blood, opens up clogged veins and arteries, relaxes the nerves, and ultimately helps to elevate both the body and the mind. It activates and re-energises the battery of the body. The importance of *Pranayam* in Yoga can never be fully emphasised because it is the main tool of Yoga. Some of the *Upanishads* describing the process of *Pranayam* are the following—(i) *Shukla Yajur Veda* = *Trishikhi Brahmin Upanishad*, 2/53, 2/92-120. (ii) *Sam Veda* = The entire Canto 5-6 of *Jabal Darshan Upanishad*; *Yoga Chudamani*. (iii) *Krishna Yajur Veda* = *Brahm Vidya*, verse nos. 21-22, 66-76, *Dhyān Bindu*, *Yoga Kundali*, Canto 1, verse nos. 19-62, *Yoga Tattva*, *Yogshikha*.

(v) *Pratyahar*—this is the state of withdrawal of the mind from agitations caused by the stimuli-inputs reaching it from the five sensory organs of perception of the body, which act like radars collecting various information from the outside world.

With the lack of inputs, i.e. the radar going blank, the mind does not have to bother itself about the output, which is the control of the organs of action. Hence, it finds time and energy to relax and contemplate and ponder upon other more important matters of life such as the spiritual and ethereal rather than spending its energy in the humdrum, routine work of the world. The entire Canto 7 of Jabal Darshan Upanishad of Sam Veda is devoted to this theme.

(vi) Dharna—it means training of the mind to focus on one point; it is concentration of the mind as opposed to its constant state of being in a flux, always volatile and restless. It helps sharpen the intellect and empowers it with tremendous potentials like the rays of laser —precise, incisive, sharp, powerful, effective and surgical in nature. It also refers to firm conviction, belief and faith in the chosen path. The entire Canto 8 of Jabal Darshan Upanishad of Sam Veda is devoted to this theme.

(vii) Dhyan—uninterrupted contemplation and meditation without an object used as a medium to concentrate the mind. The intention here is to heighten awareness of the pure-self and to establish oneness with the macro-soul of the cosmos. It results in the achievement of calmness, peace and tranquility. The practical benefit in life is the calmness and serenity achieved by a seeker/aspirant during the process of Dhyan, and this calmness and tranquility spills over into all other aspects of life, thereby strengthening the emotional, intellectual and spiritual fabric of the creature. The entire Canto 9 of Jabal Darshan Upanishad of Sam Veda is devoted to this theme.

(viii) Samadhi—it is the final step and final stage of meditation, and it is a trance-like state of existence wherein the creature remains virtually awake in this world, but on a subtle plane he remains totally oblivious of the existence of the surrounding gross world. This Samadhi leads to bliss and happiness. In this state, the seeker/aspirant merges himself with the supreme Self, which is the real Truth and absolute Reality. Such people become truly enlightened souls who have developed union with their parent, the Brahm. The entire Canto 10 of Jabal Darshan Upanishad of Sam Veda is devoted to this theme.

All these limbs of Yoga work together in unison. The 1st five steps are mainly concerned with tuning the body and mind leading to its focus on the truth in the 6th and the 7th steps. The integration of the body, mind and soul into one spiritual whole, and removing of the barrier between the microcosmic Atma/soul of the individual and the macrocosmic Atma/soul of the cosmos is achieved, resulting in ultimate felicity and beatitude of the 8th step.

These eight fold path of Yoga have been listed in Varaaha Upanishad, Canto 5, verse no. 11—11 ½ and Yogtattva Upanishad, verse no. 24-25 of the Krishna Yajur Veda tradition, as well as in Trishikhi Brahmin Upanishad, Canto 2, verse no. 28-34, and Mandal Brahmin Upanishad, Canto 1, verse nos. 3-10 of Shukla Yajur Veda tradition.

The first five steps of Yoga, i.e. Yam, Niyam, Aasan, Pranayam and Pratyahara are considered external processes or 'Bahiranga Yoga', while the last three, i.e. Dharna, Dhyan and Samadhi are called the internal processes or 'Antanranga Yoga'. Patanjali says in his 12th maxim of the first chapter of Yog Sutra that success in Yoga can be achieved by a coordination of practice and detachment. While 'practice' obviously implies the observation of rules and steps of Yoga as defined in Yoga treatises, 'detachment' means the consciousness that has given up desires for objects either seen of or heard of. This detachment should be comprehensive in the sense that the practitioner of Yoga should also be indifferent towards the three Gunas or qualities of Sata, Raja and Tama that dominate all behavioral patterns in this world.

These eight steps of Yoga designed by Patanjali are meant to guide the spiritual aspirant gradually and in a systematic manner to progress higher in his spiritual endeavours and ultimately achieve the supreme state of eternal blissfulness that comes with inner awakening and experiencing the divine source of light and enlightenment that resides in one's own bosom.

The first two steps, i.e. Yam¹ or abstentions, and Niyam² or observances, result in calmness of body and mind which are essentials in success in any enterprise. This preliminary moral training provides the aspirant with the solid ground which helps avoid future digressions from the main path of Yoga. The third step, i.e. Aasan or various sitting postures, helps one to exercise control over the physical body. The fourth step, i.e. Pranayam or breath control, helps to harness the stupendous energy of the different vital winds present inside the body and divert their inherent powers for the spiritual as well as physical benefit of the aspirant's mind-body complex. The fourth step, i.e. Pratyahar or control over the sense organs, helps him to detach himself from the external objects of this distracting world and focus all his attention inwards. These first five steps of Yoga, i.e. Yam, Niyam, Aasan, Pranayam and Pratyahar are considered external processes or 'Bahiranga Yoga'.

Next come the internal processes or 'Antanranga Yoga' which consists of the last three steps. Thus, sixth step, i.e. Dharna or fixed attention, helps to rivet or fasten the mind to one object which is the aim of Yoga. Constant practice of this sixth step called Dharna leads to the seventh step called Dhyan or continuous meditation and contemplation, without any break. The culmination of all these seven steps is the last stage or the eighth step called Samadhi or the trance-like transcendental state of deep absorption of the mind. The difference between Dharna and Dhyan is that the former is a temporary fixation of the mind while the latter is a higher state of fixation of concentration of the mind where it is not disturbed by any other thoughts. To draw an analogy to explain the relation between Dharna and Dhyan we may cite the instance of water and oil or any other viscous fluid such as honey or jelly. Drops of water dripping from a tap are like Dharna, while the continuous and interrupted flow of oil is like Dhyan.

Patanjali has defined Samadhi as the eclectic and mystical state of the mind when it is full of the revelation of the object concentrated upon, a state in which the aspirant loses awareness of all external as well as internal existence. He even forgets about himself.

It should be noted here that the second last step (Dhyan) which leads to Samadhi is a 'reflective knowledge', i.e. it consists of three elements of knowledge. These are—the 'Dhyata' or the awareness of the person who concentrates, the 'Dhyan' or the process of concentrating, and 'Dhyeya' or the object concentrated or meditated upon. It is like saying 'I am meditating on such and such object'. When these distinctions are removed, then it is the state of Samadhi.

The main thrust of Yoga is not mere arrest of the mind or mere physical exercises, but train the aspirant to realise his true self and its divine nature by rigorously following certain well defined and tested techniques.

³There are said to be eight Siddhis or mystical powers that come with success in Yoga. They are the following— (i) 'Anima' means the power to become microscopic or so minute that one becomes invisible to the naked eye; (ii) 'Mahima' is to have majesty, glory and fame; to be honoured and acknowledged for one's achievements, knowledge and skills; (iii) 'Garima' is to have weight, stature, dignity, decorum, gravity and significance, (iv) 'Laghima' is to have simplicity and humility; (v) 'Praapti' is to be able to attain or obtain anything wished or desired; (vi) 'Prakramya' is to have valour, ardour, strength, powers, prowess, potential and punch leading to triumph, glory and majesty; (vii) 'Ishwatwa' is to be able to have lordship or sway over others; and (viii) 'Vashitwa' is to be able to control and subdue others.

References—(a) Krishna Yajur Veda—Yogshikha Upanishad, Canto 1, verse no. 151-155, Canto 5, verse nos. 46-55; Yogtattva Upanishad, verse nos. 56-102; Brahm Vidya Upanishad, verse nos. 23-24.

The wise and enlightened ascetic is one who does not get deluded by the various Siddhis that naturally come to him as a reward of success in Yoga. This fact has been affirmed in Yogtattva Upanishad, verse nos. 21-22, 62, 76-79; and Yogshikha Upanishad, Canto 5, verse no. 62.

Besides these eight Siddhis there are said to be two more types of Siddhis according to the Yogshikha Upanishad of Krishna Yajur Veda tradition, in its Canto 1, verse no. 151-155 classifies all Siddhis into two categories—Kalpit and A-Kalpit. The Kalpit Siddhis are the ones which are created with efforts made for them using various means and methods. They have a limited scope, are perishable, and have imaginable powers and potentials that can be predicted. On the other hand, the A-Kalpit Siddhis are those which are self-generated or uncreated by any artificial means, are natural and with unimaginable mystical potentials and powers that cannot be predicted.]

14. Say, how can death touch anyone who has tasted this elixir of eternity? How can death affect someone who has grasped the essence of the Shiva principle and its dynamism called the Shakti (as outlined in the forgoing verses)? Indeed, such an enlightened aspirant is deemed to have conquered death, he has indeed vanquished the fear of death, and that is why he is honoured by the title of ‘Mritunjay’—one who has obtained victory over death (14).

[Note—‘Death’ is an adjunct to birth. Birth is a precondition for death. That which is born must die. Therefore, that which has no birth would not die. The Shiva principle is the Truth of existence, and it is always constant, unchanging and immutable, hence is eternal and infinite as opposed to falsehood that constantly changes and undergoes mutations. The Truth vis-à-vis life and existence is that there is only one Consciousness that actually matters in this creation, and that this Consciousness has no physical body or grossness in it. It is constant, steady, immutable, universal and pure holy entity. It neither comes into being nor comes to an end. It is called the Atma that lives in the creature’s gross body. It is therefore Truth personified. This Consciousness is the creature’s truthful ‘self’. Actually it is the gross body in which this ‘self’ or Atma lives that dies and comes to an end; it is the body that too suffers and enjoys, and not the Atma which is pure consciousness and the ‘truth’. Hence, an enlightened man who has understood the Shiva principle is never subjected to death; he has no fear of death; he never dies. He employs the energy and dynamism of his ‘self’, known as the Shakti, to become wise, erudite and enlightened, instead of frittering this unique power in the pursuance of falsehood and delusions.]

15. I have disclosed to you this most esoteric and secret as well as the purifying and spiritually elevating knowledge.

A person who has relied on this knowledge pertaining to the real meaning of the two components of creation called the Agni and Soma (as enumerated and elucidated in this Brahman) does not have to take a birth again. [That is, he gets Mukti, i.e. he finds final liberation and deliverance from this body and the entrapments of the world.] (15).

16. He who symbolically burns his body to ashes in the fire representing Shiva (i.e. in the fire of self-realisation and renunciation) by taking the help of Shiva (i.e. knowledge about the supreme Truth called the Shiva principle, and the awareness of the pure Consciousness known as the true ‘self’) and Soma (i.e. finds pleasure in doing so, enjoys the exercise and obtains bliss and satisfaction from it) becomes not only eligible to obtain the Amrit or the elixir of eternity and profound bliss but actually achieves success in obtaining it (16).

[Note—The ‘burning of the body’ means he has detached his ‘true self’ known as the Atma, his pure conscious ‘self’ which is sublime and subtle, from the body which is gross, inane and mundane. Such a person is self-realised because he has understood the great truth that the body is merely a habitat of the Atma and not to be mistaken as the ‘self’. He has distanced himself from everything associated with the body and its

desire for constant gratification; he has renounced the illusionary and misleading charms of the world of material sense objects because he has realised their transient and perishable nature. He has understood that it is the body—and not the Atma—which is affected by its interactions with the external world, and this interaction creates longings for the material sense objects of the world and the desire to enjoy them and acquire more of them. This interaction also has a negative effect on the man in as much as the numerous negative sensory inputs from this world snatches away all his peace and happiness, and instead keep him constantly miserable and tormented. All these developments, if intelligently analyzed by him, fills him with complete detachment and renunciation; he begins to loathe the body and treats it as the root of all the hurdles that prevent his spiritual liberation and deliverance as well as peace and rest—and this understanding is tantamount to burning his body to ashes in the fire of self and truth realisation.

He aims for eternal calmness and blissfulness that eludes him while he is associated with the body and the world through the medium of this body. Once the body is eliminated, the soul is freed from its bondage like a de-caged bird. This is the Mukti or liberation and deliverance that the aspirant has so painstakingly wanted to achieve.]

-----*****-----

Brahman 3

[This Brahman serves two purposes. One, it narrates how the sacred ash is to be produced and worn by an aspirant, and in this it bears great similarity to the Kalagnirudra Upanishad of the Krishna Yajur Veda, and Bhasma Jabal Upanishad of the Atharva Veda traditions. And second, it uses the body of the cow and compares it to various components of knowledge and metaphysics, thereby drawing a parallel between the cow and the other eclectic aspects of creation. This is why the cow is regarded as holy in Hinduism.]

1. After being enlightened about the great metaphysical and spiritual importance of the Bhasma¹, sage Bhusund asked Lord Kalagnirudra to tell him about the proper way of wearing it on the body. [The sacred ash is worn on the body either as a paste rubbed or smeared on the body, or as a mark of the Tripundra—a three-line mark symbolic of divinity and holiness that stands for Lord Shiva and is worn by all the worshippers of this deity. Lord Shiva is regarded as a synonym of the supreme transcendental Brahm, the cosmic Divinity and the Supreme Being. Thus, wearing of the Bhasma in any form is symbolically investing the wearer's body with the divine virtues and holiness associated with Brahm and the sacred fire of the fire sacrifice, thereby making the body as consecrated as a temple. It also helps to purify and give a sense of holiness to what is otherwise a gross and inane entity known as the 'body'. This body which is unfit to harbour the sacred Atma—the holy soul, the holy Spirit, the pure consciousness representing Brahm, the Supreme Being—inside it now becomes fully competent to do so after it is sanctified by application of the Bhasma.]

The Lord told him—'Bhasma should not be made from the dung produced by the following types of cows—a cow with deformed body or one having any anomalous growth, a cow which is mad, a cow which is wicked and mischievous, a cow which is dirty and filthy as well as sad and weary, a cow which has bad behaviour and evil tendencies, a cow which is thin and emaciated, a cow which is barren, a cow which is restless and aggressive, a cow which does not produce

milk, a cow whose body is weak, feeble and decrepit, a cow which is unable even to graze and eat grass (i.e. one which is extremely weak, old and diseased), a cow which feeds things not meant to be eaten, such as clothes made of Kush grass or bark of trees (birch), or one who eats carcasses (i.e. who is not a pure herbivore), a cow which is pregnant, a cow which has conceived only recently, and a cow which is sick.

The dung of a good and healthy cow is to be used in preparing the Bhasma.

The dung that lies on the ground should not be picked up and used. Instead, it should be collected fresh while the cow is producing it, and before it falls on the ground. It is alright to retrieve dung from a clean place if it is not possible to collect it while being produced fresh by the cow.

It is preferable to use the dung produced by a Kapilaa cow (the one with reddish-brown skin with white spots) or a fair skinned cow, and if this is not feasible then other cows can be considered subject to her having no faults as noted in this verse above.

The Bhasma made from picking up dung at random from all sorts of places should not be used. The Bhasma should be first consecrated and sanctified before being worn on the body.

In this connection there is the following Shloka (scriptural verse)—‘The power, potentials and authority that comes to someone depends upon the level and type of Vidya (knowledge, erudition, skills and wisdom) that he has. It is Vidya that empowers him. All the three Gunas (basic qualities in an individual; the Sata Guna, the Raja Guna and the Tama Guna corresponding to the noble, the mediocre and the mean qualities respectively) depend upon Vidya². Vidya itself is dependent upon these three Gunas³ (1).

[Note—¹The term *Bhasma* has been explained in the earlier Brahmanas. It refers to the sacred ash of the fire sacrifice in which the cow’s dung is exclusively used for the purpose of fuel as well as an oblation to the sacred fire to the exclusion of all other types of fuels or oblations. This sort of Bhasma is the physical characteristic of the ash, but the Bhasma that is described in Brahman 2 has a sublime and subtle meaning that rises above the physical aspects of Bhasma and deals with its metaphysical importance and significance in relation to the aspirant’s liberation and deliverance from the body and the world which is of a greater value and importance for him and his long term spiritual welfare.

Having thus explained the two aspects of Bhasma, the present Brahman narrates how the physical form of Bhasma is to be worn on the body so that its spiritual benefits are arrived at. This is like using the formula correctly in order to solve a problem in science; merely applying the formula would not help as a wrong way of using it would not solve any of the problems, but would give a wrong result instead.

²The three basic Gunas or qualities are the following—(a) The *Sata Guna* is the best of the three qualities present in any creature. It is a positive quality and is marked by a propensity for following the path of nobility, auspiciousness, probity, propriety, virtuousness, holiness and righteousness. Creatures that have a predominance of Sata Guna are inclined to do selfless service, be benevolent, merciful, kind and gracious, have coolness of head and a rationale and balanced mind, be contented, have humility and piety etc. Such creatures are devoted to good values in life and have a desire to acquire knowledge that would help them reach higher spiritual goals in life.

This Sata Guna is marked by high standards of ethical and moral existence that makes the bearer of such qualities highly respected in society. Such people have a spiritual dimension to their personality. This quality is spiritually uplifting and gives a divine halo to those who possess it and practice it.

The Vasanas that have the *Sata Guna* or quality dominant in them are like a veil covering the lamp or like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the Satwic desires; its removal requires the least effort.

(b) The second quality is the *Raja Guna* and it makes a man more attracted to this material world and its charms, and less spiritually inclined. The *Raja Guna* is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It makes a creature inclined towards the material things of the gross world and their enjoyments, towards creation of wealth, its enhancement and protection, and generally having a desire for growth, development and expansion etc. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, selfishness, expansionist tendencies, a desire to acquire, retain and develop such acquisitions even to the detriment of one's long term spiritual welfare and even if such actions cause pain to others. All these pertain to this materialistic world. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the Satwic qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The Vasanas that have the *Rajasic Guna* or quality dominant in them can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with Satwic quality.

(c) The third quality is called the *Tama Guna* and is the meanest and the basest of the three Gunas. It is a demeaning quality in a creature that leads to his downfall and perpetual entanglement with things that are considered improper and unethical. It creates an inclination for committing all sorts of sins, misdeeds and demeanours. It leads the creature towards negativity and inspires him to acquire negative qualities such as various vices, evils, sins, perversions etc. It makes him inclined to be greedy, rapacious, haughty, arrogant, lustful, intoxicated, vile and wild to the extreme. Such a creature with a predominance of *Tama Guna* has utter disregard for propriety, noble virtues and ethics, for righteousness and morality.

In brief, it is the most degrading, denigrating and contemptible of the three characteristics in a person, and leads to such behaviour which is utterly immoral, denigrating and depraved, marked by grossness, crassness and recklessness. It therefore leads to his downfall, ignominy and ruin as well as ignorance, delusions, gloom, inertia, anger, frustration etc.

These distinctions come from knowledge of what is good, auspicious, righteous and noble, and what is not. Knowledge also tells the man how to overcome the dominance of certain negative traits and replace them with higher values. The knowledge that helps to distinguish between the good and the bad, and how to change for the better is called 'Vidya'. The benefits of this knowledge are immense. Once a man realises the difference and that there are ways to improve himself, a wise and intelligent man would strive hard to improve his self and inculcate positive qualities and virtues in him while gradually eliminating the negative ones. So, even though he might be having a predominance of *Tama Gunas* at certain period of time, he might ascend and reach the top by having exemplary proportion of *Sata Gunas* by constant practice. *Vidya* also helps him to put to good use whatever he knows, whatever skills he possesses, and whatever assets that are available with him.

The opposite would be lack of *Vidya*, or having *A-Vidya*, which roughly means ignorance. Such a man would keep on rolling in the disgusting quagmire and filth of his present circumstances without even being aware that there is filth and muck all around him. How can then one expect him to improve his dire fate?

This is how the Gunas depend upon *Vidya*.

³Next is how the *Vidya* depends upon the various Gunas. Since the Gunas condition a man's thoughts and mental abilities, his natural instincts, desires, habits, behaviour and temperaments, they will definitely play a role on how he interprets the

knowledge that is available to him. The same knowledge can play a constructive role in the hand of one man and a destructive role in the hand of the other. A simple example would illustrate the point. The explosive power of dynamite is used by one man to construct tunnels in mountains for railway tracks and roads, or extract minerals from the hard rock lying deep in the bowl of the earth by blasting his way through, or even during emergencies to evacuate victims trapped under huge boulders or behind insurmountable obstacles such as solid rocks that need cutting through to extricate the survivor during natural calamities such as earthquakes, and the same dynamite is used for blowing up people and buildings during savage wars. Similarly, atomic energy provides an endless and uninterrupted supply of electricity to millions of homes on the one hand, and wipe out cities in wars on the other hand.

So a wise man who has a predominance of Sata Guna in him would, for instance, see the assets that he possesses as not being his exclusive fiefdom that has to be jealously guarded, but as an asset held on behalf of the Lord and as an opportunity provided to him by the Lord to serve the latter. Now, one man would use this tenet of serving the Lord as means to serve his own interest by bargaining with the Lord for favours, another man would think that service to the Lord is giving donation to already rich priests who feed upon misconceptions in society, and the third man would serve poor and suffering brethren as a means of serving the Lord. The point is very clear here—it is the inherent Guna in a man that has conditioned his brain to twist or mould things to suit his temperament and his hidden wishes.

Another instance is that while one man would see the Lord in pilgrim places and waste his entire life visiting them in the belief that he is doing a religious duty and hopes for his salvation by doing this ritual year after year, another would see the Lord in shrines, and the third would see the Lord in the man in front, while still there would be a fourth man who would see the Lord everywhere—front, behind, top and bottom. So, the same knowledge of scriptures pertaining to the Lord is interpreted and accepted differently by different people depending upon the ratio of different Gunas in them—or the level of Vidya, i.e. the level of wisdom, knowledge, erudition and enlightenment that he has acquired.]

2. The cow symbolises all the three Gunas. [The cow is regarded as a representative for all the living beings in creation. The mind and intellect of all the creatures are conditioned by the ratio of the three Gunas that form an integral part of their character. Their personality and uniqueness are determined as a net result of the combined effect of these three Gunas present in them.]

The dung produced by the cow is just like the Vidya (wisdom, erudition, mental skills and knowledge that a man possesses) that is a product of the combined effect of the three Gunas that a man possesses (as outlined in verse no. 1 and its note above). [The dung is the output of the cow's body after it has eaten all sorts of food available to it and extracted its nourishment from them. Similarly, a man comes in contact with all sorts of knowledge and things while he lives in the world, and although he cannot avoid them, the trick lies in extracting the best from of all knowledge and things available to him, and rejecting the rest. The actual knowledge that he gains from his interaction with the world of profound diversity and complexities and variables, the lessons he learns from his experiences are the ones which would be of any use to him. The rest is worthless as far as he is concerned. This knowledge and its implementation help the man to shape his character, thoughts and personality. Since knowledge is extracted only from the choices available to him, the quality of knowledge, and its subsequent affect on the man's overall life is directly related to the source of his knowledge—viz. the company which he keeps, the books he reads, and the general environment in which he lives. This is like the case of the dung being directly related to the quality of food eaten by the cow. Hence, with the

long-term good of the man in view, it is important for him to keep tabs on the source from which he gathers his knowledge. Wrong source would give wrong knowledge, and wrong consequences would follow in its wake.]

The Upanishads are like the cow's urine. [The cow's urine is the filtered part of the body's fluids that are not retained inside but pushed out of the body into the external world. The urine is the liquid produced out of the solid food eaten by the cow, its nourishment extracted, digested and dissolved in the blood which then takes the nutrients to various parts of the body to benefit the cow, and finally filtered in the kidneys to be converted into urine. The urine in a sense is a product of the cow's blood as much as is its milk. It represents the juices extracted from the food eaten and digested by the cow. In the same way, the Upanishads are the juice of the Vedas which has been extracted from the latter, understood and analyzed by ancient sages and seers, and then expounded upon by them for the benefit of the disciples and the forthcoming generation. It represents the essence of the Vedas that has been extracted and presented in a homogenous body of knowledge. The cow grazes upon green grass symbolising fresh and reinvigorating knowledge that the Vedas contain, and extracts the essential nourishment present in it that gets dissolved in the blood, and then filtered and presented in the form of the fluid called urine. Therefore, as compared to the difficult and raw knowledge of the Vedas, the Upanishads present them in an easy-to-grasp form which is pre-digested and a ready-made elixir of eclectic knowledge that can benefit the spiritual aspirant.]

In this sense also, the Bhasma (sacred ash) that is produced from the cow's dung is also the best form of ash that can be used for smearing on the body (as compared to the ash that would be produced by using other materials, such as firewood, the most common and universal fuel that is used for the purpose of the fire sacrifice) [This is because Bhasma is likened to Amrit, the elixir of eternity and bliss, as well as to Agni, the dynamic and energizing force of Nature, which are rejuvenating and purifying respectively as narrated in Brahman 2.] (2).

3. The calf of this cow is like the Smriti Granthas¹. The cow is therefore vested with high virtues and it is from her dung that the Bhasma is to be made.

First, the cow should be sanctified by the Mantra 'Aagava' (3).

[Note--¹Technically the term 'Sruti' means that which is 'heard', and 'Smriti' means that which is 'based on memory or recollection' or which is 'remembered and recollected'. The word 'Grantha' means a 'treatise or book'. Traditionally, the most ancient of scriptures for which no dates are determined and which are regarded as old as civilisation, such as the primary Vedas and their expositions in the form of Upanishads, and the latter day mythological histories based on the fundamental tenets, axioms and maxims of the Vedas in order to explain them by the method of story-telling are called Purans and Itihaasas. They are categorized as *Srutis* because they were based on the process of 'hearing'. The ancient sages had initially 'heard' the Mantras etc. in their mind during their meditation and contemplation sessions, and then they had divulged what they experienced or heard to their disciples by the oral process of preaching. The disciple became aware of the teaching by 'hearing' them being taught by their learned teachers, rather than by reading them in some text book.

On the other hand, the various books or treatises penned by a chain of saints and sages of the later half of civilisation who had thoroughly studied the *Srutis* and had hitherto preached them by the oral method now decided to pen down their teachings for the sake of authenticity and standard. So they wrote down their knowledge in their independent commentaries on the *Srutis* based on their memories and their own interpretations of their tenets, axioms and maxims. These came to be known as *Smritis* because of two reasons—one, it was based on the 'memory' of these learned

teachers, and second, they bore the name of the author to commemorate his memory and contained the essence or juice of his own deductions and thoughts which he had thought to the essence of the ancient scriptures called the Srutis and which he had thought proper to bring into writing himself for posterity. There are instances when their teachings were compiled and edited by their disciples and named after the teacher—for instance the Brihad Parashar Smriti which was named after the great sage Parashar to honour his memory but actually penned by another sage named Suvrata.

So, though traditionally the primary scriptures such as the Vedas, Upanishads, Purans and Itihaasas are all called 'Sruti Granthas' because these scriptures were 'heard' by great sages and transmitted orally, but technically only the original Vedas and Upanishads should be titled as 'Srutis' because they were revealed or 'heard' by enlightened and learned sages and seers when they meditated, i.e. they were revealed to them while in deep meditation and were 'heard' by their mind. They were then taught to the disciples who received them by 'hearing' these scriptures instead of reading them, and their transmission through generations also depended upon 'hearing' them. The Upanishads come under the category of the Sruti Granthas because essentially they are expositions on the Vedas and, more importantly, were a part of the Vedas and hence revealed as part of the latter. Thus, technically only the very early scriptures are to be called the Sruti Granthas.

The latter day scriptures should therefore technically be called 'Smriti Granthas' because they were based on 'memory and recollection'. After the original scripture was revealed to a particular saint or ascetic, its passage down the line would automatically depend on 'memory' and 'recollection' rather than original revelation. These are a sort of secondary scriptures. Therefore, under this category would come the Purans and Itihaasas which were ancient traditional histories that had to be remembered, as well as those Upanishads that were not included in the Vedas but were later day additions and were so-called because of their profound importance which was no less than the original Upanishads. The Purans and Itihaasa fall under the category of literature called Smriti Granthas because their transmission relied heavily on memorizing events and their sequences as any modern student of history would have to remember the many dates and events of the past and commit them to mind by memorizing them by heart. The later day Upanishads are called Smriti Granthas also because though they were expositions on the philosophy of the Vedas and earlier Upanishads but still they relied heavily on what the teacher remembered, what he spoke based on this memory, and how the disciple interpreted these teachings himself that would affect this teaching as it was passed on to the next generation.

Therefore, more broadly speaking and technically prudent, though not traditionally correct, would be to include all the scriptures that came into being *after* the original revelations of Vedas and Upanishads as 'Smriti Granthas' because they all relied upon memory and recollection.

Again, there cannot be an artificial boundary between these categories of scriptures as it would be wrong and impractical. This is because, for instance, though the Vedas and Upanishads are 'Sruti Granthas' because they were 'heard or revealed to the mind of seers and sages who had heard them during meditation and contemplation', their teaching and transmission depended upon 'memory and recollection'. So it is obvious that they are both 'Srutis' as well as 'Smritis'. Similarly, though the later day books written by sages and named after them are called Smriti Granthas in their memories or because they relied upon their memory to write them as there was no previous book to refer to, they are also 'Sruti Granthas' as well because these first authors had only 'heard' them being taught by their own teachers.

So we can justifiably put the later day Upanishads and Purans under the common category of both Sruti as well as Smriti Granthas because of the simple reason that their were first heard (Sruti), and then memorized (Smriti) for the purpose of

preaching and transmission to the next generation as no written version were available in ancient times. Similarly, though the Vedas were first heard while meditating, and hence primarily 'Srutis', their perpetration and survival depended upon their being remembered by heart, and hence were 'Smritis' as well. This applies to all the principal scriptures.

Now, let us examine the second generation of scriptures such as the ones which were named after some great sage and seer who had first expounded them and are therefore named after them. These are traditionally categorized as the 'Smriti Granthas'. This is because they 'remind' one of the great truths of the Sruti Granthas. Some of these latter day Smriti Granthas are the following—(a) the Angiras Smriti named after sage Angira who was one of the ten primordial sages mentioned even in the Rig Veda and who is credited with the revelation of the Mantras of the Atharva Veda, (b) the Atri Smriti named after sage Atri an ancient philosopher and writer (it deals with topics such as gifts, prayers, austerities and penances), (c) the Brihaspati Smriti named after sage Brihaspati who was an ancient teacher of Arthashastra (economics and political science), (d) the Brihat-Parashar Smriti was written by a sage named Suvrata who was probably a disciple of the great sage Parashar on whose memory this scripture was named by its author (it deals with noble duties that are ordained for the various sections of the society as well as certain Yoga disciplines), (e) the Parashar Smriti named after sage Parashar (it deals with the 4 Yugs, the daily duties of a the four Varanas or sections of the society, study of the Vedas, remarriage of widows, purifications, penances and austerities etc.), (f) the Daksha Smriti named after Prajapati Daksha (it deals with the duties of the four Ashrams (sections of life), various types of actions, making gifts, purification rites, Yoga and its branches, the combined philosophies of duality and non-duality or Dwaitya and Advaitya etc.), (g) the Devala Smriti named after sage Devala who is mentioned in the epic Mahabharata along with another sage Asita (it deals with purification rites), (h) the Gobhila Smriti named after sage Gobhila (it deals primarily with a householder's duties such as wearing the sacred thread, observing sacraments, offering respects to the spirits of dead ancestors etc.), (i) the Kaatayaana Smriti named after a sage of this name (it deals with details of wearing the sacred thread, worship of various goddesses and Lord Ganesh, the Vedic sacrifices and chanting of Mantras, purification etc.), (j) the Narad Smriti named after sage Narad, (k) the Samvarta Smriti which contains the teachings of sage Samvarta as given to sages Vaamdeo and others (it deals chiefly with duties of monks and hermits), (l) the Vyas Smriti that is attributed the legendary sage Veda Vyas, the author of the Purans and the classifier of the Vedas (it ratifies the authority of the Sruti and Smriti Granthas, and deals with such subjects as the sixteen duties, mixed castes, marriage, the three types of Karmas or deeds, the greatness of the householder etc.), (m) the Yagyavalkya Smriti is penned by the famous sage Yagyavalkya to whom the major part of the Brihad Aranyak Upanishad is attributed and to whom is attributed the Shukla Yajur Veda (it deals with such topics as religious duties, marriage, Varna and Jaati, donation, faith and devotion, civil duties, crime and punishment, austerities and penances, etc.), and (n) the Yama Smriti which was written by a sage named Yama (it deals with penances and austerities).

In this verse, the calf is compared to the Smriti Granthas because the calf came into existence after the mother cow had come into existence. In the context of the scriptures, since the Smriti Granthas came into being based on the memory of what the original primary scriptures called the Sruti Granthas had taught, the former were a product of the later. Hence, the Smriti Granthas are like the 'calf' produced from the 'cow' representing the Sruti Granthas.]

4. By pronouncing the Mantra 'Gaavo Bhago Gaav' the cow should be made to drink water to quench her thirst.

The aspirant (who wishes to prepare the sacred Bhasma) should observe fast on the Chaturdashi (fourteenth) day of the Shukla or the Krishna Paksha of a month (i.e. the bright or the dark half respectively of the lunar month) (4).

5. Getting up in the morning on the following day (i.e. after the day on which fast is observed), the aspirant should ensure that he is calm and poised. He should first take a purification bath and wear clean and washed clothes. Then he should sprinkle some water on the hind part of the previously sanctified cow (5).

6. The cow should be made to stand up and its urine should be collected while saying the Gayatri Mantra¹. The urine is to be collected in a vessel made of gold, silver, copper or earth (clay pot) (6).

[Note—¹The Gayatri Mantra is the following:—OM BHURBHUVAHA SVAHA¹, TSAVIURVARENYAM², BHARGO DEVASYA DHIMAH³, DHIYO YO NAH PRACODAYAT⁴. It means ‘OM is the supreme, transcendental Brahm. He is the lord of creation of the terrestrial, the celestial and heavenly worlds. I offer my oblations to you. That Brahm is luminous like the sun. He is excellent, the best, the most exalted, a destroyer of sins, and a divine entity. May he imbibe, infuse and inspire our intellect with wisdom and enlightenment so that we are purified and move on the righteous and noble path’. The four phrases of the Gayatri Mantra are clearly marked by small numerals in this Mantra. This Mantra appears in the Rig Veda (3/62/10), the Sam Veda (1462), and Yajur Veda (3/35, 22/9, 30/2, 36/6).

Details of this grand Mantra are given as note no. 2 appended to verse no. 6, Canto 1 of Nrsingh Purva Tapini Upanishad which is Chapter no. 7 of our present volume.]

7. If the above vessels are not available, then the urine can be collected in the leaf of the lotus flower rolled into a conical shape that resembles the horn of a cow.

The cow's dung should be collected while some fragrant incense is lighted (so as to suppress the foul smell of both the urine and the dung) and the Gayatri Mantra is being pronounced (7).

8. A householder should accept the urine and dung before they fall on the ground.

The Mantra ‘Srirme Bhajantu’ is to be said while the cow's dung is being sanctified (8).

9. While picking out residual food particles sticking to the dung, the Mantra ‘Alaxmirma’ should be said. [It means those things that are of no use.]

Then the collected urine is poured on this dung while saying the Mantra ‘Santava Sinchaami’ (i.e. ‘I am irrigating or watering the sanctified dung’) (9).

10. With this moist dung, he should make fourteen balls while saying the Mantra ‘Panchaanaam Twiti’. These balls are to be dried in the sun's light (i.e. they should be left in the open to dry in the heat of the sun) (10).

11. Then the dried up balls should be kept in a container made of any of the materials mentioned earlier (in verse nos. 6-7).

Using the Mantras of the ‘Griha Sukta¹’ (a hymn used by a householder to perform fire sacrifices and other religious duties) the aspirant should establish (ignite) the sacrificial fire and duly worship it (11).

[Note—¹The *Griha Sukta* appears in the Pippallaad branch of the Atharva Veda. It is included in this volume as appendix no. 5 at the end.]

12-13. The six lettered Mantra of Lord Shiva¹ is said while these dried and sanctified balls of cow-dung are lifted and placed on the lighted fire. It must be noted that this Mantra is to be repeated for each individual ball as it is picked up and placed on the fire.

The word 'Swaha' is said while offering these balls to the sacred fire as an oblation to the deity. [The word 'Swaha' is said whenever an offering is made to the sacred fire.]

It should be remembered that the offering called 'Ajyabhag' that is made to the Adhar (sacred fire)² is made before the main sacrifice is done (12-13).

[Note—¹The *six-letter Mantra of Shiva* has two versions as follows—(i) According to the Atharva Veda's Tripura Tapini Upanishad, Canto 4, paragraph no. 8, it is 'OM Namaha Shiva OM'. [OM + Na + Maha + Shi + Vaa + OM = 6.]

(ii) According to the Bhasma Jabal Upanishad, Canto 2, paragraph no. 4 of the Atharva Veda however, it is 'OM Namaha Shivaaye'. [OM + Na + Maha + Shi + Vaa + Ye = 6.]

²The proper way of doing a fire sacrifice has been described in detail in the Mundak Upanishad of Atharva Veda, in its Canto 1, section 2, verse nos. 2-7. It describes what these two terms mean in the context of the fire sacrifice.

Briefly, when fire sacrifices are done, the sacred fire that is lit to invite the patron God to the ceremony is called the Ahawaniya fire, or the invocational fire. The first offering is made to the north of it while pronouncing the Mantra 'Agneya Swaha'. The second offering is made to the south of it with the Mantra 'Somaaya Swaha'. These offerings consist of clarified butter. These are called 'Adhar' and 'Aajya Bhaag'—the share of the Fire God and the Moon God respectively. Since Brahman 2, verse nos. 1-2 of the present Brihajjabal Upanishad asserts that Agni and Soma are virtually the two aspects of the same cosmic Divinity that creates and sustains life in this creation, the offering made to this Divinity or Brahm through the two Mantras mentioned above in this paragraph are the shares or 'Bhaag' that are offered to the fire located to the north and south of the main fire-pit.

The central part of the fire between these two ends is called the 'Awapasthan'. It is in this that the main oblations intended for the patron deity who is being invoked are made.]

14. Now, the oblations to the main fire are being narrated. First, twenty-three oblations are made in the honour of the God of death, i.e. Lord Rudra or Shiva, and five oblations are made in the honour of Brahma, the creator, by uttering the Mantra 'Namo Hiranyavaahave' (I bow before Lord Hiranyagarbha) (14).

15-16. While offering oblations to these two Gods, their names are invoked or reverentially remembered by using the fourth case or inflexion of the Sanskrit grammar.

The worshipper should touch the shoulder by saying the Mantra 'Ritam Cha Satyam', and all the other external organs of the body by the Mantra 'Yasya Vaikuntha'. [This is done to sanctify the body and establish the deities Rudra and Brahma on the shoulders and other organs respectively.]

Then he should make offerings to the sacred fire nine times by saying the Mantra 'Swischsta Kritam' (15-16).

17. The sanctified water kept in the pot for offering to the sacred fire as a token of conclusion of the fire sacrifice should be sprinkled on the fire by saying the Mantra 'Purnamatim'. [That is to say that he has successfully completed the offerings.] (17).

18. Some of the water of this pot should be sprinkled on the head by the worshipper by saying the Mantra 'Brahamane Swamritam'. [This is to say that he makes himself purified by establishing Brahm on his head.]

The remaining water is then sprinkled in all the directions around him (18).

19-20. The Brahmins or the priests are given donation and gifts. After that the fire is calmed down or converted into its hidden form by covering it with dried rice stalks. The worshipper does this while thinking to himself—"I am laying the Gods to rest so that their stupendous powers and supernatural deeds are kept secret. I also am covering the burning fire and requesting the Fire God to retire so that it can secretly empower the ash (that would be now produced by the doused sacred fire) and conceal himself in it along with the other Gods. For this purpose, I am covering the Jatveda fire¹ with these stalks of rice. [In other words, while the fire was burning brightly, its brilliance was a vivid proof of the presence of the Fire God. But this Fire God is so terribly hot and horrifically scorching that it is impossible for the worshipper to establish this God on his body like he has done with the Lords Rudra and Brahma (see verse nos. 15-16). So he requests the Fire God to calm down and hide himself in a latent form in the cool ash or Bhasma that is produced from the fire sacrifice so that he can establish the Fire God on his body when he smears the ash on it.] (19-20).

[Note—¹The *Jatveda Fire* is the cosmic all-pervading Fire element that is uniformly and universally present wherever there is sky element or open space. It is represented by the word Bhuvaha.

Jatvedas is the name of the Sun God as well as the Fire God. The Sun is indeed the most evident form of the fire element and possesses all the virtues and qualities of the latter. When two pieces of wooden drills known as *Arani* are rubbed together vigorously, they produce fire though prior to this rubbing no fire was visibly there. This rubbing is symbolic of the Tapa done by Brahm at the beginning of the creation to create the energy needed to initiate the process of creation which is represented by the latent fire element or its personified subtle form as the Fire God who is invisible. The more gross form of this fire element and the visible aspect of the Fire God is the celestial Sun.

It has been explained by Yam, the death God, to Nachiketa in Kathvalli or Kathopanishad of Krishna Yajur Veda, in its Canto 2, Valli 1, verse no. 8 as follows—"That fire element known as Jatveda (which is glorious and brilliant as the Sun God—the 'Jatvedas') present between the two Aranis (which are the wooden drills used to kindle fire during a fire sacrifice by rubbing them vigorously against each other), is as glorious, radiant, splendorous and magnificent as the embryo nourished in the womb of pregnant women.

This reverend 'fire' is worshipped, honoured and adored by righteous men (sages and seers) who are free of all delusions and confusions, who do not make errors of judgment, and who are wise and learned in such matters, by doing the fire sacrifice using various offerings meant to pay their obeisance and to show their respect to this exalted 'fire'.

Verily, this splendorous, radiant, majestic and brilliant 'fire' known as Jatveda (represented by the Jatvedas or the Sun in the sky, and the latent fire element present concealed between the two drills which reveals itself when a vigorous attempt is made to ignite it during a fire sacrifice) is indeed the supreme transcendental Brahm in that form or manifestation."]

21. The fire is covered so as to keep it latently alive for thirty days. [That is, it is covered in such a way that the fire-pit maintains its heat for one month, and the embers are allowed to smoulder slowly. If any fresh firewood is placed into it any time or even at the end of a month, it is easy to kindle a new fire from these embers. In other words, the fire is not completely doused but kept in animated suspension, in a latent form, hidden behind the covering put over the fire-pit to hide the fire's existence. This fire is able to rise up on its own accord with the slightest hint, needing no external help to do so, thereby eliminating the need to undergo the cumbersome process of lighting the fire afresh.]

After having covered the fire, the worshipper should first feed Brahmins (priests), and then feed himself. While eating, he should keep quiet (21).

22-24. If the worshipper wishes to have a greater quantity of Bhasma, the amount of dried cow-dung that is offered to the consecrated fire should be proportionately increased.

On the morning of the second or the third day of the fire sacrifice, the Bhasma can be picked up and marked or smeared reverentially on the body. For this purpose, the worshipper should first have a bath and then wear washed, clean and white clothes, a garland made of beads of white sandalwood, and a white sacred thread.

Having done so, he should say the Mantra 'OM Tad Brahm' (i.e. OM salutations, you are indeed a symbol of the supreme Brahm) and remove the ash formed by covering the fire with rice stalks and dousing it or cooling it down by spreading it on the ground around the fire-pit. [Refer verse no. 19-20.] (22-24).

25. The sacred fire is worshipped by various formal rituals such as 'Awahan' (invocation) employing the relevant Vyahriti Mantras of the Jatveda fire (i.e. 'Bhuvaha'—see note of verse no. 19-20) (25).

26. The Bhasma is accepted (picked up from the ground) while saying the Mantra 'Agnirbhasmi' (i.e. this ash is a symbol of the Fire).

The coarse ash is to be rubbed and made into a fine powder (26).

27-28. Now, for the purpose of making a paste the following procedure is prescribed—Water in which sandalwood is dissolved or sanctified urine of a Kapilaa cow (i.e. a cow with skin that is reddish-brown with white spots, and who is most docile, simple and humble) is to be used as the fluid for this purpose. In it is added a fine powder made of ground Kapoor (camphor), Kumkum (a red colour or copper colour made from the pollen of the flower of the plant *Crocus sativus*), Kashmir (yellow colour; light-tinged saffron; saffron that is especially grown in the northern Indian state of Kashmir), Mushir (commonly known as Khas—the scented root of the grass *Andropogon muricatus*), and Chandan (sandalwood).

While the grinding and mixing of these ingredients is done, the Mantra 'OM Brahm' (i.e. OM is Brahm; Salutations to Brahm) is said reverentially (27-28).

29-30. A wise and expert worshipper should slowly add the liquid (water in which sandalwood had been previously dissolved, or the cow's urine as said in the 1st paragraph of verse nos. 27) to this finely grounded and mixed powder (made according to verse no. 28) by saying the Mantra 'OM Anoraniyaaniti'. The liquid should be added carefully so that a smooth past is made out of the ingredients (29-30).

31-32. Clean water is then added in drops seven times by saying the Mantra ‘OM’ (representing Pranav or Brahm).

The Bhasma prepared as above should be applied on the various parts of the body along with the pronouncing of the relevant Mantras as follows—On the head by saying the Mantra for Ishan, on the forehead and other frontal parts of the face by saying the Mantra ‘Tatpurush’, on the thighs by saying the Mantra of Lord Aghor, on the genitals by saying the Mantra for Lord Vamdeo, and on the legs by saying the Mantra for Saddyojat*. [Refer Brahman 4, verse nos. 1-4.]

Thereafter, the supreme Mantra OM which precedes all the Mantras and is the crown jewel of a Mantra (as it directly relates to the supreme transcendental Brahm) is pronounced while applying (smearing, spreading) the Bhasma on all the organs of the body. [That is, after it has been applied to the specific places mentioned above, the remainder of the Bhasma is picked up by the fingers and spread over the body while saying OM.]

In the above described method, the sacred and consecrated Bhasma should be applied to all the organs of the body from the leg to the head (31-32).

[Note--*The five names mentioned here all pertain to Lord Shiva and all refer to the supreme transcendental Brahm. This fact is asserted in the Panch Brahm Upanishad of the Krishna Yajur Veda, verse nos. 5-23.

See also Brahman 4, verse no. 1, and Brahman 7, verse no. 1.]

33. The person who wishes to wear the sacred Bhasma on his body (and derive spiritual benefits by this symbolic exercise of establishing all the five divine forms of Shiva or Brahm on his own body, thereby making it as sanctified and holy as a shrine) should wear clean clothes and symbolically clean his mouth with a sip of clean water before starting the exercise, and once completed the mouth is again cleaned by another sip of clean water.

Other daily routine religious affairs such as observing sacraments, doing Japa etc., or daily chores of the world should be done only after the above ritual of wearing the sacred Bhasma on the body is completed as the first thing in the morning (33).

34. [This verse describes the four types of Bhasmas.]

The consecrated Bhasma is of four types—the first is called ‘Anu Kalpam’, the second is called ‘Op Kalpam’, the third is called ‘Upop Kalpam’, and the fourth is called ‘A-Kalpam’.

The Bhasma (sacred ash) that is directly produced from the fire sacrificial pit and is a fine powder free from any dust, un-burnt fuel, residual charcoal or other contaminants is of the best type and called the Anu Kalpam.

The Bhasma that is made from dried cow’s dung that is found in the forest and grounded to a fine powder and mixed with other ingredients (as narrated in verse nos. 27-28) is called the Op Kalpam variety.

The Bhasma that is made from cow’s dung picked in the forest and then ground to a powder and mixed with cow’s urine to make small balls (‘Pindas’) that are offered to the sacred fire is called the Upop Kalpam type of Bhasma.

Finally, the Bhasma that is taken from a temple of Lord Shiva (i.e. that which is not prepared by the worshipper himself but taken from a temple’s fire-pit) is called the A-Kalpam Bhasma. It is also called ‘Shat Kalpa’ Bhasma.

All these four types of Bhasmas can destroy or annihilate sins and their evil consequences, and provide the wearer with Moksha. That is, if the sacred ash is worn

with due wisdom, it is potent enough not only to help the wearer get rid of the burden of current sins but also paves the way of his spiritual liberation and deliverance from this body and the world. Lord Kalagnirudra becomes pleased when the Bhasma is worn with due respect and wisdom, and he becomes benevolent and munificent towards a worshipper who wears it (34).

-----*****-----

Brahman 4

[This Brahman continues on the theme of application of the sacred Bhasma on the body that was the concluding part of Brahman 3. It describes how and when the Bhasma can be applied.]

1. After this (i.e. after being told about the way of preparing Bhasma as outlined in Brahman 3), Bhususnd asked Lord Kalagnirudra about the proper method of taking a symbolic bath with it. [That is, just like a man cleans himself by bathing in water and scrubbing off dust from his body, the sacred ash is also applied on the body to wash off the sins of the wearer. This fact has already been said in verse no. 34 of Brahman 3 above. So, this Brahman continues with the theme.]

The Lord preached—‘The Bhasma should be rubbed by pronouncing the Mantra ‘OM’. It should be empowered with divinity and made all-powerful using this eclectic and all-incorporating Mantra of Pranav (Brahm).

Then the five relevant Mantras pertaining to the five deities should be said while this consecrated Bhasma is applied on various parts of the body (as already mentioned in Brahman 3, verse nos. 31-32). Hence, it should be applied on the head by saying the Mantra for Ishan, on the forehead and other frontal parts of the head by saying the Mantra ‘Tatpurush’, on the thighs by saying the Mantra of Lord Aghor, on the genitals by saying the Mantra for Lord Vamdeo, and on the legs by saying the Mantra for Saddyojat.

The Bhasma is applied on the whole body, from the leg to the head, and then water is sipped to clean the mouth—this is the symbolic way of taking bath with the sacred Bhasma. After that, clean white cloth is worn just like one wears clean clothes after his bath.

This is the sanctioned way of bathing with the sacred Bhasma according to the Vedic tenets (1).

2-4. A diligent worshipper should take ‘Bhasma Snan’ or purification bath using the sacred and sanctified ash by the above described method.

The Bhasma is placed on five spots on the top of the head (on the cranium) by saying the Mantra of Ishan, on the face at four spots by saying the Mantra of Tatpurush, on the heart at eight spots by saying the Mantra of Aghor, on the genitals at thirteen spots by saying the Mantra of Vamdeo, and on the legs at eight spots by saying the Mantra of Saddyojat*.

In this way, the sacred Bhasma is worn on the entire body (2-4).

[Note—*This paragraph means that a particular Mantra is repeated so many times and each time the Bhasma is applied on different spots of the part of the body mentioned against that particular Mantra.]

5. The Bhasma should be applied everywhere except the mouth (i.e. it should not be applied on the lips).

The ritual of Bhasma bath can be done at the time of dawn and dusk (called the Sandhyas because these two times mark the period when the two halves of the day, i.e. the sun-lit phase and the dark phase of the night, meet each other). It can also be done at midnight. [This is usually done by those ascetics who do night meditation.] (5).

6. Since this application of the sacred Bhasma (ash) on the body is as purifying or cleansing by nature as taking normal bath with clean water, it can be done whenever the worshipper feels the need of cleaning himself. Some of these occasions are the following—after sleep, after taking meals or drinking water (as done by weary travelers), after finishing important work (as a busy man does to relax and refresh himself after some strenuous exercise), after being touched by a woman and an eunuch, or by animals such as a vulture, a cat, a duck or a mouse (6).

7-8. In other words, the Bhasma should be applied whenever one comes in contact with anything or anyone that is impure and polluting for him.

On the other hand, there is no need to apply Bhasma and clean oneself when one comes in contact with his Devta (the deity whom he worships), the Agni (the fire), the Guru (teacher), or a Briddha (an old man). [This is because they are not considered impure or corrupting.]

Bhasma should also not be applied on the body if one is forced under circumstances to travel on a path that is not considered auspicious and good for him. [This is because when he has crossed over and reached the other end of the path, he would have the chance to clean himself by ‘washing off the negativity’ that might have clung on to him during his actual journey through the inauspicious path which he was forced to take recourse to due to certain most difficult and unavoidable situations which were not under his control.]

The conch shell should be used to add water to the dried Bhasma (7-8).

9. Those who are experts in this knowledge say that the sandalwood dissolved in water should be added to the Bhasma before it is applied on the body. The sandalwood-mixed Bhasma is the one which bestows knowledge (enlightenment) upon its wearer.

This exercise of mixing sandalwood with water is to be done before noon, for in the afternoon hours it is prohibited (9).

10-12. [The following verses have an uncanny resemblance to the Kalagnirudra Upanishad of Krishna Yajur Veda.]

After that, sage Bhusund asked Lord Kalagnirudra the way to wear the Tripundra¹. In this context, the scriptural verses are as follows—‘The Tripundra symbolises the Trinity Gods—i.e. Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder.

A pinch of the sacred Bhasma should be picked up with the help of the joined fourth and third fingers touching the end of the thumb while saying the main Mantra having six letters. [This Mantra is ‘OM Namō Shivaye’. Refer verse no. 12-13 of Brahman 3.]

This sacred Bhasma is to be applied by a Brahmin (a learned person) on his head, face and other parts of the body at thirty-two, or sixteen, or eight or five spots (10-12). [These spots are described in the following verses.]

[Note—¹The word *Tripundra* has two parts—‘tri’ and ‘pundra’. Tri means three while the word Pundra refers to the three horizontal lines marked on the body (the forehead, the chest and the shoulders) by Hindus. The Pundra can be horizontal or crosswise lines, in which case it is called the ‘Tiryak Pundra’, or it can be vertical or upright lines, in which case it is called ‘Urdhva Pundra’. The Triyak Pundra or Tripundra is worn by devotees of Lord Shiva and initiated ascetics and is marked by the paste of the ash obtained from the pit of the fire sacrifice by mixing it with water.

The three lines of the Tripundra stand for the entire gamut of the triad of creation—i.e. for all the aspects of creation in its three dimensional aspect—such as the Trinity Gods i.e. Brahma the creator, Vishnu the sustainer and protector, and Rudra the concluder as stated in verse no. 10 above, the three Gunas such as the Sata Guna, the Raja Guna and the Tama Guna, and the three sacred fires such as the Ahawaniya fire, the Grahapatya fire and the Dakshinagni fire as stated in verse no. 36 of this Brahman 4.

The metaphysical and spiritual importance and significance of the Tripundra have been narrated in Brahman 7, verse nos. 5-7 of the present Upanishad. It is also the subject of exposition in the Kalagni Rudra Upanishad of Krishna Yajur Veda tradition when sage Sanatkumar had enquired about it from Lord Kalagni Rudra and explained by the Lord himself.]

13-15. The above mentioned thirty-two spots are the following—(i) the (top of the) head, (ii) the forehead, (iii-iv) the two ears, (v-vi) the two eyes (eyelids), (vii) the nose, (viii) the mouth (lips), (ix-x) the two sides of the chest, i.e. on either side of the breast bone, (xi-xii) the two wrists, (xiii) the heart, (xiv-xv) the two sides of the rib-cage, (xvi) the navel, (xvii-xviii) the two groins, (xix-xx) the two knees, (xxi-xxii) the two shin bones, (xxiii-xxiv) the two soles, (xxv-xxvi) the two thighs, (xxvii-xxviii) the two legs (feet), (xxix-xxx) the two hips, and (xxxi-xxxii) the two heels (13-15).

16. There are eight Vasus—viz. Ghar, Dhruv, Soma, Kripa, Anil, Anal, Pratyush and Prabhash (16).

[Note—The Vasus are the personified forms of the essential things that the supreme Creator created in this world so that the forthcoming creation would be well provided for and its essential needs taken care of. Some of these essentials were Fire (‘Anal’) that gave light, heat and energy, Air (‘Anil’) that breathed life into the creature’s body and prevented suffocation, Water that acted as the soothing balm, the lubricating liquid and the nectar of life (‘Soma’), a dwelling (a ‘Ghar’), whether it was a cave, a crevice, a tree branch or a mud hut that the creature needed for its residence and protection against the vagaries of Nature, the virtue of compassion and kindness (‘Kripa’) to let one’s neighbour too live and enjoy life to the full, and so on and so forth. These were the ‘assets’ that were personified as various Gods named above.]

17-18. The Tripundra is marked on the thirty two spots on the body (as narrated in the foregoing verses) after invoking the names of these eight Vasus and prefixing their names with the word ‘Namaha’ (literally meaning ‘I bow before you’).

Now, the sixteen places or spots where the Tripundra is to be marked are the following—(i) the (top of the) head, (ii) the forehead, (iii-iv) the two ears, (v-vi) the two shoulders, (vii-viii) the two sides of breast bone, (ix-x) the two wrists, (xi) the heart, (xii-xiii) on either sides of the navel, (xiv) the Adam’s apple, (xv) the navel, and (xvi) the spine (back bone) (17-18).

19. While the Tripundra is marked at the above sixteen spots on the body, the worshipper should invoke the following names—Shiva, Shakti, Saad, Isha and Vidya (19).

20. At the same time, the worshipper should also remember (invoke) the holy names of the nine Shaktis such as Vaamaa etc¹, along with the sixteen Gods², Naasatya, Dasra and the two Ashwini Kumars³ (20).

[Note—¹The *nine Shaktis* are the various forms of the divine dynamic power, potential, authority and energy of the Supreme Being that has taken the form of nine Goddesses. These Goddesses are worshipped as Mothers of creation and they complement the Supreme Being. The nine divine Goddesses, also known as the patron Goddesses in Tantra literature dealing with occult forms of divine worship, are the following—‘Maha Tripur Sundari’ (महा त्रिपुर सुन्दरी), ‘Tripur Amba’ (त्रिपुर अम्बा), ‘Tripur Siddhi’ (त्रिपुर सिद्धि), ‘Tripur Malini’ (त्रिपुर मालिनी), ‘Tripura Sri’ (त्रिपुरा श्री), ‘Tripur Vasini’ (त्रिपुर वासिनी), ‘Tripur Sundari’ (त्रिपुर सुन्दरी), ‘Tripur Reshi’ (त्रिपुर रेशि), ‘Tripura’ (त्रिपुरा).

According to another version, the nine divine Goddesses are the following—Vaamaa (the divine consort of Lord Vamdeo, one of the forms of Lord Shiva), Durga (the Goddess who rides a lion and is considered a manifestation of Parvati, the divine consort of Shiva, and who had slayed the demon named Durg), Gauri (the divine consort of Lord Shiva; another name of Parvati), Bhagwati (another name of Parvati; the divine Mother Nature personified and from whose womb the entire creation has emerged), Parvati (the consort of Shiva; had derived her name because she is said to be the daughter of the king of mountains, called ‘Parvat’ in Sanskrit), Laxmi (the divine consort of Lord Vishnu, the sustainer of creation, and the patron Goddess of good fortune, prosperity and wealth), Saraswati (the divine consort of Brahma, the creator, and the patron Goddess of knowledge), and Aditi (the mother of all the Gods).

The system of worshipping of the divine Goddess envisages that she is a personification of all the dynamic powers and essential energy of all the Gods rolled into one. The chief Goddess is known as Parvati, the divine consort of Lord Shiva who is regarded as the greatest and most senior amongst the pantheon of Gods, and hence honoured by the epithet ‘Maheshwar’. Parvati is also known as Durga who is worshipped in nine different forms. These nine forms of Durga are called ‘Nav Durgas’ or nine Durgas. They are also called ‘Nav-Shaktis’ or the nine personified forms of the divine dynamic power and energy of the Supreme Being.

Thus, according to the Kavach Stotra of Devi-mahatamya, the nine Shaktis are the following—Shailputri (literally, the daughter of the Lord of Mountains), Brahmchaarini (one who is perpetually a celibate and self-restrained), Chandraghantaa (one who is as beautiful as the moon), Khushmaandaa (one who is always cheerful), Skandamaata (the mother of Skanda, also known as Lord Kartikeya, the son of Shiva and Parvati and a commander of the army of Gods), Kaatyaani (the Goddess who personifies the holy consort of the great ancient sage of the Vedic period, named Var-ruchi Kaatyaan), Kaalraatri (a personification of the night of the doomsday), Mahagauri (the great Goddess known as Gauri, another name of Parvati, the divine consort of Maheshwar or Lord Shiva), and Siddhidaatri (one who gives mystical powers and bestows her devotees or worshipper with success in everything).

According to Brahmaand Puran, the names are the following—Neelkanthi (one whose throat is blue-tinged), Kshemankari (one who takes care of her dependents), Harasiddhi (one who gives all Siddhis—mystical powers), Vanadurga (the patron Goddess of the forest), Rudradurga (the Goddess who is as fierce as Lord Rudra), Agnidurga (the Goddess who is as fierce as Agni, the Fire God), Jayadurga (the

Goddess who gives victory), Vindhyavaasini (the Goddess who lives in the Vindhya mountain ranges), and Ripumaaridurga (the Goddess who vanquishes enemies).

²The *sixteen Gods* who are worshipped as patron Gods during ritualistic forms of worship are the following—Shiva, Rudra, Indra, Vishnu, Prajapati Brahma, Surya (the Sun God), Vignesh (Lord Ganesh) (mentioned in verse no. 4/22), and the eight Vasus (mentioned in verse no. 4/16), i.e. Ghar, Dhruv, Soma, Kripa, Anil, Anal, Pratyush and Prabhash, and Ishan or Isha (mentioned in verse no. 4/19).

³The *Ashwini Kumars*—They are the twin sons of the Sun God and the medicine men of the Gods.]

21. Besides the sixteen spots mentioned above, the following are also the other alternative spots where the Tripundra can be marked—(i) the (top of the) head, (ii) the tuft of hairs on the cranium, (iii-iv) the two ears, (v-vi) the two arms, (vii) the nose, (viii) the heart, (ix) the navel, (x-xi) the two thighs, (xii-xiii) the two knees, (xiv-xv) the two feet, and (xvi) the back (spine) (21).

22-23. [Now, the patron Gods who are deemed to be present in all these spots on the body are being enumerated.]

The following deities (Gods) are said to be present in the places mentioned above where the Tripundra is marked on the worshipper's body—Shiva (the most enlightened, wise and renunciate God who is deemed to be a synonym of the supreme transcendental Brahm), Indra (the king of Gods), Rudra (one of the many forms of Shiva responsible for conclusion of creation), Surya (the Sun God), Vighnesh (Lord Ganesh; the God who removes all obstacles and ill-omens), Vishnu (the sustainer, nourisher and protector of creation), Sri (Goddess Laxmi, the divine consort of Vishnu, who is the patron deity of all good fortunes, prosperity, majesty and fame in this world), the patron deity who resides in the subtle heart (i.e. the supreme transcendental Brahm in the form of the pure conscious Atma or soul), Prajapati who dwells in the navel (i.e. Brahma the creator as well as the Sun God who both are regarded as the creator and caretaker of this living world, hence called 'Prajapati'—one who is the Lord of his subjects), Naag (the serpent who is said to support this creation on its hood), the Naag Kanyas (the mythological beauties who are supposed to be offspring of the Naag and inhabit the subterranean world), and the two Rishi Kanyas (the daughters of an ancient Rishi, a sage or seer) (22-23).

24. Besides the above deities and their locations, the feet is the symbolic site of the 'Samudra Tirtha'. [The word 'Samudra' means the ocean or sea, and the word 'Tirtha' means a holy pilgrim site. Hence, the feet correspond to the ancient pilgrim sites located on the shores of the ocean or the sea, such as the Dwarka Tirtha on the western seaboard, the Puri Tirtha on the eastern seaboard, and the Rameshwaram Tirtha on the southern tip of the mainland. These are the main pilgrim sites, and there are countless others which are all deemed to be present in the feet which is a metaphoric way of saying that a pilgrimage to these places is dependent upon the leg or the feet. This is because a pilgrim can reach any holy site if his legs allow him to go there, or if the legs carry him there.]

The divine deities mentioned herein above (in verse nos. 22-23) are also present in the shoulders. [That is to say, these deities are not only restricted to the specific spots listed earlier in verse no. 18-21 but are also present in the region of the shoulders.]

After having enumerated the sixteen places where the Tripundra can be marked, now are listed the eight places where it can also be assigned. These eight spots on the body are the following—(24).

25-26. (i) The (top of the) head, (ii) the forehead, (iii-iv) the two ears, (v) the two shoulders, (vi) the two shoulders, (vii) the heart, and (viii) the navel. These are the eight places where the Tripundra can be marked (25-26).

27. Those who are expert in the proper way of applying the Tripundra say that there are five spots where it can also be applied. These five places are the following—(i) The (top of the) head, (ii-iii) the two upper arms, (iv) the heart, and (v) the navel (27).

28. If the worshipper is unable to wear the Tripundra as described in the forgoing verses of this Upanishad, then it can simply be applied on the following nine spots on the body (to derive the same benefits)—the forehead, the heart, the navel, the throat, the wrists, the elbows, the shoulder blades, the back (spine), and the top of the head (28).

29. [This verse lists the Mantras that are to be said when the Tripundra is marked on the eight designated spots on the body as enumerated now.]

While wearing or marking the Tripundra on the forehead, the Mantra which is to be said is ‘Brhmane Namaha’ (I bow reverentially to the supreme Brahman).

While wearing or marking the Tripundra on the heart, the Mantra which is to be said is ‘Prabhanjanaaye Namaha’ (I bow reverentially to the Lord Prabhanjan, one of the vital winds that controls the opening of the anus).

While wearing or marking the Tripundra on the navel, the Mantra which is to be said is ‘Skandanaaye Namaha’ (I bow reverentially to the Lord Skanda, i.e. Kartikeya).

While wearing or marking the Tripundra on the throat, the Mantra which is to be said is ‘Vishnave Namaha’ (I bow reverentially to the Lord Vishnu).

While wearing or marking the Tripundra on the middle of the abdomen, the Mantra which is to be said is ‘Prabhanjanaaye Namaha’ (I bow reverentially to the Lord Prabhanjan).

While wearing or marking the Tripundra on the wrists, the Mantra which is to be said is ‘Vasubhyo Namaha’ (I bow reverentially to the Vasus).

While wearing or marking the Tripundra on the backbone, the Mantra which is to be said is ‘Haraye Namaha’ (I bow reverentially to the Lord Hari, one of the names of Lord Vishnu).

While wearing or marking the Tripundra on the top of the head, the Mantra which is to be said is ‘Parmaatmane Namaha’ (I bow reverentially to the supreme Lord known as the Parmatma, the Supreme Being).

While making the mark of the Tripundra on the forehead, the worshipper should invoke the Mantra ‘Namaha Shivaye’ (I bow before Lord Shiva) and simultaneously meditate upon the Lord who is known as Trinetrum (one who has three eyes—two conventional eyes and one eye of wisdom and enlightenment located in the forehead), who is Trigunaadharam (the supreme Lord who is the bearer of all the three basic aspects of this creation such as its origin, its sustenance and its conclusion, or the one who is the base upon which all the three Gunas such as Sata, Raja and Tama are founded), and who is the Lord from whom the Trinity Gods (i.e. the creator Brahma, the sustainer Vishnu, and the concluder Rudra) are born. [This

Lord is none other than Lord Maheshwar, the great Ishwar or Lord of creation who is also known as Shiva, Ishan, Isha etc. This Lord is synonymous with the supreme transcendental Brahm. This fact is endorsed Krishna Yajur Veda's Varaaha Upanishad, Canto 4, verse no. 32, and in Dakshin Murti or Dakshin Mukhi Upanishad.] (29).

30. The Mantra 'Pitribhyam Namaha' (I bow before the holy spirit of my ancestors) is said while marking the Tripundra below the forehead (on the nasal bone).

The Mantra 'Ishaanayebhyam Namaha' (I bow before the Lord known as Ishan) is said while marking the Tripundra above the forehead (on the front part of the skull).

The Mantra 'Ishaabhyam Namaha' (I bow before the Lord known as Ishan) is said while marking the Tripundra on either side of the body (rib cage) (30).

31. The Mantra 'Swachhabhyam Namaha' (I bow before the Lord that keeps my abdomen clean and purified) is said while marking the Tripundra abdomen.

The Mantra 'Bhimaye Namaha' (I bow before the Lord known as Bhim, i.e. who is steadfast, strong and robust; the Lord who keeps my back strong and sturdy) is said while marking the Tripundra below on the backbone (on the spine).

The Mantra 'Shivaye Namaha' (I bow before Lord Shiva) is said while marking the Tripundra on the two hips (31).

32. The Mantras 'Neelkanthaaye Namaha' (I bow before the Lord with a blue-tinged throat, i.e. Lord Shiva) and 'Sarwa-atmane Namaha' (I bow before the Lord who is the soul of all living beings) are said while marking the Tripundra on the top of the head (on the cranium).

If a worshipper wears the Tripundra in the proper way as narrated herein above, all his sins and their consequences that have accumulated over numerous births are destroyed or eliminated. [And as a result, he becomes eligible to obtain Mukti—liberation and deliverance, emancipation and salvation.] (32).

33. If the divine Tripundra is worn (marked) on the throat, the worshipper's sins are destroyed, while all his sins along with diseases from which he might be suffering are eliminated when this Tripundra is worn on the ears (33).

34. Just as all the sins caused by the use of the throat (such as by speaking lies, speaking ill of others, or using abusive language etc.) are eliminated by wearing the holy Tripundra on the throat, and the sins caused by the use of the ears (such as hearing evil things) are eliminated by wearing the holy Tripundra on the ears, all the sins caused by the use of the upper arms (or hands) are eliminated by wearing the holy Tripundra there. [Since all the deeds are done with the aid of the hands, this verse implies that all the evil deeds and their horrific consequences are decimated if one devotedly wears this Tripundra on the hands.]

Similarly, when this Tripundra is worn on the chest, the sins committed by the Mana (mind and heart) are eliminated.

When this Tripundra is worn on the navel, the sins committed by the genital organs are eliminated.

When this Tripundra is worn on the backbone, the sins committed by the anus are eliminated (34).

35. When this Tripundra is worn on either side of the body, the sin of adultery committed by way of embracing a woman, who is not one's wife, is eliminated. [This is because an adulterous man sleeps, sits or walks with his lover constantly by his side, either the right or the left. His 'side' becomes polluted and corrupted by the sin of adultery. Hence, when he applies the Bhasma on the sides of the body, it is symbolically washed and cleaned of the sin created by being touched by the adulterous woman.]

Hence, it is advisable to wear (mark) the sign of the Tripundra (the three lines) and smear the Bhasma (sacred ash) as prescribed in this Upanishad on all the organs of the body. [These act as a shield to perpetually protect the worshipper from any future transgressions by the powerful forces of sins as well as to always keep him spiritually cleansed and purified as it acts as a constant reminder to him that the Lord is firmly seated on his body, and so he must be on his guard against committing any sin because the Lord is watching each of his deeds, actions, movements and thoughts.] (35).

[Note—It must be noted that this pardon or immunity is not meant to say that one is given a blanket immunity or pardon, or even a license to commit all types of evil deeds in the hope of being excused of his misdeeds simply because he is wearing the mark of the Tripundra, but it is prescribed as a means or an avenue that is provided in the scripture for those who wish to sincerely relent for their past misdemeanors, are sincerely regretful, and want to amend themselves. It is expected that when a man wears the Tripundra he would be conscientious and strive to uphold the dignity and honour of this holy mark. He must not do anything that would undermine the exalted stature of a person who wears this holy mark. To err is human, to do something wrong unknowingly or inadvertently or even under circumstantial compulsion is excusable, but to continue to commit sins and go on doing wrong, and ignore them willingly, is absolutely unpardonable. A person should be given all the chances for atonement and redemption if he is sincere and willing to do so.]

36. By wearing them (i.e. the Tripundra and the Bhasma) one gets the same eclectic benefits that comes by symbolically wearing or honouring or paying tributes to the three Gods of the Trinity, i.e. Brahma, Vishnu and Mahesh (Shiva/Rudra), the three holy fires (i.e. the Grahapatya fire, the Ahawaniya fire and the Dakshinagni fire), the three Gunas (the Sata Guna, the Raja Guna and the Tama Guna), and the three Lokas (i.e. the past, the present and the future; the terrestrial world, the heavens and the nether world) (36).

-----*****-----

Brahman 5

1. When the Bhasma (the sacred ash) is worn on the body, it should be first empowered with divine powers and vested with holiness by invoking the relevant holy Mantras called the 'Manostotra' as prescribed by the Vedas.

The spiritual benefits derived by a worshipper by wearing the Tripundra on the head are equivalent to chanting the Mantras of the Sam Veda (or reading this Veda).

If the Tripundra is worn on the middle part of the body, the wearer is rewarded with a long life as a blessing of the Trinity Gods (Brahma, Vishnu and Shiva/Rudra) (1).

2. The same benefit is obtained by wearing it (the Tripundra) on the two upper arms and the forehead.

The Brahmins (i.e. the first class of people in the traditional Hindu society who are deemed to be learned and are usually teachers, preachers and preceptors) and the Kshatriyas (i.e. the second class of people in the society usually assigned the task of giving protection to the rest of the society) should wear the Bhasma and the Tripundra on the navel, the head, the heart and the two sides of the body (i.e. on the left and the right of the rib-cage) (2).

3. The first three sections of the society, i.e. the Brahmins, the Kshatriyas and the Vaishyas (i.e. the third class of people in the society who are responsible for providing all the necessary material things needed for living a comfortable life by the members of the society) are expected to wear the Tripundra made by the Bhasma (sacred ash) obtained by doing Agnihotra (fire sacrifice).

The householders should primarily wear it on the heart.

The ash should be in the form of fine powder and free from other contaminants (such as un-burnt dung or other offerings that have been offered to the sacred fire during the rituals) (3).

4. Great sages have asserted that the above sacred ash is really worthy of wearing. For the householders, this Bhasma is especially prescribed for the purpose of wearing (4).

5. A Brahmachari (a celibate person who observes strict laws of self control and other religious vows) should wear the Bhasma derived from offering of Samidha¹ to the sacred fire.

The Shudra (people who belong to the fourth rung of the society according to the ancient system of classification, and are usually assigned the task of serving the other three classes) is required to wear the Bhasma that is got from the sacred fire of a household of a person who performs fire sacrifices according to Vedic traditions (5).

[Note—¹*Samidha* is an offering made to the sacred fire during the performance of the fire sacrifice ritual. According to the Mundak Upanishad of Atharva Veda, Canto 2, section 1, verse no. 8, there are *seven* types of Samidhas (fuel for the fire sacrifice; the firewood) and seven types of Yagyas (fire sacrifice). The seven types of Samidhas are the fuels that are needed to keep the fire of the sacrificial pit lit. It is a general term for the firewood. Wood from seven types of trees are used for this purpose as follows—Ashvattha (*Ficus religiosa*), Bilva (*Aegle marmelos*), Chandan (sandal wood), Devdaaru (pine), Khadira (*Acacia catechu*), Nayagrodha (Indian fig tree), and Palaas (*Butea frondosa*).

The wood from the following trees are not to be used for the purpose of Samidha—Bibhitak (*Terminalia bellerica*), Kapittha (wood apple), and Neem tree.

Each stick of the firewood should not be thicker than the thickness of the thumb, must have the bark on them, and should not be eaten by wood-worms or insects, or infected by any kind of germs—i.e. should be fresh.]

6. All members of the society should wear the Bhasma and the Tripundra (the three lines marked on the body from a paste of this sacred ash).

By wearing them, Sanyasis are blessed with truthful and absolute Gyan (true enlightenment that culminates in knowledge of the Absolute Truth; knowledge of the supreme transcendental Brahman who is also known as Shiva, the Truth), while Vanprasthas¹ are blessed with truthful and sustained Vairagya (honest renunciation,

dispassion, detachment and non-involvement with this material world and its sense objects) (6).

[Note—¹The life of a person is divided into four sections of roughly twenty-five years each. These are called the *four Ashrams*. They have been described in note of verse no. 8 below.]

7. Those persons who are castigated from the society (or are considered out-castes due to some or the other reason)¹ can also wear the Bhasma, but they are required to use the ash of the funeral pile in the cremation ground.

Devotees of Lord Shiva should wear the Bhasma got from a fire sacrifice done with proper Mantras and in accordance with established traditions in a temple of Lord Shiva.

To emphasis the immense importance and great significance of wearing the Bhasma and the Tripundra, there are Slokas (verses of the scripture) that endorse this view—‘A Brahmin who has worn the Tripundra made from the (paste of) Bhasma on his head is deemed to have studied (the Vedas and other scriptures), observed all the sacraments, and performed all the religious rituals (7).

[Note—¹Such people are called ‘Chandals’. The Chandal performs last rites of the dead and stay in the cremation ground and away from inhabited areas of cities and villages.]

8. Even a man who has become so wayward, deviant and fallen that he has abandoned all traditional codes of proper conduct and rules of behaviour as sanctioned for the four Varnas and Ashrams¹ in the society by the ancient scriptures, a man who has not done any religious or auspicious deed and has forsaken the virtues of righteousness, probity and propriety in his life, can obtain pardon for his misdemeanors, misdeeds, sins, reckless behaviour and deviance from established norms by wearing the Tripundra made of the sacred Bhasma. [This verse provides all people who have, for some reason, not been following the righteous path an avenue to redeem themselves and mend their ways so that they can put their past behind and look forward for a better life and a better future. The scriptures are not like a cruel tyrannical king’s dictate that has to be followed ruthlessly out of fear of merciless punishment for those who do not obey their orders, without giving them even a chance for repentance, rectification and redemption, but a considerate, merciful and magnanimous charter that shows the fallen man a path that can be followed by him for his own self-redemption and welfare no matter how sinful or bad his past might have been if he is really and sincerely interested in his liberation and deliverance from the horrific consequences of his past misdeeds and unrighteous conduct. After all, it is perfectly alright to err as a human being, but what is more important is to realize the fact that one has committed an error and that he should rectify himself at the first available opportunity.] (8).

[Note—¹The four Varnas and the four Ashrams—

(a) The four *Varnas*--The Hindu society has been divided into four sections or classes by ancient sages to regulate its functioning by delegation of authority and clearly specifying the jobs each section is supposed to do to maintain order and system in the world, to prevent overlapping of functions and avoid anarchy and chaos. These four sections are— (a) Brahmins*—the learned and teaching class; a wise one well-versed in the knowledge of the ultimate Truth about the supernatural Being called Brahm. They also presided over religious functions as priests, because these functions were central to life in the Vedic period; (b) Kshatriyas—they were the warrior, fighting, kingly class. They were assigned the job of giving protection to the society,

dispensing justice and maintaining general law and order. (c) Vaishyas—they were the trading and farming class responsible for commerce and wealth generation. They provided for the necessities for a comfortable life. And finally (d) the Shudras—the service class of people whose main function was to free the other three classes from the humdrums of daily chores and concentrate their energies to the particular jobs assigned to those classes to which they belonged.

Yajur Veda 31st Chapter, 11th Mantra says that Brahmins are the mouth of society, the Kshatriyas are its arms, Vaishyas are its stomach or abdomen, and Shudras are its legs. The body is regarded as a symbol of the society. As is obvious in this analogy, all these four units of the body must function properly and in close cooperation with each other in order that the body can survive and live comfortably and carry on with its assigned duties in an orderly fashion. The mouth is important because it is the medium by which the body takes food and speaks; the arms procure food and gives protection to the body against enemies; the stomach digests food and supplies the whole body with the energy needed by it; the abdomen holds all the internal organs; and the legs carry the body wherever it wants to go such as the place where food is available. Since food is the basis necessity of life, this instance is cited here. And the logic can be extended to everything else. Each component of the society must work properly in order that the whole society survives; each component is as vital as the other; each has its own importance in the bigger picture.

*The salient features of Brahmins are the following—they should possess these noble qualities—(1) 'Riju'-be expert in the Rig and the Yajur Vedas, (2) 'Tapa'-should be involved in doing penances, observing austerities and enduring sufferings for the welfare of the soul and the society, (3) 'Santosh'-be contented and satisfied, (4) 'Kshamaa'-to be forgiving and tolerant, (5) 'Sheel'-to have such virtues as good character, dignity, decorum and virtuousness, (6) 'Jitendriya'-to have self control over the sense organs, (7) 'Data'-to be a giver, one who sacrifices his own interests for the benefit of others, (8) 'Gyani'-one who is well learned, wise, enlightened and erudite, (9) 'Dayaalu'-to be merciful and compassionate. [Shatpath Brahman.] An entire Upanishad called Vajra-shuchiko-panishad, belonging to the Sam Veda tradition is devoted to the subject. The eclectic virtues of Brahmins have been expounded in Brihad Aranyaka Upanishad, Canto 3, Brahman 5 as well as in Canto 3, Brahman 8, verse no. 10

These four classes of the human race were created from the single father, the Viraat or Brahma. Their origins are indicative of the different jobs that they were assigned so as to enable the creator perform the task of governance just like a king assigns separate jobs to his different ministers. But it must be clearly understood here that each class of the human race was like a part of the body of the Supreme Being, and even as a man feels disfigured and handicapped as well as feels the pain equally if his leg is cut off from the rest of his body as he feels when his arm or head is severed, the Lord feels betrayed and hurt when even one of his sons is subjected to humiliation and pain. The four classes had specific jobs cut for them so that the society could function smoothly.

The Brahmins have their origin from the mouth of Brahma the creator. Since the mouth is used to give advice and teach others, the primary job of the Brahmins was to act as moral guide to their brethren. The four Vedas, which are repository of all knowledge that exist, were also created from the mouth of Brahma; hence these Brahmins were considered most wise and learned. The arms are metaphors for strength and powers; they are used to protect and help others. Hence, the Kshatriyas, who were created from the arms of Brahma, were those sons of his who would give the needed protection and security to their other brethren. In order to feed his creation, Brahma had to toil and labour to provide for the maintenance and financial and material well being of the society for merely teaching and protecting would not suffice without some one to take care of the other necessities of life. So he created the Vaishyas from his thighs, symbolizing labour, to pick up the mantle of mundane

affairs of life. But there must be someone who would do the daily chores, such as tilling the fields, doing the harvesting, washing and cleaning, and all other such odd jobs. This was assigned to the Shudras created from Brahma's feet symbolizing service.

None of these classes were meant to be inferior or superior to one another; they were all parts of the body of the same Brahma. In fact, the leg bears the burden of the body; just imagine what would have happened if Brahma had not created anyone from his legs? How would the Brahmin walk, how would the Kshatriya fight, and how would the Vaishya do his commercial activities if he could not walk? Similar arguments can be applied to other classes.

The origin of the four classes in the society have been described in detail, inter alia, in the following Upanishads—Shukla Yajur Veda tradition's Subalo-panishad, Canto 1, verse 6, and Canto 2, verse 1; and Brihad Aranyak Upanishad, 1/4/11-15; Rig Veda tradition's Aetereyo-panishad, 1/1/4.

Reasons for classification—The Niralambo-panishad of Shukla Yajur Veda, in its verse no. 10 states the reason for the classification of the society in four classes.

Colour of the skin--It ought to be noted here that the genesis of creation as outlined by the Upanishads describe the colour of the skin of the creatures that came into being. The colour of the skin was used symbolically to indicate the dominance of one or the other of the three basic Gunas, the Sata, the Raja and the Tama, in a particular individual that determines to which class of society he belongs, and which formed the basis of this classification which depend heavily on the quality displayed by an individual to become eligible to belong to one or the other class. The Gunas displayed by him holds a greater importance than his mere birth in a particular section.

For example, in Mantriko-panishad, verse no. 5 of Shukla Yajur Veda tradition it is said that Maya, which has created this entire world by its delusion creating powers, has the following three colours—white (fair; grey; all the light shades), dark (brown, black, yellowish and all shades of colours that are not essentially white) and blood red (or copper colour). Since the offspring gets the colour of the skin of the parent because the colour often is indicative of the race to which a particular species belongs, there would therefore be creatures having these three basic colours in varying hues and shades. Now what is the significance of these three colours? These three colours represent the three basic qualities, called Gunas, present in all the creatures. Even as an offspring gets the colour of the skin of the race to which it belongs, the inherent characters of all creatures are inherited from their mother, and this mother is Maya. The white colour stands for the best category of qualities called Sata Guna, the red colour stands for the second and medium quality called Raja, and the dark colour stands for the meanest quality called Tama. The word Tam itself means 'dark' and it stands for the worst type of qualities leading to sinful and pervert nature in a man which makes his life hellish; the word 'red' is a metaphor for anger, vehemence, vengeance, agitations, restlessness, short temper, strife, hatred, envy, jealousy and the other such negative worldly characteristics in a person; the colour 'white' stands for peace, tranquility, prosperity, happiness and wisdom, all of which are the characters of noble and gentlemanly persons. Refer also Shewata-shwatar Upanishad, Canto 4, verse 4-5; Paingalo-panishad, Canto 1, verse no. 3; Mantriko-panishad, verse no. 5 in this context.

According to some versions, there are five or six Varnas instead of four as described above.

The 5 Varnas are the following—Brahmin, Kshatriya, Vaishya, Shudra and Nishad who belong to the hunting and boatman tribe.

The 6 Varnas are following—Brahmin, Kshatriya, Vaishya, Shudra, Nishad (who belong to the hunting and boatman tribe) and Chandala who perform last rites of the dead and stay in the cremation ground and away from inhabited areas of cities and villages.

(b) The four *Ashrams*—The life of a Hindu man is divided into four segments or sections of roughly twenty-five years each. These are called the ‘Ashrams’. They are the following—(a) Brahmacharya—this is the 1st phase of life in which a person studies the scriptures under the tutelage of a wise teacher. This phase of life is marked by austerities, keeping of vows, observing celibacy, abstinence and continence as well as leading a regimental life style of a boarding school. (b) Grihastha—when a person has studied and prepared himself to face the world, he comes back to his house and enters the 2nd phase called Grihastha Ashram which is a householder’s life. He marries, raises a family, produces wealth and helps to carry forward the cycle of creation. This is the most important and enjoyable phase as well as the most tough one because on the one hand there are the comforts and pleasure of the world to be enjoyed, and on the other hand there are the various tribulations and miseries of a family life alongside the dealings with this deceptive world with all its accompanying horrifying problems. (c) Vanprastha—this is the 3rd phase when a man hands over the responsibilities of the world to his heirs and renounces his attachments to the house as well as the world, and heads for the forest, leaving the home for his next generation. It is now that he goes on pilgrimage and prepares for the final stage of his life, and (d) Sanyas—this is the 4th and last stage of life when there is complete cutting-off of all the ties with the world, spending time in contemplation and meditation, living a life of total renunciation, and begging for food for survival while single mindedly endeavouring for emancipation and salvation. This phase of Sanyas also has many stages depending upon the spiritual elevation and accomplishments of the aspirant, viz. Kutichak, Bahudak, Hansa, Paramhans, Turiyatit and Avadhut.

These four Ashrams, their characteristic features and virtues are described in detail in an Upanishad called ‘Ashramo-panishad’ belonging to the Atharva Veda tradition. Refer also to Narad Parivrajak Upanishad of the Atharva Veda, Canto 1, verse no. 2, which is Chapter 8 of the present volume, as well as to the Kathrudra Upanishad of Krishna Yajur Veda, verse no. 3 in the context of one taking the vows of Sanyas, the renunciate way of life which is the fourth and the last phase in the life of a man which prepares him for his final liberation and deliverance from this world.]

9. Those persons who do not wear the Bhasma and perform religious rituals do not get the desired spiritual rewards and neither do they ever get Mukti (spiritual liberation and deliverance from the cycle of birth and death) even after taking numerous births. [This verse merely highlights the importance of the Bhasma in the sense that if one wishes to derive the best result from any religious activity done by him, such as doing the fire sacrifice etc., then he must wear the consecrated Bhasma on his body.] (9).

10. A person who wears the Tripundra is freed from the evil consequences of great sins committed in some past time of his present life, and even those of the previous lives (10).

11. If a person becomes annoyed or angry at seeing the Tripundra on the head of any other person then it should be understood that the former is not from a noble and refined family, or has not been initiated into the religious fold and been baptized, or has not undergone the normal purification process and obtained consecration (by being given the sacred thread or the Mantra that is given to all children when they are baptized according to Hindu system) (11).

12. Wearing of the Tripundra and Bhasma is prescribed by the Vedas; the importance of its wearing and its holiness is described by them. Therefore, those who do not have faith in the Tripundra and the Bhasma, and do not wear them with due reverence, suffer from the bad consequences arising from defective purification or consecration rituals that are done for a newly born child, and such people lack from the benefits that normally accrue with proper baptism and initiation into the religious fold. This is a certainty.

On the contrary, those who do not suffer from such defects of baptism or other rituals done for purification of the child at his birth have a natural respect for and faith in the sanctity and the power of the Tripundra and the Bhasma, and such people wear them with firm conviction and devotion (12).

13. A wise and learned person must know that if a man forces someone wearing the Bhasma and the Tripundra to suffer, or tortures him or causes misery to him in any way, then surely the man who causes such sufferance or misery is highly despicable and born to Chandal parents. [That is, a man who makes the religious man who wears the Tripundra undergo sufferance or misery is not of a noble birth, and is surely a lowly and fallen man. He is an evil and ignoble man who is no better than the lowly Chandal who is an outcaste, and whose vocation is to burn dead bodies in the cremation ground.] (13).

14. If a man becomes angry or gets upset by merely seeing someone wearing the Bhasma and the Tripundra then such a man is cursed and he commits an offence which is equivalent to having committed a great and horrible sin—this is conclusion of the scriptures (14).

15. Criticism of the Tripundra is like a direct insult of Lord Shiva (because it is a symbol of the Lord).

In the same vein, wearing the Tripundra on the body is like establishing Lord Shiva on it and consecrating it as a holy abode of the Lord (15).

16. Cursed is a man and woe betide him who does not wear the Bhasma (as the mark of a Tripundra) on his head. Cursed is a town, a village or a habitat, and woe betide it, that does not have a shrine dedicated to Lord Shiva. A birth (i.e. a life) in which a person does not worship Lord Shiva is contemptible and cursed. Any body of knowledge that does not enlighten one on the Shiva Tattva (i.e. the Shiva principle; the knowledge of the Absolute Truth) is similarly contemptible and abhorable, and worth avoiding (16).

17. The Bhasma is a symbol of the fire emanating from (the eyes of) Lord Rudra (one of the forms of Lord Shiva, especially the one which is dynamic, forceful and energetic). [The Bhasma or the sacred ash is produced when the offerings are made to the sacred fire of the fire sacrifice. The fire reduces all these offerings to ash, and it is a sort of condensed and purified form of all the offerings as the raging fire would have burnt all the impurities put into it. Here the symbolism is clear—the angry and uncompromising form of Shiva, who himself stands for the eclectic virtues of truth, holiness, divinity, righteousness and auspiciousness, is known as ‘Rudra’, and in this form he burns all the evil elements that taint a worshipper’s inner being, thereby cleansing him from the inside. When the ash is worn outside the body, it is like cleansing the outside as well. Again, Lord Shiva is known for his immense wisdom

and enlightenment, and hence whenever he observes things tainted with corruption and which do not conform to the principles of probity, propriety, auspiciousness and righteousness, he ignites the fire hidden in his eyes to send out rays to clean the system. These rays are like the laser rays, and they are very powerful and precise. Like the laser rays used in modern surgery that hit directly and precisely to burn the ‘cancer cells’ in order to protect the rest of the body of the patient, the fiery rays emanating from the eyes of Lord Shiva strike at the root cause of a devotee’s spiritual decline and burn all the ‘impurities and tainted elements’ in him. That is, they eliminate all his evil tendencies and the horrific spiritual consequences of all his evil deeds, evil behaviour, evil thoughts and mental decadence in order to protect his soul. Thus, what remains is the pure and holy ‘self’.]

Therefore, this Bhasma is a source of spiritual strength and powers. Hence, a person who wears this Bhasma is ‘spiritually strong and empowered’ at all times; he is strong and powerful (17).

18. A person who has firm faith in the esoteric spiritual powers of Bhasma to provide purification from all sorts of sins and misdemeanours is rewarded with the same. That is, all his misdeeds and their accumulated horrible consequences are reduced to ashes or eliminated.

The Atma or the pure conscious ‘self’ of a person who is cleansed by taking a virtual bath with the Bhasma (i.e. who has worn the sacred ash in the prescribed manner on his body) is deemed to be most holy, purified, taintless, uncorrupted and immaculate. Such a person is the one who is said to have ‘Bhasma Nistha’—one who has firm believe in the mystical and esoteric powers of the Bhasma, and who is fully devoted to honouring and wearing it in the proper way (18).

19. A person is also called ‘Bhasma Nistha’ if he smears the sacred ash on his entire body, if he wears the mark of the Tripundra made of (a paste of) this Bhasma, or if he sleeps on a spread of the sacred ash on the ground (19).

[Note—The mystical powers of the sacred Bhasma have been enumerated below in Brahman 6.]

-----*****-----

Brahman 6

[This Brahman describes five astounding mystical powers of the sacred Bhasma (the consecrated holy ash of the fire sacrifice) by illustrating them citing a story from the Purans. Each power is like an honoured title or an epithet assigned to the Bhasma. Hence, this Brahman describes the ‘Naam Panchak’ or the five names by which the Bhasma is known. For instance, the first power is its ability to give life to a cursed man who is condemned to death. This is described in verse nos. 1-4. The second is its power to eliminate the curse of horrific sins. This is narrated in verse nos. 5-6. The third is its power that established a unique similarity between Lords Vishnu and Shiva and to provide all round welfare and auspiciousness to a devotee. How this came to happen is narrated in verse nos. 7-11. This power is endorsed by Lord Vishnu himself. The sacred Bhasma is so powerful that various Gods stand around to attend the devotee who wears it, and it is a bestower of all wisdom, erudition and knowledge to its wearer—these two additional facts, bringing the total number of glorious virtues of Bhasma to five, have been outlined in verse no. 12.

The mystical powers and the glory of the sacred Bhasma have been enumerated also in Brahman 4, verse nos. 32-36, and in Brahman 7, verse nos. 2-4.

Earlier, Brahman 1 has listed these names of the sacred Bhasma as Vibhuti, Bhaasit, Bhasma, Kshar and Rakshaa.]

1. In the continuing discourse, sage Bhusund then asked Lord Kalagnirudra about the importance of the 'Naam Panchak'—the five names or epithets that are given to the sacred Bhasma (the sacred ash derived from a fire sacrifice) as an honour for it, and to describe the astounding mystical and esoteric powers that it possesses. [A story from the Purans is cited here to illustrate each power that the Bhasma possesses.]

The Lord answered—'There was a Brahmin named Dhananjay who was born in the clan of sage Vashistha. [Sage Vashistha was one of the sons of the creator Brahma, and was the court priest of the kings of Ayodhya where Lord Vishnu took an incarnation as Lord Ram whose story has been narrated in the great Ramayana.]

He had a hundred wives. From the eldest wife a son named Karun was born. His wife was named Shuchismita. Animosity and ill-will developed between Karun and his other brothers. He could not bear with this tension and went to have a divine sight or Darshan of Lord Narsingh (a half man and half lion incarnation of Lord Vishnu) situated near a shrine dedicated to the Goddess Bhavaani (one of the forms of Parvati, the divine consort of Shiva).

Someone had offered a lemon to the idol of Lord Narsingh. Karun picked up the lemon and smelled it. The servitors of the Lord (i.e. of his shrine) saw this and cursed him that he would be born as a mosquito for a hundred births. Karun accepted this curse and became a mosquito.

He made efforts to contact his wife Shuchismita and asked her to help him. When she came to realize his predicament, her relatives kept this mosquito in a pot of oil.

The wife took that body of her husband who had been transformed as a mosquito and went to take shelter with and to seek the intervention of Arundhati (the wife of sage Vashistha).

The holy Arundhati reassured Shuchismita and told her not to grieve. She said, 'I will bring him back to life by using the sacred ash of the holy fire (that was constantly present in her home).' Then she invoked the most powerful Mantra called the 'Mritunjay Mantra' (literally meaning the Mantra which can conquer death) and sprinkled the sacred ash on the body of the insect (mosquito). Shuchismita began to wave the fan to provide refreshing air (1).

2. Karun got up and regained his consciousness as a blessing of the powerful rejuvenating and restoring effect of the Agnihotra (i.e. of the holy ash taken out of the pit of the sacred fire sacrifice) that was sprinkled on his body as a mosquito.

When a hundred years passed (symbolizing the curse of a hundred births as a mosquito), he was killed by someone of his own caste or clan (2).

3. He was once again revived as a blessing of the sacred Bhasma.

The five Gods (i.e. the Lokpals or custodians of the world) live in Kashi (the holy pilgrim city of Varanasi in north India) because they know the astounding mystical powers of the Bhasma (3).

4. I (Kalagnirudra or Shiva) too bless the dying man with life relying on the esoteric and most astounding rejuvenating powers of the Bhasma. Dadhichi had also known

this mystery of the Bhasma. He used to live in his hermitage by smearing the Bhasma on his body (4).

[Note—*Dadhichi* was an ancient sage who willingly sacrificed his life to help the Gods win over the Demons. He was the son of sage Atharvan, the progenitor of the Atharva Veda and the first sage who initiated the tradition of Fire worship, and his wife Shanti. The well known sage Pippalaad was his son. Dadhichi is a synonym for the highest ideals of self-sacrifice for the general good.

It so happened that once the Gods deposited all their weapons with him for safe keeping, promising to return at some fixed time. When they failed to show up and upon observing that the weapons had begun to rust, Dadhichi dissolved them in water and drank the solution. The ingredients of the weapons got deposited in his bones, especially the back bone. Thus, his bones became extremely strong. When the Gods came asking for their weapons, the sage told them what he had done, whereupon the Gods requested him to give them his backbone from which an invincible weapon can be crafted by which their formidable enemy, the demon king Vrittaasur, could be slain. Dadhichi conceded and gave them his backbone from which was made Indra's invincible weapon called the Vajra (thunder-bolt).

He did not die, but used the sacred ash of the fire sacrifice to remain alive in his hermitage as is clear from this Upanishad.

Verse nos. 1-4 narrate the power that the Bhasma has which can help the wearer overcome the fear of death.]

5. [The second story is now being described to emphasize the importance of Bhasma as an eliminator of all the evil effects of horrible sins.]

Now the astounding mystical and esoteric power of the sacred Bhasma—that it can destroy or eliminate all the sins and their horrific consequences—is being narrated.

On the occasion of the marriage of sage Gautam, the Gods saw his wife Ahilya and became so infatuated by her bewitching beauty that they lost their self-restraint and the sense of ethics, wisdom and rationality. This was not expected from them, and thus this very despicable thought of becoming sexually passionate about a sage's wife was a horrible sin. This evil thought became the cause of their being eclipsed by the dark shadow of sin. To get reprieve, they approached sage Durbasa and requested him to do something to calm down the horrors of this sin.

The sage promised them to do something to calm down the evil effects of this ignoble act. He said, 'I had on earlier occasions given (or prescribed) the sacred Bhasma empowered by using the 'Shatrudra Mantra' (i.e. the sacred hundred names of Lord Rudra or Shiva that are used as mystical formula called a Mantra; it has divine and mystical powers) for the purpose of redemption from and calming down of the horrible effects of even the most horrendous of sins such as the killing of a Brahmin.'

Saying this, the sage gave this most excellent and mystically empowered Bhasma to the Gods. As a result of its divine powers, the Gods were able to redeem and absolve themselves from this sin. Instead of being condemned, acquiring ignominy or getting demoted from their exalted stature of godhood because of this sinful act (of becoming passionate with a sage's wife), they not only were given a pardon from their sins but also became all the more glorious as a blessing bestowed upon them when they wore the Bhasma which is especially empowered and blessed by me (i.e. by Lord Kalagnirudra or Lord Shiva) (5).

6. They rejoiced—'All our sins and evil thoughts that were caused by the dominance of Tama Guna (which is the lowest of the three qualities in all the creatures, and

which makes them swerve towards sins and harbour evil thoughts) have been eliminated by the auspicious effects of wearing the sacred Bhasma which is infused with astounding mystical powers of redemption and salvation that is derived from it being sanctified and empowered by the use of the Shatrudra Mantra. [Refer verse no. 5.] (6).

7. This magical ability of the Bhasma is really astonishing.

Listen to more wonders of this mystical Bhasma. It is on the strength of this Bhasma that Lords Vishnu and Shiva have acquired wisdom and enlightenment. It is an eliminator of the horrors of grave sins such as the killing of a Brahmin. It can bestow immense good fortunes, majesty, grandeur and fame.

Lord Vishnu had scooped up some Bhasma with the help of his finger nails from the chest of Lord Shiva, sanctified and empowered it with stupendous mystical powers with the help of the two divine Mantras, one of Pranav (i.e. the Mantra of OM) and the other of the famous Gayatri Mantra, and then wore it on his head and body. [The Gayatri Mantra is given as a note to verse no. 6, Brahman 3.]

Lord Shiva said to Lord Vishnu—‘Meditate upon my divine form in your heart.’

When Lord Vishnu meditated, he had a divine and auspicious vision of Lord Shiva. He exulted in excitement—‘I’ve seen! I’ve seen (the magnificent divine form of the Lord)!’

Then Lord Shiva requested Lord Vishnu to gulp down a little of the sacred Bhasma.

Lord Vishnu said that first he would take a symbolic bath with this Bhasma (i.e. smear it over the body) before gulping it down (7).

8-9. After taking permission from Lord Shiva, Vishnu gulped down some Bhasma. Then a magical event occurred there—after eating the Bhasma with great devotion for Lord Shiva, Lord Vishnu’s complexion changed to the radiant colour of pearl. This complexion made Lord Vishnu appear to be like a reflection of Lord Shiva, an image of Shiva (because Shiva’s glowing complexion is also like that of a pearl due to the rubbing of the sacred ash on his body). [Normally, Vishnu is of a blue complexion like that of the sky. When he ate the Bhasma, it changed to the radiant colour of pearl.]

It is since then that Lord Vasudeo (i.e. Lord Vishnu) has become clear complexioned (8-9).

10. Lord Vishnu declared—It is not at all possible to have a full knowledge of the magical powers and mystical effects of the Bhasma as well as of the glorious majesty, the divinity, the cosmic powers and mystical abilities of Lord Shiva.

[Prayer that were offered by Vishnu to Lord Shiva—] ‘I repeatedly bow most reverentially to Lord Shiva. I have come to seek refuge at the holy feet of the Lord (10).

11. Oh Shambho (Shiva)! Let me have steady and constant devotion for your holy feet.’

Lord Vishnu declared as follows—‘A devotee who prays in this way and wears the sacred Bhasma in honour of Lord Shiva would deem to be my (Vishnu’s) devotee.’ (11).

[Note—Earlier in verse nos. 8-9 it has already been said that after imbibing the sacred Bhasma, Lord Vishnu had undergone a transformation and appeared to be a reflection of Shiva. That is, there appeared to be no difference between Vishnu and Shiva. This fact that both of them are the same cosmic Divinity or the Supreme Being having two names because they perform different functions, the former being the sustainer and protector of creation, while the latter, in his form as Rudra, is the concluder of creation, has been affirmed in other Upanishads as well—for instance, the entire Rudra Hridaya Upanishad and Skanda Upanishad of the Krishna Yajur Veda are dedicated to this theme. Verse nos. 4, 8-9 of the Skanda Upanishad are specifically explicit on this point.]

12. Hence, this sacred Bhasma is called ‘Bhuti-Kaari’—i.e. one that purifies, cleanses, and bestows all kinds of welfare and auspiciousness (to its wearer).

The eight Vasus¹ stand in attendance in its front, the eleven Rudras² are to its south (rear; behind), the twelve Adityas (Suns)³ are to its west (left hand side), the Vishwa Devas (the patron Gods of the various worlds) are to its north (upper side; above), the Trinity Gods consisting of the creator Brahma, the sustainer Vishnu, and the concluder Shiva are to its south (below), and the Sun and the Moon stand on its either sides. [Here, the reference is to the wearer of the Bhasma. This verse implies that all these Gods stand ready to attend to any of the needs of the wearer of the Bhasma, and are ever eager to give their protection to him from all the sides.]

The Brihajjabal Upanishad and its proper knowledge is a fulfiller of all desires and expectations; it is a doorway to Moksha (liberation, deliverance, salvation and emancipation); it is a personification of or equivalent to the three primary Vedas—viz. the Rig, the Yajur and the Sam Vedas; and it is like Amrit or the elixir of life that gives eternity and bliss.

A person who has a proper and comprehensive knowledge of this Upanishad becomes most wise, erudite, sagacious and learned inspite of his being as naïve, immature, unsophisticated and ignorant as a child. He becomes a learned one who is deemed to be a universal Guru (moral preceptor, teacher and guide) for all. He is elevated to an exalted stature so that he becomes eligible to give the holy Mantras to others.

This Upanishad is like a divine Mantra which possesses the mystical power to help one overcome death. A devotee or spiritual aspirant should accept it from a learned Guru and make it into a charm, and then wear it on the throat (as a necklace), the upper arms (as an armband) or on the Shikha (the tuft of hair on the head).

The obligation of the Guru is so great upon the disciple that the entire earth with its seven continents cannot suffice as a fee for the Guru. It is rather better to give a cow as a fee to the teacher as it would be sufficient (12).

[Note—¹The *eight Vasus* are Ghar, Dhruv, Soma, Kripa, Anil, Pratyush and Prabhash. Refer verse no. 16, Brahman 4 of this Upanishad. Refer also to Nrisingh Purva Tapini Upanishad, Canto 1, verse no. 3 and its accompanying note no. 3, which is Chapter 7 of this volume.

²The *eleven Rudras* are the eleven forms of Lord Shiva. They are the following:-- (i) Mannu (मनु), (ii) Manu (मनु), (iii) Mahinas (महिनस), (iv) Mahaan (महान), (v) Shiva (शिव), (vi) Ritdwaj (ऋतुध्वज), (vii) Ugrareta (उग्ररेता), (viii) Bhav (भव), (ix) Kaal (काल), (x) Vamdeo (वामदेव), and (xi) Dhritvrat (धृतिव्रत). The eleven Rudras appear in Rig Veda 1/43/1, and Taittiriya Brahman 3/4/9/7. They are regarded as the father of the Wind God or the Maruts (Rig Veda, 2/33/1). The word Rudra means one who is angry, terrible and wrathful. Amongst the Rudras, Lord Shiva is regarded as the most senior and enlightened.

The eleven Rudras according to Vishnu Puran (1/1/15) are the following—Har (हर), Bahuroop (बहुरूप), Trayambak (त्र्यम्बक), Aparajeet (अपराजित), Shambhu (शम्भु), Vrishakapi (वृषाकपि), Kapardi (कपर्दी), Raivat (रैवत), Mrigvyadh (मृगव्याध), Sharva (शर्व), and Kapaali (कपाली). Refer also to Nrisingh Purva Tapini Upanishad, Canto 1, verse no. 3 and its accompanying note no. 2, which is Chapter 7 of this volume.

³The *twelve Adityas* are simply as many forms of the Sun God. These are the revelations of Brahm in the form of the Sun to carry out the following functions of creation—(a) take care of the world (Rig Veda, 2/27/4); (b) are like the heads (Taittiriya Brahman, 1/2/3/3) and eyes (Jaimini, Uttar. 2/1/2/3) of all the creatures.

These twelve Adityas appear first in the Rig Veda 1/41/4-6 and 2/27. They are the sons of Aditi, the mother of Gods (Atharva Veda, 8/9/21). They are the following—the eight Vasus + Indra + Sun + Vishnu + Shiva = 12 in number.

According to Vishnu Puran, the twelve Adityas are the following—Dhata (धाता), Arayma (अर्यमा), Mitra (मित्र), Varun (वरुण), Anshu (अंशु), Bhug (भृगु), Indra (इन्द्र), Vivaswan (विवस्वान), Pusha (पूषा), Parjanya (पर्जन्य), Twashta (त्वष्टा) and Vishnu (विष्णु).

The *Sun God* is worshipped by twelve names during the twelve months of a year. These names and the months are as follows—(1) as Dhata during the first Hindu month of Chaitra also known as Madhu (roughly corresponding to mid-March and mid-April); (2) as Aryama during the second Hindu month of Vaishakha also known as Madhav (roughly corresponding to mid-April to mid-May); (3) as Mitra during the third Hindu month of Jyestha also known as Shukra (roughly corresponding to mid-May and mid-June); (4) as Varun during the fourth Hindu month of Ashad also known as Shuchi (roughly corresponding to mid-June and mid-July); (5) as Indra during the fifth Hindu month of Sravan also known as Nabha (roughly corresponding to mid-July and mid-August); (6) as Vivaswan during the sixth Hindu month of Bhadrapad also known as Nabhasya (roughly corresponding to mid-August and mid-September); (7) as Pusha during the seventh Hindu month of Aashwani also known as Tapa (roughly corresponding to mid-September and mid-October); (8) as Kratu during the eighth Hindu month of Kartik also known as Tapasya (roughly corresponding to mid-October and mid-November); (9) as Anshu during the ninth Hindu month of Marga Shirsha also known as Saha (roughly corresponding to mid-November and mid-December); (10) as Bhag during the tenth Hindu month of Paush also known as Pushya (roughly corresponding to mid-December and mid-January); (11) as Twasta during the eleventh Hindu month of Magh also known as Esh or Ish (roughly corresponding to mid-January and mid-February); and (12) as Vishnu during the twelfth Hindu month of Phalgun also known as Urj (roughly corresponding to mid-February and mid-March). Refer also to Nrisingh Purva Tapini Upanishad, Canto 1, verse no. 3 and its accompanying note no. 3, which is Chapter 7 of this volume.]

-----*****-----

Brahman 7

[This Brahman describes two things—one is the importance of the Bhasma and the Tripundra (from verse nos. 1 to 7), and the other is the importance of the Rudraksha beads (in verse no. 8).]

1. Once, the king of Videha, King Janak¹, went to the great sage Yagyavalkya and asked him to elucidate about all the rules and regulations pertaining to the process of

sanctifying the Bhasma (the sacred ash of the fire sacrifice) and wearing of the Tripundra (the three lines made on the body by using this duly empowered Bhasma).

Sage Yagyavalkya replied—‘One should offer oblations to the sacred fire using the five sacred Mantras of the Vedas such as ‘Saddyojat’ etc. [The five divine Mantras referred to here have been narrated earlier also in Brahman 3, verse nos. 29-32, and Brahman 4, verse no. 1. These Mantras are dedicated to the supreme transcendental Brahman, and they have also been described in detail in the Panch Brahm Upanishad of the Krishna Yajur Veda, in its verse nos. 5-23.]

The sacred ash is invested with mystical powers by invoking the Bhasma Mantra. It is lifted by invoking the ‘Manastok Mantra’, mixed with water (to form a paste) by saying the ‘Trayush Mantra’, and worn (marked) on the head, forehead, chest and the shoulders by invoking the ‘Trayambak Mantra’. [The Bhasma Mantra is narrated in Brahman 2, verse no. 11, the Mantras needed for its preparation are narrated in Brahman 3, verse nos. 3-25, and the Bhasma accepted and applied on the various parts of the body by invoking the different Mantras as enumerated in Brahman 3, verse nos. 26-32.]

A person who wears the Bhasma in the prescribed manner becomes purified and cleansed; he becomes eligible for obtaining Moksha (spiritual liberation and deliverance; emancipation and salvation).

Such is the immense potentials and importance of wearing the sacred Bhasma in the aforesaid manner is that its systemic wearing is equivalent to performing a religious ceremony or a ritual using the divine Mantra of Lord Shiva, called the ‘Shatrudra Mantra’ (1).

[Note—¹King Janak was regarded as the most enlightened and a self-realised dispassionate king of his times who was well-versed in and had a deep knowledge of metaphysics and principles of the Upanishads. He used to hold regular conclaves or assemblies where great sages and seers of the time were invited to discuss and preach on spiritual and metaphysical subjects. The Brihad Aranayak Upanishad, Brahman 3, Cantos 1-9 mention one such great conclave where great sages and seers had participated, and where sage Yagyavalkya was finally declared the undisputed winner, while Brahman 4, Cantos 1-4 describe how Janak had accepted Yagyavalkya as his teacher and asked the latter to preach him.

The level of Janak’s learning and erudition is evident from another incident when sage Shukdeo, the enlightened son of sage Veda Vyas who had classified the Vedas, compiled the Upanishads, and written the voluminous Purans, was advised by his learned father to go to king Janak to learn profound principles of metaphysics and spiritualism. Janak had tested Shukdeo’s eligibility, aptitude and competence by making him wait for prolonged time before even giving him a hearing. The entire episode along with the profound teachings of Janak forms the subject matter of the text of Canto 2 of the Maho-panishad of the Sam Veda tradition.

In the Ithihas-Purans, especially the one dealing with Lord Ram such as the epic Ramayana, he is shown as being the father of Sita, the divine consort of Lord Ram. He is called ‘Videha’ because he was so highly enlightened and self-realised that he knew the truth of the teaching of the Upanishads that the ‘self’ is not the gross body but the pure consciousness Atma, the soul, the spirit. This led him to be totally detached and disinterested in his body and what it does. He was so unconcerned about the body that for all practical purposes the body did not exist for him—i.e. he was ‘one without a body’, or a ‘Videha’.]

2. King of Videha, Janak, asked—‘What is the reward of wearing the Bhasma¹?’

Sage Yagyavalkya replied—‘As a divine grace of wearing the sacred Bhasma, all the Gods obtain Mukti (spiritual liberation and deliverance); all of them obtain the form of Mukti called ‘Sayujya Mukti’².

Verily, as an auspicious blessing and a reward for wearing the sacred Bhasma, they do not have to take a birth again; indeed they do not have to be re-born again (2).

[Note—¹The glorious and divine mystical powers of the sanctified Bhasma have described in Brahman 4, verse nos. 32-36, Brahman 5, verse nos. 18-19, and the whole of Brahman 6.

²There are four types of *Muktis* or deliverances for a creature— viz (i) *Salokya* which refers to finding an abode in the supreme divine abode of the chosen deity of the seeker; (ii) *Sayujya* which refers to intimate union between the individual soul of the creature and the supreme Soul of creation which is the supreme transcendental Brahman manifested in the form of the Lord whom the aspirant worships as his patron deity or Lord God. It implies to become one with the Lord; to merge one’s own identity with the Lord so that one becomes inseparable from his Lord; this form of salvation is very similar to the one that comes under the definition of Kaivalya; it is also called the ‘Param Pad’ or supreme state of being one with the Lord. (iii) *Samipya* which refers to being able to reside near the Lord to serve him; and (iv) *Sarupya* which implies that the aspirant becomes one with the deity whom he worships as his ideal.

Therefore, when the Gods wear the sacred ash they become as holy and divine as Lord Shiva himself.]

3. King Janak of Videha asked sage Yagyavalkya to further elaborate upon the immense spiritual rewards of wearing the sacred Bhasma and its great significance.

The sage replied that many exalted sages who had attained the highest stature of spiritualism and were honoured by the title of a ‘Paramhans’¹ had obtained the same Mukti (or an exalted state of existence) that is available to the Gods (as described in verse no. 2) by the divine grace and blessings of the sacred Bhasma. Some of these sages were Samvartak², Aaruni³, Shwetketu⁴, Durvasa⁵, Ribhu⁶, Nidagh⁷, Jadbharat⁸, Dattatreya⁹, Raivat¹⁰, and Bhusund¹¹.

The sage asserted that such is the eclectic glory and divine powers of the sacred Bhasma that these sages could attain a stature as that possessed by the great Gods (3).

[Note—¹A *Paramhans* is a person who has become self-realised and Brahman-realised, and consequently is regarded as being wise and enlightened as well as immensely holy and pure. He is therefore compared to a Swan which is regarded as a wise bird that invariably picks up the best and discards the rest. According to legends, the Swan would pick up pearls from an assortment of gems and jewels, and show no attention to or interest in the rest. It is also known to drink only milk and leave the excess water which had been added to it as an adulterant. A *Paramhans* is a *Sanyasi*, a renunciate ascetic who is most wise, self-realised and enlightened. All the Upanishads that describe the concept of *Sanyas* stress on the exalted nature of a *Paramhans* ascetic.

The *Varaaha Upanishad* of Krishna Yajur Veda tradition, in its Canto 2, verse nos. 37-38 describes the characteristics of a *Paramhans*

²Sage *Samvartak*—He was the son of the great sage Aangiras. Brihaspati and Uthya were his brothers. [Mahabharata, Adi Parva, 67.] He is probably the author of the ancient work called ‘Samvarta Smriti’ which is in the form of his teachings to sages Vamdeo and others. The topics dealt with in it are related to Brahmacharya (i.e. the life of immaculacy and observance of self righteousness), Prayaschitta (i.e. expiation for various sins), duties of a householder, a forest dwelling ascetic as well as a *Sanyasi* (a renunciate monk), a king etc.

³Sage *Aaruni*—He was the son of sage Arun Anupveshi, and belonged to the kingdom of Panchaal. He is one of the more important sages mentioned in the

Upanishads. He was the father of another great sage named Shwetketu and had taught his own son the profoundly esoteric secrets of that by knowing which all that is unknown becomes known. [Refer Chandogya Upanishad of the Sam Veda tradition, Canto 6.]

He was a disciple of the sage Dhaumya. He was such a faithful and obedient disciple that once when his teacher had asked him to stop the water that had breached the embankments of his field during a heavy downpour, Aaruni lay down on the ground himself to block the breach as all his other efforts to stop the leakage had failed. The Guru (teacher) Dhaumya was exceedingly pleased at his devotion to duty, his sincerity and obedience, and therefore he blessed him that he would acquire all knowledge even without studying them formally, that he would get immense renown, glory and majesty, and that he would be especially blessed by the Lord and accepted as his devotee. It is since then that Aaruni became famous as 'Uddyakak'—one who fastened or bound the embankment.

He had participated in the great metaphysical debate held in the court of the wise and enlightened king Janak of Videha in which sage Yagyavalkya had defeated all the assembled Brahmins. Aaruni had himself asked Yagyavalkya a question about who the Antaryaami (the one who resides in one's inner self and knows everything, even one's secret thoughts) was, and the latter replied this in a comprehensive manner. [Refer Brihad Aranyak Upanishad of the Shukla Yajur Veda tradition, Canto 3, Brahman 6.]

He was very humble and readily acknowledged his limited knowledge of the fathomless unknown. This is proved by the fact that he had no second thoughts in requesting king Pravaahan, the son of king Jaivali, to teach him the 'Panch Agni Vidya' or the metaphysical knowledge about the five holy Fires. [Refer—Chandogya Upanishad of the Sam Veda tradition, Canto 5, sections 3-10; Brihad Aranyak Upanishad of the Shukla Yajur Veda tradition, Canto 6, Brahman 2.]

⁴Sage *Shwetketu*—He was the son of sage Aaruni and a grandson of sage Arun, and belonged to the lineage of the ancient sage Gautam. So, on numerous occasions he is referred to as 'Gautam' in the Upanishads. He is one of the more famous sages appearing in the Upanishads. He was taught the principles of metaphysics pertaining to the supreme transcendental Brahma by his father Aaruni (also known as Uddyalak). [Refer—Chandogya Upanishad, Canto 6.]

He was initiated as a disciple very early in life at the age of 12 years and studied the Vedas for 24 years. But he was very arrogant and haughty of his knowledge. [Refer—Chandogya Upanishad, Canto 6, section 1, verse no. 2.] When he returned from his teacher's hermitage, his learned father was sorry at this mentality of his son. The father asked him if he knew about that by knowing which even the unknown could be known. When Shwetketu replied in the negative, his father taught him this great esoteric secret in the whole of Canto 6 of the Chandogya Upanishad.

His arrogance led him to taste defeat and humiliation at the hands of king Pravaahan, the son of king Jaivali, of Panchal, when the king asked him about Brahm. [Refer—Chandogya Upanishad, Canto 5, section 3, verse nos. 1-5.]

In another incidence, he could not answer questions about the 'Vaishwaanar Atma' (the cosmic Consciousness that is all-pervading and omnipresent) when approached by five noble householder sages Aupmanyu (the son of sage Upmanyu), Paulashi alias Satyayagya (the son of sage Pulush), Bhaallavi (the son of sage Bhalavi), Bhaalarveya alias Indradumnya (the son of Bhaallavi), Shaarkaraakshya (the son of sage Sharkaraaksha), and Budil (the son of sage Ashwatarashwa). They then went to king Ashwapati (literally a king who had a large cavalry and a huge stable of war horses) who elaborated on this aspect of metaphysics. [This episode is narrated in Chandogya Upanishad, Canto 5, sections 11-24.]

It was Shwetketu who had assigned specific duties to priests who perform the elaborate fire sacrifices. He was very annoyed at the promiscuity of the people of his time and had thus initiated reform in this direction by establishing and systematizing

the institution of marriage. He is credited in this context to have penned an abridged version of the Kaamsutra (the science and principles of Erotica) which was originally written by Nandi, the mount of Lord Shiva.

One of his talented disciples was the learned sage Upkosal. [Refer—Chandogya Upanishad, Canto 4, section 10.]

His wife was named Suvarcala who was the daughter of sage Devala. His brother was sage Nachiketa who had been blessed by the God of death, Yama, himself, and who is the cause of the revelation of the famous Katho-panishad of the Krishna Yajur Veda. His sister was Sujata, the wife of sage Kahola. Another famous sage Ashataavakra was his nephew.

⁵*Sage Durvasa*—Sage Durvasa was a highly enlightened sage inspite of his reputation of being anger personified as he is regarded as being an incarnation of Lord Rudra, the angry form of Lord Shiva. The depth of his metaphysical and spiritual knowledge is revealed in the form of an Upanishad known as the Gopal Uttar Tapini Upanishad of the Atharva Veda tradition which is included as section 2 of Chapter 27 of the present volume. This Chapter is ‘Gopal Tapini Upanishad. A brief life-sketch of sage Durvasa is appended as a note of verse no. 2 of this particular Upanishad.

⁶*Sages Ribhu and* ⁷*Nidagh*—An entire Upanishad called the Annapurna Upanishad of the Atharva Veda tradition is dedicated to these two sages. It was revealed as a preaching of sage Ribhu for the benefit of Nidagh. It is Chapter 16 of this current volume. For a brief pen-sketch of sages Ribhu and Nidagh, the reader is advised to refer to the note of verse no. 1, Canto 1 of this Annapurna Upanishad in this volume.

⁸*Jadbharat*—There was an ancient king named Bharat who was very devout, valorous, influential and renowned. India is also known as ‘Bhaarat’ after him. Towards the end of his life, he became infatuated with a fawn, as a result of which he had to take a birth again as a deer. Upon death, he was re-born in a Brahmin’s household as ‘Jadbharat’. His father was a learned man who read the Vedas and belonged to the clan of seers named after the great ancient sage Aangiras. [Aangiras was the sage who first started the ancient tradition of ‘fire worship’, was the first sacrificer and the forefather of sacred rituals. He had achieved such great mastery of the fire element that he could replace the Fire God and take over his duties during rituals if the latter did not oblige the worshipper. The Purans describe him variously as being the mental-born son of Brahma, the creator, and as having sprung forth from the sacrificial fire of the Varun God (the Water God; also sometimes referred to as the Sun because the latter is responsible for rains).]

Jadbharat had remembered his past life and how attachment to a fawn had resulted in his demotion to being born as a deer in the next life. So in this new life as a human he was extra cautious and remained aloof from and dispassionate towards the temptations of all charming things of this material world and its sense objects to avoid falling in the trap of Moha (attachments) once again. To avoid the world he intentionally pretended to be crazy, insane, intoxicated, wild and possessed by some spirit, appearing to be blind and deaf, and remaining moody, unpredictable and disinterested in everything. This helped him to avoid any contact with society as people avoided him like the plague, and this allowed him to roam alone like a mendicant who is out of his mind. In fact, the term ‘Jada’ means one who is utterly stupid, foolish and insane.

His learned father tried his best to teach him the Mantras and the Vedas, but inspite of his best of efforts he did not succeed in teaching Jadbharat even the basic Gayatri Mantra. In due course of time, his father died, and his mother handed him and his sister over to his step-mother for custody before she died herself. After his father’s death, his step-brothers did not care for him. Jadbharat continued to pretend to be crazy, answering people in most uncivilized manner whenever they taunted him for his stupidity or illiterate behaviour. He did whatever people told him to do, without

bothering for the consequences, and ate whatever was available without paying heed to whether it was worthy of eating or not. He never ate for taste or satisfaction of the body. He was equally immune to praise and insult, to comfort and suffering—because he had understood, as the result of divine grace, without being formally taught on the subject, that his ‘true self’ is not the body but the pure conscious Atma that is eternally blissful and contented, that is immune to insults and praises, and that never suffers, enjoys, takes a birth and dies.

He always remained naked whether it was hot, cold, rainy or windy; this made his body strong, resilient, stern and robust; it became immune to the affects of weathers and seasons. He neither took a bath nor scrubbed his body; this made him sport a most unconventional, dirty and unkempt look.

When his half brothers found him absolutely useless, and to prevent him from working in other people’s fields for free for food in return, they assigned him the task of looking after the embankments in their own field to avoid embarrassment. Unaffected and unconcerned, Jadbharat did whatever he was told to do, and ate whatever was given to him to eat, without giving a second thought to it, without complaining or fussing.

A miraculous incident is related to his life. Once it so happened that a chieftain of some tribe wished to make a human sacrifice to please some deity to beget a son. The man who was to be sacrificed escaped, and so his assistants caught hold of Jadbharat when they were searching for a replacement man. They found him standing in the dead of night on one leg, protecting the field against wild animals. They took him away without any resistance, then bathed, dressed, fed and prepared him for being sacrificed before the idol of the deity. But as soon as the priest raised the sword to swoop down upon him, the deity revealed itself and snatched the weapon from his hand, and cut off the heads of all the people who had wished to sacrifice Jadbharat!

There is a story which describes his high wisdom and level of enlightenment. Once, king Rahugana of the kingdom of Sindhu-sauvir was going to sage Kapil for hearing discourses. On the banks of river Ikshumati, the palanquin bearers needed a man to help them carry the weight, and they engaged Jadbharat because of his strong body. But as they walked, Jadbharat avoided stepping upon any insect on the way, resulting in his steps mismatching those of the other bearers. This resulted in the carriage swaying or rocking violently from side to side. Naturally, this annoyed the king who severely admonished the palanquin bearers. They told him that the cause of the rocking of the palanquin and the resultant inconvenience to the king was due to Jadbharat, at which the latter was at the receiving end of the king’s wrath. Jadbharat listened to the king with exemplary patience, and in return answered the king in such a way that the latter realised that he was no ordinary human but some highly self-realised and enlightened sage in that disguise. So the king immediately knelt down in front of him, and received the sage’s blessings along with his teachings on subjects pertaining to spiritualism and metaphysics.

⁹*Dattatreya*—An entire Upanishad is named after this great sage who is regarded as a combined revelation of the Trinity Gods, i.e. Brahma, Vishnu and Shiva, in as much as he possessed the virtues of them all. The life-sketch of Dattatreya is given as a note of verse no. 4, section 1 of the Dattatreya Upanishad which is included as Chapter 30 of our current volume of the Upanishads of the Atharva Veda tradition.

¹⁰*Raivat*—He was a king of Aanarta, and is mentioned in *Srimad Bhagvat* in its Chapter 52, Canto 10, verse no. 15 wherein it is narrated that his daughter named Raivati was married to Balraam, the elder brother of Krishna, at the behest of Brahma the creator. It is believed that Raivat was born in Sata Yuga, the first of the 4-Yuga cycle, when he had approached Brahma to know the destiny of his daughter. In the heaven, he stayed so long that the whole Sata Yuga passed, followed also by the Treta Yuga, So, his giving his daughter to Balraam in marriage during the Dwapar Yuga, which was the third era, proves that Raivat had an astonishingly long lifespan that covered three Yugas.

¹¹*Bhusund*—The first six Brahmanas of the present Brihajjabal Upanishad are dedicated to the discourse between sage Bhusund and Lord Kalagnirudra. His brief life is included as a note at the end of Brahman 1.]

4. King Janak asked sage Yagyavalkya once again—‘What are the benefits of wearing the Bhasma?’

The sage replied—‘By wearing (smearing of) the Bhasma on the body, all the pores of the body from where the hair follicles emerge become de-facto Shiva Lingams¹. [The ‘Shiva Lingam’ is a symbol of Lord Shiva and is shaped like an erect cylinder which is encircled by a rounded horizontal flat platform at its base. This Shiva Lingam is consecrated in all the shrines dedicated to Lord Shiva. In the present case, by saying that each pore of the body of the wearer of Bhasma becomes a Shiva Lingam, it is meant that the whole body, the entire being of the wearer, becomes holy and sanctified, and it becomes a de-facto shrine of the Lord. It is to emphasize the profound sanctifying and purifying powers of the sacred Bhasma.]

Since the sacred Bhasma is rubbed on the whole body, and since each pore of the body has become a Shiva Lingam, it follows that the spiritual rewards of wearing the sacred Bhasma on the body is equivalent to offering the Bhasma to as many physical Shiva Lingams in temples of Lord Shiva.

All the sections of the society, whether they are Brahmins, Kshatriyas, Vaishyas or Shudras, get the same auspicious benefits and blessings, the same grace and benediction by wearing the sacred Bhasma as are got by offering it in a shrine of Lord Shiva’ (4).

[Note—¹Some of the Upanishads that describe how the Shiva Lingam can be visualized as being present on the body are the following—(i) The *Yogshikha Upanishad* of Krishna Yajur Veda tradition has a number of verses dedicated to this symbolic worship of Lord Shiva in the form of the Lingam—viz. Canto 1, verse nos. 72, 167-168; Canto 2, verse nos. 6 (Naad Lingam), 8-14, 20; Canto 3, verse nos. 1-15; Canto 5, verse nos. 2-5, 5-16 (as abode of Shakti); Canto 6, verse no. 33. (ii) The *Brahm Vidya Upanishad* of Krishna Yajur Veda, verse no. 80 describes the Shiva Lingam symbolically present in the body.]

5. In some other time, king Janak, accompanied by sage Pippalaad¹, went to the divine abode of Prajapati (i.e. Brahma, the creator of this world inhabited by living beings). He asked Prajapati about the importance of wearing the mark of the Tripundra (the three lines made by a paste of the sacred ash) on the body.

Prajapati replied—‘The great metaphysical importance and spiritual significance of the Tripundra are same as those of Lord Shiva (because it is a symbol of the Lord and represents his divine authority and cosmic powers) (5).

[Note—¹Sage *Pippalaad*—A brief life-sketch of this sage is given in *Prashna Upanishad*, Canto 1, note of verse no. 1. This Upanishad is Chapter 1 of the present volume.]

6. After that, Pippalaad went to Vaikuntha, the abode of Lord Vishnu the sustainer of this creation to know more about this Tripundra and its esoteric secrets, metaphysical significance and mystical powers.

Lord Vishnu endorsed the views of Prajapati and reaffirmed that the importance and authority of the Tripundra are equivalent to those of Lord Shiva (6).

7. Then Pippalaad went to Lord Kalagnirudra and requested him to describe the eclectic glories and mystical powers of the Tripundra.

The Lord replied—‘The mysteries and astounding powers of the Tripundra cannot be described in words. A person who is adorned by the Bhasma (the sacred ash by the paste of which the Tripundra is marked on the body) finds Mukti—i.e. he gets liberation and deliverance.

A person who sleeps on a bed of Bhasma finds the sort of Mukti called ‘Sayujya’ (to be very close to one’s Lord, which in this case is Lord Shiva), and is freed from the cycle of birth and death. If he simultaneously reads the sacred Mantras of Lord Rudra called the ‘Rudraadhye’ along with wearing the Bhasma, he finds a stature that gives him immortality.

Indeed, a wearer of the Vibhuti (i.e. the sacred ash endowed with stupendous mystical powers and majesty, the ash that is honoured with the title of ‘Vibhuti’—i.e. one that is grand, has glory, majesty and immense fame) becomes one with and inseparable from the supreme transcendental Brahm (i.e. he acquires a spiritual stature that makes him equivalent to the Lord of creation).

He gets the same rewards as are found by taking a holy bath in various pilgrim sites. He gets the same reward as is obtained by taking a holy bath in Kashi (the pilgrim city of Varanasi situated on the banks of the holy river Ganges and where Lord Shiva is said to permanently reside).

He gets the same magnificent glory and acquires the same mystical energy, powers and authority as possessed by the Trinity Gods, i.e. Lords Brahma, Vishnu and Shiva (7).

8. [This verse describes the spiritual importance and metaphysical significance of the Rudraksha beads. This concept has also been explained in the Rudraksha Jabal Upanishad of the Sam Veda tradition, and the Kalagni Rudra Upanishad of Krishna Yajur Veda tradition.]

On some other occasion, sage Sanatkumar¹ asked Lord Kalagnirudra—‘Oh Lord! Please tell me about the metaphysical importance and spiritual value of the Rudraksha² beads’.

The Lord replied—‘Rudraksha was created from the eyes of Lord Rudra. [Refer Rudraksha Jabal Upanishad of Sam Veda, verse no. 2.] That is why they are called ‘Rudraksha’—one that has emerged from the eyes of Rudra, and therefore represent the Lord’s eyes.

At the time of doomsday, Lord Rudra had closed his eyes after having annihilated this creation. It is from these closed eyes that Rudraksha seeds were created. This is also why it is called ‘Rudraksha’—something that makes one weep, something that has been born from the eyes of Rudra who had mercilessly concluded this creation. [Perhaps Lord Rudra had closed his eyes to cool them down after they had spewed fire and brimstone that burnt this world to ashes, or perhaps he was overwhelmed by the destruction and ruin that unfolded before his eyes that made him wince with regret, and forced him to close his eyes as he wept at the havoc and ruin that spread before him. Tears must have rolled down from these eyes, and these metamorphosed into the seeds that came to be called the ‘Rudraksha beads’. Shiva is an eternally merciful Lord, so he must have invariably felt immense regret at having had to carry out this nasty job of burning down everything during the doomsday. But the Lord was duty-bound to do so as a part of the cosmic cycle of destruction and construction mandated by none other than the Supreme Being himself, and Shiva is none other than the latter. In other words, it is Shiva himself who had laid down the laws of creation and conclusion, the laws of Nature, and so he must adhere to these

cosmic laws in order to maintain their sanctity and effectiveness. This was necessary to maintain a balance in Nature because when the evil, the decadence and the vices in this world go beyond limits, the Lord was obliged to assume the non-forgiving and ferocious form of Rudra to clean the slate so as to begin afresh, and to ensure that noble, holy, pious, humble and righteous creatures who were about to be crushed by the ascendant evil forces could be given a chance for living a new life free from fear.]

By narrating the glories and majestic powers of Rudraksha one gets the auspicious rewards which is equivalent to having donated ten healthy cows.

Touching the Rudraksha and wearing it gives auspicious rewards that are equivalent to donating a thousand cows.

By wearing the Rudraksha beads on the ears (as ear-ring), one gets the auspicious rewards which are equivalent to donating ten thousand cows.

As an auspicious effect of the Rudraksha, such a man is able to dissolve himself or become one with the eleven forms of Lord Rudra³. That is, he is deemed to be a living personification of Lord Rudra in all of the latter's eleven divine forms.

By wearing the Rudraksha beads on the head as a crown made of a rosary of Rudraksha beads, one gets the auspicious rewards which are equivalent to donating millions of cows.

By wearing the Rudraksha beads on the ears (as ear-ring) as well as on the head (as a crown of beads), one gets the auspicious rewards which are so great that they cannot be described or enumerated.

One should wear the Rudraksha beads as follows—forty beads on the head (as a crown or girdle), one or three beads tied to the Shikha (the tuft of hairs sported on the top of the head by Hindus), six beads on each of the two ears (i.e. a total of $6 + 6 = 12$ beads on the ears as ear-rings), sixteen beads on each of the two upper arms (i.e. a total of $16 + 16 = 32$ beads on both the arms as arm-bands or armlets), twelve beads on each of the two wrists (i.e. a total of $12 + 12 = 24$ beads on both the wrists as wrist-bands or bracelets), and six beads on each of the two thumbs (i.e. a total of $6 + 6 = 12$ beads on both the thumbs as rings). [Refer—Rudraksha Jabal Upanishad of Sam Veda, in its verse nos. 17-23.]

According to the sanctified tradition of doing the fire sacrifice and offering of worship three times of the day (dawn, noon and evening), one should wear the Rudraksha beads as described above along with a Pavitri made of Kush grass on one of the fingers, and then make oblations to the sacred fire. [The Pavitri is a symbolic ring of purification worn on one of the fingers when one does any religious ritual. It is made of Kush grass, also known as Darbha or Durba. Its botanical name is *poa cynosuroides*, and it is a dark green reed used during religious ceremonies.]

This is the proper and sanctified way of offering oblations to the sacred fire and doing the fire sacrifice (8).

[Note—¹Sanatkumar and others called *Sankaadi Rishis*—A brief note on sage Sanatkumar and Sankaadi Rishis has been given a note no. 2 of Kandika 1 of the Atharva Shikha Upanishad which is Chapter 5 of this volume.

²The *Rudraksha* beads are made from the seeds of the tree *Eleocarpus ganitrus* having five faces or surfaces, and are used in rosaries and necklaces are also called Kalagni-rudra beads because these are very much liked by Lord Shiva.

The great spiritual importance and metaphysical significance of the Rudraksha beads have been explained in the *Rudraksha Jabal Upanishad* of the Sam Veda tradition, and in the *Kalagni Rudra Upanishad* of Krishna Yajur Veda tradition.

³There are *eleven Rudras*—refer Brahman 6, verse no. 12, note no. 2 of the present Brihajjabal Upanishad.]

-----*****-----

Brahman 8

[This Brahman is devoted to highlighting the immense metaphysical significance, spiritual importance, majesty and greatness of the Brihajjabal Upanishad.]

1. Lord Kalagnirudra expounded upon the astounding greatness and the esoteric spiritual value of the Brihajjabal Upanishad, its reading and its implementation in the following way—

He who reads (i.e. studies), contemplates upon (i.e. thinks deeply and meditates upon) and pays due respect to (i.e. honours and has faith to what is being said) this Brihajjabal Upanishad daily, and on a regular basis, is blessed and made pure by the grace of the Agni (the Fire God), Vayu (the Wind God), Aditya (the Sun God), Soma (the Moon God), Brahma (the creator), Vishnu (the sustainer, nourisher and protector) and Rudra (the concluder).

Verily, he finds the highest standard of purity and blessedness; he becomes universally pure and taintless much like these exalted and divine Gods themselves (1).

2. Such a person acquires so great and magnificent mystical powers, potentials and authority that he can, if he so wishes, overcome, supersede and exert control even over the great Gods such as Agni (the Fire God), Vayu (the Wind God), Aditya (the Sun God), Soma (the Moon God) and Udak (the Water God). [That is, he is mystically empowered to have control over the forces of Nature which are personified as these Gods.]

Not only them, but he can even stop the various powerful Grahās (planets, both the malevolent ones as well as the benign ones, which exert influence on the life of all living beings in this world) and the different types of severe poisons from having any effect upon the creature (2).

3. He is able to vanquish death. He becomes cleansed of all sins and their evil consequences. He becomes so blessed and cleansed that he is acquitted and granted pardon from many grave sins such as killing of a Brahmin, aborting a foetus, murdering a brave warrior or his widow, and all other sorts of killings¹.

In fact, he frees himself from all the entrapments of this mundane world and its ills. He is able to overcome all spiritual hurdles or obstacles that come in a creature's way and prevents him from finding final liberation and deliverance for his soul (3).

[Note—¹It must be noted here that this stanza does not mean that habitual murderers or those who commit such horrible sins as listed here are in any way encouraged, protected or condoned by this Upanishad. This provision of granting pardon is not meant as a blanket license for committing heinous crimes because it seemingly gives immunity from punishment and prosecution. It is neither the case nor the intention of this Upanishad to do so. The actual intention is to provide a means for repentance, reform and redemption to those who might have committed some grave sin due to a variety of reasons and compulsions, or even unknowingly, unwittingly and inadvertently under false knowledge that they are not committing any wrong, but when they come to become aware of their mistakes, they develop an honest and sincere wish to atone for their sins, to undo what wrong has been done by them. Since

every honest effort of repentance and reform should be encouraged and aided, and every man should be given a chance to improve his future inspite of his bad past, this Upanishad has sanctioned this pardon. Once a man does the fire sacrifice and understands the true meaning of wearing the sacred ash on his body, it is deemed that he has decided to keep his past behind, and sincerely and honestly wishes to move ahead in life.]

4. A regular and steady reader who diligently studies this Upanishad and contemplates seriously upon its philosophy is symbolically able to vanquish all the seven worlds such as the Bhuloka (the earth), Bhuvaloka (the sky), Swarloka (the heaven), Mahaloka (the greater heaven), Tapaloka (the heaven where ascetics doing Tapa live), Janahaloka (the mortal world inhabited by living beings), and the Satyaloka (the world of Truth where the enlightened souls live). [In other words, such a person is able to have access to all the divisions of creation, and no corner of creation is inaccessible for him. This is a natural corollary to the fact that he is blessed by all the divine Gods as listed in verse nos. 1 and 2.]

He can perpetually live in any of these worlds as he wishes (4).

5. The eclectic spiritual rewards and profound affect of reading, studying and contemplating upon this Brihajjabal Upanishad is equivalent to having read, studied and contemplated upon the Rig Veda, the Yajur Veda, the Sam Veda, the Atharva Veda, the Aangiras Vidya (the detailed knowledge of performance of the fire sacrifice and worship of the Fire God), along with the study of all their branches and sub-branches, all the details of sacred rituals and religious rites, all the Naaraashanshis (liturgies and formal prayers offered at ritualistic worship), all the Purans (ancient mythological histories), and deep meditation upon the supreme Braham represented by the divine Mantra known as Pranav or OM (5).

6. A hundred men who do not wear the Yajyopavit (the sacred thread) are equivalent to one man who wears it.

A righteous and noble Grihastha (householder) who is untainted and uncorrupt is equivalent to a hundred wearers of the sacred thread.

A Vaanprashta (one who lives in the forest) is equivalent to a hundred such Grihasthas.

A Sanyasi (a reclusive man who has sincerely renounced this world and severed all ties with it; a renunciate and dispassionate monk, hermit, friar or ascetic) is equivalent to a hundred such Vaanprasthas.

A person who is a worshipper of Lord Rudra and repeats the Lord's divine Mantras is equivalent to a hundred such Sanyasis.

A practicing teacher and a learned preacher of the profound spiritual and metaphysical philosophy of the Atharva Veda and the great Upanishads of this Veda is equivalent to a hundred such worshippers of Rudra.

And a single enlightened teacher and learned preacher of this Brihajjabal Upanishad is equivalent to a hundred such teachers and preachers.

This Upanishad is endowed with stupendous glory, divine powers and majestic potentials. Those who read it and study it attentively, diligently and sincerely, those who contemplate upon its philosophy and think deeply upon it, those who implement its teachings in life and practice its philosophy, become so powerful and authoritative that they can even overcome or vanquish the powerful energy and scorching fire of the sun as well as the dynamic, powerful and forceful punch of the wind (i.e. they become more powerful than the sun and the wind); they become more

soothing and comforting by nature than the moon (i.e. they acquire a natural gift of holiness, piety and divinity which makes their presence most welcome as it is more spiritually blissful, comforting and soothing for all others around them than the physical light of the moon which is cool and usually regarded as soothing); they do not have to remain bound to certain limits like the pre-fixed orbits of the various planets (i.e. they are freed from all boundaries, fetters and limitations; they do not have to remain confined to pre-fixed destinies symbolized by the pre-fixed orbits of the planets which they are bound to follow and remain confined to for the entire span of their existence); they are able to cross or overcome even the scorch of the fire and the greatest of sufferings in this world (i.e. even the fire cannot harm them, and the worst of horrors and torments do not affect them).

Indeed, they are able to vanquish all sorrows, miseries and grief; they are able to conquer even death and its fear.

[Since they have Lord Rudra as their patron Lord, even death is not able to harm them in the conventional sense because Rudra is the God who controls death, and therefore 'death' thinks twice before approaching the Lord's worshipper against his wishes. In practical terms it means that such persons become highly self-realised and enlightened, having understood that the body that dies is not their true 'self', but it is the pure conscious Atma that is their true 'self', and that this Atma is eternal and blissful, that it is beyond the purview of death and sufferings.]

When a person reaches this state of enlightenment, there is not the slightest hint of sorrow or grief; there is no hint of sufferings and torments. On the contrary, there is an all-pervading and all-encompassing state of eternal blissfulness, immense contentedness, tremendous grace and universal happiness. It is a state of blessedness; it is a state of profound tranquility, peace and serenity that comes with Brahm-realization.

Such a man is able to have access to the supreme spiritual stature of being Shiva realised. This exalted and eclectic state of being is always adored and revered by great ascetics. As a result of this achievement they do not have to remain trapped to the cycle of repeated births and deaths in this world. [That is, they find final emancipation and salvation for themselves.]

This fact is endorsed in the following Richa (hymn of the Veda)—‘Tad Vishnoha Param Padam Yatra Pashyantha Suryaha. Diviva Chakschuraatatam. Tad Vipraaso Vipnyavo Jaagrivansaha Samandhite. Vishnoyati Param Padam’.

OM salutations! This is the absolute, universal and irrefutable Truth that this Upanishad expounds upon and espouses.

Amen! (6).

Chapter 7

Nrisingh Purvatapini Upanishad/ Nrisingh Purvatapiniyu-panishad

This is a revealed Upanishad as it is a discourse given by Prajapati Brahma, the creator, to answer certain questions asked by the Gods. It expounds upon both the Saguna and the Nirguna aspects of the supreme transcendental Brahm (i.e. on the formed aspect of Brahm having specific attributes as well as the unformed, invisible, attributeless and cosmic aspect of the same Divinity). It lays emphasis on that aspect of Brahm which is very dynamic, most powerful, invincible and strong, and which had revealed itself as a half lion and half man incarnation to save the devotee named Prahalad from the tyranny of his demon father Hiranyakashipu. Since a 'man' is the best in the higher order of living beings, and the 'lion' in the lower order of creatures, the form of the Supreme Being as half man and half lion is to depict the fact that he represents the best of everything in this creation.

The 'Tapini' group of Upanishads is the one which mostly deal with the details connected with Upaasana (meditation) of a particular deity to whom they are dedicated, and by whose name they are known. The word 'Purva' refers to the commentary on this Upanishad as narrated by the renowned sage Adi Shankaracharya (A.D. 788-820).

The Upanishad is divided into five sections called 'Upanishads' themselves, and have a total of 77 verses or Mantras.

In Canto or Upanishad 1 it is described how there was only the causal water everywhere before this creation came into being, how the creator Brahma emerged atop a divine lotus that came out of this water, and how Brahma had done Tapa (severe penance and austerity) to initiate the process of creation. It was then that he 'saw' or realised or obtained the powerful Nrisingh Mantra by whose dynamic powers he was enabled to start the process of creation. This Upanishad refers to this Mantra revealed in the Anushtubh (or Anushtup) Chand style of composition. A parallel is drawn between the four steps or lines of this divine Mantra, and the earth, the semi-Gods in the lower heaven (called the Antariksha), the higher Gods such as the Vasus, Rudras and Adityas in the upper heaven (called the Duloka), and Brahm. Again, the four Vedas (Rig, Sam, Yajur and Atharva) are also symbolically represented by these four lines of the Nrisingh Mantra. Then the Upanishad eulogizes the profoundness and greatness of repeating this Mantra, and enumerates the immense rewards got there from. The four steps of this Mantra are also likened to the various things and beings in creation, such as fire, gods, vital airs, the sun, the moon, the Trinity Gods, and so on. A devotee can have a divine vision of the deity by repeating this Mantra.

Canto or Upanishad 2 describes how the Gods conquered sin and its consequence death when they were preached this Nrisingh Mantra by Brahma the creator. Then meditation using the divine Mantra OM as representing Pranav or Brahm, and its synonymous nature with the four Vedas and the sacred fires is narrated. It is followed by the method of using this OM for the purpose of Nyas (investiture). Then follows a detailed exposition on each of the words of the Nrisingh Mantra.

Canto or Upanishad 3 describes the Beej (seed) and Shakti (dynamic power) of the Nrisingh Mantra. Prajapati Brahma asserts that Maya (the power of creating delusions) is its Shakti, and the Akash (the sky) is its Beej. It is from Maya Shakti that

Brahma can create, and it is from the Akash that everything sprouts and expands because the vast cosmic space of the sky is the crucible that harbours the entire creation, right from its primordial stage to its birth, growth and development, and till its conclusion.

Canto or Upanishad 4 deals with the ‘Angamantras’ or subsidiary Mantras. They are OM, the Savitri Mantra of Yajur Veda (same as the first part of the Mahanarayan Upanishad, 15/2), the Laxmi Mantra of Yajur Veda. This is followed by the famous ‘Nrisingh Gayatri Mantra’.

Canto or Upanishad 5 describes the powerful Sudarshan Chakra or the discus of Lord Nrisingh. The Sudarshan Chakra is held by Lord Vishnu, the second of the Trinity Gods who is the protector of creation. This discus has six, or eight, or twelve, or sixteen or even thirty two spokes with corresponding teeth. The esoteric method of meditation connected with them is also narrated. Finally, a long litany of benefits got by worshipping Lord Nrisingh with the Mantra is described.

A minor Upanishad called ‘Nrisingh Shat-chakra Upanishad’ describing the Chakra (wheel of worship) dedicated to Lord Nrisingh is included as Addendum no. 1 of this Chapter.

-----*****-----

-----Shanti Paath-----

Please see appendix no. 1 for the English of this Shanti Paath.

Upanishad (Canto) 1

1. It is said that in the very beginning when this creation did not exist, there was only the causal water everywhere, and nothing else. From this primordial water emerged a divine lotus, and Prajapati Brahma, the creator, sat on its petals. Prajapati Brahma developed a desire to create the world. It is a well established principle in creation that what one sincerely desires or wishes, the inner self begins to speak (and think) in accordance with it, and the creature’s actions also correspond to such desires or wishes. [This is because his mind becomes focused on fulfilling his desires and wishes. It becomes polarized and restricted in one direction, concentrating all its divine energy and strength on efforts to ensure that the wishes and desires are fulfilled.]

In this connection, wise Rishis (learned sages and seers) have asserted—‘In ancient time, at the time of initiation of creation, the first to come into existence from the Mana (mind) was Kaam (desire). That is why those who are constantly meditating upon the ‘self’ and observe its behaviour and nature regard this Kaam as the fetter of the Atma (which is the pure consciousness that is their true ‘self’). [This is because by having some kind of Kaam (desire) pertaining to this world of material sense objects, the Atma would be focused on it, thinking of it always, and devoting all its time and energy in the pursuit of this desire. This would act as detraction and is a cause of constant annoyance for the Atma, robbing the latter of its freedom and peace.]

Those who are wise, sagacious and learned believe that Kaam is created or has its origin in the Mana (mind) of the creature, and that it is the Mana which is the cause of creation of the Prakriti (or ‘nature’) as well.

It was the primordial water that became the ‘cause’ of this creation (because it is from this ‘causal’ water that Brahma was born atop a lotus, and it was the latter who initiated the process of creation by developing a desire for it, and then taking

necessary steps to realise his desires or achieve success in fulfilling his wishes). It is from this water that the creation was created.

Those who know this esoteric secret are able to get or have access to whatever they wish to have (1).

2. Brahma did Tapa (severe austerity and penance) with the noble intention of initiating the process of creation. As an auspicious effect of this Tapa, he had a divine vision or obtained the mystical Mantra of Lord Nrisingh¹ which would empower him to succeed in the noble endeavour of creation. This Mantra was composed in the Anushtup Chanda style².

Brahma created this visible world with the help of this Mantra (i.e. this Mantra empowered him with the mystical powers to create). That is why this visible world is called a manifestation or revelation of the Anushtup Mantra. All the Bhuts (elements) have been created by, or have their origin in this Mantra. All of them get their vital life, and derive the strength and energy to survive from this Mantra, and at the end of their life span they collapse into this Mantra and merge with it.

Indeed, this Mantra of Lord Nrisingh composed in the Anushtup Chanda is the symbolic creator of this entire creation. [This is because even the creator Brahma had got his initial power to create out of this Anushtup Mantra.]

Anushtup is the Vaani or speech personified. In other words, the spoken word is a manifestation of the Anushtup Chanda. It is the Nrisingh Mantra composed in this particular style of metre of verse that has empowered the faculty of speech to speak and express one's inner thoughts. [Obviously, a hymn composed in any metre, whether it is Anushtup or something else, is revealed when it is said aloud, and this entails the use of voice or the faculty of speech. The dynamic powers of the Mantra is revealed when it is repeated or chanted aloud during ceremonial worship or even during personal meditation when a person repeats the Mantra to derive mystical benefits from it. The spoken words of the Mantra help to spread the divine dynamic energy contained in the syllables of the relevant Mantra into the surroundings, and this energy gets uniformly diffused in the space where the Mantra is said. This not only benefits the speaker but even those who hear it.]

A man gets birth and comes to death with this Vaani (speech). [This is a metaphoric way of saying that a man's speech and words can lead to his rising to an exalted stature and acquiring great fame and respect in society on the one hand, or lead to his ruin and infamy on the other hand. It is the man's words and his utterances that can cause strife, hatred, animosity and ill-will, or spread brotherhood and love around him.]

Hence, this Anushtup Chanda is regarded as the best amongst all the Chandas³ (2).

[Note—¹The *Nrisingh Mantra* that was revealed to Brahma has been described in Canto 2 of this Upanishad.

Nrisingh or *Narsingh* is the half lion and half man incarnation of Lord Vishnu to slay the demon Hiranyakashipu who had been tormenting Prahalad, his son, because the latter worshipped Vishnu. Lord Vishnu had incarnated as Nrisingh to kill the demon Hiranyakashipu who had been tormenting his own son Prahalad because the child was a devout follower of Vishnu. After having killed the demon, Nrisingh started roaming in the forests, striking terror in the hearts of all the creatures. It was then that Shiva, the universal Lord who has been honoured with the epithet of 'Mahadev' as he is the greatest and supreme God, had assumed the form of Sharav, the killer, and liberated Vishnu from the body of Nrisingh. [Refer *Sharav Upanishad* of Atharva Veda, verse no. 8.] Thus liberated, Vishnu had thanked him a lot (refer

Sharav Upanishad of Atharva Veda, verse no. 19) and went to his divine abode called Vaikunth. So this ferocious form of Shiva known as Sharav was also called 'Rudra', the angry and ferocious form of the Lord. One can imagine the fight that might have raged between Nrisingh and Rudra, and obviously Rudra must have been more ferocious than Nrisingh in order to subdue the latter.

This 'half lion and half man' form of the Lord is a visible image that has a cosmic counterpart as the 'half man and half female' manifestation of the Lord that is known as 'Ardha-Narishwar'. This cosmic form of Brahm as Ardha-Narishwar has two components—the right half is depicted in iconography as being a male representing Shiva, the great God, the other half is female representing his divine Shakti known as Parvati or Uma. This Shakti represents the dynamic energy of Shiva. When this applies to Brahm, the male aspect refers to the Supreme Being himself while the female aspect applies to Maya which is the dynamic power that Brahm employed to initiate this magical creation. This depiction is basically envisioned to drive home the point that Brahm and Shakti are inseparable in the context of the creation of the world. This elementary method of reproduction is known as 'asexual reproduction' and is depicted by many asexual plants and animals even today. For instance, the one-celled amoeba reproduces itself by cleavage. On the other hand, if we were to regard Brahm in its purest form as the cosmic Consciousness, then Brahm would not need the other half of the Maya, and would only be one and universal entity which has no definite and describable form and shape, it has no characteristic features, attributes and qualities. This form of the sublime and most subtle Brahm is known as either the Hiranyagarbha or the Viraat Purush depending upon the level of subtlety and grossness which is assigned to it, the former being more subtle than the latter.

The 'lion' part is a metaphor for the grand qualities of unmatched authority, stupendous strength, physical prowess and complete and unchallenged sway over the entire domain of creation just like a lion has over the forest and its inhabitant wild animals. This term is symbolic of the inherent stupendous might of the supreme Brahm as the unquestioned and powerful Lord of this forest-like world inhabited by myriad varieties of living beings, called the Jivas, just like a dense forest infested by wild animals. Similarly, the 'man' part symbolises the fact that Brahm is the most highly placed Lord much like a human being who represents the highest level in the ladder of evolution.

In other words, even as the lion is the unquestioned lord of the wilds and the man is of all the living beings, the supreme transcendental Brahm is the unquestioned Lord of all that exists with all its variations in this creation, whether in its primary form represented by the wild and primitive animals of the jungle or in its more evolved and developed form represented by the man, with all the other stages of creation included in between these two.

Lord Nrisingh is the fourth incarnation of the Supreme Being who had taken various forms to ward off and overcome evil forces in creation when they become ascendant and overcame the good and the righteous. The Lord did this to maintain order in the creation which is like his offspring.

So when one of his great devotees known as Prahalaad was being extremely tormented by his own father, the demon Hiranyakashipu, the Lord appeared as Nrisingh—or as a half lion and half man form—from the pillar to which the innocent lad was tied by the demon to prove to him the omnipresence and all-pervading form of the Supreme Being. Nrisingh is a personification of the grand virtues of dynamism, power, energy, valour and strength, and hence is worshipped by warriors and rulers in general. The Mantra of this Lord is believed to be very powerful and effective against enemies and opponents.

Iconographically, there are many forms of Nrisingh. Some of them are as follows—as seated (Aasin), as standing (Sthaanak), as boon-giver (Vardaayak), as ferocious and angry (Ugra), as striding (Yaanak), in the company of Laxmi, the Goddess of wealth and the divine consort of Vishnu (Laxmi-Nrisingh), as seated in

Yoga or doing meditation like Shiva (Yoga-Nrisingh), as a resident of a mountain (Girija), etc.

His images depict him in either the two-hand form or in a four-hand form. In the latter case, the two back hands hold a conch and discus like the case of Vishnu. The two front hands are shown as killing the demon Hiranyakashipu by forcing the latter on his lap, tearing his abdomen, and yanking his entrails out by his sharp nails.

An entire Puran called Narsingh Puran is likewise dedicated to this Godhead. This Puran glorifies Nrisingh as an incarnation of Vishnu, and is regarded as being synonymous with Narayan, one of the names of Lord Vishnu who is none but the Supreme Being called Brahm. Since Lord Vishnu himself is a macrocosmic, all-inclusive and invisible form of the supreme transcendental Brahm, therefore Nrisingh is a de-facto visible form of the otherwise invisible Brahm.

The Shuk Rahasya Upanishad of Krishna Yajur Veda, verse no. 27, while describing the process of invoking one of the components 'Asi' ('is') of the Maha Vakya (the great saying of the Vedas) 'Tattwamasi' ('that essence is you') says that the Shakti (dynamic energy) of this individual component 'Asi' is Nrisingh.

The Skanda Upanishad of Krishna Yajur Veda, verse no. 13 praises Lord Nrisingh as an incarnation of the Trinity Gods consisting of Brahma the creator, Vishnu the sustainer, nourisher and protector, and Shiva the concluder of creation. His divine and glorious virtues are similar to Brahm. Earlier in this Upanishad it has already been established that these three Gods of the Trinity are Brahm personified, as well as the fact that the creature's Atma or pure 'self' which is Consciousness personified, are also Brahm personified. Hence, by worshipping Nrisingh one is offering prayers to Brahm and honouring the grand virtues of creation exemplified by the latter. He is also offering worship to the 'consciousness' that represents Brahm in the physical body of Lord Nrisingh.

²The *Anushtup Chanda* has four lines and a total of thirty-two syllables or letters. Refer Canto 2, verse nos. 3-4.

³The word *Chanda* has two connotations—one is the style in which the hymns of the scriptures were composed, and the other is something that covers another thing, or acts as an enclosure that encircles all other things, or an awning that gives protection or shade, or something that wraps or envelops everything else. Since the creation is divided into four basic divisions or constituent parts, each step of the Anushtup Chanda is like one step of this creation. The four parts of this creation assumes many forms—viz. the four Vedas such as the Rig, Sam, Yajur and Atharva; the four types of creatures such as Swadej (those born from sweat and dampness, e.g. lice), Andaj (those born from an egg, e. g. birds), Jarayajuj (those that develop as an embryo lodged in the womb, e.g. man), and Uddbhij (those born from seeds, e.g. plants); the four types of Anthakarans (the inner self—which are Mana (mind), Buddhi (intellect), Chitta (the faculty of concentration, paying attention and memory; knowledge and sub-conscious), and Ahankar (ego, pride, arrogance); the four Ashrams (sections in a man's life, such as Brahmacharya, Grishastha, Vaanprastha and Sanyas Ashrams); the four Varnas (classes in society, such as Brahmins, Kshatriyas, Vaishyas and Sudras) etc.]

3. One should know that out of the first step of this eclectic and divine Mantra (i.e. the Anushtup Chanda in which the Nrisingh Mantra was revealed to the creator Brahma), which is also known as Sam (because it can be sung melodiously like the hymns of the Sam Veda), were created the earth with its seven continents, the mountains and the oceans.

It is to be understood that from the second step of this Mantra were created the Yakshas (a type of demi-god), the Ghandharvas (celestial musicians) and the Apsaras (celestial lady dancers; the damsels living in the heaven) who inhabit the Antariksha (the lower heavens).

Again, one should understand that out of the third step of the same Mantra were created the Vasus¹, the Rudras², the Adityas³ and other Gods who inhabit the Duloka (the middle level of the heaven above the Antariksha and below the upper heaven where the Supreme Being lives).

Finally, it is to be understood that out of the fourth step of this divine Mantra was created the supreme Brahm who is most immaculate, without any taints or faults, most pure and holy, like the great Vyom or the sky that is fathomless, infinite, measureless, all-encompassing and all-pervading. This Brahm is completely free from Maya—i.e. Brahm is not at all affected by any kind of delusions and its negative effects.

When a living being understands this esoteric secret, he is able to obtain the essential fountain of Amrit (which is the elixir of eternity and eternal bliss, felicity and beatitude) (3).

[Note—¹The Vasus—These *Vasus* are the various patron Gods who preside over the essential elements of life. They are eight in number as follows—Vishnu who is the sustainer, Shiva who is the annihilator, Kuber who is the treasurer of the wealth of the Gods, the Sun, Water, Fire, Wealth represented by gems and gold, and ‘Ray’ representing glory and fame. The element ‘Fire’ is the most potent, prominent and essential force in creation, because without fire the world would freeze to death. Hence, the Fire-God is said to be the chief amongst the Vasus. The ‘fire’ element is the active force in creation and is primarily responsible for kindling the cosmic cauldron that set in motion the process, and once having set it in motion it then sustained it and would finally annihilate it by burning it to cinders. On the other hand, Lord Vishnu is the passive force of creation represented by his other form of Viraat Purush which is the primary male aspect of creation. Lord Vishnu, who is the sustainer of the creation, is the Lord of Laxmi who is the Goddess of wealth, and is the supreme creator because Brahma, the old patriarch of creation who created the visible world and its creatures, was himself born atop the divine lotus that emerged from the navel of Lord Vishnu. Lord Vishnu utilizes the services of Laxmi who is the personification of the active forces of creation to create, sustain and annihilate the world. The Vasus are symbolic Gods who represent those essential aspects of creation without which life would be difficult to conceive and sustain and finally conclude.

The eight Vasus are the patron Gods who provide succour and a dwelling place for the whole creation. They symbolise those primary necessities of life without which existence is not possible. They are— (i) Kuber (the God of wealth and prosperity), (ii) the Sun God (who provides energy and food) and his rays and radiance (i.e. sunlight and the energy that it provides), (iii) Shiva (the concluder or annihilator of the creation), (iv) Vishnu (the sustainer), (v) the Water God (called Varun), (vi) the Fire God (called Agni), (vii) any body of water such as a pond, a river etc., and (viii) holy and pious people (who give advice and guidance to the creatures of the creation). According to Brihad Aranyak Upanishad 3/9/3, the Vasus are the following—Fire, Earth, Air, Antariksha (the space of the solar system), Aditya (Sun), Duloka (heavens), the Moon, and the Nakshatras (the stars and the planets).

According to Purans, the eight Vasus are the following—Dhruv (ध्रुव), Dhar (धर), Som/Soma (सोम—the sap of an elixir-providing plant called Som/Soma which is used during religious ceremonies as sanctified liquid offered to the Gods), Aapha (आप—water), Anil (अनिल—wind), Anal (अनल—fire), Pratush (प्रत्यूष) and Prabhaas (प्रभास).

These eight Vasus are the semi-Gods who symbolise the various types of assets needed to sustain this world. They therefore represent such assets as jewels, precious stones and gems, gold and other forms of wealth and property. Vasus also refers to the fire and water elements as well as their grosser forms as the terrestrial fire and water bodies such as ponds and lakes; to the virtue of radiance, splendour and glory;

to the ray of light; to Kuber (the treasurer of Gods), Shiva, Sun, Vishnu, and a simple and pious gentleman.

The *Ekakchar Upanishad* of Krishna Yajur Veda, in its verse no. 7, says that these Vasus are manifestations of Brahm in order to provide the creation with the necessities of life.

The *Atharva-shikha Upanishad* of the Atharva Veda, in its Kandika (Canto) 1 says that the Vasus were created in the beginning of creation from the first Matra 'A' of OM representing the first leg of the supreme Brahm along with Brahma the creator, the Rig Veda, the Gayatri Chand and the Grahapatya Agni.

The *Brihajjabal Upanishad* of the Atharva Veda, Brahman 4, verse no. 16 lists the eight Vasus as follows—Ghar, Dhruv, Soma, Kripa, Anil, Anal, Pratyush and Prabhash.

²*Rudras*—There are said to be eleven Rudras which are the different forms of Lord Shiva. They are the following:--(i) Mannu (मनु), (ii) Manu (मनु), (iii) Mahinas (महिनस), (iv) Mahaan (महान), (v) Shiva (शिव), (vi) Ritdwaj (ऋत्ध्वज), (vii) Ugrareta (उग्ररेता), (viii) Bhav (भव), (ix) Kaal (काल), (x) Vamdeo (वामदेव), and (xi) Dhritvrat (धृतिव्रत). The eleven Rudras appear in Rig Veda 1/43/1, and Taittiriya Brahman 3/4/9/7. They are regarded as the father of the Wind God or the Maruts (Rig Veda, 2/33/1). The word Rudra means one who is angry, terrible and wrathful. Amongst the Rudras, Lord Shiva is regarded as the most senior and enlightened.

(2) The eleven Rudras according to Vishnu Puran (1/1/15) are the following—Har (हर), Bahuroop (बहुरूप), Trayambak (त्र्यम्बक), Aparajeet (अपराजित), Shambhu (शम्भु), Vrishakapi (वृषाकपि), Kapardi (कपर्दी), Raivat (रैवत), Mrigvyadh (मृगव्याध), Sharva (शर्व), and Kapaali (कपाली).

(3) Lord Shiva has eleven forms, and one of them is 'Rudra', which literally means anger, wrath and vehemence. The Lord is considered to be the most enlightened of the Trinity Gods, and is therefore called 'Maheshwar'. He always remains in a meditative posture, always contemplating and meditating on the supreme Soul and the Truth. But still he shows anger and mercilessness, because one of his tasks is to punish the evil and sinful ones by ruthlessly slaying them in order to protect the good and righteous souls in the creation. Further, when his meditation and peace is disturbed he also becomes angry. He remains aloof and disinterested in the world, because he is very wise and enlightened, and he stays in the form of an ascetic. Ordinary people think that he is proud, arrogant and haughty because he does not give a damn to worldly formalities and niceties of behaviour. Shiva's failure to conform to set norms of proper and sane conduct makes him look most odd God.

The word 'Rudra' is literally used as a metaphor for anger, wrath, vehemence and cussedness. But this is a very misleading title for Shiva because there are a number of great Upanishads which describe Rudra as none but the Supreme Being known as the transcendental Brahm from whom the entire creation has emerged, who sustains it and in whom the creation would finally collapse. It is this Brahm in the form of Rudra who is treated as the supreme Lord God of creation, and hence is called Maheshwar. Refer also to *Brihajjabal Upanishad* (Chapter 6 of this volume), Brahman 6, verse no. 12, note no. 2.

The *Rudra Hridaya Upanishad* of the Krishna Yajur Veda tradition and *Atharvashir Upanishad* of the Atharva Veda tradition are exclusively dedicated to this theme. The *Dakshin Murti Upanishad* of the Krishna Yajur Veda describes the esoteric significance of the Shiva Tattva or the essential knowledge of Shiva who is the greatest Guru or moral preceptor and teacher of the creatures.

The *Atharvashir Upanishad* of Atharva Veda is especially relevant here because it explains the various epithets used to describe the virtues and glories of the supreme transcendental Brahm by Lord Rudra himself, and upon close reading it would be very clear that Rudra is describing Brahm when he describes himself.

³Adityas— The *twelve Adityas*—(a) According to mythology, there are said to be *twelve Adityas* which are simply as many forms of the Sun God. These are the revelations of Brahm in the form of the Sun to carry out the following functions of creation—(a) take care of the world (Rig Veda, 2/27/4); (b) are like the heads (Taittiriya Brahman, 1/2/3/3) and eyes (Jaimini, Uttar. 2/1/2/3) of all the creatures.

These twelve Adityas appear first in the Rig Veda 1/41/4-6 and 2/27. They are the sons of Aditi, the mother of Gods (Atharva Veda, 8/9/21). They are the following—the eight Vasus + Indra + Sun + Vishnu + Shiva = twelve in number.

(b) According to Brihad Aranyak Upanishad 3/9/5, the twelve months of the year represent these twelve Adityas, one month for one Aditya. In this Upanishad, sage Yagyavalkya draws a parallel between the twelve months of a year and the twelve Adityas for the following reasons—First, with the passage of one complete year, a corresponding number of years are subtracted from the total number of years that a person is supposed to live in this world. That is, death comes so much the nearer to him. The passage of the sun across the sky from dawn to dusk is used as a symbolic way of depicting the passage of the life of a man from his birth till his death. Since there are twelve mythological suns and twelve months in a year, a parallel is drawn between them and the life of a man.

Second, the whole life of an individual creature as well as the entire creation as a whole depends upon the various seasons that appear in a year. If even one of the seasons is disturbed, the entire cycle of life is disturbed correspondingly. For the smooth functioning of life, all the seasons must appear in a rhythmic and systematic manner, and it is a scientific fact that the seasons, upon which the life on earth is so dependent, also themselves depend upon the sun. That is why the Adityas are termed as being synonymous with the twelve months of the year as well as with the life cycle of creation.

(c) According to Vishnu Puran, the twelve Adityas are the following—Dhata (धाता), Arayma (अर्यमा), Mitra (मित्र), Varun (वरुण), Anshu (अंशु), Bhug (भृग), Indra (इन्द्र), Vivaswan (विवस्वान), Pusha (पूषा), Parjanya (पर्जन्य), Twashta (त्वष्टा) and Vishnu (विष्णु).

The Sun God is worshipped by twelve names during the twelve months of a year. These names and the months are as follows—(1) as Dhata during the first Hindu month of Chaitra also known as Madhu (roughly corresponding to mid-March and mid-April); (2) as Aryama during the second Hindu month of Vaishakha also known as Madhav (roughly corresponding to mid-April to mid-May); (3) as Mitra during the third Hindu month of Jyestha also known as Shukra (roughly corresponding to mid-May and mid-June); (4) as Varun during the fourth Hindu month of Ashad also known as Shuchi (roughly corresponding to mid-June and mid-July); (5) as Indra during the fifth Hindu month of Sravan also known as Nabha (roughly corresponding to mid-July and mid-August); (6) as Vivaswan during the sixth Hindu month of Bhadrapad also known as Nabhasya (roughly corresponding to mid-August and mid-September); (7) as Pusha during the seventh Hindu month of Aashwani also known as Tapa (roughly corresponding to mid-September and mid-October); (8) as Kratu during the eighth Hindu month of Kartik also known as Tapasya (roughly corresponding to mid-October and mid-November); (9) as Anshu during the ninth Hindu month of Marga Shirsha also known as Saha (roughly corresponding to mid-November and mid-December); (10) as Bhag during the tenth Hindu month of Pausa also known as Pushya (roughly corresponding to mid-December and mid-January); (11) as Twashta during the eleventh Hindu month of Magh also known as Esh or Ish (roughly corresponding to mid-January and mid-February); and (12) as Vishnu during the twelfth Hindu month of Phalgun also known as Urj (roughly corresponding to mid-February and mid-March).

Since the Sun God is a manifestation of the Supreme Being known as Viraat Purush, he is like an Emperor who, during his sojourn across the sky which is like his

vast realm, is accompanied by many sages called Rishis, celestial courtesans called Apsaras, celestial musicians called Gandharvas, servants called Rakshas or demons, guards known as Bhalls, and serpents called Naags. The Rishis walk in the front singing the Lord's glories in sacred hymns; the Apsaras dance to the music scores by Gandharvas; the Rakshas (demons) push the chariot from rear; the Bhalls take care of the chariot and guide it along, while the Naags pull it forward.

These attendants are also different like the forms in which the Sun God is worshipped in different months as described above. The list is outlined month-wise in the following sequence—Rishi, Apsara, Gandharva, Raksha, Bhalla and Naag.

(1) The month of Chaitra—Rishi is Pulastya; Apsara is Kritsthal; Gandharva is Tumburu; Raksha is Heti; Bhalla is Rathkrit; and Naag is Vasuki.

(2) The month of Vaishakha—Rishi is Pulaha; Apsara is Punjiksthal; Gandharva is Narad; Raksha is Praheti; Bhalla is Ojaha; and Naag is Kachaneer.

(3) The month of Jyestha—Rishi is Atri; Apsara is Menaka; Gandharva is Hahaa; Raksha is Paurusheya; Bhalla is Rathaswan; and Naag is Takshak.

(4) The month of Ashadha—Rishi is Vashishta; Apsara is Rambha; Gandharva is Huhu; Raksha is Shukra; Bhalla is Chitraswan; and Naag is Sahajanya.

(5) The month of Sravan—Rishi is Angira; Apsara is Pramlocha; Gandharva is Vishwaivasu; Raksha is Varya; Bhalla is Srota; and Naag is Elapatra.

(6) The month of Bhadrapad—Rishi is Bhrigu; Apsara is Anumlocha; Gandharva is Ugrasen; Raksha is Vyagha; Bhalla is Aasaaran; and Naag is Shankhapal.

(7) The month of Ashwin—Rishi is Gautam; Apsara is Ghritaachi; Gandharva is Dhananjay; Raksha is Vaat; Bhalla is Suruchi; and Naag is Sushen.

(8) The month of Kartik—Rishi is Bhardwaj; Apsara is Varchaa; Gandharva is Parjanya; Raksha is Senjit; Bhalla is Vishwa; and Naag is Eeraawat.

(9) The month of Margashirsha—Rishi is Kashyap; Apsara is Urvashi; Gandharva is Ritsen; Raksha is Vidyu-chhatru; Bhalla is Taksharya; and Naag is Maashankha.

(10) The month of Paush—Rishi is Aayu; Apsara is Purvachitti; Gandharva is Sfurja; Raksha is Arishtanemi; Bhalla is Uurna or Oorna; and Naag is Karkotak.

(11) The month of Magh—Rishi is Jamdagni also known as Richik-tanaya; Apsara is Tilottama; Gandharva is Shatjit; Raksha is Brahmapet; Bhalla is Dhritrashtra; and Naag is Kambal.

(12) The month of Phalgun—Rishi is Vishwamitra; Apsara is Rambha; Gandharva is Suryavarchaa; Raksha is Makhaapet; Bhalla is Satyajit; and Naag is Aswatar.

Refer also to *Brihajjabal Upanishad*, Brahman 6, verse no. 12, note no. 2.]

4. All the four Vedas¹ along with their branches and sub-branches are the symbolic four legs or steps of this Mantra (4).

[Note—¹The *four Vedas* are the following—Rik/Rig, Sam, Yajur and Atharva. Refer verse no. 22 of the *Sita Upanishad* of the Atharva Veda tradition. This Upanishad is Chapter 9 of the present volume of ours.]

5. [The following verses now go into the detail of the Nrisingh Mantra.]

How should one meditate upon this divine Mantra? Who is its patron deity or God? What are its limbs? What is the category of the Gods worshipped by this Mantra? What is the Chanda (its composition style)? Who is its Rishi (the sage who had first saw or visualized this Mantra while meditating)? (5).

6. Prajapati Brahma (the creator) said—‘A wise person, who recognizes that this divine Mantra is adorned by the glory and magnificence that is comprehensively encrypted in the single word ‘Sri’ (meaning fame, majesty, honour, glory, magnificence, grandeur, wealth and prosperity), which is its Beej Mantra¹ (or seed Mantra), and that it has the same eclectic glory, stupendous authority and divine

powers as possessed by the renowned Gayatri Mantra², is blessed with 'Sri'—that is, such a person who knows this fact as stated herein above acquires all the eclectic virtues and majesty that this word 'Sri' stands for or symbolizes.

The word Pranav or OM is uttered before all the hymns of the Vedas. Those wise and erudite persons who know or recognize this Pranav or OM as an integral part and parcel of this Sam Mantra (which is regarded as the 'best amongst the Mantras', here referring to the Nrisingh Mantra composed in the style of the Anushtup Chanda) becomes a conqueror of the three worlds collectively called Triloki. [That is, he is regarded as the most learned and wise in the entire world. The three worlds are the terrestrial, the heavenly and the nether.]

A person who is wise enough to know that the Mantra of Laxmi (the patron Goddess of wealth and prosperity, and whose abbreviated name and form is the word 'Sri') consisting of twenty-four letters or syllables is like the Yajur Veda itself, gets immense fame, majesty, wisdom and knowledge, besides having a long life.

A person who knows about this Sam (i.e. the eclectic Nrisingh Mantra composed in the Anushtup Chanda style that can be melodiously rendered) obtains access to Amrit (the elixir of eternity and bliss; of beatitude and felicity). Hence, one should endeavour to learn and be acquainted with this Sam complete with all its limbs (branches and details) (6).

[Note—¹The *Beej*, literally the seed, is the syllable or letter which is the basic sound-form from which the Mantra has sprouted much like a tall tree having its origin in the humble 'seed'. During formal ritualistic forms of worship using worship instruments as well as during the process of 'Anga Nyas', which is the invocation of the chosen deity and assigning various designated parts of the body where this deity is to invest its supernatural powers for the benefit of the worshipper. The Beej Mantra is the root or seed formula around which a particular Mantra is built, and which gives the Mantra its basic and inherent power and mystical strength.

The Beej Mantra is like the 'seed or root' from which the rest of the Mantra evolves and is said to derive its mystical and stupendous powers and potentials. This Beej Mantra is like the seed having the tree secretly present in it, and the Mantra would then be like the fully grown-up tree. Even when grown, the tree needs the root to anchor it and derive its nourishment from the ground. Hence the two epithets 'seed' and 'root' used to describe the Beej Mantra. Each deity has a specific Beej Mantra dedicated to it, and one Beej Mantra may apply to more than one deity.

In Hinduism, meditation and contemplation upon a chosen deity is done by the help of a Mantra as a specific formula dedicated to invoke its powers as well as to concentrate the mind and its various faculties on the deity along with aiding the process of meditation and contemplation. This is done by doing Japa which involves repetition of the given Mantra. In fact, Japa is an integral part of any religious exercise, even for success in Yoga because it helps to harness the latent and dormant energy in the body by focusing the mind on the purpose at hand. The Beej Mantra is used for its concentrated energy and strength alongside its ease of use and usefulness in offering oblations or doing Anga Nyas (which is establishing the divine powers of the deity on the different parts of the body to purify them, empower them and strengthen them with dynamic energy and holiness associated with the Mantra).

²The famous Gayatri Mantra is composed in the style of an Anushtup Chanda. It is the following—OM BHURBHUVAHA SVAHA¹, TSAVIURVARENYAM², BHARGO DEVASYA DHIMAH³, DHIYO YO NAH PRACODAYAT⁴. It means 'OM is the supreme, transcendental Brahm. He is the lord of creation of the terrestrial, the celestial and heavenly worlds. I offer my oblations to you. That Brahm is luminous like the sun. He is excellent, the best, the most exalted, a destroyer of sins, and a divine entity. May he imbibe, infuse and inspire our intellect with wisdom and enlightenment so that we are purified and move on the righteous and noble path'.

The four phrases of the Gayatri Mantra are clearly marked by small numerals in this Mantra. This Mantra appears in the Rig Veda (3/62/10), the Sam Veda (1462), and Yajur Veda (3/35, 22/9, 30/2, 36/6).

(iii) There are 24 Rishis of Gayatri Mantra. They are the following— Vamdev, Atri, Vashistha, Shukra, Kanva, Parashar, Vishwamitra, Kapil, Shaunk, Yagyawalkya, Bharadwaj, Jamdagni, Gautam, Mudgal, Veda Vyas, Lomas, Agstya, Kaushik, Vatsa, Pulastya, Manduka, Durvasa, Narad and Kshyap.

The 24 Chandas (metres) of Gayatri Mantra are the following— Gayatri, Ushnik, Anushtup, Vrihati, Pankti, Trishtup, Jagati, Ati Jagati, Shakvari, Ati Shakvari, Dhriti, Ati Dhriti, Viraat, Prastarapankti, Kriti, Prakriti, Akriti, Vikriti, Sankriti, Aksarapankti, Bhu, Bhuvaha, Swaha and Jyotismati.

There are 24 Devtas (Gods or patron deities) of Gayatri Mantra. They are the following— Aagneya, Prajapati, Saumyam, Ish, Savitri, Aditya, Bhrishapti, Maitravarun, Bhagdaivatya, Aryamaishvar, Ganesh, Twastra, Paushna, Indra, Vayu, Vamdeo, Maitra Varunidaiv, Vaishvadev, Matrik, Vaishnav, Vasu Dev, Rudra Dev, Kuber and Ashwini.

The 24 Shaktis (divine powers or the female aspects of creation) of Gayatri Mantra are the following— Vaamdevi, Priya, Satya, Vishva, Bhadravilasini, Prabhawati, Jaya, Santa, Kanthaa, Durga, Saraswati, Vidruma, Vishlesa, Vyapini, Vimla, Tamopaharini, Sukhma, Vishwa-yoni, Jaya-vasa, Padmalya, Paraa, Sobha, Bhadra and Tripada.

The 24 Varnas (colours or shades) of Gayatri Mantra are the following — Campakam (yellow), Atasi (hemp), Vidrum (coral), Sphatik (crystal), Padam (lotus), Tarun-aditya (rising sun-red), a mixture of Shankha (conch), Kunda (white jasmine) and Indu (moon), Pravaal Padma (red-lotus), Padmaraga (emerald), Indranilamani (sapphire), Mukta (pearl), Kumkum (a red colour or copper colour made from the pollen of the flower of the plant *Crocus sativus*), Anjam (collyrium-black), Rakta (blood red), Vaidurya, Ksaudra (champa; yellow), Haldi (turmeric yellow), Kunda Dugdha (white as jasmine), Ravikanthi (sun-white), Shukpuccha (a tail of a parrot), Shat-patra (white lotus), Ketaki (light yellow), Mallika and Karavira.

The 24 Tattvas (essence, elements) of Gayatri Mantra are the following—earth, water, fire, air, space (called the 5 Mahabhuts), smell, taste, vision, sound, touch (called the 5 Tanmatras), generative organ, excretory organ, feet, hand, mouth (called 5 organs of action), nose, tongue, eyes, skin, ear (called 5 organs of perception), Pran, Apan, Vyan and Samaan (called vital airs).

The 24 Mudras (postures) of Gayatri Mantra are the following— Sumukham and Samputam, Vitatam and Vistrutam, Dwimukham and Trimukham, Chaturmukham and Panchmukham, Sanmukham, Adhomukham, Vyapakanajalikam, Shakatam, Yampasham, Sanmukho-mukham, Vilambam, Mustikam (closed fist), Matsyam (fish like), Kurmam (tortoise), Varahakam (boar like), Singhkrantham (lion like), Mahakrantham (a great lion like), Mudgar (Pelion like), Pallavam, Trishulyoni (trident like), Surabhi (cow like), Akshamala, Lingakam (phallus like) and Ambujam (blue lotus).

Refer also to Atharva Shikha Upanishad (Chapter 5), Kandika 1, note no. 4, and Brihajjabal Upanishad (Chapter 6), Brahman 3, verse no. 6, note no. 1.]

7. Wise men do not wish to preach to incompetent, unprepared or ineligible persons, such as women and the Sudras (low castes), the two Mantras called the 'Pranav Gayatri Mantra' which is like the Sam Veda, and the 'Mahalaxmi Mantra' which is like the Yajur Veda itself personified. [The Pranav Gayatri Mantra is narrated above

as a note of verse no. 6, while the Mahalaxmi Mantra is narrated below in Canto/Upanishad 4, verse no. 11 of the present Upanishad.]

A wise and erudite aspirant should be well versed in the Sam (sacred hymn) having thirty-two letters or syllables—i.e. the hymn composed in the Anushtup Chanda and the subject matter of the present Upanishad. A person who knows is able to access the essence of Amrit—i.e. he obtains an eternal fount of bliss and everlasting beatitude and felicity.

Even if the Mahalaxmi Mantra¹, which is as powerful and effective as the Gayatri Mantra, the Pranav Mantra (i.e. the divine word OM) and the Yajur Veda are made known to incompetent or ineligible persons such as a woman or a Sudra, the latter still do not get the expected high stature and the benefits that are expected by having access to the aforesaid divine Mantras and the Veda, but remain fallen and downgraded instead, subject to misfortunes and restlessness that is associated with ignorance and delusions as they have a natural inclination to slide downwards, remain mired in worldly delusions and temptations, and inclined to enjoy the material world and gratify their sense organs, leading to a general spiritual decline and moral degradation. In this state of affairs, the teacher who gives or teaches the Mantra should be extra cautious about the receipt of these Mantras, because otherwise they too are dragged along with the disciple in a downward spiral² (7).

[Note—¹The *Maha Laxmi Mantra* is given in Canto 4, verse nos. 11-12 of this Upanishad.

²It must be noted here that this restriction is not meant to demean women or the Sudras in any way because a woman is regarded highly in the scriptures as a personification of Mother Goddess, and the Sudra occupies an important place in the scheme of things planned by the supreme creator as asserted in the Yajur Veda 31st Chapter, 11th Mantra which says that Brahmins are the mouth of society, the Kshatriyas are its arms, Vaishyas are its stomach or abdomen, and Shudras are its legs. The Subalo-panishad of Shukla Yajur Veda tradition, in its Canto 1, verse 6, and Canto 2, verse 1 describes the origin of these four classes in society as follows—‘From this Brahma, the creator, emerged the rest of the creation. From his mouth came into being the Brahmins; from his arms were created the Kshatriyas; from his thighs evolved the Vaishyas; and from his legs were created the Shudras.’ Say, how someone can stand without his feet! Hence, it is not the intention of this Upanishad to demean either the woman or the Shudra.

The probable reason for singling them out as being ineligible is that both the woman and the Sudra are so busy with daily chores of life that they might not find the necessary time and energy to devote themselves to observing the rigorous discipline ordained in the scriptures for worshipping the deity of this Mantra, or even repeating this Mantra and meditating by using it in the proper fashion.

A woman has to spend a great part of her life in producing children, and then rearing a family and taking care of its routine affairs. So it becomes practically difficult for her to observe a strict code of conduct and rigorously adhere to the discipline needed for recitation and practice of meditation employing the various Mantras. She has no time on her hands to read the scriptures and take part in metaphysical discussions as her hands are already full. Further, she is also found to be more talkative and fickle. She finds it hard by nature to spend a life of serenity and meditation. She is more interested in her children and more attracted to the material comforts and pleasures of this world. This mental attitude of hers makes her unsuitable as a candidate for learning and practicing the great tenets of the Upanishads and the Vedas. This is the general case, and there are indeed exceptions to this—for example there was the great woman sage named Gargi who had participated in a religious conclave called by king Janak and attended by great and learned sages and seers of that time. It was she who was the first to declare that sage

Yagyavalkya was the undisputed leader of the entire brotherhood of saints, unmatched in his wisdom, erudition and knowledge. This incident is described in the Brihad Aranyaka Upanishad of the Shukla Yajur Veda, in its Canto 3, Brahman 7.

Then there was Maitreyi, the wise wife of sage Yajgyavalkya, who was as wise and enlightened as her husband. The sage had preached her the profound knowledge of the Atma and principles of metaphysics himself in the Brihad Aranyaka Upanishad of the Shukla Yajur Veda, Canto 2, Brahman 4, and Canto 4, Brahman 5.

Similarly, the Shudra is usually regarded as being so over-burdened with the problems of mundane life and serving the other three classes of society that he rarely finds time for physical rest. He does not have peace as he is always on his toes to do one or the other chore for the society. How can a person whose mind is engrossed in the humdrum affairs of life, whose hands are full with so many chores to be done, and who is always restless and worried to fulfill his obligations ever be expected to have the inclination or find the time and energy to meditate and contemplate on esoteric subjects?

Constant distraction in the form of obligations and call of duty prevent normal women and Shudras to find time and energy needed for the study of the scriptures and other esoteric matters coming under the overall jurisdiction of Mantras, metaphysics and spiritualism.

Therefore, if a woman and a Shudra are competent and free from the fetters that usually tie them down to this humdrum life and its affairs, they would not fall under the barred category as said in this Upanishad. It ought to be understood that the edicts and tenets of the scriptures should be treated in the proper light; their 'spirit' is to be understood, and this is more important than misinterpretation of their intention by merely reading their words and letters.

The idea is that this Mantra should not be given to 'incompetent and ineligible' candidates who are not mentally prepared to accept it, or who cannot devote the required time and energy and attention of the mind needed to make the Mantras effective, or who do not have the mental aptitude and intelligence needed to delve on the difficult subject related to Mantras just like the case of not every student in a school having the proper aptitude for science, mathematics etc. not being allowed to pursue these technical subjects. This is because if they fail to derive the expected benefits from the Mantra, it would give a wrong signal to others. Others would not look at the worshipper's own incompetence, but blame the Mantra for its ineffectiveness and its lack of validity. Hence, if an upper caste man is not competent he too is not eligible to receive any of the Mantras.

Refer verse no. 9 below.]

8. Prajapat Brahma continued—'One should understand that all the Gods, the various forms of the divine fire, the living beings, the vital winds or airs (called the Prans), the organs of the body (i.e. the five organs of perception and five organs of action, called the Indris), the animals, the food, the Amrit (referring to the liquid that sustains and harbours life, i.e. water), Samraat (literally the Emperor, here referring to the highest form of human beings), Swaraat (Brahma the creator), and Viraat (i.e. the Viraat Purush, Lord Vishnu)—all of them represent the first Paad (or leg or step) of the divine Sam Mantra (i.e. the Anushtup Chanda in which the Mantras of Gayatri such as Pranav or OM, and Laxmi as well as and Nrisingh were revealed).

Similarly, one should understand that the four Vedas such as the Rig/Rik, the Yajur, the Sam and the Atharva, the Sun and the divine Purush living in this Sun represent the second Paad (or leg or step) of the divine Sam Mantra (as described above). [The Sun is regarded as a visible manifestation of the majestic and stupendous glories of the Supreme Being. The external splendorous disc of the Sun is the gross body of this Supreme Being, and the eternal 'fire' that burns inside this disc and

which empowers the Sun to shine brilliantly, to foster life in this world by its light, heat, warmth and energy, represents the subtle body of the Supreme Being that resides inside this disc. This subtle form is known as the 'Purush', the Supreme Being concealed as the dynamic 'fire' that lives inside the external body or the disc of the celestial Sun that actually makes the Sun what it is worth. This Supreme Being is the 'soul' of the Sun; he is revealed as the eternal 'fire' burning inside the Sun; his dynamism is manifested as the light, heat and energy emanating from the Sun. It is this concealed 'Purush' or the Supreme Being himself who is being referred to in this stanza.]

Likewise, one should understand that all the medicinal herbs and the Moon, which is the king amongst the stars, represent the third Paad (or leg or step) of the divine Sam Mantra (as described above).

Finally, one should understand that the Trinity Gods consisting of the creator Brahma, the sustainer and protector Vishnu, and the concluder Shiva, along with Indra (the king of Gods) and the imperishable supreme Lord of creation (i.e. Brahm) represent the fourth Paad (or leg or step) of the divine Sam Mantra (as described above).

A person who becomes acquainted with the esoteric meaning and the divine form of the holy Mantra is able to obtain eternity and blessedness (8).

9. In the Anushtup Chanda which is revered as the grand holy Mantra (of Lord Nrisingh to whom this Upanishad is dedicated, and which is referred to above and given in the note of Canto 2, verse no.6), the words 'Ugram' is the first word of the first step.

The word 'Jwalam' is the first word of the second step. The word 'Nrisingh' is the first word of the third step. And the word 'Mrityu' is the first word of the fourth step.

A person who understands this is able to attain eternity and blessedness.

If someone is to be given this Mantra, or taught this Mantra, then the right candidate is a son who is obedient and serves his parents affectionately and diligently, or to a disciple who is devoted to his teacher, and is obedient. Great care should be taken for not giving or teaching it to incompetent or ineligible persons who do not have the necessary aptitude¹ (9).

[Note—¹Refer verse no. 7 above.]

10. The Nrisingh (half man and half lion) form of the Lord who reclines on (a bed made of the coiled serpent called the Seshnath who floats on) the celestial ocean of milk called the Kshirsagar (i.e. Lord Vishnu) is worthy of meditating and contemplating upon, and aimed to be reached or attained by learned Yogis (ascetics) as the highest and the most divine destination. [Lord Vishnu's name is mentioned in the first Paad or line or step of the holy Nrisingh Mantra which is being described in Canto 2 of this Upanishad.]

A person who becomes acquainted with the esoteric meaning and the divine form of the holy Mantra is able to obtain eternity and blessedness (10).

[Note—The form of the Lord cited here is the 'peacefully reclining form known as 'Yog Nidra'. This refers to the Turiya state of consciousness, which is the fourth state of existence. It is attained as soon as one crosses the Sushupta state of consciousness, which is the third state of existence. In this fourth state, the ascetic is expected to taste the nectar of bliss and contentedness as a reward of success in Yoga. Hence this reference to Lord Vishnu's reclining state as the highest spiritual destination sought by an ascetic.]

The word 'Nidra' means sleep, and the word 'Yoga' of course means meditation. Hence, obviously, the combined phrase 'Yog Nidra' means that stage in meditation when the ascetic lives in a state equivalent to that obtained in sleep. In practice, it means deep meditation and contemplation.]

11. The word 'Viram' is to be understood or regarded as the second half of the first word of the first Paad (or step or line) of the holy Sam Mantra. [This Mantra is the divine Anushtup Mantra of Lord Nrsingh narrated in Canto 2, verse no. 6 and its accompanying note. The first letter is given in verse no. 9. All the following stanzas follow the same pattern as this present one.]

The syllables 'Tam and Sa' constitute the second half of the first word of the second Paad (or step or line) of the same Sam Mantra.

The syllables 'Ham and Bhi' constitute the second half of the first word of the third Paad (or step or line) of the same Sam Mantra¹.

A person who is wise and erudite enough to understand that whatever that exists is nothing but this Sam (the Mantra) manifested in its form is indeed learned and enlightened, and he obtains the essence of Amrit, the elixir of eternity, of bliss, of beatitude and felicity.

A person who accepts this eclectic, divine and holy Mantra from a wise and learned teacher not only obtains Mukti (or liberation and deliverance) from the fetters of this gross body as well as the world himself but acquires the ability to give Mukti to others as well.

This Mantra is so potent and powerful that an aspirant who takes its shelter or seeks its blessings becomes naturally inclined to desire Mukti inspite of his remaining engrossed in the mundane affairs of the world and the entanglements of humdrum life.

A person who does Japa with this eclectic Sam Mantra (i.e. he constantly repeats this hymn dedicated to Lord Nrsingh), and meditates upon Lord Nrsingh using this Mantra is able to have the Lord's divine vision in this life itself.

There is no other easier way of finding Mukti (liberation and deliverance) from this world in the current era of Kali Yug².

An aspirant who becomes acquainted with all the limbs or branches or connotations of this Sam Mantra (dedicated to Lord Nrsingh), is able to access the elixir that provides eternity and blessedness (11).

[Note—¹The *Nrsingh Mantra* is interpreted both in the Anushtup Chanda style having four lines, as well as in the Gayatri Chanda style which has only three lines. The form cited here is the three-line Gayatri Chanda style of composition in which the third and the fourth lines are regarded as a single line. This Mantra is given in full in note no. 2 of verse no. 6 of this present Canto no. 1.

²*Kali Yug* is the fourth era of the 4-era celestial Hindu cycle of one revolution of the celestial wheel of creation and conclusion. This era is deemed to be most corrupt, pervert and sinful amongst the four eras, and this high level of decadence and sinfulness becomes the cause of the conclusion of one round of creation at the end of its term.]

12. Lord Nrsingh is a living personification of the virtues of Rit (righteousness) and Satya (truth). He is an incarnation of the Supreme Being who resides in the inner self of all living beings and knows their inner thoughts, as well as is all-pervading and omnipresent in creation.

His complexion is a combination of dark and grey colours. His visible external form is that of a half man and a half lion. [The lower half of the body is like a man's, and the upper part is like that of a lion.]

The exalted Lord Nrisingh's eyes are very ferocious and terrible. But this does not mean that he is cruel or merciless, for he is a provider of auspiciousness and all round welfare to all. [Actually, his fierce form is due to his anger at observing the horribly sinful deeds, that had gone beyond tolerable limits, of the demon Hiranyakashipu. This demon was so cruel and ruthless, and so inimical towards the Lord that he did not spare his own son Prahalad, a stout devotee of Lord Vishnu, from torture for his devotion for the Lord. One of the reasons why Lord Vishnu had to assume this odd form of Nrisingh is that the demon had a boon which said that he would not die at the hands of a man or an animal. So the Lord had to circumvent this injunction by assuming a most unconventional form of a half man and a half lion to kill him. Otherwise, Nrisingh is very loving and compassionate, and this is proved by the fact that immediately after killing the demon he lifted the young Prahalad on to his lap, and licked him lovingly, most affectionately and benevolently like a lion caressing its cub.]

This most unconventional form of Lord Nrisingh is none but Lord Shankar (Shiva) himself. His throat is blue-tinged, and the face is red. That is why his devotees worship him as 'Neel Lohit'—one with a blue and red countenance. [Lord Shiva is depicted as having a blue-tinged throat. This was caused when the merciful Lord had gulped the scorching poison that emerged when the ocean was churned by the Gods and the Demons in search of Amrit, the elixir of eternity. Shiva said the name of his own Lord who happens to be Lord Ram, and after gulping the poison kept it in his throat because if the poison reached the stomach it would have burnt to death the entire creation. His countenance is red because as the concluder of creation in his manifestation of Rudra he is depicted as being an epitome of anger and wrath, and the colour red is associated with anger and wrath. Here, Nrisingh is regarded as being the manifestation of Lord Shiva, though in the form of Rudra, because Nrisingh is as wrathful and angry as Shiva.]

Lord Nrisingh is none other but the Lord who is the divine husband of Uma (also known as Parvati and the Mother Goddess), who is also known as Pashupati (the Lord of animals, implying one who can control those who have animal-like evil and pervert tendencies) as well as Pinaakdhaari (one who holds the most invincible bow called Pinaak), and who is endowed with astounding radiance, dazzle, splendour and brilliance that resembles electric.

Lord Nrisingh is Ishan* (i.e. the great Lord called Maheshwar, one of the many names of Lord Shiva) who is the patron God of all esoteric knowledge, and he is the controller and the Lord of all the Bhuts (i.e. the elements as well as creatures of creation). He is the Lord of Brahma the creator (because Brahma was born atop the lotus that emerged from the navel of Lord Vishnu, and Lord Nrisingh is an incarnation of Vishnu). He is the Lord of Brahmins (who are deemed to be representatives of Brahma amongst men). He is also the primary teacher who had enunciated the Yajur Veda. This Veda is nothing but Sam Mantra revealed.

A person who is aware of this esoteric secret obtains eternity and imperishability (12).

[Note—It has been repeatedly stressed in this Canto that whatever exists in this creation is one or the other form of Lord Nrisingh and his divine Mantra. In simple terms it means that since the entire world is a revelation of the supreme transcendental Brahm who permeates uniformly in it and is inseparable and indistinguishable from it much like salt is from salty water or air is from the sky, and since the primary primordial Mantra is OM representing this Brahm in his subtlest manifestation as sound from which all the rest of the letters and Mantras, including

the ones called Sam Mantra, were created, it follows that whatever that exists, visible or invisible is one or the other form of the Lord.

To illustrate this part we can take the example of water. The water is known to have the formula of H₂O. Therefore, all forms of water, whether it is a lake, a river, an ocean, a well, or as steam, ice, rain etc. would have the same formula of H₂O, though externally none of them resembles the other in the least. This formula is the basic structure and identity of 'water'. Hence, no matter in what form this creation exists, no matter which deity we are talking about, they have the same Brahm principle inherent in them; Brahm is intrinsic to them and inseparable from them.

This Upanishad establishes beyond doubt that there is no difference between Lord Nrisingh, Lord Vishnu and Lord Shiva. Nrisingh is an incarnation of Vishnu, and at the same time he is also an incarnation of Shiva in his ferocious form known as Rudra, as well as Pashupati which means the lord of animals since half of his body was like a lion who is the lord of the animals on earth. Hence, the combined form of Nrisingh as a man and a lion is a metaphoric way of saying that Lord stands for the combined virtues and forces of Nature and the creation that are represented by Lords Vishnu and Shiva.

Refer also verse no. 10 above which clearly states that Lord Nrisingh is a manifestation of Vishnu.

*The word *Ishan* has been explained in the Atharva Shir Upanishad, Kandika 4, which is Chapter 4 of this volume. Ishan briefly is the Lord who presides over, controls and has an overriding authority over all the other Gods of creation. He has superseding powers and authority.]

13. The word 'Maha' is the first part of the concluding word of the first Paad (line or step) of the divine and holy Mantra dedicated to Lord Nrisingh (which is composed in the Anushtup Chanda style and detailed in note of verse no. 6 of Canto 2).

Likewise, the word 'Vrato' is the first part of the second word of the second Paad (line or step) of the same divine and holy Mantra (of Nrisingh).

Similarly, the word 'Shanam' is the first part of the second word of the third Paad (line or step) of the same divine and holy Mantra (of Nrisingh).

And finally, the word 'Namaa' is the first part of the last word of the fourth Paad (line or step) of the same divine and holy Mantra (of Nrisingh).

All these words as well as the aspects of creation they represent, or everything that exists and covered by these words, is nothing else but a revelation of this Sam Mantra (i.e. it is revelation of Lord Nrisingh in these myriad forms).

A wise and erudite aspirant who is acquainted with these facts is able to obtain the essence of Amrit (i.e. he is able to obtain an eternal fount of blissfulness, beatitude and felicity).

The Sam Mantra is a personification of the supreme transcendental Brahm who is honoured, revered and adored with the epithet 'Sacchidanand'—i.e. one who is 'Sata' meaning absolutely true, 'Chit' meaning pure consciousness, and 'Anand' meaning blissfulness.

A realized and learned person who knows this fact is able to obtain the essence of Amrit, i.e. is able to access the eternal state of blissfulness and blessedness in this life itself.

An aspirant who knows the esoteric secrets of this Sam Mantra with all its limbs and branches (i.e. in all its intricate details) is able to obtain Mukti (liberation and deliverance) (13).

14. The Prajapati (creator) had created this visible world with the help of this Sam Mantra. That is why he is known as the creator of this universe. [Refer verse no. 2 of this Canto/Upanishad above.]

This world is born from this Prajapati (Brahma, the creator). A wise and erudite person who knows this fact is able to obtain access to the Brahm Loka (i.e. the abode of Brahm). [That is, a wise man is able to see beyond the physical structure of the visible world and understand the secrets that lie behind it and unfold its hitherto invisible aspects. Such a man is indeed rare; he is deemed to be the wisest and most learned amongst men. Once he can see or peer behind the charming exteriors of the visible world which are nevertheless delusory by nature, he is able to see the hidden 'truth', and this realisation makes him attain an exalted state of existence that is spiritually elevated and enlightened. He rises and stands on a high pedestal of self and Brahm realisation which is tantamount to having known the Absolute Truth of creation. Obviously, such a man would certainly reach a destination not normally accessible to those who remain trapped and deluded by the vision of charms and magnificence presented by the exterior façade of the material world of sense objects, which is actually a mirage.]

Hence, once having known the eternal and absolute Truth, or once having reached the highest level of realisation by being acquainted with the truth of Brahm, he loses his individuality by becoming universal like Brahm. In other words, he dissolves himself and merges with the supreme Brahm; he merges his own 'self' with the cosmic Self known as Brahm. [This state is called 'Brahm realisation', and is the ultimate destination for the soul of the creature when the latter merges finally with its primary source to become one with and inseparable from it. This is called the 'final Mukti or Moksha' from where there is no return to the cycle of birth and death. It means that the individual Atma of the seeker, or his pure conscious 'self', finds liberation from all sorts of spiritual fetters that shackle a living being to this gross body and an equally gross and deluding world. The liberated Atma is then able to escape from the bondage of the body and the world, and merge with its primary source known as the cosmic Atma which is Consciousness personified as the supreme Brahm.]

Therefore, he who is wise and erudite endeavours to learn about the intricacies of this Sam Mantra in detail. This leads to his obtaining the essence of spiritual nectar known as Amrit (which is the elixir of eternity, beatitude and felicity). This Amrit gives him his final peace and rest (14).

15. The word 'Vishnum' is the last part of the first Paad (line or step) of the divine and holy Mantra dedicated to Lord Nrisingh (which is composed in the Anushtup Chanda style and detailed in note of verse no. 6 of Canto 2).

Likewise, the word 'Mukham' is the last part of the second Paad (line or step) of the divine and holy Mantra dedicated to Lord Nrisingh (as noted above).

Similarly, the word 'Bhadram' is the last part of the third Paad (line or step) of the divine and holy Mantra dedicated to Lord Nrisingh (as noted above).

Finally, the word 'Myaham' is the last part of the fourth Paad (line or step) of the divine and holy Mantra dedicated to Lord Nrisingh (as noted above).

A wise and erudite person who is well acquainted with the esoteric secrets of this Sam Mantra (i.e. the divine Mantra dedicated to Lord Nrisingh composed in the Anushtup Chanda style, and called 'Sam' because it can be sung melodiously and is spiritually uplifting for the soul) is able to access the essence of Amrit (which is the elixir of eternity and blissfulness).

Brahma is the one who knows the secret of this esoteric knowledge that has been expounded in this Upanishad. This most eclectic Anushtup Mantra is enshrined as the Atma of all, or is literally the soul and essence of everything in existence. It is established in the supreme Brahm and represents the latter. [That is, its divinity, holiness and authority is the same as that of Brahm who is the principal Lord of creation and the primary cause of its coming into being. Since Brahma initiated the process of creation by invoking this Mantra and getting empowered by it (refer verse no. 2 above), it follows that this Mantra was the primary ‘driver’ or the ‘dynamic force’ which was behind the entire process of creation. Again, since the supreme transcendental Brahm is the cosmic, supreme and ultimate Lord of this creation, the eternal, imperishable, infinite, all-encompassing, all-pervading and all-inclusive Supreme Being from whom the entire creation came into being, the Anushtup Chanda is virtually a personification of Brahm. They are deemed to be the two aspects of the same divine concept.]

A wise and learned aspirant who is acquainted with this fact is able to obtain the essence of Amrit—i.e. he is able to obtain the fount of eternal beatitude and felicity.

Lord Nrisingh blesses such a wise and learned person who follows the auspicious and righteous doctrines outlined in this Upanishad by fulfilling all his aspirations and desires for happiness and prosperity. The Lord gives him all the good luck and fortunes, all the fame, majesty and magnificence that are available in this world. Wherever such an aspirant dies or discards his mortal body, Lord Nrisingh ensures his salvation and emancipation at the same spot by enlightening him about the divine ‘Tarak Mantra’, i.e. the Mantra which paves the way of the dying man’s final liberation and deliverance from this world and body. After being initiated with this Tarak Mantra pertaining to Brahm, or after being enlightened about the supreme transcendental Brahm who is none but the Absolute Truth and the pure Consciousness of this creation, the dying man is able to automatically attain eternal peace and blissfulness. [This is made possible because the man now realizes that his Atma or soul, which is his ‘true self and identity’, is none else but Brahm personified, that this Atma is eternal, imperishable, infinite, ever blissful and contented, and that what is apparently dying is the mortal gross body and not this Atma. When the body dies and disintegrates into the elements, the ethereal Atma is liberated from its cage (body) and set free to become one with the fathomless vastness of the open sky. In the present context, it implies that Lord Nrisingh initiates him and accepts him into the fold of his devout devotees and humble worshippers. Once the Lord takes him under his wings, once the Lord accepts him as his devotee and ward, the destiny of the dying man is now onwards in the hands of the Lord, and this guarantees the man’s final emancipation and salvation. A parallel can be drawn here with Lord Shiva giving the same benefit to the dying man in the holy city of Kashi by uttering the holy Tarak Mantra—literally the Mantra which takes one across the fathomless ocean of birth and death—in his ears.] (15).

16. Hence, one should always do Japa (constant repetition) of this Tarak Mantra in the form of Sam. [This refers to the divine Mantra of Lord Nrising composed in the Anushtup Chanda style and described in this Canto 1. The full Mantra is given in note of verse no. 6 of Canto 2. Its other version is called the Gayatri Nrisingh Mantra, and it is described in Canto 4, verse no. 13 of this Upanishad.]

This Sam Mantra inherently has the stupendous cosmic dynamic powers of Brahm as its basic force and energy.

An aspirant who knows this esoteric secret of the divine and enigmatic Sam Mantra is deemed to be a sincere aspirant who seeks the absolute truth and the essence of eternity.

This Upanishad is honoured as a Mahopanishad, literally meaning the ‘great Upanishad’, because it enlightens the aspirant about the principal essence of the supreme Lord.

A person who follows the eclectic divine path shown by this Upanishad and worships the Lord by repeating his Mantra and meditating upon him with an auspicious aim in mind, verily indeed, he is able to obtain the full rewards of such worship and meditation as well as by doing sacrifices. He becomes one like Lord Vishnu. [In other words, by constantly remembering the Lord, he dissolves his own individuality and merges it with the Supreme Being. This is in accordance with the age old adage that one becomes what ones thinks of and what company one keeps. Since Lord Nrisingh is an incarnation of Lord Vishnu, the devotee becomes as holy and auspicious as Lord Vishnu by constantly remembering the Lord and being in communion with him.] (16).

-----*****-----

Upanishad (Canto) 2

1. In some ancient time, all the Gods—worried at, afraid of and tormented by the ascendance of myriad sins and evil tendencies in this mortal world, leading to death and all round decadence and degeneration—went to Prajapati Brahma (the creator) to seek his advice and to find a way out of their consternations and worries.

Prajapati Brahma preached them the divine Anushtup Mantra of Lord Nrisingh. By worshipping and meditating upon this Mantra and using it as a tool to overcome their fears, the Gods were successful in vanquishing death (i.e. they became immortal) and find freedom from sins and their evil effects (because this Mantra is purifying and a provider of auspiciousness). As a result, they were able to cross over this vast and formidable ocean-like world (characterized by sins and pervasions along with their horrible consequences, and the endless cycle of death and birth).

This is why a man who is afraid of death, sins and their evil consequences, and the vast entrapping ocean represented by this mortal world with its innumerable horrors, miseries and agonies should seek the shelter of this divine Anushtup Mantra dedicated to Lord Nrisingh.

Verily, an aspirant who takes the shelter of this Anushtup Mantra is able to overcome all fears of death, of sins and their consequences, and of this ocean-like entrapping world. [In other words, this Mantra provides him a one-point solution to all his spiritual problems.] (1).

2. The four limbs of this Anushtup Mantra are like the four syllables or aspects of the divine Mantra of Pranav (Brahm), which is OM. [Refer also Canto 4, verse no. 2-3.]

The first letter of this OM is ‘A’. Its manifested form is the earth; its Veda (revealed knowledge) is the Rig/Rik Veda adorned with (i.e. consisting of) its glorious Richas (hymns); its Devta (deity or patron god) is Brahma; its Ganas (attendants) are the eight Vasus¹; the Gayatri Chanda² is inherent in its sound; and the Garhyapatya Agni^{*} is its integral part (i.e. this fire is its inherent strength, dynamism, energy and power, and it is intrinsically present in it). All these units or elements of creation are implied or vested in the first step or leg or aspect of Pranav represented by the first

letter 'A' of the divine Mantra OM. [In other words, they represent the first leg or aspect of the supreme Brahm.] This first Matra (a letter or syllable) of OM is equivalent to the first Paad (a line or step) of the divine Anushtup Mantra (dedicated to Lord Nrisingh).

The second letter of Pranav (Brahm), represented by the divine Mantra OM, is the letter 'U'. Its manifested form is the Antakariksha (the sky above the earth and the lower heaven); its Veda (revealed knowledge) is the Yajur Veda adorned with (i.e. consisting of) its glorious Mantras (hymns); its Devta (deity or patron god) is Vishnu; its Ganas (attendants) are the eleven Rudras³; the Trishtup Chanda⁴ is inherent in its sound; and the Dakshinagni* is its integral part (i.e. this fire is its inherent strength, dynamism, energy and power, and it is intrinsically present in it). All these units or elements of creation are implied or vested in the second step or leg or aspect of Pranav represented by the second component or syllable 'U' of the divine Mantra OM. [In other words, they represent the second leg or aspect of the supreme Brahm.] This second Matra (a letter or syllable) of OM is equivalent to the second Paad (a line or step) of the divine Anushtup Mantra (dedicated to Lord Nrisingh).

The third letter of Pranav (Brahm), represented by the divine Mantra OM, is the letter 'M'. Its manifested form is the Duloka (the deep space of the higher sky usually referred to as the upper heaven); its Veda (revealed knowledge) is the Sam Veda adorned with (i.e. consisting of) its glorious Sam (hymns); its Devta (deity or patron god) is Rudra (the angry form of Lord Shiva which brings about the conclusion of creation); its Ganas (attendants) are the twelve Adityas (Suns)⁵; the Jagati Chanda⁶ is inherent in its sound; and the Ahawaniya Agni* is its integral part (i.e. this fire is its inherent strength, dynamism, energy and power, and it is intrinsically present in it). All these units or elements of creation are implied or vested in the third step or leg or aspect of Pranav represented by the letter or syllable 'M' of the divine Mantra OM. [In other words, they represent the third leg or aspect of the supreme Brahm.] This third Matra (a letter or syllable) of OM is equivalent to the third Paad (a line or step) of the divine Anushtup Mantra (dedicated to Lord Nrisingh).

The fourth part or aspect or leg of Pranav (Brahm) is represented by the fourth component of the divine Mantra OM, and it is known as the 'Ardha Matra' as it is half-syllable or a half-vowel sound of the Sanskrit language. It is actually the protracted humming sound of the letter 'M' that reverberates at the end of saying OM, and it represents the cosmic ethereal sound called Naad⁷. [This is the sound of 'dot' or Anuswar placed on the top of a Sanskrit letter to sound like 'mum' with a protracted humming of the second 'm'.] Its manifested form is the Som Loka (the Moon which is regarded as a pitcher of elixir in the heaven); its Veda (revealed knowledge) is the Atharva Veda adorned with (i.e. consisting of) its glorious Mantras (hymns); its Devta (deity or patron god) is the supreme transcendental Brahm (who is the primary cause of coming into being of the entire creation, including the Trinity Gods such as Brahma, Vishnu and Shiva); its Ganas (attendants) are the forty-nine Maruts⁸; the Viraat Chanda⁹ is inherent in its sound; and the Samvartak Agni* is its integral part (i.e. this fire is its inherent strength, dynamism, energy and power, and it is intrinsically present in it).

There is only one Rishi (or seer who had first seen or to whom this Mantra was first revealed during deep meditation) of this most divine and eclectic Mantra. [This Rishi is the creator Brahma. Refer verse no. 2 of Canto 1 of this Upanishad above.]

The fourth Matra (i.e. the 'Ardha Matra' representing the cosmic Naad that is heard at the end of pronouncing the Mantra OM) is most glorious, magnificent,

eclectic and divine, it is splendorous and illuminating, and it represents the supreme transcendental Brahm himself. [That is, when the aspirant actually gets deeply submerged in meditation, he experiences the presence of the eternal fount of bliss and ecstasy in his own inner self. He experiences the blessedness of self-realisation which illuminates his inner being, and he becomes enlightened. This is the state of Brahm-realisation; the state of extreme blessedness when beatitude and felicity is witnessed first hand, and this is tantamount to having reached Brahm. Indeed, this Brahm is nothing but Consciousness personified. The humming sound of OM completely overwhelms the aspirant or the spiritual seeker, and massages his nerves so much so that all his worldly worries, pains, agonies and sorrows are eliminated. This is equivalent to becoming liberated from the horrors of the mortal world and its accompanying fear of death.]

Indeed, this fourth Paad (step or aspect) of the Pranav, i.e. the Naad, is the fourth Paad of the divine Sam Mantra (i.e. of the Anushtup Chanda in which the Mantra of Lord Nrisingh is composed, and which is the subject matter of the Cantos 1 and 2)¹⁰ (2).

[Note—¹The *eight Vasus*—refer note of verse no. 3 of Canto 1.

*There are *four diving fires*—viz. Garhyapatya, Dakshinagni, Ahawaniya and Samvartak. (a) The ‘Garhyapatya’ (the fire of the household hearth; the main fire of the formal fire sacrifice; the fire that every householder is supposed to keep alive and worship regularly and from which the first spark is taken for the rituals associated with religious ceremonies), (b) The ‘Dakshinagni’ (the fire used as a witness to making charities or any other religious festivity; the fire lit at the site of a sacrificial fire ritual, near its south end), (c) The ‘Ahawaniya’ (the fire lit to invoke the Gods, to invite them to participate and accept the offerings made to them during a ritualistic fire sacrifice), and (d) The term ‘Samvartak Agni’ refers to the fire that engulfs the earth at the time of dooms-day, or the fire that brings about the conclusion of creation, and which represents that phase of the fire sacrifice when offering of oblations are complete and the sacred fire is let to burn out and calm down, because the word ‘Samvartak’ means the end of an era or a period of time, and Agni means fire.

References—The *Garhyapatya* fire has been described in the Chandogya Upanishad, 2/24/3-6, 4/11/1-2, 4/17/4; the *Dakshinagni* fire in the Chandogya Upanishad, 2/24/7-10, 4/13/1-2, 4/17/5; the *Ahawaniya* fire in the Chandogya Upanishad, 2/24/11-16, 4/14/1-2, 4/17/6; and the *Samvartak* fire in the Atharva-shikha Upanishad of the Atharva Veda tradition, Kandika 1.

²The *Gayatri Chanda* has 24 letters and syllables in all which are divided into 3 steps or stanzas of 8 letters or syllables each. Hence the total is $3 \times 8 = 24$. The Nrisingh Mantra according to this style of composition is called the ‘Nrisingh Gayatri’ and has been described in Canto 4, verse no. 13 of the present Upanishad.

³The *eleven Rudras* have been listed in note of verse no. 3 of Canto 1 above.

⁴The *Trishtup Chanda* is a verse of 4 lines in which each line has 11 letters; $11 \times 4 = 44$ letters in all.

⁵The *twelve Adityas* have been listed in note of verse no. 3 of Canto 1 above.

⁶The *Jagati Chanda* is a verse of 4 lines with 12 letters in each line, bringing the total number of letters to 48.

⁷*Naad* is the cosmic sound in ether which forms the background sound in this creation. It is from this Naad that all other sounds emerge, develop, spread, and finally collapse back into much like the consecutive waves that emerge from the surface of the vast and fathomless ocean, develop, spread and finally collapse into the ocean, only to be re-formed again and again endlessly.

⁸The *49 Maruts*—they are the Wind-Gods mentioned in Rig Veda, 1/37-39 and 1/165/3, 5, 7, 9. They are regarded variously as — (i) sons of Indra and Vrishni (Rig

Veda, 2/34/2), (ii) Sons of Rudra (Rig Veda, 2/33/1), (iii) similar to the Fire-God (Rig Veda, 6/66/2), and (vi) Indra God (Rig Veda, 1/165, 171). The Purans call them sons of sage Kashyap and Diti.

The *Atharva-shikha Upanishad* of the Atharva Veda tradition, in its Kandika 1 says that the Maruts were created along with the Moon God, the Mantras of the Atharva Veda, the Viraat Chanda and the Samvartak Agni. It is the fourth leg or Paad of Brahm and corresponds to the Ardha Matra of the half a syllable that follows the third letter 'M' of the ethereal word OM representing Brahm.

⁹The *Viraat Chanda* is one in which the verse has four lines each having ten letters, bringing the number of letters to 40.

¹⁰The *four Paads of Brahm* have also been described in Canto 4, verse nos. 3-7 of this present Upanishad.]

3. The Anushtup Mantra consists of a total of thirty-two letters or syllables. Its first Paad or line or step has eight letters or syllables, and the remaining three Paads too have eight letters or syllables each, bringing the total to thirty-two. [4 lines x 8 letters = 32.]

This Anushtup Mantra is the hub around which the entire creation revolves. It is the central point from where the entire creation has evolved. [Refer Canto 1, verse no. 1.] The latter arises from this Mantra, and finally collapses into it. [This implies that this Anushtup Mantra is a manifestation of the supreme Brahm because whatever has been said in this verse applies only to Brahm and nothing else.] (3).

[Note—Refer verse no. 7 of the present Canto 2, as well as verse no. 1 of Canto 1.]

4. This Anushtup Mantra actually has five Angas (organs, limbs or aspects, of which four have been enumerated in Canto 1, verse nos. 8-9, 11, 13 and 15, and verse no. 4 above of the present Canto 2).

The fifth Paad (limb or aspect) is represented by the Pranav or the OM Mantra which is regarded as a monosyllabic sound. This OM Mantra or Pranav is needed to complete the Anushtup Mantra and endow it with its stupendous glory, power, authority, majesty, holiness and divinity.

A man's body is also said to have five parts or components—viz. the heart, the head (the forehead or the cerebrum), the tuft of hair on the top of the skull (on the cranium) which is called the Shikha, the shoulder blade, and the mind.

Therefore, when one does formal worship and wishes to empower the body with the mystical strength of the Anushtup Mantra, and ensure that the body is purified and sanctified by this Mantra in the formal way, he should say the relevant Mantra as follows—'Hridaye Namaha' (for the heart), 'Shirshe Swaha' (for the head), 'Shikhaye Vashat' (for the Shikha), 'Kavachaye Hum' (for the shoulder), and 'Astraye Phat' (for the mind). [These esoteric Mantras are said while making offerings during the Tantric or occult forms of worship.] This helps to establish a link between the body and the Anushtup Mantra.

One should establish coordination between the five aspects of the Anushtup Mantra and the five parts of the body as mentioned above. Thus, the first aspect or limb of the Mantra should be linked or coordinated with the first part of the body (i.e. the heart), the second aspect or limb of the Mantra should be linked or coordinated with the second part of the body (i.e. the head; the forehead or the cerebrum), the third aspect or limb of the Mantra should be linked or coordinated with the third part of the body (i.e. the Shikha), the fourth aspect or limb of the Mantra should be linked or coordinated with the fourth part of the body (i.e. the shoulder), and the fifth aspect or

limb of the Mantra should be linked or coordinated with the fifth part of the body (i.e. the mind)¹.

Even as all the units of this world are linked with each other and inter-dependent, these organs of the body and the limbs of the Anushtup Mantra too are linked to each other and inter-dependent (4).

[Note—¹This is like linking two components of an electric gadget so that electric current can flow unhindered and easily. When the Anushtup Mantra with five limbs or 'wires' is linked to these five points on the body, each of the five parts get attached to the relevant point of the Mantra. This ensures that the eclectic, the divine and the mystical powers of the Mantra are transferred to the body through these 'junction points'; there should be no short-circuit. Thus, the first limb of the Anushtup Mantra gets attached to and empowers or 'charges' the heart; the second limb does the same with the head, the third limb with the Shikha, the fourth with the shoulder, and the fifth with the mind. Since the most important part of the man's body which determines his thoughts and controls his actions is the mind, when it gets charged with the fifth limb—which is Pranav and its representative sound called the Naad (refer verse no. 2, last stanza)—the man becomes enlightened and overwhelmed with bliss and happiness. When the cosmic Naad begins to reverberate in his mind, he obtains the elixir of bliss and happiness; he begins to taste the nectar which vanquishes all his miseries and agonies pertaining to the body and the world.]

5. The OM is an acronym for the entire universe or creation. Therefore, it is proper that each letter or syllable of the Anushtup Mantra should be pre-fixed and suffixed with the divine monosyllable OM when it is invoked and vested on the body. Those who are well-versed with this procedure assert that it is the proper way of doing 'Anga Nyas', which is vesting the body with the mystical powers and strength of any Mantra (5).

6. [This verse narrates the full Nrisingh Mantra according to the Anushtup Chanda style of composition.]

The Anushtup Mantra has the word 'Ugram' in the first spot or place. He who knows this is able to obtain the essence of Amrit (which is the elixir of eternity and bliss). The word 'Viram' occupies the second spot or place. The word 'Mahavishnum' is at the third place. [This completes the first line of the 4-line Mantra.]

The word 'Jwalantam' is at the fourth place. The word 'Sarwatomukham' occupies the fifth place or spot. [This ends the second line of the Mantra.]

The word 'Nrisingham' is at the sixth spot or place. The word 'Bhishanam' is at the seventh place or spot. The word 'Bhadram' is on the eighth place or spot. [This is the end of the third line of the Mantra.]

The word 'Mritumritum' is on the ninth spot or place. The word 'Namami' is on the tenth place or spot. And the word 'Aham' is the final one occupying the twelfth place or spot.

A wise person who knows this eclectic and divine Mantra in the way narrated above is able to access the essence of Amrit (i.e. he is able to access the eternal source of beatitude and felicity) (6).

[Note—The Mantra of Lord Nrisingh composed in the Anushtup Chanda style as narrated in this verse is therefore the following—'Ugram Viram Mahaavishnum (step 1); Jwalantum Sarwatomukham (step 2). Nrisingham Bhishanam Bhadram (step 3), Mritumritum Namaamyaham (step 4)'. Refer also to verse nos. 9, 11, 13 and 15 of Canto 1. The meaning is briefly the following—'I bow respectfully before him who is most terrible, valorous, an incarnation of the great Lord Vishnu, blazing and splendid (like the fire or the sun), all-pervading and a representative of all the

aspects of this vast and myriad creation. Lord Nrisingh (the half man and half lion an incarnation of the great Lord Vishnu) is most terrible and awful, but auspicious and benevolent at the same time; he is the death of even the God of death (i.e. he causes the end of even Yam, the God who is responsible for the death of all other creatures in this creation).’ [Refer also to Prapannakchar Saar Sangraha, 23.]

This Mantra is deemed to be so esoteric, enigmatic, holy and divine that it is regarded as both of the Anushtup Chanda style and of the Gayatri Chanda style. Whereas the version having four lines as narrated above falls under former category, the one having three lines falls under the latter category. This present verse along with verse nos. 1-9, 13, and 15 of Canto 1 deal with the Anushtup Chanda version of the Mantra, while verse no. 6-7 of the same Canto describes it in its Gayatri version having only three lines. It must be noted here that besides the ‘Anushtup Gayatri’ version of the Nrisingh Mantra there is another version of the Mantra, and it is called ‘Nrisingh Gayatri’. This is narrated in Canto 4, verse no. 13.]

7. This Mantra consisting of eleven units or words is the one from which the entire creation has been born or revealed. [Refer Canto 1, verse no. 2-3.] It is the one which becomes the cause of conclusion of this creation. [Refer verse no. 3 of the present Canto 2.]

It ought to be understood that such is the glory and majesty of the Anushtup Mantra. A person who knows this is able to obtain eternity and imperishability (7).

8. [Verse nos. 8-18 now elaborately explain the significance and importance of each of the words of this Nrisingh Mantra.]

The Gods asked Prajapati Brahma—‘Why is the epithet ‘Ugram’ used for Lord Nrisingh?’ [This word ‘Ugram’ usually has a negative connotation as it literally refers to being terrible, awful, angry, vehement etc., but here it means someone who has the formidable authority, strength and power, or someone who has the ‘terribly awesome’ strength and power to lift something or someone up from a low level of existence in which it or he/she presently is. The creatures of this mortal world have become so heavily burdened with sins and wrought in evils that their liberation and deliverance, their salvation and emancipation is indeed a formidable and daunting task requiring tremendous will, dynamism and strength. Since this is brought about by the Lord, he is honoured by this epithet ‘Ugram’.]

Prajapati answered—‘Lord Nrisingh always ensures the awakening, rising, elevation and upliftment of all the Lokas (various aspects of this creation; the different levels of creation; the various worlds such as the terrestrial world, the heavenly world, the nether world etc.), all the Gods, all the Bhuts (elements of creation and creatures in general), and all the Atmas (i.e. each individual soul; each individual creature). [That is, the Lord ensures that all his dependants and off springs progress in life; they do not remain mired and trapped in their present situation which they have got due to their past deeds, but always get a chance to rise higher and higher with each passing day and birth to finally attain the highest spiritual stature of being Mukta and Gyani, i.e. being emancipated and enlightened. This is because the Lord is very magnanimous and merciful by nature inspite of his ferocious external form which incidentally he had to assume when evil and perversion reached its zenith, and a quick and surgical remedy was the need of the hour.]

It is he (Lord Nrisingh) who creates, sustains, nourishes, develops and protects, and finally concludes everything and everyone in this creation. At the time of conclusion, he merges or dissolves the entire creation in his own self. [This is because he is the Supreme Being known as Brahm personified. The emergence,

evolving, expansion and dissolution of the creation in Brahm can be compared to the wave of the ocean. The wave arises from the surface of the ocean, it is the latter which creates the former, and then this wave reaches its height and is often seen like a huge wall of water, moves fast, and finally collapses back into the ocean to become one with it and indistinguishable from it. Once the wave makes its appearance, it looks much different from the ocean—for one, the ocean is flat while the wave is like a huge erect wall of water which crashes against an object like a bludgeoning battle-ram, overturning big ships and causing horrors and destruction on the shore. But after it calms down, no one can see any distinction between this wave and the ocean.]

The Lord himself shows grace and mercy on this world, and inspires others to do the same. All these factors (as enumerated herein above) are the reasons why he is honoured by the title of ‘Ugram’.

It has been said in the Rig/Rik Veda (the first of the four Vedas) that one should offer prayers and worship to the supreme Lord who is honoured and revered even by the scriptures. This Lord lives honourably and gloriously in the cave-like subtle heart of all living beings.

It is to be noted that this merciful Lord is not fearsome or frightening for his devotees inspite of his having assumed the form of a lion. [This is proved by the fact that immediately after slaying the cruel demon Hiranyakashipu who had been tormenting Prahalad, his son, because the latter worshipped Vishnu, Lord Nrisingh had picked up Prahalad on to his laps, and licked and caressed him like a lion does to its cub.]

He is accessible to all any time and at any place, and gives them protection and benediction whenever and wherever needed.

He is called ‘Ugram’ because he diligently, aggressively and pro-actively ensures the all round welfare and well-being of auspicious people and his devotees, while being ruthless, merciless and uncompromising towards those who are wicked and sinful, slaying or eliminating such evil and pervert creatures with any reservations or regrets. These are some of the reasons why the Lord is called ‘Ugram’.

Oh Lord Nrisingh! We pray to you. Grant us auspiciousness and welfare. Let your fierce army not attack us, and let it go somewhere else’ (8).

[Note—This verse explains the significance and importance of the first word ‘Ugram’ of the Nrisingh Mantra.]

9. The Gods asked Prajapati Brahma—‘Why is the epithet ‘Viram’ used for Lord Nrisingh?’ [The word ‘Viram’ literally means one who is brave, valiant, courageous and valorous.]

Prajapati replied—‘The Lord makes all the different Lokas (worlds), all the Gods, all the Bhuts (elements of creation and creatures in general) and all the Atmas (individuals) remain active and agile. He makes them enjoy their deeds and activities. He constantly and actively creates them, establishes them, develops them, protects them, and finally concludes them. He is most gracious towards his devotees.

He is brave, courageous, valiant, valorous and diligent. He is active and agile in carrying out his duties towards this creation, and he does so steadily, consistently and persistently with unstinted courage and diligence on his part. He assumes the form of the Adharvayu priest who prepares and offers oblation of the Soma (a sanctified liquid) to the sacred fire during religious rituals. It is he, as this pries, who invokes the Gods and the patron deity during such ceremonies. These are the reasons why he is honoured with the epithet ‘Viram’. [Since all activities in this world require courage and diligence, the Lord is honoured with this title because he is the one who

controls each and every action and deed of all living beings as well as of the Gods. Even the latter cannot do anything without the wish and permission of Lord Nrisingh, or without the latter empowering them to do so. In short, whatever is done in this world is actually done by Lord Nrisingh, and this fact is implied when it is said that he lives in the subtle heart of all the Bhuts (units of creation such as the creatures, plants and elements) and the Gods—refer verse no. 8. Being the almighty Emperor of this creation, it is actually he who drives the edifice of creation in every meaning and aspect. If he does not wish then even the Gods, who are deemed to be self-sufficient and empowered themselves, would fail to act. Since Lord Nrisingh can control single-handedly such a vast and perplexing world of an astounding variety of creatures and Gods, who, more often than not, pull the creation in opposite directions and get at each others throat to usurp its limited resources, it really needs stupendous courage, strength and valour on the part of the Lord to control this world and its naughty inhabitants. It is similar to controlling a vast and diverse army of soldiers of different backgrounds, training, mentality and motivation, and coordinating their efforts to ensure victory. That is why he is called ‘Viram’—someone who is immensely conscientious and diligent while carrying out his obligations, besides being strong, brave, courageous, valiant and valorous.] (9).

[Note—This verse explains the significance and importance of the second word ‘Viram’ of the Mantra.]

10. The Gods asked Prajapati Brahma—‘Why is the epithet ‘Mahavishnum’ used for Lord Nrisingh?’ [The word ‘Maha’ means one who is immensely great, magnificent, grand and majestic, while the word ‘Vishnu’ refers to the sustainer, nourisher and protector of creation. Lord Vishnu is also the Viraat Purush, the macrocosmic invisible gross body of Brahm, from whom the rest of creation came into being. Even the creator of the visible world, Lord Brahma to whom this Mantra of Lord Nrisingh was revealed in verse no. 2 of Canto 1, was born atop a lotus that emerged from the navel of Vishnu. Hence, the word ‘Mahavishnum’ clearly means that Nrisingh is none but this great Lord Vishnu himself.]

Prajapati replied—‘Lord Nrisingh uniformly and universally pervades in, or is an integral and an inseparable part of all the Lokas (worlds), all the Gods, all the Bhuts (elements of creation and creatures in general) and all the Atmas (individuals).

Just like a ball of meat is uniformly soaked in fat, the Lord is uniformly and undeniably present in each unit and cell of the body.

Since this world is completely soaked in the spirit of the Lord, i.e. since the Lord is omnipresent, all-pervading, all-encompassing and all-inclusive, and since nothing exists outside the ambit of or the periphery formed by the Lord, it is natural that the world collapses into and merges with the Lord. [The analogy of the wave and the ocean cited in verse no. 8 by way of explanation also applies here. The wave does not arise in the sky or the land, so when it dies it naturally collapses and merges with its primary source, which is the ocean. Another instance is that of the sky and the sound. Sound arises in space, it travels in space, and it dissipates in space. Similarly, a plant comes forth from the earth, it grows upon the earth, it draws its energy and nourishment from the earth, and finally it dies and disintegrates to merge with the soil of the earth.]

[The immense glories and majesty of Lord Nrisingh has been lauded in the Rig/Rik Veda as follows--] ‘He who is the supreme caretaker of all the subjects (units; creatures) of this creation, he who is worshipped, honoured and revered by all the subjects (as their supreme Lord), he who is universal, omnipresent and all-pervading,

and he who is so unique that there has been no parallel like him ever—verily, it is this Lord Nrisingh who is inherently present or revealed in all forms of this creation. It is he who is illuminated or manifested in all his sixteen Kalaas¹ in everything.’

These are the reason why he is adorned by the title ‘Mahavishnum’ (10).]

[Note—This verse explains the significance and importance of the third word ‘Mahavishnum’ of the Mantra of Lord Nrisingh.

¹The sixteen Kalaas—The word *Kalaa* has a wide application and briefly it refers to the a particular aspect or position or condition or situation of any entity. It refers to the special qualities, attributes, virtues, strengths, powers and potentials possessed by it. other connotations include—(a) shape, form, contours of a thing; (b) special qualities, art, craft, skills, expertise, attributes, tricks etc. that one possesses; (c) a division, portion, fraction, phase or degree; (d) brilliance, magnificence and grandeur; (e) the maverick and supernatural powers that someone possesses.

References—(i) Shukla Yajur Veda:-- Brihad Aranyaka Upanishad of, Canto 1, Brahman 5, verse nos. 14-15. (ii) Sam Veda:-- Chandogya Upanishad, Canto 6, section 7. (iii) Krishna Yajur Veda:-- Brahm Vidya Upanishad, verse nos. 18-19; Kalisantarna Upanishad, verse no. 2. (iv) Atharv Veda:-- Prashna Upanishad, Canto 6, verse no. 1-6.

As we have observed above, the word *Kalaa* represents the special qualities, art, craft, skills, expertise, attributes etc. that one must possess if he were to successfully reach his target in life. These different qualities and virtues present in a man symbolically make him perfect; they represent his various strengths and potentials, and they are said to be sixteen in number corresponding to and symbolized by the sixteen phases of the moon. Since a man is an exact replica of the ‘Viraat Purush’, who in turn is a subtle manifestation of the sublime Brahm, these sixteen qualities or attributes of a man refer to the sixteen qualities of Brahm himself that made him the Lord of creation. The presence of all these divine attributes makes a man complete and very powerful. Hence, these sixteen Kalaas represent all the magnificent good qualities that are present in this creation which enable a man to overcome all adversities, hurdles and ill circumstances. Since Brahm is the creature’s only sincere well wisher and succour in times of distress and dismay, and since Brahm possesses all the exemplary qualities grouped under the single word *Kalaa*, a man who is blessed with them is regarded as being equivalent to Brahm. Or in other words, he personifies Brahm with all his dignified virtues that are needed by a man to complete and get across the cycle of birth and death without hurdles.

These sixteen Kalaas of creation that are present in a man refer to the sixteen elements or primary components that form the basis of a man’s very existence and his nature and temperament. These are the fundamental building blocks of his subtle and gross body, its characteristic qualities as well as the world surrounding him and how the man lives in and interacts with it.

The sixteen Kalaas or aspects or facets of creation have been expressly listed in the Prashna Upanishad of the Atharva Veda tradition, in its Canto 6, verse no. 4. These sixteen Kalaas are the following—(i) Pran (life; life consciousness; the very essence of creation; the vibrations of life manifested in the form of the vital winds; the rhythm and essential functions pertaining to life), (ii) Shraddha (the eclectic virtues of faith, believe, conviction, reverence, respect, devotion), (iii) Akash (the all-pervading, all-encompassing sky or space element), (iv) Vayu (wind, air element), (v) Tej (energy, splendour, radiance, glory, might, majesty and fire element), (vi) Apaha (water element which is the all-important ingredient for life), (vii) ‘Prithivi’ (earth element which is the base or foundation for all mortal creation), (viii) Indriya (the organs of the body, both the organs of perception as well as of action), (ix) Mana (the mind and heart complex and their stupendous potentials), (x) Anna (food, the element without which life is simply not imaginable because it provides it with the basic nourishment and energy), (xi) Virya (semen, sperms, standing for courage, valour,

potency, vitality and prowess), (xii) Tapa (austerity and penance, tolerance of hardship as a means of penitence, forbearance as well as carrying out strict religious vows in order to purify one's self; the sufferance for some auspicious and noble cause) (xiii) Mantra (the key or formula to achieve success in any enterprise; it also refers to the ability to give good advice; the power to contemplate and think, concentrate and focus, and then logically arrive at a conclusion; the different mystical formulas consisting of letters or words or phrases which encapsulated various dynamic forces of Nature which could be invoked and harnessed by the creature and help him to utilise the latent cosmic energy, strength and other magnificent powers incorporated in these Mantras for the benefit of creation at large), (xiv) Karma (the ability to do deeds and take action; the strength, energy and stamina to perform even difficult tasks), (xv) Loka (the various worlds, such as the mortal world where the creature lived on the earth, the lower heaven called the Antariksha where the junior Gods and the Spirits of dead creatures would live, and the upper heaven or Brahm Loka where the Supreme Being lives; the different worlds as experienced during the waking state, the dreaming state and the deep sleep states of existence of the consciousness), and (xvi) Naam (the name assigned to each independent creature; the good name, fame, reputation, honour and glory that a creature has in this world).

These sixteen elements or units created by the Supreme Being are the sixteen Kalaas or aspects or fractions of creation. In other words, this visible creation is made up of these sixteen units in different ratios just like a colourful picture in mosaic is prepared by an expert artisan from bits and pieces of glass or stone which are independent units in their own right but when incorporated in the mosaic that forms the colourful picture they become an inseparable and an integral part of the latter. Even if one piece is removed, the picture is disturbed.

In simple terms it means that a person's total composite personality, his characteristic attributes and individuality, his vitality and stamina, his prowess, powers and strength, his drive and vigour et al can be divided into sixteen parts.

The *Kalisantharna Upanishad* of Krishna Yajur Veda, in its verse no. 2 says that these sixteen Kalaas are like sheaths or veils covering the Atma or 'self' of the man, and he can realise this glorious divinity residing in his bosom only when these Kalaas which are like impediments or hurdles in self and Brahm realisation are removed. When this Upanishad describes them as 'hurdles or impediments' in realising the glory of the 'self' it implies that although all these sixteen qualities are related to achieving glory and majesty in the world, they have nothing to do with 'self-realisation' and 'Brahm-realisation' which is possible only by abandoning everything related to this world as well as the body both in its gross part and its subtle part.

The *Prashna Upanishad* of Atharva Veda, Canto 6, verse no. 2 says that the divine entity that exhibits sixteen divine attributes lives in the body itself.

The *Brihad Aranyaka Upanishad*, Canto 1, Brahman 5, verse nos. 14-15 describes the sixteen Kalaas of Prajapati (the Lord of creation/world) in a symbolic manner by alluding to the phases of the moon. The fifteen nights of the dark or the bright phases of the moon when the disc of the moon continuously changes + one fundamental truth of the moon which is its disc that never changes inspite of its view from the earth that constantly changes.]

11. The Gods asked Prajapati Brahma—'Why is the epithet 'Jwalantum' used for Lord Nrisingh?' [The word 'Jwalantum' literally means an entity that blazes like the fire; an entity that is hot and radiant, glorious and splendorous, glowing and brilliant like a raging fire. The Sun also is an example to illustrate the meaning of the word 'Jwalantum'—one who burns or glows.]

Lord Prajapati replied—'All the Lokas (worlds), all the Gods, all the Bhuts (elements of creation and creatures in general), and all the Atmas (individuals) are illuminated (i.e. are lighted, are alive and active, are born and made known, made

aware of and got enlightened) by the divine grace of Lord Nrisingh who himself is illuminated. [It is like the case of the blazing sun in the sky which is self-illuminated and illuminates everything in this world that comes within its sight. In the Upanishads, the Sun is treated as a living and vivid symbol of Brahm, the Supreme Being—one of the many reasons being its natural eternal illumination, brilliance, dazzle and splendour.]

All forms of illumination and sources of light in this world get their inherent power to illuminate and show light from the Lord, and once thus empowered, they illuminate and show light to others in this world. [Again taking the analogy of the sun, the latter is self-illuminated like the Lord, and its light makes the moon shine. The moon has no light of its own, but when the sunlight falls upon it, it appears that it has its own light called the ‘moonlight’. Therefore, the moon only reflects the light of the sun to illuminate the world during the night. The word ‘illumination’ also refers to the grand and eclectic virtues of wisdom, erudition, enlightenment and discrimination that come with correct and truthful knowledge. Hence, it implies that those who are blessed by the Lord acquire these grand qualities, and then they ‘illuminate’ or ‘enlighten’ others with their own light of wisdom and knowledge.]

[The Rig/Rik Veda hymns have described the glories of the Lord in the following way—] ‘It is the Lord who in his cosmic form as the Savita (the sun) spreads light in all the directions of this creation, and it is he in the form of the Prasavita (the Mother Nature; the divine Goddess) who gives birth to the entire creation. It is the Lord who is not only eternally self-illuminated but always illuminates others too.’

[Taking the instance of the sun, the latter is eternally illuminated, though during the night there appears to be darkness everywhere. So, even after the doomsday when an all-enveloping gloom engulfs this creation, the Lord remains illuminated, though in a latent form, in his cosmic invisible form as the Viraat Purush. Like the sun re-emerging the next day to illuminate the world, the new phase of creation emerges from the Viraat Purush to become visible. Since the sun is at the core of life in this world as it provides light, heat and energy to it, and life in all its known forms would be simply inconceivable without the sun, the latter is also like the ‘mother’ who conceives the child and then not only harbours it in her womb but also takes care of its nourishment till the time the infant is born. Not only limited to this, the mother continues to look after the child even after birth, even during his adolescent days, and is worried about her child even when he grows older to become a self-sustaining adult.]

The Lord does Tapa himself (i.e. he remains constantly diligent and dedicated; he himself remains active in being auspicious and righteous), and makes others follow him. [And if they do not follow his advice, the Lord becomes compelled to punish such evil and sinful persons to protect the rest of the creation, and maintain the law and order situation in his cosmic kingdom.]

The Lord is himself splendorous and radiant with the glorious virtues of divinity, holiness, auspiciousness and righteousness, and makes others in his cosmic kingdom conform to these noble virtues (so that they become eligible to be called his subjects).’

These are the reasons why he is honoured and revered by the epithet ‘Jwalantum’ (11).

[Note—This verse explains the significance and importance of the fourth word ‘Jwalantum’ of the Mantra of Lord Nrisingh.]

12. The Gods asked Prajapati Brahma—‘Why is the epithet ‘Sarwatomukham’ used for Lord Nrisingh?’ [The word ‘Sarwatomukham’ has to parts—one is ‘Swarto’ meaning everything, everyone, everywhere, and in all situations; and the other is ‘Mukham’ meaning ‘mouth or face’. Here it means that the Lord is present everywhere in each unit of creation in a uniform and universal manner. There is nothing that is not pervaded by him, there is nothing that is not within his purview or authority, and there is nothing that is not known to him.]

Prajapati replied—‘All the Lokas (worlds), all the Gods, all the Bhuts (elements of creation and creatures in general), and all the Atmas (individuals) are seen, heard, felt and taken care of by the Lord even though he has no physical organs or any physical body. He goes everywhere, remains everywhere, knows everything, sees everything, feels everything and takes care of everything.

He is universal, uniform, omnipresent, omniscient, all-knowing, all-encompassing, all-pervading and all-including.

[The Rig/Rik Veda lauds the Lord in its hymns in the following way--] ‘The Lord who was all alone before the beginning of this creation has revealed himself in the form of this creation or universe. It is this Lord who is the principal creator, sustainer and caretaker, as well as the concluder or annihilator of this world. We bow most respectfully to such a glorious and divine Lord.’

These are the reasons why the Lord is honoured and revered by the use of the epithet ‘Sarwatomukham’ (12).

[Note—This verse explains the significance and importance of the fifth word ‘Sarwatomukham’ of the Mantra of Lord Nrisingh.]

13. The Gods asked Prajapati Brahma—‘Why is the epithet ‘Nrisingham’ used for the Lord?’ [The word ‘Nrisingh’ has to parts—one is ‘Nar’ meaning a man; and the other is ‘Singh’ meaning a lion. Here it means that the Lord represents two highest forms in creation—one is the ‘man’ who is not only the virtual Lord of all living beings in this world but is the most wise, intelligent, powerful, authoritative and highly developed creature amongst them, representing the higher forms of life in the cosmic kingdom, and the second is the ‘lion’ who occupies the same position amongst the members of the animal kingdom which is the lower form of life. Lord Nrisingh represents, therefore, the best of all the worlds taken together.]

Prajapati replied—‘Amongst all the creatures it is the man who is highly developed, most intelligent and wise, extremely powerful, immensely strong, very valiant and authoritative. At the same time, the lion is also known to be physically very strong, powerful and valiant amongst animals. This is the reason why Lord Nrisingh is honoured by this epithet of Nrisingh which is a combination of the two words ‘Nar’ meaning a man, and ‘Singh’ meaning a lion.

This eclectic and divine form of the Lord is a provider of auspiciousness and well being for this world; it is an eternal, ancient, traditional and primeval truthful (i.e. the primary, real or essential) form of the Lord; it is his imperishable and infinite form. [That is, one should not look only at his external unconventional form as a half man and a half lion form which is terrible, fear inspiring and very odd, but understand the underlying philosophy that this peculiar form represents.]

[The Rig/Rik Veda lauds the Lord in its hymns in the following way--] ‘It is Lord Vishnu (the sustainer, nourisher and protector of creation; the Viraat Purush who is the macrocosmic invisible and all-pervading form of Brahm, the Supreme Being) who had revealed himself as Lord Nrisingh, and is worshipped by his devotees in this form.’ [That is, when one worships Lord Nrisingh he is actually worshipping Lord

Vishnu.] Devotees pray to this form to have access to numerous forms of strengths and powers (to overcome numerous problems and hurdles in life which require special strength, energy, valour and courage, along with skill, wisdom and knowledge, to be get over them).

In spite of being in a fierce form of a half man and a half lion, the Lord does not instill any kind of fear whatsoever in his devotees. Rather, they feel reassured and protected.

The Lord roams about freely everywhere on this earth, including the lofty mountains. [This is an obvious reference to both the man and the lion. The lion roams freely in the forests and the mountains, fearing nobody, as it is the lord of the wild. The implied meaning here is that a wise man who understands the import of this Upanishad and is blessed by the Lord becomes empowered and infused with such glory that he too can walk fearlessly in the mountains and forests like a lion. This is true because ancient sages and hermits used to stay alone in dense forests and mountain caves among wild animals without any fear from them or being caused any harm by them.]

He is present in all the forms that this creation and its creatures have taken. [This is because the entire creation is a manifestation of this single Lord. This fact has already been asserted in verse no. 12 above.]

It is this Lord who is implied in the hymns chanted by those who sing prayers in honour of the Lord, or those who chant the Mantras while making offerings to the sacred fire during rituals.

The entire creation is measured by his three steps. [This has reference to Lord Vishnu's incarnation as Vaaman or a mendicant dwarf Brahmin who had measured the entire creation in three steps during the fire sacrifice of the demon king Bali¹.]

These are the reasons why the Lord is honoured and revered by the use of the epithet 'Nrisingham' (13).

[Note—This verse explains the significance and importance of the sixth word 'Nrisingham' of the divine Mantra of Lord Nrisingh.

¹The legend of Lord *Vaaman* is briefly this—King of demons known as Bali, who was a grandson of Prahalad for whom Lord Vishnu had revealed himself as Nrisingh/Narsingh, had conquered the whole world, including the heavens. The Gods were deprived of their kingdom in the heaven, and so their mother Aditi requested Lord Vishnu to intervene on the behalf of the Gods. Vishnu incarnated as *Vaaman*, a dwarf Brahmin mendicant. He approached Bali who was famous for his charities and munificence and asked for a gift of land that could be measured by three steps. When Bali agreed, Lord *Vaaman* measured the earth with his one step and the heaven with his second step. Taken aback, Bali offered his own head for the third step, at which the Lord placed his feet on it and pushed Bali to the netherworld. But the merciful Lord saw the injustice done to a magnanimous Bali who had been righteous and firm in his vow of making charity, and never rescinded on his commitments. So, the Lord made him the king of the nether world, and himself took up the job of protecting him there as his gatekeeper. This incarnation of Lord Vishnu is his fifth and followed the Nrisingh form which was the fourth. The idea behind this *Vaaman* incarnation is that even the most humble looking man can indeed have the stupendous power of the Spirit that even the most powerful gods and kings lack.]

14. The Gods asked Prajapati Brahma—'Why is the epithet 'Bhishanam' used for the Lord?' [The word 'Bhishanam' literally means an entity that is terrible, awe-inspiring, fearful, grave, formidable.]

Prajapati replied—'The Lord's fierce and formidable form instills fear and awe in all the Lokas (worlds), all the Gods, all the Bhuts (elements of creation and

creatures in general), and all the Atmas (individuals) in this world. They run hither and thither out of his fear, but the Lord is afraid of none. [This is not to mean that the Lord is a cruel tyrant who wishes to subdue his subjects with roughness and high-handedness. It means that it is necessary for the Lord to maintain stern demeanours so that the wicked and the evil creatures can be kept under leash. The fear of the Lord injects angst in the heart of the sinful and the cruel, and not his devotees and righteous persons. If a king of any kingdom shows undue softness, excess kindness or mercy, then it would be difficult for him to enforce discipline and order in his kingdom, for his good virtues of kindness and forgiveness would be misinterpreted by the pervert and the wicked as his weakness, his inaptitude and lack of will, which in turn would be detrimental for the overall control over the vast realm of the kingdom which has all sorts of subjects residing in it, some of whom are so rogue that only severity of punishment and hard spanking can control them. This is true even in a civilized society where there are some rogue elements that have no scruples about anything, who do not understand the language of 'Dharma', or the codes of conduct, civility, morality and ethics, and the only language they understand is the language of the stick. So, if a king has to maintain law and order in his kingdom and ensure that his righteous subjects can lead a happy life, then he must look stern and fearful to those who are inveterately wicked, mischievous, pervert and sinful, in spite of the king being most kind and graceful at heart. The same thing applies to the Lord of the universe. It is only the sinful who are afraid of his ferocious form, and not his devotees—and this fact has already been affirmed in verse nos. 8 and 13 above. This observation is endorsed below in the next paragraph.]

[The Rig/Rik Veda lauds the Lord in its hymns in the following way--] 'It is out of the fear of the Lord that the Wind God keeps on moving, the Sun God keeps on illuminating the realm, the Fire God and Indra (the king of gods) carry on their assigned duties, and the fifth God known as Mritu (the God of death) too remains diligent in his duties.' [All these Gods represent the various forces of Nature. So, the supreme Lord is the controller of these units of creation so that the wheel of creation keeps on rotating smoothly. If the Emperor is slack, the whole administrative structure of the empire would become slack and crumble under its own weight. The Lord's sternness is necessary to keep the different forces of Nature under tight leash. Otherwise the situation would be much like that of a chariot having many horses who cannot be controlled by the charioteer. The obvious result would be the chariot rocking violently and eventually toppling over. Bridling the creation and reining-in its wayward forces are as important as being merciful to the creation.]

These are the reasons why the Lord is honoured and revered by the use of the epithet 'Bhishanam' (14).

[Note—This verse explains the significance and importance of the seventh word 'Bhishanam' of the holy Mantra of Lord Nrsingh.]

15. The Gods asked Prajapati Brahma—'Why is the epithet 'Bhadrum' used for the Lord?' [The word 'Bhadrum' is defined below.]

Prajapati replied—'The word 'Bhadrum' means that the Lord is most auspicious, graceful, kind, gentle, civil, courteous, suave and affable. He himself is radiant and glorious, and bestows these grand virtues on others. The Lord is adorable and honourable himself, and he grants these virtues on others (who worship him and adore the principles he stands for).

[The Rig/Rik Veda lauds the Lord in its hymns in the following way--] 'Oh Lord who takes care of devout worshippers and seekers! Let us hear only auspicious

words in our ears, and see only auspicious things with our eyes. Oh Lord! Let us have a healthy, well-nourished, strong and robust body with which we can offer prayers and oblations to you while living a life till its full term and carry out the Lord's assignments in this world.'

These are the reasons why the Lord is honoured and revered by the use of the epithet 'Bhadrum' (15).

[Note—This verse explains the significance and importance of the eighth word 'Bhadrum' of the holy Mantra of Lord Nrsingh.]

16. The Gods asked Prajapati Brahma—'Why is the epithet 'Mritumritum' used for the Lord?' [The word 'Mritu' means death, and 'Amrit' means the elixir of eternity. Hence, the term 'Mritumritum' means freedom from death. Its import has been described below in the next stanza.]

Prajapati replied—'When the Lord is remembered or invoked by his devotees and worshippers he frees them from the fear of death, or makes them immune from death—both the types of death, i.e. one that is inevitable at the end of their lives, and the second that comes prematurely (such as from an accident or disease).' [This stanza means that such persons are given eternity and imperishability in the sense that they do not have to take a birth again, and are elevated to the stature of Gods. It also implies that such persons find Mukti or Moksha—i.e. final liberation and deliverance for their souls by merging it with the supreme Brahm from where there is no coming back into this world of miseries and pains, a world marked by a continuous cycle of birth and death. If there is no birth, naturally there would be no death because death is dependent upon birth. Anything that takes birth must die; if it does not take birth it would not die.]

[The Rig/Rik Veda lauds the Lord in its hymns in the following way--] 'The divine Lord who grants all successes, abilities and powers of achievement in both spheres of life—viz. in the physical world of material sense objects as well as in the spiritual realm, the Lord in whose refuge and under whose patronage one finds the elixir of eternity and blissfulness, while being averse to him leads to downfall and the torments that accompany various miseries and death, and the Lord who is ardently followed by the Gods who themselves follow the path of righteousness and auspiciousness—verily, we offer oblations to the sacred fire of the sacrifice for this Lord who is 'Sachidanand'—one who is a personified form of 'Sat' or truthfulness, 'Chit' or pure consciousness, and 'Anand' or blissfulness.

These are the reasons why the Lord is honoured and revered by the use of the epithet 'Mritumritum' (16).

[Note—This verse explains the significance and importance of the ninth word 'Mritumritum' of the holy Mantra of Lord Nrsingh.]

17. The Gods asked Prajapati Brahma—'Why is the epithet 'Namaami' used for Lord?' [The word 'Namaami' means to bow down before someone in reverence and honour.]

Prajapati replied—'The Lord is worshipped and offered prayers and oblations by all the Gods, all the wise and enlightened ones, and all the spiritual aspirants who aim for liberation and deliverance, for emancipation and salvation. That is why he is adored by all.'

[The Rig/Rik Veda lauds the Lord in its hymns in the following way--] 'We most humbly bow before the divine and holy Lord, and offer our greatest of respects to him who is also honoured by Brahma the creator, who is the very foundation and

support for Brahma and the Vedas (or upon whom the glory and majesty, the power, authority and sanctity of both rest), and who has been accepted as the patron Deity and the Lord by other Gods such as Indra (the king of Gods), Varun (the Water God), Mitra (the first of the twelve Adityas or the principal Sun), Aryama (a junior Aditya who is worshipped during the second Hindu month of Vaishakha also known as Madhav which roughly corresponding to mid-April to mid-May) and others.’

These are the reasons why the Lord is honoured and revered by the use of the epithet ‘Namaami’ (17).

[Note—This verse explains the significance and importance of the tenth word ‘Namaami’ of the holy Mantra of Lord Nrsingh.]

18. The Gods asked Prajapati Brahma—‘Why is the epithet ‘A-ham’ used for Lord?’ [The word ‘A-ham’ means ‘it is me; it is I’. Its import is described below in the next paragraph.]

Prajapati replied—‘The Vedas and other scriptures declare—‘I (the Supreme Being) predate the sacrifice which resulted in the creation of this most ancient world.

It is I who is the source of the creation of Amrit (the elixir of eternity, bliss, beatitude and felicity).

It is me who is known as Anna (the food eaten by all living beings which sustains the life of each single creature in this world). [The food has two components—one is its gross external form, and the other is its inherent strength to foster life, which is its subtle quality. The gross body of the creature which is visible from the outside symbolizes the gross aspect of the food, and is therefore called the Anna Maye Kosh or the food sheath. This external covering encloses the actual creature in its subtle invisible form, which is called the Pran Maye Kosh or the inner cell that is the living component of the complete entity. So, this virtue of the Lord means that all the visible gross aspects of the creation as well as all the invisible subtle components are nothing but the Supreme Being in these forms.]

It is I who empower both the Jyoti (illumination, light) and the Shakti (energy, strength, power, authority, dynamism) to exhibit their stupendous glories and magnificent virtues. [For instance, it is the Lord who empowers the fire to give out light and heat energy. It is the Lord who makes the sun shine and give out its brilliant light, heat and energy.]

The auspicious offerings that are made to me are utilized by me to provide welfare to all the rest of the creation. On the other hand, those who are selfish and eat Anna themselves (or enjoy the material things of the world themselves without sharing them with others), I devour them (i.e. I punish them).

It is me who has revealed himself as this universe. It is me who lights it up with a golden light. [This refers to the sun on the one hand, and to the virtues of wisdom, erudition, knowledge and enlightenment which are also equivalent to ‘light’. The ‘gold’ is a precious metal, and is used as a metaphor for all the virtues that are priceless and much sought after by the world. Hence, the ‘golden light’ is the most precious form and the most eclectic form of spiritual knowledge that is being referred to here.]’

True spiritual aspirants are those who know this secret. This knowledge is expounded and elucidated in this great Upanishad (18).

[Note—This verse explains the significance and importance of the eleventh word ‘Aham’ of the holy Mantra of Lord Nrsingh.]

-----*****-----

Upanishad (Canto) 3

[This Canto essentially expounds upon the philosophy of Advaitya Vedanta or the eclectic philosophy of non-duality. It espouses that there is one single universal Truth known as the Consciousness in this creation. It is this Consciousness that is seen in various shapes and forms in this creation depending upon the mental caliber and level of the viewer's intelligence. So, once the spiritual aspirant becomes wise and enlightened enough to see this Truth everywhere, or to realise that the cosmic Consciousness is all-pervading and all-encompassing, he has nothing to fear from, he has nothing more to search, nothing more to desire or long for, and he has nothing to hate or love either. For him, his own 'self' is as much Brahm as the other creature. For him, all the numerous Gods and countless forms in which this creation exists, including its numerous elements and objects, have their origin in one single Brahm who is as vast and fathomless as the sky. He develops exemplary equanimity and fortitude; he finds eternal peace and calmness for his soul. He in fact becomes as deep and vast in these virtues as the sky itself. The last two verse nos. 5-6 aptly summarise this conclusion.]

1. Once upon a time, the Gods asked Prajapati Brahma, the creator—'Oh Lord! Please enlighten us about the Beej (seed, essence, the base) and Shakti (dynamic energy, vitality and strength) of this divine Anushtup Mantra of Lord Nrisingh.' (1).

2. Prajapati Brahma replied—'The ancient and most powerful Shakti or dynamic energy of Lord Nrisingh is called Maya (the power to create delusions), and it is with this Shakti that the visible world was created. [Therefore it follows that the world itself is a delusion like the illusionary world created by the magician using his magical powers.]

It is this Maya Shakti that not only creates this world but also sustains it and eventually becomes the cause of its conclusion. This is why this Maya is the inherent Shakti (dynamism; energy; active ingredient) of Lord Nrisingh's Mantra. Once an aspirant becomes aware and well acquainted with all the aspects of this Maya, he becomes free from all sins¹, he obtains victory over death², and he accesses the eternal fount of blissfulness and blessedness called Amrit³.

Such a lucky man is able to cross over this ocean-like world and obtain all sorts of blessedness and spiritual prosperity (happiness, contentedness, peace, tranquility, blissfulness, beatitude and felicity) that one can hope for (2).

[Note—¹He overcomes sins because he would have realised that all the misdeeds he does to satisfy his desires and gratify himself by pursuing this material world of sense objects is like running after a mirage in the desert, seeking water. This chase would hasten death because there is no water in the mirage. So, when a man becomes enlightened about the falsehood of the charms of this world, and the falsehood of the world itself, he would not do anything unrighteous and wrong just to satisfy himself and the natural urges of his sense organs at the cost of getting trapped in a vicious cycle of sufferings that would inevitably come in its wake. No one wants to suffer. He would also have realised the actual 'truth' in this creation as well as about his own self—that is, he would have become self-realised and enlightened. This development would pre-empt all inclinations of getting involved in any kind of sins, misdeeds and misdemeanours that is degrading and demeaning for his 'truthful self'.

²He defeats death in the sense that he has nothing to fear from as to what would be his destiny or fate when he leaves this mortal body because he is rest assured of his

emancipation and salvation. Angst of death, morbid fear of death arises from fact that a man has to suffer from various sufferings and torments as a punishment for his recklessness and misdeeds in life. For instance, if a man does not take proper care of his health he would fall ill and suffer its consequences. Binge eating or eating wrongly just to satisfy the taste buds makes a man conscious of the ill fate that awaits him, and this creates fears. So a sinful man is afraid of death and his ill-fated destiny as to where he would go after death, he is uncertain of his future, but a righteous man has no such fears or doubts. Further, a devotee of the Lord has taken the refuge of the supreme Lord and put himself in the Lord's custody, therefore he is sure of salvation. Being blessed by the Lord, he would have become sufficiently enlightened to realise that it is the body which dies and not the Atma which is his truthful 'self' and is pure consciousness that is an eternal and imperishable entity.

³It is obvious that with all these developments, with the elimination of sins and the fear of death, the spiritual aspirant would have found the eternal fount of peace and tranquility. This gives him access to the nectar of life called Amrit.]

3. Wise men wonder whether this Maya Shakti of the Lord is 'Hriswa/Hrasva', 'Dirgha' or 'Plut'. [These three words refer to the three aspects of creation. The word 'Hriswa/Hrasva' refers the smallest step, the initial phase of anything, the beginning; the word 'Dirgha' refers to the most evolved, highly developed, the expanded and widespread form of the same thing; and the word 'Plut' symbolises the basic or elementary form or the rudimentary form that remains at the end of conclusion and from which a fresh beginning is made.]

When the wise aspirant worships the Lord holistically and uses his divine Mantra for the purpose of meditation and contemplation, he is able to benefit from all these three aspects of the Maya Shakti. That is, the 'Hriswa/Hrasva' aspect of the Lord's Maya Shakti helps to destroy all his sins and their consequences. As a result the aspirant obtains Amrit, the elixir of eternity and blessedness that gives infinite bliss and happiness. The 'Dirgha' aspect of the Maya Shakti bestows upon him immense fame, good name, magnificence, grandeur, majesty, authority, prosperity and well being. He obtains Amrit which gives him all that he desires. And finally, the 'Plut' aspect of Maya Shakti blesses him with wisdom and erudition which also makes Amrit accessible for him.

[Note—From the perspective of creation, the word 'Hriswa/Hrasva' refers to the small beginning of creation in the form of primary forms of life such as algae and fungi. The word 'Dirgha' refers to the most evolved, highly developed and widespread form such as the higher species of animals and the highest rung occupied by the humans. And the word 'Plut' symbolises the rudimentary forms left after the present creation comes to an end, or the conclusion of the creation itself.

In the present context the word 'Hriswa/Hrasva' would mean making a small beginning by abstaining from sinful deeds and thoughts. The word 'Dirgha' would mean reaching the higher stage of auspiciousness and righteousness when one becomes perfect and immaculate. Obviously such a man acquires immense good name, powers and authority. And the word 'Plut' would refer to the ultimate state of enlightenment and self-realisation when nothing more is sought and needed.]

4. In this context the Rishi (the ancient seer or sage who had been initiated into this Mantra) says—'Oh the ethereal sound represented by the monosyllable word that sounds like a hum and represents the dot put on a letter in the Sanskrit language. [This refers to the divine Mantra OM which is a monosyllabic word, and a humming sound is heard at the end of its pronunciation.]

With the intention of crossing this vast and formidable ocean-like world, and to attain a long life while I live in it, I collect all the auspicious and necessary accouterments (i.e. I come fully prepared and have vowed to dedicate myself to goodness and auspiciousness) and present myself most humbly and devotedly, and with great diligence and sincerity before the great cosmic Shakti (dynamic aspect) of the Lord revealed in the form of Sri Shakti represented by Goddess Laxmi (the Goddess who presides over wealth and prosperity and who is the divine consort of Lord Vishnu), the Mother Goddess known as Ambika (referring to the Goddess Uma or Parvati who is the divine consort of Lord Shiva and regarded as the most senior form of Goddess from whom all the rest of Goddesses were revealed), the Brahmi Shakti (referring to the Goddess Saraswati who is the divine half of the creator Brahma and is the patron Goddess of knowledge, wisdom and erudition), and the Sashthi Shakti represented by Indra (the king of Gods whose army is commanded by Lord Kartikeya who is the son of Shiva who is reputed to relentlessly vanquish evil and sins). [All these are the various dynamic forms of the supreme Brahman through which he regulates and sustains this world. Laxmi is needed to provide all the necessities of life. Ambika is the female aspect of creation or the 'mother' without whom no child can be born, and therefore is the main pedestal upon which the edifice of creation rests. Brahmi Shakti is Saraswati or knowledge which is a most vital and basic component of creation because even for doing basic things in life relevant knowledge and skill are needed. And finally, physical strength represented by the army of Gods headed by Kartikeya is needed to actually control this formidable creation once it has come into being.]

I take the refuge of the Vidya Shakti (the power of knowledge, wisdom, erudition and enlightenment) that would ultimately make me witness Brahman, the supreme transcendental Lord.

I seek your refuge and blessing, and bow most reverentially before you. Please give me your protection and patronage.' (4).

5. The Akash (sky) is the place which gives refuge and support to all the Bhuts (elements as well as the creatures of this creation). All the Bhuts have their origin in the sky; they develop, grow and expand or spread in the vast fathomless realm of the sky, and ultimately collapse into and vanish in the sky. [Refer Canto 4, verse no. 9, and Canto 5, verse no. 9 in this context.]

This is why it is said that the sky is the 'Beej' or seed from which the entire creation has emerged (5).

[Note—This is because everything that is born needs space to grow and develop. The origin of this creation too took place in the vast bowl of the cosmic space. The sky acted as the huge crucible where the cosmos was conceived, where it developed and grew, and in which it lives. At the end it would collapse into the sky much like a wave which originates from the surface of the ocean, develops and grows and spread on the surface of the ocean, and finally collapses into the same ocean.

Taking another example of a tree we see that a tree has its origin in the seed hidden in the earth. This seed develops into a huge tree which not only draws its nourishment from the earth but is also rooted or anchored to the earth. In other words, the earth gives the tree its support and foundation; the earth acts as its base; the earth is its progenitor. The tree produces a new seed, and it dies and perishes itself in the same earth. Hence, the earth is compared to the sky, while the tree is comparable to the Bhuts referred to here—the earth, like the sky, is where the tree is conceived, grows and develops into a full-blown structure. Finally, the tree dies and perishes in the earth. The new seed left by the tree sows the spark of a new tree. Similarly, the

sky creates the Bhuts or elements, they develop into myriad forms of creatures and things, they develop and grow to their full life and potentials, and finally die and perish into the vast bowl of the sky. At the time of death, their gross bodies disintegrate into the basic Bhuts or elements from which it was cast in the beginning. These Bhuts left after the end of the previous generation form the 'Beej' or crop of seeds from which a new generation eventually comes into being, and the cycle continues to rotate.

In other words, everything that has come into being exists in the space of the sky; nothing exists beyond the limits of the sky. The sky is boundless, endless and without limits. Therefore, it is an apt synonym for Brahm.]

6. The wise ones have said that the supreme Lord, who is self-illuminated and glorious, is also self-established in his exalted divine abode or exalted stature. [That is, the Lord does not need any other support for rest much like the case of the sky cited above which gives rest and acts as a basis for the rest of creation but does not have or does not need anything for its own origin or rest or basis or foundation. In other words, the sky is self-sufficient, self-created and self-established. Hence, the 'sky' is the most apt metaphor for Brahm.]

All the Vasus¹ residing in the Antariksha (the sky above the surface of the earth; the lower heaven) are none but this supreme Lord in their forms.

It is this same supreme Lord who arrives in a household as a guest.

The sacred fire established on the altar of the fire sacrifice as well as the person who offers oblations to this fire are both manifestations of this supreme Lord.

It is this supreme transcendental Lord who resides in this mortal world called the Bhu Loka (where the mortal living beings live), in the heavens called the Swarga Loka (where all the Gods live), and in the highest heaven called the Satya Loka (the 'truthful abode' where the Viraat Purush or Lord Vishnu lives).

It is this supreme Lord who lives in the Akash or sky. [That is, the Supreme Being rules over the sky uniformly. In the language of the Upanishads it simply means that Brahm is uniformly present in the sky because the cosmic Consciousness is all-pervading and all-encompassing. There is no place where Brahm is not present, and neither is there anything in existence that is out of reach for Brahm. Since everything has its origin in the sky, since everything lives in the space of the sky and develops in it, and since everything is a manifestation of Brahm, it follows that both the sky as well as the things it harbours are Brahm in their individual and combined forms.]

It is this supreme Lord who has revealed himself as the ultimate Absolute Truth in all forms of creation, such as the gross forms seen as earth and its water bodies and mountains.

All the good deeds and auspicious actions are revelations of this supreme Lord.

A wise, erudite and enlightened man who knows this esoteric fact is able to obtain the eclectic reward as narrated earlier (in verse nos. 2-3). Verily, this is what this great Upanishad says and affirms (6).

[Note—¹The *Vasus* represent the primary Gods representing the principal forces of creation, such as the 'air or the wind' symbolizing Pran or the vital forces of life, the 'water' symbolizing the elixir of life and the lubricant for this world, and the 'fire' symbolizing light, heat, dynamism, vitality and energy. All of them are actually the same supreme transcendental Brahm who has assumed these forms to carry on with the multifarious obligations related to the upkeep of the creation created by none other but himself. Since this creation is his own creation, it is the Lord's duty to take care

of it in the form of the different Vasus. The Vasus have been described in a note appended to verse no. 2 of Canto 2.]

-----*****-----

Upanishad (Canto) 4

1. The Gods once again asked Prajapati Brahma—‘Oh Lord! Please enlighten us about the other holy Mantras which are deemed to be subtly included in, are implied by, and are an integral part of the Anushtup Mantra dedicated to Lord Nrisingh.’ (1).

2. Prajapati Brahma replied—‘The four divine Mantras—viz. the Pranav Mantra (i.e. OM)¹, the Savitri Mantra (which is also called the Gayatri Mantra)², the Yajur-Laxmi Mantra (dedicated to Goddess Laxmi, the patron goddess of prosperity, welfare and good fortunes)³, and the Nrisingh Gayatri Mantra (i.e. a Mantra dedicated to Lord Nrisingh but composed in the Gayatri Chanda or meter)⁴—are deemed to be an inseparable and an integral part of, an implied subtle part of, and therefore equivalent to the Anushtup Mantra of Lord Nrisingh. [This Anushtup Mantra was the subject matter of discussion of the previous three Cantos 1-3.]

A wise and erudite person who knows this esoteric secret is able to obtain greatness, majesty, authority, supremacy, glory, mystical powers and renown in this world along with accessing the essence of eternity and blissfulness known as Amrit (2).

[Note—¹The Pranav Mantra of OM is a universal Mantra. Its significance and importance is narrated in Canto 2, verse nos. 2, 5.

²The Gayatri Savitri Mantra is given as a note no. 2 of verse no. 6 in Canto 1. Refer also verse no. 8 of the present Canto 4 below.

³The Laxmi Mantra is given in Canto 4, verse no. 11.

⁴The Nrisingh Gayatri Mantra is narrated in Canto 4, verse no. 13.]

3. OM¹ is imperishable and eternal. The entire visible world is an exhibition of the majesty, greatness, grandeur, stupendous powers and dynamism of OM representing the supreme transcendental Brahm. Each phase and aspect of creation, such as the past, the present and the future are dependent upon and controlled by OM. What lies beyond these three phases of creation and time are also deemed within the purview of OM. The entire creation, visible or invisible, is a revelation of Brahm and completely soaked or infused in or pervaded by Brahm. [That is, everything in this world is regulated by the Supreme Being. The word OM represents this Supreme Being like the words ‘His/Her Majesty’ used in modern language to denote the sovereign of country. All the limbs of the government are called ‘on his/her majesty’s service’. Likewise, the running of the entire creation is done on the behalf of the supreme Lord represented by OM. This word is like the Lord’s royal seal and insignia.]

Lord Nrisingh is none but this Brahm personified. Lord Nrisingh has symbolic four Paads, or has four aspects, facets or limbs² (3).

[Note—¹Refer Canto 2, verse nos. 2-5.

²The four limbs are the four states of consciousness and are described in the next verse nos. 4-7 below.]

4. [This verse describes the first Paad of Lord Nrisingh in the context of the Jagrat or waking state of consciousness.]*

He who pervades uniformly and universally in the visible world seen or witnessed or experienced or perceived during the waking state of consciousness called the Jagrat state, he who makes this external visible world the subject matter of perception done by the organs of the body (such as the eye, the nose, the tongue, the ears and the skin), he whose cosmic body consists of all the seven Lokas¹ as its organs, he whose nineteen mouth consists of the five organs of perception, five organs of action, five Prans (vital winds or airs) and four Antahakarans (the inner self and its four aspects)², he who is the de-facto enjoyer and lord of this material world, and he who is called 'Vaishwanar'³ because his body consists of the entire creation and his 'true self' called the Atma that lives in this cosmic body is the cosmic Consciousness that pervades uniformly in this creation—verily, this macrocosmic form of Supreme Being known as the Vaishwanar is the symbolic first Paad or aspect or facet of Lord Nrisingh (4).

[Note—*The Mandukya Upanishad, verse nos. 3-7, describes the four Paads of Brahm in great detail. This Upanishad is Chapter 3 of the present volume. Since Lord Nrisingh and Brahm are the same divine entities with two names, the present verse should be read along with the verses of the Mandukya Upanishad to derive the maximum benefit by the reader.

¹The *seven Lokas* are the following— The *seven Bhuvans* or Lokas according to the Purans are the following:--According to Brahmaand Puran (BP) and Vaaman Puran (VP) there are the following lokas-- 'Bhu' (भूः) or earth [BP-3,4,2-18]; 'Bhuvaha' (भुवः) or the space between the earth and the heaven [BP-3,4,2-19]; 'Swaha' (स्वः) or the heavens known as Brahma's abode; the space beyond the earth's atmosphere; cosmic wind represented by the solar wind blows here [BP-3,4,2-20]; 'Maha' (महः) or the world created by Brahma pronouncing the divine word Maha meaning the great heaven or the outer space; it is believed that great sages and seers stay here; it is 1000 Yojans or appx. 8000 miles away from the Swaha Loka [BP-3,4,2-21; VP-52,21-22]; 'Janaha' (जन्ः), so called because it was to be inhabited by the humans and the cows [BP-3,4,2-22; VP-52, 22]; 'Tapaha' (तपः) or the Loka where great amount of austerity and penances are done; it is said to be 60 million Yojans or appx. 60 x 8 million miles away from the Janaha Loka [BP-3,4,2-24; VP-52, 23]; and 'Satyam' (सत्यम्) or the truthful heaven where the supreme Lord has his abode; it is 300 million Yojans or appx. 300 x 8 million miles beyond the Tapaha Loka [BP-3,4,2-25; VP-52, 24].

Refer also to Canto 5, verse no. 16 of the current Upanishad.

The seven Bhuvans or Lokas according to the Vedantic view are the following:-- the seven organs of perception situated in the region of the head —viz. the two eyes + two ears + two nostrils + one tongue/mouth = seven. Refer *Mundak Upanishad* of Atharva Veda, Canto 2, section 1, verse no. 8.

²The *five organs of perception* are the eye, the ear, the nose, the tongue and the skin.

The *five organs of action* are the hand, the leg, the mouth, the excretory and the reproductive.

The *five Prans* are the vital airs or winds such as Pran, Apaana, Samaana, Vyan and Udaana. These five winds control all the functions of the body. These have been elaborately described in all the Upanishads dealing with Yoga.

The *four Antahakarans*—The word Antahakaran literally means the 'inner instrument' of the creature by which his mind works and receives the world. The word has two components—viz. 'Antaha' meaning 'inner', and 'Karan' meaning 'instrument that causes the mind to work'. The external organs of the body such as the eye, ear, nose, tongue and skin which are the organs of perception physically receive the inputs from the external world, but their actual functioning is due to this

Antahakaran or the inner instrument of the subtle body consisting of the mind and intellect complex because if the latter malfunctions the former are useless.

Out the three states of existence of the creature, viz. the waking, the dreaming and the deep sleep states, the mind is active in the first two states only, and therefore the Antahakaran is related to only the first two states of existence. But even here its main field of activity is internal and not external as is implied in the word 'Antaha' itself which means 'inner'. Therefore, the external organs of the body such as the organs of perception and action are only subsidiary and play an ancillary role only vis-à-vis the activity of the 'inner self' consisting of the mind, intellect and sub-conscious as well as the subtle heart which is the seat of various sentiments and emotions. This is simply because the inner self receives inputs from the outside world through the instrument of the external organs, and all the activity of the inner self in relation to the world in which the creature lives depend upon these external organs directly or indirectly.

The Antahakaran functions in four different ways and gets four different names according to these four functions. (1) It is called Chitta or sub-conscious mind and its ability to receive information and remember while performing the function of reception and retention. (2) It is called Mana or logical mind when it performs the function of questioning, doubting and willing. (3) It is called Buddhi or intellect when deducing, deciding and determining. And (4) it is called Ahankar or ego, self pride, arrogance of knowledge when it identifies itself with each of these functions—when it thinks that it has the ability to remember, to question and debate, to decide and will.

The word would therefore briefly mean the inner self of the creature consisting of the subtle body rather than the outer self consisting of the gross body. It is said to be one of the 19 Tattwas or essential elements that came into being at the very commencement of creation.

The Antahakaran with four dimensions is described in Shaarirako-panishad of Krishna Yajur Veda tradition, in its verse no. 4.

³*Vaishwanar*—The term Vaishwanar in simple words means the form of Brahm that is as large and as vast as the universe, enclosing it from all sides like a moat of a fort, and even existing beyond it. This all-inclusive, all-pervading and all-encompassing macrocosmic form of Brahm is the 'Vishwa' or the vast world because this world is a manifestation of Brahm, it is Brahm revealed in its myriad and diverse forms, and it is the glory of Brahm on display. In fact, if one wishes to witness Brahm, he must observe Brahm at play in this world itself. The physical aspect of Brahm in the form of the visible world is equivalent to the Jagrat state of consciousness because it is in this state that the creature sees or perceives the presence of the physical world. Here the word 'creature' refers to his Atma or soul which is pure consciousness and his true self. This Atma is called Vaishwanar because, like Brahm, it is manifested as all forms of life in this world. Refer Mandukya Upanishad of Atharva Veda, verse no. 3.

The word 'Vaishwanar' has many connotations as follows—(i) It is the fire used in sacrificial rituals. (ii) The microcosmic pure consciousness that resides inside the body of the creature, providing it with life, vitality and energy which helps it to digest food. (iii) Vedanta says that it is the pure consciousness that is a fraction of the Supreme Consciousness, and it resides in the body of the creature even as the Supreme Consciousness resides in the macrocosmic vast body of Nature or creation. It is representative of the supreme, transcendental entity that is the Lord and the primary cause and the governing authority of the whole creation. (iv) Since the creatures have myriad forms, it has as many forms as the creatures themselves, incorporating all of them in it. Hence, it is also called 'Viraat Purush' (which means the vast, colossus, all incorporating, all-pervading, almighty form of the microcosmic Atma of the creature as well as the macrocosmic Atma of the creation; it is measureless, infinite and eternal). This is the subtle form of 'Vaishwanar'. (v) The gross manifestations of this 'Vaishwanar' is the 'Annamaya Kosh' or the food sheath

which is one of the five sheaths enclosing the Atma of the creature. This is because, as the Vaishwanar Agni (fire), it helps in digestion of food. (vi) Its state of existence is defined as the ‘waking state of consciousness’ (refer Brahma Upanishad of Krishna Yajur Veda, verse no. 21). (vii) The word also means—relating to or belonging to all men, omnipresent, known and worshipped everywhere, universal, general, common, complete, immutable, full in number, a collective noun for all the Gods, one who is all commanding and almighty.

The word Vaishwanar refers to the universal fire element because the fire provides the light with which the creature sees the world. The fire removes darkness and illuminates the realm with its light. In this context, the Sun is the eye of Brahm in the sky because it is through this Sun and its fire that the world is lighted and energized. The faculty of sight in the eye of the creature is thus a symbolic presence of this Vaishwanar at the macro level of creation.

The Atma is called a Vaishwanar because the man becomes aware of the world when he sees it with his own eyes. This is why it is called the ‘waking’ state of consciousness. The presence of the consciousness known as the Vaishwanar in the eye is a metaphor for this waking state because when a man ‘sees’ anything only when he is awake and not while he sleeps.

Refer also to Krishna Yajur Veda’s Brahmo-panishad, verse no. 21; Pran Agnihotra Upanishad, verse no. 15; and Atharva Veda’s Ram Uttar Tapini Upanishad, Canto 3, verse no. 5; Mandukya Upanishad, verse no. 3; Narad Parivrajak Upanishad, Canto 8, verse no. 11.

5. [This verse describes the second Paad of Lord Nrisingh in the context of the Swapna or dreaming state of consciousness.]

He who lives and pervades in the Swapna or dreaming state of consciousness and its subtle world of dreams, he who quietly knows everything that occurs in the dream or he who makes the creature subtly aware of what is perceived in one’s dreams, he who had seven organs¹ and nineteen mouths (as described in verse no. 4), he who is the Lord and enjoyer of the subtle world that exists in the Swapna state of existence—verily, that cosmic form is known as Hiranyagarbha², and it represents the second Paad or limb or aspect of Lord Nrisingh’s cosmic form (5).

[Note—¹The seven organs refer to the following—the five Prans (Pran, Apaana, Samaan, Udan and Vyan) + the mind + the intellect = 7.

It might also refer to the seven states of consciousness as described in Mahopanishad, canto 5, verse nos. 8-20 of Sam Veda tradition. Briefly they are the following—(i) ‘Beej Jagrat’ (the elementary waking state of consciousness), (ii) ‘Jagrat’ (or normal waking state of consciousness), (iii) ‘Maha Jagrat’ (or a greater waking state), (iv) ‘Jagrat Swapna’ (or a state in which a person is misled to erroneously believe in anything while he is wide awake in this world; literally meaning to ‘day dream’, or dream of imaginary things while a man is wide awake), (v) ‘Swapna’ (or a dreaming state of consciousness), (vi) ‘Swapna-Jagrat’ (or a state when a person’s dreams last long enough to influence him and he lives in his dreams so much so that they affect his mind while he is awake), (vii) ‘Sushupta’ (or the deep sleep state of consciousness).

²*Hiranyagarbha* is the cosmic subtle body of Brahm. It is from this Hiranyagarbha that the rest of creation came into being. The word also refers to the creator Brahma.]

6. [This verse describes the third Paad of Lord Nrisingh in the context of the Sushupta or deep sleep state of consciousness.]

The third state of consciousness is called Sushupta or deep sleep state of consciousness. During this state a sleeping creature neither sees any dreams nor has

any desires. He who lives and pervades in this Sushupta or deep sleep state of existence when the world exists in a state of complete dissolution or a virtual state of non-existence and no activity, he who is uniform, one, steady, unchanging and immutable, he who is Vigyan or complete knowledge personified, he who is blissful and self-illuminated with an eternal light of knowledge and enlightenment, he who remains the only one to enjoy the eternal fount of bliss, beatitude and felicity which are his own divine virtues, and he who is knowledge personified—verily, this is the third Paad or aspect or facet or form or limb of Lord Nrisingh (who is none but the supreme Brahm himself personified) (6).

7. [This verse describes the fourth Paad of Lord Nrisingh in the context of the Turiya or the post-Sushupta state of consciousness, i.e. the state when Sushupta becomes perpetual.]

He who has no awareness of the gross or the subtle, and at the same time knows everything (being omniscient and all-knowing), or in other words, he who is so mysterious and enigmatic that it is not possible to say that he knows anything or does not know anything (i.e. whether he is knowledgeable or ignorant), he who is not a grosser form of knowledge and enlightenment (i.e. he who does not represent the grosser aspects of creation that one comes to be aware of or enlightened about), he who is not visible (because he is not gross but most subtle like the air), he who cannot be held, caught or grasped (i.e. cannot be comprehended or perceived), he who cannot be used in practice (i.e. he is not a material thing or substance that one can physically see), he who is formless and without any attributes, he who is beyond imagination and conception, he who cannot be felt or perceived, he who cannot be defined or described, he who can only be experienced in the form of the pure Consciousness that is known as the Atma, he who is auspicious, munificent and a provider of all round welfare and well being to all the creatures, he who is free from deceit, conceit, falsehood, impersonation and illusions, he who is eternally calm, peaceful, serene and tranquil, and he who is a unique entity that has no parallel—verily, such a divine and glorious entity represents the fourth Paad or limb or aspect of the cosmic form of Lord Nrisingh.

This is what those who are wise and learned believe. It is this Lord in the form of the Atma (the pure conscious ‘self’, the cosmic Consciousness) that is worthy to be known (7).

[Note—These four states of consciousness have been described elaborately elsewhere in other Upanishads as well. (a) Shukla Yajur Veda—Subalo-panishad, Canto 4 full as well as Canto 9, verse no. 1-7; Paingalo-panishad, 2/11-15; Mandal Brahmin Upanishad, 2/4-2/5; (b) Krishna Yajur Veda tradition—Varaaha Upanishad, Canto 2, verse no. 59-64, 72; Canto 4, verse no. 11-20; Brahmo-panisha, verse no. 1, 20-21; Kaivalyo-panishad, verse no. 12-14; Dhyani Bindu Upanishad, verse no. 93/12-93/15; Sarwasaaro-panishad, verse no. 4; Shaarirako-panishad, verse no. 14. (c) Atharva Veda tradition—Mandukya Upanishad, verse nos. 3-7; Atharvashikha; Naradparivrajak Upanishad, Canto 5, verse nos. 1, 24-26; Canto 6, verse no. 4, Canto 8, verse nos. 9-16, 19-20; Ram Uttar Tapini Upanishad, Canto 3, verse nos. 5-8; Param Hans Upanishad, paragraph no. 6.]

8. Now the Savitri Mantra is being described. It is a Yajur Mantra (i.e. a hymn of the Yajur Veda and used during fire sacrifices) and composed in the Gayatri Chanda style. The entire world is soaked in it (i.e. its glories and divine effects spread throughout this world).

Its two letters or syllables represent 'Ghrini', next three represent 'Surya', and the final three letters represent 'Aditya', bringing the total number of letters or syllables to eight. In this way this Savitri Mantra is endowed with great majesty and magnificence that is equivalent to that of the Sun (because the forms mentioned here are the various names of the Sun God, and this Mantra is dedicated to the latter).

A wise and learned man who knows this Mantra and its esoteric secret in the way stated above is blessed with all round well being, prosperity, greatness and majesty ('Sri') that comes by worshipping the Lord with this Mantra, and for which the Sun is regarded as a metaphor and an analogue (8).

9. The Richa (hymn or verse of the Veda) affirms thus—'The Richas of the Rig/Rik Veda are self-illuminated like the supreme Brahm they refer to, and from whom they get their relevance, sanctity and authority. The self-illuminated, eternal and imperishable Brahm is revealed in the form of the 'Param Akash'—literally the highest, the vast, the infinite and the fathomless space of the cosmos which extends endlessly. All the Gods reside there in this Param Akash. [The word 'Param' means supreme and one without a parallel, while of course the word 'Akash' means the sky. Hence, the combined word means the sky that is infinite, fathomless, measureless and eternal. In other words, the hymns of the Rig Veda refer to the supreme Divinity that as eternal, infinite and imperishable as the sky. The sky was present even before the beginning of creation as the latter was conceived in its fathomless bowl. It is in this sky that this creation developed, grew and spread, and it is in this sky that it would ultimately vanish when it comes to an end. Everything in existence is enclosed by the sky; there is nothing that exists outside the limits of the sky. Similarly, nothing exists outside Brahm. Brahm is like this sky—possessing identical virtues of vastness and infinity, of being all-inclusive, all-encompassing and all-pervading. Since the Rik Veda was the first of the Vedas, it is symbolic of the initiation of creation as it contains the most primary and ancient body of knowledge. This knowledge later on evolved and developed into the other Vedas such as the Sam, the Yajur and the Atharva.]¹

An aspirant who does not have knowledge of this fact, then say what would he gain or find by reading and studying the Vedas!

On the contrary, those aspirants who know this fact about Brahm are able to have access to the supreme abode where there is bliss and happiness.' (9).

[Note—¹Refer also to Canto 3, verse no. 5, and Canto 5, verse no. 9 in this context.]

10. A wise and enlightened man who knows the esoteric secret of the Savitri Mantra as narrated herein above has no need for any other Mantras of the Rig, the Yajur or the Sam Vedas. [Refer also to Canto 2, verse no. 2, and Canto 5, verse no. 9. The implication is that this Mantra is self-sufficient. The idea is that the main intention of the Vedas is to show the light of Truth to the spiritual aspirant and enlighten him about Brahm. If this does not happen then reading the voluminous Vedas goes in vain. The Savitri Mantra is dedicated to the Sun God who is an epitome of brilliance and splendour, and therefore represents the light of knowledge which removes the darkness of ignorance. If this dazzling sun is not able to remove the darkness of the night, can a humble lamp do so? Surely not, and this is the meaning hinted here. If this Mantra cannot teach the man who Brahm is, nothing else would, and he would remain ever submerged in the pitch darkness of spiritual ignorance.] (10).

11. [Verse nos. 11-12 describe the divine Laxmi Mantra.]

‘OM Salutations! The great Goddess known as ‘Maha Laxmi’ is the most glorious, majestic, powerful, great and divine Goddess. She is the ‘Laxmi’* of the three worlds called the Bhu Loka (the terrestrial world where mortal creatures live; the earth), the Bhuvaha Loka (which is the lower heaven where the junior Gods and spirits live), and the Swaha Loka (the upper heaven where the Lord of the world Vishnu lives). [*The word ‘Laxmi’ is used here as an adjective to describe the glorious virtues and majestic qualities that give greatness and supremacy to an entity. It is usually measured in terms of grandeur, magnificence, prosperity, opulence, supernatural powers, sway and authority that such an entity possesses. In materialistic world it is usually a synonym for material wealth, prosperity, opulence and the fame that comes with them. The divine Goddess Laxmi, who is the consort of Lord Vishnu, personifies these grand and eclectic virtues. Since Lord Vishnu is another name for the Viraat Purush, the macrocosmic all-pervading and all-inclusive form of the supreme Brahm from whom the entire creation has been born and who completely soaks it like water in sponge, it follows that Laxmi represents the dynamic qualities of the supreme Brahm in his form as Vishnu that helps the Lord to sustain, nourish and protect the world.]

Let the great Goddess Maha-Laxmi whose other name is ‘Kaal-Kaarni’ (i.e. the one who actively controls all the deeds and actions of the creature in all phases of time and circumstance) inspire and impel us towards doing auspicious, righteous and noble deeds.’ [The word ‘Kaal’ means time and circumstance in all dimensions and planes of existence such as the past, the present and the future. It also means death. On the other hand, the word ‘Kaarni’ is a female term referring to the divine Goddess who does anything, the force of Nature that drives this creation. Therefore, Kaal-Kaarni is the divine Goddess representing the dynamic forces of Nature that control all deeds and destiny of a living being. This force controls whatsoever a creature does, whatsoever happens in this creation. It also controls death and consequentially the re-birth of the creature.]

This Mantra dedicated to the great Goddess Laxmi in the Gayatri Chanda (style of poetical composition) is enunciated in the Yajur Veda, and is therefore called the ‘Maha-Laxmi Gayatri Mantra’ of the Yajur Veda. It has twenty-four letters or syllables (11).

[Note—Refer also to Canto 1, verse no. 7, and Canto 4, verse no. 2.]

12. The entire visible world is surely a manifestation of the Gayatri. [That is, it is the Divine Being who is honoured by the prayers of the Vedas composed in the Gayatri meter, and who is revealed in each unit of this creation. This creation is another form of Brahm, the supreme Divine Being.]

A wise and erudite aspirant who comes to know the esoteric secrets of the great Goddess Maha-Laxmi as revealed in the Mantra dedicated to her and composed in the Gayatri Chanda style, which in turn represents the entire Yajur Veda (or encrypts the entire Yajur Veda in an abbreviated form; or is an acronym for this Veda)—verily, such a person is able to obtain great fame, majesty, magnificence and superhuman powers (12).

13. [This verse describes the Nrisingh Gayatri Mantra¹.]

‘OM salutations! We have known Lord Nrisingh (by the medium of the Guru, a wise and learned teacher, and the scriptures).

We enshrine this Lord, whose nails are as strong as Vajra, in our heart. [Vajra is the weapon of Indra, the king of Gods; it is regarded as the most formidable, invincible and the strongest weapon in creation.]

Let this great Lord Nrisingh inspire and impel us to move on the path of auspiciousness, righteousness and nobility.'

This is the famous 'Nrisingh Gayatri Mantra' which is at the base from which has sprung forth the Vedas, and which is the cause of all the Gods coming into being. [That is, the Vedas and the Gods that they praise owe their origin and existence to this eclectic Mantra. Refer Canto 1, verse no. 2 where it is narrated that Brahma the creator had done Tapa and received the Mantra of Lord Nrisingh which gave him the power and authority to start the process of creation. Though the Mantra mentioned in Canto 1, verse no. 2 was in the Anushtup Chanda and the one mentioned here is in Gayatri Chanda, the implication is that no matter what method is used in the composition of the hymns, they have the same theological, metaphysical and spiritual importance. When this is seen with a broad perspective it means that all the Vedas and their hymns, all the scriptures and their verses speak of the same Absolute Truth, and if the latter is not grasped then it is useless to read and study any of the Vedas or the scriptures. To remain entangled in endless debates about words and grammar and other literary niceties is like missing the essence and instead remaining embroiled in meaningless external formalities. It is like missing the real diamond in a collection of worthless pieces of glass, or like missing the targeted mango tree bearing succulent fruits in an orchard of similar fruit-bearing trees. This fact is endorsed in Canto 4, verse no. 10.]

A wise and learned person who comes to know the esoteric secret of this Mantra is able to have access to the Lord (i.e. he is able to reach his spiritual destination of witnessing the presence of the Lord first hand) (13).

[Note—Refer Canto 1, verse nos. 6-7, and Canto 4, verse no. 2 also.]

14. The Gods asked Prajapati Brahma once again—'Oh Prajapati! Please tell us all the Mantras which help to please Lord Nrisingh.' (14).

15. Prajapati replied—'From each of the thirty-two letters or syllables of the Anushtup Mantra of Lord Nrisingh, a prayer hymn is composed. They form 'Stuti Mantras' or hymns that are used to honour the deity. One should employ them to please Lord Nrisingh.

The thirty-two Mantras therefore are the following—

(i) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Brahma Bhu Bhurva Swastame Vai Namah.' [It is Lord Nrisingh who is the supreme Lord of creation, and it is he who has not only revealed himself in the form of Brahma the creator but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(ii) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Vishnu Bhu Bhurva Swastame Vai Namah.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Vishnu who is the sustainer and protector of creation, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(iii) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Maheswar Bhu Bhurva Swastame Vai Namah.' [It is Lord Nrisingh who is the supreme

Lord of creation and it is he who has revealed himself not only in the form of Lord Shiva the great God who is the most enlightened in creation and is the concluder of creation, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(iv) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Purush Bhu Bhurva Swastasme Vai Namoh Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of the Purush, the male aspect of creation and representing the Viraat Prush, the macrocosmic all-pervading form from whom the rest of the creation came into being because it is the male who provides the sperm so necessary for creation and its re-production, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(v) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Ishwar Bhu Bhurva Swastasme Vai Namoh Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Ishwar, the Lord God of is the Supreme Being himself, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(vi) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Saraswati Bhu Bhurva Swastasme Vai Namoh Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Saraswati who is the patron Goddess of knowledge, wisdom and speech, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(vii) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Sri Bhu Bhurva Swastasme Vai Namoh Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Sri, the Goddess Laxmi who is the patron Goddess of wealth, prosperity and well being in this world, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(viii) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Gauri Bhu Bhurva Swastasme Vai Namoh Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Gauri, the divine consort of Lord Shiva and who is regarded as the universal Mother of creation, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(ix) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Prakriti Bhu Bhurva Swastasme Vai Namoh Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Prakriti, or Nature, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(x) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Vidya Bhu Bhurva Swastasme Vai Namoh Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Vidya, or

knowledge, skills and erudition of all kinds, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xi) ‘OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Omkar Bhu Bhurva Swastasme Vai Namō Namaha.’ [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of OM which is the divine monosyllable word standing for Pranav or Brahm himself, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xii) ‘OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Tasmō-ardha-matra Bhu Bhurva Swastasme Vai Namō Namaha.’ [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of the Ardha Matra or the half-syllable used at the end of the pronunciation of OM and which stands for the conclusion of creation as well as the eternal and imperishable Lord who is proceeds this creation and precedes it, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xiii) ‘OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Ye Veda Sanga Sashakha Setihaas Bhu Bhurva Swastasme Vai Namō Namaha.’ [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of the Vedas and their accompanying scriptures along with their branches and Itihasas (ancient histories), but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation. The Vedas and their branches and other scriptures associated with them have been enumerated in the Sita Upanishad, verse nos. 21-31 of the Atharva Veda tradition. It is included as Chapter 9 of this volume.]

(xiv) ‘OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Ye Panchaagnaya Bhu Bhurva Swastasme Vai Namō Namaha.’ [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of the five sacred fires*, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.] { *The five sacred fires have been described in the Chandogya Upanishad of Sam Veda tradition, Canto 4, sections 10 to 13, the five formal divine sacred fires are the following—(a) ‘Garhyapatya’ (the fire of the household hearth; the main fire of the formal fire sacrifice; the fire that every householder is supposed to keep alive and worship regularly and from which the first spark is taken for the rituals associated with religious ceremonies), (b) ‘Dakshinagni’ (the fire used as a witness to making charities or any other religious festivity; the fire lit at the site of a sacrificial fire ritual, near its south end), (c) ‘Ahawaniya’ (the fire lit to invoke the Gods, to invite them to participate and accept the offerings made to them during a ritualistic fire sacrifice), (d) ‘Sabhya’ (the fire of the Vedic period which was continuously lit), and (e) ‘Awasathya’ (the fire of the later Smṛiti period). Worship of the three important fires have been described in Chandogya Upanishad, Canto 2, section 24, while Canto 5, sections 4-10, 19-24 explain their great symbolic metaphysical significance. }

(xv) ‘OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Yaha Sapta Mahavyahriti Bhu Bhurva Swastasme Vai Namō Namaha.’ [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the

form of the seven great Vyahritis*, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.] [*The seven Vyahritis are the primary root words pronounced by the creator Brahma at the time of the beginning of creation and from which formed the nucleus around which the seven worlds formed. In other words, the rest of the creation was revealed from these primary sounds created by Brahma. The seven 'Vyahritis' are the words—(1) Bhu, (2) Bhuvaha, (3) Swaha, (4) Maha, (5) Janaha, (6) Tapaha, and (7) Satyam.

(xvi) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyachastho Lokapala Bhu Bhurva Swastasma Vai Namoh Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of eight Lokapals* or custodians of the different worlds, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.] [*The Lokpals are (i) Indra (the king of Gods), (ii) Agni (the fire-God), (iii) Yam (the death-God), (iv) Nirriti, (v) Varun (the Water God), (vi) Vayu (the Wind God), (vii) Kuber (the treasurer of Gods) and (viii) Ish (Lord Shiva; the chief Lord). Though Brahma and Anant (Vishnu) are also considered guardians of the world and are listed as the last two amongst the 10 Digpals, but the above 8 Gods are regarded as the lokpals.]

(xvii) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyachastho Vasavaha Bhu Bhurva Swastasma Vai Namoh Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of the eight Vasus*, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.] [*The eight Vasus are The eight Vasus are the patron Gods who provide succour and a dwelling place for the whole creation. They symbolise those primary necessities of life without which existence is not possible. They are— (i) Kuber (the God of wealth and prosperity), (ii) the Sun God (who provides energy and food) and his rays and radiance (i.e. sunlight and the energy that it provides), (iii) Shiva (the concluder or annihilator of the creation), (iv) Vishnu (the sustainer), (v) the Water God (called Varun), (vi) the Fire God (called Agni), (vii) any body of water such as a pond, a river etc., and (viii) holy and pious people (who give advice and guidance to the creatures of the creation). According to Brihad Aranyak Upanishad 3/9/3, the Vasus are the following—Fire, Earth, Air, Antariksha (the space of the solar system), Aditya (Sun), Duloka (heavens), the Moon, and the Nakshatras (the stars and the planets).

According to Purans, the eight Vasus are the following—Dhruv, Dha, Som/Soma (the sap of an elixir-providing plant called Som/Soma which is used during religious ceremonies as sanctified liquid offered to the Gods), Aapha (water), Anil (wind), Anal (fire), Pratush, and Prabhaas.]

(xviii) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Ye Chaikaadash Rudra Bhu Bhurva Swastasma Vai Namoh Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of the eleven Rudras*, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.] [*The eleven Rudras are the various manifestations of Lord Shiva. They are the following:--(i) Mannu, (ii) Manu, (iii) Mahinas, (iv) Mahaan, (v) Shiva, (vi) Ritdwaj, (vii) Ugrareta, (viii) Bhav, (ix) Kaal, (x) Vamdeo, and (xi) Dhritvrat. The eleven Rudras appear in Rig Veda

1/43/1, and Taiteriyā Brahman 3/4/9/7. They are regarded as the father of the Wind God or the Maruts (Rig Veda, 2/33/1). The word Rudra means one who is angry, terrible and wrathful. Amongst the Rudras, Lord Shiva is regarded as the most senior and enlightened. The eleven Rudras according to Vishnu Puran (1/1/15) are the following—Har, Bahuroop, Trayambak, Aparājeet, Shambhu, Vrishakapi, Kapardi, Raivat, Mrigvyadh, Sharva, and Kapaali. }

(xix) ‘OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Dwadashaaditya Bhu Bhurva Swastasma Vai Namō Namaha.’ [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of twelve Adityas*, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.] {*The twelve Adityas appear first in the Rig Veda 1/41/4-6 and 2/27. They are the sons of Aditi, the mother of Gods (Atharva Veda, 8/9/21). They are the following—the eight Vasus + Indra + Sun + Vishnu + Shiva = twelve in number. According to Brihad Aranyak Upanishad 3/9/5, the twelve months of the year represent these twelve Adityas, one month for one Aditya. In this Upanishad, sage Yagyavalkya draws a parallel between the twelve months of a year and the twelve Adityas for the following reasons—First, with the passage of one complete year, a corresponding number of years are subtracted from the total number of years that a person is supposed to live in this world. That is, death comes so much the nearer to him. The passage of the sun across the sky from dawn to dusk is used as a symbolic way of depicting the passage of the life of a man from his birth till his death. Since there are twelve mythological suns and twelve months in a year, a parallel is drawn between them and the life of a man. Second, the whole life of an individual creature as well as the entire creation as a whole depends upon the various seasons that appear in a year. If even one of the seasons is disturbed, the entire cycle of life is disturbed correspondingly. For the smooth functioning of life, all the seasons must appear in a rhythmic and systematic manner, and it is a scientific fact that the seasons, upon which the life on earth is so dependent, also themselves depend upon the sun. That is why the Adityas are termed as being synonymous with the twelve months of the year as well as with the life cycle of creation. According to Vishnu Puran, the twelve Adityas are the following—Dhata, Arayma, Mitra, Varun, Anshu, Bhug, Indra, Vivaswan, Pusha, Parjanya, Twashta and Vishnu. }

(xx) ‘OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyachaatho Graha Bhu Bhurva Swastasma Vai Namō Namaha.’ [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of the eight Grahas*, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.] {*The eight Grahas are Sun, Moon, Mars, Mercury, Jupiter, Venus, Saturn, and the combination of Rahu and Ketu which are considered as one and not two entities as they are supposed to represent the ascending and descending phases of the Moon. The eight Grahas have been referred to in Atharvashir Upanishad of Atharva Veda tradition, in its Kandika 2, verse no. 9. This Upanishad is in honour of Lord Rudra as another name of Brahm, and says that Rudra is a personification of the eight Grahas. }

(xxi) ‘OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Yani Cha Panchabhutaani Bhu Bhurva Swastasma Vai Namō Namaha.’ [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of five Bhuts or primary elements*, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most

reverentially and humbly offer my obeisance to this great Lord of creation.] {*The five Bhuts are sky, air, fire, water and earth.}

(xxii) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Kaal Bhu Bhurva Swastasme Vai Namō Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Kaal who represents the force of creation which brings about an end of everything in existence, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xxiii) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Manu Bhu Bhurva Swastasme Vai Namō Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Manu who was the first Male in creation and it was from him that the human race was born, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xxiv) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Mritu Bhu Bhurva Swastasme Vai Namō Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Mritu or death personified, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xxv) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Yam Bhu Bhurva Swastasme Vai Namō Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Yam, the god of death and the one who decides whether the dead man goes to the heaven or hell, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xxvi) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyachantaka Bhu Bhurva Swastasme Vai Namō Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Antak meaning the dooms-day, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xxvii) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Pran Bhu Bhurva Swastasme Vai Namō Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Pran, or the vital life-forces in creation represented by the vital winds or airs, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xxviii) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Surya Bhu Bhurva Swastasme Vai Namō Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Surya, the Sun God, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xxix) 'OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Soma Bhu Bhurva Swastasme Vai Namō Namaha.' [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Soma, the

Moon God, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xxx) ‘OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Viraat Purush Bhu Bhurva Swastasme Vai Namō Namaha.’ [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of the Viraat Purush who is the macrocosmic, invisible but all-pervading gross body of the supreme Brahm, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xxxi) ‘OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Jiva Bhu Bhurva Swastasme Vai Namō Namaha.’ [It is Lord Nrisingh who is the supreme Lord of creation and it is he who has not only revealed himself in the form of Jiva, the living being, the creature who inhabit this world, but also as the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.]

(xxxii) ‘OM salutations! Yo Ha Vai Nrisingh Devo Bhagwanyacha Sarwam Bhu Bhurva Swastasme Vai Namō Namaha.’ [It is Lord Nrisingh who is the supreme Lord of creation, and it is he who is everything there is in this creation, including the three worlds known as Bhu (earth), Bhuvaha (lower heaven) and Swaha (the upper heaven). I most reverentially and humbly offer my obeisance to this great Lord of creation.] (15).

16. These are the Mantras which please the Lord and he reveals himself before the worshipper. So, one who offers worship to the Lord with these Mantras is able to have a first hand divine vision of the Lord and is able to see his Viraat (vast, colossus) form. This helps him to obtain the essence of Amrit—the elixir of eternity, bliss, felicity and beatitude. This Upanishad endorses this eclectic view that he is sure to access this grand reward as mentioned herein above (16).

-----*****-----

Upanishad (Canto) 5

[This Canto describes the great worship instrument called a Chakra or wheel. This is used in ritualistic and mystical forms of worship of Lord Nrisingh. Since Nrisingh is an incarnation of Lord Vishnu, this Chakra is also called Sudarshan Chakra (verse no. 2), the discus held by Lord Vishnu as his weapon which he uses to vanquish evil and sinful forces, and give protection to this world.]

1. Once the Gods approached Prajapati Brahma and asked him most respectfully—‘Oh Lord! Please tell us about the Maha Chakra which is relevant to the Anushtup Mantra (of Lord Nrisingh). Wise ascetics say that this Chakra provides Mukti (liberation and deliverance), and fulfils all the desires and aspirations of the worshipper.’ (1).

2. Prajapati replied—‘This great Chakra (wheel) is called ‘Sudarshan Maha Chakra’. [It consists of five consecutive rings or tiers, each outer ring resting upon its inner one with the support of spokes designed like carved petals of the lotus flower, and which act like pillars supporting a five storeyed house. The construction is so magnificently

balanced that the number of letters and spokes or lotus petals goes on increasing with each new tier or circle symbolizing the various layers of the multi-layered structure of the worship wheel. This results in the increase of the circumference of each successive ring of the whole Chakra. The entire structure is perfectly aligned and balanced around the central hub or core which is described in this verse no. 2. The rest of the concentric layers are described in verse nos. 3-7.]

The first ring has six letters or syllables. The six seasons are like its six spokes called 'Patra' because they are designed like the petal of the lotus flower. These Patras (which are like spokes of an ordinary wheel) are fixed to the hub or the central point of this ring. This ring is tightly gridled (encircled, clasped, enclosed or surrounded) by Maya. Since Maya (delusions, illusions, falsehoods, deceit) does not affect, or cannot touch or taint or corrupt the Atma (which is pure consciousness that is eternally enlightened and immaculate), it follows that this Chakra is surrounded by Maya only from the outside. That is, the Atma, which is at the core of creation, is not at all tainted or affected by any of the negativity associated with Maya. [The 'hub' or the central axis to which the spokes are attached, and which holds the wheel of creation represented by this symbolic Chakra or wheel of worship in its standard shape and designated form, is the Atma or the pure Consciousness around which the entire edifice of creation is built. It is around this central hub symbolizing the Atma that the entire creation revolves. If the hub is removed, the wheel would fall apart. The gridle is tightly fixed on the circumference of the wheel to hold it in shape. This Maya thus gives the edifice of creation its shape. This Maya is never able to touch the central hub represented by the Atma because the spokes of this symbolic wheel rigidly forces the Maya to maintain a safe distance from the Atma.] (2).

[Note—This verse describes this creation as a wheel hemmed in by Maya and at centered around the Atma which is at its core. This analogy of the wheel is cited in other Upanishads also, viz. (a) Atharva Veda = Prashna Upanishad, Canto 1, verse no. 11; Canto 6, verse no. 6; Mundak Upanishad, Mundak (Canto) 2, section 2, verse no. 6. (b) Krishna Yajur Veda = Shwetshwatar Upanishad, Canto 1, verse no.4, 6; Canto 6, verse nos. 1-3. (c) Shukla Yajur Veda = Paingalo-panishad, Canto 4, verse nos. 3-4.]

3. The second ring has eight letters or syllables which represent its eight spokes designed like a Patra (the petal of the lotus flower). [These spokes rest on the rim of the first ring and act like pillars that support the second tier. The rim of the first tier resembles the ceiling of the ground floor of a five-storeyed house. This rim acts as the base upon which rests the second ring or the second storey of the five-storey house. The rim or circumference of this second ring would therefore be like the ceiling of the second floor of this five-storeyed house, and it is supported by the eight spokes or pillars mentioned here.]

The divine Gayatri Mantra has eight letters or syllables in each of its steps or lines, and hence this second ring is regarded as being symbolic of the Gayatri. This is also girdled or surrounded from the outside by Maya. This Maya is present in all spheres of life and creation. [That is, Maya encircles or girdles each strata of creation. Right from the initial stages or phases of creation to the latter much evolved stages, nothing escapes Maya. Maya has a dominant and all-pervading presence in all the aspects and spheres of creation. The only entity that does escape from the affects of Maya is the Atma as outlined and explained in verse no. 2.] (3).

4. Outside of the second Chakra (as described in verse no. 3) is the third ring or tier or layer of the Chakra. It consists of twelve letters or syllables which form its twelve spokes designed like the Patra or petals of the lotus flower, and act like pillars supporting this ring. It is compared to the Jagati Chanda which has twelve letters or syllables in each step. Like its predecessors, this Chakra is also girdled from the outside by Maya (4).

[Note—Each step or ring of the Chakra represents one strata or tier of creation. What applies to the first ring also applies generally to the rest of them, the only difference being the details in the composition of letters of each ring that symbolize the level of development or evolvement in creation vis-à-vis the various creatures, the level of erudition and knowledge, the various natural forces that come into play etc. that are specific to a particular ring or strata and distinguish one from the other. But it must not be forgotten that all are an integral and inseparable part of the wheel of creation in as much as that even if one of them is removed, the entire structure would collapse sooner or later, besides losing its character of being a unique entity known as the ‘creation’ having magnificent and unparalleled qualities that are a combination or a synthesis of all the unique qualities that are specific to a given strata of creation. In other words, none of these rings or layers of creation—represented by the various rings of this wheel—have an independent existence of their own. The Atma mentioned in verse no. 2 is the central hub around which this wheel is built, and upon which this entire edifice known as the ‘creation’ is founded and erected.]

5. The fourth layer of the Chakra consists of sixteen letters or syllables which act like sixteen spokes designed like the Patra or petals of the lotus flower, and act like pillars supporting this ring. These sixteen Patras represent the sixteen Kalaas¹ of Lord Nrisingh, and therefore this Chakra is regarded as a personification of the Lord himself. [That is, it acquires the same power and authority if worshipped properly as possessed by Lord Nrisingh in person.]

This Chakra is also girdled or surrounded on the outside by Maya (5).

[Note—¹The concept of sixteen Kalaas has already been explained in Canto 2, verse no. 10 of this Upanishad.]

6. The outermost fifth layer of the Chakra consists of thirty-two letters or syllables which act like thirty-two spokes designed like the Patra or petals of the lotus flower, and these act like pillars supporting this ring. These thirty-two Patras represent the Anushtup Chanda in its entirety. [The Anushtup Chanda has four lines with eight letters in each line. Therefore the full verse has 4 lines x 8 letters each = 32 letters.]

This Chakra is also girdled or surrounded on the outside by Maya (6).

7. This symbolic Chakra is held in place with these spokes. The spokes represent the Vedas, while the lotus petals of their design¹ represent the Chandas in which the Vedas are composed. The wheel rotates on the strength of these spokes and their robust, self-sustaining design (7).

[Note—¹An analysis of this verse indicates that the wheel is visualized with a three-dimensional perspective. The spokes are not straight like a rod but cast in the shape of the petals of the lotus flower with the central spine around which the dome-like or cupola-like bulging design of a petal is moulded. The central spine that runs through this dome or cupola represents the Vedas, and it is hidden inside the outer shape of the lotus petal which is the visible part. This petal is beautifully carved and represents the Chandas or the style of poetic composition in which the Vedic hymns are composed. These enchanting and lyrical hymns are very melodious, extremely pleasant and sweet to hear, and therefore often times called ‘Saam’—verses that can

be melodiously sung, the melody that touches the heart and is rejuvenating as well as uplifting for the Spirit.]

8. The Sudarshan Chakra with the sixteen spokes designed like lotus petals is the one that is famous and most adored. One should do Nyas¹ in the central point (or the hub or the core) of this Chakra with the eclectic divine Mantra dedicated to Lord Nrsingh, i.e. the Mantra OM which is a monosyllabic sound and is also called Tarak Mantra (because it gives liberation and deliverance to its worshipper).

The six letters or syllables of the Mantra ‘Sahastraar Hum Phat’ are used to do Nyas in the six Patras (spokes designed like a lotus petal) of the first ring. [One letter is done Nyas with in one Patra or petal.]

The eight letters or syllables of the Narayan Mantra ‘OM Namo Narayan’ are used to do Nyas in the eight Patras (spokes designed like a lotus petal) of the second ring. [One letter is used to do Nyas with in one Patra or petal.]

The twelve letters or syllables of the Vasudeo Mantra ‘OM Namo Bhagwate Vasudevaaya’ are used to do Nyas in the twelve Patras (spokes designed like a lotus petal) of the third ring. [One letter is used to do Nyas with in one Patra or petal.]

The Nyas in the sixteen Patras or spokes of the fifth ring is done using the first letter of the various categories of vowels and consonants of the Sanskrit language with a dot on the top of each letter. [One letter is used to do Nyas with in one Patra or petal. These letters are the following—(i) the short vowels such as A (as in *done*), E (as in *if*, *in*), U (as in *full*, *bull*), Ri (as in *wring*), Ae (as in *may*), O (as in *Oh*), Ang (as in *clung*), Aha (a combination of the vowel A and consonant Ha); (ii) the consonant letters at the beginning of each category, such as Ka (as in *kerb*), Cha (as in *champion*), Tta (as in *ton*—pronounced from the base of the tongue), Ta (as in French ‘t’ pronounced from the front part of the tongue), Pa (as in *purse*), Ya (as in *yearn*), Sha (as in *shawl*), and Ha (as in *hut*).]

The thirty-two letters or syllables of the great Anushtup Mantra (described in Canto 2, verse no. 6, and elaborated in its verse nos. 6-18) are used to do Nyas in the thirty-two Patras (spokes designed like a lotus petal) of the fifth ring. [One letter is used to do Nyas with in one Patra or petal.]

This most magnificent and powerful Surdashan Chakra is the fulfiller of all desires and wishes of a worshipper. It is door or medium for obtaining Mukti (liberation and deliverance). It is a symbol of the Rig/Rik, the Sam and the Yajur Vedas. It is a personification of the supreme Brahm himself, and an embodiment of Amrit—the elixir of eternity, bliss, happiness, beatitude and felicity.

The eight Vasus are established in its eastern side, the eleven Rudras are established in its southern side, the twelve Adityas are established in its western side, the Vishwa Deva (the Lord of the universe) is established in its northern side, the Trinity Gods Brahma, Vishnu and Shiva are established in its central point, and the Sun God and the Moon God are established in its two flanks (8).

[Note—¹Nyas is to symbolically establish the Mantra’s divine mystical powers in a particular point of the worship instrument. It makes that point or spot holy, auspicious, sanctified and empowered. Doing Nyas helps to purify this instrument and make it blessed. The word ‘Nyas’ refers to an invocation, or vesting or assigning any entity with something, or entrusting an entity with some trust and responsibility; to deposit, repose, trust, pledge, entrust, keep, place, etc. This is a ritualistic process in which certain parts of the worship altar or instrument or even the body of the worshipper are touched and certain Mantras are said. Therefore, doing Nyas is a process of pledging utmost faith and conviction on the divine and holy Mantra’s supernatural powers and potentials by invoking it and reposting it on the various

locations of the worship instrument and its vital parts, such as its central point, its spokes and rings. It makes the worship instrument powerful and effective as it now becomes energized with the dynamic powers of the deity to which this worship instrument is dedicated.]

9. The Richas (hymns) of the Vedas affirm—‘All the Vedas are inherently established or reposed in the cosmic form of Lord Nrisingh which is like the great Akash (sky), a form that is vast, measureless, fathomless, imperishable, eternal and infinite. All the Gods are likewise established or have their base in this cosmic form of the Lord. [This refers to the fact that the Gods are present in the endless heaven, and are not bound like the creatures of the earth. This virtue of being endless and infinite, of possessing endless powers and virtues are unique to Lord Nrisingh who is none but the Supreme Being himself.]

A wise and learned man who does not know the Supreme Being referred to in this verse benefits nothing by studying the Rig/Rik Veda and other Vedas.

On the other hand who are enlightened about this supreme Lord are able to obtain the most exalted stature and the best of spiritual destination in this world (9).

[Note—Refer Canto 3, verse no. 5, and Canto 4, verse no. 9. Both emphasise that the sky is the nearest analogue for Brahm whose manifestation is Lord Nrisingh. Since Brahm is an embodiment of knowledge, and it is from the former that the latter has emerged, it is a natural thing to say that the Vedas—i.e. the knowledge that they contain and the Truth that they espouse—are also like the sky.

Again, since all the Gods are none other than the same Brahm playing different roles in their forms, it follows that the Gods are an integral part of Brahm, they are inseparable and indistinguishable from Brahm.]

10. Even a child or a young man who acquires full knowledge of this mystical Sudarshan Maha Chakra becomes so powerful, authoritative and empowered that he is regarded as a Guru (an adroit, expert and skilled person) by all others. He becomes eligible to preach all the various Mantras. [This implies that he has had indepth and full understanding of the mysterious secrets and the metaphysical importance and significance of the Mantra of the Lord and its application in practice as outlined in this Upanishad. Obviously, it is only then that he is deemed to be learned and skilled in this field, and not otherwise.]

When the Sundarshan Yantra (worship instrument described in verse nos. 2-8) is used during formal forms of worship and doing fire sacrifices, the Anushtup Mantra of Lord Nrisingh (described in Canto 2, verse no. 6) is used for the purpose.

This Yantra is said to be so powerful and effective that it gives protection against the fear of demons (or all sorts of tormentors) as well as from the fear of death (and its accompanying horrors).

After receiving it in the proper way from a Guru (who had previously sanctified it and empowered it by doing Nyas and other rituals to give it its mystical powers and effectiveness), the worshipper should wear this Yantra as a charm around his neck, arms or the Shikha (which is a tuft of hair on the top of the head).

Even if the receipt of this Yantra gives the whole earth consisting of the seven continents to the Guru as his fees for providing it to him, it is still not sufficient a compensation. Hence, one should donate to his Guru as much land as is possible for him (i.e. whatever he can conveniently afford and spare) as the fee for acquiring this Yantra.’ (10).

11. The Gods asked Prajapati again—‘Oh Lord! What are the divine benefits or rewards obtained through this Anushtup Mantra? Please be kind to tell us.’ (11).

12. Prajapati replied—‘A person who does regular meditation and contemplation using this Anushtup Mantra of Lord Nrisingh, and he uses it to do regular Japa (repetition) becomes as glorious and radiant as gold that is heated in fire. That is, he becomes purified and holy, and his countenance glows with the halo of divinity that effuses from his inner being and radiates out in all the directions like the light of a burning fire.

He is blessed and purified (i.e. made holy) by even the Sun God, the Moon God, the Wind God, the Absolute Truth representing the Supreme Being, by Brahma the creator, Vishnu the sustainer and protector, and Rudra (Shiva) the concluder of creation, and by all the rest of the Gods—individually and collectively (12).

13. A person who does regular meditation and contemplation using this Anushtup Mantra of Lord Nrisingh, and uses it to do regular Japa (repetition), is able to vanquish death. He becomes free from sins and their consequences. He is also absolved of the horrendous sin of killing a Brahmin, an embryo or a warrior. In fact, he is excused of the sin of all killings¹.

Such a man is enabled to cross this vast ocean-like world, and is also empowered to help others cross it (13).

[Note—¹It must be noted that this verse is not to be misinterpreted as sanctioning murder. It is only meant to give a ray of hope to those who might have committed some horrible sin in the past due to unavoidable circumstances, and now wish to atone for their misdeeds. They must vow not to repeat their mistakes again for the simple reason that while Lord Nrisingh to whom this Upanishad is dedicated is munificent enough to pardon sincere persons and forgive them for their sins, he is at the same time very stern and relentless in punishing the evil and sinful ones as is proved by his physical form and the reason of his incarnation as a half man and a half lion, which was to slay the demon who was tormenting even his son Prahalad.]

14. A person who does regular meditation and contemplation using this Anushtup Mantra of Lord Nrisingh, and uses it to do regular Japa (repetition), acquires such immense and intense mystical powers that he can, if he so wishes, obstruct the path of fire, wind, sun, moon and water. He can also stun the Gods, obstruct their movements or override their decisions. He can obstruct the movement of stars and even neutralize the effect of the most potent poison (14).

[Note—This verse is intended to highlight the stupendous mystical powers that a worshipper of Lord Nrisingh acquires. It does not intend to mean that he can physically stop the sun, the moon and the stars from moving in the sky, but he can change the way they affect the destiny of a person as recognized by astrological calculations. By saying that he can override the Gods and the elements such as the fire, wind and water it is meant that he becomes as powerful as the Lord who supervises them, and that he accesses super-human powers and authority.]

15. A person who does regular meditation and contemplation using this Anushtup Mantra of Lord Nrisingh, and uses it to do regular Japa (repetition), acquires such a great power that he can attract even the Gods, Yakshas (sort of semi-gods), Naag (legendary serpents who rule the nether world), Grahas (stars, both the benign as well as the malignant), and humans (both friendly as well as inimical). He indeed can attract everyone towards himself (15).

[Note—This draws a parallel from the celestial sun around which the entire solar system revolves. The planets keep their respective position in the vast space of the sky because they are pulled in towards the sun by the gravitational forces of Nature which prevents them from spinning out of the sun's orbit. The moon revolves around the earth and all the things on the surface of earth are held in their respective positions because of this attractive power of gravity. Even the entire administrative edifice of an empire is centered on one single office of the emperor. The wheel cited in this Upanishad is also centered on the hub. In other words, the worshipper who uses this Mantra to meditate acquires holiness and purity along with immense mystical powers that those around him look up to him in every sphere of life for guidance and help. He becomes the focal point for seeking advice and direction. He becomes a wise and expert teacher, and wherever he stays pupils and disciples gather around him. For such a person there is no distinction between an enemy and a friend—i.e. whether the God or the stars are inimical or friendly, he treats all of them equally and with the greatest of equanimity.]

16. A person who does regular meditation and contemplation using this Anushtup Mantra of Lord Nrisingh, and uses it to do regular Japa (repetition), is able to vanquish (i.e. acquire prominence, honour and glory in) all the seven Lokas such as the Bhu Loka, the Bhurva Loka, the Swaha Loka, the Maha Loka, the Jana Loka, the Tapa Loka and the Satya Loka. [Refer Canto 4, verse no. 4.] (16).

17. A person who does regular meditation and contemplation using this Anushtup Mantra of Lord Nrisingh, and uses it to do regular Japa (repetition), is deemed to have done (and therefore entitled to the benefits accruing from doing) the great Yagyas or fire sacrifices such as the Agnishtom Yagya¹, Ukthya Yagya², Shodhashi Yagya³, Vajpaye Yagya⁴, Atriraatra Yagya⁵, Aptoryaam Yagya⁶ and Ashwamedh Yagya⁷.

He is deemed to have done these sacred sacrifices in all the seasons of the year⁸ (17).

[Note--¹The *Agnisthoma*—This is the first of the Soma Yagyas where the sanctified liquid extracted from the herb called Som is used as offerings to the sacred fire and the Gods. It is spread over five days and requires an attendance of sixteen priests. It is performed in the spring season annually. Its climax is reached when the Soma juice is extracted at midday from the herb.

²The *Ukthya Yagya*—This is the fire sacrifice in which the hymns of the Sam Veda are used for recital and offering of oblations to the sacred fire.

³The *Shodashi Yagya*—As the name suggests, it is done continuously for sixteen days of the lunar calendar. It starts on the dark-moon day and finishes on the full-moon day. The word 'Shodasha' also refers to the sixteen purification rites enjoined for a twice-born from birth till death. It also means observing the sixteen obligatory steps in formal forms of worship—such as Awaahan (invocation of the deity), Aasan (offering of seat to the deity), Ardhya (offering oblations), Padya (washing of feet), Achaman (sipping of sanctified water to cleanse the mouth), Madhupark (offering of desserts or mouth sweeteners), Snan (ablution; bathing), Vastraavharan (clothing), Yagyopavit (wearing of the sacred thread), Gandha (offering perfumes), Pushpa (offering of flowers), Deep (showing ceremonial light), Naivaidhya (offering fresh oblations to the deity in the form of sweet pudding or porridge), Tambul (betel leaves), Parikrama (circumambulation), and Vandana (offering prayers).

⁴The *Vajapeya Yagya*—This is performed by one who desires unlimited dominion. This sacrifice had many special features and the number 17 plays a dominant role—for there are 17 animals that are sacrificed, 17 objects are distributed as fees for the priests, and it lasts for 17 days culminating in a chariot race in which the patron who does the fire sacrifice is made to win at any cost.

⁵The *Atiraatra*—This is form of Soma sacrifice but done in one day only. An ewe or ram is sacrificed for Goddess Saraswati, the goddess of speech, wisdom and knowledge.

⁶The *Aptoryaama*—This is a modification of the Agnisthoma Yagya and is done for the fulfillment of desire. The chief patron who does this sacrifice is expected to give one thousand cows as gift or charity. A fully decorated chariot is donated to the chief priest.

⁷The *Ashwamedh*—This is called the horse sacrifice because a horse is sacrificed in it. It is most ancient sacrifice and can be successfully done by very powerful kings or emperors. The horse is let free to go anywhere it wants for one year and the land where it sets foot is either annexed by treaties or by force in war. The actual sacrifice is though for only three days. The sacrificial horse is protected by the army and if by chance it is killed by the opposing king then the sacrifice is deemed to be defiled. In practical terms, it was a means to spread a king's area of influence.

⁸The *Chaturmaasya*—This is a fire sacrifice consisting of three independent sacrifices done at four-monthly intervals called the 'Chatur-maas' or a period of four months. Each sacrifice has an independent name, viz. Vaishwadeva, Varun-praghaasa and Shakamedh. Sometimes one more named Shunaashirya is also added if the Hindu lunar calendar shows an extra month. Each of these is performed on the full-moon day and mark the advent of a season—such as the Phalgun or Chaitra Purnamaasi (February-March or March-April), Aasaadh Purnamaasi (July), and Kaartika Purnamaasi (November). Sweet pudding or porridge and rice cakes are the main offerings.

Refer also to Chapter 2, Mundak Upanishad, section 2, verse nos. 3 and 8 of this volume.]

18. A person who does regular meditation and contemplation using this Anushtup Mantra of Lord Nrisingh, and uses it to do regular Japa (repetition), gets the eclectic reward of having studied the Rig/Rik Veda, the Yajur Veda, the Sam Veda and the Atharva Veda.

He gets the eclectic reward of having studied the Angiras section of the Vedas. [This deals with the worship of the sacred fire and the performance of the fire sacrifices.] He gets the eclectic reward of having studied other scriptures such as the Purans (ancient mythological histories of the Hindus), the Kalpa Gathas (the stories of specific eras or ancient times), Narashanshi (formal prayers; liturgy), and Pranav (the divine Mantra OM pertaining to the supreme transcendental Brahman).

Such a person is deemed to have studied them all and have become wisened in their tenets and philosophies (18).

19. A wearer of the sacred thread (and the worshipper of the Lord using the Anushtup Mantra as described in this Upanishad) is equivalent in glory and high honour to a hundred persons who have not worn the sacred thread (and therefore not been formally initiated into the religious fold).

A householder who studies the Vedas is equivalent in glory and high honour to a hundred Brahmacharis (celibates who observe strict rules of abstinence and self control over the senses).

A Vaanprastha (a person who has left the world and heads for the forest for doing meditation and tapa) is equivalent in glory and high honour to a hundred such householders.

A Sanyasi (a renunciate hermit or ascetic) is equivalent in glory and high honour to a hundred such Vaanprasthas.

A person who does Japa or repeats the divine Mantra of Lord Rudra (one of the forms of Lord Shiva) and meditates upon it is equivalent in glory and high honour to a hundred such Sanyasis.

A person who studies the Atharva Shikha Upanishad is equivalent in glory and high honour to a hundred such worshippers of Lord Rudra. [The Atharva Shikha Upanishad is Chapter 4 of this volume.]

A worshipper of Lord Nrisingh and who uses the Lord's Mantra for doing Japa and meditation is equivalent in glory and high honour to a hundred such wise persons who study the Atharva Shikha Upanishad. [Such is the tremendous glory and majesty of the Nrisingh Mantra.] (19).

20. The devotee of Lord Nrisingh who worships this Mantra of the Lord and meditates upon it is able to attain the supreme abode where even the wind has no access, where there is no heat and scorch of the sun, where neither the moon shines nor the stars twinkle, where there is no heat of the fire nor entry of death—a divine abode which is free from all sufferings and miseries, where there is perpetual bliss and happiness, an abode which is absolutely peaceful, tranquil and serene, which is auspicious and holy, which is adored by the Gods, which is the supreme destination aspired by ascetics, and which is the supreme object of all spiritual endeavours.

It is this abode or destination reaching where the devotee finds complete Mukti for himself—i.e. he finds full liberation and deliverance from this world and the cycle of birth and death; he obtains complete and unhindered emancipation and salvation for his soul (20).

21. The Richas (hymns) of the Rig/Rik Veda too affirm—‘Just like an ordinary man can see the splendorous sun in the sky, those who are wise and enlightened see the divine and supreme abode of Lord Vishnu with their subtle eyes of wisdom and knowledge.

Such wise, learned and enlightened persons bring this supreme abode to the knowledge of the ordinary people by teaching them about it and making them aware of its esoteric secrets.

He who knows this secret and who is enlightened about it is the one who is able to obtain this most exalted spiritual stature. Verily, this is what the Maha Upanishad (the great Upanishad) says. Amen! (21).

Addendum no. 1

Nrisingh Shatchakra Upanishad

This is a minor Upanishad which describes the six-faceted Chakra or wheel of worship dedicated to Lord Nrisingh/Narsingh, the half man and half lion incarnation of Lord Vishnu. It has only 8 verses, and it complements the Nrisingh Purvatapini

Upanishad which is Chapter 7 of this volume and which describes only the Sudarshan Chakra.

The present Upanishad derives its name from the fact that the creator Prajapati Brahma had referred to six Chakras or wheels of worship dedicated to Lord Nrisingh. Each of these independent Chakras are in a way an extension or variation of the main Sudarshan Chakra described earlier in the main text of the Purvatapini Upanishad, Canto 5.

-----*****-----

1. Once the Gods went to the Satya Loka (the upper heaven; the abode of the truthful Lord) and asked Lord Prajapati Brahma, the creator—‘Please enlighten us about the Chakra (wheel of worship) dedicated to Lord Nrisingh.’

Prajapati told them about the Chakra of Lord Nrisingh which is as follows—The Chakra of Lord Nrisingh are six in number. [Hence the name of the Upanishad is ‘Shat Chakra = six wheels.’]

The first and the second Chakras have four spokes each; the third Chakra has eight spokes; the fourth and the fifth Chakras have five spokes each; and the eighth Chakra has eight spokes.

Thus, we have these six Nrisingh Chakras (1).

2. When the Gods asked Prajapati about their names, they were told that the first Chakra is called Aa-chakra (i.e. the first primordial wheel of creation), the second Chakra is called Su-chakra (i.e. the auspicious), the third Chakra is called Maha-chakra (i.e. the great wheel), the fourth Chakra is called Rakshan-chakra because it gives protection to the entire creation and its inhabitants, the fifth Chakra is called Duyt-chakra (i.e. the wheel surrounded or girdled by Maya—‘Duyt’ meaning deceit and delusions), and the sixth Chakra is called Asurantak-chakra (because it brings an end to the demons or evil forces of creation).

These are the six Chakras of Lord Nrisingh (2).

3. On being asked what the three ‘Valayas’ or braces that hold these wheels in place are, Prajapati replied that they are called Aantar (inner most), Madhyam (middle) and Vaahya (outer).

In relation with the worship Chakra, these braces are the Beej Mantras (i.e. the seed letters or syllables unique to a particular deity and used to empower the worship instrument).

Out of these, the inner one is called the Beej or seed, the middle is the Nrisingh Gayatri, and the outer Beej is the full form of the Nrisingh Mantra¹ (3).

[Note—¹The inner Beej is like the seed from which the entire tree sprouts forth. It is the Mantra for Pranav—i.e. OM. The importance of OM in this context has been described in Nrisingh Purvatapini Upanishad, Canto 4, verse nos. 2-3. The Nrisingh Gayatri is narrated in Nrisingh Purvatapini Upanishad, Canto 4, verse no. 13. And the full Mantras of Lord Nrisingh are narrated in Nrisingh Purvatapini Upanishad, Canto 4, verse no. 15. This Upanishad is Chapter 7 of the present volume.]

4. The Gods asked—‘How many inner Valayas (braces) are there, and what are their Beej Mantras?’

Prajapati replied that they are six in number. The first Beej is called ‘Naarshingham’; the second Beej is called ‘Maha-Laxmyam’; the third Beej is called

‘Saaraswat’; the fourth Beej is the one that is specific to the worshipper’s deity¹; the fifth Beej is ‘OM’; and the sixth Beej is ‘Krodh Daivat’ (i.e. the Lord of anger, a reference to Lord Rudra, the angry form of Shiva).

These are the Beej Mantras of the inner most Valaya of the six Chakras of Lord Nrisingh (4).

[Note—¹This observation shows that these worship instruments can be used by all people to worship their personal deities. The use of Chakras need not be restricted to worshipping only Lord Nrisingh. This is due to the fact that Upanishads have a very broad view of spiritualism and metaphysics, not being dogmatic, inflexible or rigid in their approach. The main thrust is on treating the supreme transcendental Brahm as a universal Absolute Truth which is not bound or tied down by any specific criterion or dogmas, for it is applicable to all and each situation or aspect of creation. So it does not matter in which form the worshipper worships the Lord, and therefore this worship Chakra is equally applicable to all the deities. Its like the case of modern science whose principles are universally applicable but need to be fine-tuned according to the present application.]

5. The Gods then asked—‘How many middle Valayas (braces) are there, and what are their Beej Mantras?’

Prajapati replied that they are six in number. The first Beej is called ‘Naarsinghaaya’; the second Beej is called ‘Vidmaye’; the third Beej is called ‘Vajra-nakhaaye’; the fourth Beej is called ‘Dhimahi’; the fifth Beej is called ‘Tannha’; and sixth Beej is called ‘Singha Prachodayaat’.

Hence, these Beej Mantras form the middle Valayas of the six Chakras of Lord Nrisingh (5).

6. The Gods then asked—‘How many outer Valayas (braces) are there, and what are their Beej Mantras?’

Prajapati replied that they are also six in number. The first Chakra called Aa-chakra has ‘Atma’ (literally the pure conscious self) as its Valaya and Beej Mantra. The second Chakra called Su-chakra has ‘Priyatma’ (literally the dear Atma) as its Valaya and Beej Mantra. The third Chakra called Maha-chakra has ‘Jyotiratma’ (literally the self-illuminated Atma) as its Valaya and Beej Mantra. The fourth Chakra called Rakshan-chakra has ‘Mayatma’ (literally the Atma that is protected from Maya, or the Atma that is not influenced by Maya) as its Valaya and Beej Mantra. The fifth Chakra called Dyut-chakra has ‘Yogatma’ (literally the Atma that is engrossed in Yoga—meditation and contemplation) as its Valaya and Beej Mantra. And the sixth Chakra called Asuraantak-chakra has ‘Satyatma’ (literally the pure conscious, truthful, eternal, universal Atma) as its Valaya and Beej Mantra.

These are the outer Valayas and the Mantras of the six Chakras of Lord Nrisingh (6).

7. The Gods asked Prajapati the places where Nyas is to be done with these Mantras? [That is, what are the points on the body where these Mantras are used for the purpose of purification and invoking the worshipped deity to take its seat.]

At this, Prajapati replied—‘Nyas with the first one is done on the heart; with the second one on the head; with the third one on the Shikha (the tuft of hair on the top of the skull); the fourth one on all parts of the body; the fifth one on all the other entities (i.e. on all things and people around); and the sixth one in all the directions. [In other words, the divine powers of the Lord and the mystical powers of the Mantras

are invoked for the all round welfare of creation and not selfishly to satisfy one's own interests.]

A wise person who invokes these Mantras and invests his body with the mystical powers of these Chakras by symbolically wearing them on it is able to access all the accompanying mystical and spiritual benefits; he obtains super-human powers that come naturally and automatically with success in harnessing the divine energy and spiritual potentials of these six Chakras.

Lord Nrisingh is pleased on such persons. Such a person obtains the eclectic form of Mukti called Kaivalya. [That is, he obtains complete liberation and deliverance from this body and the world in as much as he does not have to take birth again.]

He is able to have access to all the worlds; he is able to know all about them. All the subjects of these worlds (i.e. all the creature) come under his control and become obedient to him.

These are the six Chakras and the way to do Nyas with them. This process is exceedingly purifying. This process pleases Lord Nrisingh greatly. Such a person is deemed to have knowledge of doing the best of deeds; he is deemed to have knowledge of Brahm.

Lord Nrisingh is not pleased without doing Nyas properly as described here. An aspirant cannot hope to be rewarded for doing auspicious deeds without doing Nyas as stated here, and neither can he expect these rewards without duly worshipping the Lord.

Hence, this is the right and the most holy thing to do; it is most purifying and auspicious thing to do (7).

8. An aspirant who studies and implements this Upanishad is deemed to have studied all the Vedas. Likewise, he is deemed to have done all the Yagyas (fire sacrifices). He is deemed to have taken a holy bath in all the pilgrim sites. He gets all the mystical powers that come with doing worship using all the known Mantras. He is completely purified and made holy. He is empowered and becomes powerful and strong enough to give protection to all. He is able to trounce the fear that comes from lowly evil spirits such ghosts, phantoms, vampires, ogres, hobgoblins and the like (i.e. such frightening spirits do not dare to harm him). He becomes fearless.

This esoteric and most enigmatic knowledge of the six mystical Chakras of Lord Nrisingh should not be divulged to unworthy persons who are unbelievers and have no faith and devotion (8).

Chapter 8

Narad Parivraajak Upanishad/ Narad Parivrajaako-panishad

This is major Upanishad dealing exclusively with the concept of Sanyas—the life of complete serenity, renunciation and dispassion, and one that deals with the truthful monastic way of life. It was enunciated by the great celestial sage Narad, and is revealed in the form of nine ‘Updeshas’ or teachings which we shall call Cantos in this Chapter.

It is a combination of prose and verses composed in the Anushtup Chanda (metre) style.

In Canto 1, the sages Shaunak and others have asked sage Narad about the way by which a person can find freedom and deliverance from the endless and stubborn fetters of this material. Narad, in his answer, starts with giving a detailed account of the four Ashrams and Varnas (phases of a man’s life and the classes in which the society is divided), and their relevant laws and tenets.

In Canto 2 sage Shaunak has asked Narad to give a detailed account of the sanctified process, of the formalities and procedure to be followed in accepting the life of Sanyas.

In Canto 3 sage Narad has asked Brahma, the creator, to describe the virtues of those who are eligible to accept the life and vows of Sanyas, and Brahma answers him in detail. In this process, Brahma explains the concept of ‘Aatur Sanyas’—i.e. about an aspirant who is very eager to accept the rigorous vows of renunciation as a means of liberation, deliverance, emancipation and salvation.

Cantos 4 and 5 explain in detail the due diligent process of accepting Sanyas and its tremendous importance and significance for the spiritual aspirant. The various types of Sanyas and their differences are enumerated in Canto 5.

Canto 6 deals with the eclectic concept of Turiyateet (which is the transcendental state of existence) and how to obtain it. It also highlights the various aspects of daily life of an aspirant who has accepted the vows of Sanyas.

Canto 7 describes the normal laws governing the life of various types of Sanyasis that would help them reach their goal of self-realisation, and provides them with the means by which such self-realised Sanyasis can find deliverance from the cycle of birth and death.

In Canto 8 Brahma extensively explains to Narad the divine Mantra OM pertaining to Pranav or Brahm, the supreme transcendental Being, when the sage asked him about the Mantra which can help an aspirant to attain final Mukti (liberation and deliverance) from this world. It goes on to describe elaborately the meaning of the numerous terms that are used to indicate the various facets of the same universal divine entity known as Brahm that is supreme and transcendental. Here, almost all the esoteric terms used as adjectives or epithets for Brahm have been explained at a single place, and in this respect this Canto is unique in the pantheon of the Upanishads.

And finally Canto 9 marks the culmination of one’s spiritual search when he is enlightened about the supreme transcendental Brahm. Hence, this Canto attempts to narrate about this Brahm. It also describes in the process the signs of a self and Brahm realised ascetic, and how he obtains the ultimate destination for his self. This Canto concludes the most profound of Sanyas Upanishads.

This Upanishad appears to be highly repetitive as the same thing is being said again and again. One plausible reason is that sage Narad might have approached Brahma on different occasions, and each time asked the same question for clarification, or in the hope that some new thing would be taught to him. Each such occasion was recorded as a separate Updesh (teaching) or Canto. Another reason may be that the conversation between Narad and Brahma was recorded for posterity by different sages who were separated from each other by vast geographical distances. One did not know what the other recorded or taught his own line of disciples. When sage Veda Vyas, the compiler of the Vedas and the Upanishads, sat down to compile the Upanishads, he decided to collect all such versions and put them under one roof, giving each version one distinct number. Hence, since all these versions appear to be saying the same thing with slight variations in language and tenor, and they all relate to the same topic of Sanyas taught by the same teacher Brahma to the same disciple Narad, they were collectively called 'Narad Parivrajak Upanishad'. The objective was to present a comprehensive text on the subject of the renunciate way of life.

-----*****-----

-----Shanti Paath-----

Please see appendix no. 1 for the English of this Shanti Paath.

Updesh (teaching)/Canto 1

1. Once sage Narad¹, who is regarded as the most exalted in the fraternity of Parivrajaks (also known as Sanyasis; those who have taken the strict vow of renunciation and lead a life of total dispassion and detachment from everything and everyone in this material world; those who lead a serene life of a reclusive monk or hermit), went to all the holy pilgrim sites during his constant travel. All these places became more holy and purer as a result of his stepping foot on them.

This visit helped the godly sage to clean all impurities that might have tainted his mind, and consequentially obtained complete peace and tranquillity of the mind by having a divine sight of these holy places.

The sage was very rested and tranquil; he had all the sense organs completely under control and epitomised self restraint; he was completely renounced and dispassionate towards all. He had no animosity or malice towards anyone. Being in such a state of mind, he was absorbed in self contemplation and constantly meditating upon the truth about the 'self'.

During the course of his travels he came to a place called Naimisharanya. This holy pilgrim site is especially endowed with auspiciousness and the ability to bestow exceptional bliss and happiness when one lives a duly restrained and religious life here. Numerous sages, seers, hermits and ascetics used to live there.

The divine sage Narad had a holy view of this place where the soothing and soulful sound of the Indian lute, a sound that created an atmosphere of auspiciousness and spirituality filled with renunciation and detachment, wafted in the air as various sages and others sang hymns and offered sacrifices with Vedic Mantras using this musical instrument. Narad joined the celebratory atmosphere and religious fervour, deriving immense comfort and spiritual pleasure by listening to divine songs sung by others and himself singing the glories of the Lord to the accompaniment of the sweet

music of the lute. He did not talk of any worldly issues. The entire place and its surroundings, consisting of both the movable as well as the immovable entities, resonated with his melodious singing, and all the creatures remained submerged in spiritual ecstasy and a sense of immense exhilaration arising from it. It was a Utopian situation of an eclectic spiritual dimension.

Narad's divine songs, soaked in the nectar of devotion and submission to the supreme Lord, attracted all creatures alike, whether they were humans, animals, gods, Kinnars (a higher form of semi-god), Gandharvas (musicians of the gods) or Apsaras (celestial dancers in the court of Indra, the king of gods). They danced and swayed in blissful happiness and ecstasy of the highest order.

At that time, a special religious festival of a sacrifice extending for twelve long years was being organised there (and this explained the celebrations and festive environment). Great Gods, renowned sages and seers as well as the divine sages Shaunak and others had gathered on the occasion to participate. When they saw the great sage Narad amidst them they felt very glad and extended a very warm and heartiest welcome to him by duly paying their obeisance to him and honouring him. They collectively bowed at his august feet and gave him a high seat of honour.

All the assembled sages and seers took their respective seats, and when all were duly seated the great sage Shaunak² joined them to ask Narad—‘Oh great sage! What is the way to find freedom and deliverance from the fetters pertaining to this world? How can one find emancipation and salvation? Please be kind to enlighten us about it.’ (1).

[Note—¹Sage *Narad*—The celestial sage Narad is said to be a manifestation of the Supreme Being's Mana (mind and its thoughts, intentions, hopes, desires and wishes, as well as the heart and its emotions and sentiments). The Supreme Being implements his wishes and expresses his intentions and wishes by making Narad his spokesperson. Purans list uncountable instances when Narad has approached people—both the good and righteous as well as the demonic and unrighteous ones—to tell them the path best suited to them, and the wise ones treated this advise as the Lord's wish while the unwise ones still benefited from it because Narad's intention was always to turn a living being away from his sinful ways and lead him towards the good.

Since he is a personified Mana, he is as fickle, unstable and transient as the Mana—never staying at one place for more than a fleeting moment, always roaming here and there in the entire creation, having nothing to stop his path as he could go anywhere he wished. And the remarkable thing is that he was never unwelcome anywhere—even the demons welcomed him with the same respect as did the Gods.

It is believed that he is born in each Kalpa to carry out the wishes of the Supreme Being. [1 Kalpa is equivalent to 4.32 billion human years.] He was a Gandharva (a semi-God who is a celestial musician) named Upbarhan in the previous Kalpa. He was physically very charming and an expert musician. Once he showed his amorous intentions towards Urvashi, a celestial dancer, in the presence of Brahma the creator where he was supposed to show exemplary restraint, and this overt show of lust resulted in his being cursed by Brahma that he would become fallen and take birth in the mortal world as a Shudra (a low caste). So, he was born from a maid servant of low caste working as a devoted servant of a learned Brahmin. Under the constant companion of this great Brahmin, Narad developed noble and auspicious virtues in him even though he was a mere child of five years. He was very modest, devoted, pious, noble hearted and diligent.

Since he had the Lord's genes in him, his inclinations were more inclined towards the Spirit than the worldly charms of material sense objects which he detested from childhood. As luck would have it, once some wondering mendicants came to spend the four-month period of the rainy season in the hermitage of this Brahmin. Narad

served them with great devotion. Impressed by his service and having some inner vision of his high spiritual stature and the spark of divinity that was lying hidden in him waiting for an opportune moment to leap up and shine through, they blessed him, taught him meditation and contemplation, besides initiating the child into the path of the Lord.

Thus, the dormant fire of renunciation and spiritual awareness was immediately ignited in Narad's little heart and he wished to take to Sanyas (a renunciate's life marked by constant wandering as a mendicant in search of the supreme bliss and Truth), but he did not wish to hurt his mother's emotions. But the Lord had other plans for him, and soon his wish was fulfilled when his loving mother died of snake bite while milking a cow. Instead of grieving at such a loss in human terms, the child Narad felt happy as if the last fetter was broken and he was liberated from worldly obligations.

He immediately headed north towards the mighty Himalaya Mountains to do severe Tapa (penance and austerity) to attain access to the Supreme Being. The little one walked on and on, and finally he was so tired and exhausted that when he saw a cool lake he drank water, ate fruits that he found there, and sat under the shadow of a tree and became lost in meditation. Lord Vishnu revealed himself in his four-arm form in his heart, but Narad was so thrilled and excited with this divine vision that he wished to see the Lord in practical terms with his physical eyes rather than the subtle eyes while he was in deep meditation. But as soon as he opened the eyes, the Lord vanished. Most sorry and overwhelmed with this loss, the child began to cry bitterly. Then a cosmic formless reverberating voice said—'Oh son! Your penance is accepted, and I do love you. Though I bless you with an eternal life and that your memory of me would never be erased, but you would not be able to see me with physical eyes in this world. So go back to the world and carry out my divine mandate for me. Become my messenger and go preach the path of my devotion and holy name to this world so that other unfortunate creatures also can get liberation and deliverance from the fetters in which they have bound themselves with no one to show them an easy and practical way out of their predicaments. Go and preach my message to such people in every corner of the earth; go and preach my devotion and let them have faith in my holy name. Your salvation would come naturally and automatically to you as an unasked reward.'

Narad turned back with this divine mandate of the Lord to be carried out just like the great Apostles of Lord Jesus Christ had went, on the Lord's instructions, to spread his message to the people on this earth. Henceforth, he wandered in the entire creation like a mendicant, with an Indian lute upon which he sang the Lord's glories and his divine name, spreading the divine message of the Lord's mercy, compassion, benevolence and love everywhere, attempting to turn everyone towards the Lord and away from this sinful and mortal world so that each individual creature could get his spiritual liberation and deliverance. Such are the ways of great and holy saints that instead of being selfish to seek his own liberation and deliverance from the Lord as the grant of a boon and letting the rest of the world go to hell, Narad chose to sacrifice his own life, liberation and deliverance at the altar of larger good of creation and to fulfill the wish of the Lord. Of course there is another twist to this tale—the Lord does not select everyone to carry on his own divine agenda, and a soul who the Lord designates for this purpose is indeed the most favoured and lucky one—because the Emperor chooses only those upon whom he has utmost confidence to carry out his personal task. It is just like Jesus choosing his disciples and ordaining them the task of spreading his glorious Gospel of love and salvation.

Therefore, Narad, the apostle of the Supreme Being, is the most loved disciple of the Lord, and it is evidenced by the fact that he is the only saint who has unrestricted access to the abode of the Trinity Gods (Lord Vishnu the sustainer and protector of creation, Brahma the creator and Shiva the concluder of this creation) besides every nook and corner of creation without hindrance and even without seeking any previous

permission and appointment from anyone, be it a God or a Demon or anybody else. Narad's visit was always for the host's long term good, so he was always welcome and revered.

When the time came and the age of the physical body ended, he left the mortal coil like a serpent leaves its cuticle and went to heaven to sing the Lord's holy and divine name in the presence of Brahma, the old patriarch of creation. At the end of the Kalpa, at the time of Doomsday, he merged and became one with Brahma, the creator.

When the new cycle of creation came into being, he was born again from the Mana (mind) of Brahma the creator after the Sankadi sages were born. That is why, in the present Kalpa, Narad is called the 'Manas Putra' of Brahma, i.e. the son born out of Brahma's mental powers or his wishes. With this heritage and gene running in his blood, it is natural that he is highly respected and regarded as one of the greatest devotees of Lord Vishnu who is the Supreme Being personified. It is from the navel of Lord Vishnu that Brahma, the creator of the visible world, was born atop a divine Lotus that emerged from it while he was reclining on the bed made of the coiled body of the legendary serpent named Seshnath who floated on the surface of the celestial ocean of milk called Kshirsagar.

Narad preached renunciation of this material world and an extreme sense of faith in and complete devotion for Lord Hari (Narayan, Vishnu, the Supreme Being). But this was against the process of creation, because if everyone followed the path preached by Narad and renounced the material world then the process of propagation of the world and its inhabitant creatures along with its development would come to a naught. So, when Narad preached renunciation and detachment from this material world of sense objects that was mortal, transient and never a giver of peace and happiness to the ten thousand mental sons who were created by Daksha Prajapati (the first male from whom the rest of the human race was born and who was assigned the task by Brahma to propagate creation) in order to propagate this human race, Narad obviously annoyed him. These sons were preached by Narad and they all became mendicants, renouncing their attachment with this life and all charms of the material world along with the desire to enjoy it, gratify their sense organs and remain entangled in affairs of this world. Daksha Prajapati was exasperated and he created another set of ten thousand sons. But when Narad again played spoil-sport, Daksha cursed him that Narad would have to remain on the move always and he would not be able to stay at one place for more than two 'Gharis'. [1 Ghari = 24 minutes. In practice the term means a very short period of time; a fleeting moment as small as batting an eyelid.] As a result of this curse, Narad became an ever-wandering mendicant. But this suited the divine mandate of the Lord—for now Narad was forced to keep on the move and reach newer corners of the worldly and celestial realm to preach the Lord's message amongst the mortal creatures on earth and the Gods and Spirits in the heaven.

It is believed that Narad is immortal and is symbolic of the stupendous powers of a man's mind. The mind is ever-wandering like Narad, and the subtle message in the entire lore is that one should tame this restless mind and train it to turn away from this mortal engrossing material world and instead turn towards the Lord for finding permanent liberation and deliverance from this world. A wise mind would teach (preach) the aspirant about the futility of pursuing this artificial world, and instead seek ways of finding the Truth that gives eternity and brings to an end the endless litany of miseries and horrors, perplexities and confusions, restlessness and agitations that are invariably associated with un-truth, delusions and ignorance.

Narad was the most erudite and scholarly devotee of the Lord. No other sage or saint could match him in his scholarly acumen and profundity of wisdom (ref. Chandogya Upanishad, Canto 7, section 1, verse no. 2). Narad is also credited with the composition of the great Sutra (formula or key) called 'Narad Bhakti Sutra' which defines the eclectic principles and characteristics of the spiritual practice called

Bhakti which is to have a profound and exemplary degree of devotion for and surrender to the Supreme Being. Narad himself epitomizes Bhakti at its most refined and developed form.

²Sage *Shaunak*—A brief life-sketch of Sage Shaunak is given in Mundak Upanishad, Mundak 1, section 1, verse no. 3 as a note. It is Chapter 2 of this volume.]

2. The world famous sage Narad replied—‘If a man is born in a high and noble clan but still has not been formally initiated by the investiture ceremony of the sacred thread (called *Upnayan*), then first this must be done. All the forty-four consecration ceremonies and purification rites should be properly done. Then he should approach a Guru (a learned teacher) in his hermitage as his disciple or student.

There, he should please the Guru with his devoted and selfless service on the one hand, and diligently start a systemic study of the branch of the Vedas assigned to him. He should then progress in his studies, and gradually study all the branches and all the scriptures while serving the Guru for twelve years. During this time he should strictly observe the tenets of *Brahmacharya*. [This refers to a life of observation of strict self-discipline and self-control. It entails strict control of all the sense organs and their natural impulses. This ensures that the student is not only able to concentrate his mind and energy on his studies but also to preserve the vital energy of the body and the mind, as well as inculcate noble virtues during these formative years of his life.]

After this, he should lead a *Grishastha*’s (householder’s) life for the next twenty-five years, followed by another twenty-five years as a *Vaanprastha*. [The *Vaanprastha* is a person who leaves the house and literally heads for the forest, but in practice it entails visiting all the pilgrim sites, remaining aloof from worldly attachments, distancing oneself from all household affairs, and spending time in peace, study and contemplation. This is a preparatory stage for the fourth stage of *Sanyas* which is life of complete severance of all worldly ties.]

Wise people assert that *Brahmacharya Ashram* is of four types, *Grishastha Ashram* of six types, and *Vaanprastha Ashram* of four types. [The word ‘*Ashram*’ refers to a phase or period of life.] One should be loyal to his *Ashram*, i.e. he should faithfully follow the codes of conduct, do all the required deeds diligently and practice the sanctified way of life as designated for each of these three phases in his life.

After having led a fruitful and auspicious life according to traditional norms and sanctified by the scriptures, he should rise above from this world of material objects, i.e. he should become detached from and dispassionate towards this material world of sense objects, its accompanying pleasures and comforts, its charms and temptations, its joys and sufferings, and its entanglements and delusions. He should abandon all sorts of desires, hopes and expectations from his conscience, and free his mind, speech, deeds and body from them. He should completely overcome all sorts of *Vasanas*, or passions, yearnings, greed and wants. [That is, he must not allow his mind to harbour any desire or hope, nor expect anything from the body and the world. He should not spend his precious energy and time in pursuing this material world, and gratification of the self and the body. He should not expect that his body would give him support in his old days, or help him enjoy the pleasures and comforts of the world, and neither should he employ the body in this pursuit. He should not do deeds with expectation of a reward or gain something or to fulfil some aspirations, but only do them selflessly as an ordained duty done to serve the Lord and his extended form in the shape of this world or creation. He should use his speech not to gain some benefit from it, such as gaining name and fame as a scholar or wise person, but to help

others and to serve the noble cause of the Lord. He should not harbour any passions and worldly desires whatsoever because they lead to getting tied down in shackles.]

He should forsake all ill-wills and animosities with everyone, and exercise the greatest of self-control over his sense organs. Having thus prepared himself properly and wisely, he should enter the next and final stage of life called the Sanyas Ashram. [This is a life of total renunciation of all involvement with this world. It entails complete detachment and severance of ties with the world.]

Having taken to this auspicious path of Sanyas, an aspirant should spend his precious time in self contemplation and meditating upon the Absolute Truth about the pure conscious eternal and imperishable 'self'. A person who leaves his mortal body while thus remaining engrossed in this constant contemplation and meditation is able to attain Mukti. That is, he obtains liberation and deliverance from the mortal gross body as well as from this entrapping and deluding world of transmigration permanently.

Verily, this is what this Upanishad affirms. This is its great teaching (2).

-----*****-----

Updesh (teaching)/Canto 2

1. After that, once again sage Shaunak and others requested the divine sage Narad—'Oh Lord! Please tell us the full detail of what constitutes the concept of Sanyas (i.e. please elaborate on a life of total and exemplary renunciation and dispassion when one has no attachment for anything in this world).'

Sage Narad looked at them with affection and benevolence, and began his preaching—'Oh great sages! It would be proper to hear about Sanyas in a comprehensive way from Brahma, the great grandfather of creation.'

So the exalted sages waited for the completion of the sacrifice, and then they accompanied sage Narad to the divine abode of Brahma in the heaven. There, meditating upon the supreme Brahm (the Supreme Being) and remembering the eclectic glories of the Lord in their hearts, the congregation of sages bowed before Brahma the creator most reverentially and prayed. Pleased, Brahma requested them to be appropriately seated.

Sage Narad took the initiative and humbly submitted before Brahma—'Oh Brahma! You are the Guru (teacher, guide and advisor) as well as a father for all of us. You are omniscient and all-knowing; you are well-versed in all the Vidyas (composite body of knowledge) that exist in this creation. So be kind to reveal the secret of something which we are very eager to know. There is no one in this creation who is better qualified and more competent than you who can satisfy our quest.

If you are ready to show your benevolence and grace upon us then please first tell us about the truthful identity, form and nature of a Parivrajak (a spiritual aspirant who has taken the vows of Sanyas, and is very sincere and diligent about it) along with the ethics, codes of conduct and other laws and regulations that govern this form of exalted life.'

When Narad made this request, Brahma closed his eyes for two 'Gharis' (literally a period of 2 x 24 minutes = 48 minutes because 1 Ghari equals 24 minutes, but here implying 'for some time') and began meditating to search for an appropriate answer that can show the path or way which would help a creature to find liberation and deliverance from the uncountable miseries, pains and torments associated with

this mortal world of an endless cycle of birth and death, a world which traps a creature in its vice-like grip.

He replied—‘Oh Narad! In some ancient time, the Viraat Purush, the all-pervading cosmic form of the Supreme Being who is the most sublime, divine, enigmatic and exalted Lord of creation, who is honoured and adored by and paid obeisance to in the ‘Purush Sukta’ (which is hymn of the Veda dedicated to the Viraat Purush) as well as the Upanishads, had preached some divine knowledge to me at the beginning of creation. I shall now divulge or reveal that most sublime and divine secret knowledge before you all.

The identity, form, nature and way of life of a Parivrajak are most mysterious, exquisite and enigmatic, besides being unique, sublime and honourable. Listen about it with great attention. If a child is born in a high clan and is very obedient towards his parents, but has not undergone the formal investiture ceremony in which he is given the sacred thread and initiated (i.e. baptised) formally, then the first thing to do or the first step to implement is to formally initiate him by the ceremony of the sacred thread.

Then the boy should leave his parental home and go to reside with a wise and learned Guru (teacher) in the latter’s Ashram (hermitage). The teacher must be wise, erudite and competent besides having great faith in, devotion for and knowledge of the Vedic scriptures. The aspirant should humbly pray to the Guru and submit himself before him (or surrender himself to him in the search of true knowledge). [That is, the disciple should place his all-round well being and the future prospects of his life into the able hands of his Guru like one relies upon one’s parents.]

The disciple must strictly follow the tenets as prescribed for a Brahmachari (a celibate person who shows exemplary self-restraint over his sense organs) for the next twelve years while serving the Guru selflessly and faithfully as well as devoting his entire energy, time and attention in studying all the scriptures and gaining knowledge. [This is the first phase of life.]

At the end of this period and after having acquired all knowledge to the best of his ability (i.e. after having completed his education), he should take permission from his Guru and marry an appropriate girl. Thereafter he should live life as a householder for the next twenty-five years. During this phase of life he should follow tradition to produce sons to carry forward his family line. [This is the second phase of life.]

At the end of this period he should step on the next (third) phase of life as a Vaanprastha (which is the beginning of life of renunciation and detachment; refer Canto 1, verse no. 2). This phase should ideally last for the next twenty-five years. During this period he should take a purifying bath three times of the day—at dawn, noon and twilight hours, and eat once a day—before sunset. He is expected to forsake well-tread paths passing through villages and towns known to him, and instead roam incognito and go that way where no one can recognise him. He should roam alone in the forest. [Actually the word Vaanprastha means someone who heads for the forest. But it should not be taken too literally as it is not practical for a modern man to go to the forest. The intention is to go out of the house unrecognised and move alone freely in the country, visiting pilgrim sites and other holy places that help the middle-aged man to live a carefree life of no worries and encumbrances. This is a virtual vacation for him that helps to rejuvenate his soul and body.]

He should eat coarse meals prepared from whatever grain of rice he can pick up from un-cultivated fields. [Such rice is grown naturally near ponds or where the field is submerged in water.] He should abstain from all the charms of the visible

world of material sense objects as well as all forms of enchanting sounds (such as music, songs) or pleasing words (such as praises that stoke his ego).

Having fully observed all the ordained forty traditional obligatory purification rites, called the various ‘Sanskars’, during his life time, he should now calm down his Chitta (sub-conscious) and ensure its uniform purity and holiness. He should abandon all sorts of hopes, desires, aspirations and expectations as well as all forms of jealousy, malice, animosity and ill-will towards all. On the contrary, he should inculcate the four-fold noble virtues for his spiritual welfare, called the ‘Saadhan Chastusthaaya’. [There are said to be four Saadhans of Vedanta, and they are called the ‘Saadhan Chastusthaaya’. These four spiritual disciplines of Vedanta are the indispensable tools that help the aspirant to reach his spiritual objective and fully benefit from the teaching of Vedanta; without them it is not possible for one to truly understand or implement the teachings of Vedanta. These four Saadhans or means for obtaining success in Vedanta are the following—(i) ‘Vivek’ or having the power to discriminate between the right and the wrong; (ii) ‘Vairagya’ or having a high degree of renunciation; (iii) ‘Sham-dishtak’ or having a uniform view of things in this world leading to equanimity, peace, quietude and serenity; and (iv) ‘Mumukshu’ or having a strong desire for Moksha, which is final liberation and deliverance of the soul.]

When the aspirant has fulfilled these criterions, he finally becomes eligible to accept the vows of Sanyas (1).

-----*****-----

Updesh (teaching)/Canto 3

1. The celestial sage Narad asked Brahma once again—‘Lord! Who can take the vows of Sanyas and what are the eligible criteria for it?’

Brahma answered in detail as follows—‘Let us first explain who is eligible for taking Sanyas, and then we shall throw light on the sanctified due process of doing so. Listen carefully.

The following persons are not eligible to take to the path of formal Sanyas inspite of their being detached from this world and having renounced it—an impotent person, a fallen or lowly person (who has not lived up to the standard of life expected of him as a Brahmachari (i.e. while he was a student) or as a Grihastha (i.e. while he was a householder), a physically deformed person or one who has some part of the body severed, a person who is excessively lustful, passionate or promiscuous, a person who is either deaf or dumb, a person who is still a child or very young, a person who is crooked, deceitful and an impostor, a person who indulges in evil conspiracies, is scheming and cunning, a person who is more interested in wearing external signs and robes (to show-off his religious inclinations in the hope of getting false praise and gathering admirers around him) rather than sincerely inculcating the sublime and noble virtues of Sanyas internally, a person who is still in the third phase of life as a Vaanprastha (as described in Canto 2), a person who is a devotee of Lord Shiva, a person who is a paid teacher and accepts money or other benefits for imparting knowledge, a person who suffers from leprosy or other congenital or contagious diseases, and a person who does not perform the fire sacrifice or does not worship the sacred fire. [Refer verse nos. 3-4 below; it’s almost a repetition of these restrictions.]

Even if they have adopted the path of Sanyas, they still are not eligible to accept the teaching of the Maha Vakyas or the great sayings of the Vedas.

Only those who had internally inculcated the sublime and grand virtues of Sanyas even while they were leading the earlier phases as a Brahmachari (a student in the hermitage of a teacher) or as a Grihastha (a householder) are indeed the ones who are actually eligible to accept the path of Sanyas. [The implication is obvious here. The eclectic and grand virtues of renunciation and detachment from this material world and its false and ensnaring charms are qualities that are cultivated internally, and mere external show of being a Sanyasi (a noun used for a person who has taken the stern vows of Sanyas or renunciation and detachment from anything related with this world) would lead a man nowhere. Rather, it would only ruin him and cause him ridicule and pain which he could have well avoided if he did not take the vows of Sanyas at all. So, it boils down to the fact that even while a man may lead a normal life in this world, going about his normal life in a routine manner, he may still be highly spiritually evolved and is as good as a full-fledged and honest Sanyasi when compared to another man who may have formally accepted the vows of Sanyas, even sport some external signs of being a Sanyasi, but his mind, his sub-conscious and his heart are entangled in the world which he pretends to leave behind, or he is overcome with some physical discomfort due to some kind of deformity of the body which prevents him from finding peace and the ability to meditate and contemplate. Such a man should better not take Sanyas at all, for not only is he cheating himself and the rest of the world but is also demeaning and insulting the august institution of Sanyas.] (1).

2. The scriptures assert that a person who is not afraid of anything (including death and any kind of harm) himself, nor causes fear or dread to others in any way whatsoever is indeed an honest and true Parivrajak (Sanyasi) (2).

3-4. None of the following categories of people are eligible to take the holy vows of Sanyas—a Shanda (an impotent person), a Vikala (a physically deformed person or one who has some part of the body severed), an Andha (a blind person), a Baalak (an immature child), a Paataki (an evil and sinful person), a Patit (a fallen or lowly person who has not lived up to the standard of life expected of him as a Brahmachari—i.e. while he was a student, or as a Grihastha—i.e. while he was a householder), a Pardwari (a person who is excessively lustful, passionate or promiscuous; a person who eyes other women), a Vaikhaanas (a sage or hermit, because such a person is deemed to be already a wise and enlightened person who has renounced the illusionary charms of the world and has sufficiently progressed on the path of spiritualism), a Har-dwij (a person who is a devotee of Lord Shiva, because such persons are again expected to have already renounced the false world), a Chakri (person who is deceitful and an impostor, a person who indulges in evil conspiracies, is scheming and cunning), a Lingi (a person who is more interested in wearing external signs and robes to show-off his religious inclinations in the hope of false praise and gathering admirers around him rather than sincerely inculcating the sublime and noble virtues of Sanyas internally), a Paakhandi (a person who is crooked, a hypocrite, pretentious and deceptive), a Shipivishto (a person who suffers from leprosy or some other congenital or contagious diseases), an Anagnik (a person who does not perform the fire sacrifice or does not worship the sacred fire), a Dwitivaaren (a person who has taken the vows of Sanyas for two or three times previously, but each time got distracted and abandoned its vows), and a Brhit-Adhyaapak (a person who is a paid teacher and accepts money or other benefits for imparting knowledge) (3-4).

5. [Narad asked—] ‘What is the appropriate time for taking the vows of (or being initiated as an) ‘Aatur Sanyas’?’ [The word ‘Aatur’ means one who is very eager, anxious and sincere in obtaining something. Therefore, ‘Aatur Sanyas’ refers to accepting the vows of Sanyas when the person is very eager to receive its divine benefits on an emergency basis when there is no time for long formalities, or when he can’t resist his internal urge to become a Sanyasi, i.e. a person who has accepted the vows of Sanyas, inspite of his not reaching the fourth phase of life when ordinarily one should take the vows of Sanyas. This would be clear in the following paragraphs.]

[Brahma replied—] ‘The most appropriate time for taking to ‘Aatur Sanyas’ is when the man is about to die. Aside of this, there is no other time which is proper for accepting Aatur Sanyas. In fact, if one takes Aatur Sanyas at the proper time (which can be any time in life when he has developed a profound degree of renunciation and enlightenment), then it can provide the aspirant or seeker with Mukti (liberation and deliverance; emancipation and salvation) (5).

[Note—In the context of this verse, refer also to verse nos. 10, 12-13, and 70 below of this Canto.]

6. Even in such a situation (such as when death is near), a wise man should accept Aatur Sanyas with proper Mantras (i.e. he should utter the holy Mantras while being initiated as an Aatur Sanyasi; he must not rush through it) (6).

7. There is virtually no difference between the due diligent process of accepting Aatur Sanyas and normal Sanyas. All the Mantras are related to certain Karma or deed, and all the Karmas are empowered, energised and sanctified by relevant Mantras. [That is, if the Aatur Sanyas is to be made effective as an instrument for giving Mukti or liberation and deliverance, then it must be empowered and energised and authorised by relevant Mantra. To illustrate, if we wish to light a particular electric bulb then we must click on the correct switch.] (7).

8. In fact, no auspicious religious Karma (deed; action) would be effective and sanctified if it is not empowered and energised by the relevant Mantra. Hence, one should not be in a tearing hurry to accept Aatur Sanyas by overlooking the necessity for invoking of the relevant Mantra.

Any Karma done without invoking proper Mantra is equivalent to, and as worthless and ineffective as offering of oblations to a dead fire when it has already calmed down to form ash. [During fire sacrifices, offerings are made to the sacred fire while it is burning brilliantly, and not when it has run its course and cooled down to leave smouldering charcoal or reduced to an ash in the fire pit.] (8).

9. Oh sage! The formal process of accepting Aatur Sanyas is deemed to be complete if one follows the due process as prescribed in the scriptures even briefly. [This is a special concession meant to save time because, as is obvious, death is near at hand and there is no time for elaborate formalities.]

Hence, it is sufficient to repeat the necessary Mantras in order to accept Aatur Sanyas (instead of undergoing the rituals and other formalities ordained for all other types of Sanyas as would be detailed in this Upanishad later on) (9).

10. If a person, who has completed all the fire sacrifices required to be done by him as a householder, has gone to a foreign land and develops Vairagya (renunciation and

detachment) there, then he can take the vows of Sanyas by doing the rite of Prajapatya Ishthi¹ in any water body available and accept Sanyas there. [Refer verse no. 77 in this context.] (10).

[Note—¹The *Prajapatya Ishthi* is a special fire sacrifice offered to the creator Brahma and done with a specific desire, which in this case is the desire for obtaining Mukti and Moksha—liberation and deliverance as well as emancipation and salvation. Usually the word ‘Prajapatya’ refers to the sacrifice done by a householder with the desire of begetting a son, or for an increase in the healthy population of the territory under his domain as desired by kings and emperors. Refer verse no. 70.]

11. This Prajaptya sacrifice is either done mentally, or by pronouncing the relevant Mantras, or by following the detailed process as prescribed in the Vedas and involving elaborate rituals and fire sacrifice. [These options are given to the aspirant considering the fact that he is away from home and all the necessary facilities might not be available to him in a foreign land.]

A wise person should choose the option best suited to his present circumstances and follow the instructions diligently to take Sanyas, for otherwise he is falls from grace and is deemed to have violated the auspicious and sanctioned path (11).

[Note—The most important thing to note here is that the sacrifice can be done in a symbolic manner ‘mentally’. In other words, any fire sacrifice, or for that matter any endeavour, is successful only when the mind is committed to it and wholly interested in it. Otherwise, the mind would cause immense amount of distraction, and even if the physical body remains involved in doing the sacrifice, the desired fruit would not be obtained. Doing a fire sacrifice with the mind somewhere else is as good as not doing it at all. The word ‘sacrifice’ itself implies a great deal of commitment, total and honest dedication and faith, gladly undertaking sufferance and observing due diligence on the part of the aspirant in order to achieve success in some noble cause. This can happen only with the involvement of the mind. If the mind is not fully convinced on the utility of taking Sanyas, if it does not have faith and devotion in this path, if it is not fully committed to reaching the spiritual goal of liberation, deliverance, emancipation and salvation come what may, if it is fickle and undecided—then obviously the man is bound to fail in Sanyas. This fact is asserted in the next verse.]

12. It is only when one develops sincere and steady dispassion and detachment from all objects of this material world, it is only when renunciation sprouts spontaneously in the inner self of an aspirant that he should desire to take the vows of Sanyas. Otherwise he would fall from the auspicious path, become disillusioned and disgraced (12).

[Note—If one decides to renounce the world in a fit of emotions such as upon the death of someone very dear to him or loss of some property, then such fleeting sense of renunciation would pass off with time and sooner or later the man would start yearning for his lost assets and comforts of the world to which he was so accustomed. Though it might happen that out of fear or dread of being castigated in society he might remain a Sanyasi outwardly by wearing ochre clothes, but his mind and heart would be attached to this world and the charms he left behind. He would be frustrated and constantly filled with regret at having taken Sanyas in the first place, and such a situation is obviously counter-productive for his spiritual well-being. He would fall an easy prey to temptations, and would be neither here nor there. On the one hand he would have missed out on the opportunity of fulfilling his obligations to the family and society, and on the other hand the very purpose and intent of taking Sanyas,

which is to find freedom from this world, would be defeated as his mind and heart would still be locked in them. Refer verse no. 77 of this Canto 3 also in this context.]

13. Only a person who has developed deep, sincere, steadfast and honest sense of renunciation and detachment should take the path of Sanyas. A person who has the slightest trace of attachments to this world and family should best avoid it, and instead live in the house.

A sinful and fallen Brahmin who accepts Sanyas inspite of having latent attractions for and attachments to this world and its material charms surely goes to hell. [That is, he suffers a lot and is punished for his deceit.] (13).

14. Only a Brahmin (or any other learned person) who has his tongue (i.e. taste and speech), the genital organs (i.e. sexual desires), the stomach (i.e. yearning for food) and limbs (i.e. hands and legs) under strict control, and one who has not married¹—only such a person is eligible to take Sanyas (14).

[Note—¹This restriction is practical in nature. A man with a wife and family has countless obligations to fulfill. It is not possible for him to renounce the world altogether, for even if he does so he would be going against the laws of Dharma which extol a man to lead a life fruitfully, honour all his obligations and fulfill all his commitments dutifully. Making his family members suffer by taking to Sanyas while they are not well provided for is a sin in itself, and Sanyas cannot be successful with any guilt heavy on one's mind.]

15. Those who are wise and erudite understand the futility of this delusory world of material sense objects which is hollow and without any pith. They desire to obtain the real essence and be acquainted with the truth of existence. Thus they accept Sanyas while still unmarried and take refuge in the eclectic way of life marked by exemplary renunciation and dispassion in order to reach their true goal in life (which is finding the 'truth' and liberation from the snare of falsehoods) (15).

16. Desire to do deeds and getting involved in them (and expecting results from doing such deeds) is a sign of one's natural attractions for the world and a desire to remain involved in it (because the material world necessitates the doing of deeds if one were to live in it), while having a natural and inborn virtue of wisdom and enlightenment (which tells the person of the falsehood of this world and the futility of pursuing it by getting involved in doing deeds in order to attain even a rudimentary form of success in this world, and instead inspires him to search for the real 'truth' and seek the path that would lead to his final liberation and deliverance from the vicious cycle of birth and death) is a sign of natural Sanyas (or natural renunciation, dispassion and detachment). [This is because when a man realises the falsehood of this material world and therefore the futility of pursuing it, when he understands that the pleasures and comforts that he gets from this world are temporary and transient by nature, when he realises that the true 'self' of his is not the gross body that remains involved in this world but the pure consciousness that has got nothing to do with this gross body or the equally gross world, and that true liberation and deliverance as well as true happiness and contentedness is to inculcate these virtues internally rather than searching for them in the external material world of sense objects—it is then that he develops sincere renunciation and detachment from all things worldly. When this happens, his commitment to Sanyas would be honest and true. Obviously then, he would be successful in the path of Sanyas.]

So a wise aspirant should aim at acquiring the highest level of Gyan (wisdom, erudition and enlightenment) if he wishes to enter the path of Sanyas (16).

17. [The following verse nos. 17-27 describe who is eligible to take the vows of Sanyas and become a Sanyasi—i.e. these verses outline the requirements needed by one one to successfully take to the auspicious Sanyas way of life, to be successful in keeping the stern vows of Sanyas, and to successfully attain one's spiritual objective for which one takes to the Sanyas way of life.]

When an aspirant has become realised and enlightened in a comprehensive manner about the fundamental essence of the eternal and truthful supreme transcendental Brahm, he should then abandon his Shikha (tuft of hair worn on the top of the head) and Yagyopavit (the sacred thread), and instead accept only one Danda (the ascetic's rod or sceptre or staff) (17).

[Note—Refer verse nos. 79, 80-82. The Shikha and the Yagyopavit are worn by all Hindus who have been formally baptised. But when one takes to Sanyas, he is expected to leave these signs of his earlier life and take up the ascetic's staff. This ascetic's staff/rod has great symbolic importance. For once, it is an indication of his superior authority over all others in the world just like a king is distinguished by his sceptre which is a sign of his authority, and a teacher holds his stick to indicate that he is in charge of his students whom he treats as his wards. Second, it is a constant reminder for him that he has renounced the world and has vowed to firmly hold on to one single 'truth' known as Brahm who accompanies him wherever he goes like his staff or rod that accompanies him everywhere. This helps him to be loyal to the path of Sanyas, and to Brahm whom he treats as the only Lord and the ultimate goal of his spiritual practices.]

18. Only those aspirants who have the greatest of faith and belief in as well as devotion for the supreme Lord, and have no interest or attractions for anything other than the Lord, and an aspirant who is free from all forms of desires (such as desire to have sons—called 'Putreshna', desire for wealth and prosperity—called 'Vitteshna', and desire for fame and enjoyment of the world—called 'Lokeshna')—only such persons are eligible to take Sanyas and become a Bhikshuk (someone who accepts food by begging; it is a term usually used for a Sanyasi, who is a person who has taken the vows of Sanyas, because he has to beg for his food) (18).

19. A person who feels the same sense of happiness and joy when beaten by a stick as enjoyed by ordinary people when they are praised and honoured—verily, only such a person is eligible to become a Bhikshuk (i.e. a Sanyasi who has to depend upon begging for his food) (19).

20. An aspirant who is firmly convinced that he is the eternal and imperishable supreme Brahm, who is also known by the name Vasudeo (which is one of the numerous names of Lord Vishnu), personified—verily, only such a man is eligible to become a Bhikshuk (20).

21. An aspirant who inherently has a preponderance of the eclectic noble virtues of Shanti (peacefulness and tranquillity), Sham (self control), Dam (suppression of evil tendencies), Shaucha (cleanliness and purity), Satya (truthfulness), Santosh (contentedness), Saraltaa (simplicity and humility), and Aparigraha (renunciation and giving away of superfluous wealth; non-accumulation), and who has no deceit and

cunning in his nature—verily, it is he who is eligible to enter ‘Kaivalya Ashram’. That is, he is eligible to take up the vows of Sanyas which is unique and the only one of its kind (‘Kaivalya’) path which leads to final liberation and deliverance of his soul. [Refer Canto 4, verse nos. 10-12.] (21).

[Note—The word Kaivalya means one of its only kind; matchless, unparalleled and unique. It also refers to the state of the mind when it is steady and undistracted. A person who has taken the path of Sanyas is expected to be exemplarily calm, serene, quiet, peaceful, rested and steady. He is to remain concentrated on one entity that is the Absolute Truth in creation, and this means that he focuses his attention on the pure consciousness that is his ‘truthful self’. He has only one aim left in life—and that is to seek this Truth and attain Mukti (spiritual liberation and deliverance) which is consequent to realisation of this Truth. Therefore, he should be steadfast and unfaltering on his path of Sanyas. In effect, he remains in a perpetual state of Samadhi, a state of existence marked by total detachment from this material world and all that is happening around the aspirant’s gross body. In fact, such a man is not even aware of his own body and what it does or how it suffers. This is tantamount to be meditative and contemplative on a permanent basis.]

22. A person who keeps no ill-feeling or harbours no evil thoughts for anyone, who does not speak or utter anything that harms others or cause them pain in any way, and who never does anything or takes any action with ulterior motives of causing harm to others in any form—verily, only such a man with purity of mind and thought is eligible to become a Bhikshuk (i.e. a Sanyasi) (22).

[Note—Refer Canto 5, verse no. 43, and Canto 6, verse no. 39.]

23. A person who has diligently followed in his life the traditional ten rules of auspicious and righteous living (as laid down in the Smritis and outlined in the next verse no. 24), who has attentively studied the Vedas in the proper way, who has observed the tenets of Brahmacharya (self-control and abstinence from all indulgences) painstakingly in his life, and who has freed himself from the three moral indebtedness or obligations (or has fulfilled his duty as required under these obligations)¹—verily, only such a man with purity of mind and thought is eligible to become a Bhikshuk (i.e. a Sanyasi) (23).

[Note—¹The three moral indebtedness or obligations of a man are the following—(i) the ‘Rishi-rin’ or moral indebtedness or obligations that he has towards senior sages and seers, and this includes the Guru who is the moral preceptor and guide, because in ancient times Vedas and other scriptures were usually taught only by them. This obligation is fulfilled by serving the sage selflessly, obeying him and studying hard to become a brilliant disciple who would carry forward the heritage of learning and knowledge that the concerned sage is so famed for to the next generation, being always submissive towards the sage and repaying him to the best of one’s ability, and taking care of the Guru in his old age; (ii) the ‘Dev-rin’ or moral indebtedness or obligations that one has towards Gods and deities which involves pleasing them with worship and offering of oblations by means of various religious rituals; and (iii) the ‘Pitri-rin’ or moral indebtedness or obligations that one has towards one’s ancestors, and it includes producing sons and bringing up a noble family which carries forward the honourable name and legacy of the ancestor and enhances his glory.]

24. The ten signs or markers or pillars of Dharma (righteousness, auspiciousness and nobility) are the following—Dhairya (patience, resilience and calmness of demeanours under adverse circumstances), Kshama (forgiveness), Daman (self control and suppression of natural instincts; restraint of the mind and the body),

Asteya (non-stealing), Pavitrata (purity of mind, body, thoughts and actions), Indriya Nigraha (control of all the sense organs of the body), Dhi (wisdom; proper, righteous and auspicious thoughts and intellect), Vidya (correct knowledge and its associated wisdom and erudition which helps one to judge and discriminate between the right and the wrong), Satya (truthfulness; non-deceitfulness and honesty), and Akrodh (non-anger; to have a tolerant, forbearing and compassionate temperament)—verily, these are the ten great tenets of Dharma. They act like indicators of whether a man has lived his life according to established principles of Dharma or not, and to what extent. (24).

[Note—Refer Canto 4, verse nos. 10-12 also.]

25. A person who never thinks of (recalls; broods over) the sufferings and pains or enjoyments and pleasures of the past, who never is concerned about them in the present (i.e. is not affected by present sufferings nor exults at pleasures), and is never bothered about them ever affecting him in any time to come in the future—verily, only such a man is eligible to live in the phase of life called the Kaivalya Ashram, i.e. he is fit to become a Sanyasi. [The term Kaivalya Ashram is explained in verse no. 21.] (25).

26. A person who gives no importance to and pays no heed to any of the units consisting his inner self called the Antahakaran¹, and similarly neglects all the external impulses originating from the world of material sense objects²—verily, only such a man is eligible to live in the phase of life called the Kaivalya Ashram, i.e. he is fit to become a Sanyasi (26).

[Note—¹The ingredients that affect the inner self of a person are the constituent parts of his Antahakaran. The Antahakaran with five dimensions or aspects is described in Trishikhi Brahmin Upanishad, Canto 1, verse no. 6, and in Paingalo-panishad, Canto 1, verse no. 9, and in Canto 2, verse no. 3—both of the Shukla Yajur Veda tradition. The five components of Antahakaran are—(i) Mana (mind), (ii) Buddhi (intellect), (iii) Chitta (the faculty of concentration and memory; knowledge and consciousness), (iv) Ahankar (ego, pride, arrogance), and (v) Vrittis (inherent character, traits, habits, inclinations and temperaments of a creature) which decide the basic nature of a person and the way he would react to a given circumstance, the way he would deal, behave and interact with the world, the way he would interpret things, the way he thinks, the things that would appeal to him and the things he would abhor etc.—all depends upon the mental setup tinged with the fundamental character traits that are firmly ingrained in him.

Since the mind, intellect and the sub-conscious are involved in the definition of Antahakaran, it would follow that the following too would be included as the five components of Antahakaran—(i) Pramaan—knowledge that helps to establish the truth; (ii) Viparyaya—ignorance, delusions, illusions such as imagining a snake in a piece of rope; this is erroneous knowledge; (iii) Vikalp—alternatives; that knowledge which is acquired by hearing of it but may not present the correct picture, such as for example a wooden puppet—there seems an apparent difference between plain wood and the puppet, but they are basically the same and defined with the same word 'wood'; this knowledge is neither true nor false for to say that the puppet is different from an ordinary piece of wood because of its distinctive shape and value would be as much true as saying that it is plain wood; (iv) Nidra—meaning sleep; when a man remains oblivious of any truth just like anything gets hidden in darkness though it is very much there, that man is likened to a man sleeping soundly in spite of the goings on around him and therefore remaining unaware of them; and (v) Smriti—literally meaning memory; it refers to that knowledge which is based on experience

and witnessing so that it is etched in memory; such knowledge becomes robust and gets soundly established in mind with the passage of time.

²The body of a creature consists of five organs of perception and five organs of action which help him to receive the world and its inputs in the form of sensory perceptions, and then respond to them accordingly. The five organs with which he receives the sensory inputs from the world and which make the creature aware of the pleasures and sufferings of the world are the following—the eye which is concerned with the function of seeing, the ear which is concerned with the function of hearing, the nose which is concerned with the function of smelling, the tongue which is concerned with the function of tasting, and the skin which is concerned with the function of touching and feeling. These organs are the ones concerned with reception of the world.

The organs which help in response are the following—the hand which helps one to do various deeds and take actions besides receiving and taking anything on behalf of the ‘self’, the leg which takes the creature to his destination as determined by the mind, the mouth which makes him speak and express his desires, the genitals which satisfy his sexual urges, and the excretory which help to eliminate what has been taken in by the mouth in the form of food and drink.

It is vital for a Sanyasi to exercise exemplary control over them. This fact is also endorsed in verse no. 36 below. For instance, if he cannot control his eyes then this organ would prevail upon him and force him to see pleasant sights, and this in turn would silently incite his sub-conscious to long for the objects which present such a charming view. Now, if he forcefully suppresses his desires of obtaining access to the object which had earlier lured the eye then he would be obsessed by it mentally. This obsession with the world would foster frustration because the man would be torn between his desire to look at the charming object and make an effort to acquire it, and the desire to avoid looking at it as it might simply be not possible for him to access it or acquire it at all. This dilemma would consume his energy and time before he forgets about this object in due course of time. But meanwhile the damage has already been done as his peace and natural state of restfulness are severely compromised with. If he does not wisely inculcate the grand thought that this world and its objects have no substance in them and are useless vis-à-vis his spiritual welfare, his sub-conscious mind would be constantly nagging at him to glance surreptitiously at the object. Then he would be suppressing his desires instead of not having any desires at all. Say, how such a mind possessed with desires can ever give true peace to the aspirant?

The gravity of the situation is that there are five such organs of perception and five of action, and one can well imagine the situation of a man who is being pulled in different directions by them at the same time. It’s like a chariot being pulled in different directions by horses who cannot be controlled, or who have not been properly bridled and harnessed. Surely this situation would topple the carriage and gravely injure the passenger as well as the charioteer!]

27. Just like a dead body has no feeling of pain or happiness, a person who remains indifferent and aloof from such feelings while alive—verily, only such a man is eligible to live in the phase of life called the Kaivalya Ashram, i.e. he is fit to become a Sanyasi (27).

[Note—Refer Canto 4, verse no. 36.]

28. A Paramhans Sanyasi (one of the various categories of renunciates) is not supposed to possess more than two Kopins (the piece of cloth to cover the private parts), one Kantha (which is a roughly sewn coarse over-garment made of old, torn and padded pieces of clothes picked up at random), and one Danda (an ascetic’s staff or rod) (28).

29. If he violates this edict and gathers more objects then he is condemned to go to a great hell called 'Rairav', and has a low birth by being re-born in the lower rung of the creation as a bird or insect (29).

30. A Sanyasi (a noun used for a person who has taken the stern vows of Sanyas or renunciation and detachment from anything related with this world) should stitch an over-garment or shawl-like covering from tattered and worn out clothes to protect himself from cold and heat, but it should be clean. He should go out of populated areas of a village, and prefer to live in un-inhabited and secluded areas outside it. He should wear ochre clothes (30).

31. A Sanyasi should wear only one cloth or remain without it. [The one-piece cloth is wrapped around his body, and if he prefers to discard it then he should only wear the loin cloth. Refer Canto 4, verse no. 17, stanza no. 1.]

He should not have a fickle sight and instead maintain poise and concentration of mind. He should remain unconcerned with or distanced from any of the objects of the world which can be distracting for his calm mind and affect his concentration. [Refer verse no. 26.]

He should roam alone without any company. He should spend the four months of rest, called the 'Chaturmaas', in one place. [This is usually the rainy season as it's impractical to move in rains. This is the time which helps him to give rest to his body and rejuvenate it. Refer Canto 4, verse nos. 14-16.] (31).

32. A Sanyasi should completely discard any thoughts or memory of his relatives, sons and family as well as the Vedas and their branches, the various obligatory fire sacrifices, and even the sacred thread. [Refer also to Canto 4, verse no. 1, and Canto 5, verse no. 26. This edict is not meant to demean the Vedas or the fire sacrifice or the sacred thread at all, but this is a practical advice sanctioned by the Upanishads because a roaming mendicant is not expected to stay at one place so he can study the Vedas and perform fire sacrifices. Further, he is already advanced in age and so it is not practical for him to read and study any longer while on the move. Again, he has no need for them now that he has taken to the auspicious and spiritually uplifting path of Sanyas, as being enlightened about the basic tenets of the Vedas is a pre-requisite criterion for being initiated into this divine and holy path of Sanyas in the first place, and so any further reading of the scriptures would be not required as it would be superfluous. Doing of fire sacrifices is also not possible for him while roaming from place to place. Once he has accepted the Danda as a sign of his symbolic holding on to the Absolute Truth known as Brahm and having a firm grip on it, the sacred thread also becomes unnecessary, redundant and obsolete. Besides this, the sacred thread is merely a symbol to remind him that he has been baptised into the religious fold and therefore he must be very careful to diligently obey the laws of Dharma, i.e. the proper codes of conduct that are part and parcel of a righteous way of life expected of him. But once he has taken Sanyas, he does not need this external symbol to remind him of his moral duties and to act as a constant bridle on his mind because now it is deemed that the virtues of auspiciousness, righteousness, nobility and propriety are an integral part of his character and personality; they are ingrained in his inner-self. It is like a student who would heap books on his study table during his college days, but once he becomes a professional well-versed in his profession he would no longer need them in his day-to-day life.]

On the contrary, a Sanyasi should live and roam anonymously and incognito. [This is to ensure his privacy and avoiding undue attraction of attention and praise. This also prevents his erst-while disciples, relatives and friends from trailing him and creating unnecessary mental tension for him.] (32).

33. A Sanyasi should abandon such negative emotions and traits as having Kaam (lust and desires), Krodh (anger and vehemence), Lobh (greed, avarice), Moha (attractions and attachments), Ahankar (ego, false pride, vanity and their attendant arrogance and haughtiness) etc. (33).

34. A Sanyasi should be completely indifferent to all attachments and attractions for anything or anyone in this world, and instead he should treat a ball of earth as well as a piece of stone or gold equally, without distinguishing between them. [Refer Canto 4, verse no. 17, stanza no. 3.]

He should keep away from violence of all kinds (mental, physical, emotional; actual or implied), inculcate the noble virtues of equanimity and fortitude, and become absolutely neutral, dispassionate and detached (34).

35. A Sanyasi who is far from or free from the negative traits such as Dambha (deceit, conceit, falsehood and pretensions), Ahankar (ego, false pride etc.), Hinsa (violence), Paishunya (animal-like qualities, always criticising others) etc., and on the other hand is endowed with the auspicious virtues of wisdom, self-realisation and enlightenment is the one who is eligible to obtain Mukti or liberation and deliverance (35).

36. If the sense organs of the body get attracted and hooked to their respective objects in this world, it is certain that a man becomes corrupted and mired with bad traits (as he is tempted by the alluring charms of the objects of the sense organs in this world which are very ensnaring by nature, and once one falls into their trap they exert a vice-like grip on him and devour him mercilessly).

On the other hand if he can exercise control over them, it is natural that they would not be able to lead him astray, they would not have any influence upon him and his mind, and consequentially he can obtain success in his spiritual goal of obtaining Mukti or liberation and deliverance (36).

[Note—This concept has been explained earlier in verse no. 26 of this Canto above. The primary form of the creature is his Atma, the immaculate Consciousness. It is only when this Atma comes in contact with the tainted but most fascinating mirage-like charms of the world with which it comes in contact and becomes aware of through the various sense organs of perception such as the eye, the ear, the nose, the tongue and the skin that it gets mired in corruptions and impure thoughts. Therefore, if the intermediary sense organs are removed from the field and stopped from interfering with the Atma's natural inclinations of seeking the good, the holy, the divine and the pure, it is obvious that the creature would be free from these taints and remain pure himself. This world and its illusive charms and temptations are like fetters that keep the creature shackled forever should he be careless enough to allow himself to be lured by them. It is just like the case of a fish that gets caught in the hook because it is tempted by the bait. It is also like the case of a free-flying bird which is trapped in the net of the bird-catcher because it cannot resist its urge to eat the grains spread to catch it.]

37. It is not possible to calm down or eliminate the innate desire to enjoy the pleasures and comforts of the sense objects of this material world as long one continues to do

so. On the other hand, they are further enhanced and stoked just like a fire into which butter is poured. [That is, so long as the creature continues to remain involved in the material world, it would be impossible for him to break free this fetter and become liberated. It is only when he determines firmly that he would shake off his burden represented by attachments for this material world and its sense objects that this burden is actually dispensed with. It needs a strong will and a firm determination besides full conviction that all desires have to be done away with if one is to find his true spiritual peace and bliss, if one is to find Mukti and Moksha—which means liberation and deliverance as well as emancipation and salvation respectively.] (37).

38. A person who is endowed with the glorious and eclectic virtue of having equanimity and evenness of mind, who treats everything and every situation with exemplary stoicism, neutrality, dispassion and an indifferent attitude, such as neither feeling happy and exulted on hearing praises and good words nor feeling sorrowful and pained at being insulted or upon hearing harsh words, who treats both tasty food as well as bland and tasteless food alike, who is unmoved by either the attractions of charming sights or the repulsive feeling of repugnant sights, and for whom both the pleasant sweet smells (such as those of fragrances and perfumes) and reprehensible odour and stinks (such as from decaying or rotten things) make no difference—verily, only such a man is regarded as one who has actually practiced exemplary self-control over his sense organs (38).

39. A person who is completely pure in the mind and thoughts, a person who is free from any of the impurities and corruptions that taint the mind and thought of ordinary people—verily, only such a man is able to get the reward of hearing the Vedas and Vedanta (Upanishads) (39).

40. A Brahmin (i.e. a learned and self-realised person) should treat praises and honours disdainfully as if they were poison, and accept criticism and harsh words as if they were nectar (40).

[Note—Refer Canto 5, verse no. 30.

This is intended first to inculcate and then to test continuously if the noble and auspicious virtues of indifference, neutrality, detachment, equanimity, self-control over the mind and thoughts, stoicism, non-anger, calmness of demeanours etc. expected of a Sanyasi as outlined in the previous verses are firmly established in the inner-being of the spiritual aspirant or not.]

41. A person who calmly and silently accepts being humiliated, insulted, rebuked or admonished, if he humbly and politely hears words without retaliating, and instead remains poised and serene all the while, it is then that he is able to maintain his true peace and tranquillity. Such a man is able to sleeping comfortably and soundly, or roaming around in this world fearlessly while awake. [He will have no burden on his conscience, and would neither fret nor fume at not being able to retort and pay his tormentor in the same coin by using harsh words or abusive language against him. He would not feel frustrated or have an inferior complex that he could not retaliate at being humiliated. So he would have a good night's sleep. Since he has not answered back even to his adversary, he would have no enemy, and so he will have no cause of fear from anyone.]

On the other hand, a person who uses harsh words ruins himself and destroys his own peace and tranquillity (41).

[Note—Anger is one's most dangerous enemy and it has a negative effect on the mind, behaviour and personality of the person. It gives him a bad name; it snatches the peace of the mind; it keeps the man unnerved for a very long time, keeps him agitated and restless, and prevents him from working normally and rationally. This situation stresses him out excessively and acts a drain on his nerves and his energy. On the other hand, a man who remains calm and does not indulge in verbal duals is able not only to maintain his own peace but even bring the bitter moment to an end quickly because the abuser would be fed up, lose steam and fall silent himself. The abuser would be ashamed at his own behaviour and impertinence. If an angry man is answered back his anger is further stoked, and this goes on aggravating the situation instead of quickly bringing it to an end. The abuser or the arrogant opponent of the Sanyasi will regret himself once the anger is over. He would be frustrated that his tantrums have had no affect on the Sanyasi, rather the latter's calmness would make the tormentor bury his face in self-guilt. Instead of provoking the Sanyasi, he himself feels provoked by the former's silence and smile. The tormentor's inner voice coming out from his Atma would take him to task, though he would not acknowledge it in public out of shame at his behaviour. He would feel dejected and defeated and worn-out by his own intemperate behaviour; the Sanyasi meanwhile would emerge all the more emotionally stronger as well as the winner.]

42. A wise aspirant on the path of Sanyas should diligently practice to tolerate, with great forbearance, equanimity, neutrality and poise, harsh and intemperate words uttered by others. He should not insult others under any circumstance, nor retort at or harbour any ill-will for their rude behaviour. He should never allow anger to taint his inner-being by being vengeful against or frustrated with his tormentors.

He should never have animosity or ill-will with others just for the sake of this mortal and perishable gross body being subjected to insult or humiliation. [This is because he knows well that this body is perishable, gross and worth of contempt nevertheless, and secondly that this body is not his 'true self' which is being subjected to ridicule. So, there is really no point at getting annoyed with someone who insults the body—for the offender is totally ignorant; he is surely not wise enough like the Sanyasi, and it is deemed to foolish to get angry with those who have no intellect worth the name in them. A wise Sanyasi understands the fact that 'he' is not being insulted as his truthful 'self' is pure consciousness that is an exalted entity that cannot be demeaned or humiliated at all, and what is being insulted is the gross body which is not his 'self'. So what is he to bother about? How does it matter to 'him' if someone casts aspersions on his mortal gross body in the misplaced notion that he is admonishing the Sanyasi himself?] (42).

43. A wise spiritual aspirant (i.e. a Sanyasi) should not be angry towards anyone, or harbour any feeling of revenge, retaliation or malice for someone who has been angry at him, has insulted him, or has used any harsh or uncouth language for him. He should never seek retribution; he should never be vengeful. On the other hand, he should use pleasant words for his abuser and tormentor. [Refer Canto 6, verse no. 5. The effect of this attitude would be that the abuser and tormentor would himself feel guilty and ashamed at his own impertinent, intemperate and uncivilised behaviour.]

The tongue that is associated with the seven doors of the body (the two eyes, two ears, two nostrils and one mouth) should never be used to speak lies or falsehoods. [That is, one should never use the tongue to tell a lie in relation to what one knows. The knowledge comes from these sense organs—viz. the eyes helps one to see and have a visual knowledge of things, the ears makes him hear about them, the nose tells him how the thing smells, and the mouth helps to taste and eat things worth

eating. However, it is the tongue that expresses the way the world is perceived by these individual sense organs by ‘speaking about them’, for none of these organs can express their views in words. So when one uses the tongue to speak, he must be truthful and honest in what he says because he is merely a neutral messenger who is merely conveying the message of these sense organs. In other words, no personal interpretations or ideas should be allowed to interfere with what the tongue has to say about what the sense organs make out of this world. In essence it means that the wise man always speaks the truth no matter how bitter and uncomfortable it might be for others.] (43).

44. A person desirous of peace and happiness should concentrate his mind and heart on spiritual matters, and pull his attention away from worldly issues. He should remain calm and quiet; he should be unmoved and unruffled by any circumstance. He should not expect anything from anyone; he should abandon all desires, hopes and expectations. He should help himself (i.e. he should be independent and self-reliant) while roaming fearlessly and freely in this world (44).

45. A wise spiritual aspirant (i.e. a Sanyasi) should keep his sense organs under tight control. He should eliminate attachments or animosities. He should not harm or cause any sort of violence (mentally, physically and emotionally; actually or implied) to anyone.

By following these tenets a person is able to obtain Mukti (freedom from all fears, freedom from all fetters that tie the soul to the gross body as well as the equally gross world of material sense objects) (45).

46. [Verse nos. 46-51 outline the despicable nature of the creature’s gross body. Refer also to Canto 4, verse nos. 25-29 in this context.]

This body is a treasury of diseases, pains, sufferings of various sorts, and torments of all imaginable kinds. It has pillars represented by the bones, tying ropes representing the nerves, veins and arteries etc., it is plastered by using a mixture of blood and flesh, and it is enclosed in a shell of the skin. It is always full of urine and stool, and is therefore inherently stinking with a foul odour (46).

47. This body is a cause of perpetual anxiety and miseries arising from the fear or dread of old age and various diseases that afflict it.

Since the gross physical body is created by the union of the male sperm called the ‘Virya’ and the dark fluids called ‘Raja’ present in the female reproductive organs, it (the body of the creature) is named ‘Raja-swal’—i.e. an entity which is predominantly dark or gross in nature, or an entity which is inherently unclean, or an entity which has a preponderance of ‘Raja Guna’ in it which makes it inherently and naturally attracted towards the charms, pleasures and comforts of this material world and its sense objects.

This gross body is mortal and perishable; no one can say for certain when it would come to an abrupt end (47).

48. The body is occupied by the five Bhuts (i.e. the five primary elements of Nature such as earth, water, fire, air and sky). [In other words, this body is made up of entities which are inert, non-living and non-conscious themselves par-se, and therefore the body cannot be active, conscious or alive on its own. In fact, this body is

like any other normal dwelling such as a brick-and-concrete house in which a man lives. The resident of this body is the Atma which is pure consciousness and the truthful identity of the man/creature having this body.]

Hence, one should not have an attachment with this body (and use it merely as a temporary habitat for the Atma till the time it finds its liberation and deliverance after having fulfilled all its obligations).

If a man is stupid enough to love this body made up of blood, fluids, flesh, marrow, bones, urine, stool and a network of nerves and blood vessels, then surely he would also love the greatest of hells (because this body is as miserable and tormenting to the Atma is an actual hell) (48).

49. To have a sense of ego, pride and possessiveness vis-à-vis the body is the cause that takes a man to the hell called Kaal-sutra. [The word 'Kaal' means death or destiny, and 'Sutra' means a string, a formula or a principal cause. Therefore, to be attached with the body would act as a string that would prevent the soul from finding its final liberation and deliverance, for the soul would be attached with the body like a kite is to a string. Attachments with or attractions for the body is the cause that forces the Atma to remain trapped in its snare, and, through it, with the world. This is because the body lives in the world with which it is closely associated as they share common grossness and are needed for each other. The world has significance only till the time there are living beings doing various things in this world, for no one would be interested in a world with dead creatures. The body has significance because it is the medium by which the creature interacts with the world and enjoys its material sense objects. They have a symbiotic relationship. Since the body is inherently decayable and the world also has a limited life-span—this is because both have a certain time of their births, and anything that is born must come to an end, they are very different from the Atma which is an imperishable and eternal entity that is never born and therefore never dies. The Atma takes a new birth because it is deluded and falsely attracted to this body and the world. It is its desire to enjoy the world that it needs the body. Once the desire for the world is done away with, the need for the body would also vanish. Earlier, verse nos. 34, 36-37 also stress this point. When the Atma forces upon its self the need to take a birth, it enters a body and consequentially goes through a hell of its own making. So, what is the way out, how can the Atma get freedom from the endless cycle of birth and death, and the constant fear of sufferings associated with them? Obviously, it is by detaching and distancing itself from the gross, perishable and despicable body.]

Similarly, this attachment with and longing for the body is the cause of a man going to the hell called 'Kaal-vichi' as well as to the hell called 'Asipatra-van' which is like a dense forest with cobweb-like undergrowth of entangled creepers etc. which trap the soul for eternity and prevents its freedom (49).

50. To have a sense of ego and pride vis-à-vis the body is as reprehensible and condemnable as eating dog-meat. So a wise man should make an all-out effort to forsake it and completely eliminate such ill-conceived and ill-fated notions. [That is, one should not be boastful of the body. One should not have any sense of ego vis-à-vis the body. One should not be proud about the body's beauty, strength and abilities. Like the body, they too are transient and perishable.] (50).

51. An aspirant desirous of his own spiritual welfare must ensure that this sense of ego and pride pertaining to the body does not even touch (i.e. affect or influence) his

mind under any circumstance, even if everything is ruined as a result of this humble attitude. [For instance, a truly realised man would have no hesitation at remaining calm when his adversary abuses him or insults him or taunts him. He would also not retaliate if he is beaten—refer verse no. 19. He would willingly and cheerfully serve others without bothering for his exalted position in society. All these behaviours might make him appear ridiculous, inferior or menally retarded in the eyes of ordinary people who have a sense of false pride, vanity and chauvinism, but actually he has risen above these narrow-minded considerations, and instead has attained a high stature and maturity as a highly self-realised, wise and enlightened person.]

He should see only auspicious virtues in people and treat such virtues as personifications of his dear ones with whom he wishes to have contact or relationship, and on the other hand see inauspicious and evil qualities as personifications of those with whom he does not wish to have any contact or relationship.

Such an aspirant is able to attain the truthful and eternal Brahman with the help of Dhyana Yoga—or he is able to reach his spiritual destination with the aid of proper thinking and proper means. He remains calm and poised, and by keeping good company he inculcates nobler virtues which would provide the required impetus for his spiritual and mental well-being and upliftment in the long run.] (51).

52. By following these grand tenets, a wise Sanyasi is able to gradually overcome, in due course of time, all his worldly attractions and attachments, and ultimately reach the supreme goal of Brahman-realisation (52).

53. An aspirant desirous of attaining success in his spiritual quest should always roam freely and humbly, without having any pretensions or encumbrances (because they would act as a spiritual drag for him and shackle him down).

A Sanyasi does not feel jealous when he sees others who have attained success and possess some kind of Siddhis (mystical powers). He does not abandon his own chosen path of total neutrality, detachment and renunciation just to compete with the other person out of jealousy and because he feels inferior to him for not possessing certain Siddhis. In fact, such resolute pursuit of his own path of Sanyas does give him Siddhis as well. [This Siddhi, or attainment and achievement, is of a high spiritual denomination as it provides the Sanyasi direct access to the eternal fount of blessedness and blissfulness which the other ordinary mystical powers that bestow the practitioner with magical abilities that are more of a worldly nature cannot provide.] (53).

54. To have a scooped-out pot (made from wood or coconut shell) for drinking water, to take rest under the shade of a tree very close to the base of its trunk, to use tattered pieces of cloth to cover the body, to have a habit of living alone and avoiding company, and to treat all living beings equally—verily, all these are the signs of an aspirant who is deemed to have attained Mukti or spiritual liberation and deliverance (54).

55. A Sanyasi should be helpful to all and think about the good and welfare of all creatures; he should be a well-wisher of all living beings.

He should always remain calm and poised. He should constantly carry the ascetic's staff called the Tridand as well as the water-pot called the Kamandalu with him.

He should constantly and consistently remain engrossed and submerged in the thoughts of the pure consciousness known as the Atma; he should be perpetually in a state of meditation and contemplation, concentrating upon the Atma to the exclusion of all other things. [Refer Canto 6, verse no. 40.]

He should roam about alone, and enter a village (or populated areas) only when he has to beg for food (55).

56. In the scriptures, only a person who always remains alone and also goes out alone for begging for food (i.e. he never keeps company and never begs with a group of other mendicants) is called a true Bikshuk (i.e. a person who sustains himself by begging for food). This is because a company of even one person is regarded as deemed 'Mithun', or having an intercourse (relationship; interaction) with another person. Company of another person forms 'a couple', and in such a situation inter-relationships of some sort are bound to precipitate. This situation creates a chain of consequences which are detrimental to the spiritual welfare of the Sanyasi.

A company of more than two people, such as a group of three persons, would be like a miniature village, while a group of more than three persons would be symbolically like a small town. [So it is best avoided by a Sanyasi. Therefore, he must always remain alone. Refer also to Canto 4, verse nos. 14-16, 19, and to Canto 7, verse no. 1] (56).

57-58. A wise and erudite Sanyasi should therefore not give another person a chance to come near him so that a situation similar to having Mithun (intercourse), being in a village or a small town does not arise. If he allows himself to fall into this trap of having a company of one or the other kind then he would have fallen from his chosen path and violated the rules of Dharma as applicable to a Sanyasi.

When more than one person assembles at a place, it is natural that there would be gossip, some kind of idle talk or some discussion on a variety of subjects. There would be discussion about the king or rich people, and other topics such as where and what type of alms and charities are available. Such talks would lead to either agreements or disagreements, creating in their wake likings, attractions or attachments for certain things or people on the one hand, and repulsions and dislike for others on the other hand. Dissensions, back-biting and finding fault with others, or undue praises and bias for someone else, would crop in unnoticed. These things are unavoidable when people have nothing worth to talk about; it is a part of human nature. There is no doubt about it (57-58).

59. That is why the scriptures have ordained that the Sanyasi should always stay alone without having any kind of attachments or links with anybody or anything else. He should not talk with others unnecessarily. If someone talks with him or bows before him to show respect, then he must respond with the words 'Narayan'¹ (59).

[Note—¹*Narayan* is one of the divine names of Lord Vishnu, the senior-most of all the Gods and regarded as a personification of the supreme transcendental Brahm himself. The use of this word in daily life is just like we say 'hello' in English—that is, the word 'Narayan' is employed as a means of respectful address for someone; it's a word of greeting. It is also used to acknowledge someone's else's greetings. From the metaphysical perspective this word indicates that the person using it is highly enlightened and wise because he knows that the Supreme Being known by the name of Narayan is present before him in the person of the man standing in front. He is not addressing the physical gross body of the man, but the Atma resident inside this body, the Atma which is a personification of Brahm, the Supreme Being. In fact, the man

using the term 'Narayan' to reply someone is actually addressing the Lord in the physical form of the other person, and not the gross body of the person as is recognised by the world to be the identity of the concerned person. In the present context, the use of 'Narayan' shows that the Sanyasi sees Lord Vishnu everywhere, in each living being. So he replies to the greeting, or acknowledges the greeting, just because he knows that the Lord himself is calling out to him, and not replying would be tantamount to causing insult to the supreme Lord. Otherwise he would have preferred to remain silent. This observation would be in consonance with the edict that a Sanyasi is expected not to have any company, and avoid talking with anyone whatsoever. Here, he is not responding to some mortal man, but to the Lord himself in a personified form.]

60. A Sanyasi should live alone in a secluded and an un-inhabited place, and always remain submerged in meditating upon only one divine entity known as Brahm. He should concentrate upon Brahm and devote all the efforts of his mind, speech, body and actions or deeds in this direction to the exclusion of all other things. [That is, he should think of nothing else other than Brahm, and devote all his energy and time in meditating and contemplating upon Brahm. He must speak only about Brahm; he must talk only about Brahm and nothing else. He must think of Brahm, and nothing but Brahm. He must devote all the actions of his body in serving the Lord and endeavouring to reach his spiritual goal without getting deflected from it even for a moment.]

He should never adore life or long to live, nor should he ever fear or dread of death or loathe it (60).

61. He should patiently and stoically wait for the time when death comes naturally. A Sanyasi is not expected to either long for a long life or die before due time¹.

He should be like a paid employee of a Lord who waits quietly for instructions of his master before doing anything—i.e. a Sanyasi should wait patiently for the time when his Lord decides that he must leave his mortal body and find eternal freedom (61).

[Note—¹A wise person is one who understands and interprets the advice given in the scriptures correctly and with proper wisdom. This stanza means that he should not find an excuse for avoiding Sanyas because of its harsh conditions, as they would speed up the decay of the body and cause death sooner than it would normally have been due—because 'dying before its due' is not the correct thing to do. 'Not longing for a long life' also does not mean that he can commit suicide, or willingly cause harm to the body so as to cut short his life-span. Not dying before its due implies that he avoids undue suffering to the body, eats properly and generally takes good care of its physical health. This does not mean pampering the body—for 'not longing for a long life' takes care of this, but it means avoiding a harsh treatment to the body which it cannot tolerate—for this would comply with the requirement of 'not dying before its due'. It ought to be noted here that on the one hand this Upanishad derides the body and says that it is worthy of contempt, and on the other hand it advises its proper upkeep.

Well, it must not be forgotten that this body is the abode of the holy Atma which is a personification of the supreme Brahm, the cosmic Consciousness. This body is like a shrine for this Atma representing the Supreme Being. Hence, like the shrine, it must also be properly taken care of. Otherwise, it would be tantamount to desecration of the shrine which houses the deity known as the Atma. But this does not mean that one should be indulgent in the gross physical body, and forget that it is worth only because of the resident Atma in it. So, both things go hand-in-hand. One should respect the body as it is the abode of the Atma, but, at the same time, be wary of its

gross and entrapping nature that prevents this same Atma from finding its freedom. A delicate balance is to be struck between the two by a wise, erudite and enlightened Sanyasi.]

62. [Verse nos. 62-68 outlines the qualities that make a man eligible to take Sanyas.]

A mendicant who lives like a person who has no taste for delicious food (i.e. whose tongue has lost its sense of taste due to some reason such as upon catching cold or some other diseases of the stomach), a person who is impotent, a person who is physically handicapped such as being lame, a person who is blind and deaf, and a person who seems so stupid that he remains in a constant state of stupor, a seemingly dull-witted man with a very low intelligent quotient so much so that he does not appear to know even the basic things of life and what happens around him—verily, only a Sanyasi who has these six eclectic virtues is eligible to obtain Mukti (or liberation and deliverance, salvation and emancipation) (62).

[Note—Refer Canto 4, verse nos. 21 and 35 also. This attitude and behaviour is willingly adopted by him as a means to avoid company and lead a life of solitude. He wishes to remain aloof from all attractions of the world and the body, hence has developed a natural sense of neutrality towards them which is interpreted by others, who are not aware of his evolved spiritual stature and high level of enlightenment, as his physical deformity or intellectual shortcoming. Actually it is not so. He is very wise instead of being a fool as he pretends to be.]

63. A Sanyasi who accepts food without paying attention to its appetising taste or its blandness¹, and one who speaks prudently, pleasantly and truthfully words of wisdom and good advice without favour or fear²—such a wise, erudite and enlightened Sanyasi is one who is symbolically regarded as being indifferent to taste¹ and as the one who has controlled his tongue² (63).

[Note—¹Anyone who does not have control over his taste buds would find it too difficult to eat food that is not tasty. Such a man is a serf of his organ of taste, and therefore he can't claim to have practiced full control over his sense organs. Desire for tasty food would compel him to compromise on the principles of Sanyas in as much as he would prefer to accept food from those households which offer him food of his liking. His mind would be pre-occupied with searching for tasty food. Such a person is deemed to be serf of his sense organs. Besides this, it is also a practical advice given for a wandering Sanyasi. It is expected of him that he accepts food from a new household every day, and not visiting any one house twice. It is obvious that no two households would offer the same type of food. Therefore it is essential for him to exercise self-control over the taste buds. This also ensures that no one can entice him with the offer of good and tasty food, and this frees him from falling prey to any bonds and personal relations.

²Speaking the truth always is a hard thing to observe in a world accustomed to hearing things which it wants to hear. It is a form of Tapa or observation of severe penance and vow to always to speak the truth even under duress and the risk of personal harm. Often such plain speaking makes a man unwanted in and unacceptable by the society. But it is also mentioned in this stanza that he gives good advice and speaks pleasantly. Of course, anyone who gives good advice and speaks affably is welcome and endeared by others. But of course his advice should be honest and neutral, without any bias and favour for one, or against another.]

64. A Sanyasi who treats a new-born girl child, a young woman of sixteen years of age, and an aged woman who is nearly a hundred years old as being alike, without having any sense of either attraction or aversion for them, without liking one and

disliking the other—such a wise Sanyasi is one who is symbolically likened to an impotent man. [As is obvious here, he is completely dispassionate, has overcome the natural instinct of a man to be attracted towards a young woman, and has inculcated the noble virtue of exemplary equanimity and non-distinction. Refer also to Canto 4, verse nos. 3-4.] (64).

65. A Sanyasi who goes out only to beg for food, who goes out only to attend to the calls of Nature such as to evacuate his urinary bladder or his stools, and who does not venture out for more than one Yojan (i.e. for not more than 8 miles) during his begging rounds—such a wise Sanyasi is one who is symbolically likened to the man who is lame and physically handicapped. [He spends the rest of his time and energy peacefully in meditation and contemplation. He does not aimlessly waste his time wandering here and there.] (65).

66. A Sanyasi who sees not further than a distance of four Yugs (i.e. a distance of not more than roughly ten feet), either when sitting or when standing—such a wise Sanyasi is one who is symbolically likened to the man who is blind (66).

[Note—In effect this means that he does not allow his eyes to wander around in the world. This helps him to prevent the mind from being distracted by so many sights of the world, both the pleasant as well as the unpleasant. While the pleasant sights might charm his mind to such an extent that he forgets that he is to remain un-involved in the delusory world and its temptations and instead spend his time on matters of the Spirit and his spiritual well-being, doing meditation and contemplation, the unpleasant sights would irritate him and snatch his peace of mind. Both interfere in his calm demeanours and observance of the principles of strict neutrality, equanimity and dispassion. His mind gets involved directly or indirectly. So, it is important for him to turn a 'blind eye' to every kind of distraction.

His not seeing more than a distance of ten feet is simply a figure of speech to emphasise the need to observe strict control over the tendency of the mind to see and observe things in this material world, and then allow itself to get involved in the sights it sees, to think over them and get hooked to them inspite of it being taught continuously and repeatedly by the scriptures that this world is like a mirage seen in a desert, that it has no substance and pith in it, that it is as delusory as the colourful sky seen at sunset after the monsoon rains, and that it is like a bird-catcher's trap for the creature.

It ought to be noted here that it is possible for a man to exercise control over all the rest of the five organs of perception, such as the nose which smells, the skin that touches, the tongue which tastes, and the ears that hears, because none of them have as long a reach as the eye. We can see things far away in the atmosphere of the earth and even in the far depths of the universe by using binoculars and telescope, but of course we can't touch them, hear them, smell them and taste them. It is the eye that enables the man to learn things from far and wide, it is the eye with which he closely and directly observe the world. If the eye is shut, the world is as good as dead. That is why we have the phrase 'turn a blind eye' inspite of being aware of anything or any development—which means to neglect it willingly. So, it becomes very easy for the Sanyasi to neglect the world and keep himself aloof from its temptations if he should be able to control his eyes.

In the context of the previous verse no. 64 this verse becomes all the more clear. One can distinguish between a girl, a young lady or an old woman only when one sees them, and the negative tendency of getting passionate towards a voluptuous woman is also directly related to the eye.

Not seeing more than ten feet is also a metaphoric way of saying that a Sanyasi should not overly worry about the future, and instead concentrate his attention on the

present. He should remain withdrawn from the world like a tortoise ensconced in its shell. So when a Sanyasi does not allow his mind to wander into the sights of the world, he is able to maintain his peace and serenity.

Refer also to Canto 4, verse no. 18.]

67. A Sanyasi who pays no attention to, or bothers to hear, any word pertaining to his personal welfare or harm, and similarly has no ear for words describing sufferings or happiness of any kind in this world—such a wise Sanyasi is one who is symbolically likened to the man who is deaf (67).

[Note—This is a step ahead in the process of attaining tranquillity and calmness of the mind that non-seeing and non-tasting, as described in verse nos. 66 and 63, have already initiated. Previously, verse nos. 40-43 have already stressed the need to remain stoic and not to retort in spite of the gravest of insults and provocation from adversaries. This can only happen when one turns a ‘deaf ear’ to them.

Verse nos. 43-45 sum-up the need to exercise control over the body and its sense organs in order to attain success in any spiritual endeavours by the aspirant.]

68. A Sanyasi who is not attracted towards any of the sense objects of the material world and remains indifferent to all of them is like a sleeping man in spite of him being near to such temptations, his body being able to acquire them, and his organs being healthy and potent enough to enjoy them if he so wishes—such a wise Sanyasi is one who is symbolically likened to the man who is very innocent, naïve and like if he was in a state of stupor (68).

[Note—This is again a step forward in the path of Sanyas. Refer also to verse no. 62 above. He is actually a man who has attained the exalted stature of Turiya, which is the fourth state of consciousness and is equivalent to attaining Samadhi. Such a man would appear to be doing something externally, but internally he is aloof and detached from everything so much so that his mind is virtually asleep—for his mind does not perceive any sensory perceptions originating from this material world, nor does it respond to them like a sleeping man.

This state of being like a sleeping man indicates that his external gross body and its sense organs have been completely brought under control. This ensures that the mind is left to meditate and contemplate without any disturbances.]

69. A Sanyasi should not even glance at the following six entities—his relatives and compatriots of earlier life when he was a householder, performances by dancers, actors and acrobats etc., gambling and other lowly means of passing time, a young woman, delicious eatables, and a menstruating woman (69).

70. A Sanyasi should never have animosity, ill-will or malice towards others (Dwesh), nor should he have attachments or endearments towards or show favour to his kith and kin (Raag). [That is, he should practice exemplary neutrality, dispassion, detachment, equanimity and fortitude.]

He should keep a safe distance from such faults as Moha (attractions, attachments and longings), Mada (arrogance, haughtiness and hypocrisy), Maya (delusions, attachments to illusionary charms of this material world), and Raag-Dwesh (having endearment and attachment or animosity and ill-will respectively for and against anyone).

He must not let such emotions and thoughts ever taint his mind and intellect (70).

71. For a Sanyasi the following six faults are like grave sins, and therefore he should avoid them at all costs—to occupy a dais or a high seat (i.e. to accept honour and praise, or even otherwise to sit on a high pedestal of respect, because that stokes his ego and the false sense of pride and superiority complex), to wear or accept white clothes (i.e. to accept any ceremonial garment as it gives him some special status that would attract attention of the society and give him some sort of honour and prestige which he is expected to avoid), to indulge in talks or gossiping about women (because that is tantamount to mental intercourse), to yearn for pleasure and comforts of the sense organs (such as the desire to see pleasant sights, hear sweet words or melodious music, eat tasty food, to touch things that titillate, smell sweet fragrances, to grab beautiful things with the hand, to go to pleasant places, to eat delicacies with the mouth, and to enjoy sex with the genital organs, because all of them mean indulgences and self-gratification), to sleep during the day (as it makes him lazy and indolent; he would be wasting precious time that he is expected to spend on meditation and contemplation), and to ride a carriage to move from one place to another (as he is expected to move on foot, because riding a vehicle is tantamount to giving comfort to the legs and pampering the body) (71).

72. It is advisable for a Sanyasi desirous of self realisation and meditation upon the Atma (the pure consciousness) that he does not go to far away places. Instead, he should spend his time and energy on concentrating on the study of the Upanishads which give him the knowledge that would help him find spiritual peace as well as liberation and deliverance from this world for which he has taken to Sanyas in the first place (72).

73. It is not advisable for a Sanyasi to spend an extended period of time in a pilgrim place¹, or observe excessive and prolonged fasting². He should also not develop the habit of too much reading and teaching of the too many and too varied scriptures (i.e. scriptures other than the Upanishads)³. He should abstain from giving lectures or discourses in assemblies and congregations⁴.

He should not behave in a sinful, pervert or wicked manner in a general way (73).

[Note—¹All the restrictions and prohibitions imposed on a Sanyasi are meant for his spiritual welfare and general well-being, and not intended to impose unnecessary hardship on him or torture him or punish him. It is incredulous to even think in these terms. To be frank and honest, pilgrim places are riddled and infested with corruptions, pretensions, deceit and falsehood, along with commercialisation of religion and its holy practices, reducing them to nothing but farce. They are more vexing and entangling for the Spirit than providing it with spiritual liberation and deliverance. A wise Sanyasi is advised to avoid living for a long time in these places because there are great chances of his being trapped in the temptations of easy life where food is easily available and other creature comforts are also as easily available. There are huge crowds, countless rituals, meaningless discussions and debates, and numerous other distractions for the mind which a Sanyasi is expected to shun.

If he stays long in a pilgrim place, all the negativity of these places are bound to have an impact on his psyche and influence his sub-conscious which would lose its pristine innocence and spiritual beauty to become mired with the same corruptions that have eclipsed others who are not fortunate enough to have had the same level of wisdom and enlightenment that had inspired the Sanyasi to take the vows of Sanyas in the beginning.

Verse nos. 56-60 of the present Canto 3, and verse nos. 14-16 of Canto 4 also say that company of all kinds is to be avoided by the Sanyasi under all circumstance, and

staying in a pilgrim place would go against this edict. Such prolonged stay would be no different from staying in one's own village or house. Verse nos. 61-69 of the present Canto 3 are also very relevant here.

²Verse no. 61 of this Canto 3 asserts that he must not do anything that can be construed as causing the body pre-mature death. Prolonged fasting causes the body to become weak and susceptible to diseases. It also creates an yearning for tasty food, something he should also avoid—there are umpteen numbers of verses to highlight this fact, viz. Canto 3, verse nos. 14, 38, 62-63, 90, 92, and Canto 4, verse no. 30 amongst others.

³In old age, eye sight becomes weak. A Sanyasi must not carry possessions, so he cannot carry voluminous scriptures. He is expected to be roaming, so he cannot sit down to read and study scriptures. He is not expected to stay at one given place, avoid company and discussions, which again precludes his living at a place near libraries, or attending discourses and discussing metaphysical principles with others. Besides these compulsions and restrictions, he is already advanced in age and therefore has very little time and energy left to pore over scriptural texts—this he must have already done in his younger days as a Brahmachari when he had studied the scriptures under the guidance of a Guru (a teacher). In fact, now is the time for him to meditate and contemplate more than doing anything else.

It ought to be noted in this context that verse no. 72 allows him to study the Upanishads, but the present verse no. 73 talks about him not reading too much and too many scriptures. The reason is that while the Upanishads talk in unison about one and only one Truth that would be easy to follow, and create no confusion, perplexity, doubt, schism or dichotomy in the mind of the Sanyasi, which in its turn make it easy for him to follow their tenets in leading a spiritual life and tread on a single path to his final emancipation and salvation, reading of many and varied scriptures, discussing them and trying to search the Truth by delving in their voluminous texts would be like searching a hair in a hay-stack. Such endeavours only lead to confusions and perplexities instead of removing them. A man has taken to the path of Sanyas not to become a scholar, something he had intended to do when he had studied the scriptures early on in life as a Brahmachari student under the guidance of a teacher, but to find the ultimate peace and rest for his soul. He also has very limited time at his disposal to fritter it away in debates and discussions or reading varied many scriptures.

Therefore, it is most prudent and wise for him to shun many scriptures and concentrate his time and energy in self-study of the Upanishads. Since his aim as a Sanyasi is to find final Mukti and Moksha, which means final liberation, deliverance, emancipation and salvation, in the least possible time and by the easiest method, he should desist from such situations that would cause doubts and confusions, such as by reading or studying so many scriptural literatures. On the other hand, Upanishads are to the point and brief, they teach him the truthful path in precise and succinct manner.

Further, in old age he deserves physical and mental rest which also necessitates his abstaining from spending time on reading and studying voluminous treatises of diverse nature, content, philosophy and path. The extent of the variation of the scriptures is got when one reads the Sita Upanishad, verse nos. 21-31 which lists the scriptures that evolved from one single primary body of knowledge. This Upanishad is Chapter 9 of the current volume. Besides them, there are the eighteen Purans and an equal number of sub-Purans, and the Itihasas (Hindu mythological histories). Even a cursory glance would show that it is impossible for someone to read them fully in the limited time available to him during one lifetime. That is why only the study of the Upanishads is prescribed and lauded as the only scripture that are of any real value and importance for a spiritual aspirant.

So we find that though on the face of it there appears to be a contradiction in what verse nos. 72 and 73 say, but actually it is not so. Their intention is clear if we read into these verses intelligently and with wisdom. If a Sanyasi is able bodied and

has the inclination to read and study, if he stays in a monastery where the facility for reading books and self-study is available, then he is welcome to do so. It is after all a good thing to study and deduce things for one's own self. It is a good way to spend time instead of, say, idle it away in gossip or just plain lazing in the sun. But of course this good fortune to be able to study the scriptures is not easily available to all the Sanyasis as more often than not they may be illiterate or not able to understand the hidden meaning of these highly esoteric texts of metaphysical philosophy, because in the latter case it would be counter-productive as wrong interpretation may be more harmful than not reading the scriptures at all. Then there are the many circumstantial compulsions which are an integral part of a Sanyasi's life—such as for example the lack of basic facilities, old age, the need to beg for food, the requirement that he should be on the move, that he should not carry any possessions except the ascetic's rod, a water-pot, a body-wrapping garment etc. How can one expect someone to devote his mind and energy to study scriptures in these situations?

The idea is that even if a Sanyasi is not able to study the scriptures though he had eagerly wished to do so earlier—because while he was younger and in the earlier phase of life as a householder, he had postponed such study, due to his busy life, for the time when he would become a Sanyasi and had hoped that then he would be freed from his obligations and responsibilities to find time to devote to the study of the scriptures, but as it turned out eventually, he finds this option of study impractical and impossible due to harsh realities—he must not lament or feel remorseful or regret at his inability to study the scriptures. He must not feel guilty that he has missed on some sacrosanct requirement for attaining spiritual enlightenment, liberation and deliverance just because he missed reading and studying the scriptures. He must understand that the essence of the scriptures is very simple, and it comes to him when he becomes privy to the quintessence of these scriptures in the form of the study of the Upanishads which has been specifically prescribed in verse no. 72. The study of the Upanishads would tell him that the essential teaching of all the scriptures is to become self-realised and aware of the Atma residing in his body, that this Atma is the pure consciousness and his truthful 'self', that this Atma is eternal and imperishable, that nothing in this world is true except this Atma, that Mukti or liberation and deliverance is when one understands the 'truth' and frees himself from the fetters of ignorance and its accompanying delusions, and so on and so forth. If this is not achieved, then merely reading or studying the scriptures is a waste of time and energy.

So he must be rest assured that inspite of his inability to read and study the scriptures, his emancipation and salvation, his liberation and deliverance is certain if he has understood the truth espoused by the Upanishads. He must understand that the scriptures are merely tools that help one to be made aware of and led towards the 'truth', and they are not to be regarded as one's spiritual destination. What is more relevant and important for a Sanyasi is inculcating high moral values and wisdom in order to succeed in his spiritual practice.

⁴Discourses, debates, discussions, lectures etc. draw on his already depleted energy and strength of the body as it has become old and comparatively weak because of his having to abandon the comforts of a home. Besides this, such things bring in their wake either praises or criticism, both of which are deemed to be vexing for the Spirit, for while praise stokes ego and a sense of pride in the Sanyasi, criticism evokes negative emotions which would need efforts on his part to overcome. Both agitate his mind and make it restless. Praises for his oratory, knowledge and wisdom are a natural accompaniment of giving discourses and lectures, while he is bound to ruffle some egos and offend some sentiments by his frank views on many assorted subjects, thereby evoking criticism from others. Both are to be avoided equally by him. The Upanishads prohibit a Sanyasi's involvement in such things—refer verse no. 18, 40-43, 56-60 and 71 of this Canto 3 in this context.]

74. Just like a tortoise withdraws its limbs into its shell to retire, the wise Sanyasi should withdraw his senses of perception from their respective objects in this world and establish them in his inner self.

He should control the working of the mind and eliminate its natural inclination to think of this world and make efforts to please the latter (74).

75. Abandoning all desires and wishes for anything as well as the inclination to seek and accumulate them (refer verse nos. 36-37), a wise Sanyasi should become calmed down and rested. He should be freed from having any worries, and remain immune to either sorrows or happiness (refer verse no. 38).

He should even discard bowing before Gods as well as offering oblations and libations to the spirits of dead ancestors (because his Lord is now the supreme transcendental Brahm, the Supreme Being) (75).

76. A Sanyasi should become immune to having longing and attachment for anything or anyone dear to him, as well as be free from having the taint of ego, pride and vanity of any kind whatsoever. [Refer verse nos. 40-42, 49-50.]

He should always live alone with having any company. [Refer verse nos. 56-60.]

If he lives an exemplary life as narrated above, he is surely able to free himself from the fetters that had been shackling him till now to this world (76).

77. The vows of Sanyas (renunciation) can be taken by any person—whether he is a Brahmachari (a student still studying under a teacher; the first phase of life), a Grihastha (a householder; the second phase of life) or a Vaanprastha (a wandering pilgrim or a man living in a secluded place away from the house; the third phase of life)—if a sincere and deep-rooted sense of Vairagya (renunciation, dispassion and detachment) sprouts in his inner being at any time in life, if he diligently and with great care contemplates upon the Atma, the pure consciousness that is the real and truthful ‘self’, along with having an overwhelming desire to abandon the illusory and transient world and instead seek the ‘Absolute Truth’ which is the essence that would provide eternity and spiritual bliss to him. [Refer verse nos. 9-10, 12-13 of the present Canto 3, and verse no. 37 of Canto 4. This is called ‘Aatur Sanyas’. It means that a person can take the vows of Sanyas if he is very eager to do so, but this eagerness should be sincere and honest, and not due to certain compulsions or circumstances. For taking Sanyas, an Aatur (eager) person need not wait till his old days to take the vows of Sanyas, for such vows can be accepted if true renunciation and detachment sprouts in his heart.]

If Vairagya (renunciation, dispassion and detachment) is not deep-seated and naturally-born then he must not hurry but follow the due process of passing through and completing the three earlier phases of life, such as Brahmacharya, Grihastha and Vaanprastha, before taking to the path of Sanyas¹.

On the other hand, if the sense of Vairagya becomes profound, deep-seated, strong and steady early on in life to such an extent that nothing would ever be able to sway the aspirant from the path of Sanyas once he takes to it then he can take the vows of Sanyas directly after the first phase of Brahmacharya.

Likewise, if profound Vairagya sprouts in the inner being of a person any time later in life when he is either passing through the second phase of life as Grihastha (householder phase), or the third phase as a Vaanprastha (a forest-dweller or one who

has left the house and wanders as a pilgrim), then he can take to Sanyas without waiting for the completion of the full term living in that particular phase.

The only overriding criterion for taking to and being successful in the path of Sanyas is overwhelming, sincere, deep-rooted and steady sense of Vairagya. Therefore, whether a person is Brahmachari or not, whether he is educated or not, whether he does fire sacrifices or not—as soon as sincere Vairagya sprouts in his inner being he can accept the vows of Sanyas. [Refer verse nos. 10, 12-13 of the present Canto 3, and verse no. 37 of Canto 4.]

Though it is prescribed that the formality of doing the ‘Prajapatya Ishti ritual’ (as described in Canto 3, verse no. 10-11) should be done at the time of initiation into the fold of Sanyas, but if Vairagya is profound and robust then the observation of this formality can be dispensed with. Or, one can offer oblation to any fire to suffice for this ritual. This is because Agni (fire) is equivalent to Pran (the primary life-forces in creation), and with offering oblations to the Agni the spiritual aspirant is actually nourishing his own Pran (essential factors of life-consciousness that are present inside his own ‘self’ in the subtle form of the Atma which is pure consciousness).

Another option is to do the ritual of ‘Traidhaatvi’ (which is related to the worship of the three elements called Dhatus). There are basically only three elements called Dhatus in creation, and they are the fundamental Gunas or qualities known as Sata, Raja and Tama². So, the spiritual aspirant can complete the formality of the ‘Ishti ritual’ by offering these three Gunas to the sacred fire in a symbolic manner. [Verse no. 79 of the present Canto 3 gives details of these two concepts of Traidhaatvi and Ishti rituals, and how they are observed. Meanwhile, offering of these three Gunas to the sacred fire means that the Sanyasi overcomes all sense of his individuality, his false sense of ego and pride, and thereby becomes emotionally purified. He gets rid of the tainting influences of these three Gunas which determine his overall personality, thought process and behaviour, and negates all the negative influences of any of these qualities for the rest of his life. He is able to neutralise the effect of these three qualities on his personality, mind and temperament, and becomes as immune to their influences as a piece of rock is to its surroundings.] (77).

[Note—¹This is because if he is wise, intelligent and discriminating enough, he would be closely observing each passing day of his life, and he would have realised the harsh realities of the world and the body—that they are equally gross, painful, entrapping and delusory, and none of them can give true and real happiness to him inspite of his best of efforts and spending the entire life in serving them both. In fact, both the body and the world are utterly selfish by nature, for as long as the person continues to serve them and devote himself to them, they are interested in him, and as soon he is unable to live up to their expectations he is shunned by them.

So, by the time he enters the last phase of life to become a Sanyasi, the bitter lessons of life mentally prepares him to accept Sanyas voluntarily, sincerely, truthfully and honestly. He stops gratifying the body and longing for the material comforts and sense pleasures obtainable from this world—because he now knows of their deceptive, transient and selfish nature. His renunciation and detachment for the world and its sense objects, and his non-attachment with the gross body would therefore be self-inspired, sincere, honest and natural, coming out of his personal experiences of life rather than being forced and artificially imposed.

Hence, it would be easier for him to adhere to the principles of Sanyas and seek his Mukti (spiritual liberation and deliverance) without falling prey to worldly and bodily temptations. He would have been fed-up with whatever he had observed and experienced in life—back-biting, undue criticism, lack of loyalty, all-round betrayals and selfishness of others, pains and sufferings, death and decay, frustrations and

perplexities, diseases and deformities—all of them in their true colour and in full-blown form. So, by the time he reaches the phase of *Sanyas*, his bitter experiences kindle sincere renunciation, dispassion and detachment in him. Since he has had a first-hand experience of the bitter world, his conviction and faith in the futility of pursuing the world and the truthfulness of following the path of *Sanyas* as a means of finding true spiritual solace and succour would be unflinching, unwavering, convincing, abiding and robust.

On the other hand, if he takes to *Sanyas* due to some tragedy or circumstantial compulsions or events in life, such as death of some dear one, loss of property and trade, disease and deformity, natural calamities such as famines, droughts and earthquakes and such other unfortunate events, then his renunciation and detachment would be momentary and transient—for sooner rather than later he would forget his misfortunes and revert to his old habits and start regretting his decision of taking to *Sanyas*. He would yearn for the things and the people that he had left behind, the comforts and pleasures he was accustomed to, and he would harbour a secret desire to get them back once his heart and mind are able to overcome the initial shock of the misfortune or the circumstance which had made him take *Sanyas* in the first place. He would be tempted by their sight and thoughts, and swerve towards them at the first opportunity. In short, his *Sanyas* is short-lived and as fickle as a bubble of water. Such imposed and artificial form of *Sanyas* is not sincere and convincing, it is repressive, suppressive and regressive for the soul instead of being uplifting, enhancing, empowering and encouraging for it.

²The *Sata*, *Raja* and *Tama* are the three virtues or qualities in creation which determine the nature and temperament of all creatures. The character of all the living beings in the entire creation is dependent upon these three primary qualities called the *Gunas*.

(a) The *Sata Guna* is the best of the three qualities present in any creature. It is a positive quality and is marked by a propensity for following the path of nobility, auspiciousness, probity, propriety, virtuousness, holiness and righteousness. Creatures that have a predominance of *Sata Guna* are inclined to do selfless service, be benevolent, merciful, kind and gracious, have coolness of head and a rationale and balanced mind, be contented, have humility and piety etc. Such creatures are devoted to good values in life and have a desire to acquire knowledge that would help them reach higher spiritual goals in life.

This *Sata Guna* is marked by high standards of ethical and moral existence that makes the bearer of such qualities highly respected in society. Such people have a spiritual dimension to their personality. This quality is spiritually uplifting and gives a divine halo to those who possess it and practice it.

The *Vasanas* that have the *Sata Guna* or quality dominant in them are like a veil covering the lamp or like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the *Satwic* desires; its removal requires the least effort.

(b) The second quality is the *Raja Guna* and it makes a man more attracted to this material world and its charms, and less spiritually inclined. The *Raja Guna* is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It makes a creature inclined towards the material things of the gross world and their enjoyments, towards creation of wealth, its enhancement and protection, and generally having a desire for growth, development and expansion etc. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, selfishness, expansionist tendencies, a desire to acquire, retain and develop such acquisitions even to the detriment of one's long term spiritual welfare and even if such actions cause pain to others. All these pertain to this materialistic world. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the *Satwic* qualities, then

they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The Vasanas that have the Rajsic Guna or quality dominant in them can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with Satwic quality.

(c) The third quality is called the *Tama Guna* and is the meanest and the basest of the three Gunas. It is a demeaning quality in a creature that leads to his downfall and perpetual entanglement with things that are considered improper and unethical. It creates an inclination for committing all sorts of sins, misdeeds and demeanours. It leads the creature towards negativity and inspires him to acquire negative qualities such as various vices, evils, sins, perversions etc. It makes him inclined to be greedy, rapacious, haughty, arrogant, lustful, intoxicated, vile and wild to the extreme. Such a creature with a predominance of Tama Guna has utter disregard for propriety, noble virtues and ethics, for righteousness and morality.

In brief, it is the most degrading, denigrating and contemptible of the three characteristics in a person, and leads to such behaviour which is utterly immoral, denigrating and depraved, marked by grossness, crassness and recklessness. It therefore leads to his downfall, ignominy and ruin as well as ignorance, delusions, gloom, inertia, anger, frustration etc.]

78. After having properly done the Ishti ritual, the aspirant should smell the fire and say the Mantra ‘Ayam Te Yoniha’ (78).

79. The meaning of this Mantra is as follows—‘Oh the Fire God! The entity that is all-pervading and the universal inspirer of everything is the cause of your origin. It is due to this reason that you are adorned with a radiant splendour, the glory, the magnificence and the majesty like your creator. [The entity alluded here is ‘Brahm’, the cosmic Consciousness that is at the root of everything coming into being in this creation.] By becoming aware of your origin, please be established in the Pran. Being thus established in my Pran, you should enhance my wisdom, erudition and knowledge which are like assets for me.’ [Usually the word ‘Pran’ is used to indicate the vital winds or airs that sustain life in this creation. But in the present context, ‘Pran’ has a wider import and it refers to the vital life-consciousness in this creation, the factor that injects both ‘life’ and ‘consciousness’ into the otherwise inane and gross world at large and the body of the creature at the individual level. The Pran is the ‘vital spark of life’ present in the creature. Fire is also the vital ‘spark of life’ and it is therefore synonymous with Pran. This is proved by the fact that a creature whose body has become cold, from which warmth and heat are gone, dies—which means ‘life’ or ‘Pran’ has left his body. When a man dies, his body becomes cold, but while he is alive it is warm, meaning that he is ‘alive’, inspite of certain medical conditions such as coma and being brain-dead when he is physically regarded as being as good as dead. But since ‘fire’ is present inside his body to keep it warm, he is not technically ‘dead’. No one buries a man till his body is warm and he continues to breathe. But it must be noted that if one were to treat ‘Pran’ as merely being the vital winds or airs, then it would be doing injustice to the institution of ‘Pran’ because the vital winds are not entirely able to inject life in this creation had it not been for the ‘fire’ to lend its heat, warmth, energy and dynamism to it. Hence, the mysterious entity that gives both the fire and the vital winds/airs their ability to infuse ‘Pran’, or life and consciousness, in this creation is the ‘Brahm’ implied in this stanza.]

Indeed, the Pran (here meaning the vital winds or airs) is the progenitor of the Agni (fire). [That is, the air is a necessary condition for the fire to light up and remain

lighted. No fire can be started or sustained without air. This fact is very easy to verify. If the air is removed, even the fiercest of raging fires would be suffocated to death and get extinguished. After all, this is the principle of physics that is used to bring fire under control during blazes and infernos—by firmly wrapping or covering the fire with some chemical so that all supply of air to it is eliminated. If the fire does not get its Pran, i.e. if the fire is prevented from ‘breathing air’, it would die. When smouldering charcoal is puffed into, the hidden fire in it springs back to life—a fact employed to re-kindle the fire-pit of the sacrifice after a day’s rest.]

Hence, this Mantra establishes oneness or non-duality between the Pran and Agni. That is, we conclude that Pran and Agni are equally important and synonymous with each other.

To perform the above ritual of Ishti, one should take some fire from the main Ahawaniya Agni (which is the formal fire lit to invoke the deities during fire sacrifices), and symbolically accept that fire by smelling it with the Mantra narrated above. [This ritual symbolically establishes the sacred fire inside the inner being of the person who is about to take the vows of Sanyas. There are two benefits—one, he would no longer need to do external fire sacrifices as the fire is established in his own being in the Pran or the vital winds and consciousness that pulsate in his body, and two, this consecrated fire would give him the required energy, vitality and stamina to go through the tough life of Sanyas.]

If due to some reason or circumstances fire is not available to perform the initiation rituals then the aspirant can use plain water also for this purpose. The aspirant should have the following thought—‘Indeed, all the deities (Gods) are an image of the water element. Therefore, I am offering oblations to them in the water and request them to accept it (like they would have readily accepted these offerings if I had made them to the sacred fire element).’ [In other words, he has realised that the water and fire are the same supreme Brahm having two forms just like the same Brahm is also known by different names that are assigned to different Gods, who in turn symbolise the different forces of Nature. Water as well as the fire are equally important as far as sustenance of creation is concerned; both are equally necessary for this creation to come into being. Indeed, scientists search for water as well as warmth when they search for life anywhere in the universe. Mere presence of water is not sufficient for fostering life anywhere—this is evident in frozen places on earth such as glaciers which are nothing but water in a condensed form, but they lack vibrant life because there is no fire and its accompanying warmth and heat present there.]

After that, some water in which the offerings were made should be taken and sipped. [This would be symbolically like smelling the fire as described earlier.] This water in which the offering of clarified butter (called Ghee) was made previously is a symbolic provider of good health and deliverance from the fetters that tie down the aspirant (just like the fire element does because of its purifying properties that symbolically burn all the fetters of the person who does the fire sacrifice).

Once this is finished, the aspirant should also shave off the Shikha (the tuft of hair on the scalp worn by all baptised Hindus) and discard the Yogyopavit (the sacred thread) for all times to come. He should also abandon forever any contact with the members of his family—such as his father, his son, his wife etc. He should also distance himself from all the worldly responsibilities that compel him to get involved in doing all sorts of deeds, getting engaged in either teaching or learning, and all other formalities and rituals including the recitation of Mantras and formal forms of worship.

Indeed, only such an enlightened person who has realised the profundity of the Atma and its overriding spiritual importance is eligible to become a Parivrajak or accept the vows of Sanyas. [That is, only an aspirant who is wise, enlightened and self-realised, who treats his pure conscious Atma as the only truthful entity with which to interact and to have anything to do with at all in this world is the candidate most suited to accept Sanyas.]

One should endeavour to become enlightened about the supreme transcendental Brahm, the Absolute Truth, with the aid of the 'Traidhaatavi Mantras'. [The different Mantras employed for initiation into Sanyas are narrated in Canto 4, verse no. 37, and the great Mahavakyas or the sacrosanct sayings of the Vedas are referred to in Canto 4, verse no. 38. Becoming enlightened and realised is made possible because when one has overcome his ego and pride, when he has become absolutely neutral and dispassionate, when having the grand virtues of equanimity and evenness is a way of life, it is only then that he would have developed a broad perspective of life and its manifold meaning. He would see the all-pervading nature of the universal Truth as it unfolds its secrets in all the facets of life in this world. Then no one would be an enemy and no one would be friend; all sorrows and pains would be no different from joys and happiness. One would become absolutely calm, poised and serene. This would lead to a great sense of peace and bliss which are signs of being Brahm-realised.]

The divine entity that is a personification of the excellent and most sublime virtues of absolute truthfulness, enlightenment, wisdom and knowledge—verily, it is known as Brahm. It is this Brahm that is worthy of being worshipped and pursued. Indeed, it is exactly in the way narrated here. [That is, a sincere Sanyasi should worship and meditate upon Brahm who has the eclectic virtues as enumerated in this Upanishad.] (79).

80-82. The holy sage Narad asked Prajapati Brahma further—'Oh Brahmin! How can a man who does not wear the Yagyopavit (the sacred thread)¹ still be called a Brahmin (or someone who occupies a high stature, both moral and spiritual, in this world, is deemed to be wise, learned and well-versed in the tenets of the scriptures, is regarded as holy and honourable, and is given great respect by other people)?'

Prajapati explained—'Oh Narad! A truly wise, learned and enlightened man is he who abandons all external signs of being exalted or of a high birth as a Brahmin² by shaving off all hairs on the head, including the tuft on the top of the head called the Shikha, along with the sacred thread worn across the chest, called the Yagyopavit. Instead, he should sufficiently be erudite and enlightened enough to understand that the supreme transcendental sublime Brahm, the cosmic Consciousness, is the only eternal and absolute Truth in creation that pervades uniformly in each unit of creation without exception, and therefore it is not proper and wise to confine this all-pervading and all-inclusive cosmic divine entity to some specific signs such as the hair or the sacred thread to imply that these are more representative of Brahm, or are more closer to Brahm, or are more empowered, purifying and spiritually uplifting than any other entity in creation.

Anything that gives the basic knowledge or information about other things, anything that acts as a key that can unlock the enigmatic secrets of unknown things, anything by knowing which one can come to know all other things, is called a 'Sutra'. [The word Sutra means a formula or basic knowledge or key that can help one to unravel the great secrets which are still unknown to him. For instance, if one knows the fundamental theories in science and really understands the basics of mathematics

then he can apply this knowledge to not only solve the most complex of theoretical problems appearing in his examination papers but also knows how to apply the great truths of science and mathematics in practice in life. These theories and formulas are universally applicable and can benefit the learner only if he can apply them to the practical problems of life as and when they appear.]

Hence, a person who has come to grips with the profound secrets of Brahm, a person who has deeply understood the reality and truthful nature of Brahm, is indeed the one who has truly and really understood the essence of the Vedas and other scriptures (80-82).

[Note—¹The concept of the *Yagyopavit* or the ‘sacred thread’ have been described in a number of Upanishads, viz. (i) Krishna Yajur Veda = Brahmo-panishad, verse no. 4-15. (ii) Atharva Veda = Pashupata Brahm Upanishad, Canto 1, verse nos. 14-19, 27; Par Brahm Upanishad, verse nos. 3-20.

The Yagyopavit is given to a Hindu child as part of his baptism rituals. It is a constant reminder to him as he grows up into an adult that he has certain moral obligations to live up to and certain basic standards that he must observe at all costs. He must be constantly on the vigil not to do anything that would undermine the authority and sanctity of this thread which acts as virtual string binding him to the vows of righteousness, auspiciousness and nobility in thought and action. It is his ‘sacred’ duty to uphold this path as laid down in the scriptures to which he had promised to adhere to at the time of his initiation or baptism. If he does not obey these rules and violates them in his life then what is the use of his wearing the Yagyopavit in the first place? It would be deceitful and cheating one’s self. This is precisely the point here. The sacred thread is only an external sign indicating that the wearer occupies a noble stature amongst men, but if he does not live up to the expectations from a man who wears this insignia of holiness and purity then he is only committing a grave sin as he is defiling the very principles upon which the institution of the sacred thread is based.

The Yagyopavit consists of three interwoven threads, and it is therefore known as the *Trisutra*. It is worn around the neck or slung diagonally across the chest, from the left shoulder to the right side of the hip bone. The word *Sutra* in this term has great metaphysical meaning.

These three threads also stand for the three Gunas or qualities that Brahm possesses. These are the following—‘Sata Guna’, the ‘Raja Guna’ and the ‘Tama Guna’. They have been described in brief as note of verse no. 77 above.

The sacred thread actually consists of *nine fine threads* (Par Brahm Upanishad, verse no. 5; Pashupata Brahm Upanishad, Canto 1, verse no. 27) which are intertwined into three strands, each strand having three fine interlocked threads, that are once again knitted together to make up the Yagyopavit or the sacred thread (Par Brahm Upanishad, verse no. 5).

The sacred thread symbolizes all the subtle aspects of creation, called the Tattwas. These Tattwas are variously said to number ninety-six, twenty-seven, nine etc., and the sacred thread encompasses all of them. It is, in fact, a representative of Brahm in entirety. These facts are explained in detail in the Atharva Veda’s Par Brahm Upanishad, verse no. 5, and Pashupata Brahm Upanishad, Canto 1, verse no. 14-15.

The *Par Brahm Upanishad* of the Atharva Veda tradition, verse nos. 3-20 are entirely dedicated to the metaphysical importance of the symbol of the sacred thread and its spiritual value. The sacred thread is a symbol that stands at once for (i) Brahm represented by Pranav, the cosmic vibration or ethereal sound encapsulated in the word OM, (ii) for the Atma that is also known as Hans, the divine Swan, (iii) for the Fire, and (iv) for Gyan or truthful knowledge, wisdom, erudition and enlightenment about the Truth of the self and Brahm. Refer: Atharva Veda = Pashupata Brahm

Upanishad, Canto 1, verse nos. 14-19, 27; Par Brahm Upanishad, verse nos. 3-14, 16-17.]

83. [The term ‘Sutra’ is being further defined now, and its metaphysical importance and significance outlined.]

Just like the beads of a garland or a rosary are threaded together and held in place by the string running through them, the entire creation is bound and held in place with all its individual units interlocked to form a complex grid-lock or matrix by the hidden ‘truth’ running imperceptibly through them, and this ‘Truth’ is the ‘Sutra’ which is eternal and truthful essence of existence and the creation. [In other words, the subtle and esoteric but the most eclectic Absolute Truth—which is irrefutable and incontrovertible, which is eternal, infinite, imperishable, universal and uniform—in this creation is the entity that gives credence to this creation and makes its existence possible. In metaphysics this Absolute Truth is known as Brahm. It is this Brahm which is responsible for shaping this world and keeping its texture sustained. Brahm gives the world its meaning and shape. Without Brahm this world would fall apart and scatter haphazardly into non-entity and non-existence just like the garland or the rosary losing its meaning and existence if the string binding the flowers or the beads together is cut and the latter scatter around. The ‘Sutra’ is responsible for creation having any meaning. Otherwise, the numerous individual units of this creation would have remained scattered units having no meaning and importance. It is this Sutra symbolising Brahm or the universal consciousness running invisibly through the length and breadth of creation that not only binds the countless units together but also gives them their life and identity. So if one wishes to know the secret of this world as it exists in its present shape one must know about Brahm which is the hidden force that has given the world or the creation its meaning, shape and existence just like the case that if one were to recognise an assortment of flowers as a garland or a collection of beads as a rosary one must understand that it is the string running through them that has held together these individual flowers or beads so that they come to be known or recognised as a garland or a rosary. Therefore, the very existence of this creation hinges around the Sutra symbolising Brahm.]

A wise and erudite ascetic is one who realises what this eclectic and most divine and holy Sutra representing the essential secret of existence is (which of course is Brahm, the Absolute Truth, and the cosmic Consciousness). He then enshrines it in his heart, in his inner being, with this understanding, with this wisdom, thereby giving the Sutra (representing Brahm) its due importance, honour, reverence and dignity. [That is, once having known and understood that it is the supreme transcendental Brahm which is the Absolute Truth in creation, a wise and enlightened spiritual aspirant should concentrate his attention on this Truth, and not allow himself to be buffeted (i.e. made restless by being deluded, misled or confused) by numerous ideas and notions, countless theories and doctrines, innemurable philosophies and schools of thoughts which only lead to utter vexation, confusion and perplexity. By concentrating upon one single path or goal it becomes very easy for him to reach it within the limited time span of this short life, and if he does not do so he would be like a man who keeps changing boats every now and then and ultimately sinks mid-stream before he reaches the other shore.] (83).

84. A truly wise and learned man should discard the external form of the ‘Sutra’ (i.e. the gross form of the sacred thread or Yagyopavit, which is also called a Sutra, consisting of mere threads woven together into a sling put across the shoulder and the

chest), and instead accept the divine principle that this ‘Sutra’ represents—as it is a symbolic form of Brahm, the divine and holy entity that is truthful, all-pervading, all-inclusive, eternal, infinite, supreme and transcendental. This is the true and real meaning of ‘Sutra’ that the spiritual aspirant should wear. It is the essence, the truth, the fundamental aspect and the primary form of the sacred thread, and it is the only form that would be on any spiritual benefit for the aspirant instead of merely wearing it just for the sake of doing so. [Whereas the Sutra made from ordinary thread is just that—‘ordinary’, the symbolism of acceptance of Brahm as the supreme Sutra makes one as glorious, divine and holy as Brahm himself—i.e. the aspirant becomes ‘extraordinary’. He becomes a personified form of Brahm if he is enlightened enough to inculcate all the good virtues that Brahm stands for. By wearing the Sutra on his body, the aspirant is openly declaring this fact that he has established Brahm on his gross body, and therefore as long as the Sutra is on his body he is obliged to honour its sanctity and act with consonant dignity so that the holy nature of the Sutra is not compromised with and its divinity is not demoted by any of his actions, deeds, words, thoughts, behaviours etc. He has to be extra cautious about being righteous and noble because of the presence of the Sutra on his body.]

Such a Parivrajak (i.e. a Sanyasi) never becomes impure and defiled; he never gets demoted or falls from his exalted stature. [The wearing of the Yagyopavit is a visible sign that the wearer is of a high birth such as a Brahmin or some learned, holy and religious man. It is believed that as long as he wears this Yagyopavit, he is pure, holy and un-corrupt. But since this Yagyopavita is made from ordinary thread, it is subject to all the grossness, impurities, faults, shortcomings and impermanence that are associated with everything that is gross in this transient, faulty, mortal and perishable world. In short, the purity and holiness that the gross form of the Yagyopavita bestows upon the wearer is not permanent in nature because the former itself is not permanent. On the other hand, Brahm is an eternal, infinite, imperishable, truthful and divine entity, and therefore if one is wise enough to accept the Yagyopavit for his spiritual well-being then he must wear it with proper wisdom and understanding as to its symbolic meaning and its subtle import. It is only then that this Yagyopavit would be of any benefit for him and it would bestow holiness and purity to the wearer. Once this actually happens, the wearer becomes a living embodiment of Brahm.] (84).

85. A wise, erudite and enlightened Parivrajak (a Sanyasi) who has accepted the secret Truth and eclectic knowledge of the divine Brahm as the metaphoric Yagyopavit which he devotedly enshrines in his heart or wears it in his inner being is indeed the one who has understood the reality and the truth of this world as well as worn the Yagyopavit in the correct sense (85).

86. A Parivrajak (Sanyasi) is one who wears or accepts Gyan (truthful and correct knowledge; wisdom, erudition and enlightenment about the Absolute Truth and the supreme transcendental Brahm; self and Brahm realisation) as a metaphoric Shikha or tuft of hair on his head (instead of the conventional hairs), who wears or accepts Gyan as the metaphoric Yagyopavit or the sacred thread worn on the body, and who remains established in the enlightenment, wisdom, awareness, holiness and purity that the auspicious attribute of Gyan provides him. [That is, instead of relying on the external signs of the Shikha and the Yagyopavit as marks and constant reminder of his acceptance of the path of Brahm, i.e. the path of truthfulness, righteousness, auspiciousness and nobility of thought and action, he accepts the fundamental essence

of this knowledge and imbibes its basic values internally, integrating them with his inner being and his thought textures so that his entire life and his entire being become an image of the glorious virtues that Brahm stands for. Holiness and divinity, purity and righteousness, auspiciousness and truthfulness become an integral, inseparable, effortless and natural part of his life and existence, and not something that is done with some bit of conscious and physical effort as is required when one has to keep his Shikha properly trimmed and the Yagyopavit properly cleaned.]

For such wise and enlightened aspirants, acquisition of Gyan is the best effort made in the direction of spiritual upliftment and attaining one's real goal in life. It is considered as the most purifying, dynamic, electrifying and empowering entity. [True and correct knowledge is the Sutra or key to the removal of darkness of ignorance and delusions. With Gyan it is easy for one to unravel the secrets of the enigmatic cosmic Brahm just like it is easy to unlock the treasury with the correct key to its lock. Gyan is a dynamic and powerful force which empowers the spiritual aspirant to see the reality and truth hidden from view under a thick cover of delusions leading to numerous misconceptions, misrepresentations, misinterpretations and misinformations. Thus, it is hard and almost impossible to become truly self-realised and Brahm-realised in the absence of this vital key or Sutra called Gyan. Gyan is an important and indispensable aid or tool to self-realisation and Brahm-realisation.] (86).

[Note—Refer Canto 4, verse no. 32.]

87. Just like the Shikha (the tip of a lighted flame) is inseparable from the flame of a lighted candle and marks the tip or the highest point of the latter, a Parivrajak who has accepted Gyan as his symbolic Shikha (to the tuft of hair worn by an ascetic on his head), who has accepted the virtues of wisdom, self-realisation, enlightenment, erudition and knowledge as his main defining virtue and glorious characteristic, is indeed the one who can be said to have actually sported or worn this 'Shikha' in an honest and truthful sense. All the rest are simply called 'ordinary and perfunctory wearers of Shikha' (because they have not understood the profundity and the real meaning, significance and import of the Shikha and wearing it) (87).

[Note—The word *Shikha* has two meanings—one refers to the tip of the wick of a lighted candle which burns to produce the flame and its attendant light, and the second refers to the tuft of hair on the top of the ascetic's head which is also the highest point of his body and its apex.

In this instance, the aspirant's body is likened to a candle, and the knowledge that the aspirant has is like the light of this candle. What good is a candle if it does not show its light? Similarly, what good is the body if its mind is not soaked in knowledge? When the candle burns and gives out light, its physical body slowly melts away into nothingness; the body of the candle ultimately vanishes altogether when its wax is exhausted. The 'light' that the candle gives out also does not depend upon the length or thickness of the candle. Likewise, the light of Gyan or knowledge, wisdom, erudition, enlightenment and self-realisation that effuses from the ascetic does not depend the grossness of his physical body, its age, its physical fitness, its colour, birth, caste and race, and other such worldly considerations.

Just like the candle having any value and importance because of its ability to give light, the ascetic is known, respected and valued for the light of Gyan that he has. Otherwise, he is no better than a candle which is unable to give any light for a variety of reasons, such as it being wet. The physical body of the candle is of no significance, and it is sought after only because the light emanating from the wick removes darkness. Similarly, the ascetic, or for that matter any man, is honoured, revered and remembered for the Gyan that he possesses, Gyan that not only removes the darkness

within his own gross body but also of those around him. Here, the word ‘darkness’ refers to ignorance and delusions that mire the creature and prevents him from knowing the ‘truth and reality’.

This light of Gyan, or the light of knowledge and enlightenment, has its focal point in the head where the mind, the intellect, the faculty of discrimination, and the sub-conscious are located. In Yoga Upanishads it has been stressed that the ascetic experiences the eclectic feeling of ecstasy and bliss that comes with self-realisation when his Prans (vital winds) reach the forehead and the tip of the head by various meditating techniques. It is this tip of the head where the Shikha or the tuft of hair sported by the Sanyasi is located. This Shikha is therefore only a symbol or a mark to indicate that the person has the potential to light the world with his Gyan just like the wick of the candle lights up the surrounding when it is lighted. What good is the wick if it does not produce the flame that gives light? Similarly, what good is there in wearing the Shikha if the wearer does not have any Gyan in him, and he cannot benefit the society with knowledge and wisdom?

The light of knowledge or ‘Gyan’ that a wise Sanyasi possesses is his metaphoric Shikha because this virtue has its seat in the head, just as the light of the flame of the candle is present around its wick that is also located on the tip of the body of the candle.

A man without Gyan is a burden and worthless being just like a candle that cannot be lighted. Gyan is the high seat which distinguishes one man from another. It is Gyan which makes one a realised being and shine in this world as compared to others who lack Gyan and remain mired in the grave darkness of ignorance just like reptiles and other lowly animals who prefer living under crevices and inside caves. It is Gyan that acts as a catalyst for his spiritual well-being, his spiritual upliftment, his spiritual liberation and deliverance. The importance of Gyan vis-à-vis the Sanyasi is especially emphasised in Canto 4, verse no. 32.

Hence, a true Sanyasi or Parivrajak is one who has Gyan as an integral and inseparable part of his being just like the Shikha is of the body. This Gyan is the only element that makes him exalted, honourable, revered and distinguished from other human beings. Those who are not enlightened, those who are not aware of the ‘Truth’, those who are not self-realised, but still wear the Shikha just because they are supposed to wear it are therefore regarded as fools who do things just because others are doing it, and they cannot expect to derive any spiritual rewards by sporting the Shikha.

Refer verse no. 17 of this Canto 3 in this context.]

88. For those who engage in performance of formal Vedic rites and other religious rituals are required to wear the Yagyopavit (the sacred thread) as it is a necessary purifying accoutrement of such formal exercises. [But for a Sanyasi who is not required to engage himself in such formalities in the first place, there is no need and compulsion of wearing the sacred thread for him. His ‘Yagyopavit’ is his high state of being Brahm and self realised because this sacred thread stand for Brahm, it is symbol of Brahm and nothing else.] (88).

[Note—Just like a Sanyasi sporting the Shikha without having Gyan is merely cheating himself and deceiving others, for he gains nothing more by sporting the single tuft of hair on his head than either having a thick lock of hairs on the head or shaving the hair completely, a Sanyasi does not need to wear the sacred thread because he is deemed to have become self and Brahm realised.

As had been noted elsewhere, he establishes the sacred fires inside his own body, and therefore performs the fire sacrifice internally instead of doing it externally. Since wearing of the sacred thread is necessary for doing the sacrifice externally, therefore it is not necessary for the Sanyasi who has already established the sacred fire inside his own self. This fact is endorsed in Canto 4, verse no. 37 of the present Upanishad.

Refer verse nos. 17, 90 and 91 of this present Canto 3 in this context.]

89. Those who are Brahm-realised aver that only a Parivrajak (a Sanyasi) who has accepted Brahm as his symbolic Shikha and Yagyopavit is indeed the enlightened and wise one who is fully infused with and completely soaked in the essence of Brahm. Indeed, he is a personification of Brahm, the supreme transcendental Divinity in creation in the form of the Absolute Truth and irrefutable Reality (89).

90. [Verse nos. 90-92 have an uncanny resemblance to verse nos. 28-76 of this present Canto 3. They are a sort of recapitulation to summarise the things already said previously. This phenomenon is a constant feature of this Upanishad where many things have been repeated often.]

A Brahmin (i.e. a wise and learned person), after having acquainted himself of all the codes and tenets of Sanyas, its detailed rules and regulations, should make a firm resolve to take the vows of Sanyas, and leave his home.

He should henceforth wear only one piece of cloth to cover his body, shave off the hair from his head, and should not attempt or desire to accumulate any thing or any material of any kind whatsoever.

If it is not possible for him to cope with physical discomfort beyond a certain limit then it is permitted for him to keep wearing the piece of cloth that covers the lower part of his body. If he can, it is best advised that as a Sanyasi (a noun used for a person who has taken the stern vows of Sanyas or renunciation and detachment from anything related with this world) he should even discard this piece of cloth and instead remain completely naked. This is the proper system for the Sanyas or a renunciation way of life. [For such an enlightened man, the sky or the firmament is the all-covering garment. Refer also to verse no. 91 of the present Canto 3.]

He must snap all relations with everyone such as his friends, companions, son, wife, elders and other kith and kin. [Refer Canto 3, verse nos. 32, 70; and Canto 4, verse no. 2). Instead, he should wander alone like a friar or mendicant. [Refer Canto 2, verse no. 1; Canto 3, verse nos. 31, 54-56, 59-60, 76. This shows that wandering alone or staying alone is very necessary for the Sanyasi. This helps him to avoid all sorts of restlessness and vexations that come to the Spirit when one keeps company of any kind.]

Excepting the study of the scriptures as convenient and observing the duties as prescribed in the Vedas, he is expected to distance himself from all other obligations of this mortal world, become absolutely non-involved with this material world at large, and snap all his links with it.

The only things he can keep with himself are the Kopin (loin-cloth), the Danda (an ascetic's staff), and the piece of cloth to cover the upper part of his body or which is used to protect him against cold and heat.

He must observe exemplary tolerance and fortitude, treating everything and everyone equally with the greatest of equanimity and evenness of mind. [Refer Canto 3, verse no. 34.]

He must calmly bear all sorts of provocations, mental agitations and physical discomfort with the greatest of stoicism, and remain unruffled and poised under the greatest of adversities. He shouldn't be bothered by either heat or cold. He shouldn't ever desire comfort and pleasures, nor should he be bothered by any kind of restlessness, both mental and physical. [Refer Canto 3, verse no. 37-39.]

He should not even pay attention to sleep. [That is, if he cannot sleep due to some reason, then he is not expected to feel restless and worn out. Similarly, if he

wishes to sleep as a natural urge of the body, then he should not be overly worried about the timing, and allow his body rest by sleeping till it wants. But this does not mean that he should develop the habit of being lazy, as this would interfere with the need for him to spend the most of his time on meditation and contemplation.]

He should treat honour and dishonour, praise and insult with stoicity and equanimity. [Refer Canto 3, verse no. 40-43.]

He must never be affected by the six Urmis. [Refer also Canto 7, verse no. 1. According to Mudgalo-panishad, 4/7 of the Rig Veda tradition, the six delusions, called 'Urmi', that create fear, sorrows, agonies, sufferings and pains to a creature are the following:--(1) hunger, (2) thirst, (3) grief, (4) Moha (worldly attachments, illusions, entrapments), (5) horrors of old age, and (6) death.]

He should discard all Vikaars (or impurities, shortcomings or faults) that taint a creature's inner self and affect his basic immaculate nature. These faults are the following—Ninda (finding faults with others and criticism), Matsarya (jealously, envy, anger, wrath), Ahankar (pride, ego), Garva (vanity, self-praise, haughtiness, arrogance), Dambha (deceit, conceit, impersonation, falsehood), Irshya (jealousy, malice, ill-will and intolerance of the other person's successes and achievements), Suya (finding unnecessary faults with others), Ichha (having desire, wishes and aspirations), Dwesh (having ill-will and keeping malice), Sukh-Dukh (the feeling or notion of having happiness, comfort and pleasure on the one hand, or having pain, sorrow, grief and agony on the other hand), Kaam (lust, passion), Krodh (anger, wrathfulness and vengeance), Lobh (greed, rapacity), Moha (attachment, longing, endearment) etc. [Refer Canto 3, verse nos. 33, 35; Canto 4, verse nos. 5-6; Canto 7, verse no. 1]

He should treat his physical gross body as being good as dead (i.e. he must not pay any attention about the comfort or discomfort of the body), and should accept only the Atma (the pure consciousness residing inside the body) as the only entity worth accepting and thinking about. [That is, instead of worrying about the fate of his body and being pre-occupied with its demands, a wise Sanyasi should instead be concerned about his spiritual welfare and how to ensure that his Atma finds peace and tranquillity that it deserves. The focus of his mind should be the Atma and not the body. The lowly nature of the body is emphasised in verse nos. 46-48 of Canto 3, and verse nos. 25-27 of Canto 4.]

Since he accepts only the Atma, the pure consciousness, as the supreme entity in this world, he should not bow before anyone else. Similarly, he should not get involved in formal rites and rituals such as doing religious sacrifices or offering oblations to the spirits of dead ancestors.

He should neither submit before anyone else (except the Atma), and therefore should not make any humble requests for anything to anyone nor become annoyed if denied anything by anyone. Hence, he should not speak ill of anyone nor should he praise anyone.

He must roam around freely alone, without encountering any kind of encumbrances. [He must not keep any company, and never get involved in any relationships; he must not accumulate any material things.]

He must be satisfied with whatever food is made available as a will of the Lord. [That is, he must learn to control his hunger and taste, and instead be contented whatever comes his way. Refer also to verse nos. 38, 62-63 and 92 of the present Canto 3.]

He must never keep (or hoard) any kind of gems or jewellery or golden ornaments with him. [That is, he must not have anything to do with material wealth.]

He should be completely neutral and dispassionate, having exemplary equanimity and highest degree of evenness in his approach. Hence, he should neither invite anyone nor tell anyone to go; he should neither use any of the Mantras nor abandon them. He must not even do any specific forms of worship such as Dhyana and Upasana—or meditating upon any deity or worshipping it.

He should have no specific aim or goal, and neither should he be aimless and without any target in life. [Having no aim or goal would make him mentally and physically free from the overbearing burden of having to strive hard to reach that goal or achieve that aim. On the other hand, it does not mean that he is absolutely aimless and drifting along like a worthless vagrant or a vagabond in life. Indeed his single noble aim and divine goal in life is to seek Mukti and Moksha, or liberation, deliverance, emancipation and salvation for his self; it is to attain the ultimate source of eternity, bliss, felicity and beatitude in the form of Brahman. Having no other worldly aims or aspirations, such an aspirant can preserve his energy and divert it to attain this single and eclectic goal in life.]

He should develop such a high degree of aloofness, neutrality and dispassion that it does not matter to him whether anyone stays with him or accompanies him, or whether he remains alone or has some company. In fact, he is oblivious to such things.

Similarly, he should not ask to be allowed to stay at any one place, nor should he request to be allowed to go somewhere else. [That is, he must not adhere to any fixed place or protocol, and can stay anywhere he wishes and as long as he wants to. When he wants to move out and go somewhere else, he need not observe formalities of requesting permission to move, but just move out on his own free will. That is, he should be totally and completely independent and freed from the obligation of having to adhere to any formalities and niceties of formal behaviour in this world.]

Such a wise Sanyasi should not have any hermitage or dwelling of his own.

His mind and intellect must always be steady and under strict control.

For shelter, he can stay in an abandoned house, the base of a large tree (i.e. under its shade), a temple or shrine, a thatched hut, a potter's place, a spot in the south-east corner of a place where fire sacrifice is done, a place which is either close to the banks of a river or some low lying piece of land near it, a hole in a mound of earth or a cave in a mountain, a platform near a waterfall or some worship altar or pit where some sort of sacrifice was offered, and in a forest.

Some of the exalted and highly realised Sanyasis who were counted as one of the greatest of sages of all times never accepted and wore any external signs of Sanayas, and neither did they reveal their exalted stature and mystical authority and powers to anyone, but were nevertheless highly realised, enlightening, wise and spiritually liberated souls, and are the following—Ribhu, Shwetketu, Nidagha, Rishabha, Samvartak, Durvasa, Dattatreya and Raivatak. [Refer Brihajjabal Upanishad, Brahman 7, verse no. 3. This Upanishad is included as Chapter 6 of the present volume. A brief life-sketch of these sages is also appended to the said verse.]

An exalted Sanyasi should behave like an innocent child or like someone possessed by a spirit. In spite of being highly realised, wise, enlightened, poised, stable in his mind and thoughts, and enabled with stupendous mystical powers and authority, he should however behave in an erratic, unpredictable, irrational and idiotic manner. [This behaviour ensures that people avoid him and he is left alone in peace. This gives him the much desired tranquillity, peace and serenity that would be impossible to achieve should the world become aware of his inherent mystical powers and spiritual

achievements, for then the Sanyasi would be hounded by favour-seekers and surrounded by those who would plead with them to alleviate their worldly problems.]

When he reaches a higher level of Sanyas and Brahm realisation, he should discard even the bare necessities of life that he had with him till now, such as the Tridand (the stick or staff), the plate for food, the sling bag, the water pot, the waist band and the loin cloth. This is done by saying 'Bhu Swaha' and discarding them in some water body nearby. [The Mantra 'Bhu Swaha' means that I am offering all these possessions of mine to the Earth. The term 'Swaha' is used while making offerings to the sacred fire during formal fire sacrifices. So, when the Sanyasi offers his possessions to water by saying Swaha, it becomes equivalent to offering them to the sacred fire during formal fire sacrifice and acquires the same sanctity. Refer verse no. 79, last stanza.] (90).

91. A Parivrajak should discard all external signs of Sanyas such as the waist-band, the loin-cloth, the staff, the single piece of cloth which he uses to wrap his body, and the water-pot by respectfully immersing them in any water body (such as a river or lake or pond). Thereafter, he should roam around naked in the way he was originally born and which is the truthful form of his body sans all external paraphernalia (with the eclectic notion that he is wearing the sky as his garment) [Refer verse no. 90 of Canto 3.] (91).

92. He should constantly, consistently and persistently meditate and contemplate upon his Atma which is pure conscious and his true 'self' (with the eclectic notion that this Atma is the supreme Brahm residing in his inner being).

Remaining without any clothes or coverings, he must steadfastly bear with all sorts of restlessness and resist all temptations; he should not at all be affected by any of them. He must not accumulate anything of any kind. Instead, he should be firmly established in the path of Gyan (truthful knowledge) which enlightens a man about the Atma that is his pure consciousness as well as the supreme transcendental Brahm that is the universal cosmic Consciousness.

He must keep his mind absolutely free from all corruptions and impurities.

In order to protect his Pran (vital life factors present inside the body), he should accept the bare necessary and whatever food that comes his way without specifically asking anybody for it (i.e. without specifying the type of food that he would prefer, or that he needs it at all). It is also necessary to accept food at a fixed time (as this helps to maintain a steady regime and promotes good health by regulating hunger and digestion as compared to eating haphazardly and at random times). He must accept food in the cupped palms of his hands and eat directly from it (treating them as a natural pot). He may also use some other pot (such as a clay pot) that is easily available at the time.

Treating Laabh (gain) and Haani (loss) alike, he should disassociate himself from all Mamta (attachments and longings).

He should only meditate and contemplate upon the truthful and eternal supreme Brahm at all times.

He should constantly, consistently and persistently concentrate his mind on matters pertaining to the Atma, and think of nothing else.

Adjudicating and discriminating between what is good and auspicious and what is not, he must always strive for the upliftment of his Atma (i.e. his pure and truthful 'self') and abandon everything else. He must abandon all material things and sense objects of this world.

Having been soaked in the eclectic and sublime thoughts of Brahm which is the only blissful, supreme and transcendental divine entity in creation, when he has witnessed the subtle presence of this Brahm in his inner self and has realised the truth of the axiomatic maxim 'I am Brahm', he becomes firmly established in this eclectic Truth (i.e. he is convinced about the truth of Brahm, and his Atma being this Brahm personified). Like the insect that is always thinking about the large black bee because of the latter's constant humming over the former, a realised spiritual aspirant should always think of Brahm revealed in the cosmic sound called OM that resonates through his being. [Refer Canto 5, verse nos. 22 and 66 also. The black bee captures an insect or a worm and constantly hums over it for long time. The resonating hum emanating from the buzzing bee so much overwhelms the humble and captive insect or worm that the latter forgets about its own nature and turns mentally into a black bee! The poor creature begins to think of nothing else but the buzz of the bee. It is mentally metamorphosed into a bee, and loses its own individuality as an insect or a worm. Likewise, when the spiritual aspirant constantly thinks of Brahm, when he constantly meditates upon Brahm using the Mantra OM as a medium for such meditation, a method prescribed in all the Upanishads dealing with Yoga, a deep resonance is heard in his mind, and this is the cosmic sound of OM that begins to reverberate in his nerves and veins so much so that his entire inner-self is submerged in the resonance created by the sound of OM. This OM is a sound manifestation of the cosmic Consciousness, and so when the meditating person begins to hear this cosmic sound of OM in his nerves and veins, he is said to experience the titillation and ecstasy that comes with witnessing the cosmic Consciousness flowing inside his own body through his nerves and veins. This gives him the experience that comes with Brahm-realisation because the cosmic Consciousness represented by the vibrations created by the sound of OM is another name of Brahm. Refer also to Canto 4, verse no. 38, and Canto 5, verse no. 66.]

A Parivrajak is expected to completely abandon all sense of pride or ego as well as attachment with the three aspects of his body (which are the gross, subtle and causal bodies)¹ along with all other possessions he has, whether tangible or intangible, before he leaves his body in physical terms (i.e. before he dies). [This complete detachment and highest degree of renunciation ensures his final salvation and deliverance. His Atma would no longer yearn to take another birth so as to enjoy the sense organs of the body.]

A Sanyasi (Parivrajak) who adopts all the aforesaid methods and principles of Sanyas (renunciation) becomes fulfilled and truly liberated. Verily, this is what this great Upanishad affirms (92).

-----*****-----

Updesh (teaching)/Canto 4

[This Canto is an extension of the previous Canto 3 as it continues with the narration in detail of the importance and the due process of accepting the vows of Sanyas. Canto 5 would further elaborate what is being said in the present Canto.]

1. An Yati (ascetic or Sanyasi or Parivrajak) who abandons all contacts with this world, abandons even the Vedas (i.e. their ritualistic practices, but it does not mean to demean them in any way or restrict their study), pays no attentions to enjoyment of the pleasures of the sense objects, and has broken free from being dependent upon the

sense organs of the body and the need for their gratification, and instead remains focussed only on the spiritual upliftment of his Atma (soul; the true 'self')—only such an Yati attains the most exalted spiritual stature or the supreme destination of the soul called 'Param Gati'. [The word 'Param' means supreme, the most exalted, the highest, and the best, while the word 'Gati' means goal, destination or fate of a creature; result of an effort or deed, whether that result is favourable when it is defined as a reward or a 'good Gati', or unfavourable when it is regarded as a punishment or a 'bad Gati'.] (1).

[Note—Refer Canto 3, verse no. 32, and Canto 5, verse no. 26.]

2. An exalted and realised Sanyasi should never disclose anything about himself such as his name, clan or caste, his country of origin or region to where he belongs, his age, his scriptural knowledge, his general condition (such as whether he is sick or healthy, aged or young, rich or poor, of low or high birth, a professional or layman etc.), the codes of conduct he prefers to follow, the vows of abstinence and fasting that he observes, and how humble he is. [If he does so it would be tantamount to advertising himself, and it would not only stoke his ego or the pains of his past life, but also defeat the very purpose for which he had taken to Sanyas in the first place.] (2).

[Note—Refer verse nos. 33-34 of the present Canto 4.]

3. He should never talk with any woman under any circumstance. He should never think of or remember about any woman with whom he has had any contact or acquaintance in his earlier phase of life, and neither should he keep their pictures with him nor allow himself to talk about them (3).

4. To talk with any woman, to remember any woman, to have any discussion about any woman, and to view any picture of any woman—certainly a man who does these four things out of Moha (which is to have attachment with and longing for something) is bound to develop some or the other kind of Vikars (impurity, corruption, taint) in his mind and sub-conscious, and they would definitely prove to be his undoing and destroy his elevated stature as a Sanyasi (4).

[Note—In this context of what has been said in verse nos. 3-4, refer also to verse nos. 25-29 of the present Canto 4, as well as to verse no. 64 of Canto 3, and verse nos. 35-36 of Canto 6.]

5-6. For a Sanyasi, all the following are prohibited—Trishna (to have desire and yearning for something), Krodh (anger, wrath and vengeance), Jhutha (falsehood, conceit, deceit), Maya (delusory effects of the world), Moha (longing, desire, attachment), Lobh (greed, avarice, rapacity), Priya-Apriya (to treat something or someone as loving and dear, and the other as being the opposite), Shilpkala (craftsmanship), Vyakhyan-Yog (to give discourse or lecture to others), Kaam (to have desires, lust, yearnings, passions etc.), Raag (to have mental desire or affection for anything), Parigraha (accumulation of anything such as material objects), Ahankar (self pride, ego), Mamamatva (to be emotionally and mentally attached with something and love for it), Chikitsa (giving medical advise such as on use of herbs), Dharma-Saahas (to show valour in the name of religion), Prayaschit (to do any kind of repentance, penance or atonement for some misdeed), Pravaas (to stay at any one place), the use of Mantra (i.e. to use any other Mantra except the all-inclusive and universally divine Mantra known as OM to aid in one's spiritual progress), to give

Visha (poison anyone or do something that harms him severally), and to bless others employing the mystical powers that the Sanyasi possesses (5-6).

[Note—It would be observed that all these things have a negative impact on the mind and are related to this material world, and if one indulges in them then he cannot be categorised as a holy man a Sanyasi is expected to be. Any taints or impurities on his character would make him fall from his highly elevated spiritual stature; it would be demeaning for him and detrimental to his spiritual progress. Even a man who is still living as a householder is advised by the scriptures to avoid these negative traits, so naturally they are forbidden for a true Sanyasi who has renounced this world and all its characterising features.

Refer Canto 3, verse no. 90.]

7. A wise and enlightened Sanyasi who is always striving to attain Moksha (i.e. seeking final emancipation and salvation for himself) should not invite or welcome even his well-wisher, and neither should he tell him to go away. He should not tell him 'come, you're welcome' or 'go please'. [That is, he should be absolutely indifferent, stoic, neutral, detached and dispassionate. If anyone comes to him he shows no special attention to the guest, and similarly if he wants to go away the Sanyasi must not ask him to stay even for a second.] (7).

8. He should not accept any donation of material things given to him even in his dreams. ['In his dreams' is a figure of speech to mean 'never, under any circumstance'.]

He should not tell the donor to give it to someone else instead of him or on his behalf, and neither should he force anyone to give donation or accept it such donation (8).

9. He should never be mentally and emotionally moved or get distracted from his chosen spiritual path of Sanyas upon hearing any good or bad news about any person, either a female or a male, who was very dear to him in his early life, such as his kith and kin. Likewise, he should never be affected by a feeling of happiness on seeing them happy and prosperous, nor get emotionally upset by seeing their miserable condition.

He must abandon all emotions or feelings, such as that of happiness or gladness on the one hand, and of grief and sorrows on the other hand, for all times to come (9).

[Note—Refer Canto 3, verse nos. 25, 44.]

10-12. The following are the best principles to be followed by a wise and enlightened Sanyasi—Ahinsa (non-violence in all aspects, physical, mental and emotional), Satya (truthfulness), Asteya (non-stealing), Brahmacharya (observance of strict self-control, abstinence), Aparigraha (giving away of assets or possessions; non-accumulation; renunciation of the highest degree) [10], to become calmed, rested and peaceful, and stop being arrogant, rude, reckless or impertinent, not to become too humble to the extent of showing subservience or lowliness in the front of anyone no matter how senior he is, to remain always cheerful and happy (and never regret at becoming a Sanyasi or lament at inconveniences that are encountered), to be steady and unwavering in his chosen path, to have simplicity of demeanours, not to have any sort of affection for or attachment with anyone, to selflessly serve the Guru (the moral preceptor), to have the virtues of Shradha (steady faith and firm conviction), Kshama (forgiveness), Dam and Sham (self-restraint of the sense organs as well as the mind),

Upeksha (to treat with neglect all relationships; to be non-attached, non-involved and exemplarily dispassionate), Dhairya (to have patience, forbearance and resilience), Madhurya (to have sweetness of demeanours and speech), Titiksha (to have forbearance, tolerance, fortitude), Karuna (to have compassion, mercy, kindness) [11], Lajja (to feel ashamed at doing anything inauspicious and unrighteous and ignoble for a spiritual aspirant), to be diligent in pursuing the correct path and be interested in the pursuit of Gyan and Vigyan (enlightenment, wisdom and truthful knowledge that can be verified by personal experience), eating with restraint, and Dhriti (courage and patience developed by steadiness of mind and thoughts) [12]. (10-12).

[Note—Refer Canto 3, verse nos. 21, 33-35, 70-76 in the context of the present verse nos. 10-12.]

13. A Parivrajak who is free from all sorts of turmoil, restlessness and agitations, who is always sincere, diligent and steadfast in following the principles of Sata Gunas (noble and auspicious virtues), who has fortitude, dispassion and equanimity of approach towards everything in life, and who remains in a perpetual state of Turiya (transcendental state of conscious existence)—indeed, such a Parivrajak is called a Paramhans (a highly evolved state of renunciation which makes a man absolutely pure and incorrupt), and he is a living personification of the supreme Lord Narayan (Vishnu) himself (13).

14. Except the rainy season, a Parivrajak should stay in a small village for one night only, and in a big town or city for five nights only. But during the rainy season he can stay for four months at a place (14).

[Note—In the context of what is being ordained here, one should refer to verse nos. 15-16 and 19-20 of this Canto 4 below, as well as to verse nos. 31, 56-59 of Canto 3 earlier. Refer also to verse no. 1 of Canto 7.]

15. A Parivrajak should not stay in one village for more than one night. If he does stay then it is possible that his inner being might get influenced by certain emotional or mental taints such as developing Raag (getting attracted to anything and beginning to have affection for it) etc. [And this eventuality would be his undoing and detrimental to his spiritual progress. He would lose whatever moral ground he might have covered till then.]

Should any worldly faults ever taint him, he slides down and heads for hell. [Instead of moving steadily upwards towards his final freedom from all faults associated with the body and this material world to find emancipation and salvation for himself, a Sanyasi who allows even a slight speck of corruption to taint his moral fabric which is so scarred by its negative effects and its attendant grossness that he is pulled down by it. As a consequence of the latter, all his earlier austerities and penances go to waste.] (15).

16. He should stay outside a village (or populated areas) in a secluded, peaceful, calm and serene location. [Refer Canto 3, verse no. 60.]

He should exercise great control over his mind and sense organs. [Refer Canto 3, verse no. 68.]

He must not construct any permanent shelter such as a hut or a monastery for the purpose of his dwelling. Just like creatures of Nature such as insects and worms wander around everywhere on the face of the earth without getting attached to any one fixed place, he too must roam around for eight months of a year. He can stay at a

single place only for four months during the rainy season. [Refer verse no. 14 and 19 also of the present Canto 4.] (16).

17. A Parivrajak should wear only a single piece of cloth over his body, or remain naked. [Refer Canto 3, verse no. 31, stanza no. 1.]

His sight or view should not be fickle and jump from object to object, but instead it should be fixed on one target or goal that he has chosen in his life as a Sanyasi. [That is, he must remain focused on his spiritual goal and not allow himself to be distracted by so many charms of this fascinating but entrapping world. Having restless eyes show that his mind is fickle. Spiritual success is not at all possible with an unsteady mind. Refer Canto 3, verse nos. 31, 65-68.]

He must never get hooked or attracted towards enjoyment of sensual pleasures and objects of this material world; he must never do anything that would tarnish the holy and eclectic path shown by his predecessors. [Refer Canto 3, verse no. 36. By becoming a Sanyasi and avowing his faith in this holy institution, if he does anything that is not expected from such people, it would have a catastrophic cascading effect on the institution of Sanyas and society would begin to look down upon all Sanyasis because of the misdemeanours of this single person. People would treat with disdain the entire community of ascetics, monks, mendicants and friars because they have had a bitter experience of this single individual.]

So, keeping guard and remaining on constant vigil, he must roam around on the face of the earth freely, always thinking only of the Supreme Being. [Refer Canto 3, verse no. 53.] (17).

18. Constantly remaining steadfast on his spiritual path and being vigilant in strictly observing the principles of Sanyas, he must always live in a clean place.

A Yogi (an ascetic) should always keep his eyes low and see only the ground ahead of him (instead of looking up at things or persons that might distract him) during his wanderings. [Refer Canto 3, verse nos. 65-66.] (18).

19. He should not move out here and there during the night, at noon time, at dawn and at dusk. He should also not venture into such places as are completely un-inhabited, or terrains that are harsh, rough and inhospitable, and which cause unpredictable and endless miseries for any creature that happens to inadvertently venture into them. [It should be noted here that the scriptures do not mean to inflict torture upon Yogis or Sanyasis when they prescribe stern rules of conduct for them, as is clear that they tell him not to go to such places that cause physical harm or unnecessary discomfort. Strict codes of conduct and moral discipline are necessary if one has to succeed in such arduous and difficult a path as Yoga and Sanyas. Any negligence would spoil the whole game and would be detrimental for one's own welfare.]

A Parivrajak can stay in a small village for one night, in a bigger village for two nights, in a small town for three nights, and in a large town or city for five nights. [Refer verse nos. 14 and 16 also. When we read verse no. 16 which advises him to stay outside a village we conclude that he is not to stay inside the populated areas but on the outskirts of such villages or cities, or in some temple located within their territorial limits. Staying in a temple or shrine is sanctioned by Canto 3, verse no. 90. The idea is that he should be generally on the move except under certain circumstances. Constant wondering is also endorsed in Canto 7, verse no. 1.] (19).

20. During the rainy season, he should find a place that is surrounded by clean water to stay. [That is, the place should have a clean source of water readily available, such as being near a large pond, a lake or a river.] (20).

21. Treating all the living beings as being similar to his own 'self', having no sense of discrimination between any of them and his own self, he must wander freely like a blind man, a stupid man, a deaf man, a lunatic or mentally deranged man, or a dumb man. [That is, his demeanours should be innocent like a child. He should not see anything like a blind man, not get involved in intellectual exercises like a stupid man, not hear anything like a deaf man, not get mentally attached to anything like a deranged man, and not speak anything like a dumb man. These forms of avoiding any contact with the deluding and entrapping world helps him not only to maintain his calm, peace, neutrality and poise, but also helps him to control his mind and emotions, and to direct their efforts towards his long term spiritual welfare and help him to move ahead on his spiritual path unhindered and without any fetters attached.] (21).

[Note—Refer Canto 3, verse no. 62.]

22. For Sanyasis who are called 'Bahudak' and for those who live in a forest it is prescribed that they take a bath three times a day.

For Sanyasis who are categorised as 'Hans' it is stipulated that they should take only one bath each day.

For those Sanyasis who have risen to a higher spiritual stature and are therefore honoured by the title of Param Hans (supremely realised, immaculate, holy and pure) there is no such recommendation. [They are no special rules for them as laid out for other categories of Sanyasis. The reason is that bath and other purification rites are meant for those who are yet not completely clean and holy internally in the true sense, or who are like the pilgrim who has yet not reached his destination. The word 'Param' itself shows that this sort of Sanyasi has reached the pinnacle or the citadel of self-realisation and enlightenment. He has been washed clean of all the taints that mire other junior categories of Sanyasis, and so it makes no sense for him to clean the external body, because this body has no relevance at all.

Therefore, for those who have already reached this exalted stature of being a Param Hans, such exercises of taking a purification bath become superfluous, and hence unnecessary. However, if they do wish to take a bath due to some reason, say an extreme hot environment, then they are not even prohibited from doing so. In fact, they are given a lot of freedom to decide what suits them. Refer verse no. 24 of this Canto 4 below.] (22).

23. For 'Ek-Dandi' Sanyasis (i.e. those ascetics who hold a straight staff made of one single piece of wood) the following rules are prescribed for observance—Maun (silence), Yogasan (the various sitting postures of Yoga), Yoga (meditation leading to the union of the self with the cosmic Self, along with unification of the various Prans or vital winds inside the body), Titiksha (to have forbearance, tolerance, fortitude), Ekanta (to live alone and in a secluded place; not to have company), Nispriya (to remain free from desire and wants; to be contented; to be dispassionate, indifferent and detached), and Samatva (to have equanimity; to treat everything and everyone equally; not to discriminate between any two entities based on any worldly criterion) (23).

24. Since it is not required of a Sanyasi (a Parivrajak) who has reached the higher spiritual stature of being a Param Hans (a superior order of Sanyas) to take a regular purification bath (refer verse no. 22), it is sufficient for him to get rid of the various Vrittis (natural tendencies and inclinations) of his Chitta (sub-conscious mind). [That is, for a Param Hans Sanyasi, the riddance of the mind's natural waywardness, inherent fickleness, and its natural tendency to be attracted towards the sense objects of this material world instead of remaining focussed on spiritual matters is equivalent to taking a purification bath. This is because while bathing in water would only clean the external body, if the mind is not freed from its corruptions and faults then the internal being would remain as polluted and defiled as before, and actual cleansing has not been achieved. Since a Sanyasi is not supposed to act to please the world, it is most important for him to clean his inner being more than the external body, as his 'truthful self' is his inner being and not the external body.] (24).

25. Say, how much difference is there between a man who moves around in a body which is like a bag made of skin that encloses or contains flesh, blood, nerves and veins, fat, marrow and bones, and an insect or worm or germ that lives in filth such as excretory products consisting of stool and urine as well as stinking purulent discharges effusing from rotten mucous surfaces? [That is, there is no difference between the two of them.] (25).

26. On the one hand is the actual form and truthful reality of this body as a big container of reprehensible things such as cough and mucous, and on the other hand is its misleading external façade which appears to have handsome qualities such as beautiful and attractive organs, chiselled features and exceptional charms (26).

27. If a man is stupid enough to have affections for and attractions towards such a reproachable and despicable body consisting of nothing else but blood, flesh, purulent mucous, stool, urine, marrow, nerves, veins and bones, then surely enough he goes to attain hell or a lowly and contemptible stature befitting his low mentality (27).

28. Though there is no fundamental difference between the private organs (i.e. the genitals) of a woman and a rotten tubular duct inside the body such as a diseased and swollen vein or nerve, it is still out of a man's own imaginations based on ignorance and stupidity (as well as lust and passions and other such Vikaars or faults and shortcomings of the mind) that he thinks that there is a difference, and therefore he is inclined to long for one and feel repulsive for the other. [That is, to think of the female organ, which is like a hollow tube full of bodily fluids, as charming, and the festering, maggot-infested wound of some vein or artery in the body as horrible, is indeed a stupid and most ignorant way of treating the reality. For a wise man, they are both alike, and if he must abhor the thoughts of rotten vein than he must also instinctively feel repulsive when thinking of the female organ.] (28).

29. After all, what is the female sex organ? It is nothing but a hole that is covered by a flap of skin that has been ruptured down the centre. What more, even this is stinking due to the whirling and the passage of the Apaana Vayu (the wind that moves in the lower part of the abdomen, and usually goes down the intestines and escapes through the anus).

We bow (in sarcasm) to a man who remains ever engrossed in it and its thoughts. What other great courage can he display! [To be enamoured by a hole that

emits stink due to its proximity to the anus from where the foul Apaan wind passes, and through which the horrible stale odour of the urine emanates, is absolutely incredible and the most reprehensible thing for a man within his right senses to do. But still if he does it, then of course he deserves the greatest of ridicule, contempt and reproach.] (29).

[Note—Refer Canto 3, verse nos. 46-50 in the context of present verse nos. 25-29 which also endorse the view that the gross body of the creature is worthy of contempt.]

30. For a truly wise and enlightened Parivrajak there is no duty left to be completed, deed left to be done or action that is yet to be taken with respect to anything, and neither is there any necessity for him or any obligation on his part to wear any external signs or symbols. [Refer Canto 3, verse nos. 80-82, 91.]

He is free from all affections and endearments. He is free from all fears and reservations. He is calm, peaceful and poised. He is free from all turmoil, restlessness and agitations. He is also free from the numerous restrictions and obligatory formalities to be observed by various classes and castes in the society. He is even free from the need of making diligent efforts to acquire food for himself (because he is supposed to accept whatever comes his way as a grace of the Lord without being worried about what it is, or from where his next meal would come) (30).

31. A renunciate hermit (Muni) should wear only the loin-cloth, or else he should remain without clothes (i.e. naked) while he constantly remains engrossed in contemplation and remembrance of the supreme Lord. Such a wise and enlightened ascetic (Yati) is successful in attaining the transcendental state of Brahm realisation (31).

32. Though certain signs and symbols are prescribed for the use of Parivrajaks (Sanyasis), but primarily it is Gyan (truthful knowledge of the esoteric principles of the 'supreme self' and metaphysics) that is the provider of Moksha (final liberation and deliverance; emancipation and salvation) to them.

All the external signs and symbols of Sanyas and codes of conduct they follow are useless if one has not inculcated Gyan in its holistic and truthful form (32).

[Note—Refer Canto 3, verse no. 86.]

33. A true Brahman/Brahmin (i.e. a person who is Brahm-realised) is one about whom no one can determine his true nature, as to whether he is a holy and pious person or not, whether he is a wise, knowledgeable, enlightened and learned man or not, and whether he lives an auspicious and righteous life observing all the tenets of right living, right thoughts and right conduct or not. [That is, a truly realised man prefers to keep quiet and not boast of his spiritual achievements or his knowledge. He has no desire for praise that would automatically come should people come to know of this holiness and exalted stature. It makes no difference to him if people neglect him as one other vagabond going around to beg though he might be possessing exceptional mystical powers that would stun the world should he display them even once. He rather prefers anonymity because this gives him his much desired peace and need for solitude. For otherwise, he would be surrounded by multitudes of eager blessing-seekers, and he would regret this development later on.] (33).

[Note—Refer Canto 4, verse no. 2.]

34. This is why a wise and enlightened Parivrajak should not be too much concerned about the signs or symbols of Sanyas, but instead concentrate upon implementing the best of spiritual doctrines pertaining to the supreme Brahm who is eternal and imperishable. It is this knowledge of Brahm that would be the ultimate tool that gives him Moksha as a Sanyasi. [Refer Canto 3, verse nos. 91-92.]

Relying on the most esoteric and holy principles of true Sanyas, he should remain incognito and behave in such a way that no one becomes aware of his real spiritual stature. [Refer verse no. 33.] (34).

35. Remaining an enigmatic mystery for all, he must remain above the various restrictions that are imposed upon a man depending upon the different class or caste or phase of life to which he belongs. [That is, he must not conform to any set rules in his behaviour so that people can determine who he might be or what his mental state is.]

Remaining without any permanent shelter, he should wander on the face of the earth like a man who is blind, stupid or dumb. [Refer Canto 3, verse no. 62; Canto 4, verse no. 21; Canto 5, verse no. 50, 53 also.] (35).

36. Even the exalted Gods feel eager to attain the exemplary stature of extreme quietude, contentedness and bliss that is experienced by such an achieved Sanyasi when they watch him.

The eclectic spiritual state of Kaivalya (the only one; the unique state of transcendental bliss and quietude) is obtainable only when one is not aware of the existence of any other entity except his own Atma, the pure conscious self. [Refer Canto 3, verse no. 27.]

Verily, this is the divine and holy message pertaining to the eclectic spiritual essence known as Brahm Tattva.’ (36).

37. [This verse is in the form of a running paragraph.]

Sage Narad once again asked the great grandfather of creation Brahma—‘Oh Lord! Please elaborate further on the steps involved and the proper system to be followed while accepting the vows of Sanyas.’ [Refer Canto 3, verse nos. 80-92.]

Brahma said ‘Tathastu’ (so it shall be) and began his discourse.

‘When one wishes to accept the vows of strict renunciation (Sanyas) and enter the fourth and final phase of life as a Sanyasi—either directly as a ‘Aatur Sanyasi’ (i.e. one who eagerly accepts Sanyas as the result of profound renunciation, without waiting for old age) or after having systematically passed through the earlier three phases of life as a ‘Kram Sanyasi’ (i.e. one who takes to Sanyas after having lived earlier as a Brahmachari or celibate student, a Grishastha or household, and a Vanprastha or one who leaves the house and wanders around as a preparatory stage for final Sanyas)—he must first undertake certain purifying rites and do penances, such as doing Krichra and other such rituals followed by the ‘Astha Shraadh’ (as would be narrated now), that help one to atone for one’s past sins and cleanse one’s self. [Refer Canto 3, verse nos. 5-10, 77.]

The Astha Shraadh are the devotional worship and offerings that one makes by the way of oblations and libations to the following eight entities—Gods, Rishis (sages), Dibya Maanav (Holy Men; or those who have attained super-human stature), Bhuts (the five primary elements), Pitras (spirits of dead ancestors), the Matrikaas (divine Goddesses) and one’s own Atma (the pure conscious soul; one’s true ‘self’). It is most important to satisfy these eight before one takes the vows of Sanyas.

[Now, the details of these eight Shraadh are being narrated.] To start with, for doing Dev Shraadh (offerings meant for the Gods) one should first invoke the Vishwa Devas (the Lords of the world) named Satya and Vasu, followed by the Trinity Gods, i.e. Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder.

For doing Rishi Shraadh, one should invoke all the great sages and seers—viz. the Dev-Rishis (celestial sages), the Raj-Rishis (those sages who have acquired the stature equivalent to a king amongst their peers), and Manushya-Rishis (sages who live like ordinary humans but are more exalted and enlightened than the latter).

For the purpose of Dibya Shraadh (or offerings made for exalted and divine entities), one should invoke the eight Vasus, the eleven Rudra (the eleven forms of Shiva) and the twelve Adityas (Suns)¹.

For the purpose of doing Dibya Maanav Shraadh (i.e. offering worship and oblations to holy men), one should invoke the great men such as Sanak, Sanandan, Sanatkumar, and Sanatsujat.

For doing Bhut Shraadh (or offerings made to the elements), one should invoke the five primary elements such as the earth, the sky etc. (the other elements being water, fire and air), and their manifestations in the form of the five organs of the body such as the eye etc. (the other being ear, nose, tongue and skin) and the four types of creatures called Jarayuj (those born from an embryo developing inside a mother's womb such as humans), Swadej (those born from sweat such as lice), Andaj (those born from eggs such as birds and insects) and Udbhij (those born from seeds such as plants).

For doing Pitra Shraadh (or libations made for the spirit of dead ancestors, especially those of the male ancestors), one should invoke the spirits of one's father, grandfather and great grandfather.

For the purpose of doing Maatri Shraadh (libations made for the spirit of one's mother etc.), one should invoke the spirit of one's mother, grandmother and great grandmother.

Finally, for doing Atma Shraadh, one should invoke one's own Atma as an entity that is pure consciousness and the true 'self' of the worshipper, as well as the Atma (soul; Spirit) of one's father and one's grandfather. [The worshipper must understand that the Atma is a universal and indistinguishable entity—it is the same in his own self as it was in his ancestors. This is the non-dual philosophy of Advaitya Vedanta, and a true Sanyasi is one who believes in this tenet of non-duality.]

These eight Shraadhs are to be treated as part of one obligatory sacrifice ritual for the purpose of accepting the vows of Sanyas. Since each Shraadh if done separately, would require the aspirant to invite two Brahmins to preside over the rituals, it follows that a total of sixteen Brahmins should be invited when they are done together. These Brahmins should be duly honoured and worshipped. The Mantras employed for this purpose should be according to the branch of the Vedas to which these Brahmins owe their allegiance.

These Shraadhs can be done in one day if they are done together (as mentioned above), or spread over eight days if done separately.

The invited Brahmins should be duly honoured, worshipped and fed as described in the rules prescribed for doing Shraadh. At the end of the rituals, the rite of Pinda Daan (offering of rounded balls of cooked cereals to the deity invoked during the ritual) is to be done with great respect. Then donation or Dakshina should be given to the Brahmins along with some mouth fresheners such as betel leaves.

To tonsure the head, the aspirant should leave seven or eight strands of hair on the top of the head and get the rest shaved. The beard, moustache and nails should

also be shaved off. The hair in the arm-pit and around the testicles should never be shaved. After this shaving off of bodily hair, the aspirant must take a bath.

Then, he should repeat the Gayatri Mantra one thousand times at dusk after worshipping Brahm during the prayers offered while observing the Sandhya sacrament. [A Hindu is expected to worship three times of the day when two phases of time meet, such as dawn, noon and dusk. This is called doing Sandhya.]

Next, the aspirant should establish the sacred fire independently to do the special fire sacrifice dedicated to Brahm, called the 'Brahm Yagya'. [Normally when a fire sacrifice is done, the fire in the sacrificial pit is lit from a spark brought from some earlier sacrifice done in a householder's place. But an aspirant Sanyasi should light his own fire independently.]

The Yagya (fire sacrifice) should be done properly by offering melted butter till the offerings of Aajyabhaag is complete according to the way prescribed for the branch of the Vedas one ascribes to. [The 'Aajyabhaag' is the name given to the two libations of Aajya or melted butter that is offered to the Soma (the Moon God) and Agni (the Fire God) preceding the principal oblation to the Darsha sacrifice. The Darsha Yagya is the fire sacrifice that is done on the Amavasya day, the last day of the dark fortnight of the lunar month.]

After completing the fire sacrifice, the worshipper should take a few mouthfuls of Sattu (roasted gram that has been ground to a coarse powder and kneaded into dough with water). Thereafter, he should sip some water to clean the mouth and place some firewood on the fire to save it from extinguishing. Then he should sit on a dark deer skin to the north of the fire pit and spend the night remaining awake and hearing ancient stories as narrated in the Purans etc.

In the fourth quarter of the night (i.e. early morning before sun rise), he should take a bath and cook some sweet porridge in the fire of the previous night. Then he should offer sixteen oblations of this porridge to the sacred fire of the previous night (and in which this porridge was cooked) using the sixteen Mantras of the Purush Sukta (a hymn of the Vedas dedicated to the Viraat Purush, the all-pervading cosmic Supreme Being), saying one Mantra with one offering.

After having worshipped the Supreme Being with this sacrifice he should clean his mouth by sipping some water and make charities by giving away clothes, ornaments, gold, cows, vessels and other material objects that he has in his possession. [That is, he should not keep anything with him when he takes the vows of Sanyas.] This would complete all the prescribed rites and rituals necessary for systematically accepting the order of Sanyas.

Then after having dismissed the Brahmins representing Brahma, he must say the following two Mantras and symbolically establish the Adhi-daivak form (i.e. the divine celestial form) of the sacred fire inside his own being for the future. [That is, now onwards he need not worship the fire formally in any external ritual involving elaborate Mantras and other formalities, but worship it internally in his own 'self'.]

The two Mantras for this purpose are—

(i) 'Sam Ma Sinchantu Marut Samindra Sam Brishaspati; Sam Mayamagni Sinchatwayush Cha Dhanen Cha Balen Chanushmantam Karotu Ma'. (saṃ mā siñcantu marutaḥ samindraḥ saṃbr̥haspatiḥ / saṃmāyamagniḥ siñcatvāyusa ca dhanena ca balena cāyusmantāḥ karotu mā)

[The brief meaning of this Mantra is 'Oh the divine Gods such as Maruts (the Wind Gods), Indra (the king of Gods), Brihaspati (the moral preceptor of Gods) and Agni (the Fire God)—shower me or bless me with welfare and auspiciousness.

Oh Fire God! Bless me with a long life (i.e. a disease-free life), with assets in the form of Gyan (knowledge), and with all necessary abilities and resources (that would help me achieve success in my new life as a Sanyasi).’]

(ii) The second Mantra is ‘Ya Te Agne Yagyiya Tanustyeeyhaya-rohatmatmanam; Acha Vasuni Krinvannasme Naryaa Puruni; Yagyo Bhutva Yagyamaasid Swaam Yonim Jatvedo Bhuva Aajaayamaanha Sa Kshaya Ehi’. (yā te agne yajñīyā tanūstayehyārohātmātmānam / acchā vasūni kṛṇvannasme naryā purūṇi / yajño bhūtvā yajñamāsīda svām yoniṁ jātavedo bhuva ājāyamānaḥ sa kṣaya edhī)

[The brief meaning of this Mantra is ‘Oh Agni (Fire God)! Please reveal yourself here in the holy form that you assume during the sacred fire sacrifices, and while blessing us with all the material things that are needed by all human beings for their welfare and normal comfort in this material world, you must also especially establish yourself perpetually in my inner self called the Atma (my soul). Becoming the sacred fire of the fire sacrifice, establish yourself in your primary holy form. Oh Jatveda Fire—reveal yourself from the earth and get established in my body like it were your abode.’ This is because the body has the earth element as its dominant ingredient.]

After having completed the fire sacrifice as described above, the aspirant should circumambulate the consecrated fire, bow before it reverentially, and give it rest.

Then he should do the Sandhya prayers that are done at dusk and dawn by repeating the holy Gayatri Mantra² one thousand times.

Getting up, he should proceed in the direction of the sun (i.e. towards the west at dusk, and towards the east at dawn) and enter any water body (such as a river or a lake). He should sit down in the water in such a way that the water reaches his navel region, and then offer libations to the eight Dikpals³. [The Gayatri Mantra is principally offered to the Sun God. So, after offering the prayers by facing the Sun God who is in the east at dawn and in the west at sunset, the worshipper moves in the respective direction for the next step to be undertaken now.]

The divine Goddess Savitri (representing the dynamic powers of the Supreme Being and made vivid by the dazzling rays of the Sun God in a symbolic manner) is invoked and requested to establish her divine presence in the Vyahritis⁴. The Mantras to be used for this purpose are the following four—

(i) ‘Aham Vrikchaya Reriv; Kirti Prishtham Gireriv; Urdhvapavitro Vajinivaswamritmasmi; Dravinam Me Sarwachasam Sumedha Amritokchitaha; Iti Trishankorvedanuvachanam.’ (aḥaṁ vṛkṣasya reriva / kīrtiḥ pṛṣṭhaṁ gireriva / ūrdhvapavitro vājīnīvasvamṛtamasmi / draviṇaṁ me savarcasaṁ sumedhā amṛtokṣitaḥ / iti trīśaṅkorvedānuvacanam /)

[The meaning of this Mantra in brief is ‘I am the conqueror of the world that is like a huge tree. My fame is as high as the lofty summit of a mountain. Like the Amrit or nectar that produces food and stored in the sun, I too am a treasury of the most holy and divine nectar of purity. I am glorious and full of understanding and intelligence. I am anointed by the nectar called Amrit. Verily, this is the enlightened words of the great Trishanku.’]

(ii) ‘Yaschandasāmrīṣabho Viśvarūpaḥ; Chandobhyo-adhyamritaatsambavhuv; Sa Me Indro Medhaya Sprinotu; Amritasya Devdharanao Bhuyasam.’
(yaśchandasāmrīṣabho viśvarūpaḥ / chandobhyodhyamṛtātsambabhūva /
sa mendo medhayā sprinotu / amṛtasya devadhāraṇo bhūyāsam /)

[The meaning of this Mantra in brief is ‘He who is lauded by the Vedas and who is manifested in all the forms in existence; he who is specially revealed by the Vedas—let that Indra (the chief amongst the Gods) bless me with intelligence and understanding. Oh Lord (Indra)! Let me be the one who is competent enough as well as the fortunate one who can establish the Supreme Being known as the Parmatma (the supreme Atma or the supreme Consciousness representing the supreme Brahm), who is an embodiment of Amrit (the nectar that gives eternity, bliss and beatitude), in my own self.’ That is, let me be blessed and enlightened enough to accept the august presence of the cosmic Consciousness representing the Parmatma in the form of my own Atma that resides in my inner being as my truthful conscious ‘self’.]

(iii) ‘Sharirum Me Vicharshanam; Jivhaha Me Madhumattama; Karnavhyam Bhuri Visravam; Brahmanha Koshoasi Medhayapihitha; Srutam Me Gopaya.’ (śarīraṃ me vicarṣaṇam / jihvā me madhumattamā / karṇābhyāṃ bhūri viśravam / brahmaṇaḥ kośo’si medhayāpihitaḥ / śrutam me gopāya /)

[The meaning of this Mantra in brief is ‘Let my body be agile, nimble and active. Let my tongue be sweet and pleasant in what it says (i.e. let my speech be nice and sweet; let me be able to talk pleasantly and truthfully). Let my ears hear only the best of words that are spoken (i.e. prevent me from having to hear idle talk, deceitful words or any other kind of falsehoods). You (Savitri) are endowed by the glorious and grand virtues that are like those possessed by Brahma, the creator. Let me not forget the great words that I hear (i.e. give me a good memory).’]

(iv) ‘Dareshanyascha Vitteshanyascha Lokeshanayascha Vyuthitho-aham OM Bhu Sanyastam Mayaa. Om Bhuvha Sanyastam Mayaa. Om Svaha Sanyastam Mayaa. OM Bhurbhuva Svaha Sanyastam Mayeti Mandra-madhya-mataal-jadhya-nibhirmanasaa’ (dāreṣaṇāyāśca vitteṣaṇāyāśca lokeṣaṇāyāśca vyutthito’haṃ om bhūḥ saṃnyastaṃ mayā om bhuvāḥ saṃnyastaṃ mayā om suvaḥ saṃnyastaṃ mayā om bhūrbhuvāḥsuvaḥ saṃnyastaṃ mayeti mandramadhyamatāladhvanibhirmanasā)

[The meaning of this Mantra in brief is ‘I have risen above (i.e. have abandoned) such worldly desires as those related to one’s wife, material prosperity and well-being, as well as all other forms of worldly entanglements such as the desire for worldly glory, grandeur, fame and majesty. I have completely renounced the material world. Indeed, I have fully and completely renounced all glories and majesties that are associated with any of the three worlds such as Bhu (earth), Bhuvaha (the lower heaven) and Swaha (the upper heaven). I don’t long for anything; I do not yearn for anything whatsoever. I have no fears of any kind in my mind ’]

These Mantras are to be said either mentally (i.e. silently), or uttered/muttered with a low voice in a whisper, or can even be said loudly so that others can hear them being said. (manasā vācoccāryābhayaṃ).

Then the aspirant should say the Mantra ‘Abhayam Sarvabhutebhyo Mattha Sarvam Pravartate Swaha’ and sip some water to clean the mouth. (abhayaṃ sarvabhūtebhyo mattaḥ sarvaṃ pravartate svahe).

[The brief meaning of this Mantra is ‘All the creatures are hereby given fearlessness as far as I am concerned; they no longer have anything to fear from me. All are dear to me. All treat me kindly (and I also reciprocate their gesture by being loving, kind and gracious towards all).’]

The two palms of the hand should be made into a cup and filled with water. This water is thrown in the eastern direction with the Mantra ‘OM Swaha’. After that, all the remaining hairs on the head are to be shaved off.

Now, the Yogyopavit (sacred thread) is to be dispensed with. This is done by saying the Mantra ‘Yagyopavitam Param Pavitram Prajapateriyatsajam Purastaata; Ayushmagryam Pratimuncha Shubhram Yagyopavitam Balamastu Tejaha; Yogyopavit Bahirna Nivasettwamantaha Pravischya Madhye Hyajasttram Paramam Pavitram Yasho Balam Gyan-vairagyam Medham Prayacheti.’ (yajñopavītaṁ paramaṁ pavitraṁ prajāpateryatsahajaṁ purastāt / āyusyamagryaṁ pratimuñcya śubhraṁ yajñopavītaṁ balamastu tejaḥ / yajñopavīta bahirna nivasettwamantaḥ praviśya madhye hyajasraṁ paramaṁ pavitraṁ yaśo balaṁ jñānavairāgyaṁ medhāṁ prayacchati)

[The brief meaning of this Mantra is ‘The Yagyopavit (thread worn by a Hindu across his chest) is sanctified, very holy and pure. It came into existence simultaneously with the creator Brahma. It is the best thing to wear, and is an enhancer of age (i.e. it helps to keep the ill effects of malignant stars that cause diseases and other problems for the body that make the body weak and fragile prematurely at bay so that the age is prolonged). The Yagyopavit should not be kept aside (i.e. it should not be removed from the body and kept elsewhere). Oh the sacred thread that represents the fire sacrifice! Now onwards, please establish your divine presence in a symbolic manner in my Atma and become one with it. (That is, from today onwards, I would assume that you have established your august presence in my Atma in a subtle and symbolic form as I am not going to wear your external gross form on my equally gross body any longer). You are most pure and holy. Bless me with the inner strength that would enable me to wear you or accept you as a symbol of the eternal fire element that represents the sacred fire of the sacrifice, and is the eternal purifier of the soul, in my inner self as the vital spark of life that resides in my gross body. This would enable me with the necessary energy, strength, vitality and stamina that would help me to move ahead on my spiritual path without losing vigour and drive.’]

When the above Mantra is complete, the sacred thread is to be torn (cut or removed) from the body and placed in the cupped palms of the hand which has been dipped in water so that it is already full of it. Then this water, along with the torn sacred thread, is to be reverentially offered to the water body (i.e. the river on the banks of which the ritual is being performed) by saying the Mantra ‘OM Bhu Samudram Gacha Swaha’. (oṃ bhūḥ samudraṁ gaccha svāhe)

[The Mantra means ‘OM salutations! I offer this sacred thread to the earth. Let it be taken to the ocean or the sea in due course of time.’ The sacred thread is actually offered to the river, and when the water of this river would eventually reach the ocean, the thread would find its final resting place there. Since it is not practically feasible for the Sanyasi to go to the ocean or the sea personally to offer the thread there, this medium is adopted by him.]

Then the aspirant should say the following three Mantras, and sip some sanctified water each time the Mantra is said—

- (i) ‘OM Bhu Sanyastam Mayaa’ (oṃ bhūḥ saṃnyastaṃ mayā);
- (ii) ‘OM Bhuvaha Sanyastam Mayaa’ (oṃ bhuvah saṃnyastaṃ mayā); and
- (iii) ‘OM Swaha Sanyastam Mayaa’ (oṃ suvah saṃnyastaṃ mayeti).

[The meaning is simple. It means ‘OM salutations! I renounce everything on the earth’; ‘everything in the lower heavens’; and ‘everything in the upper heavens’ respectively.]

Thereafter, the aspirant should say the Mantra ‘OM Bhu Swaha’ (oṃ bhūḥ svāhetyapsu) and offer the clothes that he has been wearing, along with the waist band, to the water body (vastraṃ kaṭisūtramapi visrjya). [The Mantra means ‘OM salutations! I am offering them to the earth’.]

Thus, having discarded all his possessions and becoming naked, he must think that he has renounced all his worldly obligations and has disassociated himself from all the worldly deeds (sarvakarmanirvartako’hamiti).

Contemplating upon his Atma (his pure conscious ‘self’) as being his true identity (smṛtvā jātārūpadharo bhūtvā svarūpānusandhānapūrvaka), he should raise both his hands sky wards (to indicate that he has nothing to conceal now, that he has no possessions now, that he is finally bidding farewell to this world, that he has surrendered himself to the Supreme Being, and to tell the Lord ‘here I come!’) and head in the northern direction (mūrdhva bāhurudīcīṃ gacchet)⁵ (37).

[Note—¹The eight Vasus—The Brihajjabal Upanishad of the Atharva Veda, Brahman 4, verse no. 16 lists the eight Vasus as follows—Ghar, Dhruv, Soma, Kripa, Anil, Anal, Pratyush and Prabhaash.

The eleven Rudras—(i) Mannu, (ii) Manu, (iii) Mahinas, (iv) Mahaan, (v) Shiva, (vi) Ritdwaj, (vii) Ugrareta, (viii) Bhav, (ix) Kaal, (x) Vamdeo, and (xi) Dhritvrat. The eleven Rudras appear in Rig Veda 1/43/1, and Taittiriya Brahman 3/4/9/7. They are regarded as the father of the Wind God or the Maruts (Rig Veda, 2/33/1). The word Rudra means one who is angry, terrible and wrathful. Amongst the Rudras, Lord Shiva is regarded as the most senior and enlightened.

The eleven Rudras according to Vishnu Puran (1/1/15) are the following— Har, Bahuroop, Trayambak, Aparajaet, Shambhu, Vrishakapi, Kapardi, Raivat, Mrigvyadh, Sharva, and Kapaali.

The twelve Adityas— According to mythology, there are said to be *twelve Adityas* which are simply as many forms of the Sun God. These are the revelations of Brahm in the form of the Sun to carry out the following functions of creation—(a) take care of the world (Rig Veda, 2/27/4); (b) are like the heads (Taittiriya Brahman, 1/2/3/3) and eyes (Jaimini, Uttar. 2/1/2/3) of all the creatures.

These twelve Adityas appear first in the Rig Veda 1/41/4-6 and 2/27. They are the sons of Aditi, the mother of Gods (Atharva Veda, 8/9/21). They are the following—the eight Vasus + Indra + Sun + Vishnu + Shiva = twelve in number.

According to Vishnu Puran, the twelve Adityas are the following— Dhata, Arayma, Mitra, Varun, Anshu, Bhug, Indra, Vivaswan, Pusha, Parjanya, Twashta, and Vishnu.

²The Gayatri Mantra is ‘OM BHURBHUVAHA SVAHA¹, TSAVIURVARENYAM², BHARGO DEVASYA DHIMAH³, DHIYO YO NAH PRACODAYAT⁴’. It means ‘OM is the supreme, transcendental Brahm. He is the lord of creation of the terrestrial, the celestial and heavenly worlds. I offer my oblations to you. That Brahm is luminous like the sun. He is excellent, the best, the most exalted, a destroyer of sins, and a divine entity. May he imbibe, infuse and inspire our intellect with wisdom and enlightenment so that we are purified and move

on the righteous and noble path'. The four phrases of the Gayatri Mantra are clearly marked by small numerals in this Mantra. This Mantra appears in the Rig Veda (3/62/10), the Sam Veda (1462), and Yajur Veda (3/35, 22/9, 30/2, 36/6).

³The eight Dikpals—are the custodians or protectors of the eight directions. Indra (the king of Gods) takes care of the east, Yama (the God of death) takes care of the south, Varun (Water God) takes care of the west, Kuber (the Gods' treasurer) takes care of the north, Agni (the Fire God) takes care of the south-east, Surya (the Sun God) takes care of the south-west, Vayu (the Wind God) takes care of the north-west, and Ishan (Shiva) takes care of the north-east.

⁴The *Vyahritis* are the primary root words pronounced by the creator Brahma at the time of the beginning of creation and from which formed the nucleus around which the seven worlds formed. In other words, the rest of the creation was revealed from these primary sounds created by Brahma.

The seven 'Vyahritis' are the words—(1) Bhu, (2) Bhuvaha, (3) Swaha, (4) Maha, (5) Janaha, (6) Tapaha, and (7) Satyam. 'Bhu' was the nucleus for earth, 'Bhuvaha' for the sky above the earth, 'Swaha' for the space beyond the earth's atmosphere and is generally meant for the heavens, 'Maha' stands for the greater heavens beyond the solar system, called the Maha-Loka where enlightened sages and seers are supposed to dwell (as opposed to earth where ordinary creatures including subterranean creatures would finally take up residence), 'Tapaha' was the place where exalted ascetics would do penances and austerities, and 'Satyam' was the truthful and ultimate abode where the ultimate and irrefutable supreme truthful entity which is the only Authority in creation resides.

According to Sankhya Shastra and the Purans, Brahma, who is known as 'Swayambhu' (self-created and self-begotten in the sense that he had no father or ancestor from whom he descended) created seven elements called 'Vyahriti', viz. Bhuh, Bhuvaha, Swaha, Mahaha, Janaha, Tapaha and Satyam respectively which constitute the fundamental elements which formed the gross body of the creation as its core building blocks at the macro level. Encircling this core is the rounded globe called 'earth' which is surrounded by concentric circles constituting of 'water', 'energy' called 'Tej', 'wind or air', 'sky or space', the notions that are described as 'pride, ego, arrogance, haughtiness and vanity' collectively called 'Ahankar', and the notions of 'importance, majesty, grandeur, magnificence and lordliness' called collectively as 'Mahattatva'. Each of them was ten times larger than its preceding layer or circle.

The seven Vyahritis and the worlds they represent are the following—(a) 'Bhu' represents this world (earth), fire, Rig Veda and Pran (life giving breath); (b) 'Bhuvaha' represents the sky called Antariksha, wind or air, Sam Vedas and Apaana wind (i.e. the wind which passes down the intestines and helps digestion and excretion); (c) 'Swaha' represents Dukoka (the heavens), Aditya (the celestial sun), Yajur Veda and Vyan (the wind that prevails throughout the body); (d) 'Maha' represents Aditya (the Sun God), Chandrama (the Moon God), Brahm (the supreme transcendental Being who has no specific attributes) and Anna (food which sustains life in this creation); (e) 'Janaha' represents the world inhabited by mortal creatures such as the life on earth; (f) 'Tapaha' represents the world where great ascetics and hermits live to do severe penances and austerities, and therefore it is most auspicious and holy and marked by an effulgence of divine energy and splendour; and (g) 'Satyam' representing that truthful abode where the supreme transcendental Brahm lives; it is the ultimate destination of all spiritual pursuits, and is marked by eternal beatitude and felicity.

⁵In the context of the Indian sub-continent where the Upanishads were first conceived and composed, going in the 'northern' direction refers to heading for the lofty heights of the Himalayan mountain range. It is here that great ascetics, sages, seers, hermits and mendicants used to live in early times. It has a dense population of enlightened and self-realised souls. This factor injected an aura of divinity and

positivity to the northern direction. Further, the northern direction where the mountains and verdant pristine forests were located had the quality of being tranquil, lonely, serene, calm and peaceful that was very helpful for spiritual pursuits, such as doing Tapa (austerity and penance), Dhyan (contemplation) and Yoga (meditation). This is the reason why the green, cool and pleasant surroundings of the mountains and their forests were chosen by ancient sages and ascetics as their preferred habitat. This place was far away from the hustle and bustle and the restlessness of ordinary mundane life of the world, and was untouched by corruptions and worldly taints. It gave these holy people absolute peace and quietude that is so necessary for spiritual pursuit, mental peace and emotional solace.

The term 'northern' therefore symbolically represented the upward mobility of the soul when it sought to rise above the humdrum of worldly life, break free from all worldly shackles and entanglements, and seek its liberation and deliverance from the gross body as well as the gross world. It represented the quest for higher spiritual way of existence, a life of higher consciousness, awakening, realisation, wisdom, enlightenment etc. It represented a state of existence free from all moral and spiritual encumbrances represented by numerous taints, faults, corruptions and blemishes that are associated with life in this world. It would be a utopian and pristine pure form of enlightened existence much like the crystal clean and pristine environment of the mountains and its forests themselves.

The dimension, the intensity and the density of positive energy emanating from the pure consciousness is more in the northern direction as compared to other directions because of a greater population of self-realised and enlightened sages who lived in this particular region of the earth. The lofty peaks of the mountains are metaphors of high peaks of pure consciousness, or high intensity waves of consciousness that have peaked, and its accompanying high level of spiritual energy and positivity, while the valleys, depressions and gorges present elsewhere on earth symbolise just the opposite—low level of consciousness and its accompanying low level of spiritual energy.

The world below the northern direction, i.e. everywhere else other than the northern direction, is literally like a slum-ghetto in spiritual metaphor—it is riddled with all sorts of factors that tie down the creature to this deluding world and its entanglements; it keeps the soul trapped in shackles; it impedes growth and development; it breeds moral and spiritual corruption and degeneration. Indeed, it is so gross that it needs quite an effort on the part of the aspirant to break free from its fetters and rise above to his final freedom.

We can look at these two directions from another angle. As compared to the northern direction where the high mountains are located, the opposite direction of the south is where the 'ocean' (the great Indian Ocean) is present. Whereas the mountain represents 'high' ground to which a man rushes for his life out of fear of being drowned during floods and deluges, the ocean is the one that does the opposite—it submerges and drowns everything; everything sinks in its fathomless waters. This is a metaphoric way of saying that the northern direction provides the high moral ground for the creature, and moving towards this direction means spiritual progress whereby the soul is lifted from the bowls of low forms of gross life, and endeavours to reach for the higher form of existence symbolised by the lofty peaks of the mountains. On the other hand, the southern direction is a metaphor for a lowly and gross form of existence that virtually drowns the creature in the quagmire of worldly delusions and its attendant problems just like the ocean sinks everything put in it.

The southern direction is a metaphor for spiritual downfall, degradation, degeneration and depletion of spiritual energy. The low-bound soul gets stuck in this marsh, gets dirty and corrupted, and thereby loses the pristine cleanliness and shine that it inherently possesses. The southern direction representing the gross and deluding world is entrapping for the soul, it's an impediment for the soul's liberation and deliverance, while the northern direction where high land and mountains are

present represent the state of existence when the soul lives in a high moral ground, free from all taints and blemishes, and is equivalent to the soul's progress towards its ultimate aim of finding liberation and emancipation.

This being so, those enlightened souls who lived in the northern direction were deemed to be like 'radiant Gods' because of the high level of energy of the consciousness emanating from them and forming a bright halo around them. As compared to these enlightened souls, those who lived down in the pit of ignorance and delusions that was characteristic of this material world lacked this glow of divine energy, and hence were regarded as 'dark-complexioned'.

The other two directions, such as the east and the west, are dominated by plains and comparatively flat land in nature as compared to the mountains in the north and the ocean in the south. So they were represented by those who were ordinary humans, neither as brilliant as the ones who lived in the northern direction, nor as dark as the ones who lived in the southern direction.]

38. If the aspirant for Sanyas is already enlightened and learned then it is deemed that he must have accepted the Mantra OM and the Mahavakyas (the great sayings) of the Vedas from his learned Guru (moral preceptor) before he has taken the vows of Sanyas. As a result, it is expected of him that he becomes firmly established in the truth that there is an eternal and unambiguous uniformity in this creation so much so that there is nothing which is separate from his own 'self' (i.e. that everything in this existence is one or the other form of one universal Consciousness), and with this conviction firmly engrained in his mind he should roam gladly and carefree in this world.

For food he must rely on leaves, flowers, fruits and water. While wandering, he can take shelter in mountains, forests or shrines.

If he has discarded all clothes after taking the vows of Sanyas and prefers to remain a Digambar (naked), then it is expected of him that he would be overwhelmed by the eclectic realisation and constant experience of the presence of the ever-blissful Atma, which is his pure conscious 'self', inside his own lotus-like heart, that he would believe in the tenet that it is best for him to keep a safe distance from all involvement in deeds, that he would be regularly practicing Pranayam (breath control through certain Yoga exercises to preserve and strengthen his vital life forces), keep alive (active) his vital life forces by surviving on juices and skins of fruits and flowers, as well as on leaves, roots, tubers and water, and that the only desire he would have is to seek Moksha (emancipation and salvation) for which purpose he would live alone in mountain caves, always and consistently doing Japa (repetition) of the Tarak Mantra¹ (a special Mantra that gives deliverance to the soul) as well as contemplating and meditating upon the supreme Brahm till the time he leaves the mortal body (38).

[Note—¹The *Tarak Mantra* is the divine formula that provides liberation and deliverance to the creature's soul or his Atma. It, in other words, provides the spiritual aspirant Mukti. In relation to Brahm, this Mantra is 'OM'.

Refer Canto 7, verse no. 11 as well as Canto 8 full of this Narad Parivrajak Upanishad. Refer also to Atharva Veda's *Atharvashir Upanishad*, Kandika 4.]

39. If he has taken to the path of Sanyas with the desire of obtaining enlightenment (without prior initiation from a Guru as narrated in verse no. 38), then, after he has proceeded for about one hundred steps and is addressed by his Guru or some other wise man such as a Brahmin who calls after him and says—'Oh the lucky one! Stop; stop. Accept the Brahm Danda (an ascetic's staff representing his one support and one belief in Brahm, the Supreme Being), the mendicant's ochre clothes, and the

Kamandalu (water pot). You must come to the Guru to accept the great Mantras of OM and the Mahavakyas before you proceed ahead as a Sanyasi'—he must turn back and heed their advice.

When he comes back to his elders and the Guru, he should accept the signs of formal Sanyas when they are given to him by them. These signs are the Danda (rod or staff), the Katisutra (the thread worn around the waist), the Kaupin (the loin-cloth), the Shaati (the single piece of unstitched cloth covering the upper body), and the Kamandalu (water pot). [In other words, the formal process of accepting the vows of Sanyas involves obtaining permission from one's elders and Guru. Merely walking away as a Sanyasi is not the prescribed method, though it is not strictly prohibited as it is allowed for the Aatur Sanyasi and for those who take Sanyas at the end of the Vaanprastha phase—see verse no. 37. As it would be clear by reading the present verse, the man who is taking Sanyas is doing so directly either when he is still a Brahmachari or a Grihastha and has yet not entered the Vaanprastha phase because as soon as he has entered this stage he is deemed to have snapped all his ties with the world of the earlier phase of a householder's life, including all his family members, compatriots and even his moral preceptor or spiritual teacher, the Guru.]

The Danda is to be made of bamboo only, and its length should not be more than the height of the Sanyasi's body as measured from the feet to his head. It should be flawless, without any scratches or roughness, should be smooth, should not have any holes, or in any other way damaged by insects. Its colour should not be black or dark.

The aspirant should fulfill all formalities of purification such as sipping some water to clean the mouth etc. before accepting the Danda as a unique symbol of Sanyas and an exemplary renunciate and ascetic's way of life. Then he should say the prescribed Mantra before actually accepting and holding the Danda formally. The Mantra is 'Sakhā Ma Gaupayaujha Sakshayosindrasya Vajroasi Vatragna Sharm Me Bhav Yatpaapam Tanniyaraye'. (sakhā mā gopāyaujaḥ sakhāyo'sindrasya vajro'si vātragnaḥ śarma me bhava yatpāpaṃ tannivārayeti danḍaṃ parigrahe).

[The brief meaning is 'Oh Danda! Protect my friend known as the Pran or the vital life that is present inside my body. You too are my best friend, and it is you who is held by Indra, the king of Gods, as his Vajra (which is his invincible weapon). It was you, in your form as the Vajra, who had killed the demon Vrittasur. Please become my protector and a provider of welfare. Whatever sins that might be still lingering inside me, please destroy them.']

To accept the Kamandalu (kamaṇḍaluṃ parigrahya), the Sanyasi should say OM and the prescribed Mantra (praṇavapūrvakaṃ) which is 'Jaggajivanam Jivanaadhaarbhutam Mate Ma Mantrayasva Sarvadaa Sarvasaumyati'. (jgagajjīvanam jīvanādhārabhūtaṃ mā te mā mantrayasva sarvadā sarvasaumyati).

[You are the bearer of life and the support of life in all its forms as you carry water, which is the undisputed nectar of life. I offer this Mantra to you. Please always be benevolent upon me and never let me suffer for want of the soothing nectar of life known as water.]

The Katisutra (the waist band) should be accepted by the Mantra 'Kaupinadharam Katisutramom'. (kaupīnādhāraṃ kaṭisūtramomiti)

[I am accepting the Katisutra which is basis of my accepting the loin-cloth or the Kaupin, which I would always wear.]

The Kaupin (the loin-cloth) is accepted by the Mantra ‘Guhyachadakaṃ Kaupinmom’. (guhyācchādakaṃ kaupīnamomīti)

[The Kaupin covers my private parts like a canopy or a veil, and I accept it voluntarily.]

The cloth on the upper part of the body is accepted after the following Mantra is said ‘Shitvatoshna Trankaram Daiha Rakshanmom’. (śītavātoṣṇatrāṇakaram dehaikarakṣaṇamomīti)

[The cloth would protect me against cold and heat. It would afford protection to my body.]

Sipping a little water once again, he must feel fully fulfilled and spiritually contented as if he has been duly anointed and sanctified in accordance to his own wishes as well as the edicts of the scriptures. (kaṭisūtrakaupīnavastramācamanapūrvakaṃ yogapaṭṭābhīkṛto bhūtvā kṛtārtho’hamīti)

Thereafter, after this formal initiation into the fold of Sanyas, he must strive to obey its tenets most sincerely and very diligently. (matvā svāśramācāraparo)

Verily, this is what this Upanishad teaches (bhavedityupaniṣat) (39).

-----*****-----

Updesh (teaching)/Canto 5

[This Canto narrates the different types of Sanyas and Sanyasis (a person who has taken the vows of Sanyas), as well as the laws that govern them, and the importance of obeying these laws.]

1. The celestial sage Narad asked the great grandfather of creation, Brahma, ‘Oh Lord! You have said that the Sanyas Ashram is when all deeds are dispensed with. And then you say that a follower of this holy way of life should obey its doctrines by carefully doing things and acting in a manner that is specially prescribed for this phase of life. These appear to be contradictory, so please clarify the position.’

Brahma replied, ‘Oh Narad! A living being having a physical gross body has four states of existence of its consciousness. They are Jagrat or waking state, Swapna or dreaming state, Sushupta or deep sleep state, and Turiya or transcendental state which goes beyond the third Sushupta state¹. All creatures live in one of these states, and these states are therefore the base upon which all their activities depend. These states inspire or instigate the creature to do deeds, acquire Gyan (truthful knowledge; enlightenment), or develop Vairagya (renunciation, detachment and dispassion depending upon the preponderance of various factors associated with a particular stage of existence).

Since all the creatures live in one or the other of these four states of existence of consciousness, they therefore behave and act according to the characteristic qualities and features of the particular state in which their consciousness exists at any given moment.

The four Ashrams² (phases of life of a man) that are prescribed by the Srutis and Smritis (ancient scriptures such as the Vedas and Purans), such as Brahmacharya (the first phase of celibacy and student-hood), Grihastha (the second phase as a householder), Vaanprastha (the third phase when a man leaves the house and heads for pilgrimage or for the forest), and Sanyas (the fourth and final phase of complete renunciation of all things worldly), are also like these four states of existence of consciousness. Just like a man is forced to behave in accordance to the state in which his consciousness exists in a given point of time, and all such acts of his are deemed to be normal and natural while he is in that phase but would look very odd and out of place in other states of existence, a Sanyasi is also expected to follow the rules of conduct that are prescribed for this phase of life by the scriptures without being perturbed about them or thinking guilty at observing these laws—because this is a normal way of behaviour that is prescribed for and expected from a person who lives the life of a Sanyasi.’

Hearing this, Narad asked, ‘Oh Lord! Now please tell me how many types of Sanyas are there, and about the subtle differences between the processes adopted for being initiated into each one of them.’ (1).

[Note—¹The four states of existence: Refer also to verse nos. 24-25 of the present Canto 5.

There are a number of Upanishads that describe this concept in great detail, such as (a) Shukla Yajur Veda—Subalo-panishad, Canto 4 full as well as Canto 9, verse no. 1-7; Paingalo-panishad, 2/11-15; Mandal Brahmin Upanishad, 2/4-2/5; (b) Krishna Yajur Veda tradition—Varaaha Upanishad, Canto 2, verse no. 59-64, 72; Canto 4, verse no. 11-20; Brahmo-panisha, verse no. 1, 20-21; Kaivalyo-panishad, verse no. 12-14; Dhyan Bindu Upanishad, verse no. 93/12-93/15; Sarvasaaro-panishad, verse no. 4; Shaarirako-panishad, verse no. 14. (c) Atharva Veda tradition—Mandukya Upanishad, verse nos. 3-7; Atharvashikha; Nrisingh Purvatapini Upanishad, Canto 4, verse no. 4-7.

²The four Ashrams—Refer Chapter 6, Brihajjabal Upanishad, Brahman 5, verse no. 8, note no. 1.

³A little bit of explanation would clarify the meaning here. A man in, say, the dreaming state of existence lies physically inactive because his external body is asleep, but his mind and sub-conscious are very much active, and he is living an active life in the imaginary world of his dreams. So, if he does anything in this dreaming state while appearing to be inactive physically, and then claim to have done it when he wakes up to reality, then no matter how incongruous and untruthful he might appear to be in his claims but he is actually speaking the truth.

He might not do, or simply cannot do, certain things while in the waking state of existence, but he can certainly do them in his dreams. For instance, he cannot actually jump across a tall building or fly in the air while awake, and it is absolutely absurd and incredulous even to suggest such a thing, but of course he can do so in his dreams, and then it becomes not only possible but believable too. Since any action or activity necessarily needs the involvement of the mind, it follows that the mind is active in both the waking state called the Jagrat state as well as in the dreaming state called the Swapna state of existence. But in the deep sleep state of conscious called the Sushupta state of existence the mind is defunct, and the man does not remember anything of the moment while the consciousness was in this third state. So, he might get up and perform a certain act while the mind is actually in the third state of deep sleep, and then when he actually wakes up in the sense that his mind is active in the conventional state of wakefulness, then he would not remember anything that he had done himself a while ago when his mind was in the deep sleep state.

Similarly, the same set of deeds that a man does assume different meanings depending upon which of the four Ashrams he belongs to. For instance, as a

Brahmachari he studies the Vedas to acquire knowledge that would prepare him to face life and its problems with confidence. As a Grihastha he keeps in touch with the Vedas and studies them as a means of finding ways to enhance his family's welfare and his own renown and fortunes as a learned man who believes in religious tenets, as well as to seek answers for his spiritual problems and seek guidance in the scriptures to solve the predicaments that he faces in practical life in this world. As a Vaanprastha he studies them to find ways for getting rid of his sins that he might have committed willingly or unwillingly in the course of his life and their consequences along with finding answers for the numerous spiritual problems that had been confounding him till now. And as a Sanyasi he studies them to find final solution in the form of the emancipation and salvation of his soul, the quick path to his liberation and deliverance, as well as to understand the truth about Brahm and his own Atma. During the phase of Sanyas, his main endeavour is to find final peace and rest for his soul, and to ensure that he does not have to take another birth to undergo the same series of horrors that he had to endure in the present birth.

Another example is this—as a student he eats to give sufficient and proper nourishment to his body and mind during their developmental stage, as a householder he eats to enjoy the taste of the food and build a strong and handsome body, as a Vaanprastha he eats to keep up his energy levels to help him in his wanderings, while as a Sanyasi he eats just enough to sustain his Pran or vital life factors till the time the Pran leaves the body effortlessly and painlessly when the due time comes for discarding the gross body. As a Sanyasi he does not eat to fatten his body or pamper his taste buds and tongue; he does not eat to satisfy his desire for tasty food or fill his stomach, but just to sustain the Pran inside the body till the proper time comes for the Pran to leave it.]

2. Explaining the various categories of Sanyasis and their subtle differences, Brahma elaborated—‘Oh Narad! How the type of Sanyas affects the behaviour of a practitioner of Sanyas would now be explained by me. Listen carefully.

In truth, Sanyas is essentially of one universal type (because basically it means exemplary renunciation of everything that is non-truth while accepting only one eternal Truth called the Atma which is pure cosmic universal Consciousness). But it is either due to ignorance and worldly delusions, or the inability of the mind to grasp its sublime and esoteric nuances that this august and holy institution of Sanyas has been classified into four categories¹.

Hence, Sanyas is said to be of four principle types as follows—Vairagya-Sanyas, Gyan-Sanyas, Gyan-Vairagya-Sanyas, and Karma-Sanyas² (2).

[Note—¹This classification is just a creation of the mind; it is not real. Therefore, all the Sanyasis are to be equally treated, and none of them is either junior or senior to the other. Actually, the classification of Sanyas into various categories is done to mark the different paths by which a man can become a Sanaysi. There are many circumstances and processes, but all lead to one single goal. It is like reaching the same destination by different people who have taken different routes and means to do so.

It also refers to the different levels of mental development, intellectual reach, enlightenment, wisdom, erudition and self-realisation in different people who have become a Sanyasi. In other words, though each of them has become a Sanyasi, and once they do so they stand on the same footing, but the path and the method they adopted, the basic reason for their choosing the life of Sanyas, the way they had seen this world and got the inspiration to become a Sanyasi—all differ from one individual to another. And this is indicated by the category of Sanyas they belong to.

The classification of Sanyasis into different categories is also to indicate the different stages through which a spiritual aspirant passes before his obtaining final emancipation and salvation, or his final liberation and deliverance. Just like a student

who has to pass many stages in his quest for knowledge, the path of Sanyas too has to pass many milestones. Each successive stage of Sanyas marks one higher stage of spiritual enlightenment and attainment. This step-by-step process is the routine method of attaining full maturity as a Sanyasi, but it does not mean that there cannot be persons who reach this stage with the minimum of effort and time because of the divine spark of enlightenment lighting inside their inner-self early than expected. For instance, even in modern system of education and professional life, there are people who reach the top of the ladder quicker than the others, in a much younger age than the rest. But of course such people are rare.

²Refer Sanyas Upanishad of Sam Veda tradition, verse nos. 18-22.

The present Narad Parivrajak Upanishad also lists other categories of Sanyasis in its verse nos. 12-21 of the present Canto 5, and verse no. 2-11 of Canto 7.]

3. A person who has no worldly taints and corruptions affecting his mind and inner self, who is naturally not inclined to have any sort of attractions or yearnings whatsoever for any of the material sense objects of the world as an auspicious good affect of his past life, and who has developed profound sense of sincere and deep renunciation, detachment and dispassion as another good affect of these auspicious virtues—if such a man accepts the vows of Sanyas (exemplary and truthful renunciation, detachment and dispassion), then it is called ‘Vairagya-Sanyas’—i.e. a Sanyas dominated by the glorious virtue of Vairagya—sincere and truthful renunciation for all things of this material world of sense objects (3).

4. A person who has developed natural dispassion towards this world and its material sense objects as a result of Gyan or truthful knowledge acquired by various avenues such as by studying of the scriptures, or by realising the worthlessness and falsehood of the world as a result of personal experience, or by tasting both the good and the bad effects of deeds leading to constant state of uneasiness and flux.

His intellect and wise mind tells him about the corrupt world and its tainted nature, a world that is full of such negative traits as having, inter alia, Krodh (anger), Irshya (jealousy and ill-will), Asuya (finding faults with others while being full of faults himself), Ahankar (false sense of pride and ego), and Abhiman (pride, vanity, arrogance and hypocrisy) as its integral part. He strives to keep his mind aloof from such a tarnished world.

He abandons all desires that relate to a woman, wealth and fame which symbolise a person’s three natural Vasanas (passions) called Daihik Vasana (passions and desires that relate to his sense organs and their natural wish for gratification), Shastra Vasana (desire to get mastery over the scriptures) and Loka Vasana (desire to acquire name, fame, wealth and material prosperity in this world). Just like an ordinary man treats vomited food with disgust and repugnance, he treats these Vasanas with equal disdain.

Instead, he arms himself with the four holy Saadhans¹ or means for spiritual enhancement, and thus empowered, he accepts the august vows of Sanyas. Acceptance of Sanyas by such a man is called ‘Gyan Sanyas’—i.e. a Sanyas which is marked by the dominance of Gyan—truthful knowledge, enlightenment, erudition and wisdom—as a factor which inspires a man to take to the life of Sanyas (4).

[Note--¹The four *Saadhans* are called ‘Saadhan Chatushtya’, and the term refers to the four fold spiritual disciplines in the philosophy of Advaita Vedanta. They are the following—(1) Vivek (wisdom and discrimination; intelligent interpretation of given set of information to arrive at the optimum solution; the best use of the faculty of thinking and contemplation to separate the grain from the chaff. (2) Vairagya (total renunciation and dispassion; a sense of complete detachment and non-involvement.

(3) Samaadhistak (the group of six spiritual disciplines having six steps such as Saam or tranquility and calmness, Dama or self restraint or self control, Uparati or the ability of the external sense organs to refrain from involvement in and pursuit of the sense objects in this material world, Titiksha or forbearance and tolerance, Shradha or unwavering faith, conviction and belief in one's spiritual path, and Samaadhaan or concentration and finding of solutions to vexing spiritual problems by focusing of the faculty of mind and intellect to remove doubts and confusions). And, (4) Mumuksha (desire for liberation and deliverance of the soul; seeking the soul's emancipation and salvation).]

5. A person who has gone through the ups and downs of life, who has experienced all the aspects of life, both the pleasant as well as the unpleasant, in all its hues by passing through all the three phases of life (such as the Brahmacharya or life as a celibate student, a Grishastha or as a householder, and a Vaanprastha who is a person who leaves the house and embarks upon pilgrimage or heads for a lonely life away from the hustle and bustle of the world), and in the process has gathered valuable information about the true nature of the world as well as the 'self' by being analytical and intelligent in interpreting each of his experiences—such a person is filled with an overwhelming sense of renunciation and dispassion towards the false and deluding world and its objects. Instead, he learns the sublime truth about his own 'self' which is pure and truthful consciousness that is an eternal and imperishable entity. He would rather remain submerged in the thoughts of this blissful 'self' which gives him stable peace and tranquillity than remain agitated and restless by thinking about the selfish world which is nevertheless unstable.

In other words, being discriminating, wise and intelligent, he would develop a natural sense of renunciation, dislike and dispassion towards this false material world of sense objects and their equally false charms of which he has had a first-hand experience, and instead develop an affinity for his truthful 'self' which gives him eternal peace, happiness, contentedness and bliss.

Since he remains aloof from the world and does not get involved in its ensnaring quagmire, he remains as innocent and incorrupt as a little child or a newborn infant who is yet un-tarnished, un-affected and un-influenced by the myriad spiritual corruptions, countless faults and numerous negative forces of the world in which he lives.

Indeed, this eclectic and sublime mental state of renunciation and dispassion obtained by a combination of knowledge about the reality and truth of existence, and a first-hand experience of life with all its bitter realities, is called 'Gyan-Vairagya-Sanyas'—because both the eclectic virtues of Gyan and Vairagya have played a stellar role in equal proportion that have inspired him to take to the life of Sanyas (5).

6. A person who lives through all the three phases of life, such as a Brahmachari, a Grihastha and a Vaanprastha, in a systematic manner, and then takes to the life of Sanyas simply because this is the ancient tradition that has sanction of the scriptures, though he might not have actually developed renunciation and dispassion towards the world, its attractions and his responsibilities, then this is called 'Karma Sanyas'.

In other words, he becomes a Sanyasi because it is part of his religious obligations, it is his duty to follow tradition, and it is expected of him that he takes the vows of Sanyas as an upholder of auspicious and righteous way of living that is ordained by the scriptures, and if he does not do so he would be subject to ignominy and accused of violating traditional norms and prescriptions of the scriptures, though the most important criterion for Sanyas, which is inculcation of a deep sense of

sincere renunciation, profound dispassion and total detachment towards the world and its material objects, might not be present in him. Such a man is called a Karma Sanyasi, and the form of Sanyas is called 'Karma Sanyas' (6).

[Note—A Karma Sanyasi takes to the path of Sanyas as his moral duty and religious obligation rather than an internal desire to renounce the world out of enlightenment and realisation of its falsehood, as well as a sincere desire for obtaining spiritual liberation and deliverance along with attaining true peace of mind and bliss for the soul. Truthfully speaking, Gyan and Vairagya lack in such people, hence this type of Sanyas is no match for that which is marked by these two eclectic virtues.]

7. A person who is so overwhelmed by a deep-rooted sense of renunciation, detachment and dispassion that he yearns to renounce the world even while he is still in the first phase of life as a Brahmachari (a celibate student), and accepts the life of Sanyas without entering the second phase of Grihastha (householder), becomes as innocent and holy as a little child or a new-born infant who is yet not influenced by the corruptions and taints of the world. Indeed, this is called 'Vairagya-Sanyas'.

In other words, when Sanyas is accepted by being driven by an inborn urge for renunciation and dispassion even while the person is still in the earlier phase of life as a student, when this world fails to attract the aspirant's mind by its charms and temptations, then this sort of Sanyas is called Vairagya Sanyas. In this sort of Sanyas, natural sense of renunciation, detachment and dispassion are so overwhelming, profound and robust besides being natural, and not imposed or pretentious, that no amount of enticements and cajoling would ever tempt his mind to swerve towards the charms of the material world. Hence, this sort of Sanyas is self-sustaining and self-enhancing.

An enlightened Sanyasi who is predominantly intelligent, wise, learned, erudite and analytical in his approach is called a 'Gyan-Sanyasi' because 'Gyan' or knowledge is what has made him take to the path of renunciation of falsehood and acceptance of truth; it is Gyan that is the driving force for his conscious decision to take to Sanyas, rather than any other considerations or compulsions.

On the other hand, a Sanyasi who has taken this vow of Sanyas because this is the correct direction in which a righteous and religious person is supposed to go during the final years of his life, is called a 'Karma-Sanyasi'. He is simply following tradition and has taken Sanyas because this is the ordained and prescribed way which he must follow or obey, without questioning its utility for him, or whether he fits in the bill or not (7).

8-10. Karma Sanyas is of two types—first is called 'Nimitta-Sanyas', and the second is called 'A-nimitta Sanyas'. [The word 'Nimitta' means factor, motive, cause, inducement, account, reason. The word 'A-nimitta' is the opposite of Nimitta.]

Aatur Sanyas comes under the category of Nimitta Sanyas. [In other words, when the spiritual aspirant takes the vows of Sanyas because he is very Aatur or eager to renounce the world and seek his spiritual liberation and deliverance, then it is called 'Nimitta Sanyas' as this eagerness on his part is the motivating factor, the cause and the driving force that has impelled him, that has inspired him to become a Sanyasi.]

On the other hand, pure Karma Sanyas comes under the category of 'A-nimitta Sanyas'. [When a man becomes a Sanyasi because he must do so as this is the established tradition, and he should not violate ancient laws, then renunciation is not the 'Nimitta' or causative factor for his taking to the life of Sanyas. He has, in fact, taken to Sanyas as a religious duty and a process ordained by the scriptures as well as

by tradition instead of being inspired by internal Vairagya or Gyan. Hence, it is ‘A-nimitta’ Sanyas—i.e. renunciation not due to some inborn virtue of dispassion or enlightenment, but undertaken as part of established tradition.]

When a person becomes sick and is unable to do his routine worldly deeds, he prefers to die and get rid of his agonies and torments. Physical incompetence or inability to perform deeds and take actions in this world also leads one to accept a virtual life of Sanyas as he is unable to do anything, fulfill his obligations, live up to his expectations, and generally unable to enjoy the world and its sense objects. So, when one takes the vows of Sanyas as a result of diseases that are bodily crippling for him, then this is called Nimitta Sanyas as well as Aatur Sanyas. [The first sort of Sanyas is called ‘Nimitta’ because the diseases and physical infirmities have been the cause of his decision to take Sanyas—they become a ‘Nimitta’ or causative and motivating factor. It is also called ‘Aatur’ because he is very eager to get rid of this miserable body and a wretched life that has become a constant burden for him, and instead seek liberation and deliverance from it by taking to the path of Sanyas.]

A wise and erudite person who has a healthy and strong body but still takes to the life of Sanyas as a result of sprouting of enlightenment and profound wisdom that makes him firmly convinced of the fact that this world, along with all the material things and sense objects, as well as the body which one is so proud of and which is so handsome and strong, are false, transient and perishable, that therefore they cannot ever give eternity, peace and bliss to the man—verily, such a man is like the Hans (the divine Swan) which is immaculate and the wisest amongst all the birds that have their habitat in the sky. He is like the Vasu (i.e. the Sun God) that moves majestically across the sky. He is like the Hota (the priest who offers oblations to the sacred fire during fire sacrifices) as well as the Fire God who is honoured at the altar of the same fire sacrifice. He is also the honoured guest who is always welcome and shown the greatest of respect in the house of noble and righteous householders. He is the most exalted and highly respected amongst humans. He is deemed to be as honourable and revered as the best of things in this world. He is deemed to be a living embodiment of the eternal Truth that is universal and uniform. It is he who is symbolised by the subtle ‘truth’ of the sky element (i.e. he possesses all the grand virtues of the sky element, such as being universal, infinite, fathomless, incorrupt, all-pervading, all-encompassing etc.). It is he who emerges from the water element (i.e. he is like Lord Hiranyagarbha (Vishnu and Brahma) who has emerged from the primordial cosmic fluid, and from whom the rest of the creation evolved; he is like the ‘lotus’ that emerges from the middle of the water in a pond). It is he who is revealed in the form of all living beings who speak and are represented by those who are born from a cow or are born on earth, as well as all forms of knowledge that is revealed by Vaani or speech. It is he who is born or revealed from Truth. It is he who is born from mountains but is immensely different from the latter, being the only and absolute Truth in creation. [This probably refers to the statues that are carved out of stones extracted from mountains and worshipped as some deity. It means that far from being a gross and lifeless entity like the statue carved from a mountain stone, he is consciousness personified.] (8-10).

11. A spiritual aspirant who takes the eclectic path of Sanyas with the firm conviction that the supreme transcendental Brahm, the cosmic Consciousness, is the only Absolute Truth in this creation, and that anything other than Brahm is imperishable and non-truth—then this sort of Sanyas is known as ‘A-nimitta Sanyas’. His Sanyas is without any cause or motivation. It is a natural phenomenon for him to discard that

which is non-truth and false, and accept that which is the truth and reality. [That is, a wise and enlightened aspirant who has no worldly reason for becoming a Sanyasi except the fact that he finds everything other than the Consciousness as false and non-truth, and decides to abandon this falsehood and non-truth and pursue truth and eternity instead, is said to have become a Sanyasi without any 'Nimitta' or worldly cause or motivation. Some of the causes have already been listed in the previous verses—for instance one's diseases or physical inabilities which make life a burden for him and which prevent him from enjoying the comforts and pleasures of this world and its material objects. He becomes a Sanyasi in order to hide his inadequacies and incompetence behind the façade of Sanyas-hood. Had he been healthy and had had access to this material world, probably he wouldn't have imagined of Sanyas even in his dreams! Another reason is the compulsion for following tradition which requires a man to take Sanyas in old age. No such factor is applicable here.] (11).

12. A Sanyasi is again classified into six categories as follows—Kutichak, Bahudak, Hansa, Paramhans, Turiyatit, and Avadhut (12).

[Note—Refer Sanyas Upanishad of Sam Veda tradition, verse nos. 23-30. Refer also the present Naradparivrajak Upanishad, Canto 7, verse nos. 2-11.]

13. [In the context of verse nos. 13-21, refer also to Canto 7, verse nos. 2-11 of this Upanishad.]

A Kutichak Sanyasi sports (wears) the Shikha (the tuft of hair on the head) and the Sutra (the sacred thread, also called the Yagyopavit). He also carries the ascetic's staff or rod called the Danda, the water-pot called the Kamandalu, the loin-cloth called the Kaupin, and an over-garment made of a coarse single piece of cloth or old pieces of torn clothes stitched together in a rough manner, called a Kantha.

He always remains involved in selflessly serving his parents and Guru (moral preceptor and teacher).

He also keeps a pot for collecting food, called a Paatra, a tool for digging earth, called the Khanti (which is like a pointed iron spike), and a sling bag, called a Jholi, with him. He always remains engrossed in meditation and repetition of Mantras. He takes food obtained from one single place (instead of eating it first and going to another place to get more food to satisfy his urge for eating more, or because his taste buds have got the better of him).

He wears the vertical mark of 'Shwet Pundra' on his forehead (i.e. he has the holy lines marked by white chalk-powder made into a past by mixing with water that is worn on the forehead by all initiated Hindus).

He is expected to always carry the Tridand in his hands. [The 'Tridand' is the ascetic's staff made of three pieces of wood—hence called 'Tri' or three + 'Danda' or rod. It basically consists of three staffs or sticks tied together, each made up of bamboo. There is a main shaft, and the two smaller pieces used as a handle measure about four fingers width in length. This is done for easy carrying. The word 'Danda' stands for self control, and therefore these three staffs stand for a combined control of the mind, called the Mana Dand, control over the speech, called the Vaak Dand, and control over the body, called Kaya Dand. This Danda is like a scepter held by a king; it is a symbol of his spiritual kingship and distinguishes him from the rest of the people; it is his symbol of moral and spiritual authority.]

A Bahudak Sanyasi, like the Kutichak, also wears the tuft on the head, the sacred thread across his chest, the loin-cloth across the waist, the roughly sewn over-garment on the upper part of his body, and carries the staff and the water-pot in his

hands. He too sports the Tripundra (the line marked on the forehead) like the Kutichak Sanyasi.

He has exemplary sense of equanimity and evenness, and treats everyone in the same way without any sense of discrimination.

He survives on food obtained by begging from different houses, and eats only eight mouthfuls at one meal. [The difference between Kutichak and Bahudak is obvious here—whereas a Kutichak eats food obtained from one place, a Bahudak collects food from more than one household. Again, a Bahudak is expected to eat only eight mouthfuls, but no such restrictions have been explicitly put on a Kutichak.] (13).

14. A Hans Sanyasi wears a lock of matted hairs on his head, wears the vertical lines of the Tripundra¹ (literally the three lines) on his forehead, brings food by begging from any house visited at random, wears a small piece of loin-cloth around his private parts, and carries a Tumbi (a hollowed-out and dried shell of the pumpkin or gourd which acts as a water-pot) (14).

[Note—¹The word *Tripundra* has been defined in note no. 2 of verse no. 3 of Canto 7 of the present Upanishad.]

15. A Param-hans Sanyasi does not sport a tuft of hair on the head or the sacred thread across the chest. He collects or accepts food from five houses, and eats once a day at night. He never stores food for the next day, and never visits the same house twice for food.

He keeps with him only a loin-cloth, a piece of cloth to cover his body (upper part), and an ordinary staff made of bamboo. He either covers his body with this single body-wrapping cloth, or simply smears ash of the fire sacrifice to cover it.

A Param-hans Sanyasi is highly non-possessive, and is supposed to have completely renounced everything in this world (15).

[Note—Refer Canto 3, verse nos. 28-29, 30-31; Canto 6, verse nos. 25-26.]

16. A Turiyatit Sanyasi is like a cow that survives on whatever that is made available to him as a grace of the Lord. He eats like a cow—i.e. he collects food in the cupped palms of his hands and eats directly from it like a cow, using his tongue and mouth to lick and pick up morsels of food. [That is, he does not use any pot to keep the food and then use his fingers to serve as a spoon to eat. Refer also to verse no. 38 of the present Canto 5.]

He never asks anyone for anything whatsoever. He usually eats only fruits, and if he eats cereals etc., then he collects food from three houses only. [Compare with the Bahudak and the Param-hans.]

As personal belongings, he has nothing but his own body as his only possession.

He remains naked (refer Canto 3, verse no. 31), and strives to make his sense organs irrelevant and inactive as if they were non-existent for all practical purposes, or part of a dead body (refer Canto 3, verse no. 27, 48, 50-51, 90) (16).

17. An Avadhut Sanyasi knows of no bondages, fetters, compulsions, obligations or formalities. [That is, he believes in none of these things, because he is eternally free and liberated spiritually.]

He snaps all contacts with corrupt, unscrupulous and tainted people, and with those who have fallen from their chosen paths.

Living like a python, he accepts whatever food is available to him for survival, without discriminating between the Varnas (class or caste) of the people from whose household he accepts food. [That is, he does not bother himself whether the householder who gives him food belongs to an upper class or a lower class. The only thing that he keeps in mind while accepting food is that the giver should not be corrupt and sinful, as any food from such people would have an adverse effect on his own mind and spirit.]

He remains ever engrossed in contemplation and thoughts of the true nature and form of his truthful Atma which is pure consciousness (17).

18. If a man who is eager to accept the vows of Sanyas (and renounce this world of falsehood and material sense objects which are illusive and entrapping by their inherent nature, and instead opt for the path of spiritual liberation and deliverance) wishes to have a long life then he must live through all the other three phases of life (as a Brahmachari, a Grihastha, and a Vaanprastha) before he takes the vows of Sanyas at the end of this sequence (as ordained by the scriptures and tradition)¹. Such a Sanyas is called 'Kram Sanyas' as it involves passing through all the prescribed phases in life in an orderly manner, step-by-step, before one actually accepts the hallowed life of a Sanyasi. [The word 'Kram' means a sequence; a proper series, an order or chain of events; a step-by-step approach to anything; a method or systematic way of doing anything; a route or proper way of reaching one's destination. Hence, 'Kram Sanyas' refers to the step-by-step approach to this holy way of life no matter how eager a man is to become a Sanyasi and renounce the world.] (18).

[Note—¹This systemic and orderly way helps him to experience all the pros and cons of life and see the truth of the world. This only helps to reinforce his commitment to the life of Sanyas. Otherwise it might happen that he becomes disillusioned midway when he faces the harsh reality of a Sanyas way of life and regret his decision of becoming a Sanyasi. This would be more harmful to him than not taking Sanyas at all. The bitter experience that he has had of the world while he lived in it as a Brahmachari, as a Grihastha, and as a Vaanprastha, the bitter truth that he has learnt about the world not giving him peace, rest, happiness, comfort and fulfilment in the true sense inspite of his best of efforts and also inspite of his devoting his entire life serving this world and its inhabitants—and such other factors, when properly thought of and analysed, create a sincere renunciation for this world, and when Sanyas is taken with this bitter experience then it is more sustainable and sincere.]

19. For a Kutichak, Bahudak and Hansa Sanyasi it is prescribed that they should enter this fourth phase of life of Sanyas only after having lived through the earlier three phases of life as a Brahmachari, a Grihastha and a Vaanprastha in this order (19).

20. There is no compulsion for a Param-hans, a Turiyatit and a Avadhut Sanyasi to wear the waist-band, a loin-cloth or any other sort of body-covering cloth, or even to carry an ascetic's staff and a water-pot. [They are optional for him.]

They can adopt the appearance of an infant child who remains naked and is unconcerned about it (i.e. assume a 'Jaatroop' form which means the naked form in which a child is born in this world). They are free to beg for food and accept it from all kinds of households belonging to any caste or class in the society. [This is to indicate the fact that these categories of Sanyasis are so holy and pure that food taken even from a low-caste household would not be able to affect or undermine their high ethical, moral, mental and spiritual stature. Nothing can pollute or defile them. Food for them is like an offering to the sacred fire burning inside their body that sustains

their Pran and Atma, their life and conscious 'self' respectively; it is a fire which is so pure, holy, powerful and divine that it can purify everything that is put into it rather than getting polluted by it no matter how bad or tainted or corrupt that offering is.]

Until the time an aspirant is firmly convinced at the time of accepting the vows of Sanyas that whatever he has studied is enough for him, he ought to continue with his pursuit of knowledge and learning. When he is completely satisfied with what he has learnt, when truthful wisdom and enlightenment sprouts in his bosom, when he feels fulfilled and realises that he needs no more knowledge, it is then that he should discard the loin-cloth and the waist-band etc. and immerse them in the water.

If he prefers to remain naked (Digambar) then he must not keep any type of cloth, even the patched over-garment, to cover his body. Besides this, he must abstain from reading and teaching, giving discourses, attending discussions, lectures or debates, or hear narrations of scriptures and rendering of formal prayers.

There is no need for him to study logic, or learn the art of debate and public speaking. [This is because he is not expected to attend debates and discussions or give discourses and lectures. Rather, he must lead a serene and quiet life of a reclusive hermit who spends his precious time in meditation and contemplation, thinking of the supreme Truth and experiencing the drip of bliss that accompanies the higher stages of self-realisation rather than bothering about exhibiting his scholarship and showcasing his oratory skills in public forums to gain name, honour, titles and goodwill as well as a followership of disciples. Refer also to Canto 3, verse nos. 56-60, 71; Canto 4, verse nos. 14-16, 19; and Canto 7, verse no. 1.]

He must only do constant Japa (constant repetition) with the divine Mantra of OM that pertains to Pranav, the supreme transcendental Brahm (rather than wasting his time and energy by entering in debates, giving discourses and lectures, or even teaching and reading the scriptures, for, one, he has not much time left for these as death is fast approaching, and two, it is deemed that he has already become sufficiently wise and enlightened to have realised the truth and the essence of the teaching of the scriptures by the time he has reached the stage of Sanyas, and therefore there is no real need for him to waste any time and energy on its discovery). [Refer Canto 7, verse no. 11.]

It is prohibited for him to waste the energy of speech in worthless things. It is also prohibited for him to talk in any sign language. [This is because, for one, it is more tiring than actual speaking as it requires special mental skills and exertion to express one's wishes correctly in sign language and make the other person understand one's real intentions, and second, it is subject to more wrong interpretations than the actual spoken word, leading to more confusions and perplexities which is absolutely not expected from a Sanyasi.]

He must take extra precaution of not talking to any Shudra (a low-caste man), a woman or a fallen man. He must not talk with a menstruating woman at any cost. It is equally prohibited for him to participate in religious or other festivals, events, formal forms of rituals and worship, to go on pilgrimages and visit pilgrim sites, to worship and offer prayers to Gods and other deities (including idols and other symbols)¹ (20).

[Note—¹Refer also the following Upanishads—(i) Sam Veda tradition—Maitreyu-panishad, Canto 2, verse no. 21, 26; Jabal Darshan Upanishad, Canto 4, verse nos. 50-59; and Sanyaso-panishad, Canto 2, verse no. 74-75, 97. (ii) Atharva Veda tradition—Naradparivrajak Upanishad, Canto 5, verse no. 20.

External forms of worship have been prohibited in—(a) Krishna Yajur Veda's following Upanishads—Pran Agnihotra Upanishad; Varaaha Upanishad, Canto 2, verse no. 69, 74; Canto 3, verse no. 26, 29-30; Tejobindu Upanishad, Canto 6, verse

nos. 21-24. (b) Shukla Yajur Veda's Advai Tarak Upanishad, verse nos. 5, 10, 13. (c) Atharva Veda's Naradparivrajak Upanishad, Canto 5, verse no. 20.

The fact that the same divinity known as the supreme Brahm resides in all the pilgrim sites is affirmed in Atharva Veda's Atharvashir Upanishad, Kandika (Canto) 4. This assertion implies that a wise man is one who should not roam around in different pilgrim sites in search of the Truth, seeking the Lord here and there in this mortal world, but attempt to find that Brahm in his own inner 'self' as his Atma which is immortal.

The Advai-tarak Upanishad of Shukla Yajur Veda, in its verse nos. 5, 10, 13, stresses that real Mukti or spiritual liberation is obtained when the aspirant turns inwards and searches eternal peace and bliss inside his own self rather somewhere outside.

The Tejobindu Upanishad of Krishna Yajur Veda, in its Canto 6, verse nos. 21-24 clearly stresses that all forms of ritualistic worship or symbol worship do not in any way help the spiritual aspirant to realise Brahm and reach his spiritual goal of liberation and salvation.]

21. Once again, some special rules and tenets of the life of Sanyas are being narrated.

For a Kutichak Sanyasi it is ordained that he must accept food by begging from only one place.

A Bahudak Sanyasi is to beg for food from houses selected at random.

A Hans Sanyasi is to beg from only eight households and accept eight mouthfuls of food in all. [That is, one mouthful of food from one household.]

A Param-hans Sanyasi should accept food from five households. He accepts food in the cupped-palms of his hand (and not in a food pot), and therefore he is also called a 'Karpatri'. [The word 'Kar' means hand, and 'Patra' means a pot. Hence, a man for whom his hands are the food-pot is called a Karpatri.]

A Turiyatit should accept food like a cow, i.e. he must eat whatever is available and directly with his mouth (without first collecting food in a pot and then using his fingers to eat—refer verse no. 16 and 38). He eats only fruits or things that do not need cooking, such as cereals and pulses which must be cooked before consumption.

An Avadhut Sanyasi can accept food from any household without distinguishing between them based on any kind of caste, creed or race. He accepts food like a python. [That is, he does not like to go out begging, but whatever is made available to him where he currently stays is acceptable to him.]

An Yati (an ascetic; a hermit; a wandering monk or friar) should not stay in a householder's place even for a single night. He should not bow before or offer prayers to show his humility to any person.

Between a Turiyatit and an Avadhut Sanyasi, no one is senior and no one is junior depending upon his age or his seniority according to the time he has spent as a Sanyasi. In fact, if a person is not aware of his actual truthful form, his true nature and his truthful 'self', if he has not become self-realised and enlightened, then even if he is senior in age or in the hierarchy of Sanyas he would still be deemed to be junior and premature as compared to a man who has achieved the exalted spiritual stature of 'realisation and enlightenment'.

A Sanyasi should never cross a river by swimming across it. [That is, he should take a ride on a boat instead.] He should also not climb trees. He should not take a ride on a vehicle. [That is, he must walk when going from place to place instead of accepting the easy way of riding a vehicle.]

He must not involve himself in any dealings or commerce or trade involving selling and purchasing anything. He must not barter anything, or exchange one for the other. [For instance, he must not exchange his water-pot or his over-garment with some other Sanyasi. This would be tantamount to trading.]

He must never be boastful, egoistic, arrogant, proud and haughty as well as deceitful, liar or an impostor.

He is not under any compulsion to do anything. The only thing that is expected of them and which they should be careful in doing is to do meditation and remain engrossed in deep thinking and contemplation (21).

22. [This verse describes the destination of various categories of Sanyasis.]

The Aatur and Kutichak Sanyasis attain Prithivi Loka and Bhuvaha Loka. [That is, they find their abode on this earth amongst living beings on earth, or in the lower heavens where junior Gods and Spirits live.]

The Bahudak Sanyasi finds his abode in the Swaha Loka. [That is, he goes to the upper heavens.]

The Hans Sanyasi attains the Tapa Loka. [This is the abode where those who do deep penances and austerities live.]

The Param-Hans Sanyasi goes to the Satya Loka. [This is the abode of the 'truth' or where the Supreme Being lives.]

The Turiyatit and Avadhut Sanyasis find their final destination in their own pure conscious 'self', which is the eternal Atma. This is called the 'Kaivalya'¹ destination as it symbolises the 'only one Truth that is eternal and universal'—'Kaivalya'—that exists in this creation. Just like a worm or insect (the Keet) that begins to think like a black bee (the Bhramar) and mentally becomes one like it because the black bee constantly buzzes over the former, leaving a profound psychological effect on the worm or the insect so much so that it loses its original personality and becomes a de-facto black bee², the Turiyatit and Avadhut Sanyasis too become soaked in the glory, the radiance, the magnificence and the divinity of their Atma which is immaculate and pure consciousness personified when they persistently and constantly meditate and contemplate upon it. They become indistinguishable from the nature and the subtle form of the Atma; they get coloured in the hue of the Atma. They lose awareness of everything external and superficial, and instead they reflect the glory, the divinity, the magnificence and the majesty of the Atma in its entirety. They become a glorified living personification of the eternal and divine Atma. [In fact, this is the highest state of self and truth realisation which teaches the spiritual aspirant that the only thing that is true, the only heaven that exists where he can ever expect to find eternal peace and bliss is no where in the distant sky known as the 'heaven' but well within his own bosom as his 'true self' known as the 'pure consciousness' or the Atma that resides in the subtle space of his own heart. If he does not realise this truth then all other heavens would never give him his eternal rest. In other words, one should endeavour to find peace within his own self rather than seek it in the outside world—this is the essence of this statement.] (22).

[Note—¹Kaivalya—refer Canto 3, verse no. 21, and Canto 7, verse no. 11.

The word *Kaivalya* means the 'only one' or the non-dual state. It is the supreme stature of existence which is the one of its kind and the most exalted state of existence when nothing but the non-dual consciousness is discernible everywhere in the world by the enlightened creature. There is non-duality and uniformity everywhere. It is a state of existence which is similar to the state of Samadhi in which the man goes about his daily life doing his chores in a routine way without getting emotionally involved in them and even remaining totally oblivious of what he is doing. He remains

totally submerged in his inner self and thoughts. He appears in a virtual trance-like state of existence usually observed in realised ascetics and great philosophers. People regard such men as absent minded, but they are so much absorbed in themselves that they are not concerned with others think of them. For them, the external world ceases to exist though they physically live in it and interact with it. This Kaivalya form of existence is tantamount to having emancipation while a man still has a body, because in this state he is free from all worries, sufferings and sorrows as well as all forms of attachments, entanglements and involvements with the artificial and deluding world that are the usual features of a worldly man submerged in world's entrapping charm. This state is comparable to liberation of the soul upon death when it is physically liberated from the bondages of the limitations imposed by the gross body; the only difference being that in the former case the man is alive and enjoys the body, while in the latter case he sheds the burden of the body. The Kaivalya state is considered superior because such a man lives a life of happiness and contentedness; he never suffers from any worldly miseries and worries, he treats the world around him as of no consequence, and remains indifferent to its deluding effects and their entanglements. On the other hand, the ordinary man might find emancipation upon death, but his life is a burden while he is still alive in it. Such a man has not truly understood the teachings of the scriptures; he has not understood the spirit of spiritualism, for their main aim is to give peace and tranquility to the tormented soul and help in its liberation from the deluding effects of the body and the world. This concept has been elaborately described in *Muktiko-panishad* of the Shukla Yajur Veda tradition. The concept has been described in many Upanishads, such as (i) Shukla Yajur Veda's *Muktiko-panishad*; *Subalo-panishad*, Canto 13, verse no. 1; *Mandal Brahmin Upanishad*, Brahman 2, section 3, verse no. 1. (ii) Krishna Yajur Veda's *Sarva Saar Upanishad* and *Yogattava Upanishad*, verse nos. 12-17 ½ of Krishna Yajur Veda.

²The *black bee*—The metaphor of the *Bhramar* or the black bee and the *Keet* or the insect has been cited at a number of places in this Upanishad. Refer Canto 3, verse no. 92, and Canto 5, verse no. 66. The instance of the *Bhramar* and the *Keet* has been used often in the Upanishads to indicate how constant remembrance of a thing transforms a man or any creature for that matter.

The *Bhramar* catches hold of a *Keet* and confines it to its hole. It then constantly buzzes over its captive *Keet* and a time is reached that the poor insect or worm forgets who it is due to the constant humming by the bee that has a profound psychological effect on the former. It loses its individuality and begins to think that it is also a bee. It becomes a de-facto bee for all practical purposes.

Likewise, a *Sanyasi* who constantly thinks of the supreme *Brahm* and remains mentally absorbed in this eclectic thought undergoes a personality change. This is accordance with the wisdom that a man becomes what he thinks and what company he keeps. As time passes, the ascetic forgets about everything else except the thoughts of *Brahm*. Since *Brahm* is the divine entity that is blissful and eternal, the ascetic too transforms into a living example of divinity that is blissful and eternal. Being freed from all worldly fetters that ordinarily tie down a man in strong shackles, he is deemed to be freed from all worldly bondages.]

23. A person obtains a destiny, a destination and a new body according to what his thoughts were and what he had been wishing at the time of his death¹. This is not mere hearsay but affirmed and endorsed by the scriptures (23).

[Note—¹The dependence of destiny of a man upon his thought texture and pattern at the time of death has been explained in other Upanishads as well. Refer— The concept of *death* and *what happens after that*, the *destiny* of the creature, has been succinctly described, inter alia, in the following Upanishads—

(a) Rig Veda = Kaushitaki Brahmin Upanishad, Canto 1.

(b) Sam Veda = Chandogya Upanishad, Canto 5, Section 3-10.

(c) Shukla Yajur Veda = Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 4/3/33, 35-38, 4/4/1-14, 5/10-5/11, 6/1/1-6, 6/2/2, 14-16, etc.; Subalo-panishad, Canto 11.

(d) Krishna Yajur Veda = Taittiriyo-panishad, Valli 2, Anuvak 6; Katho-panishad, Canto 1, Valli 1, verse no. 20; Canto 1, Valli 2, verse no. 1-6; Canto 2, Valli 2, verse no. 6-8; Canto 2, Valli 3, verse no. 4-17; Yogshikha Upanishad of Krishna Yajur Veda, Canto 3, verse no. 24.

(e) Atharva Veda = Prashna Upanishad, Canto 1, verse no. 9-10, 13-16; Canto 3, verse no. 7, 9-10; Mundak Upanishad, Mundak 3, section 1, verse no. 10; Mundak 3, section 2, verse nos. 1-2.]

24. Hence, a truly wise, self-realised and enlightened Sanyasi should understand that it is expected of him to think of nothing else and involve himself in doing nothing other than contemplating upon his pure conscious Atma known as the 'self', which in turn is a microcosmic counterpart of the cosmic 'Self' that is known as the eternal transcendental Brahm. He should remain submerged in deeply thinking about it and striving to experience its true, real, eclectic and divine form, and spending his precious energy and time by meditating upon it. This is the only established code of conduct and precept prescribed for a Sanyasi. This is how he is expected to spend his time.

If one follows different precepts and schools of thoughts, it only diverts his attention from the main goal of Sanyas and leads the aspirant to different destinations in accordance to the path he follows and the codes of conduct he adopts. [This is clearly stated in verse no. 22-23 above which outline the different destinations for different categories of Sanyasis. It's like a situation when a fickle minded man who is uncertain of himself and the goal he has to achieve jumps from one subject to another, changes course too often, seeks as many opinions from as many advisors as he possibly can—leading to vexations, confusions and perplexities. This dithering and lack of confidence only adds to his dilemmas and frustrations instead of removing them. He becomes aimless and never reaches his destination. It's also like jumping boats midstream in the hope that the other boat is better and would take one to the other side more quickly. The result is that he sinks somewhere before reaching the goal.]

A Gyan-Vairagya Sanyasi, i.e. a spiritual aspirant in whom 'Gyan' or truthful knowledge, enlightenment and wisdom as well as 'Vairagya' or truthful and sincere renunciation, detachment and dispassion are the dominant factors, obtains Mukti or Moksha (i.e. spiritual liberation, deliverance, emancipation and salvation) by realising his 'true and real self'. He need not seek Mukti or Moksha anywhere outside, but he finds the eternal source of bliss, contentedness and peace within his own self as his pure conscious Atma which is a microcosmic form of the macrocosmic, all-pervading, supreme transcendental Consciousness that is the only Absolute Truth and Blissful Reality in creation. [And this 'truth' is called Brahm, and such a Sanyasi is therefore called both self-realised as well as Brahm-realised.]

Not to be involved in anything else other than contemplation and meditation upon the truthful 'self' or the pure conscious Atma, not to follow any other precept or doctrine except this, is the special feature of a truly enlightened and realised Sanyasi who has reached the highest pinnacle of Sanyas-hood.

He remains uniform and unchanging in all the three states of consciousness, viz. the Jagrat or waking state, the Swapna or dreaming state, and the Sushupta or deep sleep state¹. [That is, for him everything becomes irrelevant; he remains totally

oblivious of his surroundings and even of his own gross body. Whether he is awake or asleep, his demeanours and thought processes remain constantly focused on his ultimate goal of life which is to reach the 'truth' in the form of self and Brahm realisation and break free from the endless cycle of birth and death. So he is unconcerned with anything else like an innocent child who is not bothered about things that are causing so much agitation and restlessness to its parents, other family members and neighbours. The child never even knows the difference between happiness and misery that creates restlessness to its parents because for it everything is the same as long as its need for toys and food are satisfied. The child accepts new toys and the food that is offered to it, and then it forgets about its old toys and the earlier food that it had liked so much. The same situation is applicable to the Sanyasi—he never bothers about his past, but lives in the present; he does not know what causes so much misery and turmoil in the world as he remains ever contented and stable in his present condition. He lives in a perpetual state of Samadhi—which is like being in a trans-like state of unawareness of the surrounding world.]

The same eclectic divine entity called the pure consciousness which is the 'truthful self' of the aspirant is known as Vishwa during the Jagrat state, as Taijas during the Swapna state, and as Pragya during the Sushupta state². Depending upon these three states of existence in which the consciousness lives at a particular moment, the same entity is given different names and exhibits different characteristics. Though the person is the same, he is known by different names and given different titles depending upon his different roles in life. [For instance, a man is a father for his son, a husband for his wife, a lord and master for his servant, a teacher for his student, a caring king for his subjects, and enemy for other kings, and so on and so forth.]

One can come to learn about the state of one's mind, thoughts and level of his spiritual existence by carefully examining the actions or deeds that are being done by him at any given moment. [For instance, if a man is mentally upset the way he handles any situation would be different as compared to his behaviour when his mind is composed. If a man gets mentally involved in the affairs of this material world and remains deeply involved in it, he is bound to be restless and in a state of constant flux. This would indicate his 'Vishwa' state of spiritual existence. On the other hand, if he physically remains involved in doing something, but does it merely in a mechanical manner while his mind is thinking of something else—as is the case with some students in a classroom who cannot concentrate on the subject taught in the class because though they might be physically present there but their mind is focused somewhere else—then it is the typical case of Taijas, the state of existence which is like a dream when a man does not live in the reality of the existing world, and instead lives in an imaginary world which has no relevance to the present. Finally, there is a state when a man is so focused on the job at hand that no external inputs or stimuli of the world can ever disturb or affect the composure of his mind and its ability to concentrate though he is very much awake and conscious of what he is doing, and not day-dreaming. This state of existence is called the Pragya state when pure wisdom, erudition, learning and enlightenment are the dominant factors, the key players.]

All the fourteen units (components; factors) of a creature's body that prevail upon the consciousness (Atma) that is inherently steady, composed, calm and uniform to make it outwardly extrovert, ever-changing, restless and active have only one primary instigator, and it is the creature's inherent 'Virttis'. This Vritti is a factor that determines his thoughts, behaviour and actions as well as the latent desires and wishes he has hidden inside his bosom. [The term 'Vritti' refer to a creature's basic tendencies, temperaments, inclinations and habits that are an integral part of his nature

and personality. The fourteen units instruments referred to here are the following—5 organs of perception such as eye, ear, nose, tongue and skin + 5 organs of action such as hand, leg, mouth, excretory and reproductive + 4 Anthakarans = 14 units.]

It is said that there are four Vrittis inherent in a man—and they are Mana (mind), Buddhi (intellect), Chitta (sub-conscious) and Ahankar (ego, false sense of pride)³. One's behavioural and thought patterns are governed by the various permutations and combinations of these four factors (24).

[Note—¹Refer Canto 5, verse no. 1 and Canto 6, verse no. 4 along with their accompanying notes in this context.

² Briefly, when a man is awake he interacts with the physical gross world through his sense organs of perception and action, and the world is known as 'Vishwa'. When he is dreaming, the physical world ceases to exist and the dynamism of the mind and its energy to visualise is transferred to his sub-conscious which creates a dynamic world of its own, called the world of dreams—this is 'Taijas'. Finally, when the man is fast asleep and even stops to dream, all aspects of his mind are defunct, and in this state the only entity that remains is his true form called the Atma which is eternally enlightened and wise—hence he is called 'Pragya', the state of subtle consciousness that is marked by spiritual awakening and knowledge, the state when one's true form and nature come to the fore, though of course for a short while only. This state of 'knowing one's true self' is a completely blissful state of existence.

³Refer also to Canto 6, verse nos. 2-3 of the present Upanishad in this context.

The *Shaarirak Upanishad* of the Krishna Yajur Veda, in its verse no. 4 describes these four components of the Anthakaran.]

25. The Jagrat or waking state of existence of consciousness, and its lord or ruler or governor called the Vishwa, is located in the eye. [This is because it is through the eye that a man sees this world; he becomes aware of the physical world because he can actually see it.]

The Swapna or dreaming state of existence of consciousness, and its lord or ruler or governor called the Taijas, is located in the throat. [This is because when a man is dreaming he cannot speak aloud using his mouth and tongue like he could do when he was awake, though he wishes to do so when interacting with other people during the dream. It is often observed that when a man sees a frightening dream or some very exciting dream, he would give out a guttural sound which appears like choked words. During a man's Jagrat state or waking state, he expresses his emotions and ideas aloud, but during the Swapna state or the dreaming state he cannot do so. Now, his expressions remains confined to his throat because the organ responsible for speaking aloud, i.e. the mouth and the tongue, are inactive while he sleeps. So, though his sub-conscious mind makes him express his views, it is not aloud but remains confined to the throat. This is manifested as guttural sound often emanating from a man who is lost in some restless dream while his physical body seems to be resting in deep sleep. Snoring is another manifestation of this phenomenon.]

The Sushupta or deep sleep state of existence of consciousness, and its lord or ruler or governor called the Pragya, is located in the heart. [This is because during sound sleep the mind has become defunct along with the gross external body, and the only organ which shows activity that can be physically verified is the heart that continues to beat rhythmically. It is in the subtle space of the heart that the Atma lives. This Atma is glorious and divine; it is 'consciousness' personified. Since the word 'Pragya' means knowledge and awareness, it means that as long as the heart beats inside the body, the latter is regarded as 'alive' because the consciousness is still

there inside the body. But as soon as the heart stops to beat, the body is 'dead' because the consciousness has abandoned its seat in the heart.]

The Turiya or the post-Sushupta transcendental state of existence of consciousness, and its lord or ruler or governor called the Parmatma, is located in the Brahm-randhra. [The Brahm-randhra is the hair like slit present on the top of the skull. It is described in the Upanishads that at the time of creation, the supreme Brahm had entered the body of the man through this slit and took up his seat in the head symbolising the higher echelons of intellect, erudition, knowledge, enlightenment and wisdom. An ascetic endeavours to concentrate his Pran or vital winds here by various Yoga techniques so that he can experience the eternal nectar of bliss and happiness that drips from this spot. An ascetic's final emancipation and deliverance or the Kaivalya Mukti is when his Pran and his Atma leave his gross physical body by escaping through this Brahm-randhra. The process to achieve this has been described elaborately in the Upanishads dealing with the concept of Yoga.] (25).

[Note—Refer Canto 6, verse no. 4 in the context of this verse.]

26. A wise, erudite and enlightened spiritual aspirant who has reached a permanent state of transcendental existence called the Turiya state when the only thing he is aware of is Brahm, and when his entire conscious existence revolves around this singular awareness, he is filled with the eclectic thought that 'the eternal, imperishable, supreme and transcendental essence of existence that prevails in the Turiya state is none other but me in my truthful form; it is me'. He realises that it is this supreme stature of existence of Brahm-realisation that really matters for him in any of the three states of Jagrat, Swapna or Sushupta in which he might be living in this world. [The word 'me' here refers to the pure consciousness known as the 'self'. This 'me' representing the 'consciousness' is the truthful identity of the creature.]

Having this eclectic awareness, he lives in a virtual state of Sushupta or deep sleep even while being physically wide awake in this world as during the Jagrat state of ordinary people. For him, whatever he sees and whatever he hears appear to be unknown, unseen and unheard by him. Even though he might be seeing and hearing something routinely on a daily basis, but his mind is asleep so much so that he remembers nothing and hence recollects nothing. [In other words, though he might have to attend to the chores of daily life and go out begging etc. for instance, he remains in a state of deep trance as if lost in some remote thoughts. He does things mechanically as and when they have to be done, but never allows his mind to stick to them even for a fleeting moment. With the mind de-linked from this world, he is literally asleep to the happenings around him; he remembers nothing and therefore his sub-conscious is free from the varied influences of the material world. He is not aware of either pain or comfort.]

When a man does not think about anything related to this material world, his mind does not store any memory of the latter, and sub-sequentially he would not dream of anything because dreams are based on the memory stored in one's sub-conscious mind about the world, along with a man's various desires and expectations from this world. Hence, such a man stays neutral and indifferent even in the second state of existence called Swapna or dreaming state; he never gets attracted or disturbed or influenced by anything that he sees in his dreams.

Such a person is indeed truly Jivan Mukta—i.e. he has found liberation and deliverance from all bondages and fetters even while he lives in this world. All the scriptures unanimously declare that he finds Mukti—i.e. spiritual liberation and deliverance.

A true renunciate monk is one who has no desire, hidden or apparent, of any kind, neither of anything pertaining to this world nor of anything related to the world hereafter. For, if he has any vestiges of desire of any kind left in him, he is bound to go to that place or take a re-birth in accordance to these desires. [Refer verse no. 23.]

Abandoning the search of the eternal Truth residing in his own bosom as his pure conscious 'self', and instead delving in voluminous scriptures in its search is as irrelevant an exercise as a camel on whose back saffron is loaded. [The camel does not know that the smell of saffron is coming from the load on its back because it is very light for him to take any notice. Instead of realising that the smell of the saffron is coming from its own load, the camel keeps on running thinking that the smell is coming from somewhere else. Similarly, an ignorant man does not know that the eternal Truth known as the Consciousness is a resident of his own bosom, and foolishly goes searching for it in the study of the scriptures.]

Such a self-realised ascetic should not have any further interest in the science of Yoga (meditation). [This is because the main purpose and aim of meditation is to help the ascetic realise the bliss of self-realisation and to enable him to obtain Mukti by diverting his 'Pran Shakti' (i.e. the dynamic energy of the vital winds that his consciousness exhibits inside the body) towards the Brahm-randhra from where it finally escapes into the cosmic space outside the limited confines of the gross body. When this objective is achieved in the way narrated above, there is obviously no need for doing Yoga and its exercises such as Pranayam (breath control), Aasans and Mudras (body postures) and Bandhas (closure of apertures in the body).]

Likewise, it is not proper for him to practice the philosophy of Sankhya Shastra or the use of various systems of Mantras and Tantras (i.e. use of Mantras in achieving one's goal according to esoteric occult system of worship and spiritual practices).

In fact, if a Sanyasi has any interest in any of the scriptures or schools of philosophy and thought other than what is mentioned as the correct path for him in this Upanishad then it is like a dead body wearing ornaments. [He might gain knowledge by the study of scriptures and hearing discussions and discourses, but they are useless for him just like it is useless to decorate a corpse with costly jewellery.]

He ought to remain away not only from all other members of the society just like a cobbler but also keep a safe distance from all involvement with deeds, formalities and acquisition of fresh knowledge. [A cobbler usually lives away from a village or mainstream of the society as his vocation is considered to be lowly.]

He must abstain from chanting the Mantra OM aloud—because a man is bound to enjoy or suffer from everything that he does. [In the present context it means that when he chants OM loudly, people will treat him as a holy man and begin to gather around him, showering him with praises and material gifts. This would prevent him from remaining aloof from everyone and lead a lonely life of total renunciation and serenity. With company of one or the other sort he is bound to be sucked in the vortex of emotions, sentiments, relationships, formalities and other such worldly things that would invariably affect his mind and cause perplexity and mental restlessness. A true Sanyasi is not supposed to allow himself any company and praises.]

Hence, a true Sanyasi should discard all things and all people as being without any meaning and substance just like the foam or froth that forms on the surface of the castor oil has no value and it is removed from the surface by the user of the oil. [The foam or froth increases the external volume of the oil and makes it appear fresh and genuine, but it is only air bubble with no oil worth its name in it. Likewise, a wise

Sanyasi treats the exuberant charms and boisterous presence of the world as of no real pith and substance.]

Instead, he must remain perpetually engrossed in the thoughts of the Supreme Being. He should observe the life and times of a Digambar (naked) Sanyasi for whom the control of the mind is the symbolic form of the ascetic's Danda (rod or staff), and the open palms of the hand are the symbolic Patra (pot) for accepting food, and treat him as his role model while he roams around carefree everywhere.

Remaining like a child, a lunatic or a possessed man, he should not desire either life or death. [That is, he is not bothered whether he lives or dies; whether anything that he does could cause him harm, or ponder about the options of whether he must do it or not. Refer also to verse nos. 50 and 53 of this Canto.]

Like an obedient servant he must behave and act patiently, remaining unperturbed about the result of actions or deeds that he should do as and when they are required to be done by him, and generally bidding for his time of emancipation and salvation (26).

27. A Sanyasi who manages to keep his gross body alive by subsisting on begged food without inculcating in himself such auspicious and noble virtues such as Titiksha (tolerance and forbearance), Gyan (truthful knowledge and enlightenment), Vairagya (renunciation, dispassion and detachment), as well as Sham and Dam (self-restraint of the sense organs as well as the mind)—verily, he is deemed to be a person who insults, demeans and causes harm to the auspiciousness, the dignity and the sanctity of the august institution of Sanyas. [Even an unfortunate pauper survives on charity and alms, but he has no spiritual standing, and is only living out a miserable and wretched life of hell while he is alive. Say, if a Sanyasi lives the same life, what difference would be there between him and the wretched pauper?] (27).

28. Mukti or Moksha (liberation, deliverance, emancipation and salvation) are not attainable by mere external show of holiness and posing like a realised and pious man by sporting external signs of holding an ascetic's rod or staff, by tonsuring the head, by attiring in various costumes, or in any other external show-offs (28).

29. An 'Ekdandi' Sanyasi (i.e. one who holds on to only 'one' rod) is he who holds on to the eternally robust and sturdy staff represented by the virtue of having true knowledge and sincere enlightenment.

On the other hand, a so-called Sanyasi who holds a wooden staff but is devoid of knowledge and enlightenment, and whose mind and heart are full of various desires, yearnings and expectations, is an impostor who would go to the gravest of hells known as 'Maha Raurav Narka' (29).

30. Great sages and learned men have likened a Sanyasi's 'Pratistha' (worldly fame, grandeur, majesty, respect and honours that establish a man as highly renowned and acclaimed) to the stool of a female pig. [That is, Pratistha is to be abhorred by a Sanyasi at all costs because it is like the filthy faecal matter. Refer Canto 2, verse no. 40 also.]

Hence, a wise Sanyasi should neglect Pratistha, and wander here and there like free-flying insects and bondless worms which have no attachments to any particular place, and instead wander uninhibited, going to any place where they want, without any pre-planning. [Refer verse nos. 34 and 46 of this Canto 5.] (30).

31. A true Digambar (naked) Sanyasi is one who would accept food that is voluntarily made available to him without his actually desiring it or asking for it. Similarly, he would cover his body with clothes that are made available to him without actually needing them or even desiring them. [It should be noted that the word 'Digambar' literally means one who wears the directions of the sky, the firmament, as his covering garment. For him, the sky is the cover as it wraps his body from all directions. The idea here is that he must be completely neutral, and mentally and emotionally detached from everything, liking none and loathing none. For a truly realised ascetic, it really does not matter whether he is physically naked or covered by reams of clothes. In fact, he is not even aware that he is 'naked' in the physical sense the word is understood to mean, because his 'self' is the Atma and it is already wearing the gross body with its covering of the skin as its garment or covering. So truly he is not at all naked.]

He has no wishes, aspirations or desires of his own. He wears clothes or covers his body with them if it so desired or wished by others, and he even takes a bath if it so desired or wished by others (31).

32. A Sanyasi who is as alert and vigilant to avoid sinful thoughts and deeds while he is dreaming as he would be in his waking state is deemed to be of a high stature amongst those who are expert in the eclectic knowledge pertaining to the supreme Brahm ('Brahm-Vaadin') (32).

33. He should have no regrets if he fails to get anything during begging to feed himself, nor should he exult at having got anything that is to his liking.

He should accept sufficient food that is enough to protect his life (and not to satisfy his taste buds or appease his appetite for food, and neither to hoarde for the next time) (33).

34. He ought to treat honours and respects with disdain and disgust. A Sanyasi who accepts honours and respects will be bound in fetters inspite of being free from all obligations of this world (34).

[Note—Refer verse no. 30 of this present Canto 5, and verse no. 20 of Canto 6.]

35. A wise and learned Sanyasi should approach the house of a noble and upright householder to beg for food when the cooking is over and all the members of the household have had their meals. [Refer Canto 6, verse no. 10.]

The aim of begging for food should be to protect the Pran (life-forces in the body) during its journey in this world while it resides inside the body. [Refer verse no. 33 of the present Canto 5.] (35).

36. A Karpatri Sanyasi who uses the cupped palms of his hands as his only pot should accept food directly into it during his begging rounds, and he should not beg for food repeatedly. He must accept what is voluntarily given to him once, and eat it while still standing or as he continues to move ahead. He must not take (drink) any water while there is still some food in his hands. [Obviously this would be impractical as he is supposed to eat out of his cupped hands.] (36).

37. A Sanyasi should be contained and self-regulated like the ocean. [The ocean is so vast and fathomless as well as powerful that should it so wish it can easily submerge the entire land mass in a blinking moment. But it never does so. The self-restraint of

the ocean is best exemplified by its leaving the sand on its shores and beaches untouched. Can the sand ever stand against the might of the ocean should the latter decide to wash off the sand particles off its sides? An ordinary river washes away towns and villages when it is in spate, but the restrained ocean observes its self-imposed limits. Likewise, the Sanyasi is deemed to have acquired great spiritual and mystical powers that he can do whatever he likes to do, but he must always exercise the greatest of self-discipline.]

These exalted souls have broader mental horizons and higher spiritual aims in life than allowing themselves to be bogged down in such lowly affairs as exhibiting their spiritual and mystical powers to instil fear or get respect in this world.

Similarly, even though they are as brilliant and splendorous as the Sun shining in the sky, they still do not violate the codes of moral and spiritual conduct that behoves of a great soul who is known as a Sanyasi (37).

38. When an ascetic begins to accept food directly in his mouth like a cow does, he develops great equanimity, tolerance and a sense of equality for all the creatures of this world. Such a man becomes eligible to obtain Mukti (liberation and deliverance) (38).

[Note—When the cow is hungry, she just opens her mouth and accepts whatever eatable is offered to her, without discriminating between the types of food as to its quality, taste, origin etc., as well as the person who feeds her, his gender, age, qualification, nature, caste, creed, ethnicity etc., whether the food is offered with due respect with the wisdom that it is being offered to another creature who represents the Lord or is a honoured guest of the householder or just as an excuse to get rid of leftovers in the house which no one wished to eat even later, and so many other considerations. The cow eats just to fill her stomach and sustain herself, and does not hoard food. It does not go out searching for tasty food offered from a particular house, but would gladly accept whatever comes her way.]

The statement that ‘the Sanyasi who eats like a cow stops differentiating between creatures of the world’ is a metaphoric way of depicting his state of mind which has inculcated the grand spiritual quality of being neutral, dispassionate, calm, serene and contentedness, treating every situation alike with stoic indifference and a high degree of equanimity.

Refer verse no. 16 of the present Canto 5.]

39. During his rounds begging for food, he should go to a household which is free from any sinful influences and is not subject to public censor, criticism and reproach of any kind. He should avoid those households which are reproachable, sinful and under the influence of evil. [The general environment of the concerned household would be sufficient to give a wise and discriminating Sanyasi an idea whether it is worthy of accepting food from it or not. For instance, a household that is kept neat and clean, where auspicious signs such as some kind of religious symbol or mark is marked on the door or the external wall, where sound of prayers being said, hymns being sung, scriptures being read or pleasant words being said are generally audible instead of pop music, heated arguments or harsh words being exchanged, where sweet perfume of incense sticks that are usually used during worship and a sweet aroma of auspicious food that is offered to the deity wafts out in the surroundings instead of the smell of stale food or meat being cooked, where guests are welcome and not treated with disdain—and so many like things would be a sure indication for the Sanyasi whether or not to accept food from the house.]

He should enter a house whose gates or doors are open. He should never enter a house whose gates or doors are closed. [A house with open doors is indicative of its welcoming nature as well as the fact that its inhabitants have nothing to hide. A mendicant would be welcomed in such a household. On the contrary, closed doors mean that either there is no one inside, or it is not welcoming for the guest. A closed door indicates just the opposite.] (39).

40. For the purpose of shelter, a Sanyasi should take refuge in such dwellings that are abandoned and covered by dust.

He should discard the notion of likes and dislikes in all matters (40).

41. A Sanyasi should take rest from his wanderings at any place where he finds himself when the sun sets. He must not keep any fire (or inflammable material) with him, nor must he build any dwelling for himself.

He should sustain himself on whatever is available to him as a grace of God.

He should always keep his mind and sense organs under strict control (41).

42. A spiritual aspirant who leaves his house, takes shelter in a forest, keeps his mind and sense organs under control, embarks upon the exercise of acquiring enlightenment and true wisdom, and waits for the proper time for his final salvation while remaining constantly on the move—indeed, such an exalted Sanyasi is regarded as being eligible and competent enough to attain the eclectic state of Brahm-hood (42).

43. An exalted ascetic (Sanyasi) who roams around and blesses everyone with fearlessness would have nothing himself to fear from (43).

[Note—Refer Canto 5, verse no. 22.]

44. A Sanyasi who abandons such negative traits as ego, pride and vanity, who overcomes all confusions and perplexities that mire the mind of ordinary people, is able to free himself from all restlessness and confusions arising out of falsehoods and deceitful conduct.

He never shows anger towards anyone, nor does he harbour ill-will, malice or jealousy towards any person. He never speaks a lie or talks in a deceitful manner (44).

45. An exalted Sanyasi who keeps roaming in holy places that have an auspicious environment, who never harms any living creature, and who survives on food that is available by begging—indeed, only such a Sanyasi is competent and eligible to obtain the eclectic stature of Brahm-realisation (45).

46. A wandering Sanyasi should never keep any contact with either the Grihastha or a Vaanprastha.

He must be careful that his life style is kept a secret and it is not revealed or divulged to other people.

He must never feel exulted or exhilarated at any development or circumstance.

Just like insects and worms continuously move from place to place, he must be constantly on the move on the path shown by the sun. [That is, he must move only during the day time, and rest during night. Refer verse nos. 30 and 41 also.] (46).

47. A Parivrajak (Sanyasi) should not himself do anything related to fulfilment of desires, harming others in any way, or accumulation of material things of this world, and neither should he motivate or inspire or teach others to do so (47).

48. He should never be interested in false scriptures.

He must never involve himself in doing any deeds that help him in generating his livelihood or to sustain himself, for he is expected to beg for the same. [Getting involved in any sort of vocation as a means of livelihood would make him mentally involved in it and its results or consequences, and then what would be the difference between a Sanyasi and a householder who remains engrossed in worldly activities? It would be better if he had not taken the vows of Sanyas in the first place if he attempts to engage in any sort of vocational activity.]

He must not talk without necessity, and abstain from entering into arguments, discussions and debates. He must remain exemplarily neutral, not taking sides with anyone, either those who are in the favour of the subject of discussion or those who are against the motion. [This restriction is of practical value for a Sanyasi, for if he takes side with any one party he is bound to offend the other. This would generate bad blood and create unnecessary and unavoidable problems for him.] (48).

49. A Sanyasi must not gather disciples around him (because this would be tantamount to keeping a household, albeit in the form of a hermitage full of obedient disciples or a fluid population of extended members of the family in the form of followers.)

He must not read or study many scriptures (as this is a waste of his time and energy, besides being impractical for him as he is expected to be always on the move).

He should avoid entering into debates and proving his point by arguments and logics to express what is in his mind. These create vexations and restlessness for the Spirit.

He must not attempt to spread his name and fame by holding various religious festivals and ceremonies (49).

50. A wise Sanyasi should not sport any sign indicative of the Ashram to which he belongs. [That is, he should not exhibit any external signs to show off his high spiritual stature or to indicate what type of Sanyasi he is. He should also not wear any signs that would indicate who he was prior to accepting the vows of Sanyas, or what social stature he had occupied. No one should be able to tell anything about him, and he is expected to remain completely anonymous. Refer also to Canto 6, verse no. 17.]

He should behave foolishly and stupidly like an ignorant child or a mad man in front of others. In spite of being very wise, erudite, learned and enlightened, he must remain silent as if he is dumb and dumb while dealing with other people. [This attitude helps him to avoid company and maintain his serenity and peace of mind. Refer verse nos. 26 and 53 of the present Canto 5.]

He must assume a countenance and act in accordance with the ways of the people with whom he has to interact at a particular moment. [That is, he must adapt himself to circumstances in which he finds himself at a given moment of his life, but this is to be a temporary phase and as soon as the circumstances change he must revert back to his original self. This quick adaptation helps him to avoid curiosity about himself amongst the local populace, besides making him easily acceptable by them. This makes his life easier and trouble free. It's a practical advice.] (50).

51. A Sanyasi must not let either any good or any bad thoughts to enter his mind.

He must wander silently without speaking, and not get involved in any deed whatsoever. He must remain submerged in the thoughts of his Atma, which is his true self and pure consciousness. Being thus lost in his own thoughts, he ought to roam silently and calmly like a man in a trance. He must keep his sense organs under strict control (51).

52. A Sanyasi must abandon all the Vasanas (worldly desires and passions) and roam in this world alone, without keeping any company.

He must treat everyone alike and with great equality. [That is, he must not distinguish between any two creatures. He must not show preference for one who speaks sweetly to him and dislike another person who shows disrespect to him.] (52).

53. He must behave like a child. In spite of being an expert in everything, in spite of being wise and enlightened, he should act stupidly and ignorantly. [Refer verse no. 50 of the present Canto 5, as well as verse no. 34 of Canto 3, and verse no. 21 of Canto 4 also in this context.]

In spite of having full knowledge of all the Vedas, he must keep silent and humble like a cow.

In spite of being highly erudite and learned, he must always talk impertinently and irrelevantly like a stupid and ignorant man, or one who is possessed by evil spirits (53).

54. A Sanyasi should bear with exemplary fortitude, courage and equanimity, maintaining his calm and poise in the face of all sorts of insults, false accusations, insinuations and other such attacks on his character by those who are wicked and evil.

Even if such wicked and sinful persons torment him physically, tie him in shackles, or cause hindrance in his routine life and its chores, then also he must remain calm and unruffled, neglecting their instigations and rudness. [Eventually they would relent and let him go his way. Refer verse no. 55 below.] (54).

55. A Sanyasi must tolerate with stoic calmness the ignominy inflicted upon him by wicked and sinful persons who might spit upon him, defecate or urinate upon him, or torment him in any other way.

When faced with adversities, he must endeavour calmly to extricate himself from this situation without offending the tormentor, and as soon as possible. [For instance, when the tormentor is fed up with him, he would release him, and then instead of fighting back, seeking revenge or hurling abuses and curses at his tormentor a Sanyasi should walk away calmly from the site. This would have such a profound psychological effect on his tormentor that he would be buried in the sense of guilt and shame. Refer verse no. 54 above.] (55).

56. Honours and respects that one gets from others cause hindrance in one's spiritual progress and undermines the good effects of doing Tapa (observation of austerities and penances). [Refer Canto 6, verse no. 20.]

On the other hand, insults and torments inflicted upon a Sanyasi by others, if he bears them with stoic calmness and equanimity of behaviour, would only go to enhance the good effects of Tapa done by him and helps in his early success. [Refer verse nos. 54-55 of this Canto 5.] (56).

57. An excellent ascetic or Sanyasi is one who does not cause any kind of hindrance in or obstructs the religious observances of other people. He never criticises them or their religious beliefs. He must prefer, on the other hand, that people would criticise him and avoid his contact (57).

[Note—Refer verse nos. 44, 53-56 and 58 of the present Canto 5 in this context.]

58. A Sanyasi must pursue the auspicious path of Yoga (meditation and contemplation) and have no ill-will or animosity with any creature, whether it is a Jaraauj (one who develops in the mother's womb) or an Andaj (one who develops outside the mother's womb in an egg).

He must not harbour any malice towards them. His actions or deeds, his mind and its thoughts, his faculty of speech or the words spoken by him, or his physical body and its organs should never be used to harm them or create ill-will towards them.

He must avoid all types of attachments and relationships of whatever kind (58).

59. A Sanyasi should abandon all negative traits such as Kaam (worldly passions), Krodh (anger), Mada (arrogance and haughtiness), Lobh (greed) and Moha (attachments and affections) and thereby become fearless (59).

60. [Verse nos. 60-66 reiterates some of the vows that a Sanyasi or a Parivrajak takes. These verses sort of summarise what have been said till now.]

The Dharma or the auspicious, righteous and sanctioned way of conduct for a Bhikshuk or a monk or ascetic who subsists on begging are the following—to accept food got only by begging, to observe the vows of silence, to remain constantly engrossed or involved in doing Tapa (austerity, penance and sufferance of hardships for some noble cause), to remain absorbed in researching the 'truth' and acquisition of truthful knowledge that is auspicious, righteous, divine, spiritually uplifting and generally conducive to one's spiritual liberation and deliverance, and to have profound sense of renunciation, detachment and dispassion (60).

61. An ascetic should wear ochre clothes and perpetually remain absorbed in meditation and contemplation called 'Dhyan Yoga'.

For shelter, he should stay outside a village (i.e. any populated areas) under the shade of a tree near its roots, or in some shrine dedicated to some God.

He should sustain himself by begging for food on a daily basis. [That is, he is not supposed to store food for the next day.]

He must never accept food from the same household twice, or on two occasions (61).

62. A wise and learned man should lead a self-regulated life and diligently observe all the tenets and codes of conduct that are prescribed by the scriptures and tradition for the way of life he has chosen to lead, which in this case is the life of a Sanyasi. His behaviour and demeanours should be excellent and exemplary, and it should be a daily and natural routine for him. He must continue to live auspiciously and righteously till the time his inner-self does not become completely cleansed and washed of all impurities, imperfections and taints that usually shroud a man and distort his inherently immaculate nature.

When the aspirant has successfully cleaned his inner-self of all impurities and imperfections by observing austerities and penances, he can now move around wherever he wishes without any fear. [Unless the inner-self is totally rid of all worldly corruptions and imperfections, there are good chances that he, as a human being, might fall prey to various temptations. So, this stage of rigorous observance of codes of conduct helps to build up self confidence in him and prepares him to resist the gravest of provocations and the profoundest of temptations in his life as a Sanyasi.] (62).

63. A wise Sanyasi should keep his sight focused on the supreme Lord called 'Janardan' (literally the Lord who is merciful, gracious, benevolent and beneficent towards his devotees or subjects; a reference to Lord Vishnu); he should see this Lord both in the external world as well as inside his own bosom. [That is, a true Sanyasi is one who has reached the stage of realisation when he sees the same Lord everywhere—because he has become enlightened enough to realise the non-dual nature of the Supreme Being. He realises, inter alia, that the same Lord resides in all the aspects of creation, whether it is the world outside seen with the physical eyes of the body, or it is the world of the inner-self seen with the inner eyes of wisdom and spiritual enlightenment.]

He roams around detached, unconcerned and untainted by sins like the wind or the air element that comes in contact with everything that exists on this earth, but remains unaffected or un-influenced by any of them (63).

64. A Sanyasi ought to maintain stoic neutrality and exemplary calmness and mental poise in the face of opposing situations or circumstances, such as when faced with sorrows, grief, misfortunes and distress, or during moments of happiness, pleasures and good fortunes.

He must be ever forgiving and tolerant.

He should accept whatever food that voluntarily comes in his hands. [That is, he should not demand this and that to eat.]

He must not have malice, ill-will or animosity with anyone, and treat a Brahmin, a cow, a horse and a deer alike. [That is, he must treat all living beings equally, not distinguishing between them on any criterions.] (64).

65. A Sanyasi must have the holistic and eclectic thinking that all the creatures are personifications of one Supreme Being who is all-pervading and the supreme Father of creation. He must be convinced, as a consequence, that he himself is a personification of the supreme Brahm who is an eternal fount of bliss, beatitude and felicity (65).

66. A wise and enlightened Sanyasi who has developed these auspicious thoughts in his mind holds on to them like an ascetic holds on to his physical Danda or staff. [The ascetic's rod is a symbol of his moral authority, and constantly reminds him of his special status that prevents him from going astray from the path of Sanyas-hood. A steady mind assumes the same role, and it stands the ascetic in good stead.]

Such an enlightened view point makes the Sanyasi free from all desires, aspirations, hopes and expectations. He is filled with profound renunciation so much so that he discards all clothes that cover him.

He discards the world completely and renounces all his links with it through all the instruments of his body that usually help one to maintain this link—viz. the

Mana (mind), the Vachan (speech), the Karma (deeds) and the Sharir (the physical body). [He never thinks about the world by controlling his Mana, he never speaks or hears about the world by controlling his Vaani and Vachan, he never does anything gross in nature by abstaining from Karma, and he never establishes any physical contact with any material thing of a gross nature in this world by controlling his physical body, the Sharir.]

He turns his face against all worldly affairs leading to confusions and perplexities, all sorts of worldly deceit and corruptions that have their genesis in Maya (i.e. in delusions and deceptions).

Instead, he follows the principle of 'Bhramar and Keet'¹ to remain ever engrossed in the thoughts of Brahm, to remain absorbed in doing meditation and contemplation on this Brahm to finally find Mukti or liberation and deliverance for his soul (66).

[Note—¹Bhramar and Keet—Refer note no. 2 of verse no. 22 of the present Canto 5.]

-----*****-----*****-----

Updesh (teaching)/Canto 6

[This Canto describes the fourth state of existence called the Turiya state of consciousness in which the Sanyasi lives perpetually, along with narrating the daily life of an enlightened Sanyasi or a Parivrajak. This Canto brilliantly describes the different components of the body, their utility and function for the creature, the various states in which the consciousness exists in the body, and other related matters.]

1. Once again, sage Narad asked the great grandfather of creation, Brahma—'Oh Lord! You have just said that the ascetic attains Mukti when he successfully replicates the principle of Bhramar and Keet in his personal life. [See verse no. 66 of Canto 5 above.] But now please tell me how to actually practice this principle so that one can attain the highest spiritual stature.'

Brahma elaborated—'Oh Narad! One must accept only the 'truth' in life and discard all falsehoods and pretensions. He must take the help of the virtues of Gyan and Vairagya (truthful knowledge and sincere renunciation respectively) to overcome all affections and attachments for this body which is gross, perishable, impure and mortal, and instead become established in that excellent body which is subtle, imperishable, eternal and immaculate. [The former body is the physical body consisting of the sense organs and build up of bones, marrow, skin, blood, mucous, nerves and veins, urine and stools etc. Refer Canto 3, verse nos. 46, 48; and Canto 4, verse nos. 25, 27. The latter body is the subtle body that harbours the mind and intellect as well as the causal body that harbours the pure conscious Atma.] (1).

2. [This verse describes in a symbolic manner the various parts of the subtle body of a creature.]

The aspect of the body that remains after its gross components are eliminated is called the subtle body, and it is represented by Gyan (i.e. mind and intellect, because these are the instruments by which a man acquires Gyan or knowledge to become wise, learned and enlightened).

Vairagya (renunciation) is the soul of this body. [True knowledge instils renunciation in a man for he has now realised the deluding, transient, entrapping and

artificial nature of this material world and its equally illusive charms. He begins to distance himself from it because he had become disillusioned by it. If true Gyan or enlightenment, wisdom and learning cannot inspire Vairagya, or true renunciation and detachment in a man, then he cannot be said to have acquired true Gyan. If he says that he has this virtue of Gyan in him, he is only deceiving himself and others.]

Sham and Dam (self restraint of the mind and body) are its two symbolic eyes. [That is, a wise man sees everything with restraint and with self control of natural urges.]

Its symbolic mouth is a completely cleansed Mana (mind). [A creature accepts things to eat by its mouth, and this food helps to nourish the rest of the body. In the present context, a wise and discriminating mind would accept only noble thoughts and ideas, and exclude everything that is unworthy to be accepted, that is ignoble, unholy, lowly and avoidable. This input would obviously have an all-round positive effect on the creature's well being and overall personality. Positive thoughts are always beneficial because they create positive energy fields. A system nourished by things positively charged would naturally be superior and better placed than those that are sustained by evil and negatively charged energy. Similarly, a creature speaks by its mouth; the mouth is the 'spokesman of the inner thoughts of the creature'. When the mind is holy and cleansed of all impurities, its thoughts would also be concurrently holy and pure. This would be reflected by what a man says, what he thinks, what he does, and how he behaves.]

The Buddhi or intellect is its special Kalaa or exclusive quality or virtue that distinguishes it from others. [Like the case of a man having great practical intelligence, natural wisdom and prudence inspite of him being not formally educated, or even when he is learned in the letters his literal knowledge would be useless unless he is endowed with the gift of prudence, intelligence and wisdom, the subtle body that has a sharp Buddhi (intellect) along with the Mana (mind) that is fine-tuned and wise is indeed distinguished and set apart from others.]

This subtle body has twenty-five components or parts or organs called the Tattwas (elements), and they are the following—the five perceptions (of smell, sight, hearing, taste and touch), the five faculties of action (accepting, going, speaking, sensual or sexual awareness and the desire to excrete or eliminate waste), the five Prans (i.e. the vital winds or airs that sustain life inside the body—Pran or breath, Apaana, Samaana, Vyan and Udaana), the five objects of perception (things seen, things heard, things smelt, things tasted and things felt), the four Antahakarans (i.e. the four aspects of the inner self which are Mana or mind, Buddhi or intellect, Chitta or sub-conscious, and Ahankar or ego), and one un-manifest Prakriti (or the latent, hidden but inherent nature and temperament of a creature). [Refer also to Mahopanishad, 1/4 – 69 of Sam Veda tradition.]

The overall gross body of a creature consisting of the five Maha Bhuts (elements such as sky, air, fire, water and earth) has five states of existence—viz. the Jagrat or waking state, the Swapna or dreaming state, the Sushupta or deep sleep state, the Turiya or post Sushupta state that is bordering on the transcendental and deep sleep state, and Turiyatit or post Turiya state of permanent transcendental existence.

The four symbolic limbs of the body are the following—Karma or deeds done, Bhakti or devotion for one's noble aim in life as well as submission to the Lord, Gyan or truthful knowledge, wisdom and enlightenment, and Vairagya or renunciation, detachment, dispassion and indifference towards all material things and falsehoods of the world.

Another interpretation is that the four states of existence of consciousness, viz, the Jagrat, the Swapna, the Sushupta and Turiya are the four symbolic limbs of the body.

The fourteen organs or instruments of the body (refer verse no. 3 of this Canto 6) by which the creature perceives the external world in which it lives are the following—one Mana or the faculty of the mind, one Buddhi or the faculty of the intellect, one Chitta or the faculty of the memory, the sub-conscious mind, and the power to focus and fix attention, one Ahankar or the sense of pride in the body and its achievements as well as its stupendous abilities (which enables the gross body to become agile and active to prove that it is strong, able, competent, energetic and muscular enough to achieve tough and the most daunting of tasks), five organs of perceptions such as eye, ear, nose, tongue and skin, and the five organs of action such as the hand, leg, mouth, excretory and reproductive. These organs or instruments are like the pillars that support the creature's existence in this world. It is with the aid of these fourteen components or parts the edifice of the world is accepted and known by the living being.

In this prevailing situation, a wise ascetic is he who acts like an expert boatman who can extricate the boat that has been trapped in a swamp and manoeuvre it to safety. In other words, a wise ascetic should overcome all spiritual obstacles and expertly take the boat representing his life across this endless world of delusions, entrapments, miseries and temptations, a world which is like an ocean, and reach the other shore symbolising emancipation and salvation for his soul. He must act like an expert elephant tamer who can control even a rogue elephant with dexterity, and force it to go along the desired path.

Hence, a wise and enlightened man who is well established in Gyan (or truthful knowledge of the reality of existence) must be convinced that whatever that exists besides his pure consciousness called the Atma is deluding, false and deceptive, and therefore he exclaims 'Aham Brahmasmi' or 'I am Brahm'. [This is because Brahm is the only universal, unequivocal, quintessential and irrefutable 'truth' in creation, and the Atma, being pure consciousness, is an embodiment or a personification of this 'truth'. How can one deny one's own existence? It may be difficult to visualise or think about the concept of 'pain' or 'enjoyment', for instance, when it is felt by someone else, but how can one deny this feeling when he personally feels it, when he experiences it first hand? Likewise, it may be difficult to visualise the abstract concept of the Absolute Truth and Consciousness as being one's truthful form known as the 'self', that the 'Truth' is not the visible gross body but something extremely subtle and sublime, and that this 'Truth' is known as the Atma which is all-pervading, universal and all-encompassing entity in the sense that it is present in equal intensity in all living beings of whatever denomination or in whatever form of the visible gross body they have. The realisation of this 'Truth' provides extreme bliss, contentedness, fulfilment and ecstasy. A person may not be easily convinced of this 'Truth' by merely reading the scriptures, but how can someone neglect it when he witnesses this 'Truth' first hand by meditating and concentrating his faculties on searching it out, and then personally experiencing the sublime quality of bliss obtained by this realisation?]

Having a firm conviction and sound belief that there is nothing worth knowing spiritually other than one's own self called the Atma, he becomes liberated and roams around like a free man. He is called a 'Jivan Mukta'—i.e. he is a person who attains freedom from all fetters of ignorance and delusions vis-à-vis the world and the body

that tie down an ordinary creature to them, and consequentially he is deemed to be free even though he lives in the same gross world and has a physical gross body.

A Parivrajak who lives in the aforesaid manner is fulfilled and accomplished. He must desist from saying that he is not Brahm, because that would be speaking a lie. On the other hand, he must always assert that 'I am Brahm'. [Foolish people would think that he is mad, is an impostor who is boasting about his exalted spiritual stature, but in fact he is honestly and sincerely speaking the truth.]

An acclaimed and successful Sanyasi passes through the three states of existence such as Jagrat (waking), Swapna (dreaming) and Sushupta (deep sleep) to reach the Turiya state which acts as a stepping stone to the final transcendental state of Turiyatit (2).

3. The daytime is equivalent to the Jagrat or waking state of consciousness, the night is equivalent to the Swapna or dreaming state of consciousness, and the midnight is equivalent to the Sushupta or deep sleep state of consciousness. All these three states of existence are deemed to be included in the fourth state called Turiya, and by the same logic and extension of this phenomenon, these four states are deemed to be included in the last and fifth state of existence called Turiyatit.

[The part of the night post midnight is the period when a man sleeps most soundly and peacefully. It is observed that if one does not sleep during this part of the night, he might not get proper sleep and feels worn out the next day. When a man is fast asleep and totally relaxed, he does not dream. All dreams that a man sees during sleep are bound to create some sort of reaction or response in his sub-conscious mind, though this reaction or response is at the most subtle level as compared to that which is caused in the mind by any event that occurs when the man is awake in this world. The period of sleep implied here is that when the man does not even dream, but is fast and sound asleep. In physical terms also, the period of the night post midnight is most calm and quiet. This period usually lasts for a few hours post midnight, say till the wee hours of early morning. The best and the most relaxing sleep is obtained during this period. Hence, the Turiya state is regarded as being equivalent to this period of sleep in a metaphoric way to indicate the state of the mind which is completely relaxed and totally detached even from the imaginary world of dreams. This is a state which is most rejuvenating for the Spirit of the Sanyasi.

We can take a simple example to understand this phenomenon. A student who is currently doing his post-graduation in, say, history is supposed to have already done his graduation as well as his earlier schooling. It is absurd and incongruous to say that one has reached the level of post-graduation without having passed his school and completing his graduation? Likewise, when a spiritual aspirant has reached the transcendental state of Turiyatit it is deemed that he must have successively passed through the earlier stages of Jagrat, Swapna, Sushupta and Turiya before he has climbed the steps to reach the pinnacle of conscious existence in the transcendental state.]

Now, the functions of the fourteen instruments of the body that work under the overall control and supervision of the four aspects of the Antahakarans (the inner self) that consist of the Mana (mind), Buddhi (intellect), Chitta (sub-conscious) and Ahankar (ego, pride) are being described¹.

The main function of the eye is to create in a creature awareness of and attraction for visual things in this world that have a charming countenance or external features. The ear has the function of making sounds audible for the creature and making him aware of the existence of words and all other forms of sound that imply

the presence of life in the surrounding world (because lifeless and inert entities do not emit sound, and dead creatures do not speak). The tongue has the function of tasting and making a creature aware of the various shades of taste that exist in this world. The nose has the function of smell and making the creature aware of different types of smells that exist in this world. The faculty of speech located in the mouth has the function of speaking and enabling the creature to express himself. The hand has the function of accepting or receiving anything, to give it to someone else, or to lift it and take it to some other place. The function of the leg is to walk and carry the creature's body to different places. The anus has the function of eliminating waste from the body. The genitals have the function of recreating and its associated sexual and sensual pleasures. The function of feeling and touching is carried out by the skin. [These are the gross components of the body.]

[Now the subtle components are being discussed.] The function of the Mana (mind) is to accept the sensory inputs fed in by the sense organs of the gross body as outlined above, and then consult the Buddhi (intellect aspect of the brain) so as to intelligently interpret these inputs given by the various gross organs of the body and then make proper and judicious decisions, and give effect to them so that these instruments can carry out their functions in an organised and auspicious way. The Chitta (the sub-conscious, the memory) helps to keep him conscious and internally aware and updated about the happenings, collecting data and storing them for future retrieval and reference, and generally acting as the quick-referral library for the creature. Finally, the component of Ahankar (ego, pride) makes the creature have a sense of individuality, and a feeling of having an independent existence and personality.

When the transcendental element called Consciousness weaves a web consisting of these fourteen threads or parts or components or aspects, the combined effect is the creation of an imaginary body which would naturally consist of these fourteen components. Consequentially, the Consciousness loses its originality and its pristine nature, and instead gets surrounded by this web of its own creation. The latter eventuality results in the creation of the Jiva—i.e. the result is that the eternally immaculate and transcendental Consciousness that has no physical body assumes for its self a body having various gross and subtle components, and a body that lives, interacts and perceives in this world. [That is why, this 'consciousness' or 'Atma' living inside the body of its own creation is called a 'Jiva Atma' or a consciousness that 'lives' (Jiva) in a body as its essence known as the 'soul' or the Atma.]

Just like a man living in a house begins to be known as a 'householder' because he is the proud owner and lord of this house, the Consciousness living in a body comes to be known as a Jiva—i.e. 'the living being'².

Inside the gross body is a subtle heart which is like a lotus having eight petals. The Jiva or the 'true self' of the creature, i.e. his 'pure consciousness or self', resides in this lotus like heart. This Jiva assumes different forms depending upon the perspective with which it is viewed³.

When this Jiva (the Atma or consciousness) living inside this lotus wanders or moves around the eastern petal, it develops a tendency for doing auspicious things. When it turns towards the south-east direction, it develops a tendency of laziness, and feels drowsy and lethargic. When it turns towards the south direction, it develops a tendency of cruelty and lack of compassion. When it turns towards the south-west direction, it develops a tendency for auspicious and correct thinking. When it turns towards the western direction, it develops a tendency of remaining engrossed in sports, plays, actions and other such worldly deeds and activities that need physical

effort. When it turns towards the north-west direction, its intellect begins to swerve towards nobler ideas and higher goals of life. When it turns towards the north direction, it experiences profound calmness and develops peace of mind. When it turns towards the north-east direction, it acquires eclectic wisdom and enlightenment. When it remains established in the center of the lotus in its thalamus, it develops great Vairagya or a tendency for renunciation and detachment. And when it enters the tendril of the lotus, the creature becomes aware of its pure conscious form known as the Atma (i.e. he becomes 'self-realised').

In this above way, when a wise ascetic becomes aware of this shoot (tendril) from which the lotus flower has emerged and which is the root cause of his existence as an individual person, he is said to be enlightened. He would have become aware of the pure consciousness called the Atma or soul that is the very essence and at the root cause of his being. When this profound truthful spiritual knowledge sprouts in his inner being, he is deemed to have attained the Turiyatit state of existence (3).

[Note—¹Refer Canto 6, verse no. 2, and Canto 5, verse no. 24 of the present Upanishad.

²Krishna Yajur Veda's *Saraswati Upanishad*, verse nos. 47-48, and *Rudra Hridaya Upanishad*, verse nos. 41-45 describe how the Atma, the cosmic Consciousness, becomes a Jiva, and in the process outlines who a Jiva actually is.

³The *Dhyan Bindu Upanishad*, Krishna Yajur Veda, verse no. 93/1-93/15 also describes this context where the Atma appears to look different when viewed in different perspectives.]

4. The four states in which a Jiva (living being) exists are the following—Jagrat, Swapna, Sushupta and Turiya. The fifth state called the Turiyatit state is beyond these four. [Refer Canto 5, verse nos. 24-26; Canto 8, verse nos. 9-11, 20.]

In other words, the same Atma appears to exist in four different forms depending upon these four states of a creature's conscious existence. Hence, the Atma that lives in the Jagrat state is called 'Vishwa', in the Swapna state it is called 'Taijas', in the Sushupta state it is called 'Pragya', and in the Turiya state it is called 'Tathastha' (literally meaning non-involved, indifferent and completely neutral). The Atma or consciousness that exists beyond these four states, the Atma which exists in the transcendental state called Turiyatit, is known as the 'Parmatma'—or the supreme Atma or the transcendental Consciousness. Since it is in 'transcendental' state of existence which goes beyond all the known states of worldly existence, it is natural that it rises above the gross and the mundane, and instead remains free from all the faults and shortcomings that are associated with worldly existence—i.e. the Parmatma is immaculate and devoid of all taints and corruptions that might have shrouded the Atma when it assumes a gross body while it lives in this world. [This is the reason why the Parmatma is compared to the sky because the sky stays above the gross world known as the earth and does not have any of the physical limitations of the earth.]

Again, since the wise ascetic has already realised that his true 'self' is the Atma that lives in the Turiyatit state of existence (refer last paragraph of verse no. 3), it is obvious that he is like this Parmatma. So he exclaims upon this eclectic discovery—'I am Brahm (the Parmatma)!'

A person who lives perpetually in this Turiyatit state is deemed to be free from the limitations imposed by the other four states of existence. It may be argued that this Turiyatit state incorporates all the other four states of existence (as stated in the opening stanzas of verse no. 3), but in actual practice it is perpetually a completely neutral state, and anything that is profoundly and eternally neutral cannot be said to have bias towards any one or the other thing. Since there is no reversal of this state of

Turiyatit, i.e. once a man reaches this transcendental state of existence he would not go back to the other four states of existence, he would not be aware of the gross world and his gross organs as done in the Jagrat state, he would not dream as in the Swapna state, he would not be in the temporary state of rest in the Sushupta state which is a transient state as the creature oscillates between the Sushupta and Swapna states while asleep, and he would not even have any junior level of spiritual evolvement as exemplified by the Turiya state which is higher than the Sushupta state but lower than the Turiyatit state. This is because he has reached the highest point in his spiritual journey and has reached its pinnacle or citadel. There is no existence beyond it; it is the supreme state in which the consciousness can ever expect to exist. Hence, it is honoured by the epithet 'Param'—one that is supreme and beyond which there is nothing.

Since the eternal and truthful Atma (here referring the cosmic transcendental form of the Atma known as Consciousness, rather than the microcosmic form of the Atma that lives inside the body of the individual creature as its Jiva-Atma) is the only conscious and living entity that exists in all of these states of existence, it is deemed to be the only one witness of their presence.

[The gross body ceases to exist in the other states except the Jagrat state. The subtle body consisting of the mind ceases to exist in the Sushupta state. The causal body that harbours the individual's Atma ceases to exist when the creature dies and leaves the gross body. So, none of them are eternal. The Atma itself, though it is eternal and immaculate by nature, becomes mired in the delusions of the world, allows itself to be trapped in the web-like snare created out of its own free will as described earlier in verse no. 3, then remains engrossed in doing so many deeds and suffering from their consequences, has various desires and assumes so many roles voluntarily. Hence, it is also not apparently steady. In other words, the Atma that is called a 'Jiva Atma' is influenced by the environment in which it lives; it is tainted by its surroundings. As compared to this situation, the Parmatma is unaffected by worldly things and is beyond the reach or influence of anything gross and mundane that pertains to this creation, whether it is good or bad. Hence, in this scenario, the only entity that remains constant and unchanging is the Parmatma, the supreme form of the individual Atma which is also known as Brahm. That is also why the latter is called the Absolute Truth—because the latter does not change.

A simple illustration will help to clear the idea. The celestial sun is unmoving and shining brilliantly in a uniform manner. But when seen from earth, it appears to move and even change its brilliance depending upon a number of environmental factors such as the presence of clouds, humidity, dust particles etc. in the atmosphere, etc. The sun also appears to rise and set, is hidden from view behind dark clouds, or even disappears during solar eclipses. But even a high school student knows that none of this is true. Similarly, the disc of the moon appears to have its own light whereas it merely reflects the light of the sun, and it also appears to change its contours every night though this is due to the different angles from which it is viewed from earth every night as a result of its revolution around the earth. The same argument applies to the Parmatma vis-à-vis the Jiva Atma. The Parmatma is like the sun, and the Jiva Atma is like the moon that shines in the light of the sun.]

Since the Parmatma represents that superior aspect of the cosmic Consciousness that is absolutely neutral and detached from everything, including Maya (delusions), it is beyond the purview of the four normal states of conscious existence of a creature. The Atma living in the Turiyatit state is called a Parmatma. In this state, it cannot be called a 'Drasta' of anything, or the one who sees anything,

observes anything, or is a witness to anything—because this is a completely neutral and detached state of existence in which the mind and all the other faculties are defunct, and in which nothing matters for the super-conscious Atma¹.

In such a case, should one regard the Jiva (the living being) as the Drasta? [That is, if the Parmatma is not the Drasta or the one who sees, observes and witnesses anything because of its sublime cosmic existence and neutral character, then can one treat the creature that has a gross existence in a visible world of material sense objects as the seer, observer and witness?]

No, the Jiva (living being) is also not the Drasta in the true sense because his 'true self' is the Atma that is a most subtle and sublime entity which is really not involved in anything related to the gross body as well as the gross world. This Atma is pure consciousness like the Parmatma (which is the 'supreme Atma' or the cosmic Consciousness which is the macrocosmic form of the individual creature's Atma). The Atma possesses all the virtues of the Parmatma in the sense that it is equally neutral, dispassionate, detached etc. from anything gross and untrue. The problem arises only when the creature, under the influence of delusions and ignorance, begins to identify himself with the gross body in which this Atma lives and erroneously begins to treat this body as his 'true self and identity'. This body lives and interacts with the gross material world of sense objects.

So, when the creature begins to identify himself with the body, he becomes a 'Drasta' because then he begins to 'see and perceive' this world through the organs of perception of the body. Now he becomes someone who 'sees', someone who perceives, feels, tastes, touches, smells etc. The world becomes his object of perception or the 'Drisya'. The Drasta (the seer or observer) is affected naturally by the Drisya (the objects or things seen or observed). The sight influences him and creates either a positive or a negative impression on his sub-conscious and psyche. Such a creature cannot remain immune from, unaffected by or indifferent to his surroundings and what he 'sees' simply because his mind and intellect are not attuned to see the 'truth'. Had they been so, the creature would have realised that the body—which actually does the seeing or perceiving of the objects of the world—is not his truthful identity at all in the first place. The fact that he has not realised what his true nature is becomes the breeding ground for illusions of his being a 'Drasta' or the seer. Such a 'Drasta' gets embroiled in the affairs of the gross world because he 'sees' this world as being true—though this perception is absolutely erroneous.

On the other hand is the person who can be regarded as a 'neutral Drasta or a non-Drasta'. This wise man knows that his 'true form' is not the body but the Atma that lives in this body. Such a wise and erudite man would do things in this world like another 'ordinary' man, but with the difference that he does not get involved in anything the body does at the emotional and sub-conscious level. His mind neither gets involved in what his body does, nor does it register or store any information in its memory bank regarding the humdrum affairs of the world.

Therefore it is derived that the same Jiva Atma (a living being) can either be a 'Drasta' or a 'non-Drasta' depending upon the level of its wisdom and intellectual development in the spiritual sphere. That is, everything depends on the level in which a living being's Atma or pure consciousness exists in this world. In other words, at the lower level and grosser level of existence of the consciousness, the Jiva becomes a 'Drasta', while at the higher level of existence he is a 'non-Drasta'. A Drasta is involved in and influenced by the world, while the non-Drasta is uninvolved and neutral.

In other words, if the Atma relates itself to the world—whether at the gross level corresponding to the Jagrat state known as the waking state of consciousness in the physical world, or at the lower subtle level corresponding to the Swapna state known as the dreaming state of consciousness in the world of dreams—then this Atma is known as the ‘Drasta’. But when the same Atma lives in the Turiya state of consciousness that transcends these levels of existence of consciousness—when it is completely detached from the world, the physical body and the subtle mind—then it is known as the ‘non-Drasta’.]

Now suppose it is said that the Jiva’s (living being’s) true nature is not to remain involved in worldly affairs as his ‘true form’ is the Atma which is pure consciousness that is equivalent to the cosmic Consciousness called the Parmatma, then this logic also does not hold its ground of validity. This is because as soon as the Atma assumes a gross body, it is immediately shrouded by the ego and pride of having a body. It is almost impossible to find a living being or a Jiva who would not accept that he has a body. In fact, the very concept of being a ‘Jiva’ rests on the premise that the Atma has a body. Therefore, if this notion of being a possessor of a body is done away with, it is only then that the Jiva becomes equivalent to the Parmatma. [The Atma is proud of the body because this body gives the Atma its form, its identity as an individual; it is by the medium of the gross body that the Atma is able to perform stupendous tasks in this world, achieves success in various fields and acquire name and fame; it is the body which helps the Atma to do deeds that are righteous, noble, auspicious and holy. The Atma is only a Spirit without a form, and to be identified it needs a physical form which the body provides. Hence, the Atma is proud of its association with the body. This stokes the ego and makes the Atma possessive of the body.]

In other words, the difference between a Jiva and the Parmatma is just like the difference between the Ghatakash and the Mahakash. [The Ghatakash is the space present inside a hollow pitcher, and the Mahakash is the vast open sky outside the vessel. The Ghatakash is separated from the Mahakash by the physical body of the pitcher. Actually there is no distinction between the space inside and outside the pitcher, for if the vessel is broken the two spaces coalesce instantly and effortlessly.] The two names of the same thing are given only in an abstract manner for the purpose of study, for in actuality there is no difference. So therefore, a Jiva has a distinct existence only as long as it has the body—or is conscious that it has the body, and as soon as this awareness of the body is removed, the two—the Jiva and the Parmatma—become one.

[Another instance is cited now.] The same breath moves out and in the body as exhalation and inhalation. While doing so, it makes two distinct sounds—‘Ha’ and ‘Sa’ respectively. That is, while moving out the sound is equivalent to the letter ‘Ha’ of the Sanskrit language, and when moving in the sound is equivalent to the letter ‘Sa’. This forms the Mantra ‘Hans’, meaning a divine Swan. In other words, the Jiva’s Pran or vital winds also display artificial distinction as being exhaled breath and inhaled breath though the air is the same entity that cannot be distinguished and mutated. A wise, self-realised and enlightened ascetic understands the esoteric message encrypted in this sound of Hans. He realises that the breath is telling him that he is like the divine bird Swan which is regarded as the purest and the wisest amongst the birds². So, a wise ascetic always concentrates upon his pure and enlightened form known as the Atma that has no physical body like this wind or air element which too has no physical body. The Atma then becomes equivalent to the Parmatma.

With this sublime and eclectic spiritual view firmly established in his inner self, the enlightened ascetic discards all sense of ego and pride vis-à-vis the body. And when this happens, he becomes one with the Parmatma (as explained above) (4).

[Note—¹The word 'Drasta' means one who sees, observes something. It is the mind that registers any sight that is seen, or any other perception for that matter, in order to enable the man to actually see or perceive the particular thing. For instance, a man might be gazing at something continuously but he might not be actually seeing it because his mind is lost in some other thoughts. In the present case when we refer to an ascetic in the Turiyatit state of existence we find that he is so much absorbed in meditation and reflection upon the truth of the Atma, his pure consciousness, and remains submerged in its thoughts and the bliss derived from it that he is totally oblivious about the surroundings. So he lives in a perpetual trance, and though he might beg for food or take a bath in the river, actually, at the mental level, he is not doing anything at all. If one asks him anything about his actions, his answer naturally would be in the negative, and in this he would be speaking the actual and sincere truth.

This also explains the difference between the Turiya and the Turiyatit states. The living being who has vestiges of awareness left in him, even of the fact that he is an ascetic or a Sanyasi, or the fact that he is enlightened and wise, may have risen above the rest of the creatures and live in a Turiya state of trance-like existence that resembles Turiyatit state, but he has not achieved truthful success. That comes when he reaches the Turiyatit state of complete unawareness and neutrality—or a state of 'non-knowledge'. Obviously, a man who has no true knowledge of anything would not be able to see or hear or feel or taste or smell anything, simply because he does not know what these things mean or from where they originate or how to perceive them or distinguish between any two of them. This state is the truthful Turiyatit state. The Atma that lives in this eclectic transcendental state is the superior Atma called the 'Parmatma'. It is exemplarily neutral and dispassionate. It does not see and bear witness to any thing or event. It is not concerned with anything. Hence it is called a non-Drasta—one who does not see.

²The concept of Hans and the Mantra 'Hans' has been described in a number of Upanishads. The enlightened and realised person thinks of himself as a Swan and feels exhilarated that he is not an ordinary man bogged down by worldly fetters, but an exalted soul that is like a Swan.

The bird Swan or Hans is considered the most pure, clean, wise, erudite and clever among the birds. It is said to eat pearls, which means it picks up and accepts only the best amid the variety of things available to it in the form of an assortment of various gems and jewels representing the dazzling charms of this world. It is also reputed to drink milk leaving aside the water content in it symbolising its ability to imbibe the essence and the best, and leave the rest aside. It is also the vehicle of Goddess Saraswati, the patron Goddess of knowledge, wisdom, intelligence, speech and learning, indicating that it bears these glorious virtues. Hence, the reference to a swan while describing a creature conscious of the vital wind or Pran passing through him means the basic, inherent and intrinsic tendency of that wisened and intelligent creature is to be the best, most pure and divine, wise, awakened and enlightened, adroit, clever and sagacious like the swan, and pick all the goodness and forsake all that is bad in this world. Saraswati rides on a swan, symbolising the creature's inborn enlightenment and excellence of his mental caliber. Symbolically, Saraswati resides in his Pran because it rides on the swan, i.e. in his heart, throat and mind—that is, his heart has purity of emotions, he speaks well of all, and his wise words are sought after by all as priceless gems of wisdom, and his mind is intelligent, discerning and noble. A wise man is expected to pick the truth from amongst the basket of assorted charms present in this creation, and leave aside the non-truths.

The alphabet 'Ha' of the word 'Hans' is sounded by the vibration of the exhaled wind passing through the vocal cords present in the throat or the wind pipe which connects to the nose, while the alphabet 'Sa' is sounded by the root of the tongue which opens into the mouth when the breath is inhaled. Both the nose and the mouth open in the same cavity called the throat. Hence, the inter relationship between 'Ha' and 'Sa' is evident. The main objective of this Upanishad is to make the Yogi (a person who follows its tenets of meditation) aware that he is like the divine swan, but he was unaware of his own divinity and sublimity, his exalted and noble stature, till that was pointed out to him. So he must become one like a 'swan', remind himself constantly that he is like a swan, and he must not do anything or act in anyway which is not befitting his exalted and superior status which is equivalent to a wise swan.

During the twenty-four hour period covering a single day and night, a person inhales and exhales, or breathes, roughly twenty-one thousand times, because each cycle of inhalation and exhalation is equivalent to saying one Mantra 'Hans' consisting of the two syllables 'Ha and Sa' (refer Dhyānbindu Upanishad, verse no. 63).

(b) Shukla Yajur Veda—Hanso-panishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans. (c) Sam Veda—Yogchudamani Upanishad, verse no. 31-35, 82-83, 93. (d) Atharva Veda—Pashupata Brahm Upanishad, Canto 1, verse nos. 4, 12-22, 26-27; Canto 2, verse nos. 1-3; Mahavakya Upanishad, verse no. 6; Hayagriva Upanishad, verse no. 10.]

5. A wise and learned Parivrajak (Sanyasi) is he who is free from all attractions and affections of any kind that might create some sort of emotional or mental attachments or bonds for him with anything.

He must strive to keep anger, wrath and the tendency to be vehement, retributory and vengeful under strict control. [Refer Canto 3, verse nos. 42-43.]

Eating frugally, with restrictions and moderation, he must keep all his sense organs under restraint. [Refer Canto 5, verse nos. 33-34.]

Shutting off all the external openings or doorways of these sense organs of the body through which they have a natural tendency to move out into the world, i.e. preventing these sense organs from being extrovert, he should rather turn them inwards, and focus his Mana or mind and its energy to meditate, to reflect upon and research the true nature of his Atma. This is his prime duty.

A spiritual aspirant who has interest in Yoga (meditation and contemplation) must always remain absorbed in his spiritual pursuit, without getting disturbed, distracted or diverted from his main goal (5).

6. He should live alone in a serene, secluded and lonely place, such as a forest or a cave, and remain engrossed and submerged in reflection upon the Atma. [This is because such a place would provide him with the necessary peace of mind where he will not be disturbed or distracted from his spiritual pursuit. Here, he would be able to concentrate his mind and attention on meditation and contemplation.] (6).

7. An ascetic (Sanyasi or Parivrajak) must never participate in any formal rituals and other religious activities such as Aathithya (accepting to be a honoured guest himself,

or welcoming someone else as a guest), doing Shraaddha (offering libations and oblations to the spirit of dead ancestors), performing Yagya (various religious rites and rituals such as formal fire sacrifices or religious ceremonies), Deva worship (worship of deities and its attendant formal rituals), and going on a Yatra (pilgrimage) (7).

[Note—Refer also to verse nos. 37-38 and 42 of the present Canto 6.]

8. In order to avoid any sort of contact with people of the world, he should purposely behave in an unconventional way so that no one wishes to go near him, have any dealings with him, and instead continue to neglect him (8).

9. A true Parivrajak holding the 'Tridand'¹ is one who has exercised his control over the Vaani (speech), the Mana (mind) and the Karma (deeds). An ascetic who holds the Tridand with this understanding and faith is called a true Sanyasi. [To wit, he must understand the significance of this wooden staff, that it is a symbol of his obligations towards his own self for his spiritual elevation and progress. If he holds a Tridand and does not follow the rules associated with this symbol of Sanyas then he is cheating himself and others.] (9).

[Note—¹The ascetic's staff, called a Danda, is an important insignia of a Sanyasi (an itinerant mendicant, a monk, a friar, an ascetic, or a hermit who has renounced the world and taken the religious vows of Sanyas as prescribed in the scriptures). He is expected to always carry it with him wherever he goes. The 'Tridand' basically means three staffs or sticks tied together, each made up of bamboo. This is done for easy carrying. The word 'Danda' stands for self control, and therefore these three strands of the ascetic's staff stand for a combined control of the mind, called the Mana Dand, control over the speech, called the Vaak Dand, and control over the body, called Kaya Dand. This Danda is like a sceptre held by a king; it is a symbol of his spiritual kingship and distinguishes him from the rest of the people; it is his symbol of moral and spiritual authority.]

10. The best type of Sanyasi is he who accepts food by begging from a household in which the cooking is over and the smoke from the fire of the oven in which the cooking is done is extinguished. [That is, he does not accept food while the cooking is still continuing.] (10).

[Note—Refer Canto 5, verse no. 35.]

11. But a Sanyasi who has no true sense of renunciation in his inner self, and only begs for food as a means of survival or livelihood (so that he can easily get cooked food without taking the trouble of cooking it himself or because he is too lazy to make effort for arranging raw materials needed for cooking) is an impostor who is deemed to be of a very low category. [In fact, he is demeaning and insulting the august institution of Sanyas. He has not understood the real meaning and intention of the Sanyas way of life.] (11).

12. He must not go again to the household from where he has got food once. If he does so, it would be tantamount to developing attachment or attraction or affection which is absolutely avoidable for a Sanyasi (12).

13-14. A wise, erudite, learned and enlightened self-realised Sanyasi is one who visualises himself as a personification of Brahm, the supreme Consciousness, the

Supreme Being who is an embodiment of such glorious virtues as Prakash (light and illumination), Vigyan (true knowledge that stands the test of proof, time and logic) and Sukh (spiritual happiness and comfort), who is known as Sarwa-Sakshi (the witness of all), who is different from the body and its organs, who is eternal and imperishable in this creation, and who is beyond the jurisdiction of various Varnas and Ashrams (the different classes in the society and the various phases in the life of a man respectively).

Indeed, when the ascetic has developed this eclectic, holy, divine and sublime view about himself, he becomes one with and indistinguishable from the supreme transcendental Divinity known as Brahm; he becomes a living Brahm. Such a Sanyasi is a true Sanyasi (13-14).

15. An ascetic or Sanyasi who honestly treats himself as the Atma that is truly enlightened and wise, and distances himself from such worldly considerations and artificial classifications as belonging to one or the other Varna and Ashram (i.e. the different classes in the society and the various phases in the life of a man respectively), is indeed a true and sincere Sanyasi (15).

16. An ascetic or Sanyasi who has experienced the eclectic nature of his own Atma first hand, who has realised that his true 'self' is the Atma, the pure consciousness, and not the gross body and its components, and as a consequent development has discarded all formalities such as observance of various codes of conduct related to the different Varnas and Ashrams in life (because they relate to the external gross body and not to the Atma)— actually only such a Sanyasi is regarded as being one who is 'self-realised' and 'enlightened about his true self' in the real sense (16).

17. Such a highly enlightened and self-realised ascetic or Sanyasi (as described in the forgoing verses) has been described as 'Ati-varnaashrami' (one who has transcended the limitations, barriers, compulsions and obligations that are imposed upon a man by the requirements of different Varnas and Ashrams in society) by those who are expert teachers of the philosophy of the Vedas (17).

[Note—Refer Canto 5, verse no. 50, stanza no. 1.]

18. Those who are experts in the philosophy pertaining to the sublime, divine, holy and eclectic nature of the Atma assert that to superimpose the Atma with the characteristics of the gross body is highly stupid, wrong and useless. [That is, to treat the Atma on the same plane as the body, or even to compare it with the body, or transpose the attributes of the body upon the Atma is a wrong thing to do because these two entities have no correlation and similarity of any kind whatsoever.] (18).

19. For an ascetic or Sanyasi who is firmly established in the knowledge of Brahm, who has become Brahm-realised, nothing more is left to be known or researched by him, there are no special rules of conduct that he must follow or avoid. In fact, nothing is worth leaving or discarding by him; there is nothing that he should either accept or reject.

Verily, such an ascetic is freed from all fetters and obligations (19).

20. A true spiritual aspirant must have indifference towards all honours, titles and epithets that can be got as a human being or even as the creator Brahma¹. [That is, he

should not be attracted by praise and lavish honours that one usually yearns for. For him, even the exalted stature like that of the creator Brahma is of no value.]

He must have no affections for or attachments with anything, and that includes even his own son and wealth (20).

[Note—¹Refer verse no. 42 of the present Canto 6, as well as verse nos. 30, 34, 56 of Canto 5 also.]

21. On the contrary, he should have attraction only for the path that would give him eternal freedom and lead to his liberation and deliverance, the path that would provide him with emancipation and salvation.

In order to gain the sublime and eclectic knowledge enshrined in the Upanishads, he must approach a Guru (a wise and learned teacher) with some Samidha (gift) in hand¹ (21).

[Note—¹The word *Samidha*, technically speaking, refers to the firewood used for a fire sacrifice. It also refers to a token gift that an aspirant/seeker of knowledge takes to his learned teacher when he approaches the latter with some spiritual or metaphysical query. When the teacher sees the aspirant approaching him with Samidha held in his hands, he immediately knows that the aspirant is coming to acquire some knowledge which the teacher is bound to give as per tradition; he cannot refuse to give knowledge because the Samidha is a sign of submission and humility as well as sincerity and eagerness on the part of the disciple.

It was a usual practice to approach some wise man with the purpose of enquiry and acquisition of knowledge with some gift, and this gift, known as Samidha, was not material wealth but as an offering to the fire sacrifice because of three reasons. One, a wise man was not supposed to be yearning for some sort of gold or silver gift, for had he been such he wouldn't qualify to be approached with some spiritual and metaphysical query. Second, this token gift indicated that the seeking of knowledge and imparting of such knowledge was just like the performance of some sacred religious fire sacrifice, and had the same spiritual value. So the teacher couldn't refuse to answer the query as this would amount to refusal in participating in a fire sacrifice which would be tantamount to sacrilege and unrighteous deed on the part of the teacher. This obligation ensured that the query was certain to be answered. Hence, all sincere seekers approached their teachers with this Samidha in hand. And finally the third reason is that it showed sincerity and eagerness on the part of the questioner and seeker of knowledge to find out the correct answer to his queries.

The Mundak Upanishad of Atharva Veda, Canto 2, section 1, verse no. 8 refers to the *seven* types of Samidhas (fuel for the fire sacrifice; the firewood) and seven types of Yagyas (fire sacrifice). Now let us see which are these seven Samidhas and seven Yagyas. Since the term Homa and Havi are an integral part of the fire sacrifice, they should be understood as well in order to get a comprehensive picture.

The seven types of Samidhas which are the offerings that are made to the sacred fire and help to keep it lit are the wood of seven types of trees which can be used for this purpose. They are—Ashvattha (*Ficus religiosa*), Bilva (*Aegle marmelos*), Chandan (sandal wood), Devdaaru (pine), Khadira (*Acacia catechu*), Nayagrodha (Indian fig tree), and Palaas (*Butea frondosa*).

The wood from the following trees are not to be used for the purpose of Samidha—Bibhitak (*Terminalia bellerica*), Kapittha (wood apple), and Neem tree.]

22. While living under the guidance of the learned Guru, he must serve him diligently and selflessly in order to keep him pleased. [This ensures that the teacher would teach him everything he knows, to the best of his ability, as he would be satisfied by the disciple's service and feel morally obliged to teach him in the best way he can. The teacher would be inclined to divulge even the greatest secrets of the Upanishads to

him, a thing that he would generally avoid to do because it has been ordained in the Upanishads themselves that its secrets should not be given to all and sundry at random, but only to sincere, devoted, eligible, able and competent aspirant.]

He must also strive to gather as much and as deep knowledge of the Upanishads as he can possibly do by studying them deeply and with full concentration so that he can understand their esoteric secrets and fully grasp the great sayings of these scriptures to such an extent that they become firmly engrained and find deep roots in his sub-conscious as well as the conscious mind (22).

23. An ascetic or Sanyasi must discard Mamta (affections, endearment, and the resultant sense of attraction and attachment for anything or anyone) and Ahankar (ego, pride and vanity) completely. [Refer verse no. 28 below.]

He must also keep a safe distance from all sorts of Aasakti (attractions, attachments, affections, endearment and involvements) relating to anything or anyone in this world.

Instead, he must arm himself with the virtues of Sham and Dam (self-restraint of the sense organs as well as the mind) and remain ever submerged or absorbed in reflection upon the Atma, and experiencing its eclectic presence in his own inner self (23).

24. When one closely observes constant miseries and sufferings associated with birth, death, old age and other such imperfections that are associated with this mortal gross world, a natural sense of disillusionment and detachment with this world sprouts in the heart of an intelligent and thinking man. He wishes to abandon such a faulty world that is perishable and transient, a world which has a preponderance of sufferings instead of happiness, peace and bliss. Hence, a man who has developed truthful detachment from and disillusionment with this world can find it easy to renounce it completely, and therefore such a man can become a true Sanyasi. Only such a man would willingly accept the life of a Sanyasi and be successful in it. There is no doubt about it (24).

25. A Param-hans Sanyasi who aspires to obtain emancipation and salvation must endeavour to acquire the eclectic knowledge of the sublime and supreme Brahm by studying and hearing the teachings of the Upanishads in this connection with due diligence and sincerity. This is the only way that can provide him with spiritual liberation and deliverance (25).

26. A Param-hans Sanyasi must be fully endowed with the grand virtues of Sham and Dam (refer verse no. 23) in order to fully benefit from the teachings of the Upanishads and be enabled to access the knowledge of Brahm (26).

[Note—Refer Canto 3, verse no. 21.]

27. A wise ascetic or Sanyasi should always remain submerged in the study and learning as well as the implementation of the teachings of the Upanishads.

Armed with the glorious virtues of Sham and Dam (verse no. 23, 26), he must practice strict control over his mind and the sense organs of the body.

He should abandon all fears, reservations and inhibitions.

He should have no attachments with or affections for anything or anyone under any circumstance.

He must live a carefree life without having any kind of worries and confusions.

He must never accumulate and store anything. He should forgo this inclination for all times to come (27).

28. A Sanyasi should tonsure his head. He must use old and used clothes to make a loin-cloth. Besides this piece of covering on his private parts, he must otherwise remain naked, not using any cloth to cover his body.

He must never harbour such traits as Mamta and Moha (affections, attractions, attachments, endearments, longings) as well as Ahankar (ego and pride) in his bosom. [Refer verse no. 23 above in this Canto.] (28).

29. An ascetic or Sanyasi who treats both the enemy and the friend alike, and whose inner self is eternally calm and poised—only such a wise and enlightened person is eligible to obtain Mukti or liberation and deliverance from the fetters of this world and is able to cross this huge and seemingly insurmountable world which is like a vast ocean. A man who does not have this wisdom will not be able to do so (29).

30. A spiritual aspirant eager for knowledge should remain diligent while serving the Guru and keep him fully pleased with his devotion and service. He must stay in the Guru's hermitage for one year. He must never show carelessness or lethargy in observing the laws and by-laws of the Ashram (here meaning both the hermitage of the Guru as well as the celibate life of a Brahmachari that the student leads).

He must show extra care and diligence in constantly observing all the tenets of Yam and Niyam while he spends time in the hermitage¹ (30).

[Note—¹The various Yams and Niyams are briefly the various laws and regulations that a Brahmachari or a student leading the life of a celibate must observe.

Yam and Niyam—The virtues of Yam and Niyam have been described in Skanda Puran in these words:-

सत्यं क्षमाऽऽर्जवं ध्यानमांशस्यमहिंसनम् ॥ दमः प्रसादो माद्युर्यं मृदुतेति यमा दश ।
शौचं स्नानं तपो दानं मौनेज्याध्ययनं व्रतम् ॥ उपोषणोपस्थदण्डौ दशौ ते नियमाः स्मृताः ॥—
(स्कन्दपुराण, ब्रा० ध० मा० ५/१९-२१)

The ten 'Yams' are—truthfulness, forgiveness, simplicity, Dhyan (meditation, concentration of the mind), lack of cruelty (or presence of compassion and mercy), forsaking violence, restraint of mind and sense organs, pleasant demeanors and sweet towards all). The ten 'Niyams' are— cleanliness/ablution, bath (purification of body), Tapa (austerities, penances, sufferings), alms and charities, keeping silence, Yagya (sacrifices, religious rituals), self study, observance of vows, keeping fasts, celibacy. (Skanda Puran, Bra. Dha. Ma. 5/19-21)

The *Varaha Upanishad* of the Krishna Yajur Veda tradition, in its canto 5, verse nos. 12 ½ --14 also describes these Yams and Niyams.

The *Trishikhi Brahmin Upanishad* of Shukla Yajur Veda tradition, in its Canto 2, verse nos. 32-32 describes Yam and Niyam in the following way—"Non-violence, truthfulness, non stealing, celibacy, continence or abstinence from sexual indulgences and other pervert activities of the body and mind, mercy and compassion, simplicity and humility (32), forgiveness, patience and fortitude, restrained eating, and purity of mind, intellect and body—these are regarded as the ten supreme *Yams*. 'Tapa', meaning austerity, penance, sufferance and hardships endured for some noble cause, 'Santosh', meaning contentedness and satiety, to have belief on the doctrines and teachings of the scriptures, to make charities and donations, the remembrance of the supreme Lord known as 'Hari' and devotedly serving him and contemplating upon him¹ (33), hearing Vedanta (the preaching of Upanishads), to have modesty, honour, dignity, self respect and shame, to have wisdom and intelligence, to repeat the holy

Mantras or divine, ethereal words of the Lord, and to keep stern religious vows and observe fasting—these are ten *Niyams*.”

According to *Mandal Brahmin Upanishad* of Shukla Yajur Veda tradition, Brahman 1, section 1, verse nos. 3-4, the Yam and Niyam are the following—“Verse no. 3 = To overcome the notion of feeling (excessive) heat and cold (and getting agitated about them), to have control over the urge to eat and sleep (more than necessary), to remain ever calm and tranquil (even during the greatest of adversities), to remain unwavering and steady (like a mountain and the flame of a lamp protected from the wind), and to be able to exercise control over the sense organs (of perception and action)—these are categorised as the various ‘Yams’ (3).

“Verse no. 4 =Devotion towards one’s moral preceptor, teacher and guide called a Guru, dedication and diligent pursuit of the path which is righteous, auspicious and noble, contentedness with whatever is available, residence in a secluded and serene place that gives peace, solitude, tranquility and calmness, non-attachment with and indifference towards anything and anyone in this world, diversion of the mind from the sensual pleasures and charming objects of the materialistic world, no expectation of any reward from any deed done or action taken, and a sense of exemplary renunciation—all these are the various ‘Niyams’ to be followed by the seekers of true knowledge of the Atma (4).”]

31. At the end of this period of one year it is expected that he would have proper Gyan or knowledge for which he had come to the Guru.

Thereafter, exercising great self control and observing all the laws of auspicious conduct that are expected from a spiritually elevated man, he should move around on the earth (31).

32. At the end of the period of one year when his education is complete, he should enter the next phase of life (as a householder or a Grihastha) and complete all the three phases as described by tradition and scriptures before he accepts the vows of Sanyas which marks the best phase of his life and indicates his exalted spiritual stature. [The three phases referred to here are Brahmacharya or the life of a celibate student, Grihastha or the life of a householder, and Vaanprastha or when he leaves the house and heads for the forest by renouncing all his attachments with the world. These have been outlined in Canto 1, verse no. 2.] (32).

33. After having served his Guru and gained his blessings, the aspirant can roam on the face of the earth with great respect. He must abandon all company and all forms of anger, eat frugal meals with great moderation, and exercise strict control over all his sense organs (33).

34. A householder who does deeds selflessly without expecting any worldly rewards from them, or does them as they come along without any hopes and expectations of getting any fruits for his labour, or starts to do any deed and take any action without having any kind of worldly desires to motivate such deeds or actions or have a vested interest in doing them, and a Sanyasi who diligently follows the tenets of conduct prescribed for him (as a man who has renounced all connections with this material world and who is expected to lead an exemplary life of total renunciation, dispassion and detachment, preparing himself for spiritual emancipation and salvation as well as realising the great Truth of existence)—both acquire glory and fame, both are respected and shown honour only as long as they adhere to their respective ways of life as sanctioned by tradition and scriptures. If they violate them, if they pretend to be righteous and noble and followers of sanctioned path and way of life while actually

being to the contrary, they only get ignominy and ill-fame, they are reproached and ridiculed in the society (34).

35. A man gets intoxicated by drinking wine, but the mere sight of a beautiful and voluptuous young lady makes him lustful and passionate. Therefore, a Parivrajak Sanyasi must abandon even the sight of a lady—who has the potential of causing a poison-like influence upon the Sanyasi by her mere sight—from a great distance (35).

36. A Sanyasi must guard himself against the urge for talking with a woman, or even thinking about her or sending her messages. He must not participate in dance, singing or such merry-making exercises. Likewise, he must also avoid getting engaged in jokes, jest, fun, merriment and laughter (36).

[Note—In the context of verse nos. 35-36 herein above, refer also to Canto 3, verse no. 64, and Canto 4, verse nos. 3-4, 25-29.]

37. Oh Narad! A Sanyasi is not supposed to observe formal rituals and worship formalities such as purification bath (ablution), worship of deities, Japa (repetition of Mantras, especially those that pertain to these deities and are an inseparable part of ritualistic worship), Yagya (religious ceremonies, specially fire sacrifices) and its related rites and rituals, and other such formal forms of worship (37).

[Note—Refer also to verse no. 7 of the present Canto 6.]

38. For him, even offering libations and oblations to the spirits of dead ancestors (called Pittars) is prohibited. [Refer verse no. 42.]

Similarly, he is forbidden to go on pilgrimage, observe religious fasting and other vows, and generally be obsessed about doing things to conform to the established norms of correct behaviour in this world. Rather, he must keep a safe distance from such things and not be bothered about any formalities and set norms of the world, because he is not only supposed to have broken all his links with this world but also because he has risen much above such mundane considerations and notions of what is holy, auspicious and good to do and what is not, what is religious and what is not, as he has become enlightened and truly aware of the 'truth' of creation that is known as the Atma and Brahm. [That is, he understands that his spiritual liberation and deliverance as well as emancipation and salvation does not depend at all on formal forms of worship and ritualistic practices. He realises that worshipping this or that deity, or offering oblations and libations to this and that spirit, or taking a formal bath to clean himself, or doing fire sacrifices or Japa, or observing the niceties of behaviour and etiquette in this world has no bearing on his spiritual enhancement and progress. This happens when the aspirant has become truly self-realised and Brahm-realised. And this achievement of self and Brahm realisation is the main criterion for a man to become truthful Sanyasi. If this does not happen, then he is an impostor.] (38).

[Note—This prohibition of worship of idols made of material things such as wood, stone, metals and clay etc. or other symbols of worship, or for that matter any kind of external worship such as going to pilgrim sites, rituals, fasting etc. is expressly mentioned in the following Upanishads—

(i) Sam Veda tradition—Maitreyu-panishad, Canto 2, verse no. 21, 26; Jabal Darshan Upanishad, Canto 4, verse nos. 50-59; and Sanyaso-panishad, Canto 2, verse no. 74-75, 97.

(ii) Atharva Veda tradition—Devi Upanishad, verse nos. 29-30; Narad-Parivrajak Upanishad, Canto 3, verse no. 75, Canto 5, verse no. 20, Canto 6, verse nos. 7, 37-38, 42, and Canto 7, verse no. 1; Atharvashir Upanishad, Kandika (Canto) 4..

- (iii) Krishna Yajur Veda's following Upanishads—Pran Agnihotra Upanishad; Varaaha Upanishad, Canto 2, verse no. 69, 74; Canto 3, verse no. 26, 29-30; Tejobindu Upanishad, Canto 6, verse nos. 21-24.
 (iv) Shukla Yajur Veda tradition—Advai Tarak Upanishad, verse nos. 5, 10, 13.]

39. A true Yogi (ascetic) must discard all formalities and behaviours that are associated with this world. He must divert his mind and effort to spiritualism and achieving the 'truth' in life; he must strive to attain emancipation and salvation; he must endeavour to obtain the best goal in life.

He must not do anything that would harm even the humblest of creatures, whether mobile or immobile, such as worms and insects, and even the plants (because they too have life)¹ (39).

[Note—¹Refer Canto 3, verse no. 22; Canto 5, verse no. 43.]

40. He must always remain focused on his inner self (instead of being extrovert). He must always keep himself clean and untainted, both externally as well as internally, both physically and symbolically.

He must observe absolute internal peace, calmness and poise, and keep his mind and intellect completely soaked in the bliss obtained by realisation of the Atma (pure consciousness) (40).

[Note—Refer Canto 3, verse no. 55.]

41. Oh Narad! You must abandon all sorts and hues of attractions, attachments, endearments, affections and involvements vis-à-vis this world, and then wander in it with no such fetters to shackle you down.

A Sanyasi should not move alone in any such place where there is strife, civil unrest or any other kind of disorder, lawlessness and anarchy (41).

42. A Sanyasi must keep far away from praises and honours as well as being shown respect by others as represented by such gestures as bowing before him. [Refer verse no. 20 of the present Canto 6.]

He must always keep away from doing Shraadhha and Tarpan (offering libations and oblations to the spirit of dead ancestors—refer verse no. 38 of the present Canto 6.).

He should stay in some lonely place, such as abandoned house or the cave of a mountain. [Refer verse no. 6 of the present Canto 6.]

He must roam freely without any fetters of any kind binding him in any manner. [Refer verse no. 41 of the present Canto 6.] (42).

Verily, this is what this great Upanishad says.

-----*****-----*****-----

Updesh (teaching)/Canto 7

[This Canto continues with the narration of the general rules adjured to be followed by a Sanyasi. New ideas are incorporated and necessary instructions given to him to enable him to succeed in his life of Sanyas as envisioned by the Upanishads. This Canto outlines the way of life that would help the Sanyasi reach his goal of self-

realisation, and provides him the means by which such a self-realised Sanyasi can find deliverance from the cycle of birth and death.]

1. Once again, sage Narad asked the great grandfather of creation, Brahma—‘Oh Lord! What are the rules that are to be followed by a Sanyasi?’

Brahma reflected upon his query and replied—‘Oh Narad! A Sanyasi must renounce all attachments with or attractions for this world. He should stay at one place only during the four months of the rainy season, and spend the rest eight months of the year wandering alone at different places. He must not stay at one place for any length of time, because if he does so there is always the fear of his falling prey to temptations, development attachments and generally getting astray from his chosen path of Sanyas. [Refer Canto 4, verse nos. 14, 16, 19 and 20.]

Like a black bee, he must not stay at any one place for any length of time. [The bee moves from one flower to another in its search for nectar. It never visits any one flower twice. Similarly, a Sanyasi should never visit a particular household twice for food.]

If anyone objects to his going away then he must not pay heed to it and go his way. [For instance, if some devotee or follower is sufficiently influenced by his spiritual achievements that he requests him to stay in some temple or monastery on a permanent basis, a true Sanyasi must not agree and instead move out voluntarily for his wanderings.]

He must not cross a river by swimming. He must not climb a tree. [Refer Canto 5, verse no. 21.]

He must not see or attend any festivals associated with the worship of any God. [Refer Canto 5, verse no. 20, Canto 6, verse nos. 7, 37-38.]

He must not accept food from a single household often.

He must not worship other Gods and deities except the pure conscious Atma which is the microcosmic counterpart of the supreme transcendental cosmic Consciousness known as Brahm. He must abandon everything except the Atma.

He must accept food by begging only. [Refer Canto 5, verse no. 60.]

He should keep his body humble and docile. [That is, he must be overly worried about keeping his body well built, handsome, strong, robust and muscular. Because such an attempt would necessitate its proper care, nourishment with rich and nutritious food, and rest which a Sanyasi can ill afford during his wanderings. But this does not mean that he should completely neglect it because it has also been said in the Upanishad that this body is the residence of the Atma and the Pran, and a Sanyasi must eat enough to sustain it till the time comes for him to leave it in a natural way. [Refer Canto 5, verse no. 26.]

He must ensure that he does not become obese. [This is because he has to remain alone and do everything himself. He has even to go out to fetch food for himself and remain constantly on the move. Being obese would be a great practical nuisance to him and cause a hindrance to his nomadic way of life of constant wanderings. A fat man finds it impossible to lead a life of wandering constantly. Besides, being fat would make him lazy and lethargic as well as susceptible to a number of diseases.]

Therefore, he must treat butter as being equivalent to blood, and absolutely abhor it (i.e. he must abstain from all food that are rich in fat, or would make him obese).

He must leave the food that is received repeatedly (more than once) from the same house as being equivalent to meat. [This restriction or prohibition would help

him to guard himself against being attached to or attracted by any particular household and developing even a rudimentary form of bond with it. This is a distinct possibility because the Sanyasi might prefer to reach a certain house at a certain time in the certain hope of finding food without having to take the trouble of going from one house to another in its search. But this type of acceptance of food from one single household is not ‘begging’; it is sort of remaining a householder from a distance! By and by, there is a sure danger of bonds developing between the Sanyasi and the members of the house where he goes regularly for food. This is to be avoided by him at all costs.]

He must also reject perfumes and paste of the sandalwood which is used as a smear on the body, and treat them as being equivalent to stinking urine and foul stool respectively.

He must treat caustic soda (used as an ingredient in washing soaps and powders) as being equivalent to contact with a Chandal (a very low caste man who lives outside villages and generally engaged in burning dead bodies in the cremation ground), and therefore keep himself away from having anything to do with it. [In other words, he must avoid using any soap or other forms of artificial scrubbing and cleaning material to clean his body or wash his clothes.]

He must discard all other things (clothes) except the loin-cloth, called the Kaupin, and the one-piece cloth used to cover his body, called the Kantha, by treating the rest as untouchable things.

Treating massage of the body with oil as being equivalent to an embrace of a woman, he must permanently keep himself away from it. [That is, he must learn to practice stern self-restraint, shun the desire to pamper the body and attend to its wish for gratification. This self-restraint is like a Tapa for him—i.e. it is equivalent to doing severe penances and austerities.]

He must treat company of friends and its associated pleasures and enjoyments as being equivalent to urine, and therefore shun it.

He must treat any desire for obtaining anything that may arise in his heart and mind as being similar to the desire for beef, and hence must absolutely abhor such an idea.

Well known places or those that were frequented by him earlier in life must be regarded as being equivalent to the garden frequented by a Chandal (a low caste man who has the vocation of burning dead bodies in the cremation ground), and hence should be avoided at all costs.

He must abandon gold (or any physical worldly asset) as being equivalent to the horrible poison called Kaalkut, a place where people gather to attend community functions as being like the cremation ground, the capital city (or any large city) as the greatest of hell known as Kumbhipaak, and food got repeatedly from a single place as corresponding to the Pinda (ball of cooked cereals) that is offered to dead ancestors.

He must understand that the Atma, which is the pure consciousness, is separate from the gross body. And therefore he must never allow himself to be trapped in numerous and varied addictions and different inclinations and tendencies of the mind (because they are all related to the body and have nothing to do with the Atma which is his true self).

He should ensure that he leaves his country (native place) and place of normal habitat (such as his village, town, city etc. where he had lived as a householder), and move out to some unknown destination.

Thinking about and experiencing the blissful and happy nature of his primary form (which is his pure conscious Atma) that is endowed with these eclectic divine

qualities, he must feel exhilarated and ecstatic as if he has discovered some precious treasure long forgotten or lost.

Going to a place that arouses ego and pride about one's own self and one's body (i.e. about the achievements and successes that one had accomplished with his body and its abilities, strengths, powers and vitality), as well as a place where people related to the body live (such as one's family members, kith and kin)—a Sanyasi must forget about such a place for good.

He must treat his own body as dead and never have any attachment with or endearment for it.

Even as a convict (such as a thief) released from prison never goes back to his native place out of shame and ridicule by the society, as well as out of the fear of castigation, censor and ignominy, a Parivrajak should leave the place where his family members, his kith and kin or his elders live, and go to some unknown place far away.

He must accept whatever food that is available, without making any special efforts, to sustain himself.

Remaining absorbed in meditation and submerged in hearing of the reverberation of the divine sound OM, which is a reflection of the supreme Brahm, vibrating constantly in his inner self, he must free himself from the need to undertake all other deeds and activities related to this mundane world.

He must burn (destroy or eliminate) all negative traits such as Kaam (worldly passions, lust, desires and yearnings), Krodh (anger and wrath), Lobh (greed, rapacity), Moha (affections, attractions, attachments and endearments), Mada (arrogance, haughtiness and hypocrisy), Matsarya (jealously, ill-will, malice) etc., and even go beyond the influence of the three Gunas (which are basic qualities that are inherent in all living beings and which manipulate a man's personality) called Sata, Raja and Tama. [That is, he must clean his inner self of all kinds of traits, whether they are good or bad or mediocre, and instead learn and practice to become totally neutral and dispassionate. Briefly, the Sata Guna is the noblest quality that inclines a man towards doing and thinking noble deeds, the Raja Guna is the medium quality that arouses the desire to create and maintain this world, and the Tama Guna which creates negativity such as sinfulness and perversions. Refer Canto 3, verse no. 90.]

The six types of Urmis such as hunger, thirst etc. should have no affect on the Sanyasi. [Refer also Canto 3, verse no. 90. According to Mudgalo-panishad, 4/7 of the Rig Veda tradition, the six delusions, called 'Urmi', that create fear, sorrows, agonies, sufferings and pains to a creature are the following:--(1) hunger, (2) thirst, (3) grief, (4) Moha (worldly attachments, illusions, entrapments), (5) horrors of old age, and (6) death.]

He must have also no connection with the six Vikaars or faults or imperfections of the mind that are the source of constant worry and consternation for the creature. [The 6 Vikaars or faults or shortcomings or imperfections of the body are the problems associated with this gross world that has a physical origin, takes a birth and ultimately ends or dies. Naturally they are not applicable to the supreme Lord who does not take birth and does not die. These so-called 'Vikars' are the following—(1) problems associated with birth, (2) problems associated with growth, (3) problems associated with consequences of deeds done and actions taken by a creature in this world, (4) problems associated with gradual decay and decline of the body and its functions, (5) problems associated with old age and its attendant horrors, and (6) problems associated with the ultimate destruction and end of everything that relates to the creature. One will observe that the life of a creature is a continuous graph of sorrows, sufferings and pains of one or the other kind. It is only when the creature

realises the truth of existence and who he really is that he begins to disassociate himself from the body and the world, and thus is able to break free from this seemingly interminable cycle of horrors. Refer Canto 3, verse no. 90, and Canto 4, verse nos. 5-6 of the present Upanishad, besides the following—Mudgal Upanishad, Canto 4, verse nos. 6-7 of Rig Veda tradition, and Varaaha Upanishad, Canto 1 verse nos. 8-9 of Krishna Yajur Veda tradition. The Adhyatma Ramayan of Veda Vyas, Lanka Kand, Canto 3, verse no. 29 also asserts similar views.]

He must always speak the truth, remain immaculate and pure by his mind and body, and have no malice or animosity with anyone.

He must not stay in one village for more than one night, in a town for more than five nights, in some religious place (such as a temple or other place where some religious ceremony had taken place) for more than five nights, and in a pilgrim site also for not more than five nights. [Refer Canto 4, verse no. 14-16, 19.]

A Parivrajak Sanyasi must not construct a permanent dwelling for himself at any place. [By extension, he should not stay even in a monastery permanently. Refer Canto 3, verse no. 90.]

The mind must constantly be focused on the thoughts of the Supreme Being.

He must never tell a lie under any situation.

He should make his habitat in the caves of mountains. [Refer Canto 3, verse no. 90; Canto 4, verse no. 38.]

He must roam all alone without keeping any company. [Refer Canto 2, verse no. 1; Canto 3, verse nos. 31, 54-56, 59-60, 76, 90; Canto 4, verse nos. 23, 38; Canto 5, verse no. 52; Canto 6, verse nos. 6, 41.]

It is however sanctioned that he might have a company of four people during the four months of the rainy season. To have constant company of three people would be like being in a village, and a company of four people creates an environment symbolic of a town. Hence, a Sanyasi is best advised to remain alone and avoid company of all sorts. [Refer Canto 3, verse no. 56.]

The fourteen components of the body (as outlined in Canto 6, verse no. 3) should not be allowed and given the time to act independently and without restraint. [That is, a Sanyasi must exercise the greatest of vigil on their activities, being aware that they are like horses yoked to a chariot that require being properly harnessed, reined-in and controlled, as otherwise they would wreck the chariot and kill the passenger. The chariot in this case is the man's own body, and the passenger is the 'self'. Since controlling of the body and its sense organs can only be done by the will of the mind and an involvement of the heart, collectively called the Mana, the 'charioteer' in this instance would therefore be the 'Mana'.]

A Sanyasi must be so highly enlightened and self-realised that he would not recognise or give any importance to any entity other than the 'self' which is the pure conscious Atma.

Without giving any credence to any other entity or thing other than his own Atma as being the only 'truth' in existence, he must look at everything in this world in the light of this realisation. That is, he must strive to peek behind the external façade of things and attempt to see the truth hidden behind this façade and inside that thing.

Experiencing the eclectic and blissful nature of his Atma, he must find freedom from all miseries and pain of this world as well as find liberation from all the delusions and their attendant confusions about the truth and reality of existence even while he is still alive. [This spiritual achievement is called 'Jivan Mukti'—to be liberated from all spiritual fetters arising out of ignorance of the 'truth and reality' even while a man still lives in this world and has a physical body, as compared to

finding freedom from this world after he has shed the bondage and limitations of the physical gross body that is possible only upon death.]

Once a Sanyasi has become 'self-realised', i.e. once he has understood the truthful and sublime nature of his Atma, the pure consciousness that lives inside the gross body as the person's truthful identity, he must remain self-contained and self-contented, bidding his time when he would be able to shed his mortal coil (his physical gross body) effortlessly and find eternal freedom from all physical bondages, shackles and limitations that had been inhibiting him through generations of birth and death.

It is a moral obligation on the part of the Parivrajak Sanyasi that he leaves his mortal body while remaining submerged in the eclectic thoughts of the Atma. [This would ensure that he does not feel the pain of death. In this context, refer also to Canto 3, verse nos. 60-61 of the present Upanishad.] (1).

2. [In the context of verse nos. 2-11, the reader should also refer to Canto 5, verse nos. 12-21.]

A Kutichak Sanyasi is ordained to take bath three times a day (at dawn, at noon and at dusk).

A Bahudak Sanyasi should take bath twice a day (at dawn and dusk).

A Hans Sanyasi should take bath only once a day (preferably at dawn).

A Param-hans Sanyasi should take only a symbolic form of bath mentally.

A Turiyatit Sanyasi is prescribed a bath in the form of rubbing or smearing of the sacred ash of the fire sacrifice over his body. This is called 'Bhasma Snan'—bathing with the ash.

An Avadhut Sanyasi is prescribed the 'Vaayabya Snan'—i.e. bathing with air. That is, he must inculcate the eclectic view that the air which touches his body is cleaning the latter like physical contact with water does. This symbolic bathing with air keeps him always clean because bathing with water keeps the body clean only for some limited time but bathing with air keeps it permanently cleaned as the body is in constant contact with air. Therefore, he need not take a bath with water (2).

3. A Kutichak Sanyasi should wear the vertical mark of the Urdhva-pundra¹ on his forehead.

A Bahudak Sanyasi should wear the Tripundra².

A Hans Sanyasi can wear either the Urdhva-pundra or the Tripundra.

A Param-hans Sanyasi should wear only the Bhasma³.

A Turiyatit Sanyasi should wear the mark called Tilak-pundra⁴.

An Avadhut Sanyasi is not prescribed to sport any specific sign (3).

[Note—¹Urdhva-pundra—The word 'Urdhva' means vertical or one that moves upwards. The Urdhva-pundra is a vertical line or mark made on the forehead.

²Tripundra—References: Krishna Yajur Veda's Kagnirudra Upanishad; Atharva Veda's Brihajjabal Upanishad, Brahman (Canto) 4, verse nos. 9-36, Brahman 5, verse nos. 1-19, and Brahman 7.

The word Tripundra has two parts—'tri' and 'pundra'. Tri means three while the word Pundra refers to the three horizontal lines marked on the body (the forehead, the chest and the shoulders) by Hindus. The Pundra can be horizontal or crosswise lines, in which case it is called the 'Tiryak Pundra', or it can be vertical or upright lines, in which case it is called 'Urdhva Pundra'. The Tiryak Pundra or Tripundra is worn by devotees of Lord Shiva and initiated ascetics and is marked by the paste of the ash obtained from the pit of the fire sacrifice by mixing it with water.

The three lines of the Tripundra have great symbolic significance. They stand for the entire gamut of creation having three aspects or dimensions. It is like a sign depicting a three dimensional picture of this creation. The Brihajjabal Upanishad of the Atharva Veda tradition, in its Brahman 4-5 describes in great detail the spiritual importance of this Tripundra and how to wear it on the body. It represents the Trinity Gods, i.e. Brahma the creator, Vishnu the sustainer and protector, and Rudra the concluder (Brahman 4, verse no.10), the three Gunas such as the Sata Guna, the Raja Guna and the Tama Guna, and the three sacred fires such as the Ahawaniya fire, the Grahapatya fire and the Dakshinagni fire (Brahman 4, verse no. 36).

The metaphysical and spiritual importance and significance of the Tripundra have been asked by sage Sanatkumar from Lord Kalagni Rudra and explained by the Lord in Kalagni Rudra Upanishad of Krishna Yajur Veda tradition.

³Bhasma— The word ‘Bhasma’ means ash, and it refers to the sacred ash left in the pit after the fire sacrifice is completed. The Brihajjabal and Bhasma Jabal Upanishads of the Atharva Veda describe the concept of Bhasma in great detail along with how to prepare it and its astounding mystical powers, metaphysical significance, spiritual authority and importance.

⁴The Tilak is the vertical holy mark made in the center of the forehead similar to the Urdhva-pundra. It is a single line that starts at the on the bridge of the nose and goes straight up to the hair line.]

4. A Kutichak Sanyasi should shave off the hairs on his body every two months.
 A Bahudak Sanyasi should do the same every four months.
 A Hans Sanyasi and a Param-hans Sanyasi can, if they so wish, shave off the hair every six months.
 A Turiyatit Sanyasi and an Avadhut Sanyasi are not required to shave off the hair (4).
5. A Kutichak Sanyasi should accept food from one place (household) only.
 A Bahudak Sanyasi should accept food by begging only.
 For a Hans Sanyasi and a Param-hans Sanyasi the hands are the only pots to accept food. Such Sanayasis are called ‘Karpatri’—those whose hands are like a pot. [That is, they should not accept food in a separate pot but accept it directly in their hands by cupping the palms together.] He must be contented by whatever quantity of food that can be accommodated in their cupped hands.
 A Turiyatit Sanyasi should eat like a cow—i.e. he should open his mouth and the giver puts food, consisting either of cooked meal or fruits, directly into his open mouth.
 An Avadhut Sanyasi is to accept food like a python—i.e. he must not venture out in search of food but accept whatever is made available to him by the grace of God and as desired by others at the place where he stays. He must be fully contented with it (5).
6. A Kutichak Sanyasi should keep two pieces of cloth with him. [Besides the loin-cloth he can keep two pieces of clothes—one to wrap his body with and one to spread on the ground when he rests.]
 A Bahudak Sanyasi should keep only one long piece of cloth to wrap his body with.
 A Hans Sanyasi should keep only one smaller piece of cloth as compared to the one kept by the Bhaudak.
 A Param-hans Sanyasi should wear only the loin-cloth or remain completely naked.

A Turiyatit Sanyasi and an Avadhut Sanyasi are both required to remain naked (6).

7. A Kutichak Sanyasi and a Bahudak Sanyasi can offer physical worship to God (or any deity of their choice), if they so wish¹.

A Hans Sanyasi as well as a Param-hans Sanyasi should worship God mentally and not physically.

A Turiyatit Sanyasi and an Avadhut Sanyasi are required to have the eclectic view about Brahm that makes them firmly believe in the doctrine 'So-aham'. That is, they should realise the truth of the tenet 'That Principal is me', that they are Brahm personified, and therefore they need not worship any other God or deity except their own 'self' in the form of their pure conscious Atma (7).

[Note—¹It ought to be noted here that all the Upanishads that deal with the concept of Sanyas, and even our present Naradparivrajak Upanishad have prohibited physical forms of deity worship for a Sanyasi—refer Canto 5, verse no. 20, Canto 6, verse no. 7, 37-38. So does this mean that there is contradiction in these verses? No, not at all. Now let us see why it is so.

A conscientious Hindu is taught to worship deities in a number of ways—as his family deity, as his business deity, as his personal deity, as his village and community deity etc. This he does willingly and as his religiously sanctioned duty while he is a householder. If he does not do so, he feels guilty of offending some God and fears the latter's punishment in so many ways. Perhaps this was designed to build some kind of regulatory mechanism to make a man adhere to certain norms in life and regulate his deeds, action and behaviour, and to make him pursue a righteous and auspicious path as far as possible. But Vedanta or the Upanishad teach of only one deity, of only one God, of only one Truth, and it is the Consciousness known as the Atma at the individual or micro level of creation, and as Brahm at the larger cosmic or the macro level. A wise man, even when conforming to the tradition of worshipping so many deities, understands this basic tenet that he is worshipping only one single Divinity in all the forms he worships. A wise worshipper is he who knows that the same Divinity, the same divine Principal has manifested in myriad of forms and in countless of ways to make itself easily accessible and available to the individual creature depending upon his specific abilities, spiritual needs and mental calibre. In this, Hinduism has a democratic and all-inclusive broad perspective of and approach to religion, worship and Godhood. Every single individual has the liberty to choose and pick his personal deity that suits his emotional and mental setup the most, instead of being forced to follow some abstract deity which is thrust down his unwilling mind. This freedom makes him more committed and devoted to his personal deity of choice as he is inclined to believe in it more sincerely at the emotional level. This situation stands in stark contrast with a community deity with which a man might not be so emotionally attached, and hence his devotion is also diluted. No other religion gives its followers this freedom of choice—the liberty to choose a personal 'God' from a wide variety of choices. But it must be borne in mind that it is the same Hinduism which teaches its followers that no matter what form or shape this 'God' of his takes, the fact is that all of them are the same Divinity known as Brahm in each of their forms. In other words, one can be called a true worshipper of the Lord and a wise one if he worships any form but with this enlightened view.

So, this stanza gives the Kutichak Sanyasi the freedom to follow his line of worship because he would still reach his spiritual goal if he is wise and enlightened enough. But in practice, everyone is not so highly erudite and enlightened to grasp the facts and their fine nuances. And this ignorance leads to one's downfall, which he squarely blames on the scriptures and the inefficacy of their teachings.

When a householder becomes a Sanyasi, he has his old habits, and if he is told to stop worshipping the deities that he is used to honouring he might wrongly interpret it

as being a wrong or un-religious advice. So, in the initial stages of Sanyas such as the Kutichak and Bahudak, he is allowed to carry on with his earlier habit or practice of offering worship in its external form to the Divinity. But as he progresses ahead in his spiritual awakening, he realises the futility of this form of worship, and then when he has graduated to the next level of Hans and Param-hans, he is required to chuck off this superficial form of external or formal forms of worship, and instead honour the Lord internally, which is actually the correct way of honouring the Supreme Being because the Lord does not require any external formalities, rituals, rites, pretensions of being religious and devout, and any other kind of showmanship to be honoured.

In the final stages of one's spiritual evolution, he realises the truth of the great sayings of the Upanishads and the Vedas, and understands that the supreme Truth that is the object of all religious exercises and offering of worship and honour is not to be found somewhere outside but it is hidden in his own bosom as his 'pure conscious self'. And this leads him to exclaim 'I am that universal principle, I am that truthful essence, I am the Atma that is Brahm personified'.]

8. A Kutichak Sanyasi and a Bahudak Sanyasi can do Japa (repetition) with Mantras. [They are supposed to use the OM Mantra for doing Japa.]

A Hans Sanyasi and a Param-hans Sanyasi should do only Dhyān¹ or focus their mind in deep contemplation and meditation.

A Turiyatit Sanyasi and an Avadhut Sanyasi are required to research upon their Atma, which is pure and enlightened consciousness and a fountainhead of bliss, beatitude and felicity, and do nothing else. [In other words, they do meditation and contemplation like the Hans and the Param-hans Sanyasis, but they have advanced to a higher level as compared to their brethrens, the Hans and the Param-Hans Sanyasis. Their focus is on more deep penetration of the numerous layers that shroud the truth about the Atma rather than doing meditation and contemplation as a preparatory ground for self-realisation. In fact, there is not much of a difference between what is prescribed for a Turiyatit and Avadhut Sanyasi on the one hand, and for a Hans and a Param-Hans Sanyasi on the other hand as would be clear by the note appended below. It is actually two ways of saying the same thing. Only the degree and depth of concentration could vary, as can the method employed to carry out Dhyān. But the aim of the exercise in both the cases is to concentrate the faculties of the mind and the intellect to realise the 'ultimate Truth' about the 'self' which is known as the Atma, and which can provide the Sanyasi the way for his spiritual liberation and deliverance, for his spiritual emancipation and salvation.]

The three types of Sanyasis such as the Turiyatit, the Avadhut and the Param-hans are the only ones who have the authority to preach the great sayings or the Mahavakyas² of the scriptures such as 'Tattwamasi' (that essence and principle is you), 'Ayamaatma Brahm' (my Atma is Brahm) etc.

The other three types of Sanyasis such as the Kutichak, the Bahudak and the Hans are not authorised to preach the Mahavakyas (8).

[Note—¹The word *Dhyān* literally means 'to think or to cogitate'. It is profound and abstract meditation that revolves around reflection and thoughts that are focused on the Divinity said to be concealed inside the bosom of all the creatures as their pure consciousness that in turn is the supreme cosmic power in creation known as Brahm. Usually the energy of this cosmic Consciousness is lying latent and unused in the own body of the creature simply because it is in a dormant form and un-ignited much like the fire lying dormant in the firewood or charcoal and needing some prodding to leap back into life with all its glorious potentials and splendour. Dhyān envisages the concentration of the stupendous powers of the faculties of the mind to deeply contemplate and fixedly ponder on the great spiritual truths of creation as envisioned

by the scriptures to unravel their enigmatic secrets. This is done by fixing the powerful forces of the mind which is aided by the physical contribution of the body in this auspicious endeavour in the form of various meditative exercises, onto a spot called the 'Bindu', literally the point source of spiritual energy located in the heart as the 'Atma or soul' of the creature, as also in the centre of the eyebrows as 'awareness and enlightenment', from where the great mystical powers in creation spring out and spread into the outside world. It envisions the use of various Yoga techniques to contemplate and meditate upon the various aspects of spiritualism with the objective of unfolding the magnificent treasure of spiritual enlightenment and unleashing of the astounding mystical powers that are inherently present in the Atma but tacitly concealed hitherto, leading to self and Brahm realisation, to the awakening of the universal powers of the Spirit.

Dhyan means both contemplation as well as meditation. The word also means 'attention; focus'. So this word is generally understood in common parlance to be similar to contemplation and meditation, concentration and focusing of the conscious mind. It covers both the terms in its ambit.

The appropriate word for contemplation in Sanskrit would be 'Manan and Chintan' which will roughly mean 'deep thought, reflection, pondering and application of mind'. The Upanishads stress on this 'Chintan-manan' aspect of the mind-intellect when it talks about 'Dhyan'. Greatest of scientific discoveries were made more by intuition than anything else. That is why intuition is closely related to the so-called 'sixth sense' in a man, i.e. a state when the intuitive man knows what is the correct path to chose from a variety of options, and more often than not, he is correct. We can say that this 'intuition' is the guidance provided by the subtle soul/Atma of the creature. Not everybody is equally intuitive by nature; this is because some persons, by virtue of their past actions and deeds have a thicker layer of Vasanas and Vrittis surrounding their Atma while others have a thinner layer so that the voice coming out of the Atma is easily heard in the latter case while it is muzzled and suppressed in the former case.

The great exponent of Yoga, sage Patanjali, in his magnum opus 'Yogsutra' has described 'Dhyan' as concentration. Dhyan is that state in which the inner mind tries to see the reality behind things. This 'thinking' process links it with contemplation while concentration function links it with meditation. According to Agni Puran, contemplation with a calm mind is Dhyan while Garud Puran has defined it as concentration on the Brahm. Dhyan, therefore, leads to enlightenment. Woodworth, in his book 'Psychology', writes that the mind concentrates on one impulse at a time and neglects others. So, Dhyan in this context means 'to become alert and activated for doing a work or seeing an object exclusively'. Dhyan is momentary in the beginning, but it becomes permanent later on with practice. Sidney Smith defines Dhyan as 'to forget everything else except the main objective'. Charles Dickens views Dhyan as 'useful, harmless, definite and a beneficial process of the mind'. According to Bergansa, 'suppression of external distractions is essential for the deepening expansion of Dhyan'. Edgar Casey says that 'Dhyan brings to the fore the latent powers of creativity in a person. This creativity improves and enriches his physical, mental and spiritual aspects'. John White in his renowned work 'The meeting of science and spirit' has enumerated many benefits of Dhyan— promotion of physical health, reduction of tension, anxiety and aggressiveness, it leads to self realisation and self improvement and development. He further says that the benefit of meditation are the following—feeling of tranquillity, freedom, reduction of tiredness and depression, relief from pains, increase in positive traits such as sympathy and empathy for others, believe in divinity and purity of self etc. Michael Murphy and Steven Donovan, in their research work titled 'The physical and psychological effects of meditation' have mentioned that meditation/Dhyan helps to regulate and control electrical and chemical activity of the brain, the rhythm of the heart, regulates blood pressure, the skin's ability to resist infection and it regulates general metabolism.

The great philosopher sage Sankaracharya has explained that the many Vedic rituals such as sacrifices had been transformed as mental concepts for contemplation and meditation by Chandogya Upanishad because any defect in the performance of a ritual according to the Vedas, however small and inconsequential, could devalue and derail the whole process. Further, elaborate rituals required huge preparation and expenditure. So he prescribed that meditation was far better, safer and surer means of attaining the same benefits that elaborate sacrifices offered. Contemplation and meditation are equally efficient in spiritual pursuit of the aspirant. Nevertheless, the former (contemplation) has intellect and mind as its main focus while the latter (meditation) concentrates on the mind and body to be effective. Sacrifices, as compared to them, are merely physical rituals.

As is evident, the chariot moves in the proper direction when all the horses are controlled simultaneously. So a holistic and an all-inclusive, well synchronised and homogenous approach is needed by a seeker/aspirant to attain success in his endeavour to get liberation and deliverance from the horrible torments agitating him as well as to attain emancipation and salvation for its soul from this world.

The concept of Dhyan has been described in detail in Chandogya Upanishad, Canto 7, section 6 and 18 of the Sam Veda tradition, and Dhyan Bindu Upanishad of the Krishna Yajur Veda tradition which is expressly dedicated to it.

Verse no. 1 of Dhyan Bindu Upanishad refers to the concept of Dhyan Yoga and gives its spiritual importance.

²There are a number of Upanishads that describe the *Mahavakyas*. A brief reference is as follows—

- (i) Rig Veda—Atmabodha Upanishad.
- (ii) Sam Veda—Chandogya Upanishad, Canto 6, section 16, verse no. 3 (Tattwamasi).
- (iii) Shukla Yajur Veda—Paingalo-panishad, Canto 3, verse no. 2-3, 8; Mandal Brahmin Upanishad, Brahman 2, section 2, verse no. 5; Brahman 2, section 4, verse no. 4; Brahman 3, section 1, verse no. 6; Brahman 3, section 2, verse no. 2; Adhyatma Upanishad, verse nos. 2, 10 (So-a-Ham), 30-31 (Tattwamasi).
- (iv) Krishna Yajur Veda—Shuk Rahasayo-panishad, verse no. 22; Kaivalya Upanishad, verse no. 16; Sarwasaar Upanishad, verse no. 12-14; Varaaha Upanishad, Canto 4, verse nos. 32, 37; Avadhut Upanishad, verse no. 2.
- (v) Atharva Veda— Atma Upanishad; Tripadvibhuta Maha Narayan Upanishad, Canto 5, paragraph no. 15 ('So-a-Ham'); Canto 6, paragraph no. 22 ('Twam Brahmasmi'; 'Aham Brahmasmi'; 'Twamewaaham'; 'Ahamev Twam'); Canto 8, paragraph no. 5 ('Brahmaasmi' or I am Brahm; 'Ahamasmi' or Indeed it is I/me; 'Brahmahamasmi' or I am indeed Brahm; 'Yoahamasmi' or That is I/me; 'Brahmaamashmi' or Brahm is I/me; 'Ahamevaaham' or I am indeed I/me.); Ram Rahasya Upanishad, Canto 5, verse no. 13-14 (Tat Twam Asi—That Art Thou); Ram Uttar Tapaini Upanishad, Canto 3, verse no. 9-10 (So-a-Ham); Annapurna Upanishad, Canto 5, verse no. 8 (Brahmasmi—I am Brahm personified); Mahavakya Upanishad, verse nos. 6-8 ('Hans So-a-Ham'); verse no. 11 ('So-a-Hamarka'—that essence is me); Hayagriva Upanishad, verse no. 15 ('Tattwamasi'—i.e. that supreme essence or truth is you; the second Maha Vakya is 'Ayamatma'—i.e. that essence known as Brahm, the cosmic Consciousness, is my own Atma, my own 'self'; the third Maha Vakya is 'Brahm Aham'—i.e. Brahm is me; the fourth Maha Vakya is 'Aham Brahmasmi'—i.e. I am Brahm).]

9. A Kutichak Sanyasi and a Bahudak Sanyasi are prescribed to do meditation using the OM Mantra in its apparent or clear or audible form. That is, they can repeat the divine Mantra OM symbolising Brahm audibly, and use it openly for the purpose of doing Dhyan (concentration of the mind during meditation) and Japa (repetition of the Mantra).

A Hans Sanyasi and a Param-hans Sanyasi on the other hand should use OM mentally as a means to do Dhyān, Japa and focusing of their attention on the supreme Brahm. That is, their meditation and contemplation is basically mental, done internally and imperceptibly, rather than by exhibiting any external signs of doing Yoga, Japa or Dhyān such as repeating OM aloud.

A Turiyatit Sanyasi and an Avadhut Sanyasi are expected to have become sufficiently enlightened that they directly visualise the supreme Brahm and experience the presence of the supreme transcendental Consciousness when using the Mantra OM, rather than treating it as only a symbol and representative of Brahm. [The difference between the Hans and Param-hans on the one hand, and the Turiyatit and Avadhut on the other hand is clear here. Whereas the former two classes of Sanyasis use the divine Mantra OM as a vehicle to realise Brahm, the latter class of Sanyasis directly view or experience Brahm whenever they hear or say OM.] (9).

[Note—Refer Canto 5, verse nos. 20, 26.]

10. A Kutichak Sanyasi and a Bahudak Sanyasi are authorised to hear discourses on Vedānta to enhance their knowledge in spiritual matters. [This is because they are still in the preparatory and earlier stages of Sanyas. They hear discourses to clear doubts and acquire knowledge. As has been made abundantly clear in this Upanishad, all the categories of Sanyasis are basically advanced in spiritual matters as compared to other classes in society, but they still have a lot to learn, and like any discipline of knowledge or learning, progress in this field too has to be made in a step-by-step manner. No one can jump directly to the highest category of Sanyas, which is Avadhut, from the Vaanprastha stage, though this is not completely ruled out. This is because it has also been said that there may be persons who have realised their true self and the reality of the Atma early on in life, i.e. they have become wise and enlightened without having had to go through the formal prescribed path of having to accept Brahmacharya Ashram first, followed by Grihastha Ashram and then Vaanprastha Ashram before becoming a Sanyasi. For such persons who have developed profound enlightenment and wisdom, who have developed great renunciation for this artificial world, and seek direct Mukti from it and Moksha for their selves—i.e. those who are very eager for spiritual liberation, deliverance, emancipation and salvation—a straight transition to the Avadhut state of Sanyas is allowed. Refer also to Canto 3, verse no. 5, 9, 77, and Canto 5, verse nos. 3-4, 7, 26.]

The main means of realisation and enlightenment for a Hans Sanyasi and a Param-hans Sanyasi is ‘Chintan and Manan’, i.e. to do deep contemplation, to ponder deeply, to think intently, to reflect and do silent research on what has been learnt by the study of the scriptures, and hearing of the discourses during the earlier stages of Sanyas. They hear, think, contemplate, ponder and deduce the ‘truth’ themselves.

The main tool for a Turiyatit Sanyasi and an Avadhut Sanyasi in his spiritual pursuit is ‘Nidhi-dhyasan’, i.e. to repeatedly remember what has been learned and verified by personal experience. This repetition helps to firmly fix the mind and its sub-conscious on the great truths of the Mahavakyas, and changes the aspirant mentally from the inside. When his sub-conscious thinks of nothing else except what he has learnt from the scriptures in the form of the Mahavakyas, it is completely soaked in these thoughts so much so that the overall personality of the Sanyasi undergoes a drastic change, and he no longer remains an ordinary wandering friar or monk but transforms into a personification of Brahm.

The chief spiritual aim of all these exercises is to research and know about the Atma, to realise the truth of the Atma, and to become enlightened about this grand eclectic ‘absolute truth’ of creation (10).

11. In the above described way, all the forms of Sanyasis must constantly, consistently and persistently strive to obtain spiritual liberation and deliverance for themselves, to obtain spiritual emancipation and salvation for their selves at all costs and to the exclusion of all other things.

For this purpose, they should take the help of the Tarak Mantra that can take them across the ocean-like world and give them freedom from it by constantly remaining focused on it, and repeating it consistently and persistently. [The Tarak Mantra is a divine Mantra that has the power and potential to provide the soul with the benefit of emancipation, salvation, liberation and deliverance. In the present case, this Mantra is OM which is a sound manifestation of Brahm and the easiest vehicle for Brahm-realisation. Refer Canto 4, verse no. 38, and full Canto 8.]

By doing this, they are deemed to be liberated from all the fetters that shackle ordinary creatures to this world, and thus they roam about like a free man.

Such an enlightened and exalted Sanyasi must endeavour to obtain the highest form of Mukti which is called Kaivalya. [That is, they must strive to merge their individual soul with the supreme Soul of creation known as Brahm so that, after this merger, they become one with Brahm and consequentially they would not have to take birth again and re-enter this world. This is the ‘only’ or Kaivalya way how a creature can actually get true and real freedom from this world and this body. Refer Canto 5, verse no. 22.]

Verily, this is the great teaching of this Upanishad (11).

-----*****-----

Updesh (teaching)/Canto 8

[In this Canto Brahma extensively explains to Narad the divine Mantra OM pertaining to Pranav or Brahm, the supreme transcendental Being, when the sage asked him about the Mantra which can help an aspirant to attain final Mukti (liberation and deliverance) from this world. It goes on to describe elaborately the meaning of the numerous terms that are used to indicate the various facets of the same universal divine entity known as Brahm that is supreme and transcendental. Here, almost all the esoteric terms used as adjectives or epithets for Brahm have been explained at a single place, and in this respect this Canto is unique in the pantheon of the Upanishads.]

1. After the above discourse, sage Narad asked the supreme creator Brahma—‘Oh Lord! Which is the Mantra that can help the creature to cross over or find freedom from the endless cycle of birth and death? I have humbly come to seek this knowledge from you, so please be kind to enlighten me on the subject.’ [Refer Canto 5, verse nos. 20, 26; Canto 7, verse no. 11.]

Brahma replied—‘So be it. I shall tell you about it. Oh son Narad, this Mantra known as Tarak Mantra is OM. [The word ‘Tarak’ means an instrument that provides spiritual liberation and deliverance, one that gives emancipation and salvation to the creature’s soul, a vehicle that takes across, a vehicle that can take a creature across the ocean of endless miseries and pains from which he is suffering in this world. The Tarak Mantra is a group of esoteric, ethereal and holy syllables, words or phrases

having mystical powers and divine potentials that can achieve miraculous results for the adherent as they have the authority to bestow special spiritual abilities on the creature and help in his liberation and deliverance, his emancipation and salvation. The Mantra that has this potential is called the Tarak Mantra.]

OM is a personification of Brahm (i.e. it represents the supreme transcendental Divinity in its most subtle and sublime form). Hence, a wise spiritual aspirant must meditate and contemplate upon OM both as a ‘Vyasthi’ as well as a ‘Samasthi’. [Briefly, the word ‘Vyasthi’ means to treat an entity in isolation, individuality, single entity, and the word ‘Samasthi’ means totality, aggregate of things, all-inclusive. Therefore, OM is to be treated as standing for Brahm in all its manifestations—both at the micro level of creation as well as at the macro level of creation. It is to treat OM as an individual Mantra representing Brahm (‘Vyasthi’) as well as the vehicle for realising that universal cosmic Divinity that is all-pervading and all-including (‘Samasthi’). This concept is elaborated below.]

Narad wished to have more elaboration on this eclectic and esoteric subject, so he asked—‘Oh great grandfather! What is meant by the terms ‘Vyasthi’ and ‘Samasthi’? Please be kind to explain.’

Brahma explained—‘Vyasthi and Samashti are the two aspects or limbs of the same Brahm manifested or revealed in the form of Pranav (i.e. as the ethereal sound reverberating as the background sound in the cosmic ether that is conceptualised in the form of the monosyllable word OM).

The same Brahm, also known as Pranav or OM, is said to have three subtle forms—viz. the first is known as ‘Sanhaar Pranav (i.e. the Brahm that is the cause of conclusion; that exists beyond conclusion of creation)’, the second is known as ‘Srishtih Pranav (i.e. the Brahm that is the cause of creation; the one that pre-dates creation; the one from which this creation has come into being)’, and the third aspect is known as ‘Ubhayaatmak Pranav (i.e. the Brahm that displays two characteristics; the Brahm which is both the concluder as well as the creator)’.

The ‘Ubhayaatmak Pranav’ again has two aspects—one is ‘Antaha’ (secret, hidden, internal, esoteric or subtle form of Brahm that is not visible or perceptible externally), and the other is ‘Baahaya’ (the external, visible, manifested and perceptible form of Brahm; the form that is easily known, seen, understood and experienced).

The Antaha Pranav (Brahm) (as enshrined in the Mantra OM) would be described in the next verse no. 2.

The Baahaya Pranav (Brahm) is also known as ‘Vyavahaarik Pranav’, or Brahm that is revealed in the practical world, the usual and customary form of Brahm known by the creature. This is the variant of Brahm that a creature comes in contact with. It is the external form of Brahm in practical life. It is the non-abstract and tangible aspect of Brahm that is otherwise beyond comprehension and too abstract and intangible to be grasped.

The Vyasthi Pranav (Brahm) is also known as Baahaya or Vyavahaarik Pranav. [This is because of one simple reason. The individual creature (‘Vyasthi’) is Brahm personified in the enlightened view of the Upanishads. The reason is that the Atma of the creature, which is his true self and which is pure consciousness, is this Brahm, the cosmic Consciousness, residing in the heart of this individual creature. Without this Atma the creature would cease to exist. Since a creature is a verifiable and visible entity, since no one can deny his own existence, this revealed form of Brahm at the individual level—the Vyasthi level—is called ‘Baahya Pranav or Baahya Brahm’, or the form of Brahm that is externally visible, is seen, is tangible, is

on display, is well known and understood. It does not require any grounding in the Upanishads or the Vedas to be convinced about the existence of a living being right in the front of an observer. The Baahya form of Brahm is too evident to arouse any sort of doubt and confusion. The only thing that is needed is a sharpened intelligence and wisdom that are able to analyse and correctly interpret the teaching of the scriptures which say that each individual living being is a manifestation of Brahm, and to understand the reason behind this assertion of the scriptures. In other word, Brahm is revealed in its 'Vyasthi' form as an individual creature in this world. It is in practical life that one can feel and experience the presence of Brahm if one is wise and enlightened enough to realise the basic truth of the tenets of the scriptures that whatever that exists in this creation is nothing but Brahm. No other proof of Brahm's existence is needed than the presence of a living being right in the front of the wise observer.]

Aside of these forms of Brahm, there is another form known as 'Aarsha Pranav'. This form of Pranav or Brahm is also known as the 'Viraat' or the vast, macrocosmic, invisible, all-encompassing and all-pervasive form of Brahm. [The word 'Aarsha' means that about which the ancient sages and seers—or Rishis—had written, anything that is authorised by these Rishis and sanctified by the Vedas. Hence, that form of Brahm which includes everything in the creation, which displays the grand characteristics of being all-inclusive, all-pervading and all-encompassing, who is invisible and macrocosmic in nature and from—i.e. Brahm in its Viraat or vast and colossus form—is known as Aarsha because this form has been established and sanctified by the ancient sages who had meditated deeply and realised the vastness of the cosmic Consciousness that they named as 'Brahm', as well as by the Vedas that are essentially codified form of that esoteric and enigmatic knowledge. The Vedas are in effect the knowledge of the cosmic Consciousness known as Brahm that the ancient sages and seers left for posterity.]

The Sanhaar Pranav is also known as Brahm Pranav because it is in this form of the supreme Consciousness (Brahm or Pranav) that the creator Brahma dwells in a concealed form. [The Sanhaar Pranav is that aspect of the cosmic Consciousness, the 'Viraat Purush', that brings about the conclusion—'Sanhaar'—of creation. The word 'Sanhaar' means to end, kill, slay, annihilate, demolish. But a new phase of creation is hidden in the bosom of the same Viraat in the form of Brahma, the creator of the visible world. When the time is ripe, Brahma rises from the Viraat Purush's navel atop a divine lotus to initiate the new phase of creation. So, while the Viraat concludes this present creation as the Sanhaar Pranav, it is the same Divinity that would be the cause of the next generation of creation in the form of Brahma the creator. In the Purans, this Sanhaar Brahm has been named 'Rudra' which is the angry form of Brahm. Brahm has been depicted in its angry form as 'Rudra' because normally Brahm has a very calm and neutral demeanour in his role of the creator and sustainer of creation. He gets angry only when he decides to wind up the show. Without being angry, he would not be able to demolish the same creation that he has so assiduously nurtured for such a long period of time.]

The ethereal cosmic sound OM has four syllables or letters such as A etc. which symbolise the various aspects of this world such as its gross and other forms. The OM also has a fifth syllable called the 'Ardha Martra'¹ or half-syllable which is a nasal sound. This latter Ardha Matra stands for the un-manifested, invisible and formless Pranav or Brahm. [This is because sound has no physical shape or form.] (1).

[Note—¹The word 'Ardha' means half, and 'Matra' means a part of the whole, a certain syllable in the language that is not complete in itself but is required to

complete the meaning of other letters or words. From the metaphysical perspective the 'Ardha Matra' of OM represents that phase of creation that lies beyond its present conclusion and prior to the beginning of the new creation. It is a sort of bridge between the present gross creation and the subtle aspect of the creation.

When we analyse OM as is done in the forthcoming verses, we observe that it has many components—viz. the letters A, U and M, followed by the Ardha Matra and then by the Naad and Bindu as described in verse no. 2 below. Now, the clear form of the letters A, U and M represent the gross aspect of creation, the Naad and Bindu represent the higher subtle state, and the 'Ardha Matra' is the bridge or link between the two. The 'Ardha Matra' has a meaning only as long as there is a gross aspect and a subtle aspect of existence much like the case when a bridge has any importance only when there are two banks that have to be linked or required to be transited by a traveller.

As has been said in this verse, it represents the invisible or intangible aspect of Brahm as it represents a transitional aspect of Brahm—from the physical aspect of Brahm in this visible creation to the sublime Brahm in its cosmic form that has no physical forms; it indicates a transition from the gross to the subtle.

This basic and simple idea should be borne in mind while proceeding further with the discussion of OM.]

2. Now, the esoteric and secret aspects of OM are being described. This Pranav (the ethereal cosmic sound represented by the word OM) is Brahm. [In other words, OM is a sound manifestation of the cosmic Consciousness known as Brahm.] This OM is the monosyllabic Mantra (a formula) for Brahm. Hence, OM, Brahm and Pranav are synonyms.

OM has been divided, for the purpose of study and analysis only, into eight components or aspects or sections. [Otherwise, it is an indivisible monosyllabic word.] These eight parts are the letters A, U and M, the half-syllable called Ardha Matra, the Naad and Bindu (the crescent moon-shaped sign with a centrally-located dot dangling right over it at its focal point that is placed on the top of the visual depiction of OM), Kalaa (varying aspects or qualities or virtues of OM) and Shakti (dynamic energy that is latently present and inherent to the word OM).

[According to some versions, there are four letters constituting OM instead of only three—and they are A, O, U and M. In this version, the eight components would be these four letters + the Ardha Matra + the Naad (called the Kalaa) + Bindu (symbolising the Shakti) = 8.]

Further, each of the four letters and syllables (A, O, U and M; or A, U, M and the Ardha Matra) are divided into number of sub-divisions or parts. For instance, merely the letter A has ten thousand subtle forms or aspects or sub-divisions or parts, the letter U has one thousand subtle forms, and the letter M has one hundred subtle forms. Similarly, the Ardha Matra too has uncountable subtle aspects. [It is easy to understand this phenomenon. A motion picture consists of hundreds of thousands of still frames that pass before the eye in rapid succession, so quickly that they give an illusion of motion. Similarly, the monosyllabic OM also consists of millions of tiny bits of sound waves that coalesce with each other at the subtlest level so fast and rapidly that when is heard is one composite and seamless form of sound that is equivalent to the humming of the black bee. It is impossible to separate the individual units of sound that compositely form the word OM, but just for the plain purpose of analysis OM has been divided into distinct sounds as indicated by the letters mentioned herein above.

Ancient sages and seers who could hear the cosmic sound during their meditative and contemplative sessions had such a razor sharp and sensitive mind that

they could not only hear but also analyse the constituent parts of this sound just like we have spectrometers that analyse the constituent of rocks and chemicals based on the colours emitted by them, or the prism that can segregate the different constituent elements of white light into seven colours. Further, each sound was again sub-divided into smaller units just like we have red and infra red, or violet and ultra-violet colours of the spectrum, or such colours as orange which consists of a combination of red and yellow, green which is a combination of yellow and blue, violet which combines blue with red, and grey which results from a combination of white and black.]

The Viraat Pranav (i.e. the cosmic all-encompassing and all-pervading form of Brahm) is also called 'Sagun Brahm'. [The entire visible aspect of creation is a manifestation of Brahm that exists in its cosmic form known as Viraat. The Upanishads describe this Viraat as the macrocosmic gross body of Brahm. When the entire creation is taken into consideration, this definition fits into place because everything that exists is one or the other form of the same cosmic form of Brahm. This can be easily understood by a simple example. Clay or earth is used by a potter to shape numerous pots and toys having uncountable varieties of shapes, forms and sizes. He may even colour them differently. But basically they are all clay or earth; it is the same clay or earth that has been used to mould them. Similarly, the entire creation has been moulded from the body of one Viraat. Since this world is visible, this form of Brahm is called 'Sagun'—one that is visible, has attributes and specific features and characters. The 'Sagun' (one with Guna) Brahm has 'Gunas' (certain virtues, attributes or qualities) that are discernible, tangible, quantifiable and definable.]

On the other hand, the Sanhaar Pranav is known as 'Nirguna Brahm'. [The Sanhaar form of Pranav refers to that aspect of Brahm which exists beyond the living world, that aspect of Brahm which is unknown and unseen, and which survives after the known world is concluded, eliminated or ceases to exist ('Sanhaar'). This aspect of Brahm which silently brings about the conclusion of creation and which proceeds death is invisible and imperceptible—hence, called Nirguna, one that has no known attributes and characters. When the creation concludes, no one knows what lies beyond. Hence, Brahm that exists beyond creation is 'unknown' and intangible. Hence, that aspect of Brahm which is concerned with the end of creation, or which is related to the conclusion of this existence, is the 'Nirguna' form of Brahm.]

Finally, the Sristhi Pranav is known by the combined form consisting of both the Saguna Brahm as well as the Nirguna Brahm. [The word 'Sristhi' refers to creation. This creation exists in two apparent forms—one that is visible or which is Saguna, and that is invisible or which is Nirguna. What we see and know is 'Saguna', and what we cannot know or see is 'Nirguna'.]

The Viraat Pranav is said to consist of all the four letters of OM such as A, O, U, M, and it is equivalent to the Samasthi aspect of Brahm. [This is because the Viraat stands for all the aspects of creation—viz. its creation is represented by the letter A, its development by the letter O, its expansion and growth by the letter U, and its conclusion by the letter M. This covers the entire gamut of visible creation, and hence it is called Samasthi—all-inclusive, all-encompassing, comprehensive, and the complete aspect of Brahm.]

The Sanhaar Pranav is represented by the Ardha Matra, and is equivalent to the 'Vyasthi' aspect of Brahm. [As has been explained in a note of verse no. 1 above, the Ardha Matra stands for the conclusion or termination of the sound of OM just like the word Sanhaar which also means conclusion or end of creation. Hence, both are synonymous with each other. When individual units of creation end, they all collapse

into one single mass to become indistinguishable from each other; they become homogenous in nature and texture. Since they all become one and inseparable from one another once the visible creation ends—removing distinctions and specialised features that mark the individuality of each gross visible entity of creation till it existed—so when we deal with that aspect of creation that is related to its post conclusion phase we deal with one single mass, and therefore it is ‘Vyasthi’. The word ‘Vyasthi’ means to treat an entity as a single unit instead of taking its myriad and distinctive forms into consideration. In the context of OM it would mean the stretched or prolonged sound that follows the end of the pronunciation of ‘OM’ which cannot be sub-divided like the earlier sound of OM which was divided into the three letters, viz. A, U and M.

In the context of Brahm, the word ‘Vyasthi’ refers to the only one single non-dual form of cosmic Consciousness that exists after the visible and known—or Saguna—creation, represented by the articulately spoken letters of OM, comes to a conclusion. It is called Vyasthi because it is single, one and isolated. This form of Brahm has no duality in it in as much as it is un-formed and without any attributes. This Vyasthi form of Brahm has no myriad forms or characters; it is like a calm sky that is immutable, uniform, all-encompassing, all-pervading, and aloof from all dichotomies and schisms.] (2).

3. The Viraat Pranav (i.e. the macrocosmic gross body of Brahm that personifies the sum total of all the gross bodies of this creation) consists of, or is endowed with, all the sixteen Matras¹. [The sixteen Matras are enumerated below. In the context of the sound of OM, the sixteen Matras refer to the different vowel and basic consonant sounds of the Sanskrit language.]

This Viraat Pranav is said to transcend and go beyond the thirty-six Tattvas of creation².

The letter ‘A’ is the first Matra of OM, ‘U’ is the second Matra, ‘M’ is the third Matra, the ‘Ardha Matra’, or the half-syllable represented by the long-drawn humming sound made at the end of OM when the mouth closes, is the fourth Matra, the ‘Naad’ (the crescent-shaped moon placed on the top of the symbol of OM) is the fifth Matra, the ‘Bindu’ (the dot placed on the top of the Naad at its focal point) is the sixth Matra, the Kalaa (the various aspects of OM or Brahm) is its seventh Matra, the Kalatit (the transcendental aspect of OM or Brahm) is its eighth Matra, the virtue of Shanti (peace and tranquillity) is its ninth Matra, the Shantitya (the state that goes beyond ordinary peace; the transcendental state of blissfulness) is its tenth Matra, the Unmani (a state of mental non-attachment, detachment, non-involvement and renunciation) is its eleventh Matra, the Manomani (the higher state of Unmani when the sub-conscious too becomes defunct) is its twelfth Matra, the Puri or Vaikhari (i.e. the transcendental state reached by a hermit in the higher stages of spiritual progress; the state when the reverberations of OM are clearly heard as a resonance that submerges the aspirant and when he can distinguish between its various shades of sound—represented by its initial letter ‘A’) is its thirteenth Matra, the Madhyama (the median or middle stage of the sound of OM—represented by its letter ‘U’) is its fourteenth Matra, the Pashyanti (the stage of Naad or the sound of OM when it rises from the Mooladhar Chakra located at the lower end of the body and enters the heart—represented by its letter ‘M’) is its fifteenth Matra, and the Para (the transcendental state when the resonance of OM is heard in the head—represented by its half-syllable called the Ardha Matra) is its sixteenth Matra.

The Pranav Brahm, or the supreme transcendental Consciousness that exists in the form of the ethereal sound OM and its awareness, having the above described sixteen Matras or aspects is distinct and beyond the purview of the Turiyatit state of existence. [That is, to say that Brahm is definable or understandable even by the transcendental state of consciousness known as Turiyateet is a grave mistake.]

The Turiyatit state of existence has four divisions or aspects—viz. Ot, Anugyat, Anugya and Avikalp. [The word ‘Ot’ means comfort, peace, bliss as well as little, frugal; the word ‘Anugyat’ means one that is known by mandate, by the command or orders given by the scriptures; the word ‘Anugya’ means command, order, mandate, permission; and the word ‘Avikalp’ means that which is certain, is doubtless, that which has no alternatives or choices. Hence, Turiyatit state of existence refers to that state in which one can obtain certain bliss that comes with realising one’s true divine nature and form as conscious Atma as narrated or taught by the scriptures. In the context of what is said here, refer also to verse no. 20 of Canto 8 of this Upanishad.]

Now since Brahm having sixteen Matras or Kalaas pervades in all these four states or divisions of Turiyatit, it follows that the total number of Matras or Kalaas of Brahm are sixty-four in all. [The 16 Matras or Kalaas of Brahm as described in stanza 1 and 3 of this verse multiplied by the 4 aspects of Turiyatit as described above = $16 \times 4 = 64$.]

Again, the Pranav Brahm (i.e. the attribute-less and formless cosmic Consciousness known as Brahm) is revealed in two forms—viz. the Purush (the primordial Male) and Prakriti (the primordial Nature). Since Pranav Brahm in its primary form is said to have sixty-four Kalaas or Matras (as discussed above), we conclude that the total number of Matras or Kalaas of Brahm would be one hundred and twenty-eight. [$64 \times 2 = 128$.] Thus, Brahm is said to have one hundred and twenty-eight Matras or Kalaas.

Thus we conclude that the same sublime Brahm, inspite of being one, immutable, indivisible and non-dual, appears to have so many varied forms, depicting so many varied characteristics, attributes and properties, and seemingly having so many existences, all of them depending upon how and from which angle one looks at this divine non-dual entity. This is also the reason why the same Brahm has two basic forms of existence—one is the Saguna or the form which has specific attributes and is visible, and the other is Nirguna or the form which has no attributes and which is invisible (3).

[Note—¹The word *Matra* literally means amount, volume, quantity, magnitude, ingredient, part, section, aspect, facet or dimension of anything. The creation has been divided into sixteen parts or sections. These are also called the sixteen Kalaas of creation. Since Brahm is the sum total of creation, the former is also said to have sixteen Kalaas. The word ‘Kalaa’ literally refers to the special qualities, attributes, virtues, strengths, powers and potentials possessed by an entity. Its other connotations include—(a) shape, form, contours of a thing; (b) special qualities, art, craft, skills, expertise, attributes etc. that one possesses; the shades or aspects of one’s overall personality; (c) a division, portion, fraction, phase or degree of anything.

The word *Pranav* is a synonym for the cosmic sound known as Naad which is the reverberating sound in the cosmic ether that fills the space of the sky. This Naad is regarded as being the closest analogue of Brahm, the cosmic Consciousness. This sound is homogenous and all-pervading. It is from this Naad that the first signs of life in the form of sound waves having energy were generated. It is from this Naad that all forms of sounds, having all shades of notes, meters and tunes were created. These primary forms of sound evolved into different phonetic alphabets of so many

different languages and spoken tongue which all have the same set of primary sounds as their base. The language may be intelligible or not, such as those spoken by the modern man and those spoken by the primitive man and the animals respectively, but all of them have one common denominator—and it is the basic sound of OM or Naad having the sixteen Matras as enumerated in this Upanishad. It's almost like music that is played by so many instruments—though each instrument appears to produce different type of sound but basically all of these genres of instruments have one single language, and it is the language of 'music'.

The word 'Matra' also refers to the vowel sounds of the Sanskrit language. Since the entire gamut of creation is said to have its origin in the cosmic vibration that was generated in ether at the initial stage of creation, and these vibrations created sound, it follows that Brahm which symbolically stands for this entire creation would naturally consist of the entire spectrum of sound as represented by the sixteen sounds of the Sanskrit vowels.

In the context of OM, which is the cosmic ethereal sound of space, it refers to the different shades, hues, tones and aspects in which OM is known to exist. In essence it means that the macrocosmic form of Brahm that is also known as the 'Viraat Purush' encompasses all shades of knowledge encrypted in words that are formed out of the basic sound of creation, called the various Matras of OM.

²The thirty-six *Tattvas* of creation— The word *Tattvas* literally means the essence, the reality, the true state and the basic principle of anything. It also implies the principal elements of creation. The *Tattvas* are the primary or fundamental elements or units or dimensions or aspects of creation which act as the building blocks of creation, not only as its brickwork but also to decide its exterior façade and interior character. We have *primary elements* that were formed at the time of creation, and the *secondary elements* that developed later on as the creation evolved, and finally there were the tertiary elements which were the offshoots to the process of creation when the complexities of the latter increased.

A word may have different connotations according to the context in which it is used. For example, we speak of a flower's *Tattva*, i.e. the volatile liquid extracted from the flowers and used as various scents and perfumes. It is called the 'essence' of the flower. Even the nectar is called 'essence' or *Tattva* of the flower. The oil extracted from seeds and herbs are also called their *Tattva* or essential extracts. The common factor in all these is the 'liquid or fluid' nature of the *Tattva*. It is this reason why life is said to have emerged in water, a fluid and elixir of life and vitality, the 'essence' or *Tattva* that sustains and protects life. The primary essence of creation was not some liquid as we understand the term; it was 'ethereal', more like the air or wind element, resembling more closely to the something that fills the outer space above the surface of the earth. It must be understood that though 'air' does not exist outside the atmosphere of the earth, it is not an absolute vacuum, for there is something that lies between any two celestial bodies or planets, separating them and preventing them from colliding with each other. All celestial bodies are dipped in this cosmic liquid which is like a 'volatile essence' drawn from flowers. It is 'volatile' because it is never the same, and that is why we say that the creation is continuously and perpetually changing and evolving. Had it not been so, had that *Tattva* been a solid, everything in creation would have been cast in one fixed mould for eternity.

According to the philosophy of *Tantra Shastra* dedicated to the worship of divinity in the form of Shiva and Shakti, the process of creation took the following initial steps. Before anything came into being, Brahm, the supreme consciousness and the ultimate truth of creation, known as Shiva, was established in his own radiant effulgence or self-illumination symbolising his splendorous glory, majesty and divinity. Hence he was called 'Prakash', literally meaning light. When he decided to deliberate and actually started the process of deliberation in order to start the process of creation, there was a subtle 'spandan' or a slight throb or imperceptible movement which transformed into a vibration. The waves generated by this initial vibration

developed in the cosmic ether and gradually coalesced with each other to give rise to higher waves of higher amplitudes. This produced the cosmic sound called the Naad. Since the creation was conceived in the bowl of the cosmic ether, the energy of the initial sound was focused at a central point, called the focal point or the dot or 'Bindu'. This Bindu contained the combined powers of both the male Shiva and the female Shakti like a dicotyledonous seed which produced the two separate entities called Shiva and Shakti. The union of these two resulted in the unfolding of the rest of the creation. Thus it will be observed that whatever exists in this creation can be traced back to this primeval Naad. Hence, the latter is called 'Shabda Brahm', or the Brahm as sound. Therefore it is very natural to assume that all Mantras dedicated to any divine entity and consisting of the sound element (because Mantra consist of letters and words, and are chanted or repeated to make them effective) has its origin in this Shabda Brahm and gets its powers and energy from this Shabda Brahm. In other words, the Mantra contains in itself the essential meaning, form and spirit of the deity whose Mantra it is, and which is being worshipped and invoked. Constant repetition of the Mantra generates so much energy in due course of time that the deity being worshipped is revealed. This is because the sound has great powers and energy as is evident when reverberation of sound waves and the resonance created by them are so powerful and forceful that they can shatter sheet glass in windows when an explosion occurs near a building.

Primarily there were five basic elements or Tattvas of creation—such as the sky, air or wind, fire or energy, water and earth in increasing order of density or grossness. From them came the secondary elements—they are the various Tattvas of creation. These latter vary according to the level and dynamics of creation one is dealing with in terms of metaphysics. Finally came the tertiary elements—they are the various Anatahakarans, the various Vikaars and Vrittis, the three Gunas etc. that would form the third layer of elements or Tattvas of creation.

These elements can be compared to the elements of material science of the modern world, such as the elements calcium, magnesium, potassium, selenium etc. which are heavier and grosser in nature as compared to other elements such as the gases oxygen, nitrogen, hydrogen, helium etc. which are lighter and subtler. Then there is carbon which is the base of an entire field of chemistry called organic chemistry, much like we have Atma which in association of different other elements form a vast array of organic chemicals and material products of daily use. If carbon is compared to the basic unit called Atma in metaphysics, then the other elements that combine with it are the various Gunas, Vikaars, Vasanas and Vrittis that surround this Atma to give rise to an uncountable number of creatures of different nature, temperaments, character and personalities.

In this scenario, Brahm would be like the primary Atom which left to itself is neutral and inactive. It is only when certain changes take place in its core, such as the shift in the position of its electron etc. that the chain of reaction starts that would ultimately result in not only producing newer elements but releasing energy or absorbing matter from the surrounding atmosphere. The Atma would be more like the atom of the carbon atom which is at the heart of all organic compounds.

The thirty-six Tattvas are the following—the 25 Tattvas as described in Shankhya philosophy^{1*} + 1 Iswar (of Patanjali's Yoga Darshan) + the 8 Vikaars or faults^{2*} + 1 Vyakta (that which is visible and has attributes, i.e. the Sanguna aspect of Viraat Pranav or Brahm) + 1 Avyakta (that which is not visible, not having any attributes and characteristics, i.e. the Nirguna aspect of the Viraat Pranav or Brahm) = total 36 Tattvas. {^{1*}The 25 Tattvas according to the Sankhya philosophy are the following—Purush (the primary Male), Prakrit (Nature), Mahtattva (the powerful Buddhi or intellect), Ahankar (ego, pride), the five organs of perception (i.e. the eye, nose, ear, tongue and skin), the five organs of action (i.e. the hand, leg, mouth, excretory and genitals), the Mana (mind), the five perceptions (such as the spoken word or speech, sight, smell, touch and taste), the five Bhuts (i.e. the five primary elements, the earth,

water, fire, air and space or sky) = 25. ^{2*}The eight Vikaars according to verse no. 17 of the Shaarirak Upanishad of Krishna Yajur Veda, they are the following—They are the following—one Mana (mind) + one Buddhi (intellect) + one Ahankar (pride and arrogance) + one Akash element + one air element + one fire element + one water element + one earth element = total of eight elements that cast their shadow on the purity of Nature.}}

4. [The ethereal sound OM, also known as Pranav, is said to be the manifestation of Brahm, the cosmic Consciousness that is all-pervading and is the cause of this creation as well as its conclusion. Now, an attempt is being made to outline the main sublime qualities or virtues of this cosmic Brahm. Those qualities or virtues are not exhaustive but only indicative.]

The supreme cosmic Divinity known as Brahm is the supporting foundation and cause of everything in existence. It is self-illuminated and gloriously brilliant. It is the Lord of all the living beings, and is all-pervading and omnipresent.

Brahm is honoured by the title of ‘Vibhu’—one who is almighty, omniscient, omnipresent, omnipotent, all-pervading, magnanimous, eternal, majestic and powerful Lord of all.

All the Gods are nothing but various manifestations of this Brahm to carry out different functions of creation.

The cosmic crucible called Prakriti or Nature in which the entire world characterised by the preponderance of delusions and falsehoods, a world infused and suffused wholly in illusions, deceit and confusions collectively called ‘Maya’, was conceived, is also present in or included as a part of the bowls of this Brahm that is infinite and fathomless (4).

5. The manifestation of Brahm in the form of ‘sound’, i.e. the subtle sound of OM representing the conscious living world that speaks (the ability to speak is an irrefutable and incontrovertible sign of life and consciousness because dead entities do not speak or hear), is revealed in the form of all the letters of the (Sanskrit) language. [This is a metaphoric way of saying that all knowledge is Brahm personified, because knowledge is encrypted in words and it is disseminated through the use of words, and words are based on alphabets which are simply symbol or sign representation of the phonetic sound.]

Brahm personifies the element of Kaal or the eternal factor of ‘time’. [The concept of ‘Kaal’ is a vast, all-inclusive concept even as ‘time’ is an eternal factor that surrounds the entire existence from the outside. Nothing exists beyond the boundary of ‘time’ or Kaal; nothing remains immune to the effects of ‘time’ or Kaal. That is why we say that one is facing ‘bad or good’ time when things do not remain under one’s control. This is because ‘time’ has an overriding and overruling authority over all the activities of the creature in this world. The ‘time’ would outlive this creation and would be there even before the next generation of creation comes into being. It is in the bowls of ‘time’ that the creation exists, it is in the fathomless bowls of ‘time’ that it would vanish when its time is due and up, and it is from this bowl of ‘time’ that it would again emerge when the time comes for its revival. Hence, ‘Kaal’ is treated as being equivalent to Brahm—it both precedes and follows creation.]

Brahm is an embodiment of all forms of speech or words. [That is, all the languages on this planet—mere sounds as made by animals, or the phonetic language as used by the human race—are revelations of the stupendous dynamic ability of Brahm to express himself.]

Brahm is Shiva personified. [That is, Brahm is an embodiment of the grand virtues of auspiciousness, holiness, purity, divinity and truth—virtues that Shiva personifies. These auspicious virtues of Brahm are also known as the ‘Shiva principle’.]

One must research and attempt to learn the truth about this Brahm when one studies the scriptures, as the latter unanimously proclaim the supremacy and truthfulness of this single entity that is the subject matter of all forms of knowledge. In fact, this Brahm is what all the Upanishads talk and preach about (5).

6. This Brahm encompasses all dimensions of time. It is the past, the present and the future, and the world that exists in all these three spheres of time.

Brahm is that eternal, immaculate and imperishable Absolute Truth that exists beyond all known manifestations of creation called the three Bhuvans or worlds. [The three Bhuvans are the terrestrial world, the heavenly world, and the nether world. Brahm literally surrounds these three worlds like a moat surrounds a fort. It is like the citadel of creation where the supreme Emperor lives.]

This Brahm, in its cosmic manifestation that has no attributes and which is eternal and all-pervading, is in the form of the ethereal sound represented by the word OM. Those who are wise and knowledgeable say that this OM is the vehicle or medium that provides the creature with Moksha (emancipation and salvation). That is, when a wise spiritual aspirant comes to realise the truth of Brahm and the significance of OM, he uses the latter as an easy and specific tool to come in direct contact with the Principal (Brahm) that this word (OM) represents (6).

7. The eternal and imperishable Brahm which is implied by the word OM is the divine, sublime entity that is also known as the Atma. [The Atma is the creature’s own ‘self’ which is pure consciousness that resides in his body, in the subtle heart.]

Hence, a wise and erudite aspirant should establish a clear and direct link between his Atma and Brahm through the medium of OM. Since OM represents Brahm, and since Atma is also a representative of Brahm, it follows that by meditating upon OM the spiritual aspirant’s Atma—which is his true self—is able to establish a direct link with Brahm who is eternal and imperishable as well as the only Truth in creation¹.

With this eclectic view, the aspirant is able to obtain access to Amrit, the elixir of bliss and eternity.

He becomes eternal in the sense that he realises that his ‘true self’ known as the Atma is a personification of Brahm, and hence it has the unique virtues of Brahm which include being eternal, infinite and imperishable (7).

[Note—¹Herein lie the importance of using OM as a Mantra to realise Brahm and be enlightened about one’s true ‘self’. It is well established that OM is a sound and verbal representation of Brahm, and that the Atma is a subtle image of the same Brahm. So, when the aspirant meditates using OM as a medium, he is able to establish a direct union between his Atma and Brahm. In effect, OM is the bridge that links the two banks of the river—one bank is the Atma and the other is Brahm. Say, what difference is there between the two banks of even an ordinary river on earth, except that the one where the traveller stands is known as ‘this bank’, and the one where he intends to go as ‘that bank’? Other than that, the two banks are the same; as far as the river is concerned both its banks are the same. They have the same water of the same river touching their sides. The two sides represent the same earth that is separated by the same river. A bridge across this river makes it easier for the traveller to go from either side to the other just as if he was walking on solid ground instead of

having to cross the formidable barrier of liquid water on which it is impossible for any man to walk on foot.

Let us take another example to understand the relation between OM and the spiritual aspirant. Suppose a man is trapped in a dungeon or a prison that is surrounded by a moat. This moat stands as a formidable barrier between his life of imprisonment and his freedom because even if he is freed from the walls of the dungeon he would not be able to go on the other side to enjoy his newly found freedom. Now say, how would he cross the moat to his freedom? Of course, the options open to him for the purpose of crossing the moat are the following—he can either swim across it, or take a boat, or just walk across a bridge on the moat. Obviously, the last choice is hassle free and the easiest way to freedom. So, if one were to treat this gross world as the prison for the soul, the easiest way for him to reach the goal of spiritual liberation and deliverance is to take the aid of OM as this is not only the simplest of Mantras but also the nearest analogue of Brahm, the cosmic Consciousness which is like the vast stretch of green land which his Atma, the microcosmic form of the same consciousness that resides in the individual's own gross body as his soul, as his Spirit, wishes to reach after a stifling lifetime living inside the body of the creature. This would be the Atma's liberation just like a prisoner breathing fresh air after spending a lifetime in the dark recesses of a dungeon when he would run hither and thither on the meadow across the moat in extreme ecstasy at finally being able to leave behind the horrific time spent within the confines of the walls of the prison.

In the present context of this Upanishad's teaching, this spiritual 'bridge' is OM. It establishes a permanent link between the Atma and Brahm. The river can be compared to the formidable world which has to be crossed by the spiritual aspirant who wants his Moksha or final emancipation and salvation, or one who wishes Mukti or liberation and deliverance for his trapped soul. Just like a bridge is the most comfortable method to reach the other side of the river, the ethereal Mantra OM is the easiest and the surest medium by which the creature can reach his spiritual goal of realising Brahm.]

8. With this sublime and holistic view of creation along with the realisation that everything is Brahm personified, or that Brahm embodies the entire creation in its universal cosmic form, he must understand that the same Brahm has a gross body that is visible (the Saguna Brahm) as well as a subtle body that is not visible (the Nirguna Brahm).

Similarly, he must be firmly established in the eclectic view that the Atma and the supreme transcendental Brahm are one and the same (8).

9-11. [Verse nos. 9-19 describe the four Paads, literally the legs or the steps but more practically meaning the four aspects or forms in which the Atma exists in this creation. Since the Atma is a microcosmic image of Brahm, the cosmic Consciousness, it follows that these four aspects relate to the four forms in which Brahm exists in this creation. Again, since everything in creation is a manifestation of Brahm, and there is nothing that is not Brahm, these four Paads therefore describe the four aspects of creation or its four basic forms. Refer also to Canto 5, verse nos. 24-25, and Canto 6, verse nos. 3-4 of this Upanishad in this context.]

Now the different Paads of the supreme Brahm are being enumerated in a step-by-step manner. Since the Atma is a personification of this Brahm, since it is this Atma residing inside the body of the creature that actually perceives this world and enjoys it in its gross, subtle and subtlest forms, and since inspite of all this the Atma retains its

primary form as being eternally blissful and contented, it too has all the different Paads associated with Brahm.

It is said that the Atma has four Paads or steps or aspects or forms similar to that of Brahm.

The Jagrat or waking state of consciousness is the first Paad of the Atma at the micro level of creation, and of Brahm at the macro level of creation.

[Briefly, the Jagrat state of consciousness is that state in which the creature perceives the physical external world through its gross body and its sense organs. In this state, the stimuli from the external world are received by the organs of perception and sent to the brain or mind. The latter then does the actual interpretation job and gives the necessary instructions to the organs of action to act. For more serious matters it consults the intellect. During this waking state, the creature becomes aware of the existence of the physical world, comes to witness it first hand, and gains a hands-on experience of its varied facets. It does have to imagine the existence of this world because the latter is witnessed first hand directly; it's not hearsay. In the entire episode, the sub-conscious mind stores information gathered by the mind and intellect for future reference. Hence, during the Jagrat state, the mind and intellect as well as the gross body consisting of the various sense organs are directly involved. The word 'Jagrat' also has a metaphoric connotation in as much as it implies that whatever the creature comes to learn is when he is wide awake, when he is receptive to information, and can consciously pick and choose what to and what not to learn by way of selecting what to hear, smell, taste, touch and see. It is called 'Viswa' or the world at large because he not only learns about his immediate surroundings but about the world as it exists even in far off places, in the past and the present relying upon what he sees and deduces from the information gathered. Based on this statistical knowledge the creature can even predict the future intelligently.]

In this form, the visible gross world is the body of Brahm in the same way as the gross body of the individual consisting of the organs of perception and action is the visible body of Atma. [This is because Brahm lives in this vast creation just like the Atma lives in the body of the individual creature. Even as the body of the individual has no life and meaning once the Atma or the pure consciousness residing in it leaves, the entire creation would lose its relevance and importance as soon as Brahm is taken out of it.]

Brahm pervades or lives throughout the visible world even as consciousness lives in all parts of the body of a creature. Brahm, being the cosmic Consciousness personified, is all-knowing and omniscient, and it covers the entire gamut of the visible world just like the individual living being who is conscious and wide awake becomes aware and knowledgeable about the world around him. [When a wise and intelligent creature is awake, he becomes aware of all the happenings around him. This is made possible because of the presence of the Atma inside his body. It is this Atma, the pure consciousness, that enables the otherwise inane and lifeless gross body to be alive, and be sensitive and receptive enough to be able to accept and understand the sense impulses received from the external world. Without the Atma the body would not know anything. If the Atma represents one single individual creature, Brahm would stand for the sum-total of all the Atmas in creation, and by implication this Brahm would represent the sum-total all knowledge that exists in this living creation. This is because Brahm is the 'consciousness' that exists at the macro level of creation, while Atma is the same consciousness at the micro level of the same creation. As soon as consciousness retracts itself from this world, the latter ceases to exist from all practical points of view. Therefore, Brahm is the protector of the entire

visible world (because without Brahm or 'Consciousness', this world would be as good as dead) [9-10].

This macrocosmic form of the divine Brahm (cosmic Consciousness), personified as the Supreme Being, has nineteen metaphoric mouths (symbolised by the following—the 5 sense organs such as ear, eye, nose, tongue and skin + 5 organs of action such as hands, legs, mouth, excretory and genitals + 5 Prans or vital airs or winds such as Pran or main breath, Apaana, Vyan, Udaan and Samaana + 4 Anthakarans or inner self such as Mana or mind, Buddhi or intellect, Chitta or sub-conscious and Ahankar or ego and pride = 19), whose limbs are the eight Lokas (consisting of Bhu, Bhurva, Swaha, Maha, Janaha, Tapaha, Satyam and Patal = 8), who is the undisputed supreme Lord ('Prabhu') of the entire world, who is revealed in the four states of existence known as Sthul or gross, Sukshma or subtle, Kaaran or causal, and Sakshi or the one who is a sole witness of everything—verily, the supreme transcendental and all-pervasive macrocosmic Brahm who has revealed himself as this vast and colossus creation is known as 'Vaishwanar Brahm'² or the Viraat Purush. [11]. (9-11).

[Note-- The 4 'Paads', or limbs, legs, aspects, facets or pedestals of Brahm—The four 'Paads' of Brahm are the four legs upon which Brahm stands. These four Paads symbolically establish the greatness and supremacy of Brahm as the all-powerful and all-controlling Authority in this creation. Since Brahm is the supreme Divinity that has revealed itself in the form of this creation, since each and every unit of creation is a manifestation of Brahm and without Brahm nothing exists, nothing has any relevance and truth (refer *Tripadvibhut Maha-Narayan Upanishad*, Canto 1, paragraph 1), it follows that the entire creation represents Brahm's four cosmic forms or aspects or facets—which are called the four legs or Paads of Brahm. This is a metaphoric way of saying that the supreme Brahm has manifested himself and is made known to this world by the means of these four mediums.

The four Paads of Brahm stand for the four states of existence of consciousness—viz. the Jagrat or waking state, the Swapna or dreaming state, the Sushupta or deep sleep state, and the Turiya or transcendental state. This fact is affirmed in the Atharva Veda's *Tripadvibhut Maha-Narayan Upanishad*, Canto 1, paragraph 5; Canto 4, paragraphs 1-3.

Besides the present Upanishad, these four Paads of Brahm have been explained elsewhere in the following Upanishads also—(i) Sam Veda's *Chandogya Upanishad*, Canto 3, section 18, verse nos. 2-6, Canto 4, Section 5, verse no. 2, Canto 4, Section 6, verse no. 3, Canto 4, Section 7, verse no. 3, and Canto 4, Section 8, verse no. 3. (ii) Krishna Yajur Veda's *Brahm Upanishad*, verse no. 1. (iii) Atharva Veda's *Mandukya Upanishad*, verse nos. 3-7; *Nrisingh Purvatapini Upanishad*, Canto 4, verse nos. 4-7; *Tripadvibhut Maha-Narayan Upanishad*, Canto 1, paragraph 5; Canto 4, paragraph nos. 2-3, 6; Canto 8, paragraph no. 4; *Ram Uttar Tapini Upanishad*, Canto 3, verse no. 5-8; *Par Brahm Upanishad*, verse no. 5.

²*Vaishwanar Brahm*—The word 'Vaishwanar' refers to the all-pervading and all-encompassing macrocosmic form of Brahm. It is that aspect of Brahm which represents the whole 'Vishwa' or world, the visible creation. It is the macrocosmic gross body of Brahm and represents the sum total of all gross bodies in existence. It, more practically, refers to the Jagrat or waking aspect of consciousness because it is in this state that the individual becomes aware of the surrounding world; it is during the Jagrat state that the consciousness receives inputs from the world, the 'Vishwa', and establishes a contact with it. So, that aspect of Brahm that relates to the gross aspect of creation at the cosmic level is known as Vaishwanar Brahm.

This aspect is also known as the 'Viraat Purush' as the latter term refers to the all-pervading and all-encompassing form of Brahm at the macrocosmic level of creation. The entire creation is said to be formed from the body of this Viraat Purush. Or, it is

this Viraat Purush who has metamorphosed himself in the form of the entire creation. Hence, one is inseparable from the other just like water and ocean.

Another term used in this context is 'Vaishnavar Purush' which is a combination of the two terms 'Vaishwanar Brahm' and 'Viraat Purush'.

Other reference: (i) Atharva Veda's Mandukya Upanishad, verse no. 3; Nrisingh Purvatapini Upanishad, Canto 4, verse no. 4. (ii) Krishna Yajur Veda's Brahma Upanishad, verse no. 21; Pran Agnihotra Upanishad, verse no. 15.]

12. Verily, the above described form of existence is the first Paad of the supreme transcendental Brahm.

[Now the second Paad is being narrated.]

The second state in which consciousness exists is known as Swapna or the dreaming state. This is the second Paad of the Atma at the microcosmic level of creation, and of Brahm at the macrocosmic level.

[The Swapna or dreaming state, as the name suggests, is when a creature imagines the presence of a world which has no physical existence. In this case, the physical gross body is asleep or inactive, as is the conscious aspect of the mind and intellect. Only the sub-conscious aspect of the mind is active, and the creature draws upon the data-bank of this sub-conscious mind to conjure up a fascinating world of virtuality. All knowledge that the consciousness gathered while in the Swapna state is not physical, and it exists only in the subtle level. This knowledge may be quite divergent from the knowledge of the Jagrat state. And this is the reason why the world of dreams is often very different from the world which exists in the waking state. Whereas the knowledge and the world during the Jagrat state is like the hard copy of anything, the world and knowledge of Swapna is like the soft copy. Whereas one can actually have the feel of the hard copy and its existence can be ascertained and protected, no one can feel the soft copy, and when the latter would vanish due to some software problem is most uncertain to say. But whereas the world during the Jagrat state has its own limits due to a variety of practical and physical factors, no such limitations are imposed in the subtle state and the consciousness can imagine things and create a world much more fascinating and colourful than actually possible in practice in the Jagrat state.]

The Atma (i.e. the creature's true self) that is conscious of existence of the world in its subtle form (as opposed to the gross and physical form) in the creature's dreaming state is the de-facto Lord of this state. [This is because it is the Atma that conjures up a world of dreams. If it so wants, it can exclude this state, and once the creature retires to rest and the body ceases to function, the consciousness can allow the mind to rest too. And when this happens the creature wouldn't dream. In other words, just like any kingdom is headed by a ruling monarch, the world of dreams is also headed by this subtle aspect of the Atma.]

And since Atma and Brahm are synonymous with each other, it is said that this subtle state of existence of consciousness, which is equivalent to the dreaming state of existence, or the Swapna state, is the second Paad or aspect of the cosmic Brahm.

Hence, Brahm or the cosmic Consciousness that exists in the dreaming state of existence and makes the creature aware of the subtle world that exists only virtually in one's dreams is called 'Sukshma Pragya Brahm'—i.e. Brahm that is manifested and known in its subtle form (as opposed to its gross form known as the Vishwa that exists in the Jagrat or waking state).

This Brahm also has the eight limbs or aspects as described earlier for the Vishwa or Viraat Brahm. [Refer verse no. 11.]

Oh the one who has done great Tapa (i.e. has done great austerity and penance; a reference to sage Narad)! This Brahm or consciousness in the form of the Atma is all alone in the Swapna state of existence. [And this is why this consciousness is called 'Prabhu' or Lord of this subtle state of dreams. The same epithet Prabhu was used in verse no. 11 to describe Brahm as the only Lord in the Jagrat or waking state of consciousness.] (12).

13. This subtle and invisible aspect of Brahm or the 'Sukshma Brahm' (i.e. the consciousness that exists in the Swapna or dreaming state of existence) is the one who sustains and experiences the presence of various Tattvas or elements as they exist in their subtle state or form. [The word 'Sukshma' means as small as the atom; minute, microscopic, subtle and so small that it is virtually invisible in creation.]

If this subtle Brahm or subtle consciousness that exists in the Swapna state is taken as having an independent existence, then it can also be said to have the four distinct states of existences as the gross aspect of Brahm did. [This subtle form consciousness in the dreaming state is said to have an independent existence because a world of dreams is an independent world, complete in its self in all respects. While a creature dreams, he behaves just like he would do in the real world—he has relations, he does so many deeds, he cries and laughs, he goes here and there, he loves and hates, he eats and fasts, and so on. Except for the fact that the physical gross body with its natural limitations is not involved, there is not much of a difference between the actual world of the waking state and the world of dreams. These two worlds are like independent worlds having separate existence. For instance, whereas a man may be a pauper in the gross physical world of the Jagrat state, he might be a king in the Swapna world. Therefore, if the consciousness or Brahm or Atma can have four states of existence while in the Jagrat state, it can also have similar or equivalent number of forms in the Swapna state. These four states are symbolically—Jagrat, Swapna, Sushupta and Turiya. One might wonder, for instance, how a creature can be dreaming while already in the dreaming state. Well, since the 'world of dreams' is an independent world of its own, a creature can be awake in it, doing so many things, or he might sleep in this imaginary world just as well as he would have done while living in the physical world when he was actually awake. It must be noted that we are dealing with the analysis of Brahm, an entity that is unknown, most mysterious, enigmatic and esoteric, and like in science or mathematics we have to presume certain things based on known data, available information and experience in order to arrive at a definite conclusion about the unknown.]

The Atma or the individual's consciousness that exists in the Swapna state of existence is known as 'Taijas'. It is because it is magnificent, majestic, glorious and dynamic—virtues implied by the word 'Taijas'. [Why so? It is because whereas in the Jagrat state of existence the Atma was subject to the limitations of the gross body, no such boundaries exist in the Swapna state. The Atma in the Swapna or dreaming state is more dynamic and maverick and powerful, capable of achieving stupendous feats of astounding proportions that would be impossible for it to accomplish while in the Jagrat or waking state because of natural barriers of the physical body and the physical world which are gross in nature and have various sorts of natural limitations built in their texture.]

The consciousness that exists in the individual level of the creature, i.e. in the micro level of creation, is called Taijas as mentioned above, while the same consciousness when it is considered at the macro level of existence is known as

‘Hiranyagarbha’. [The ‘Hiranyagarbha’ is therefore the sum total of all subtle bodies in creation.]

The previous form of cosmic Consciousness which is known as the Viraat or Vaishwanar is the gross aspect of the cosmic Brahm (refer verse nos. 10-11), while the form known as Hiranyagarbha (as described in verse nos. 12-13) is the subtle aspect of the same cosmic Brahm.

This subtle form of the cosmic Consciousness known as Hiranyagarbha is the second Paad of the supreme Brahm (13).

14. [This verse describes the third state of consciousness known as Sushupta. This state of existence corresponds to the third Paad of Brahm.]

The living being in the Sushupta state of existence does not see any dreams and neither does he has any sort of wishes for enjoyment of any sense organs or objects. It is a state of dissolution when nothing exists and matters.

[Briefly, the Sushupta state is the deep sleep state of consciousness when even the sub-conscious mind goes into hibernation. With the mind and body both becoming defunct, the creature is neither awake nor dreaming. It exists in a state of neutrality or dissolution. Thus it experiences nothing of the physical world of the Jagrat state or the subtle world of the Swapna state.]

The cosmic Consciousness that exists in this state of complete dissolution known as Sushupta, is known as the Kaaran or the causal body. It is the sum total of all the causal bodies of creation. [As the word implies, this state of consciousness is the ‘causative factor’—or Kaaran—that gives rise to all other aspects or forms of existence of consciousness. It is from this neutral state that the other forms of conscious existence emerge. Hence, it is the ‘cause’ of coming into being the other states of consciousness such as the Swapna and the Jagrat. Therefore, this neutral and virtually dissolved state of consciousness is called the ‘Kaaran’ or the ‘causative’ aspect of the existence.] (14).

15. In this primary form of Kaaran or causal body, the Consciousness is in a single form (i.e. it is still not revealed in its many connotations or varied aspects). It is unique and magnificent in its self. It is endowed with profound Gyan (knowledge). [This is because any entity that has knowledge can ever hope to be the cause of initiating any sort of action that results in the development of something afresh. An entity that has no knowledge would not be able to achieve anything in any field; mere ability is not enough. Knowledge is the driving force of any kind of activity and development. Since this Kaaran or causal body of the Consciousness is able to give rise to the other states of existence, since it can conjure up a fascinating world in its dreams, and then actually perceive this world in a physical, tangible form in the waking state, it is obvious that it has knowledge! Therefore, the consciousness residing in the causal body is not ignorant and stupid. Its knowledge, erudition, skill and wisdom are so perfect that the creation it creates works like clock-work. For instance, the sun rises and sets at the precise time, the embryo takes a precise time to mature and take a birth, the egg hatches at the precise time. Movements of all celestial bodies are perfectly regulated. In spite of their being present in the vast void of space without any barriers to separate them physically, they do not collide with each other, and neither do they spin out of control and get lost in this void.]

It exists in a happy and eternally blissful state of existence. [This is because it has yet no worries of any kind, as the world—both the physical world of the Jagrat or waking state as well as the subtle world of the Swapna or dreaming state—is shut off.

Since there are yet no perceptions, and since the mind that is the cause of all pain and miseries is still in a dissolved state, the consciousness exists in the blissful state of existence as long as it stays in the Kaaran body. It is only when it starts weaving the web representing this world that it gets restless and entangled just like a spider that trapped in the cobweb of its own creation.]

This consciousness is the one that lives in the inner self or the subtle heart of all living beings as their Atma which is their true and pure self (15).

16. At the macrocosmic level of creation, this state of consciousness is equivalent to the Ishwar or the supreme Lord of creation. This Ishwar is therefore in an eternally blissful state.

The light of knowledge, wisdom and enlightenment is the metaphoric mouth of this Ishwar. He is omnipresent and all-pervading. He is eternal, imperishable, steady, constant and irrefutable as well as the absolute Truth of creation.

This supreme Ishwar or Lord of creation is the one who has revealed himself in all the four forms in which consciousness exists in this creation (such as the Jagrat, Swapna, Sushupta and Turiya states)—and it is he who is known as ‘Pragya’ as well. [The Ishwar represents the sum total of all the causal bodies of creation at the cosmic level, while its counterpart at the level of the individual creature is known as Pragya. The word ‘Pragya’ literally implies one that knows, one that has knowledge, is wise, erudite and enlightened. All these are the characteristics of the Atma which is the pure consciousness in its primary form, and nothing else.]

Hence, Ishwar or Pragya stands for the third Paad of Brahm (the cosmic Consciousness) (16).

17. [Verse no. 17 describes some of the eclectic virtues of the supreme Brahm.]

The supreme transcendental Brahm (described in the above verses) is the Lord of the entire creation and its inhabitant creatures, both the moving as well as those that do not move. [The moving creatures are animals, insects, worms, birds and others belonging to the animal kingdom, while the immovable ones are the plants and some categories of living beings of the lower animal kingdom.]

Brahm is all-knowing and omniscient.

In his most subtle and sublime form, Brahm is the pure conscious ‘self’ known as the Atma that lives in the inner being or the subtle heart of all living beings.

Brahm is the cosmic ‘Yoni’ or womb in which the creation was conceived, where it developed, was nourished and from where it was finally produced—or created. Indeed, Brahm is the only cause for the creation, the development and the conclusion of this creation (17).

18. The ‘consciousness’ that is deemed to exist in the three states of existence known as the Jagrat world called the Vishwa, the Swapna world called the Taijas, and the Sushupta world called the Pragya, is basically the same entity that is always one, non-dual and immutable. [This Divinity is known as Brahm at the macro level, and the Atma at the micro level of creation.]

This misconception that the basically non-dual Brahm has three states of existence, or that the pure consciousness exists in three types of worlds (as outlined above) is at the root of all delusions and spiritual perplexities. This misconception is called Maya, and it is a constant hurdle in one’s spiritual elevation and enlightenment. In other words, the worlds created due to Maya cause confusions about the truthful

nature of Brahm or Consciousness. Instead of helping one to realise the ‘truth’ it only causes consternations and perplexities.

Not only this, since delusions create an imaginary situation which is far removed from the truth, it follows that whatever is known and recognised as the world by the creature is actually like a Swapna or dream as far as his true ‘self’ the Atma is concerned (18).

19. Besides the three Paads of Brahm (as narrated in verse nos. 9-16) there is one more Paad which is above or superior to all of them. It is called the transcendental state of consciousness, or Turiya state of existence. This corresponds to the fourth Paad of Brahm as well as the Atma at the macro and the micro levels of existence respectively.

All the states in which the cosmic Consciousness exists are deemed to be incorporated in this Turiya state. The consciousness in the Turiya state is in a non-dual form, and it is from this single entity that all the other three states of existence emerge. [It can be explained by taking the example of a post-graduate student who has completed his MA degree. It is assumed and taken for granted that he must have passed his graduate BA degree and earlier his school leaving exam if he has the MA degree. When he has completed his MA degree, it is assumed that he has the knowledge that is taught at the level of the school as well as at the graduate level. Similarly, the higher and superior transcendental state of consciousness known as Turiya is deemed to have been arrived at by a creature after having crossed the earlier three stages of Jagrat, Swapna and Sushupta. A Consciousness that exists in the Turiya state must have had an experience of what are Jagrat, Swapna and Sushupta states.] (19).

[Note—Besides this Canto, the four states of existence of consciousness have been explained in a number of Upanishads such as The four states of existence of the consciousness have been described in the following Upanishads amongst others—(a) Shukla Yajur Veda—Trishikhi Brahman Upanishad, Canto 2, verse nos. 149-150; Brihad Aranyak Upanishad 2/1/16-20, 4/3/9-38; Subalo-panishad, Canto 4 full as well as Canto 9, verse no. 1-7; Paingalo-panishad, 2/11-16; Mandal Brahmin Upanishad, 2/4-2/5; Turiyateet Upanishad. (b) Krishna Yajur Veda tradition—Varaaha Upanishad, Canto 2, verse no. 59-64, 72; Canto 4, verse no. 11-20; Brahmo-panishad, verse no. 1, 20-21; Kaivalya Upanishad, verse no. 12-14; Dhyani Bindu Upanishad, verse no. 93/12-93/15; Sarwasaar Upanishad, verse no. 4; Shaarirak Upanishad, verse no. 14; Brahm/Amrit Bindu Upanishad, verse no. 11. (c) Atharva Veda tradition—Mandukya Upanishad, verse nos. 3-7; Atharvashikha Upanishad; Nrisingh Purvatapini Upanishad, Canto 4, verse no. 4-7; Naradparivrajak Upanishad, Canto 5, verse nos. 1, 24-26; Canto 6, verse no. 3-4; Ram Uttar Tapini Upanishad, Canto 3, verse nos. 5-8; Param Hans Upanishad, paragraph no. 6.]

20. The earlier three states of existence of the consciousness that are deemed to be incorporated in the fourth state called Turiya are the following—‘Ot’, ‘Anugyat’ and ‘Anugya’. [Refer verse no. 3 of the present Canto 8 for elaboration.] They help one to analyse and understand the existence of the different aspects of the world and creation. But ultimately all come to a single point—and it is the non-dual nature of the consciousness as it exists in the eternally blissful Turiya state.

Just like the two states of existence (i.e. the Swapna or dreaming state as well as the Jagrat or waking state) being regarded as the delusory effect caused by Maya upon the pure consciousness that exists in the Sushupta state, it follows, by extension, that when the consciousness rises higher to the Turiya state then all the three states

below it (i.e. the Sushupta, Swapna and Jagrat) are also the effect of Maya. [The Atma or pure consciousness of the creature in the Sushupta state is completely neutral. But under delusions it begins to think that it lives in a world of dreams or Swapna, and in the physical world of Jagrat. It oscillates between these three states because it is not certain which is true and which is false—refer Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 4, Brahman 3, verse nos. 16-18, 34-35; and in Brahm Upanishad of Krishna Yajur Veda in its verse nos. 20-21. The Brahm/Amrit Bindu Upanishad, verse no. 11 of Krishna Yajur Veda tradition describes the three states of existence of the consciousness as the Jagrat, Swapna and Sushupta. It goes on to affirm that ‘any person who is able to transcend these three states of existences, or who has reached the fourth state called the Turiya state of permanent beatitude and felicity, is the one who does not have another birth’. ‘Not having any more birth’ is a metaphoric way of saying that the creature or his ‘true self’, has attained eternity in the form of realisation that it is not an ordinary entity but cosmic Consciousness that exists in the Turiya state. This is a deemed permanent state of spiritual enlightenment where Maya (delusion) has no or little effect. As a result of this, the Consciousness remains free from the influence of delusions that create an imaginary world of dreams in the Swapna state, or the erroneous impression of reality of the world which the creature sees while it is awake in its Jagrat state. When the Atma is not deluded and does not have to live either of the two states—viz. the Swapna state of dreams or the Jagrat state of this illusionary world—it is virtually free from the notion of ‘birth’. This is because to live in either of these two worlds and interact with them the Atma must have a ‘body’, and once these two worlds are dispensed away this need does not arise. The Atma or Consciousness living in the Turiya state is in its primary form that is ‘pure and unadulterated consciousness’ which is all-knowing and free from delusions and ignorance. Refer also to our present Naradparivrajak Upanishad, Canto 6, verse no. 4.]

Hence, a wise spiritual aspirant must understand and be convinced that there is only one non-dual supreme consciousness known as Brahm. It is most advisable for him to know this fact and overcome all delusions about this world and its existence (if he wishes his spiritual well-being, his spiritual liberation and deliverance, his emancipation and salvation) (20).’

21-23. Brahma reiterated once again— ‘Oh sage (Narad)! It is the declaration of the Vedas that the divine, sublime, holy and eclectic entity which is not the one that neither seems to know about the gross world as well as the subtle world nor is ignorant of them, that is neither highly knowledgeable nor is completely ignorant, that neither has any awareness of the inner subtle world nor of the outer external gross world, that cannot be seen by the eyes (because it has no form and shape), that can never be grasped, held or understood, that can not be brought within the ambit of the physical world of material sense objects, that is beyond the purview of the mind and intellect so much so that it cannot be thought of, imagined and understood, that cannot be brought under any definitions, the only essential form of which is the authority known as the Atma or pure consciousness, in which there is no trace of Prapanch (delusions, deceit, conceit, confusions, falsehoods and illusions—collectively also known as Maya), which is an embodiment of the virtues called Shiva (i.e. one who is pure, truthful, wise, enlightened, dispassionate and holy), which is peaceful and serene, which is the only one of its kind, being unique and non-dual—verily, this divine entity known as the supreme transcendental Brahm has four Paads as narrated

in the foregoing verses. This is what those who are wise, knowledgeable and learned assert and reiterate repeatedly.

This holy, divine and sublime cosmic entity that defies all understanding and definitions is known as Pranav Brahm. It is only this eclectic divine entity, to the exclusion of all other entities in this creation, that is worthy of realising and researching by the spiritual aspirant.

Like the celestial Sun that gives light and protects life in this creation, it is this Brahm that is the benevolent and munificent Lord of all those who seek emancipation and salvation.

The self-illuminated supreme Brahm is like the sky element. That is, Brahm is as vast, fathomless and all-encompassing as the sky. Nothing in existence lives outside the jurisdiction of Brahm just like nothing exists beyond the limits or boundaries of the sky.

Brahm is eternally omnipresent and all-pervading, and that is why it is called 'Param' or the Supreme One.

Verily, this is the great teaching of this Upanishad. It is the secret unravelled by this great Upanishad (21-23).

-----*****-----

Updesh (teaching)/Canto 9

[This Canto outlines the divine form of the supreme transcendental Brahm.]

1. Sage Narad once again asked the great grandfather of creation, Brahma—'Oh Lord! What are the truthful form, nature, identity and appearance of Brahm? Please be kind to elaborate upon this most eclectic but enigmatic divine entity.'

Brahma replied—'Oh son Narad! What or who else is Brahm other than one's own true 'self' known as the Atma, which is pure consciousness. Those who think that Brahm and I are two separate entities are no better than animals. [Here, the pronoun 'I' applies to one's true identity, which is not the gross body but the sublime consciousness that lives in the subtle heart as the Atma.]

Who is an animal (a 'Pashu')? Those people who are mentally like an animal are no different from a creature that is physically born from the womb of an animal (i.e. who has the physical body of an animal). [In other words, those people who live a life being a serf of their urges and instincts, who are dominated by the various Vasanas and Vrittis or natural passions and habits, who have no control over their sense organs, who have a low level of wisdom and intelligence and live only to gratify their bodies and enjoy the creature comforts and pleasures of this material world, who are not bothered about the welfare of their Spirit and think of merry-making while this body lasts, who do not understand that there is a higher state of existence than the one in which they live at present, who do not pay heed to the eclectic teaching of the scriptures thinking that they are imaginary creations of insane minds, whose life has a preponderance of Tama Guna and riddled by various Vikaars or faults and shortcomings enumerated in Canto 3, verse nos. 33, 90, Canto 4, verse nos. 5-6, who lack the eclectic virtues enumerated in Canto 3, verse nos. 21 and 24, as well as in Canto 4, verse nos. 10-12—indeed such people are like animals. There is no difference between them and another creature which we like to call an 'animal'.]

Hence, those wise, learned, erudite and enlightened men who recognise and understand the Brahm as the supreme divine cosmic entity that has revealed itself as

the Atma of all living beings as well as all the physical forms that this Atma assumes in this creation (in the form of myriad creatures)—well, such men are the ones who find freedom from the fear and fetter of death. [This is because they have not to fear from any creature in this creation; because they would have realised that what dies is the physical gross body which is nevertheless perishable and impermanent, and not the Atma which is eternal and imperishable; because they would have understood that their ‘true self’ being the Atma never dies just like Brahm never dies, and therefore there is no cause of any fear from death. Refer also verse no. 11 of this present Canto 9.]

Indeed, it is only the eclectic and divine knowledge of the supreme Authority that is the only Absolute Truth in creation, and which is nothing but pure Consciousness that is all-pervading and all-inclusive, that is capable of providing Mukti (liberation, deliverance) to the enlightened living being (1).

2. One must ponder deeply on the question as to what amongst the following is the cause of this world—whether it is the factor of time and circumstance or the prevailing situation, whether it is the creature’s natural habits, temperaments and traits, whether it is the deeds done with specific aims, objectives or targets to be achieved, whether it is some coincidence, an accidental occurrence or some unpredictable and spur-of-the-moment motivation, whether it is one of the five Bhuts (i.e. the primary elements such as sky, air, fire, water and earth) or a combination of more than one of them, whether it is the Jivatma or the living being himself?

Now, when all these possibilities are analysed, the wise ones come to the conclusion that neither the time or circumstance nor the other factors listed above can be the independent cause of this world because all of them are dependent upon and subservient to the Atma, the pure consciousness.

Similarly, the Jivatma or the living being also cannot be the cause of this world because it is dependent upon the affects of the deeds done by it in the past life (or time), which in turn determines the Jivatma’s state of existence or affairs in the current time, causing so many sorrows or joys for it. So the world, and its circumstances of either sorrows or happiness as it exists at present, is not created by the Jivatma on its own in its current life (2).

3. Wandering then about the real cause of this world, the wise and learned sages and seers meditated, and in their mind’s depth they got a divine glimpse or vision of the supreme dynamic power of creation, called the supreme Brahm, that warps and wafts throughout this creation, that is all-pervading and all-encompassing in creation, that is omnipresent and omnipotent in creation. This Brahm covers everything from the minute Atma (the Consciousness that is most subtle and smaller than an atom) to the colossus Kaal (the endless and fathomless Time). Therefore, this Brahm rules over and is the causative factor of all the other factors listed as various options earlier (in verse no. 2) (3).

4. These meditating sages and seers had a divine glimpse of a magnificent cosmic Wheel (representing creation) spinning majestically, and their wisdom and intellect helped them to correctly interpret the meaning and significance of this Wheel¹.

This wheel had one ‘Nemi’ or the rim (circumference of the wheel), three ‘Vrittas’ or fastening circles that surround the central axle and hold the spokes of the wooden wheel in place (or it might also refer to the three tiers of rings or fasteners used in the wheel to tie its spokes and other parts)², sixteen ‘Antas’ or ends or

extremities³, fifty 'Araas' or spokes⁴, twenty 'Praytaars' or counter spokes⁵, six 'Ashtaks' or six sets of eight factors that strengthen it⁶, a single 'Pash' or a leash representing the entire creation which is used as a symbolic belt to tie the entire structure together.

This wheel is driven to its one destination⁷ along three different paths varying from one another, and hence called 'Trimaarga Bheda'⁸. One round of this rotating wheel gives the delusion of two⁹—that is, it is out of delusion that the wheel rotating in one direction appears to be rotating in the opposite direction as well (4).

[Note—The concept of this creation being compared to a *giant wheel* has been cited and explained at other places in the Upanishads, the most similar one to the present verse in its narration being in the Shwetashwatar Upanishad, Canto 1, verse no. 4, 6; Canto 6, verse nos. 1-3 of Krishna Yajur Veda. A similar discussion also occurs in the Atharva Veda's Prashna Upanishad, Canto 1, verse no. 11; Canto 6, verse no. 6; Mundak Upanishad, Mundak (Canto) 2, section 2, verse no. 6; and Nrisingh Purvatapini Upanishad, Canto 5, verse nos. 2-7; as well as in the Shukla Yajur Veda's Paingalo-panishad, Canto 4, verse nos. 3-4.

¹The *one rim* stands for the 'Avyakta', i.e. that entity which is un-manifest and beyond comprehension but is at the core and form the cause of the rest of the things to have their basis and existence. It also stands for 'Prakriti' which is also called Avyakta because it is not verifiably, it is un-manifest, invisible and cannot be seen directly but can only be deduced by interpretation and implication.

²The *three tiers or fasteners* are the three Gunas or qualities that form the nature and basic temperament of a man. These are Sata or the best form defined by being righteous, auspicious, noble and proper; Raja which is the medium quality marked by worldly desires, passions and activity; and Tama which is the meanest and lowliest of the three and is characterised by perversions, inertia, ignorance etc.

³The *sixteen ends or extremities* are the eleven organs (five organs of perception—eyes, ears, nose, tongue and skin + five organs of action—hands, legs, mouth, genitals and excretory + one mind) and the five elements (space/sky, air/wind, fire/energy, water and earth).

⁴The *fifty spokes* of this wheel are the five misconceptions, twenty-eight disabilities, nine contentments, and eight accomplishments or Siddhis.

The *five misconceptions* called Viparyayas are the following—(1) 'Tama' which makes one think that the body is the pure self; the mistaken notion that what is non-self is the self. (2) 'Moha' which is the endearment for or infatuation with the sensual material objects of the artificial world. (3) 'Mahamoha' literally the great Moha is the high of delusions when one thinks that the world is real. (4) 'Taamisra' when one gets angry if the desired objects are not obtained. (5) 'Andha Taamisra' is the blindness that comes in the wake of failure at fully enjoying the obtained objects of desire. For example, having to leave a meal midway due to an urgent call from the office; it leaves one frustrated and angry.

The *twenty-eight disabilities* or 'A-shaktis' are the following—eleven are related to the eleven organs as stated above, nine are related internally to the Anthakaran which are nine kinds of discontent as opposed to the nine kinds of contentment described below, and eight disabilities which are related to the inability to achieve the eight Siddhis described below.

The *nine kinds of contentment* or 'Tushti' are to be always satisfied with what one already has and not to yearn for more. They are—contentment from the knowledge of Nature (such as the study of sciences), contentment from material gains, contentment from time (because time is a great healing factor and such people derive consolation that the worst of time would pass one day), contentment from good fortune (because many people believe that good luck is round the corner), contentment from renunciation, dispassion and detachment (which is however the best form of contentment), contentment from desisting from activity not out of renunciation but

because one feels that all activity would bring with it some gain and then it would be difficult to maintain it, so it is better avoided), contentment from being satisfied with whatever one has because one feels that whatever material thing is gained is perishable and would bring in its wake pain and sorrows, contentment from being satisfied with what one has because one thinks that the more one acquires the more the desires go on increasing, and contentment from the thought that no gain is possible without causing even a little harm to others, so it is better not to desire anything at all.

The *eight achievements or accomplishments* or Siddhis are the especial mystical authority and supernatural powers that one possesses. These are—(1) ‘Uha’ or the intuitive knowledge, skills and powers that one is born with. (2) ‘Shabda’ or the power of acquiring knowledge and skill just by listening to words instead of actually reading and mugging up of texts. (3) ‘Adhyayan’ or studying deeply and with concentration to acquire knowledge and skills. (4-6) ‘Dukh-Vighaatam’ or the abilities to eliminate sorrows and sufferings. There are three sorrows that affect a man—viz. (4) sorrows that originate from external and perceivable sources; they are called ‘Adbhautik’, (5) sorrows that come from unknown phenomenal sources such as malignant stars and non-favourable Gods; called ‘Adhidaivak’, and (6) sorrows that have their origin in the body and the mind; called ‘Adhyatmik’. (7) Then comes the seventh Siddhi which is ‘Shurid Prapti’ or receiving the fortunate company of someone who is compatible and like a soul-mate for the person, as opposed to the company of pervert and tormenting people. (8) And finally, ‘Daan’ or ability to give which implies that a person has sufficient for himself; it also implies that the person has an inherent noble nature and a renunciate and compassionate temperament.

So these are the so-called fifty spokes of the wheel representing Brahm.

⁵The *twenty counter-spokes* are the ten organs (five of action and five of perception) and their corresponding objects such as sound (ear), colour and shape (eye), taste (tongue), touch (skin), smell (nose), speech (mouth), walking or moving or going to a place (legs), grasping or accepting anything (hands), droppings (excretory), and enjoying sensual pleasures (genitals).

These literally act as ‘fasteners or belts’ that hold or fix the above fifty spokes in place.

⁶Next comes the *six sets of eight factors called Ashtaks*. These are the following—(1) ‘Prakriti-Ashtakam’ or the eight-fold nature of Prakriti; it consists of the five elements (sky, air, fire, water and earth) + mind + intellect + Ahankar (ego, pride). (2) ‘Dhatu- Ashtakam’ or the eight factors that sustain the outer body—outer skin (charma), inner skin (tvak), blood (rakta), flesh (mangsa), fat (medha), bones (asthi), marrow (majjaa) and semen or mucous (shukra). (3) ‘Astha-Aishwariya’ or the eight majesties and glories that are symbolic of the great mystical powers that a man possesses—‘Anima’ or the power to become as small as an atom; ‘Mahima’ or the capacity to become huge and majestic like a colossus; ‘Garima’ or to become authoritative, dignified, assertive and a heavy-weight; ‘Laghima’ or to have humility and simplicity in spite of being powerful and potent; and ‘Prapti’ or the ability to acquire anything desired. (4) ‘Bhav- Ashtakam’ refers to the various eight states of the mind and the corresponding virtues and vices. These are the following—‘Dharma’ or righteousness, probity, propriety, and nobility of thoughts and conduct, as well as its opposite component called ‘Adharma’; ‘Gyan’ or truthful knowledge and erudition, wisdom and enlightenment as well as its opposite component called ‘Agyan’; ‘Vairagya’ or renunciation, detachment and dispassion as well as its opposite component called ‘Raga or A-vairagya’; ‘Aishwarya’ or having material prosperity, lordship, majesty, magnificence, renown and pelf as well as its opposite component called ‘A-aishwarya or non-aishwarya’ or poverty and lack of renown. It is obvious that each of these virtues affects the mental bearing of different persons in different ways. (5) ‘Deva-Ashtakam’ or the eight kinds of celestial beings. These are the following—Brahma the creator, Prajapati the guardian of the visible creation

created by Brahma, the Gods, the Gandharvas (heavenly musicians), Yakshas (semi-gods; like Kuber the treasurer of the Gods), Rakshas (the demons), Pittars (spirits of dead ancestors), and Pishach (monsters and ghouls). All these entities have supernatural powers. (6) 'Guna-Ashtakam' or the eight qualities. These are Daya or compassion and mercy; Kshma or forgiveness; Anasuya or freedom from jealousy, hatred and ill-will; Shauch or purity and immaculacy; Anaayaasa or freedom from fatigue and indolence; Akirpanya or generosity and magnanimity or lack of miserliness; and Aspriha or lack of craving or yearning for sensual pleasures.

⁷The *one destination* of this wheel is to take the creature to its home called Brahm where its soul would find its eternal resting place. Another interpretation is that the entire wheel representing this world revolves around one thing—and this is 'desire'. This basic desire assumes three forms—viz. Satvic or noble desires, Rajsic or that which pertains to worldly gains, and Tamsic or that which deals with all that is evil and pervert. These desires are called 'Vishwa-rupaika Paasham' because they tie the creature in their 'Paash' or fetters represented by the desires for the enjoyments offered by the world of material sense objects, its pleasures and comforts.

⁸The *three Paths* along which the wheel is driven are represented by—'Dharma' or the path of righteousness and virtuousness, 'A-dharma' or non-Dharma or the path of evil and perversions, and 'Gyan' or the path of knowledge and erudition, of wisdom and enlightenment.

⁹It will be observed in practical life that when a wheel rotates at speed in a clockwise direction for example, it gives an impression that the spokes are turning in an anti-clockwise direction. This is due to optical illusion. In the present example, each *revolution* of the wheel gives rise to *two types of delusions*—such as good and bad, sorrows and happiness, etc. These opposite sets of notions are called 'delusions' because in actual fact the world where they are felt, the mind and the body which feel them are all delusory and have no truthful existence. The real entity that exists is one, and it is the pure consciousness known as the Atma at the micro level of creation, or Brahm at the macro level of creation. The rest is all delusion.]

5. We know of a great river¹ that is fed by five streams²—i.e. there are five streams that pour into it as it moves ahead from its point of origin. This causes turbulence in the river at these five points where the streams join it because the current of waters of different streams clash with each other, thereby bending the normal path of the river at five points³. The five Prans or vital winds form the five types of waves of this river⁴.

This five-faceted river has however one point of origin like all great rivers have, and in this case it is the Buddhi or intellectual mind⁵.

The river has five types of whirlpools⁶ swirling in it and trapping whatever comes within their range. There are five rapids⁷ in this turbulent and tossing river. It has five aspects or branches or tributaries⁸. And it is said to have fifty segments or sectors⁹ along its banks. [The mysterious river referred here is the world which is as turbulent, moving, unstable, unpredictable and trapping as the five-faceted river having five streams pouring into it, along with its whirlpools, waves, branches and rapids.] (5).

[Note—An exact similar narration is found in the Shewtashwatar Upanishad of Krishna Yajur Veda, in its Canto 1, verse no. 5.

¹The *Great River* referred here is the world which is as turbulent, as topsy-turvy, as entrapping, as fearsome and as ever-changing as this river.

²The *five streams* represent the five organs of perceptions such as the eye, ear, nose, tongue and skin of the body of the creature. This is because the creature receives the numerous stimuli from the external world through these five organs. These stimuli disturb his normal peace of mind and keep it in constant state of

agitation and flux; the creature cannot find peace as long as the organs of perception continue to receive perceptions from the world and fill the mind with their inputs. This is the reason of the *turbulence* referred in this verse. It must be noted that this world exists and has relevance only till the time the creature is alive and living in it. Hence, the world is synonymous with the creature that is engrossed in it and becomes an inseparable part of it. There is no world if there is no one to inhabit it.

³Further, the pouring in of the five streams into one body of the river and becoming one with it refers to the five primary elements that have independent existence like these five streams but merge with each other to form the body of the creature as well as the world. These five elements are sky, air, fire, water and earth. Each of these five elements has its own characteristic defining qualities, virtues and attributes, so when they mix into one body it is obvious that they would create a great deal of turmoil represented by the turbulence. They would affect the original nature of the creature's 'self' by forcing him to bend himself according to the demands of the body and the world in which the creature lives. The creature with a gross body cannot remain immune to the demands of the body—which is tantamount to bending and twisting the straightforward nature of the creature's 'true self' and giving it a tainted form. This is referred here by the *bending of the river at five points*. These five elements do not allow the Atma of the creature to retain its pristine pure form, but force it to adapt to its new habitat in the gross body made up of these five elements.

The fact that mixing of these five elements would create a lot of agitation for the Atma of the creature is easy to understand when we realise the consequences of mixing opposite forces of Nature. For instance, the water is cool by nature but the fire is hot, so when they mix together it is natural that there would be a lot of noise and fury. This can be easily verified when we pour water in a brightly lit fire—there is a tremendous amount of noise, hissing, spluttering, cracking, as well as a dense cloud of smoke, flying of dry ash, dust, powdered cinder and sparklers.

⁴The *five waves* are the five vital winds present in the body of all living creatures—viz. Pran (breath), Apaan (the wind that controls digestion and excretion), Samaan (wind responsible for circulation and equal distribution of nourishment in the body), Vyan (wind which maintains equilibrium), and Udaan (which helps the body to get up and move about). They are likened to the wave because like the wave which forms an integral part of the turbulent river, this active and agile body is also moved around and kept as such because of the presence of the vital winds inside its body. In the river also, waves rise only when the placid water is pummelled by gusts of strong wind; otherwise the river would flow calmly.

⁵The *one causative factor* which has resulted in the origin of the river is basically a glacier. In the present context in which the metaphor of the river has been cited to represent the world and its inhabitant creature, this one causative factor is the 'intelligent mind' or *Buddhi* because it is the mind that makes the creature aware of the external world and its material attractions, its comforts and pleasures, thereby creating in him a desire to acquire them and get sucked in the vortex of desires and more desires. The creature gets involved in numerous deeds and then expects results from these deeds, thereby getting trapped in the cycle of birth and death. If the mind decides that everything is false then the very cause of all upheavals and turmoil just vanish from existence and this river-like life of the creature would be led along in a tranquil and calm path like the easy flowing, placid and calm water of the river which is not in spate.

⁶The *five whirlpools* are the five sense objects pertaining to the five sense perceptions such as the object that the eyes see, the objects that the ears hear about, the objects that the nose smells, the objects that the tongue tastes, and the objects that the skin touches and feels. These objects create desires and attraction for themselves and keep the creature trapped in their vice-like grip. They are likened to the whirlpool as they keep the creature churned, going round and round in circles, continuously

tossing and turning helplessly under their influence, and gradually sinking in their vortex-like trap. These perceptions encircle the creature like the tentacles of an octopus which suck the creature in, and completely drown it in the water of the river. It means that the creature gets so much hooked to the enticing attractions of the material world and its alluring charms that he just cannot get out of their vice-like grip once he falls in their clasp.

⁷The *five rapids* are the *five types of miseries and sorrows* that afflict all creatures in this world. These are related to the creature staying in the mother's womb which is like a hellish experience, the agonies of birth, various diseases that he has to suffer in life, old age, and death.

⁸The *five aspects or branches* of this symbolic river are Agyan (ignorance), Ahankar (false pride, ego, haughtiness, arrogance and hypocrisy), Raag (attractions, attachments, love and affections for worldly things), Dwesh (ill wills, malice, animosity, enmity, hatred and spite) and Bhaye (fear) of dying or the desire to cling to life. In other words, even as a river appears to have different forms such as turbid, muddy, clear, frothy, milky white or greenish at different places due to a variety of reasons, this world also appears to have these five types of basic characteristics that determine how it looks to the creature. For example, if the element of Ahankar is the dominant factor in a man then he would have a particular take on this world which would be very different as compared to how a humble and selfless man treats the same world.

⁹The *fifty segments or sectors* represent the uncountable variations in the Vrittis of the Antahakaran or the inner self. These Vrittis are the various types of characters, qualities, virtues and attributes that decide what kind of world would be created by the creature around itself. This net result in which the world shapes itself vis-à-vis the creature as well as the basic character and personality of the individual creature itself would be the composite effect of all the above mentioned factors taken together. This is because this world is not an isolated unit but a composite mosaic of so many factors.

In practice also we observe that long rivers have many local names and significance. At places it is a holy river, while at others it is simply a flowing stream. Even as a holy river, some use its water to offer oblations to the Gods while others wash dirty clothes in it and spit in its water. At places it is calm and at others it causes havoc when it is in spate. Somewhere it is like an almost dry thin streak of water, while at other places it inundates large tracts of land. At places it is ankle shallow while at other places it can sink a boat load of passengers. The diversity of the river is starker than the ocean.]”

6. The Jivatma or the living being keeps on revolving trapped in this giant wheel of creation that is called the Brahm Chakra¹ which is rotated by the Supreme Being.

Under the hallucinating and disorienting effect caused by the constant rotation of this giant wheel in which the creature or the Jivatma is trapped, the latter begins to think that ‘he’ (i.e. the Jivatma, or the living being or the creature) and the Parmatma (the Supreme Being, the supreme Atma or the cosmic Soul) are two distinct and separate entities. [When the creature is subjected to constant turning of the wheel of creation, i.e. when he is buffeted and tossed around like a boat in a rough ocean by a never-ending chain of miseries and joys that dog him in each of his births that he has to take as a result of the deeds done by him in the previous life, he loses his bearings, his orientation and a sense of direction. He begins to hallucinate and have a topsy-turvy view of the reality. In the mental upheaval the creature forgets what the scriptures such as the Vedas say about his own individual ‘truthful self’ and the supreme ‘self’ known as Brahm. He forgets that in reality they are the same ‘consciousness’ existing in two planes—as the ‘Jivatma’ at the microcosmic level,

and as the 'Parmatma' at the macrocosmic level of creation respectively. It's like the element 'fire', for instance, that is the same whether it is in the form of the sacred fire of the sacrifice or as the fire of the household hearth. The illusion of duality is likened to the fact that a rapidly turning wheel creates the false impression that its spokes are turning in the opposite direction to the rotation of the wheel. Refer the concluding stanza of verse no. 4 above.]

But once the creature closes his eyes and calms himself down, once he shuts off the revolving world around him, he would be able to stabilise himself and regain his orientation and bearings. [Another instance to illustrate this phenomenon would be the case when a man goes round and round in circles. A short time later, the room around him begins to turn in circles too, and even if he stops to turn the room would continue to rotate around him for quite some time. But is the wall of the room actually moving? Of course not. It takes some time for the room to stop rotating after the man has himself stopped turning. When this analogy as well as of the one of the giant wheel is applied to the creature and his perception of the world it is obvious that as long as the former continues to perceive the latter it is impossible for the creature to eliminate the world and its attendant delusions. Herein comes the importance of meditation and contemplation wherein the creature turns inwards and shuts off the external world. It is like closing the eyes in the example of a turning wheel or a man turning in circles. After some time, the mind stabilises and the deluding affects of the world begins to fade away. It is then that the creature realises the 'truth'. It is like the world stopping from rotating in circles when the wheel stops or the room stopping to move in circles after the man stops turning himself. Hence, a wise and enlightened Jivatma is one who has overcome delusions and misconceptions about the world, about himself, and about the Parmatma.]

Therefore, when all delusions are removed, when the wise creature is able to understand what the hidden almighty dynamic cosmic force that is keeping this wheel of creation moving is, when he has realised that this cosmic force is called 'Consciousness', and that his own Atma is the same 'consciousness' that resides in his body, the creature is said to have obtained access to Amrit, the elixir of eternity, beatitude and felicity, the elixir of knowledge, wisdom and enlightenment (6).

[Note—¹The *Brahm Chakra* has been described in Shwetashwatar Upanishad, Canto 1, verse no. 6 of Krishna Yajur Veda, while the same Upanishad describes the *Brahm Chakra* in relation to the cycle of deeds and their effects, called the *Karma Chakra* in its Canto 6, verse nos. 1-3. Briefly the phrase means the wheel of creation that is rotated and kept in motion by Brahm, the Supreme Being.]

7. The Brahm described by the Vedas is the Supreme Being and the only absolutely truthful, eternal and imperishable entity in creation.

It is in this holy and divine Brahm that all the three Lokas (worlds) are incorporated. This is simply because nothing exists outside of Brahm, and it is Brahm that has revealed itself in everything that has come into being. [The three worlds referred to are the terrestrial world, the heavens and the nether world. It also refers to the past, the present and the future, as well as the three states in which the consciousness exists—viz. the Jagrat or waking state, the Swapna or dreaming and the Sushupta or deep sleep states.]

Those who are well steeped in the tenets and the philosophy of the Vedas are able to see (realise) that this supreme, sublime, divine and eclectic cosmic Brahm resides in their own subtle heart in the form of the Atma, which is pure consciousness.

So they do not have to search the Lord somewhere outside as he lives in their own bosom as their ‘true self’ known as the Atma.

With this grand and glorious realisation they lose any sense of distinction between their ‘self’ and the supreme Brahm, and consequentially become one with the latter. In other words, all dichotomies and sense of duality are destroyed, and instead a universal and uniform sense of non-duality is established (7).

8. The almighty and only Lord of this world is the one who bears, sustains, protects and regulates the entire world—both the visible as well as the invisible world, both the perishable gross world as well as the imperishable subtle Atma which is the true ‘self’ of the Jivatma.

Since the Jivatma or the living being is the one who is the enjoyer of the material sense objects of the gross world depending upon his individual Prakriti or the Jivatma’s inherent nature such as his natural desires, instincts, temperaments, habits and inclinations, the former becomes bonded to the latter. [That is, since enjoyment of the world is dependent upon the Prakriti or nature of any individual, the latter is symbolically tied down by the former as far as any involvement with the world is concerned.]

On the other hand, when the Jivatma becomes self-realised and enlightened, when he discovers who he actually is and what is his status vis-à-vis the supreme Brahm—that is, when an individual realises that his ‘true self’ is the Atma that is pure consciousness, and that it is the same cosmic Consciousness which is known as Brahm—he becomes free from the bondage created by Prakriti as well as the delusions created by this world (8).

9. There are two states of existence—one that is all-knowing and omniscient, and the other that is ignorant and deluded; one that is omnipotent and almighty, and the other that is the opposite. The former state of existence represents the eternal Atma that is synonymous with Brahm, and the latter represents the Jiva or the creature devoid these qualities.

Besides these two there is third state, and it is known as ‘Prakriti’ (Nature at the macrocosmic level and the creature’s own nature at the individual or microcosmic level). This Prakriti represents the dynamic power or active principal force or ‘Shakti’ of Brahm.

The supreme Brahm has no end, is a personification or an embodiment of all the forms and virtues that exist in this creation, and is free from the ego and pride associated with the ability of doing anything. [That is, though Brahm is the divine entity that has endless powers of accomplishing everything in this creation, including the ability of creating this world, sustaining it and concluding it to recreate it once again, he is never proud of these stupendous capabilities.]

When a wise spiritual aspirant understands the three aspects of Brahm as described herein above (i.e. as the Jiva, as the Parmatma, and as the Prakriti along with the world created by it), he is freed from all the fetters of delusions and ignorance that tie down ordinary creatures (9).

10. The difference between the Prakriti and the Jivatma is the fact that Prakriti and the world created by it are both perishable and gross, while the Jivatma is eternal and imperishable as well as sublime. [This is because the world is an artificial creation depending upon the creature’s individual likings and nature—refer verse no. 8, whereas the Jivatma referred to here is not the gross body but the sublime Atma that is

eternal and imperishable and the truthful conscious ‘self’ of the creature—refer verse no. 8-9.]

The supreme Atma or Brahm keeps these two entities under his strict control.

A wise and erudite aspirant who keeps his mind constantly focused on this supreme Brahm, who thinks of nothing else except this eternal Brahm, is able to ultimately attain the latter. All sorts of Maya (delusions) are done away with. [This is because all his energy and strength and time would be diverted towards achieving this one single goal. He would be so focused on his objective that he would neither have the time nor the inclinations to think about anything else, and thereby eliminating all chances of being ensnared by temptations and other negative factors that might cause delusions and distractions. He would stop perceiving this gross world as having an independent existence that is separate from Brahm, and instead would develop the holistic view that it is Brahm who manifested in the form of this world. If this world is Brahm, say how can there be delusions in it, as Brahm is free from all delusions. Why is it so? It is so because Brahm is ‘Truth’ personified, whereas Maya (delusion), on the contrary, is ‘falsehood’ personified.] (10).

11. When a wise and enlightened spiritual aspirant constantly, consistently and diligently meditates and contemplates upon the supreme Lord (Brahm), when he realises or experiences or witnesses first hand that eternal truthful source of illumination and knowledge, it is then that all his mental and spiritual torments, perplexities, confusions, dilemmas and consternations are eliminated, and when this happens, when the ‘truth’ and the ‘reality’ dawns upon his mental and intellectual horizon, the spiritual aspirant is freed from the fear of birth and death. [This happens because he comes to realise that the supreme Brahm is the cosmic Truth known as Consciousness which is the fundamental cause of everything in existence, and this Consciousness resides in his own bosom as the Atma, his truthful self. So, when he realises Brahm he is actually realising who he actually is. In other words, he has understood the true meaning of the great saying of the scriptures which assert ‘Tattwamasi’ (that essence and principle is you), ‘Ayamatma Brahm’ (my Atma is Brahm) etc.—refer Canto 7, verse no. 8. With this eclectic view of creation and the ‘self’ there is no cause of any fear because the Atma is eternal and imperishable, it is the ‘true self’ of the aspirant, it is separate from the body which is actually the entity that dies, and it is blissful and wise. Refer also to verse no. 1 of this present Canto 9.]

In this way when he has acquired a holistic knowledge of the ‘self’ and Brahm, he becomes self-satisfied and one whose the desires are fulfilled. With no desires left, he does not have to take a birth after shedding the mortal gross body upon his physical death. [This is because unfulfilled desires along with the remainder of the results of deeds done by a creature during his life-time that could not be enjoyed or suffered by him while he was still alive act as the determining factor as to what kind of re-birth he would take, where he would be born and in which form, in the next life. With desires completely eliminated, with not getting involved in any deeds which automatically result in non-accumulation of any results, the wise and enlightened aspirant does not have to take a new birth again. So what happens to him? The undisputed answer is he finds ‘Kaivalya Mukti’—the ‘only kind’ of liberation and deliverance from the cycle of birth and death, the ‘unique’ form of freedom from this vicious cycle that is not otherwise available. And, what is the fate then? Well, the Upanishads unequivocally declare that such an enlightened, self and Brahm realised person finds ‘oneness’ with Brahm. That is, his own Atma or soul merges with the cosmic Atma or the eternal Soul known as Brahm. This is possible because both are

the same ‘consciousness’ existing in two planes—one at the individual level of the person, and the other at the cosmic level of creation. It is like the case of ‘light emanating from the fire element’ having an omnipresent existence—it needs a spark to make its presence felt anywhere and at any moment. The same ‘fire’ and its ‘light’ resides latently in a candle as well as in the pit of the fire sacrifice or the household hearth.]

Such a person is so contented that he does not even desire to have anything to do with the comforts and pleasures of the heaven. [For, he has tasted the eternal and the best form of elixir of beatitude and felicity known as Brahm, and when a man has tasted the best of nectar, he would naturally have nothing to do with lesser drinks.] (11).

12. A wise, erudite, knowledgeable, learned and enlightened man is he who knows, who firmly believes, who is steady in his unfaltering conviction that the supreme Lord (Brahm) is honourably ensconced in his own bosom, in his own subtle heart as his Atma which is pure consciousness and his true self.

There is nothing better or superior to this Brahm or pure and truthful Consciousness that is worth paying any attention to, or imagining, even for a fleeting moment. [That is, the only thing worthwhile of paying any attention to, anything worthy of spending one’s time and energy on even for a fraction of a second is Brahm.]

By knowing the truth about the ‘Bhokta’ (i.e. creature or the living being who is the one who physically lives in this world of material sense objects and either enjoys or suffers it), the ‘Bhogya’ (i.e. the things of the world that are enjoyed or suffered from), and ‘Prerak’ (i.e. the supreme Brahm one who inspires, who motivates, who drives the creature, the individual as well as the entire creation, to do anything at all), the wise spiritual aspirant comes to know or learn about everything worth knowing or learning in this world.

The real underlying principle that operates in all these three planes of existence—i.e. as the Bhokta, as the Bhogya and as the Prerak—is the same, and it is known as Brahm¹ (12).

[Note—¹In order to understand what is meant here, let’s take a very simple example from the material sciences. As is well known and established, the atom is the basic building block of everything. If there is anything in existence, if we have any material object, then it is certain there must be an atom at its fundamental core. Without the atom nothing can have any physical existence. Likewise, without the underlying truth known as Brahm nothing can come into existence in this creation. Again, as ordinary eyes cannot see the atom, ordinary persons cannot see Brahm. And again, as any scientist worth his salt knows for certain about the existence of an atom though he cannot see it in physical terms, every wise and enlightened spiritual seeker knows about the truthful existence of Brahm. To disbelievers this concept of Brahm being at the core of everything in this creation seems to be as incomprehensible and abstract and incredulous as the concept of the atom being the fundamental unit of everything in this world appears to ordinary men. Since he cannot see the atom he believes this to be a cock-and-bull story conjured up by modern science; this concept is too abstract for a man too preoccupied with his humdrum life and daily chores.

From the perspective of the Upanishads, it is the Brahm that actually enjoys anything in his manifestation as the Jiva or the living being. This is because the Atma living in the Jiva is Brahm manifested in a subtle form as the Pran or life-infusing consciousness present in the body of the living being.

It is the Brahm that is enjoyed in its form as the material world. This is because the gross world is also a manifestation of Brahm in its gross form known as the Vishwa.

And it is the same Brahm that provides the medium or the inspiration to the Jiva to enjoy this world. This is Brahm in its form as the subtle mind and the heart that inspires the living being to do anything in this world.

So we deduce that all the three aspects of creation—the seer, the seen and the process of seeing are nothing but Brahm operating in them.]

13. The only way to understand about this most enigmatic and esoteric entity known as Brahm, the way to realise or experience the undisputable presence or existence of this universal eclectic entity known as Brahm are 'Atma Vidya' or knowledge of the Atma or the pure conscious soul or the 'true self', and 'Tapa' or austerity, penance, sacrifices and deep concentration. It is this Brahm which is a universal and uniformly non-dual divine cosmic entity that is so much lauded and endorsed by the Upanishads. It is out of ignorance or out of delusions or out of misconceptions of judgement or out of misinterpretations of what the Upanishads say and mean that one thinks or concludes about Brahm being dual or having a triad of existence. [That is, it is out of wrong perception of the universal Truth about Brahm that one thinks that the invisible cosmic power known as Brahm and the visible world driven by this power are two distinct and separate entities. Similarly, it is out of ignorance that one thinks of the three aspects of Brahm as being a Bhokta, a Bhogya and a Prerak as described in verse no. 12. In short, all conceptions and notions and ideas about Brahm other than the latter being an irrefutably non-dual, indivisible, immutable, unchangeable, eternal and imperishable entity is fallacious, erroneous and false. In fact, it is the same Divinity that has all these forms having different contours and shapes.] (13).

14. Where is there any scope for sorrows and grief as well as confusions, perplexities, delusions and consternations of any kind for a wise and self-realised man who has come to understand the truthful nature of his own 'self' as being a personification of the supreme Brahm, the cosmic Consciousness that resides in his bosom as his Atma?

He sees the same Brahm everywhere, in all forms, and at all times. The entire world, with its colossus dimensions and endless permutation and combination of forms and attributes, whether it is the world of the past, of the present or the future, are all a revelation of the same eternal Brahm (14).

15. This Brahm is a most enigmatic, esoteric and mysterious entity. It is smaller than the smallest, and bigger or more majestic than the biggest or the most majestic in this creation. This unique and un-definable Brahm lives in the inner chamber of the subtle heart of every creature (as his Atma).

By the grace and benevolence of this great Lord who is the creator and protector of the entire creation, when an aspirant develops the inner sight of wisdom and enlightenment that enables him to have a divine vision of the supreme Lord and realise his stupendous glories and magnificence, he is freed from all agonies, miseries, sorrows and torments that swirl around ordinary creatures in this world (15).

16. That supreme Lord (Brahm) is able to acquire everything though he has no physical hands; he can go anywhere he wishes inspite of having no physical legs; he can see everything without having any physical eyes; and he can hear everything though he has no physical ears.

If fact, he knows about everything worth knowing as he is omniscient and all-knowing. But the mystery is that no one knows anything about this Lord (Brahm), as he is most enigmatic, esoteric and mysterious in the entire creation.

Those who are wise, learned and erudite recognise him as being the most ancient, primal and majestic cosmic Purush (the primordial Male that is a metaphor for the Father) of creation. [He is called a 'male' because Brahm is the Lord who provided the initial spark of life. He was the one who initiated the process of creation by 'wishing' it to get started and symbolically providing the 'sperm' representing this wish in the form of the initial energy and the basic wherewithal that sparked off the process of creation. What were the energy and the wherewithal? The 'Tej' represented the driving force and the dynamic energy of creation, and the 'Panch Bhuts' (i.e. the five elements—earth, water, fire, air and sky) and other 'Tattvas' (such as Ahankar or ego, Gunas such as Sata Guna, Raja Guna and Tama Guna etc.) were the wherewithal needed to start the process of creation.] (16).

17. When a man patiently, after due diligence and deep analysis, and with firmness of conviction based on intelligent interpretation of the teaching of the scriptures and his own experience comes to be acquainted with this all-pervading and omnipresent supreme Lord (Brahm) who lives uniformly and universally in the perishable and mortal gross bodies of all the creatures (as their Atma) inspite of being imperishable and eternal himself, he never gets affected by any kind of worldly miseries, grief and sorrows (17).

18. This cosmic supreme Lord (Brahm) is the sustainer and protector of all living beings in this creation. The astoundingly powerful dynamic energy called the 'Shakti' of this Lord is most mysterious and un-describable. It is this dynamism of Brahm that has brought into existence the entire creation, and it is the one principal factor that is lauded by the scriptures as a special virtue and attribute of the supreme Brahm that is worth honouring and understanding. The dynamic cosmic authority, power and energy of the supreme transcendental Brahm that is known as the Lord's 'Shakti' is to be regarded as being synonymous with Brahm. [It is like the case of a king's authority and powers that are regarded as being equivalent to the king himself. If the king has no authority and powers then what is the use of his being a king? How would he carry out his functions as a ruler of his kingdom if he has no authority and power? A king sans his authority and power is like an ordinary man. In fact, it is the authority and power that is vested in the king which makes an otherwise ordinary man into a king. The 'king' and his 'royal powers' are inseparable from one another. If there is a king then his royal powers accompany him, otherwise he is not a 'king' at all.]

So, the same Lord or his Shakti is the creator of the entire creation on the one hand, and the concluder of it on the other hand (18).

19. That all-knowing, most erudite, wisest and enlightened Supreme Being is ancient and primary Purush or the primordial Male in creation.

He is the best, the most exalted and the highest Authority in creation.

He is the Lord of all lords.

It is he who has revealed himself in the form of all the known Gods, and is the one supreme Lord who is honoured and shown the greatest respect by the Gods.

He has no beginning, no middle and no end. He is imperishable, eternal, infinite, constant and steady.

He is that great mountain that gives rise (birth) to the great Gods of the holy Trinity—i.e. Brahm is the one from whom Vishnu the sustainer, nourisher and protector of creation, Shiva the concluder, and Brahma the creator born atop a divine lotus have emerged (19).

20. It is this supreme transcendental Brahm, the Lord of creation, who embodies all the five 'Bhuts' of creation (i.e. the five primary elements called the Bhuts, such as the earth, water, fire, air or wind, and sky or space, are deemed to be present in the cosmic body of Brahm, and it is from the latter that these Bhuts emerged at the time of creation).

It is Brahm who is inherently established in all five 'Indris' or sense organs of perception and action present in the body of all the living beings. [The five organs of perception are eyes, ears, nose, tongue and skin. The five organs of action are hands, legs, mouth, excretory and genitals. Brahm lives in them as the consciousness and life-factors that pervades these organs. If consciousness or life leaves these organs, they would fall numb, become lifeless, lose all sensation, and die.]

It is this Brahm who has traditionally established this endless chain of birth and death.

The entire world of astounding diversity and maverism is actually moulded from the five elementary Bhuts or elements (earth, water, fire, air/wind and sky/space) that have been created by Brahm himself, and which symbolically represent Brahm in varying degrees of grossness or subtlety. Since Brahm has used them as the fundamental building bricks to construct the vast edifice of this creation, it follows that the finished structure known as 'creation' has these five elements or Bhuts at its core and as an integral part which is inseparable from the finished product¹. Again, since these Bhuts represent Brahm in different degrees of grossness or subtlety, it follows that Brahm is secretly, but invariably and inherently present in the entire creation as its integral and inseparable part, displaying different characteristics, qualities, virtues and attributes depending upon the ratio of the various Gunas (such as Sata, Raja and Tama Gunas) and other such factors that make each individual so unique that they cannot be generalised, but at the same time they are all united together into a garland known as the 'creation' by a single underlying principle known as Brahm which acts like the thread or string that holds the beads or the flowers of the garland together and give these individual units a definitive shape and name.

In spite of this, Brahm is free from being definable in terms of the characteristics and attributes depicted by these Bhuts. [That is, though the Panch Bhuts or the five elements are incorporated in the body of Brahm in the same way as they are incorporated in the body of this creation, Brahm is not dependent upon any of them, while the creation is. Each of the Bhuts depicts some of the virtues or characteristics of Brahm, but not the Brahm in its entirety. Similarly, the reverse is also true. Brahm has the unique virtues of any one given Bhut, but Brahm cannot be defined in terms of the virtues of this single Bhut alone. In fact, Brahm represents all the Bhuts combined. This is the 'Samasthi' (all-inclusive, comprehensive) view of Brahm, while the individual Bhut is the 'Vyasthi' (isolated, individualistic) view of Brahm. So, when these Bhuts are used by Brahm as the fundamental building blocks or bricks of creation, they carry these unique virtues of Brahm to the creation just like the case of the ingredients in any chemical product lending the finished product their individual chemical properties. So the resultant structure known as the creation bears the finger-prints of Brahm in the form of these elements.]

This Brahm is out of reach and transcendental; he is supreme and most exalted. He is self-illuminated, self-present, self-evident, eternal and truthful (20).

21. A person who has not overcome the tendency to commit sins, wickedness, mischief and unprincipled misconduct, whose sense organs are not under his control and are reckless and wayward, whose sub-conscious mind is not stable and focused on the eclectic goal of life, whose mind and heart are fickle, restless, and not fully contented and calmed down—it is not possible for him to realise the supreme Brahm and acquire the divine knowledge that can enable him to get acquainted with the true nature and sublime form of the Lord. [This is because knowledge that can entitle one to be acquainted with an entity as sublime and divine, as esoteric and enigmatic, as mysterious and mystical as Brahm needs an exceptionally sharp intellect as well as a proper ground and framework to be effective. Just like one cannot expect rice to be grown on desert land or colourful flowers to grow on a cactus plant, no one can hope to know Brahm if the right mental, intellectual and spiritual environment is not there, if the environment is not conducive to realisation of Brahm.] (21).

[Note—¹The terms grossness and subtlety are only relevant in nature—for instance, earth is the grossest of the five elements and sky is the subtlest. When we start counting from below, we ascend from grossest element earth to move up the ladder of decreasing grossness and increasing subtlety to the water element, the fire element, the air or wind element, to finally reach the top rung of the sky or space element which is the subtlest of the lot. All these elements have combined together, in varying proportions, to give rise to an astounding variety of creation. In this, they are aided by other secondary elements, also called the Tattvas, such as the three Gunas—the Sata, the Raja and the Tama.

The entire world that exists is made from these five basic elements called the 'Panch Bhuts' which act as the fundamental building blocks or bricks for this creation. Since these elements are Brahm's representatives in varying degrees of grossness or subtlety, it follows that Brahm permeates throughout this creation as its basic foundation and building block. As no structure of a building can be imagined without the brick, and since the brick is at the heart of all physical structures known as buildings, it follows that Brahm is also at the heart of the edifice of the world at its fundamental called the Bhuts.]

22. That absolutely complete Brahm, the Supreme Being, is such an enigmatic, esoteric and mysterious entity that it presents the greatest paradoxes of creation. Brahm cannot be fully known and comprehended either internally (by turning inwards and doing contemplation or meditation) or externally (by the sense organs of perception that attempt to visualise Brahm in the external features of the world).

Similarly, Brahm is neither gross nor subtle, neither erudite and enlightened nor ignorant and stupid. He is beyond the grasp and reach (comprehension and understanding) of all the creatures, no matter how intelligent, wise and learned they are, and is also not the subject matter of the behavioural world of material sense objects.

He lives inside his own self. [Whereas the Atma, which is pure consciousness, lives inside the gross body of a creature as the latter's true 'self', in the case of the supreme transcendental Brahm there is no such thing as a gross body harbouring an Atma inside it. This is simply because Brahm is an embodiment of 'Consciousness', a synonym for 'Consciousness', or 'Consciousness' personified. There is no entity known as Brahm that is distinct or separate from 'Consciousness', or is 'not Consciousness' itself. Therefore, Consciousness harbouring Consciousness makes no

sense. How can, for instance, fire harbour another fire inside it? Firewood can harbour fire latently inside it, but the pure element known as 'fire' is uniformly the same 'fire' no matter where we examine it. Hence, Brahm is 'Consciousness' from within and without. Brahm is wholesome 'Consciousness'.]

A wise, learned and enlightened man who comes to realise the Supreme Being as outlined above is able to obtain Mukti (liberation and deliverance). Indeed, he attains Mukti. This is what Brahma preached sage Narad (22).

23. A self-realised Parivrajak (Sanyasi) who comes to know about his true self and its eclectic and divine nature roams freely alone. Such an ascetic never hides or remains concealed in a secure place out of any kind of fears like a terrified deer.

He never accepts any conditions being imposed upon his freedom and movement. If anyone objects to his wanderings or tells him to go in a specified direction, a Parivrajak does not pay any heed to it.

Excluding his gross body, he abandons all other possessions and survives on food obtained by begging. [He keeps the body because it is the vehicle used by his Atma, his 'true self' during his journey in this life. He has to beg for food because this body cannot survive without it. He keeps the body only till the time his Atma has to live in this world to complete the remainder of its destined time to live in the gross body, and once the pre-determined time is over, he finds final Moksha (emancipation and salvation) for himself by abandoning this last possession that he has. That is, when all his 'Praarabdha' (destiny determined by his past deeds and desires) is exhausted, when he has done away with all spiritual encumbrances and bondages that might act as drags when he (i.e. his Atma) finally leaves his gross body to fly off to its freedom, the Parivrajak gladly, willingly and without any regrets abandons or sheds this gross body as last possession that he has. When this comes to pass, the Parivrajak is said to be truly freed from all fetters and bondages.]

He remains submerged in the thoughts of his own pure 'self' (i.e. his pure consciousness known as the Atma which is self-illuminated, enlightened and blissful). As a result, he develops a profound sense of equanimity and uniformity vis-à-vis the rest of the creature and the world at large. This is because being self-realised he becomes wise and enlightened enough to understand that the Atma that resides in his own bosom is the same entity that resides in the bosom of all other creatures in this world, and that anything worth paying attention to in this otherwise false and deluding world of material sense objects is this Atma which is the only 'truth and reality' that is hidden inside it, and that it is the magnificent Atma that gives this world its charm, meaning and importance. This eclectic view of the existential world frees him from all effects of delusions and ignorance. In other words, he becomes a free man who is not bound to any fetters of delusions and ignorance.

Such a wise Parivrajak develops a uniformity of view and is firmly established in the doctrine of non-duality. He therefore eliminates distinctions between one entity being a doer and the other being a motivator or an inspirer. [That is, there is no distinction between the creature, the doer, and his Atma, the motivator. Similarly, there is no distinction between the individual creature, the doer, and Brahm, the universal motivator.]

He also does not do deeds with some motivation and cause. [That is, he does not do deeds with an eye on some result to be obtained by doing them. Instead, he does them as and when they come along, without bothering himself about the good or bad results of these deeds. He does the deeds as being the wish of the Lord who wants him to do them, and does not do them with some personal vested interests.]

He also frees himself from all formalities and obligations associated with the tripod of knowledge that consists of (i) the Guru (the teacher; the moral preceptor and teacher who brings the knowledge within the reach of the disciple), (ii) the disciple (the taught; or the person who seeks knowledge of the scriptures by approaching the teacher), and (iii) the scripture (the body of knowledge that is taught by the teacher and learnt by the disciple).

[A Sanyasi or a Parivrajak has no Guru to obey and give respect to because, once realised, he is his own Guru. He need not study and spend time with the scriptures because he has found the truth that these scriptures strive to reveal by their teachings. So, he need not follow any formalities and is under no obligation of anyone.]

Having abandoned this world, he is no more bothered by its miseries and agonies. The world can no more cause any kind of restlessness or agitations to him.

What should be his behaviour and outlook? This question is elaborated further as follows. In spite of having no physical assets or wealth, he is always and eternally happy and contented. Being endowed with the spiritual wealth of Brahm-realisation and self-realisation, he rises above all mundane considerations of this gross material world of sense objects, and becomes immune to being either knowledgeable or being ignorant. He transcends both the concepts of happiness and joys as well as of agonies, sorrows, miseries and pains. [That is, he becomes absolutely neutral and dispassionate.]

He obtains light and illumination from his own self-illuminated Atma. All that is worth knowing becomes known to him. [Here the term 'light' and 'illumination' refer to wisdom, erudition, knowledge and enlightenment. He does not need a Guru or a scripture to guide him in his spiritual path, as the realisation of the Atma proves to be the light that illuminates his spiritual path for him. Nothing remains unknown for him; nothing is too secret for him.]

He becomes so exalted and highly empowered that he acquires knowledge of everything and becomes accomplished in every respect. He acquires all Siddhis (mystical powers) and becomes an authority on them so much so that he can bless others with these spiritual powers. In this respect, he becomes equivalent to the great Lord himself, or becomes 'Brahm-like'. This is because he has truly realised who he actually is when he unequivocally affirms and honestly declares 'So-a-ham'—i.e. 'that is me'. Here, the term 'that' refers to the supreme Brahm. [So-a-ham is one of the great sayings of the Vedas and the Upanishads. It is taken for granted here that when the Parivrajak declares 'I am Brahm' he is not lying and being honest in what he says.]

The Parivrajak goes to the eternal, truthful and divine abode of Lord Vishnu. He does not have to come back and take a new birth again. [That is, he finds final liberation and deliverance from the cycle of birth and death.]

There is no sun or moon to illuminate this divine abode of Lord Vishnu. [This statement is meant to indicate that the heaven where the spiritual aspirant goes after death is not some physical world where some sun would rise during the day or the moon during the night. It is an eternally illuminated destiny. This is because this destiny of the soul is Brahm which is eternally self-illuminated cosmic Consciousness. It ought to be noted here that one need not get confused by the mention of the name of Lord Vishnu here in the context of Brahm because Vishnu is regarded as being the Viraat Purush or the macrocosmic gross body of Brahm, and is treated as the Supreme Being in the Purans and other scriptures. It is from Vishnu that Brahma and Shiva were born.]

The great Parivrajak or Sanyasi or a spiritual aspirant who obtains this exalted destiny that is eternal and imperishable becomes one like it, and therefore he does not have to come back to assume another body in this mortal world. Since that divine abode is the only truthful destiny for the Atma or soul, its accomplishment is called ‘Kaivalya’—or the destiny that is unique and one of its kind.

Verily, this is what this Upanishad teaches; this is the preaching of this great Upanishad. Amen! (23).

Chapter 9

Sita Upanishad/Sito-panishad

This Upanishad belonging to the Atharva Veda tradition was revealed as a dialogue between the Gods and Prajapati Brahma, the creator. In it, Sita, who was the divine consort of Lord Ram, an incarnation of Lord Vishnu and hence a personification of the supreme transcendental Brahm, has been established as the personification of the eternal cosmic dynamic powers, ability, virtues and authority of Brahm revealed as ‘Shakti’, and is called Mother Nature or the Mool Prakriti at the cosmic level of creation (verse no. 2). This dynamic Shakti of the Supreme Brahm is omnipotent and universal, and it is responsible for creation, sustenance and conclusion of creation. The supreme, transcendental Brahm utilises the services of this cosmic energy and majestic power to exercise his authority in the world.

In other words, Sita represents that aspect of Brahm which is responsible for the edifice of creation coming into being. She is the inseparable other half of Brahm which symbolises the otherwise neutral Brahm’s dynamism and energy. If Brahm is un-manifest form of the cosmic Consciousness, Sita then is the manifest form of the same Consciousness. Sita is the ‘will’ and ‘dynamism’ of Brahm personified.

This Upanishad stresses that that Sita principle is Brahm in its form, and then goes on to describe the esoteric meaning of the word ‘Sita’, her divine, sublime and ethereal un-manifest form as well as her form with a litany of divine attributes. It lists her righteous and noble virtues, the various connotations and forms of ‘Shakti’ (the magnificent cosmic dynamic powers of Brahm) and its embodiment as Sita, and all other such metaphysical and philosophical aspects pertaining to this Shakti that has been personified in the form of a Mother Goddess known as ‘Sita’.

Sita as the ‘Shakti’ of Brahm (verse no. 2) that takes many forms—viz. she is, for instance, a personified form of the Maya Shakti (verse nos. 3, 5, 35), the Ichha Shakti (verse nos. 11-12, 35-36), the Kriya Shakti (verse nos. 11, 20, 33), the Gyan Shakti (verse nos. 11, 21-33), the Mantra Shakti (verse nos. 3-5, 6, 8), the Aishwarya Shakti (verse nos. 8-9, 11, 37), the Pran Shakti (verse nos. 10, 13, 15), the Shakti known as the Mother Goddess having various names (verse nos. 8, 12, 16, 18, 37), the Shakti that manifests itself in the form of the Universe (verse nos. 10, 14, 17, 18, 34), the Aadya Shakti and the Mool Prakriti (verse nos. 2, 8, 19, 33), the Dharma Shakti

(verse nos. 10, 36), and the Shakti that empowers one with various boons and blessings (verse nos. 7, 34, 37).

Besides this, it is the only Upanishad which describes how the primary source of knowledge and wisdom known as the Veda came to be classified into various branches, and goes on to narrate how the different scriptures came into being along with the Vedas as primary sources of knowledge.

Shanti Paath

ॐ भद्रं कर्णेभिः शृणुयाम देवा भद्रं पश्येमाक्षभिर्यजत्राः ।
 स्थिरैरङ्गैस्तुष्टुवाग्ँसस्तनूभिर्व्यशेम देवहितं यदायुः ॥
 स्वस्ति न इन्द्रो वृद्धश्रवाः स्वस्ति नः पूषा विश्ववेदाः ।
 स्वस्ति नस्तार्क्ष्यो अरिष्टनेमिः स्वस्ति नो बृहस्पतिर्दधातु ॥
 ॐ शान्तिः ! शान्तिः !! शान्तिः !!!

The English of this Shanti Paath is given in appendix no. 1 of this volume.

1. Once the Gods approached Prajapati Brahma and asked him, 'Oh Lord! What is the real form and the fundamental truth about Sita¹? Who she actually is? We are all eager to know about it, so please elucidate the facts for our benefit' (1).

[Note—¹In the mythological histories of the Hindus known as the Purans and the Ithihasas, there is a well-known epic story of the Ramayana. It narrates how Lord Vishnu had manifested as Lord Ram, the king of Ayodhya, to kill the evil 10-headed demon-king known by the name of Ravana who was the king of Lanka. Laxmi, the divine consort of Vishnu, had accompanied the Lord as Sita. Hence, in this epic Sita is the divine consort of Lord Ram.

Sita is believed to have emerged from earth as a girl-child safely ensconced in a mud-pitcher. She was revealed when king Janak had ploughed a field to prepare the ground for a fire sacrifice he was to perform. The tip of the ploughshare got stuck in the pitcher, and so it came out of the ground. Sita got her name precisely due to this event—for the word 'Sita' means the 'tip of a ploughshare'. The king adopted her as her daughter. She was married to Lord Ram. She was abducted by Ravana during Ram's sojourn in the forest, leading to the epic war of Lanka in which Ravana was killed along with the rest of the evil demon race. The whole story of the famous epic Ramayana revolves around Sita in this sense.

The Upanishads go much higher in their interpretation of who Sita is. If Lord Ram is regarded as the Supreme Being known as Brahm himself personified in his person then Sita definitely is the dynamic Shakti of Brahm revealed in her form. Just as Brahm has countless forms and names, Sita too has equivalent number of forms and names because she is a personification of dynamism of Brahm; she is the 'other half of Brahm'. If Brahm is to be treated in entirety, Sita cannot be neglected, because without Shakti, literally meaning energy, power, authority, dynamism, vitality and vigour that the cosmic Consciousness inherently possesses, the concept of Brahm has no meaning.]

2. Prajapati replied, 'Sita is a truthful manifestation of the divine cosmic dynamic energy of the supreme Brahm which is known as 'Shakti'¹. Being the primary cause of creation and its manifestation as Nature, she is called the 'Mool Prakriti', or the root from which this vast tree representing the multifaceted creation has not only

sprouted forth but is also nourished by and empowered to develop into its fascinating, colourful and enthralling form. Since the primary cosmic divinity called Pranav or Brahm, represented by the ethereal monosyllabic Mantra OM, is the basic foundation or seed from which Nature itself has emerged, Sita is also synonymous with this Pranav which, in turn, represents the supreme, transcendental and enigmatic Brahm (2).

[Note—¹The word *Shakti* refers to the eternal cosmic dynamic powers, ability, virtues and authority of Brahm revealed in a personified form. This ‘Shakti’ is therefore the dynamic aspect of Brahm; it is the latter’s energy, powers and authority at play in a vivid form. It is this Shakti that was utilised by the Supreme Being known as Brahm to create, sustain and conclude this creation. This Shakti of Brahm is called Mother Nature or the Mool Prakriti that is subtle and invisible at the cosmic level of creation (verse no. 2), while at the level of the visible creation or the macrocosmic level it is given the name and form of Sita who was the divine consort of Lord Ram on this earth. Lord Ram himself was Brahm personified in his form, as he was the incarnation of the Viraat Purush or Lord Vishnu who is no one else but Brahm in a cosmic form.

This dynamic Shakti of the supreme Brahm is omnipotent and universal, and it is responsible for creation, sustenance and conclusion of creation. The supreme, transcendental Brahm utilises the services of this cosmic energy and majestic power to exercise his authority in the world, to execute his will, to control and regulate this creation.

In other words, Sita represents that aspect of Brahm which is responsible for the edifice of creation coming into being. She is the inseparable other half of Brahm which symbolises the otherwise neutral Brahm’s dynamism and energy. If Brahm is un-manifest form of the cosmic Consciousness, Sita then is the manifest form of the same Consciousness. Sita is the ‘will’ and ‘dynamism’ of Brahm personified.

According to this Upanishad, Sita as the ‘Shakti’ of Brahm (verse no. 2), takes many forms—viz. she is the Maya Shakti which refers to the unique, magnificent and stupendous power of Brahm to create delusions (verse nos. 3, 5, 35), the Ichha Shakti which refers to power of Brahm to create desires, aspirations, wishes and volitions which had inspired Brahm to do what it did (verse nos. 11-12, 35-36), the Kriya Shakti refers to the ability to perform deeds and take actions, as well as to the results or rewards that accompany each such deed or action (verse nos. 11, 20, 33), the Gyan Shakti refers to the power inherent in knowledge, wisdom, erudition, sagacity and enlightenment (verse nos. 11, 21-33), the Mantra Shakti refers to the powers integral in the various Mantras which are letters, words or phrases that are like formulas or keys that help to unleash the various powerful forces of creation representing different facets or aspects of the dynamism of Brahm (verse nos. 3-5, 6, 8), the Aishwarya Shakti refers to the plethora of powers, authority and majesty that come with various accomplishments, achievements and successes in this world, and they include the acquisition of Siddhis or mystical powers (verse nos. 8-9, 11, 37), the Pran Shakti refers to the mystical powers that the subtle Consciousness has which enables it to inject or infuse life in the otherwise lifeless creation, giving everything in creation its worth and importance (verse nos. 10, 13, 15), the Shakti known as the Mother Goddess having various names (verse nos. 8, 12, 16, 18, 37), the Shakti that manifests itself in the form of the Universe with all its stupendous variations and magnificence (verse nos. 10, 14, 17, 18, 34), the Aadya Shakti and the Mool Prakriti (verse nos. 2, 8, 19, 33), the Dharma Shakti which refers to the inherent powers and strength possessed in the virtues of righteousness, nobility, propriety, probity and auspiciousness (verse nos. 10, 36), and the Shakti that empowers one with various boons and blessings (verse nos. 7, 34, 37). Though not mentioned specifically, the other auspicious form of the Shakti of Brahm without which enlightenment, wisdom,

erudition and acquisition of knowledge is not possible is known as Chitta Shakti (verse no. 26).

The word *Shakti* broadly means strength, powers and potentials that a person possesses. The concept of Shakti in the context of metaphysics refers to the one dynamic cosmic force of Truth known as Brahm expressing itself in three different ways because of the different equipments used for such expressions—viz. the body, the mind and the intellect. The three Shaktis are not actually different from one another but compliment each other because they have one origin and springs forth as the dynamism of the transcendental Truth and the absolute Reality known as Brahm. Knowledge possessed by Brahm is expressed through the equipment of the intellect, the desire to use this knowledge and put it into effect is done by the mind, and the actual action to give effect to the desires is taken by the body. If one component is removed, the entire setup wouldn't function just like it is necessary to have the full system in order to make the computer work.

These cosmic dynamic forces or powers of the supreme transcendental Consciousness that is the universal and ubiquitous Truth are expressed in many forms—some subtle and invisible while others that are visible and grosser in nature. For instance, the astounding powers of the mind and intellect, collectively called the 'Chitta Shakti' as well as the 'Gyan Shakti', which are very powerful and potent but not visible, and the powers and strength of the gross body of the creature to do something, to act and perform deeds, called the 'Kriya Shakti', that can be physically seen and measured.

The dynamic powers of the cosmic Consciousness, known as Brahm, that have been unleashed in this creation assume different forms at different levels of existence. They may be in the form of various Gunas inherent to a creature, the vital winds called Pran that infuse life in this creation, the various Vasanas and Vrittis or inherent passions and temperaments that govern the personality of all living beings, and so on and so forth. They might also be revealed in the form of various Gods and Goddesses which personify the various powerful forces of Nature. They may also take visible forms in the shape of incarnations such as that of Sita in the present case. Sita embodies in her divine form all the different aspects of dynamism of Brahm, the Supreme Being, as expounded and elucidated in this grand and magnificent Upanishad.

According to ancient texts, the divine Shakti or cosmic dynamic powers of the supreme Brahm has assumed three forms called the 'three Divine Shaktis'. These three forms of the cosmic energy refer to the three forms that the supreme Brahm had taken for the purpose of creation. 'Brahmi' is the energy with which Brahma creates, and its relevant subtle counterpart here is the power to wish and aspire for and expect something. 'Rudrani' is the cosmic energy by which Shiva/Rudra ends this creation, or brings to a conclusion the creation which Brahma had made possible. 'Vaishanvi' is the cosmic energy by which Vishnu sustains and nourishes the creation, and its subtle counterpart is taking actions and doing deeds because without actions and deeds, the creation cannot be sustained. For all these activities—creation, sustenance and conclusion, knowledge, wisdom and intelligence are needed because success in any of these requires the requisite expertise and the ability to use and apply it judiciously.

In other words, Brahma makes this creation possible by wishing to do so in his mind. If the creation is righteous and virtuous, it is sustained and nourished by Vishnu, but if it goes wayward and starts committing evil and sins, Rudra takes charge and uses his energy called 'Rudrani' to destroy that evil part of the creation. Extending this logic further, we deduce that when the evil tendencies in the world will almost eclipse or outweigh the good qualities, Rudra would completely annihilate the creation, but the remnants of good elements left behind will help Brahma to re-start the cycle of creation once again.

According to verse no. 12 of this Upanishad, the Iccha Shakti of Brahm has assumed the form of three Goddesses—viz. Sri Devi (the patron Goddess of ‘Sri’—i.e. wealth, prosperity, opulence, majesty, fame, splendour and grandeur), Bhu Devi (representing Mother Earth as well as the patron Goddess of earth, representing the power of Nature to create, sustain and destroy, because it is in the earth that all seeds germinate, all creatures are born, it is from earth that they extract their nourishment, and it is in the earth that they die and perish finally), and Neela Devi (representing the vast and endless sky which is regarded as being the nearest equivalent to Brahm as well as being the patron Goddess of the blue sky representing the entire cosmos and the heaven above the earth).

According to verse no. 16, the three Goddesses are known as ‘Sri’, ‘Laxmi’ and ‘Lakshyamaan’. That is, it is the Sita principle that has been called by various names such as Sri meaning majesty, magnificence, glory and fame, as Laxmi meaning material wealth and prosperity, and as Lakshyaman referring to these two qualities in their manifold forms because the word ‘Lakshya’ means a hundred thousand, and the word ‘maan’ means a measurement.

The Shakti assumes other forms as divine Goddesses—Kali (the black complexioned goddess of war), Tara, and Tripura also known as Tripur Sundari, are also called the Trishaktis, or the divine cosmic energy which has revealed itself in the form of these three divine Goddesses. These Goddesses are the various manifestation of Parvati, the divine consort of Lord Shiva. Parvati is usually referred to by one single epithet—Shakti—which literally means energy, vitality, strength and powers.

The *Tripura Tapini Upanishad* of the Atharva Veda, in its verse no. 13 says that the Shakti has assumed the form of the following three Goddesses—Gayatri (the rising Sun), at noon when it is meant for Savitri (the Sun in its full glory and splendour), and at dusk when it is meant for Saraswati (the Goddess of knowledge).

The following are also called Trishakti or the potential powers present in a man—(i) to have influence, impact, affect and sway upon others, (ii) to have enthusiasm, zeal, flourish, drive and courage, and (iii) to have a good advise in this world as well as the support of divine intercession or intervention of Gods who should be benign and favourably inclined towards him. Further, the three Goddesses—Kali (the black complexioned goddess of war), Tara, and Tripura also known as Tripur Sundari, are also called the Trishaktis, or the divine cosmic energy which has revealed itself in the form of these three divine Goddesses. These Goddesses are the various manifestation of Parvati, the divine consort of Lord Shiva. Parvati is usually referred to by one single epithet—Shakti—which literally means energy, vitality, strength and powers.

Besides the above forms of Shaktis, there are said to be *nine other forms of Shaktis*. These have two connotations. One is the various forms that the divine dynamic power, potential, authority and energy of the Supreme Being has taken in the form of Goddesses, and the other connotation refers to the strengths and powers that a man possesses and which empowers him with divine abilities. These nine divine assets that a man possesses are also called Nidhis or assets of a man. These Nidhis may be spiritual or worldly. In brief they are the following:-

(a) Spiritual assets—according to saint Tulsidas’ epic *Ram Charit Manas*, Aranya Kand, Doha 35-36, they are— (i) communion with saints and pious people where the Lord’s glories are being sung, (ii) serving one’s teacher and elders, (ii) praising the Lord’s glories and doing Kirtan and Bhajan which are community singing of the Lord’s glories, (iv) repeating the divine Mantras or holy words of the Lord, i.e. doing Japa, (v) having such virtues as ‘Dam’ or tolerance, patience, fortitude and resilience, ‘Sheel’ or good and righteous demeanors, ‘Virati’ or being renunciate and detached from deeds and to be dispassionate towards the world, ‘Sam’ or equanimity, looking everything as Brahm, having a non-dual approach of or view of the world, ‘Santosh’ or contentedness, and ‘SaraI’ or simplicity and humility, (vi) having no deceit, conceit and falsehoods, (vii) not finding faults with others and criticising them unnecessarily, (viii) to have firm reliance and faith in the Lord, and (ix) not to feel dejected,

depressed, despaired, inferior, lowly and condemned under any adverse circumstances, because the great and merciful Lord is always with them.

(b) Worldly assets—such as gold, silver, diamond, gems such as ruby, sapphire and emerald etc.; kith and kin such as sons, wife, pets and livestock, homestead and farmland, name, fame and majesty etc. These worldly assets are at the micro level what the Gods possess at the macro level and kept in the custody of Kuber who is the treasurer of Gods.

(c) The larger quantum of these assets symbolised by the following words—Mahapadam (100 Padams), Padam (the quantity 10^{15}), Sankha (10^{18}), Makar, Kaschap, Mukund, Kund, Neel (10^{13}), and Kharva (10^{11}). These words are used to measure quantity or volume of any given entity. Hence, they are employed to indicate the quantum of certain powers that an entity possesses.

(d) The nine Shaktis are the various forms of the divine dynamic power, potential, authority and energy of the Supreme Being that has taken the form of nine Goddesses. These Goddesses are worshipped as Mothers of creation and they complement the Supreme Being. The nine divine Goddesses, also known as the patron Goddesses in Tantra literature dealing with occult forms of divine worship, are the following—‘Maha Tripur Sundari’, ‘Tripur Ambaa’, ‘Tripur Siddhi’, ‘Tripur Malini’, ‘Tripura Sri’, ‘Tripur Vasini’, ‘Tripur Sundari’, ‘Tripur Reshi’, ‘Tripura’.

According to another version, the nine divine Goddesses are the following—Vaamaa (the divine consort of Lord Vamdeo, one of the forms of Lord Shiva), Durga (the Goddess who rides a lion and is considered a manifestation of Parvati, the divine consort of Shiva, and who had slayed the demon named Durg), Gauri (the divine consort of Lord Shiva; another name of Parvati), Bhagwati (another name of Parvati; the divine Mother Nature personified and from whose womb the entire creation has emerged), Parvati (the consort of Shiva; had derived her name because she is said to be the daughter of the king of mountains, called ‘Parvat’ in Sanskrit), Laxmi (the divine consort of Lord Vishnu, the sustainer of creation, and the patron Goddess of good fortune, prosperity and wealth), Saraswati (the divine consort of Brahma, the creator, and the patron Goddess of knowledge), and Aditi (the mother of all the Gods).

The system of worshipping of the divine Goddess envisages that she is a personification of all the dynamic powers and essential energy of all the Gods rolled into one. The chief Goddess is known as Parvati, the divine consort of Lord Shiva who is regarded as the greatest and most senior amongst the pantheon of Gods, and hence honoured by the epithet ‘Maheshwar’. Parvati is also known as Durga who is worshipped in nine different forms. These nine forms of Durga are called ‘Nav Durgas’ or nine Durgas. They are also called ‘Nav-Shaktis’ or the nine personified forms of the divine dynamic power and energy of the Supreme Being.

Thus, according to the Kavach Stotra of Devi-mahatamya, the nine Shaktis are the following—Shailputri (literally, the daughter of the Lord of Mountains), Brahmchaarini (one who is perpetually a celibate and self-restrained), Chandraghantaa (one who is as beautiful as the moon), Khushmaandaa (one who is always cheerful), Skandamaata (the mother of Skanda, also known as Lord Kartikeya, the son of Shiva and Parvati and a commander of the army of Gods), Kaatyaani (the Goddess who personifies the holy consort of the great ancient sage of the Vedic period, named Var-ruchi Kaatyaan), Kaalraatri (a personification of the night of the doomsday), Mahagauri (the great Goddess known as Gauri, another name of Parvati, the divine consort of Maheshwar or Lord Shiva), and Siddhidaatri (one who gives mystical powers and bestows her devotees or worshipper with success in everything).

According to Brahmaand Puran, the names are the following—Neelkanthi (one whose throat is blue-tinged), Kshemankari (one who takes care of her dependents), Harasiddhi (one who gives all Siddhis—mystical powers), Vanadurga (the patron Goddess of the forest), Rudradurga (the Goddess who is as fierce as Lord Rudra),

Agnidurga (the Goddess who is as fierce as Agni, the Fire God), Jayadurga (the Goddess who gives victory), Vindhyavaasini (the Goddess who lives in the Vindhya mountain ranges), and Ripumaaridurga (the Goddess who vanquishes enemies).

Then we have *Forty Shaktis*—The forty ‘Shaktis are the following—fourteen organs of the body (internal + external) + fourteen patron Gods of these organs + three ‘Karmas’ or deeds + four ‘Gunas’ or temperaments or inherent qualities of a creature + worldly powers + spiritual powers + three states of consciousness = total forty. The three ‘Karmas’ are classified as (a) excessive, extravagant and enormous—known as ‘Tul’ (तुल), (b) basic and essential—known as ‘Mool’ (मूल), and (c) done out of ignorance and foolishness—known as ‘Avidya’ (अविद्याजन्य). The four ‘Gunas’ are ‘Vikshep’ (विक्षेप) meaning doubts, confusions, uncertainties, perplexities, fickleness, restlessness and agitations etc. in the creature, ‘Mudita’ (मुदिता) meaning cheerfulness and enjoyment, ‘Karuna’ (करुणा) meaning mercy and compassion, and ‘Avaran’ (आवरण) meaning neutrality, ability to show no emotions and remaining indifferent and aloof. The word also means a veil, cloak, mask and sheath. Hence, here it means ‘the ability to protect oneself from all the affects of external stimuli originating in the world which can perturb and confound the mind of the seeker/aspirant causing exasperation and perplexities, and instead, remain calm, peaceful and tranquil. The three states of consciousness are the ‘Jagrat’ or the waking state, the ‘Swapna’ or the dreaming state, and ‘Sushupta’ or the deep sleep state of consciousness.

Para Shakti—*Para Shakti* represents the supernatural transcendental dynamic powers of the pure conscious Atma, and it is revealed in the form of the ability of the man to ‘speak’. This is because the very first sign of creation coming into being is deemed to be the ‘Naad’ or the cosmic sound element that was generated when there was some activity in the calm surface of the cosmic ether. This Naad was envisioned as the first cosmic movement in the otherwise calm and tranquil ether which created a ripple that formed into a wave moving across the surface of ether, causing energy to be generated, which in due course powered the cosmic dynamo at the time of the initial phases of creation at the time of its very beginning. Naad was conceptualised as the word OM, and the whole gamut of spoken language is incorporated in the basic sound created when this OM is pronounced. So, the ‘voice’ or ‘sound’ generated in the throat of a living being is the most evident and irrefutable proof of the supreme Consciousness, which is responsible for the unfolding of this entire creation, being present inside the body of the individual.

The Para Shakti has been described in *Kshuirko-panishad* of Krishna Yajur Veda, in its verse nos. 15-16 as follows—

“Then the ascetic should diligently move the vital winds in the cluster of Naadis present in the throat. [That is, he should visualise that his consciousness is pulsating in the region of the throat where the energy center called Kantha Chakra is located.] This cluster has one hundred one Naadis. They trap within themselves the most stupendous and magnificent source of divine and supernatural energy called ‘Para Shakti’.

Some of the great Naadis located here are the Sushumna Naadi which remains perpetually submerged in the bliss obtained by realisation of the supreme transcendental Truth (and if the Pran enters this Naadi, it obviously also gets submerged in an everlasting ocean of bliss and contentedness that comes with realisation of the ultimate Truth). The Naadi called Virja is directly linked to the supreme Brahm (i.e. it has direct link with the supreme consciousness residing in the body of the individual creature, and when this Naadi is activated the individual can have direct access to that consciousness). The other two important Naadis here are called Ida which is located to the left side of the throat, and Pingla that is located in the right side of the throat. [These two Naadis move up to the nostrils located in their respective sides.] (15-16).”

Adhar/Aadhaar Shakti—The word *Adhar* or *Aadhaar* literally means support, basis, base, rest, stay, backbone, substratum, principle, foot, pillar, prop, shoulder, shore, dike, and a means of subsistence. It refers to the base or foundation of anything, any structure or any event. For example when any unfortunate event happens, we try to ascertain the cause or the basic reason why it happened. Once it is determined, the rest is easy to follow. The word *Shakti* however means energy, vitality, stamina and strength. It is the energy trapped in the triad of the Sushumna Naadi, the Mooladhar Chakra and the Kundalini that is sought to be harnessed by the ascetic for his spiritual endeavour of Brahm realisation leading to his attaining an eternal state of blessedness marked by extreme ecstasy and bliss as well as in aiding him in his liberation and deliverance from the fetters of this body and the world.

According to the *Yogshikha Upanishad*, Canto 6, verse nos. 22-37, the triad consisting of the Sushumna Naadi along with the Mooladhar Chakra and the Kundalini is called the ‘Adhar Shakti’. This is because it plays an all important role in not only keeping the nervous system of the body functioning normally but also is used in the process of Yoga to achieve spiritual high. The subtle dynamic cosmic energy present in the body is located here and the ascetic strives to arouse it and harness its astounding potentials for his own spiritual well being. Since the man’s entire life and all his activities revolve around the consciousness present in the body, as the body without consciousness would be a dead body which is good for none, this apparatus consisting of the Sushumna Naadi, the Mooladhar Chakra and the Kundalini is considered as the pillar, the foundation and the basis of obtaining enlightenment and liberation according to the philosophy of Yoga. Therefore this apparatus is called the Adhar Shakti for the ascetic, the one which empowers the ascetic in his spiritual endeavours and provides him with sufficient energy and vitality to obtain success in it.]

3. [Verse nos. 3-6 describe the esoteric meaning of the four components of the word ‘Sita’, viz. Sa, Ee, Ta and Taa.]

Sita is the virtual ‘soul’ or Atma of the entire gamut of creation having three aspects. Therefore she is called ‘Trivarnaatma’, or the soul of all those things which have three plains, phases, forms, connotations, facets or aspects in creation¹. [The creation has been envisioned as one having three plains of existence. The Atma, the pure consciousness, lives in all these three plains. Without the Atma the creation is as good as dead or non-existent. Sita is ‘Trivarna-Atma’ because she represents this Atma having three forms. She represents the dynamic Shakti of Brahm known as ‘consciousness’ that makes each of the three facets of the diverse creation active and bear life in their individual forms.]

Sita is also, at the same time, a personification of Yog Maya (which refers to the astounding powers of Brahm or the Supreme Being to create delusions). [The concept of Maya has been briefly described in note no. 2 of this verse.]

Lord Vishnu (personified Brahm at the cosmic plane; also known as the Viraat Purush) is the ‘seed’ (i.e. the primary cause) from which the entire world with all its delusions and deceptions, with all its artificiality and ostentations, with all its myriad variations and colourful charms, has been created. The Lord’s ‘Maya²’ (i.e. the delusion-creating maverick powers of the supreme Lord) is represented by the letter ‘Ee’ (॒; as in the word “see”) which is a long vowel sound (pronounced as in the word *keel*; *meet*).

[This long vowel sound of ‘Ee’ is the fourth vowel of the Sanskrit language. It is added as a suffix to the first letter ‘Sa’ of the full word ‘Sita’. Hence, the first letter becomes ‘Sa’ + ‘Ee’ = ‘Si’. The ‘Ee’ component of this holy name Sita represents the Maya aspect of creation, and as such it stands for Vishnu’s dynamic powers of

creating a miraculous world out of nothing just like a magician creates a fascinating world from nowhere.] (3).

[Note :- ¹The word *Trivarnaatma* refers to the three aspects of creation and its myriad variations. Atma refers to the soul of this whole setup. Therefore, Sita is the soul of the so-called 'Triad' of creation. This 'Triad' of creation has many connotations—

(a) Creation, sustenance and conclusion.

(b) The Trinity Gods—Brahma the creator, Vishnu the sustainer, and Shiva the concluder.

(c) The three worlds called Triloki—terrestrial, subterranean and celestial; also the Bhu Loka or the earth where we live, the Bhuvha Loka or the sky immediately above the earth where those creatures which fly live, such as the birds, as well as where the spirits live, and Swaha Loka or the far away heaven where the Gods live.

(d) The three Yugs or Eras —Sat Yug or the age when righteousness and virtuousness was at its zenith, Treta Yuga when Lord Ram had made his manifestation, and Dwapar Yuga when Lord Krishna came.

(e) The three chief human pursuits —love, wealth and duty.

(f) The three qualities that a creature possesses and which determine his temperament and behavioural pattern —'Sata' which is the most auspicious noble and righteous of the three qualities, 'Raja' where worldly passion and desire are predominant factors, and 'Tama' where lowly qualities marked by perversion, evil and sins are the dominant feature.

(g) The three chief tribes or classes into which the human race was divided by the ancients —the Brahmins who were the learned class, the Kshatriyas who were the warrior class assigned the task of giving protection to the society, and the Vaishyas who did commerce and took care of the societies material needs.

(h) The three primary colours —black, red and yellow.

(i) The three primary scriptures—the Rig Veda, the Sam Veda, and the Yajur Veda.

(j) The Trivikram— the word 'Tri' is a prefix meaning 'three', and 'Vikram' means 'brave, courageous, bold, heroic, powerful, valorous, valiant, strong, best and excellent'. It also refers to Vishnu because he has all these qualities. According to the Puranic concept, Trivikram refers to Lord Vishnu in his manifestation as the dwarf mendicant called Vaaman who had begged the demon king Baali for land measuring three steps as charity. When Baali had agreed, Vaaman revealed his true identity as Vishnu, who was the Viraat Purush who encompassed the whole creation in his own body. So, in one foot Vishnu measured the whole earth, in the second, the whole sky, and in the third the king's head was measured, symbolically defeating and subjugating him. So, Trivikram refers to the Viraat Purush or Lord Vishnu from whose navel even the creator Brahma was produced aloft a divine lotus with a long stem, and the holy river Ganges emerged from the toe nails of his divine feet. According to Vedas, this Viraat Purush is a manifestation of the supreme, transcendental, attributeless, all-pervading and all-encompassing authority of the universe, known as Brahm. Rig Veda, 10/90/4, states that this Brahm has three legs (Tri) established in the heavens. The macrocosmic male, called Purush, is its first manifestation; from this Purush came into being this creation consisting of 'those who eat food' (the living creatures of the zoological realm) and 'those who do not eat' (the plants and vegetables of the botanical realm). These three —the Viraat Purush, the living creatures and the non-living things —formed the three legs of Brahm.

(k) The three Divine Shaktis—The term 'Shakti' and its various forms as divine Goddesses have been elaborately described as a note of verse no. 2 of this Upanishad.

(m) The 'Trividya' or the triad of knowledge usually refers to the comprehensive knowledge of the three primary Vedas, i.e. Rig, Sam and Yajur. Refer verse no. 21 of the present Upanishad.

(n) The three legendary rewards obtained by being righteous, noble, holy and good. These rewards are—‘Artha’ or material well being and prosperity, ‘Dharma’ or possessing righteous qualities, being virtuous and noble, and ‘Kaam’ or being successful in fulfilling all desires.

(o) A complete knowledge of the existential world—i.e. its creation, sustenance and annihilation or end or conclusion. It involves the fundamental truths of existence and the mysteries associated with them.

(p) Knowledge of what happened in the past, what is happening anywhere at the present, and what would happen in the future is also called Trividya.

(q) From the metaphysical point of view, the knowledge of what happens to the creature in his three principal states of conscious existence in this world—i.e. the waking state called ‘Jagrat’, the dreaming state called ‘Swapna’, and the deep sleep state of existence called ‘Sushupta’ along with the three bodies that the pure consciousness relates to in these three states, viz. (a) the gross body consisting of the five organs of perception, e.g. eyes, nose, tongue, ears and skin, as well as the five organs of action, e.g. the hand, the leg, the mouth, the anus, and the excretory organs, (b) the subtle body consisting of the mind intellect complex, and (c) the causal body consisting of the pure conscious Atma.

(r) According to the revered sage Adi Shankaracharya’s commentary on *Shwetashwatar Upanishad* of Krishna Yajur Veda, Canto 1, verse no. 7, the *three fundamental aspects of the world* which give the latter three distinct characteristic forms are (1) ‘Bhokta’ or the one who enjoys or suffers, or the consumer who finds pleasure in the objects of this material world as well as the one who has to suffer the consequences of his actions, i.e. the living creature, (2) ‘Bhogya’ or that which is enjoyed or suffered from, or consumed in one form or the other, i.e. the material objects of this consumable world, and (3) ‘Niyanta’ or the one who controls and rules over the other two, i.e. the Supreme Being.

To quote the *Shwetashwatar Upanishad*, Canto 1, verse no. 7—“The supreme transcendental Authority of creation whose glories are being sung by the Vedas is known as Brahm. It is a divine entity that is beyond the purview of all worldly deceits and delusions, is most pure, sublime and holy, and is eternal, truthful and imperishable. It is in this Brahm that the entire world having three dimensions, called the ‘Triad of Creation’, is firmly established, or has its basis and foundation.

Those who are well versed in the eclectic knowledge pertaining to Brahm and have a holistic view of this supreme Divinity realise that it is present in their own bosom (heart) itself and nowhere else. This self-realisation takes a firm foothold by deep meditation, resulting in a state of perpetual blessedness. Such self-realised spiritual aspirants remain submerged in the bliss obtained by experiencing the presence of Brahm inside their own self. The affect is that they are able to get rid of the fetters of ignorance and delusions that tie them to this body and the world, and consequentially they find permanent liberation and deliverance from this entrapment (i.e. they attain emancipation and salvation for their ‘self’, for their soul) (7).”

The *Naradparivrajak Upanishad* of Atharva Veda, Canto 9, verse no. 12 also describes this concept in magnificent terms. This Upanishad is Chapter 8 of this volume.

(s) The Triad of Ishwar or the supreme Lord of all that exists, Jiva or the living being or the creature, and Prakriti or Nature—these also form the apex of the triangle which is called the world. [Refer verse no. 9, canto 1 of *Shwetashwatar Upanishad*.]

(t) The *Dhyan Bindu Upanishad* of Krishna Yajur Veda tradition, in its verse no. 36 mentions the triad of creation as follows—“A person who is aware of the presence of the supreme transcendental Being, the Supreme Being, in all the three places^a, the three paths^b, the three forms of Brahm^c, the three Akchars or letters^d, the three Matras^e, as well as in the ‘Ardha Maatraa’ or the half-syllable—such a person is the one who is deemed to be truthfully wise, erudite and enlightened about the fundamental tenets of the Vedas and the essence of their teachings (in the form of the

great sayings called the Mahavakyas or the great sayings and other maxims and axioms of the scriptures (36).”

Now let us see what these three places, the three paths, the three forms of Brahm, the three Akchars or letters, and the three Maatraas are.

^aThe *three places* where Brahm resides are the three states in which consciousness exists, viz. the waking state, the dreaming state, and the deep sleep states of consciousness. The three places also refer to the three worlds called Triloki—viz. the terrestrial world represented by the word ‘Bhu’, the sky above the earth represented by the word ‘Bhuvaha’, and the heavens represented by the word ‘Swaha’. Besides these interpretations, the three places refer to the three planes of time—viz. the past, the present and the future. The word in its broader perspective would involve the ‘triad of the entire creation’ because everything that exists is nothing but a manifestation of on single non-dual cosmic Truth known as Brahm. This is because of the simple fact that the creation ‘does exist; it is seen, witnessed, lived in, and is verifiable and tangible’, and not some hypothetical conjecture based on the figment of imagination.

^bThe *three paths* are the following—the two extreme paths, one that leads to his pomp, reputation, glory and fame, and the other that causes just the opposite to happen, leading to his ill-fame, ignominy and degradation, and the third path is the median one of moderation that is regarded as auspicious and well thought of. It is marked by the virtues of detachment, dispassion and non-involvement. According to some versions, these three paths are represented by the three aspects of the fire sacrifice by which the Supreme Being is worshipped, viz. ‘Dhum’ or the aspect of the fire sacrifice when there is smoke and much sputtering and crackling of the firewood before it catches fire properly, ‘Archi’ or the aspect of the fire sacrifice when the flames are burning brightly and brilliantly, and ‘Agati’ or the concluding part of the sacrifice when some firewood or other offerings remain half-burnt or incompletely burnt, leading to either smoldering pieces of leftover offerings, or the residue of the extinguished fire in the form of still-smouldering pieces of charcoal and ambers. Refer also to verse no. 93/12-93/15 which describes the three paths that the Atma takes from the metaphysical point of view.

^cThe *three forms of Brahm* are the following—the ‘Vishwa’ representing the gross form of the visible world in which the individual creature lives in his waking state of consciousness, the ‘Viraat Purush’ representing the gross form of the invisible cosmic parent body in its cosmic plane of waking state from which all the individual creatures of this world have come into being, and ‘Brahm or Ishwar’ which that entity from which even this Viraat has evolved. Another interpretation of these three forms of Brahm is its manifestation as the Trinity Gods consisting of Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder.

^dThe *three letters* are the three letters of OM, i.e. A, U and M. These three letters cover in their ambit the entire gamut of creation, viz. ‘A’ covers birth, ‘U’ covers growth and development, and ‘M’ indicated death or conclusion.

^eThe *three Matras of Brahm* are represented by the three phases in which this creation has evolved as a fraction of Brahm. These are called ‘Hrasva’ or the small beginning indicating the primary forms of life such as algae and fungi, the ‘Dirgha’ or the most evolved and widespread form such as the higher species of animals and the highest rung occupied by the humans, and ‘Plut’ symbolising the rudimentary forms left after the creation come to the end, or the conclusion of the creation itself. If these are applied to the divine word OM standing for Brahm, then the letter ‘A’ stands for Hrasva, the letter ‘U’ for Dirgha, and the letter ‘M’ for Plut.

(u) The triad of *seer* (the one who sees), the *seen* (the object) and the process of *seeing*—This concept has been explained in *Varaaha Upanishad* of Krishna Yajur Veda, Canto 4, verse no. 20.

(v) The triad of *doer of deeds*, the *object* of deeds done, and the *cause* of deeds done—this concept has been explained in the *Varaaha Upanishad* of the Krishna

Yajur Veda tradition, in its Canto 2, verse no. 48, and Canto 4, verse no. 35 describe the relationship between the deed, the doer and the cause.

²*Maya and Yog Maya*—The word ‘Maya’ has two parts, Ma + Ya. The first half means a ‘mother; a progenitor; something that creates’, while the other half refers to the ‘notion of doubt, of either this or that; the notion marked by uncertainty’. The word ‘Ma’ also means ‘to measure, mark off, by any standard; to show, to exhibit, to display; to infer, to conclude; to be formed, built, made of’. Therefore, the composite word Maya refers to a situation which harbours or creates uncertainties, where it is uncertain whether what is said or understood or seen or witnessed or experienced is actually the truth or not. It is virtually the ‘mother of all confusions, doubts and perplexities’. It therefore refers to something or some situation which creates or produces perplexities, doubts and confusions, something that is not real; that which is deluding, illusionary, deceptive, mirage-like and deceitful, and is caused by the ignorance about its truth and reality; something that has no substance or pith; displays no certainty and leads to wrong inference. The term Maya is used to define this entire complex phenomenon at once. Hence, Maya is a synonym used for all that is deceptive, faulty, false, deluding, ignorance-based, illusionary, imposturing, deceitful, invisible and super-natural in the sense that it defies all logic and understanding; all that which has no reality or substance inspite of appearing to be for real; all that is hollow and lacks gravity though appearing to be solid and dense. It creates hallucinations in a creature’s mind leading him to believe that what he sees is the truth. It is the deluding and magical powers of the supreme transcendental Lord that hides the reality and creates an imaginary world of deceptions and misconceptions.

Maya is the deluding power of the supreme Authority in creation known as Brahm that has been used by him to create the sense of duality. The factual position is that everything is one and the same, and the different views of them is simply an illusion just like one sees a mirage in a desert and thinks it to be real whereas everyone knows that it is a physical phenomenon created due to the effect of excessive heat on desert sand, and it is the deluded mind that thinks it to be real though it is well aware that such things do happen in a desert and it is wise advice not to follow this illusion. Likewise, when Brahm decided to initiate the process of creation, he had to create a smokescreen of delusions to enable him to hide the truth, because otherwise everyone would renounce this world of artificiality and become recluses, and the result would be everyone becoming a monk, renouncing the world and the resultant termination of the cycle of birth and death! So under the influence of Maya or delusions, the living creature thinks that it, the Jiva, and Ishwar, the Lord, are two separate entities. The Jiva offers prayers to the Ishwar and looks upon him for his benevolent mercy and intercession in order to survive and prosper in this competitive world; the Ishwar looks upon the Jiva to offer him oblations and worship that would sustain and nourish the former as well as keep him in an exalted and honourable position. There exists a mutual symbiotic relationship between the two. The Jiva lives on the earth, while the Ishwar lives in the heaven. The Jiva watches the exalted stature, glory, fame and powers that the Ishwar possesses, and so the Jiva tries to acquire that stature for himself. Therefore the Jiva does good and auspicious deeds to go up to heaven, but the deeds themselves pull the Jiva down because of their inherent and inbuilt nature to tie down anyone who gets involved in them. So the creature continues to oscillate like a pendulum between being a mortal being living on earth and the immortal being living in the heaven.

This is the theory of ‘duality’. Both are covered in an invisible veil of ignorance-based delusion. From the metaphysical point of view, Ishwar is the sum total of all the causal bodies that exist in creation, while the Jiva is represented by the individual causal body which harbours the pure conscious Atma or soul. This factor of the ‘pure conscious Atma or soul’ is common to both the Ishwar and Jiva, and hence to treat them differently is a stupid proposition caused by deluding effects of the mind. This

is called being sheathed by a veil of Maya, or being under the influence of ignorance that prevents one from realising the truth and reality.

Therefore, Maya is the indescribable and inconceivable cosmic dynamic power that Brahm employs to create delusions.

Mantriko-panishad of the Shukla Yajur Veda tradition, verse no. 3-8, describes Maya in substantial detail. In its verse no. 5 it says that *Maya has three basic colours*—viz. ‘white’, ‘red’ or ‘dark’, and the various shades in between. These three colours represent the three basic qualities, called Gunas, present in all the creatures and are only symbolic of the innumerable variations in which the basic qualities can combine to produce countless number of characteristics and virtues and behaviours that give individuality and specific characteristics to millions and millions of creatures. These are simply metaphors only meant to explain and help visualise certain things, and therefore should not be taken too literally as meaning that dark skinned people are sinful and pervert and worthy of condemnation, or that fair skinned ones are all righteous and noble, for just the opposite is witnessed daily in our lives.

Even as an offspring gets the colour of the skin of the race to which it belongs, the inherent characters of all creatures are inherited from their mother, and this mother is Maya. The white colour stands for the best category of qualities called Sata Guna, the red colour stands for the second and medium quality called Raja, and the dark colour stands for the meanest quality called Tama. The word Tam itself means ‘dark’ and it stands for the worst type of qualities leading to sinful and pervert nature in a man which makes his life hellish; the word ‘red’ is a metaphor for anger, vehemence, vengeance, agitations, restlessness, short temper, strife, hatred, envy, jealousy and the other such negative worldly characteristics in a person; the colour ‘white’ stands for peace, tranquillity, prosperity, happiness and wisdom, all of which are the characters of noble and gentlemanly persons.

Here it should be noted that the three inherent qualities or Gunas of Sata, Raja and Tama that characterize all the creatures of this creation are like the *genes* that the offspring carries of its parent. Through these Gunas, the Maya resides in the bosom of all the creatures as their defining ‘nature’ and basic ‘temperament’—called the *Prakriti* of the creature. Even as the supreme Brahm as the Great Lord called Maheshwar used his mystical deluding maverick powers to create this illusion of the world at the cosmic level and made it so perfect that it appears to be perfectly true, the same Brahm while residing in the bosom of the individual creature as its Atma also creates this world by using its delusion creating powers, and uses its man-Friday, the mind, to ensure that it is implemented to perfection.

Since Maya has three basic constituent qualities, the Sata Guna, the Raja Guna and the Tama Guna, it is called *Trigunmayi* (त्रिगुणमयि), i.e. one which has the three Gunas or qualities. ‘Sata’ is the most auspicious, virtuous and noblest quality in a man and raises him to a high moral and spiritual pedestal. It marks predominance of righteousness and the highest standards of spirituals and mental evolvement leading to high thoughts, noble actions and righteous behaviour. ‘Raja’ is the medium quality in a person, and it is marked by worldly passions, desires, yearnings and greed. It makes a man more worldly than spiritual. ‘Tama’ is the third and most lowly of the three qualities and is used as a synonym for darkness and evil. Obviously, ‘Tama’ means ignorance, delusions and all the forces or qualities that are evil, mean, lowly, miserly, wicked and base. They pull down a man from high pedestal and virtually dump him in the dust yard of creation to rust and decay.

These *three qualities* together, in various permutations and combinations, decide the innate nature of a man. The greater presence of ‘Sata’ makes a man nobler as compared to a high ratio of ‘Tama’ which makes him wicked, pervert and evil. Various proportions of these qualities will therefore produce innumerable varieties of creatures having different temperaments, thought processes, behaviours, demeanours

and mental setup in this world. The *Pashupata Brahm Upanishad* of the Atharva Veda tradition, Canto 1, verse no. 10, describes these three types of Maya

When a man understands any ‘Truth’ after rigorously examining the ‘truthfulness’ of that truth, when he has established the veracity of facts, he believes in it more firmly and more convincingly. No matter what other people tell him about the truth being not the correct or the whole truth, he would not listen to them, simply because he has verified the facts for himself, he has witnessed the truth himself, he has logically eliminated all falsehoods to deduce that what he knows is the ‘truthful Truth’. His Truth is based on rigid and solid foundation; he is unwavering and steady in it. If he is steadfast and convinced in his knowledge, no matter how much ignorance and delusions (Maya) try to push him away from the absolute ‘Truth’, he will remain steadfast and unwavering in it. There will be no doubts and confusions in his mind.

The basic idea here is that Maya is like a transparent coloured sheet which covers the supreme ‘truth’ in the creation. Since it is transparent, it assumes the attributes of the ‘truth’ that it covers, because for all practical purposes an ordinary man is unable to see that veil because of its transparency. But at the same time, being tinged by different Gunas, the view of the ‘truth’ as seen through the veil of Maya gets tainted or distorted consonantly. This is a simple way of understanding what is called ‘illusion and Maya vis-à-vis the Truth and Reality’. Maya nevertheless hides the truthfulness of the Truth, and instead lends its own attributes and characteristics to that Truth known as the ‘Nirgun Brahm’ by the Upanishads when the latter is observed through this veil, while at the same time assuming the glorious attributes of Brahm itself. So ignorant fools think that the Maya is the real thing, whereas they are actually seeing the ‘veiled truth’ as observed through this covering of Maya, because the actual ‘truth’ is hidden from view by this transparent sheet which has lent it its own colour and hue to it. As a result, that Nirgun appears to have some attributes, and it thereby becomes ‘Sagun’, or the one with attributes and characteristics, by the interference of Maya.

The *Pashupata Brahm Upanishad* of the Atharva Veda tradition, Canto 2, verse nos. 33, 44-45 describe how Maya creates this world.

The *Nrisingh Purvatapini Upanishad* of the Atharva Veda tradition, in its Canto 3, verse no. 2-3 describes Maya and says that it is the creator, the sustainer and the concluder of creation.

The *Kathrudra Upanishad* of Krishna Yajur Veda tradition, verse no. 43 describes how Maya was created by the Supreme Being and how it is kept under tight leash by him.

The *Rudra Hridaya Upanishad* of Krishna Yajur Veda, verse no. 49 describes why it is important to overcome Maya.

The *Shwetashwatar Upanishad* of Krishna Yajur Veda, in its Canto 4, verse no. 10 describes the relationship between Prakriti, Maya and Gunas in a very succinct manner.

The *Saraswati Rahasya Upanishad* of the Krishna Yajur Veda, in its verse nos. 47-49, 52-54, 56-57 describe what Maya actually is, how it creates this world and hides the ‘truth’ known as consciousness, and goes on to describe the two important types of Shaktis or dynamic powers of Maya—one called the ‘Vikshep Shakti’ and the other called the ‘Aavaran Shakti’.

Why Maya created this world and its effect on it has been beautifully described in *Paingalo-panishad* of Shukla Yajur Veda tradition, in its Canto 1, verse no. 12.

Maya has also been described in the *Sarvasaaro-panishad*, verse no. 15 of Krishna Yajur Veda; *Adhyatma Upanishad* of Shukla Yajur Veda tradition, in verse no. 30.

‘Maya’ has three names—viz. (a) *Maha Maya*—or the great powers exhibited by Brahm at the cosmic level. This Maya is the progenitor of all other types of Mayas which keep the individual creature trapped in their net. The Maha Maya is the virtual

mistress of all the delusions and misconceptions and their attendant ignorance that keep all the creatures of this creation enthralled by their deceptive charm. (b) *Yog Maya*—this is the stupendous magical powers created by the union of the supreme authority of creation known as Brahm, and the mystical and esoteric powers that delusions and hallucinations can create for the creature. (c) *Maya Shakti*—this is the ‘shakti’ or power and authority displayed by Maya in association with Brahm from whom it acquires its stupendous energy and powers.

The term *Yog Maya* can now be understood as follows:—It consists of two words, viz. ‘Maya’ and ‘Yoga’. ‘Maya’ means delusions; it refers to the delusion created by the dynamic powers of Brahm at the time of creation. ‘Yoga’ means to bring about a union between any two entities; it means a conjunction or fusion of two entities. Hence, the great delusion which is so powerful that it brings together two impossibilities together and makes them appear to be real is called ‘Maha (great) Yog Maya’.

Yog Maya refers to the fusion of the cosmic energy with the delusion-creating powers of the supreme Brahm when the latter decided to start the process of creation. The illusion created by Brahm removed the distinction between the truth and falsehood so much so that both appeared the same and became interchangeable. That is why, what appears true on the surface is actually false, and vice versa. But to enable this to happen, Brahm had to meditate and focus his attention to ignite that inherent but latent energy that is an integral part of creation. In other words, he had to do *Tapa*, which is another form of *Yoga*. The resultant stupendous forces of Nature that were unleashed by Brahm’s meditation led to the chain of events that culminated in the revelation of the cosmos as it is known today. This magnificent event or the primary force that set this chain in motion has been conceptualized by the Purans as a deity known as ‘Yogmaya’; she has been depicted by them as the female counterpart of the maverick Lord of creation, who has been personified as the Viraat Purush. In the case of Lord Ram, who is that Viraat Purush also known as Vishnu, that Yogmaya is represented by Sita. The other connotation of ‘union’ implies that this Yogmaya establishes a link between the ignorant and deluded creature, and the unadulterated, supreme and ultimate Truth represented by the Lord. The word also refers to the magical and mystical powers displayed by mystics and ascetics, which they have acquired by the virtue of their meditation and contemplation.

This world is not the ‘absolute truth’ because anything that is ‘true’ would remain constant and unchanging. Since the world is changing every moment, it cannot be the absolute truth. Therefore it is false. Truth and False are opposite things just like fire and water; they cannot co-exist. If one thing is true, it cannot be false, and vice versa. But Maha Maya is so powerful that the creature is certain that this world with all its sense objects and charms is true and real. He sees others dying but thinks that he would live forever. Since bringing together of two things is called ‘Yoga’, this bringing together of two impossible things together to make them appear to be true and possible, or making the truth appear as false on the one hand while making false appear to be true on the other hand, is called ‘Maha Yog Maya’.

The concept of the *Maha-Maya* or the great delusion can be understood with a simple illustration. The air element is the same within the earth’s atmosphere, but the density of air near the earth’s surface is obviously more than the highest point of the atmosphere. Even the level of the various gases and other ingredients of air vary at different levels. Hence, as we move up from the surface, the ingredients of the air and the space in which it lives change, their density and properties change, but primarily they will always remain the air and the sky elements, retaining their intrinsic virtues. Likewise, the same Supreme Being known as Brahm exists throughout this creation in all its different levels, and this Brahm exhibits different sets of characteristics at each level. It is only the degree of grossness and subtlety that changes, and not the primary nature of Brahm. The fact that Brahm appears to change and exhibit different

characteristics other than its original attributes at different planes of creation or existence is called 'Maha Maya'—or, the great delusion.

This Maha Yog Maya is so powerful that it creates an illusion of dichotomy and opposition in the various forms of the eternal supreme Brahm who is an embodiment of infinite bliss.

This Maha Yog Maya is like a veil surrounding the truth of Brahm. The magical world created by it is most fascinating and astonishing; it is full of maverick tricks, and is like an ocean of surprises and unexpected events and sights. It is so mysterious that inspite of being illusionary and created out of delusions it still appears to be real, everlasting and an image of happiness.

The *Tripadvibhut Maha-Naryan Upanishad* of the Atharva Veda, Canto 6, paragraph no. 13 describes how a spiritual aspirant sees the Maha Yog Maya in a personified form as he proceeds on his journey towards his final Mukti or Moksha. This Upanishad is Chapter 11 of the present volume.

We can understand this phenomenon of how the Maya of the Lord has created this vast canvas of creation with a simple example. A painter wishes to paint a landscape. He starts with a pure white canvas, and using his imagination and powers to visualise a magnificently beautiful scene, he starts painting with numerous primary colours and then goes on mixing these colours to produce umpteen numbers of colours of varying hues and shades. Besides the colour, he continuously adds a stroke here and a brush there as he tries to reveal on the lifeless canvas the conception of life as he visualises in his mind; he is never satisfied with his work and goes on and on endlessly adding colours and lines to the canvas. The result is most astounding and stupendous to behold. But still the painter is not satisfied; so the net result is that the canvas gets being redone over and over again, and layers after layers of lines that had been made and erased, of paints that had been painted over numerous times, of shapes and figures that had been visualised, rejected and reconceived and placed on the canvas only to make the painter uneasy about them. In short, the basic canvas that was pristine pure at the beginning has been reduced to scrap! The painter then keeps it aside or if totally disgusted with it, he may throw it in the garbage bin.

This all but sums up how the supreme Lord creates, develops and concludes the creation. The clean white canvas represents the Satwic qualities with which the Atma starts out. The painter is the supreme Lord or Brahm, the landscape he imagines is equivalent to Maya because it has no actual existence but is imagined by him, and he is so skilled a painter that once the painting is ready, the scene that is depicted on the canvas appears to be very real and live, creating an illusion of the grandeur of the actual thing; this is a deception because the painter has used his imagination as the subject of the painting, but an ignorant man who is not aware of this fact would believe that the painting has been inspired by some actual landscape that the painter must have seen somewhere. As a matter of fact, it might also happen that the scene does actually exist, but the painter has added touches of his own imagination to add vibrancy and colour to the scene about which the observer is unaware. The scene and the 3-dimensional landscape is equivalent to the creation and the colourful Nature. The paint and the primary colours used by the Lord during the process of creation to make it vibrant and lively are the different Gunas (virtues, qualities and characteristics), the various Vasanas (desires and passions) and Vrittis (inherent tendencies and inclinations of a creature; his nature and temperaments) as well as the Tattwas (elements) which are fundamental to and inseparable from creation. The innumerable varieties of shades of characters, virtues and qualities that are present in the creature represent these myriad colours that the creator uses to paint his creation. Until at last the Lord stands back and is stumped at the Frankenstein Monster that he has unleashed! Then he decides to call it quits, and this is equivalent to annihilation of the creation. But as a painter he cannot sit quiet; and so starts the process once all over again!

Supposing the painter did not add his own name to the painting, or he had added a pseudonym. Then in such a case, there would be conjectures about his identity, leading to so many theories and debates. Then some wise man would look up the archives and dig up some evidence about who he was. This is exactly what happens here in the case of creation—no one knows for sure who that creator is, what is his name, etc. Some wise and enlightened man came to unearth the truth about him, and he tried to tell others in the words he could muster. This is how the great maverick Lord has been known and recognised by us. When his glories are sung, it is actually praising the great painter for his skills and the matchless heritage that he has created for us to cherish and behold.

Maya Shakti—The stupendous powers of Maya have been called its ‘Shakti’. This concept has been described in *Yogshikha Upanishad* of Krishna Yajur Veda, Canto 6, verse no. 48. This Maya is so powerful that it misleads even the Gods and stuns them as stated in *Panch Brahm Upanishad* of Krishna Yajur Veda tradition, in its verse no. 24.

Sage Veda Vyas’ *Adhyatma Ramayan*, in its Lanka Kanda, canto 14, verse no.28-29 describes the relationship between Maya and Brahm, albeit in the context of Lord Ram.

The concept of Maya affecting the Atma has been elaborately dealt with in various Upanishads, especially Maitrayanyu Upanishad, Cantos 2-4 of the Sam Veda tradition.

Brahm, which is one whole, indivisible and immutable entity, assumes or appears to exist in myriad forms, having mind-boggling permutations and combinations of shapes, sizes, colours and contours, depending upon the prevailing circumstances and requirements of existence. The same entity when viewed with different glasses appears to have different colours—as is evident when we observe anything with sunglasses of different colours. It acquires different meanings when viewed from different perspective—as is evident when the same event is interpreted differently by people having different views, different intelligence, different cultures, and different mental bearings. The same things changes in size and colour when observed from different distances—as is very clear when we observe a thing from very close quarters and then view it from a great distance; even the same mountain appears to be blue, green, dark and of other colours when seen at different times of the day and varying distances and through changing atmospheric conditions.

So it would be erroneous to say with certainty that what one has observed is the actual truth, for it might be very misleading and at odds to what others have observed. When, say, five people describe a mountain or scenery, each would narrate what he has observed. All of them are correct, but there is much more to that mountain or scenery than what one gathers from these narrations. Herein lye the importance of ‘self-realisation’, because we may doubt what others say, but we cannot be more convinced when we observe anything first hand for ourselves.

Brahm is like this water molecule; it has revealed itself in the form of this multifarious creation, each unit of the latter is Brahm manifested, but Brahm is not limited to that specific definition. All forms that the molecules of water take are nothing else but ‘water’, undiluted and uncorrupted. Whether we call it moisture, cloud, rain, steam, ice, river or ocean, none of these should deter a wise man from observing ‘water’, or better still ‘two atoms of hydrogen and one atom of oxygen’ in all these forms. A learned man would be amused when people fight over these definitions, and he would call them ignorant ones.

So when we observe Brahm with a holistic and all-inclusive view, we find that the entire creation is ‘Brahm manifested’; all the different nomenclatures and definitions pertain to the same entity and therefore all of them are correct. But none of these individual manifestations define Brahm in its entirety, and nor do they become Brahm.

This is Maya, which literally means something which does exist but it is an illusion, a deception and misleading. Water appears in so many forms because of this Maya, and so does Brahm vis-à-vis the world.

Now, there must be something that not only binds two atoms of hydrogen and one atom of oxygen together but also injects it with certain qualities that give the resultant product its uniqueness known as water. And this 'uniqueness of water' is not a small matter to be overlooked, because water is the harbinger of life, it is the sustainer of life, and it is the concluder of life. How? Well, it is the first ingredient necessary for initiation of the process of creation; once life starts it sustains it and nourishes it; and the havoc it causes during severe floods, typhoons, tsunamis, cyclonic deluges and oceanic storms when it completely obliterates all traces of life are examples of destruction water can cause. Quite similarly, in different perspectives, Brahm creates, sustains and concludes this creation.

Taken independently, hydrogen and oxygen would not produce water, and neither does their simultaneous existence in a single place automatically means that water would be there, for had it been so then there would be no question of droughts anywhere because both these gases are present everywhere on earth. Therefore, there must be some supernatural force that helps these apparently innocuous looking atoms of these two gases to acquire a special quality known as water. This is called 'Shakti'. What does this Shakti do? It transforms the latent powers and potentials of hydrogen and oxygen into an entity called water that harbours life, sustains and nourishes it, and that even concludes its own creation, none of which functions would these two gases have done left to themselves. But does this Shakti come from outside? No, it is hidden in the atoms of hydrogen and oxygen, and it simply comes to the fore, does its job and collapses in to oblivion, leaving the rest of the process to take care of its self by being controlled or influenced by other forces of Nature.

This allegory or analogy helps to explain how Brahm uses Shakti to create this world, and how the resultant product creates an illusion called Maya about the essential truth. Brahm uses its creative energy, called its *Shakti*, to create this world, both the visible as well as the invisible. Brahm then resides in this creation as its integral and inseparable part even as hydrogen and oxygen are integral to and inseparable from all forms in which water exists. The ignorance about 'who or what' is the basic truth of this existence, or is the essence in this existence, or is the fundamental principle behind what is seen, witnessed or experienced, is called *Maya*. Maya also has its importance in this context of existence, because if Maya or illusion does not exist then this world would also cease to exist as we know it. If the world ceases to exist as we know it, then there would be no question of any interaction or any kind of interdependence and relationship between any given two entities because there would be no distinction between them, and they would be all alike. Taking the example of water, if we do not distinguish between an ocean or river, or say between the water of a gutter and a well, telling ourselves that the essence of all these fluids is two atoms of hydrogen and one atom of oxygen, then it would be the height of stupidity for us and create a hilarious situation. So for the purpose of existence these differences have their own importance, but when we wish to learn and get educated about them and not remain ignorant fools then we come face to face with the facts. Even then, as long as we live, we cannot treat the water of the gutter and the water of the well alike for drinking purposes. This is Maya—it creates a piquant situation wherein we know that what we see is not the actual truth but we still cannot do anything about it and continue to treat the falsehood as the real thing.

The *Tejobindu Upanishad*, Canto 5, verse no. 33 of Krishna Yajur Veda tradition says that the Atma, the pure conscious self of the creature, remains untainted by the effects of Maya.

The effect of Maya on the creature has been elaborately dealt with in *Mantrikopanishad*, verse nos. 3-8 of the Shukla Yajur Veda tradition, and in *Varaaha Upanishad*, Canto 2, verse nos. 52-53, 69, 71, 74.

The *Maya Jaal*—The mysterious net of delusions that keeps the creature trapped in its snare is called Maya Jaal. The word ‘Maya’ briefly means delusions and ignorance, and ‘Jaal’ means a net, a web, a snare, a trap, a magical spell’.

The concept of Maya briefly refers to something that is based on delusions and deceit. The magical world created by a magician is a world of Maya. The trap that this charming deception creates for the creature making it believe that what it sees is for real is called the ‘Maya Jaal’ or the net of delusions which entangle the creature like a bird getting caught in a bird catcher’s snare. When one sees a magic show he gets so engrossed in its illusions that for the time being the person forgets that what he thinks is so life-like and real has no substance and pith. He thinks that what he sees is real and true. The same basic concept is applied in metaphysics to explain the concept of delusions vis-à-vis this world. The deluded creature begins to get involved in this magical world, and does so many things as if walking in a dream. But a wise man realises that the truth is above this illusive world and does not allow himself to be misled by any cajoling by the magician; he simply laughs at it and waves away all attempts by the latter to entice him to participate in the show. He just watches the magic show dispassionately and does not get emotionally involved in it. Similarly, a wise man does not allow himself to be involved in this deluding world, and remains a dispassionate observer, not a participant in the activity of the world.

The *Tejobindu Upanishad* of Krishna Yajur Veda, in its Canto 5, verse no. 33 describes this Maya Jaal.

The *eight forms that Maya takes*—The eight forms of Maya are the delusion and ignorance creating powers of Brahm without which the creation would neither be conceived nor expanded, because if everyone becomes aware of the reality, if everyone realises that everything is perishable and immaterial, that whatever is seen and enjoyed are like a mirage seen in a desert, then all would renounce the world, there would be no marriages and procreation, there would be no creation of wealth and strife and tension to protect this wealth, there would be no desire to have dominance over others, for all are equal and one in the eyes of Brahm and they have the same Atma which prevails uniformly in the breadth and length of the creation. So Brahm uses Maya as a tool to maintain a veil of ignorance and delusions to carry forward his game plan, until the time he decides that he had had enough of it and then initiates the folding-up process of concluding this creation for good, or for at least that time when he decides to roll the carpet once again.

Now, these eight forms that Maya takes are the following—the five elements forming the basic building blocks of the gross creation (i.e. the elements of earth, water, fire, air and space which form the gross body of all the living creatures) + mind + intellect (together called the subtle body of the creature) + Ahankar (the ego, pride and arrogance that the creature possesses, leading to the notion of ‘I’, ‘me’, or ‘mine’) = eight entities.

Actually, a wise man understands that whatever exists in whatever form is nothing but one or the other form of the same universal entity known as Brahm. To take an example, a scientist knows that water in whatever form and colour and shape consists of the same two atoms of Hydrogen and one atom of Oxygen. Further, he also realises that everything is made of atoms and their basic structure consists of sub-atomic particles such as electron, proton, neutron etc. With this erudition and view point, a wise man sees these basic ingredients in all things that he observes around him, because everything is made up of atoms and molecules. But an ordinary man talks of the water of the ocean, of the well, of the drain and of the river etc. He talks of gold, of silver, of wood or of iron, not realising that all consist of the same building block called the ‘Atom’. Similarly, due to ignorance a man is deluded into thinking that the gross world that he sees is has an independent existence and it is real. He forgets to analyse its fundamental ingredient which is the pure consciousness that is making it alive. The five elements that are used to make up this world are all perishable and gross, and they are the creation of the mind. The mind itself is

perishable because it dies with the body. Then, what is the reason why a man has so much ego and pride in himself and his abilities? It is Maya. It is his ignorance that has held him by his collars, as it were. He forgets that if his true self is imperishable, then how come he dies; if his true self is enlightened and wise, then why he suffers from so much misery and disillusionment; if his true self is eternal, then why does he have to take a birth and then die? A wise man then begins to ponder why does he treat those entities which are transient, mortal and the cause of so much misery and consternations and confusions as true; why does he not realise that the truth is imperishable and eternal and universal? This is due to the influence of delusions and ignorance created by Maya. This is how Maya keeps everyone trapped under its net.

Maya is under the overall control of Ishwar, the Lord of creation—This fact has been emphasized in the *Tripadvibhut Maha Narayan Upanishad* of the Atharva Veda tradition, Canto 4, paragraph no. 10. This Upanishad is Chapter no. 11 of the present volume.

How the Maya creates a separation between Brahm (the Supreme Being) and Jiva (creature; living being) has been outlined in the *Annapurna Upanishad* of the Atharva Veda, Canto 4, verse no. 33. It is Chapter no. 16 of the present volume.

The 4 forms of Maya—Maya is said to be of three kinds, viz. the one where Sata Guna dominates, called the Satvic Maya, the one where Raja Guna dominates, called the Rajsic Maya, and the one where Tama Guna dominates, called the Tamsic Maya. Beyond these three is the primary form of Maya, known as the Adi Maya. This primary Maya is directly related to Lord Vishnu, hence called the ‘Vaishnavi Maya’. It is sort of the parent of all the other forms of Maya. It is so powerful and strong that no one can ever defeat it; not even Brahma the creator could overcome it.

The *Krishna Upanishad* of the Atharva Veda, verse nos. 4-5 describes them in detail.]

4. The Sanskrit alphabet (the consonant) ‘Sa’ (स) [as in the word *sun*; *son*] is a symbol of such virtues as Satya (truth), Amrit (the nectar-like elixir of eternity and bliss), Praapti (successful accomplishment of desired objectives) and Chandra (the Moon symbolising peace, tranquillity and contentedness; it is also a treasure of Amrit). [Hence, the first letter ‘Si’ of the word Sita stands for the combined virtues represented by consonant letter ‘Sa’ and the long vowel sound ‘Ee’.]

The Sanskrit alphabet (the consonant) ‘Ta’ (त) [pronounced as ‘t’ in French] in the letter ‘Taa’ (ता) [i.e. Ta (त) + Aa (आ) = Taa, pronounced as in the word *time*; *tide*] stands for Goddess Laxmi who symbolises the expression of light, dazzle, glory and splendour in the vast realm of creation in order to remove its darkness¹.

The long vowel sound ‘Aa’ [pronounced as in *after*] symbolises expansion and development. Hence, the second letter ‘Taa’ of the word Sita stands for the combined virtues represented by consonant letter ‘Ta’ and the long vowel sound ‘Aa’. (4).

[Note—¹Goddess Laxmi is the divine consort of Lord Vishnu and the patron goddess of material wealth and prosperity. She stands for precious metals as well, such as gold and silver, and precious stones, such as gems and jewels. These things have an inherent shine, glitter and dazzle in them, symbolising an entity that has the in-built quality to shine and emanate light.

In other words, Laxmi symbolises those things in creation which have great in-built value and importance for the creature as far as his survival in this world is concerned. This is because the basic needs of the body such as food and comfort are available with the possession of Laxmi. Laxmi is needed for the sustenance and well-being of the world.

Besides this, Laxmi is Vishnu’s Shakti—or the dynamic power of the former with which he carries out his functions of sustaining, nourishing and taking care of the needs of this creation.]

5. Sita, whose esoteric and enigmatic but sublime cosmic form is symbolised by the long vowel sound 'Ee' (ॐ), and who is the great dynamic Shakti called 'Maha Maya'¹ that has no specific form, shape and attribute at the cosmic level of creation, reveals her primarily invisible divine form as the one having a visible shape and form that possesses specific attributes, glorious virtues and magnificent qualities which are equivalent to Amrit (i.e. are as refined and of high quality as nectar). In this revealed form (as the divine consort of Lord Ram), she is adorned by so many splendid ornaments and other decorative paraphernalia that gives a magnificent, charming and a radiant dimension to her divine form (5).

[Note—¹The concept of Maha Maya has been explained in a note of verse no. 3.]

6. Sita has three esoteric, enigmatic and sublime forms—(i) in her primary cosmic form as 'Shabda Brahm' (the eternal 'word' representing the Supreme Being, the cosmic Consciousness and the Truth known as 'Brahm'), she is honoured and remembered when one studies the scriptures and reads or recites them aloud, because the scriptures that attempt to describe Brahm for the benefit of the living being are made up of 'words', the 'Shabda'; (ii) in her incarnation in this mortal world as Sita where she manifested herself when the point of the plough used by king Janak dug up the earth to reveal her as a girl child; and (iii) in the form of the Beej Mantra or the seed or the root word 'Ee' (ॐ) which is used as a Mantra (secret formula) during mystical forms of worship of the Shakti of Brahm, and which also stands for the 'Absolute Truth' (because the Sanskrit vowel 'Ee' (ॐ) symbolically stresses the unequivocal nature of the 'Absolute Truth' of anything as when one says 'yes, it is this; there is *indeed no doubt* about it!').

These three forms of Sita have been revealed by sage Shaunak¹ in his composition called 'Shaunak Tantra'. [This is a text used to worship Sita as a Shakti or divine Goddess using her Beej Mantra in mystical forms of worship.] (6).

[Note—¹ Sage *Shaunak*—He was a wise and learned sage and derived his name after his father sage Shunak. He is regarded as an incarnation of Indra, the king of Gods. He was an expert on the Vedas, especially the Rik/Rig Veda and the majority of his works revolve around this particular Veda. They are known as 'Anukramanika' (indices). His magnum opus is the 'Brihad-devta' which deals with the deities of the Vedas. He had a large following of disciples, the chief being Ashwalyaana. He appears in many ancient scriptures such as Shatpath Brahmin, 13/5/3/5; Brihad Aranyak Upanishad, 2/5/20; Chandogya Upanishad, 1/9/3; Mundak Upanishad, 1/1/3; Kaushitaki Brahmin Upanishad, 4/7.

The Par Brahm Upanishad, which is the twentieth Upanishad of the Atharva Veda tradition, was revealed to sage Shaunak by sage Pippalaad.]

7. Sita always stays close to Lord Ram, the supreme Brahm manifested in a human form. That is why she is the benevolent and gracious benefactor for the whole world; she provides auspiciousness and well being to it.

She is the one who is responsible for the birth, sustenance and the end of all the living beings. [This is because she is the dynamic power or Shakti of Brahm, the Supreme Being, which is responsible for these functions on the behalf of Brahm.] (7).

8-9. She is a personification of the primordial Nature called Mool Prakriti¹. She is the cosmic Mother called Bhagwati in whose womb the creation was conceived and developed. She possesses the six great majestic qualities called 'Shad-Aishwarya'².

Those who are well-versed in the sublime and eclectic philosophy pertaining to the supreme Brahm, those who are expert in metaphysics and spirituality, assert that she personifies Pranav which stands for the cosmic dynamic powers of Brahm revealed in the form of the primordial ethereal sound of OM³. Since this Pranav is the fundamental cause of creation, since the sublime word OM representing Brahm stands for the entire gamut of creation, right from its conception through its development and growth till its final conclusion, it is asserted by them that Sita stands as a synonym of Prakriti or Mother Nature, because the latter is a revelation of the dynamic powers of Brahm that had enabled the latter to not only reveal this creation but also to later on manage it, sustain and nourish it, and finally at the end of its tenure conclude it. [8]

The term 'Athaato Brahm-Jigyasa' literally means 'this is what one deduces when enquiring about Brahm'; 'this is the conclusion drawn by researching about Brahm'. This authoritative statement relates to Sita's enigmatic, mystical, majestic, cosmic, dynamic and all-powerful form as narrated herein above and elsewhere in this Upanishad. [This phrase implies that if one were to know about Brahm, one should first know about 'Sita'. Sita and Brahm are therefore the two aspects of the same Divinity.] [9] (8-9).

[Note—¹*Prakriti*—The word basically means 'nature' with all its connotations. The Chambers dictionary defines it as the power that creates and regulates the world; the power of growth; the established order of things; the cosmos; the external world especially that untouched by man; the inherent qualities in anything that makes it what it is; the essence; the being; the constitution; a kind or order; naturalness; normal feeling; conformity to truth or reality; the inborn mind; the character, instinct or disposition; the vital power; the course of life; the nakedness of truth; the primitive undomesticated condition; the strength or substance of anything; a deity personifying some force of physical nature.

Sir Monier Monier-Williams, in his encyclopedic Sanskrit-English dictionary describes it thus—'making or placing before or at first'.

The word Prakriti has many connotations, viz. the original or natural or basic form or condition of anything; the original or primary nature, character, condition, constitution, temperament, disposition; the fundamental form or shape or essence or pattern or standard or model, rule; Mother Nature which has the active physical natural forces that are responsible for unfolding the creation, its sustenance and annihilation; something that is inherent, innate, genuine, unaltered, unadulterated, basic, normal, bare, naked, crude, integral and stripped of all pretensions;

The word Prakriti also refers to the powers of the Supreme Being personified as Mother Nature in whose womb the entire creation has revealed itself. It is deified forces of Nature and renowned as different Goddesses. As inherent nature and temperament of a creature, it determines the way the world behaves and thinks. The Prakriti is the primary female aspect of creation and is known as Shakti, while its male aspect is known as the Viraat Purush. The Shakti is the active ingredient or force that creates and regulates everything, while the primary entity or Being whose will this Shakti is implementing is called Brahm who remains passive.

According to the Purans, this Prakriti or Nature has been personified as different Goddesses, while Brahm has been known as Viraat Purush in the terminology of Vedanta or the Upanishads, and Vishnu in the Purans. The Shakti is the female aspect of Purush, and is considered as inseparable from him; in fact they are two halves of the same Brahm. In order to create, Brahm revealed himself in these two primary forces which revealed themselves as the cosmos or Nature. As the different inherent tendencies of a creature, the forces of creation came to be known as Sata, Raja and Tama which determines and regulates the continuous cycle of creation, sustenance and conclusion.

The word Prakriti refers to the following—(a) Mother Nature and (b) the natural habits, temperaments and inclinations of a person. The Purush is the male aspect while his female counterpart is the Prakriti. Since a man resides in this world, he is surrounded by Nature which casts its shadow upon him. All the maverick tricks that Mother Nature knows create an impression upon a man. He is enthralled and so overwhelmed by the deception created by Nature that he forgets about the falsehoods of what he sees, as well as about the truthful nature of his own pure self. He is deluded by false impressions so much so that they appear to be true to him. Consequentially, he drifts along in the swift currents created by those delusions. He acquires the colours of Prakriti without realising the truth about its falsehood.

²*Aishwarya* means certain mystical, esoteric, sublime and divine powers and potential that one possesses which bestow him with immense supernatural powers and authority; that which bestows him with great fame, opulence, majesty, supremacy, sway and authority that comes with possession of great and divine abilities and potentials; the divine faculties and powers associated with mysticism. Among these powers are the eight Siddhis or divine accomplishments that empower the person who possesses them to achieve certain things that are not ordinarily possible. These eight Siddhis are the following-- (i) 'Anima' 'अणिमा' means the power to become microscopic or so minute that one becomes invisible to the naked eye; (ii) 'Mahima' 'महिमा' is to have majesty, glory and fame; to be honoured and acknowledged for one's achievements, knowledge and skills; (iii) 'Garima' 'गरिमा' is to have weight, stature, dignity, decorum, gravity and significance, (iv) 'Laghima' 'लघिमा' is to have simplicity and humility; (v) 'Praapti' 'प्राप्ति' is to be able to attain or obtain anything wished or desired; (vi) 'Prakramya' 'प्राक्रम्य' is to have valour, ardour, strength, powers, prowess, potential and punch leading to triumph, glory and majesty; (vii) 'Ishwatwa' 'ईश्वत्वं' is to be able to have lordship or sway over others; and (viii) 'Vashitwa' 'वशित्व' is to be able to control and subdue others.

³The concept of OM: There are umpteen numbers of Upanishads that expound upon this eclectic concept. A brief reference is as follows—(a) Rig Veda—Naad Bindu Upanishad.

(b) Krishna Yajur Veda—Taittiriya Upanishad, Valli (Canto) 1, Anuvak (sub-canto) 8; Amrit Naad Upanishad, verse no. 2, 4, 24-25, 31-32; Dhyana Bindu Upanishad, verse no. 2, 9-18 (which narrates how each letter of OM stands for different aspects of creation), 37, 102; Tejobindu Upanishad, Canto 1, verse nos. 1, 6; Yogtattva Upanishad, verse nos. 136-139; Brahm Vidya Upanishad, verse nos. 2-12, 69-71 ½ which narrates how each letter of OM stands for different aspects of creation; Varaaha Upanishad, Canto 4, verse nos. 1.11—1.34, and Canto 5, verse no. 70; Shuk Rahasya Upanishad, verse no. 20 describes how OM is used for the purpose of ritualistic worship according to the Tantra philosophy involving Anga Nyas, Shandanga Nyas etc.; Akchu Upanishad, Canto 2, verse nos. 42-43 ½ describe how the three states of existence (waking, dreaming and deep sleep) and the three types of bodies (gross, subtle and causal) came into existence as manifestations of the three letters A, U and M of the word OM; Rudra Hridaya Upanishad, verse no. 38.

(b) Shukla Yajur Veda—Taarsar Upanishad, Canto 2, and Canto 3, verse nos. 1-7; Hans Upanishad, verse nos. 6-17.

(c) Sam Veda—Yogchudamani Upanishad verse no. 74-81, 85-88; Pranava Panishad which has only 13 verses dedicated to OM.

(d) Atharva Veda—Besides the present Sita Upanishad, the other Upanishads are the following—Ram Tapiniopanishad, canto 3, verse no.5-9; Prashna Upanishad, full Canto 5; Mundak Upanishad, Canto 2, section 2, verse no. 4,6; Mandukya Upanishad, verse no. 1, 8-12; Atharvashikha Upanishad; Nrisingh Purvatapini Upanishad, Canto 1, verse no. 8; Canto 2, verse nos. 2, 5; Canto 4, verse no. 3; Naradparivrajak Upanishad, Canto 8, verse nos. 1-7; Shandilya Upanishad, Canto 1, section 6, verse

nos. 3-4; Pashupata Brahm Upanishad, Canto 1, verse no. 4 (which equates OM with the 'Hans' Mantra).]

10. Sita is a personification of the Vedas as well as all the Gods and their divine qualities.

She pervades uniformly in all the worlds (or aspects of creation) that exist.

She possesses all the auspicious, righteous and noble virtues which make her famous and establishes her majestic glories in this world.

She is an embodiment of 'Dharma', i.e. she symbolises all the grand virtues that are collectively called Dharma, such as the virtues of nobility, righteousness, auspiciousness, propriety, probity, morality, ethical conduct and thought etc.

She is the Atma or soul of all living creatures as well as the essential quality that lends an integral value to all the things that exist in this world. [In other words, she symbolises the inherent worth of all things that exist. Just like a creature devoid of the soul is as good as dead, and anything without having any inherent value is of no importance in this world, Sita is also the only essence that gives this creation its worth, its dynamism, its life and its meaning.]

She is the one who governs the world by controlling the cause of everything as well as the deeds done by the creatures. Since the result of the deeds are dependent upon the deeds themselves, she can control the full cycle consisting of the cause of deeds, the process of doing the deeds, and the result of these deeds.

Depending upon the deeds done by the creature, they assume different forms, and all of these forms—whether they be humans, Gods, Rishis (seers and sages), Gandharvas (a type of junior God), Asurs and Rakshas (non-Gods and demons), Bhut, Pret and Pishach (ghosts, evil spirits and ogres) and all other forms in which the creatures can be imagined to exist in this creation—have Sita as their Atma or soul. In other words, she is the eternal soul or Atma of the entire animate as well as the inanimate world.

In spite of appearing to be different from the supreme Lord of creation known as Brahm, she is actually an integral and inseparable part of the former. [That is, though Brahm and his cosmic dynamic power or force called Shakti represented by Sita appear to be two distinct entities, but essentially they are the same Brahm playing two roles. One is the passive Brahm, and the other is the active Brahm respectively.] (10).

11. That Goddess (Sita) is a visible manifestation of the divine Shakti, the dynamic cosmic forces that control Nature. [The term 'Shakti' has been elaborately described in a note of verse no. 2.]

She has three mystical forms that are the dynamic forces that drive all the creatures and their activities in this world—Ichha Shakti¹ (the power of desire that impels and inspires a creature to do anything), Kriya Shakti² (the powers to perform deeds) and Gyan Shakti³ (the power of knowledge) (11).

[Note—¹The *Ichha Shakti* relates to the power of the mind to have or make wishes, desires, aspirations and the determination to fulfill them. It is longing for anything, wanting to possess it any cost, and then endeavouring to acquire it. It is a precursor to Karma Shakti. It is only when one wishes to do anything and has the determination to do it that he actually goes about doing anything at all, strives hard to get success in it, and then would like to enjoy the fruits of his labour. It is closely related to *Bhakti Yoga* inasmuch as when the *Ichha* (desires) are turned away from the world and hooked onto the search for the Truth and Reality with devotion and sincerity of purpose, it helps the man to turn away from the entrapping world of delusions and

artificial comforts towards the world of truth and reality, i.e. towards his true 'self', the pure consciousness. The word 'Bhakti' means to be sincerely committed and devoted to anything, any cause, any principle, any doctrine or any entity. In this case, the devotion is towards the supreme transcendental Truth and the absolute Reality, whether known as Brahm or as the Atma. Bhakti Yoga therefore means a devoted and committed approach that coordinates the desires and actions in such a way that they are diverted to realisation of the supreme Truth known as Brahm instead of the mortal and perishable world of delusions and entrapments.

Refer also to verse no. 12, 35.

²*Kriya Shakti* which refers to the power of the gross physical body to act as per wishes of the mind and intellect. It is the Kriya Shakti which enables the supreme Authority to carry out its wishes through the organs of the body by taking various actions and doing different deeds. It is the ability of the body to actually do the deeds or take the actions and bring them to fruition. It also represents the ability to enjoy the results of doing such deeds and actions taken by the creature. The word also refers to being active and enterprising and the opposite of being lethargic and indolent. It is the actual ability to carry out his plans to their successful completion, i.e. to do deeds, to take actions and enter into enterprise, because simply sitting and procrastinating endlessly wouldn't give success unless there is assiduous activity and diligent effort, no matter how wise a man is and how determined he might be. The body is prompted into taking action by the desires and aspirations originating in the mind and intellect complex. If these desires are world-centric, then our actions and deeds would be also world-centric and so would be the result. This is because every activity gathers its quality from the texture of the desire that has prompted a particular action or deed. So, when the desire is to enjoy the outside world and its sense objects, the deeds and actions become entrapping and the cause of all world related miseries. On the other hand, if the desires are auspicious and noble, the same deed and action would become an instrument for spiritual upliftment as well as liberation and deliverance. In this context, the term *Karma Yoga* would be to coordinate the effort of the body and the mind not towards fulfilling worldly aspirations that would be ensnaring and enslaving in the long run but to divert them towards the divine goal of spiritual liberation and deliverance. And the tool in this endeavour would be to have auspicious, noble and righteous desires, aspirations and wishes, collectively called the different Vasanas or Ichaas inherent in a man, instead of the worldly ones. Once the desires are purified and chastened, the activities and deeds to fulfill or accomplish those Vasanas or Ichaas are purified and chastened proportionately. At its height, the total renunciation of desires for enjoying anything related to the external world of sense organs and their respective objects is called 'Vairagya'. This Kriya Shakti is more developed in those people who have a predominance of the Raja Guna or the second category of three basic qualities that decide the habits, temperaments and nature of any man. The Raja Guna makes a man more inclined towards enjoying the sense objects of the world and remain engrossed in the activities related to the gross world.

Refer verse nos. 19-20,36.

³The *Gyan Shakti* is related to the stupendous powers and authority possessed by 'knowledge, wisdom, erudition, sagacity and enlightenment', and the instrument that implements this authority and power is the intellect. Gyan is empowerment, because without knowledge the mind and body would work like those of animals. Therefore, Gyan Shakti is the powers, potentials, authority, strength, respect and empowerment obtained as a result of acquisition of knowledge, wisdom, erudition, enlightenment, sagacity, scholarship and expertise in any subject. This Shakti represents the dynamic powers and potentials that are a natural accompaniment of these grand qualities. This is called Gyan Shakti simply because merely wish and determination wouldn't suffice if a person does not have the required knowledge and skill, the necessary expertise and level of wisdom required to accomplish his objectives successfully. In this context, *Gyan Yoga* would be to divert the diligence with which a man applies this

knowledge, wisdom, erudition and skills to acquire the objects of this material world and get acclaim and applause for his expertise, knowledge and wisdom to achieving success in uplifting himself and realising the ultimate goal and truth of this life and existence, and freeing himself from the clutches of delusions which have tied him down through numerous lives to find final liberation and deliverance for his soul. Gyan Yoga endeavours to channelise one's knowledge into auspicious avenues and inspire the creature to make efforts relying upon the knowledge and wisdom he possesses to bring about a union between the individual creature's soul and the cosmic Soul and Consciousness known as Brahm so that ultimate emancipation and salvation is obtained and the cycle of delusions, birth and death and their endless horrors are got rid of. Therefore, Gyan Yoga entails diligent study and pursuance of the Truth, turning inwards and upwards instead of outwards and downwards, to separate the non-truth from the truth like separating the grain from the chaff, and finally coming to grasp with the eclectic concept of 'truth and absolute reality' of the 'self and the Atma', of 'Brahm and Moksha (final and ultimate liberation, deliverance, emancipation and salvation)'.

Refer verse nos. 21-33.

Refer also to the *Ganapati Upanishad* of the Atharva Veda, verse no. 6. It is Chapter 25 of this volume.]

12. The Ichha Shakti reveals itself in three forms—Sri Devi¹ (the patron Goddess of 'Sri'—i.e. wealth, prosperity, opulence, majesty, fame, splendour and grandeur), Bhu Devi² (representing Mother Earth as well as the patron Goddess of earth, representing the power of Nature to create, sustain and destroy, because it is in the earth that all seeds germinate, all creatures are born, it is from earth that they extract their nourishment, and it is in the earth that they finally die and perish), and Neela Devi³ (representing the vast and endless sky which is regarded as being the nearest equivalent to Brahm as well as being the patron Goddess of the blue sky representing the entire cosmos and the heaven above the earth; the sky is the cosmic bowl symbolising Mother Nature's womb because it is in the bowl of the sky that the entire creation was conceived, it developed and grew, lives, is sustained, and would finally find its resting place).

She is honoured by the epithet of 'Bhadraa', which literally means one who is gentle, genteel, civilised, cultured, soft-spoken, well-mannered, having charming demeanours, and all the auspicious and noble virtues and grand characteristics that are expected from a soul having an exalted stature. In other words, Sita possesses and displays all the great characteristics and refined qualities that make her entitled to be honoured by the title of 'Bhadraa'.

She embodies all the auspicious virtues that have a good effect or positive influence on a creature in this world.

She has revealed herself as the Sun, the Moon and the Fire (12).

[Note—¹Refer verse no. 16.

²Refer verse no. 17.

³Refer verse no. 18.]

13. [This verse stresses that the basic dynamic force and active energy present in all kinds of food that nourish and sustain this creation in its entirety is known as the Sita principle.]

As the Moon, she nourishes all the medicinal herbs (which are said to flourish and derive all their invigorating and healing properties under the rays of the moon).

It is she who has revealed herself as the entire vegetable kingdom, including the Kalpa Tree¹, the fruits, the flowers, the creepers and the shrubs, and other medicinal plants.

She grants the Gods with the privilege of drinking 'Soma' (the sanctified drink used during religious fire sacrifices, and is regarded as the drink of eternity and blissfulness that is drunk by the Gods and stored by them in the heavenly pitcher called the Moon).

In the form of basic or staple food such as water (the Amrit, literally meaning the 'nectar of life'), cereals and grass, she provides nourishment and contentedness to the Gods, the humans and the animals respectively. [The food for the Gods is Amrit; for the humans it is cereals and pulses etc. that are derived from the plants; and for the animals such as cow etc. it is the grass that is their staple food.] (13).

[Note—¹*Kalpa Tree*—It is the evergreen tree of the Gods. It is said to possess mystical powers and can bestow all that is desired by an aspirant or seeker. The Botanical name of the Kalpa Tree is *Adansonis Digitta*; it is also called 'Parijat' meaning 'descended from the sea', and 'Harsingar' meaning 'the decoration of the Gods, especially Lord Hari'. The English name of it is Coral Jasmine; in Latin it is called *Nyctanthes Arbor Tristis* (*nyctanthes* means the night flower, while *arbor tristis* means the sad tree). Its flower is said to be worn by the Gods. The orange colour of the flower is used for dyeing silk and cotton, a practice originating with Buddhist monks. According to legends, it was produced during the churning of the ocean for the search of Amrit, or the ambrosia of eternity and bliss, by the Demons and the Gods. The king of the Gods, Indra, took it away and planted it in his capital at Amravati. According to another legend (in Vishnu Puran), a princess named Parijat fell in love with the Sun God and followed him throughout the day. As night approached, the Sun became disenchanted with her and did not like her overtures any longer. Disillusioned and despaired, she died, and a tree grew up from the ashes at the site of her funeral pyre. The flower of this tree could not bear the sight of the Sun, and therefore it blooms during the night, and with the crack of dawn, it falls and dies.]

14. It is Sita principle that provides light to the Sun as well as the rest of the creation.

All the various fractions of time—such as Nimesh (the time taken for the eyes to blink), Ghari (twenty four minutes), eight Prahars (1 Prahar = 3 hours; the whole day of eight sections), the day and the night, a month, a part or phase (such as the waxing and the waning phases of the moon marking the fortnight fraction of a whole month), the seasons, a half-year period called Ayan, and Samwatsar (one full year)—all of them are completely pervaded by the Sita principle. In other words, there is no time when she is not present in this creation, whether it is in the past, or in the present or in the future.

It is she who enables a man to live up to a hundred years (i.e. she helps the man to lead a healthy and comfortable life; she provides the man with all sorts of nutrients in the form of food, and medicinal herbs that take care of his health problems). She 'lights' his days (i.e. she illuminates the life of a living being; she infuses life and vitality in the creature; she controls the living aspect of creation; she bestows knowledge and wisdom to the living being because the term 'light' is a metaphor for knowledge and enlightenment).

All measurements of time—immediate till the infinite—are the various spokes in the wheel of time, and since she pervades in each fractional second of it, the entire gamut of creation is a manifestation of Sita and the dynamic principles of the supreme Brahm she represents. She lights up or gives meaning to all the fractions of time (14).

15. Residing literally as the ‘fire element’ (heat, energy, dynamism, vitality and stamina) that is inherently present inside all the living creatures and revealed in the form of ‘thirst and hunger’ (for water and food respectively), Sita represents the basic signs of life and its fundamental requirements (of water and food).

As the fire of the sacrifice, she becomes the ‘mouth’ of the Gods (because all the offerings that are put in the sacrificial fire are said to be consumed by this fire, and it is believed that the food offered to this sacrificial fire is deemed to be eaten by the Gods).

For the forests and the countless plants and trees (i.e. the herbs having medicinal as well as nutritional value) that grow inside it, she is the element of warmth and cool that is so necessary for their growth and development¹.

She resides eternally in the wood as its latent fire. This fire element is an intrinsic part of the wood, soaking it from all sides, but is hidden from view till the time the wood is lighted when this fire element reveals itself spontaneously² (15).

[Note—¹‘Warmth’ indicates the presence of life in the form of the fire element, and ‘cool’ indicates the presence of the water element. Both these elements are fundamental to life on earth. In other words, Sita represents those dynamic forces of Nature that enable verdant life to prosper in the dense forests. Without this element, all forms of vegetation would have been non-existent on earth. Since forests are the ‘lungs’ of earth and the habitat of wild life, Sita symbolises that aspect of Nature that not only fosters life in all its colourful splendour in the form of myriad plants and animals that populate the dense forests but also takes care of their growth, survival and nourishment.

²Sita represents the dynamic energy and vitality of Brahm in the form of the ‘fire element’. Sita is that secret but powerful life-giving force of creation that lies hidden behind the external façade of the visible form that this creation has taken, but without which the latter would be worthless. The instance of the firewood is cited here to clarify this concept. The ‘firewood’ has its importance because it is universally employed by the creature to provide him with his requirement of ‘fire and heat’. Otherwise, what is the difference between this and other forms of ordinary wood; why is a particular wood described as ‘firewood’? But the point is that from the outside all wood look alike. No one can say that the scorching fire is present inside a wood that is so harmless and cool on the surface.

Taken in a holistic manner, this instance also means that Sita is the pure consciousness that lives hidden in the body of the creature much like the fire hidden inside the firewood. This ‘consciousness’ is the factor that is of any worth as far as the creature and the living world is concerned just like the fire that makes the ordinary wood worthwhile as ‘fire-wood’. Again, just like the fire not being visible from the surface of the firewood, this consciousness is also not visible from the outside. This consciousness is a microcosmic form of the cosmic Consciousness known as Brahm just like the fire hidden in a small piece of wood is similar to the raging fire of the blast furnace of a steel factory, or the energy and heat that electricity embodies in itself.]

16. As Sridevi (see verse no. 12), Sita reveals herself as Goddess Laxmi (who is the patron Goddess of material well being, wealth, property, prosperity, majesty, opulence, fame and splendour) in order to provide the basic requirements of sustenance, protection and comfort to the creatures in this world. [It is because all the creatures require a minimum amount of wealth and material comfort to be able to lead a happy, contented, independent, dignified, decent, healthy and comfortable life in this world.]

As such, Sita is known by the names of Sri, Laxmi and Lakshyamaan. [That is, it is the Sita principle that has been called by various names such as Sri meaning majesty, magnificence, glory and fame, as Laxmi meaning material wealth and prosperity, and as Lakshyaman referring to these two qualities in their manifold forms because the word 'Lakshya' means a hundred thousand, and the word 'maan' means a measurement.] (16).

17. As Bhudevi (see verse no. 12), Sita represents the entire earth with all its seven continents and seas as well as the all the fourteen Bhuvans represented by the words 'Bhu' etc.¹

She is the divine authority and the cosmic dynamic force of creation that not only reveals in the form of these worlds that act as bases or foundations for the rest of the creation, but supports and sustains these worlds themselves from within and without.

She is the divine Goddess who has revealed herself as Pranav, the all-pervading ethereal sound that fills the entire cosmos and is represented by the divine word OM which is said to be the root cause for this creation coming into being. The Pranav is also a synonym of Brahm that is the supreme transcendental Consciousness. [In other words, Sita is that principle dynamic force of Nature which not only conceived this world but also nourished it in its cosmic womb once it came into being. She represents the dynamic powers of the Supreme Being, i.e. Brahm, to create, nourish and develop something. Her existential dimensions are measured in cosmic terms as Pranav which stands for the infinite and fathomless bowls of creation filled with ether where the cosmic sound of OM was generated. This is the symbolic womb of creation. And hence, Sita is Mother Nature personified.] (17).

[Note—¹The *fourteen Bhuvans* are the following fourteen Lokas or worlds according to the Padma Puran—(A) The upper worlds called Urdhava Lokas are seven in number— (i) Bhu, (ii) Bhuvha, (iii) Swaha, (iv) Maha, (v) Janaha, (vi) Tapaha, and (vii) Satyam. (B) The seven nether worlds called Adha Loka— (i) Atal, (ii) Vital, (iii) Satal, (iv) Rasatal, (v) Talatal, (vi) Mahatal, and (vii) Patal. The total number of Lokas is, therefore, fourteen.

According to Brahmaand Puran (BP) and Vaaman Puran (VP) there are the following lokas-- 'Bhu' (भूः) or earth [BP-3,4,2-18]; 'Bhuvaha' (भुवः) or the space between the earth and the heaven [BP-3,4,2-19]; 'Swaha' (स्वः) or the heavens known as Brahma's abode; the space beyond the earth's atmosphere; cosmic wind represented by the solar wind blows here [BP-3,4,2-20]; 'Maha' (महः) or the world created by Brahma pronouncing the divine word Maha meaning the great heaven or the outer space; it is believed that great sages and seers stay here; it is 1000 Yojans or appx. 8000 miles away from the Swaha Loka [BP-3,4,2-21; VP-52,21-22]; 'Janaha' (जनः), so called because it was to be inhabited by the humans and the cows [BP-3,4,2-22; VP-52, 22]; 'Tapaha' (तपः) or the Loka where great amount of austerity and penances are done; it is said to be 60 million Yojans or appx. 60 x 8 million miles away from the Janaha Loka [BP-3,4,2-24; VP-52, 23]; and 'Satyam' (सत्यम्) or the truthful heaven where the supreme Lord has his abode; it is 300 million Yojans or appx. 300 x 8 million miles beyond the Tapaha Loka [BP-3,4,2-25; VP-52, 24].

According to some legends, the distances of various mythological Lokas from the earth or Bhu Loka is as follows—the Bhuvha Loka is situated at a distance of 25 Lakh Yojans from earth, the Swaha Loka is situated at a distance of 50 Lakh Yojans from earth, the Maharloka is situated at a distance of 1 Crore Yojans from earth, the Jana Loka is situated at a distance of 2 Crore Yojans from earth, the Tapa Loka is situated at a distance of 4 Crore Yojans from earth, and the Satya Loka is situated at a distance of 8 Crore Yojans from earth.

1 Yojan = a distance of 4, 8 and 16 miles according to different calculations. It is usually taken to be equivalent to 8 miles.

1 Lakh = one hundred thousand (1,00,000). 1 Crore = ten Lakhs (10 x 1,00,000).]

18. As Neela Devi (see verse no. 12), she reveals herself as the stupendous and powerful forces of cosmic energy manifested occasionally as the blue-tinged dazzling streak of lightening that criss-crosses across the sky¹.

This dynamic energy of creation is the spark that sustains life in all its forms. It is this energy that is surely hidden in a secret and imperceptible form in the countless herbs that give the latter their curative and healing powers (refer verse no. 13, 15) as well as in the body of all creatures in this world that enables their bodies to live and act normally and show all the signs of strength, stamina, vigour and vitality (refer verse no. 15)² (18).

[Note—¹This refers to the streak of 'lightening' that stabs across the sky during thunder-storms. It may also refer to the scintillating display of cosmic light called the 'Northern Lights' that are observed during the night in the north pole of the earth. The word 'Neel' means the colour blue, violet or indigo. Since the sky has this colour in various combinations, the word Neel refers to the cosmic form of Sita as a Devi or Goddess that personifies the dynamic powers, the astounding abilities and the stupendous strength of the 'electric' that is personified as the lightening in the sky. This 'electric' is a vivid and most potent form of the immense force and punch which Brahm possesses. It is dazzlingly blind; its splendour is indefinable and indescribable. Hence, the 'Neel Devi' has manifested her cosmic form as the lightening that streaks across the sky. Therefore, this lightening is nothing but a manifested form of the dynamic and almighty Shakti of Brahm.

²The hidden but magical power of the herbs to cure diseases, rejuvenate the body and inject vigour and stamina to the dilapidated creature is actually the dynamic power of Brahm to nourish and sustain creation on display. This dynamic power of Brahm is called Sita in this Upanishad.

It is the same dynamic and almighty power of Brahm with its stupendous strength and ability that injects life in the otherwise lifeless body of the creature. This power is known as the 'consciousness' that resides in the body as the creature's Atma. This Atma therefore has the same dazzle, the same splendour and the same life-sustaining properties as the electric and the herbs respectively.]

19. Sita has revealed herself as the primordial, the primary, the original and the fundamental dynamic force of creation (Nature) which is called the 'Aadya Shakti'.

This 'Aadya Shakti' sustains life in all spheres of creation, and literally supports life from below by acting as its base, foundation and prop.

Therefore, without this Aadya Shakti the edifice of creation would not have come into being in the first place, and would have collapsed and vanished without its support. The creation would not be in existence.

She therefore is the universal 'Aadya Shakti'—meaning the primordial, the primary and the fundamental energy, vitality, vigour, strength, power, authority and dynamism of creation that represents the universal and mystical life-creating and life-sustaining force and power of Brahm.

It is this magnificent ability and power of Shakti that keeps even a frog that remains submerged in water to remain alive mysteriously.

It is this Shakti that acts as the universal buoy and support of creation in the form of 'water'. [This refers to the fact that water is the quintessential life-supporting factor of creation. This is why water is called the 'Amrit' or nectar of life. No life is imaginable without water.]

It is this water (such as that of the ocean) that helps the land mass of earth to remain afloat inspite of its immense mass and density. [The earth is visualised here as floating on the water of the ocean. Had there been no ocean, the earth would have sunk to the nether world. This depiction of Shakti as the water of the ocean that keeps afloat the earth that harbours all forms of life as a metaphor for the stupendous ability of the powers of the Supreme Being to support the creation is a remarkable imagery of the sage who elucidated this Upanishad.] (19).

[Note—In this verse, the Aadya Shakti or the primordial force of Nature that formed the foundation of creation is shown as being ‘water’. This is a very scientific observation because modern science has also proved that water is the first requirement for life to be tenable anywhere in the universe. Scientists search for traces of water on distant planets as a sure sign of life even in its most primitive form.]

20. The supreme transcendental Lord’s ability to ‘do’ something, and to effectively carry out his mandates successfully to completion, is called the Lord’s ‘Kriya Shakti’. This power of Brahm is manifested in the divine form of Sita. In other words, Sita represents Brahm’s dynamic aspect that translates into action and deeds the wishes of Brahm. Sita represents the Lord’s stupendous ability to act and do anything that he wishes to do. In other words, what Brahm does is actually done by Sita.

When the Lord decided to initiate this creation, his latent dynamic powers, having astounding potentials to create, were first revealed in the form of Naad which was the primary sound that emerged from his mouth. It is from this Naad that Bindu¹ was produced, and from the latter was produced OM which is the ethereal sound that filled the entire cosmos with energetic vibrations. [This can be visualised in a simple manner. When Brahm decided to start creation, he opened his mouth, perhaps to yawn or to express his desire. He probably uttered the first vowel sound of ‘A’ as pronounced in the word *along*, which was prolonged into the long vowel sound of ‘Aa’ as in the word *after*. This is like a man yawning—he wakes up from sleep and yawns to signify the start of another day in life. So, the Supreme Being opened his mouth and produced the first sound to indicate a new beginning or the onset of a new dawn. Just like the first vowel sound of ‘A’ and its elongated partner ‘Aa’ are the basic sounds in the language which evolved gradually with more vowel sounds and consonants coming into being in due course, this instance is used as an analogy to describe what happened next in the process of creation. The first sound produced by the Lord indicated his desire to ‘do’ something—to create. This desire of the Lord expressed in the form of the first sound acted as the seed or the root around which the tree of creation grew. Just like a ripple spreads in waves on the calm surface of the water, this desire revealed its self as the sound grew, developed and spread to all the corners of the cosmic ether. It was like a muffled distant rumble of a train or the thunder of the cloud deep in its bowls that reverberates and echoes. Sound produces energy, and the cosmic sound produced energy of cosmic (i.e. huge, immense and measureless) proportions. This was the sound conceptualised as the word OM. Any sound has a source, a Bindu or point. It is from here that the sound waves radiate in all the directions. The medium for its spread was ether.]

Beyond this OM (i.e. beyond the creation that is filled with the vibrations of ether that produce sound; here meaning the lower heavens where the Gods and Goddesses reside) is the symbolic mountain called Vaikhanaś² which represents/symbolises Lord Ram. That mountain has many branches or peaks symbolically representing Gyan (knowledge, wisdom, erudition and enlightenment)

and Karma (the philosophy of deeds), and many other such metaphysical concepts (20).

[Note—¹There is an Upanishad called 'Naad Bindu' belonging to the Rig Veda tradition which elaborately describes this concepts. It is chapter 3 of this humble author's anthology of the Upanishads of the Rig Veda publishes separately.

²The word *Vaikhanas* means a hermit or a sage who lives in the forest. Such people are deeply contemplative, self-restrained and meditative by nature; they are erudite, sagacious and enlightened as well as renunciate par-excellence. The word implies that the supreme Brahm from whom the whole creation has come forth remains totally aloof and dispassionate towards the creation that is represented by the Pranav or OM. Upanishads that deal with OM explain how OM symbolises the whole gamut of creation—its beginning, its development and its conclusion. The creation that has a 'beginning', that changes because it develops, and which 'ends' is not the eternal Brahm that has neither any beginning, that is ever constant, and that is imperishable and never comes to an end.

Therefore, wise and enlightened ascetics aim for this eternal and imperishable form of Brahm that is stable and unchanging. It is this aspect of Brahm that is regarded as the Absolute Truth of creation, and not that aspect that has a beginning, that changes and that ends.

The reference to the higher heaven is a symbolic way of saying that the Vaikhanas or ascetic lives in a higher sublime state of spiritual existence that is much above the gross and mundane aspect of the mortal world.

This creation is a product of Maya of Brahm—that is, it is the delusion that Brahm has created. The Vaikhanas remains free from such delusions as he has become self and Brahm realised. This state of enlightened existence is a personified form of Gyan; it is attainable only as a result of knowledge, wisdom, erudition and enlightenment.

In the context of the present verse Lord Ram is cited as the Vaikhanas to stress the point that the person known as Ram who ruled over the kingdom of Ayodhya as a king, who married Sita, and who fought the war of Lanka to liberate his wife Sita from the clutches of the demon king Ravana is not the 'Ram' whom the Upanishads are talking about, or the 'Ram' who is Brahm personified. The 'Ram' as a king around whom the story of Ramayana is built is the grosser aspect of the sublime Reality known as Brahm, the Supreme Being.

The 'Ram' that is lauded by the Upanishads and whose name is regarded universally as the 'Tarak Mantra' or the divine formula that can provide the creature with liberation and deliverance from the snare of this deluding material world is a different Ram. He is the supreme Vaikhanas—the Lord who is most enlightened and self-realised, who lives in this world with a sense of heightened renunciation, detachment and dispassion, and who is extremely wise and enlightened as well as self-realised. This Ram is no ordinary king, but Brahm personified.

Therefore, Sita, who was his consort, also was no ordinary queen. She was the Shakti of the Supreme Being personified in her form. It is very important to understand the difference between the gross forms of both Ram and Sita vis-à-vis their sublime and divine forms as Brahm and Shakti respectively.

The allegory of the Vaikhanas Mountain to represent Ram has great symbolism. The 'mountain' has high peaks which represent high level of spiritual energy, enlightened consciousness, and high intensity of auspicious virtues. The 'peak' is a metaphor for the state of existence when knowledge, wisdom, erudition and self-realisation has 'peaked' or touched the highest level possible. The peak of a mountain is like the apex of a triangle representing the triad of creation. At one point of the base of the symbolic triangle is the creature, at the other point is the Maya represented by Sita, and at the apex of the triangle is Brahm.

The Vaikhanas mountain known as 'Ram' is also like the triangle—an imagery to show that Lord Ram encompasses the entire gamut of creation. He is Jiva or the living being, he is Maya, and he is Brahm. There is nothing surprising in this conclusion or absurdity in its imagery—because everything in this creation is a revelation of Brahm. The Jiva is the gross worldly form of the pure cosmic Consciousness known as Brahm; the Maya is the dynamism of Brahm revealed as Sita, and the pure cosmic Consciousness itself is known as Ram.]

21. [Verse nos. 21-33 deal with the 'Gyan' aspect of Brahm.]

On that mountain top (i.e. on the summit of the mountain known as Vaikhanas) is the primary body of knowledge that is holistic and all inclusive in nature. It has taken three forms —Rig, Sam and Yajur Vedas (21).

[Note—This verse implies that only such persons who have reached the highest level of realisation can have access to Gyan or knowledge and wisdom that is represented by the Vedas.]

22. Depending upon the function and usage, that same unitary body of universal knowledge has been divided into four segments, called the Rig, Sam, Yajur and Atharva respectively (22).

23. All the Vedas are based on 'Yagya' (fire sacrifices), but depending upon their basic structure, they are classified into three—Rig, Sam and Yajur. The fourth, called the Atharva Veda, is basically an extract or essence or juice of all these other three Vedas (23).

[Note—The fundamental truth is always one; there is no duality in it. Knowledge is one composite mass; any classification or division of that one whole body of knowledge is artificial and man-made, but it is done only to facilitate learning, understanding, analysis and usage.

For example 'science' is one whole body of knowledge that describes the regulatory forces of Nature, but it has been divided and classified into umpteen number of branches—viz. zoology, geology, botany, astronomy, astrology, chemistry, physics, geography etc. Each of these branches have been further sub-divided into sub-branches—e.g. in chemistry we have organic, inorganic, physical etc.

Likewise, the vast repository of metaphysical knowledge enshrined in the Vedas was segregated into four distinct volumes by ancient sages to facilitate their learning and usage. Briefly, those hymns which were used as invocational prayers offered to Gods representing the different forces of Nature were collected and collected under the name of the Rig Veda. Those that were in prose form and used during fire sacrifices were culled and collected under the Yajur Veda. Those hymns that needed to be sung melodiously during fire sacrifices were grouped under the Sam Veda. Later on sage Veda Vyas extracted certain hymns from each of these Vedas and grouped them under the Atharva Veda; these were used for other religious rituals as well besides the fire sacrifices, and provided spiritual solace to the people of the world by shunning complicated discourses of the Sam and Yajur Vedas as well as the proliferation of countless Gods of the Rig Veda.]

24-25 Depending upon the type of incantation, the hymns have been further divided into a number of branches—the Rig Veda has twenty one branches [24], the Yajur Veda has one hundred and nine branches, the Sam Veda has one thousands branches, and the Atharva Veda has five branches [25] (24-25).

26. In the Vedas, the philosophy or school of thought that pertains to the Vaikhanas¹ (i.e. that spiritual and metaphysical philosophy that focuses on renunciation of and detachment from Maya-created delusory and artificial world, and instead focus on the supreme Reality that is hidden behind the illusionary façade of ‘false reality’; here Lord Ram is treated as the universal supreme Vaikhanas—see verse no. 20) has been given the first place, and hence erudite and wise sages and seers concentrate their attention and focus their mind on it. It is called the supreme knowledge that is undisputable, irrefutable and beyond doubt as it enlightens an aspirant about the ultimate Absolute Truth of creation. This knowledge comes with intense research and concentration of the mind-intellect complex and its ancillary unit known as the sub-conscious or Chitta.

The power of the mind-intellect and the sub-conscious that enabled the ancient sages and seers who had renounced all aspects of the delusory world and focused their attention on the sublime knowledge pertaining to the cosmic Truth (known as Brahm or the cosmic Consciousness) that is obtained by such intense focusing of the mind and the sub-conscious is known as the ‘Chitta Shakti’. Like any other achievements in this world, this knowledge of the ‘supreme’ was known as ‘enlightenment’, and it was powered by the Chitta Shakti² (26).

[Note—¹*Vaikhanas*—The knowledge that fills the spiritual aspirant with total renunciation of this material world and its deluding charms by teaching him about the falsehood of this artificial world, about his own true self being the pure consciousness that is wise, enlightened, eternal and blissful, and about the supreme Consciousness that is the cause of this creation, along with the true meaning of liberation, deliverance, salvation and emancipation, is called Vaikhanas knowledge. It is the main thrust of the Vedas to enlighten the creature about the Truth, and this intention of these holy texts is carried out by the Upanishads which are an inseparable part of the Vedas and enshrine their pristine philosophy.

²*Chitta Shakti*—The word *Chitta* refers to the faculty of reasoning and thought of the mind-intellect complex; the ability to pay attention and fix concentration upon a chosen subject which leads to understanding and a sharp memory; the conscious intellect as well as the sub-conscious mind; the powers of discrimination, understanding, paying attention, memorizing, and the ability to recollect and store information that are characteristics of the conscious powers exhibited by the mind and intellect apparatus; the sub-conscious and memory, along with its power to remember anything as depicted when the man involuntarily reacts to any given situation depending upon his memory-bank; the ability to concentrate and focus the mind on anything. (The concept has been elaborately described in Chandogya Upanishad, canto 7, section 5; Sanayso-panishad, canto 2, verse no.42-46).

The word *Shakti* means power and authority, potentials and energy that any entity possesses. Therefore, the combined stupendous powers exhibited by ‘Chitta’ are called Chitta Shakti.

Chitta is an integral *component of the Antahakaran* or the ‘inner self’ of a living being. This has been described in—(a) Krishna Yajur Veda’s Shaarirako Upanishad of, verse no. 4; Tejobindu Upanishad, Canto 5, verse nos. 101-102; (b) Shukla Yajur Veda’s Paingal Upanishad, Canto 1, verse no. 9, Canto 2, verse no. 3; Trishikhi Brahmin Upanishad, Canto 1, verse no. 6; Subalo-panishad, Canto 9, verse no. 14.]

27-28 The ancient sages have said that the Vedas have six limbs or branches. They are the following—Kalpa (a sacred performance; Vedic rituals), Vyakaran (grammar), Shiksha (education; the fundamental tents and knowledge that the Vedas expound), Nirukta (unspoken knowledge, or implied knowledge contained in the Vedic cannons; exposition of the Vedas; etymological explanation of a word or hymn) Jyotish

(astrology; astronomy, mathematical calculations), and Chanda (style of poetic composition) [27].

They have three supplementary body of knowledge that are complementary to the main text—viz. Ayan (Vedanta; Upanishad), Mimansa (thorough discussion and debate to investigate a particular point of Hindu philosophy), and Nyaya (Vedic law and jurisprudence). Those who are steady and diligent in Dharma (righteousness, ethics and proper way of conduct and thought) regard the study of the Vedas incomplete if it does not include the study of all their branches or limbs and supplementary body of knowledge alongside them [28] (27-28).

29-31 Ancient wise sages and seers had, from time to time, elucidated upon the Vedic tenets and philosophy by composing their own essays and commentaries on them, called 'Nibandh', which were basically detailed exposition explaining the particular aspect of the Veda so that the people can easily understand them and mould their personal lives according to their teaching. Consequentially, the life and behaviour of the society at large became sanctified, auspicious and righteous in a wholesome form when it conformed to the high standards of ethical and righteous behaviour and thought as envisioned in the Vedas.

These wise, erudite and enlightened sages and seers, have, from time to time, and depending upon circumstances and needs of the society, added pristine philosophy and their own views and commentaries to further enrich the scriptures, called the various 'Dharma Shastras', which had come down to them from the hoary past. [The word 'Dharma Shastra' itself means those scriptures that establish Dharma.]

These sages and seers produced or composed the five 'Up-Vedas', or the subsidiary Vedas—viz. Itihas and Purans (mythological histories of the ancients) [29], Vastu Veda (the science of building and construction; architecture and its relevant subjects), Dhanur Veda (archery and the science of warfare), Gandharva Veda (the science of music, singing and dancing as well as the skills needed for theatrical performance), and Ayurveda (the science of medicinal herbs) [30].

Besides these, they created the treatises on subjects such as Danda and Niti (law of punishment according to sin or crime, and the law governing morality and ethics), Varta (the art of conversation, negotiation and debate), Vidya (general knowledge and skills), and the science and art of controlling the Vayu or the vital winds (i.e. Yoga which is the science of controlling the vital winds in the body by means of meditative exercise that helps one to establish oneself in the supreme state of existence, or attain a high pedestal of existence that is much above the humdrum life of the world).

These twenty-one branches or limbs of knowledge are deemed to be self-illuminating in nature; they enrich and enlighten the life of a living being in this world [31] (29-31).

32. In some hoary, ancient past, Lord Vishnu's sweet words revealed themselves as the three Vedas in the heart of one sage named Vaikhanas¹ (32).

[Note—¹Earlier, in verse no. 20 it has been said that Lord Ram is the supreme Vaikhanas or the greatest soul who has the highest virtues of renunciation and detachment from this material world. He remains totally disassociated from this world inspite of having lived as a great ruler of the kingdom of Ayodhya and the slayer of the demon Ravana, and around whom the legendary epic Ramayan has been woven. In fact, Lord Ram is an incarnation of Lord Vishnu, the Supreme Being who is also known as the Viraat Purush because of his macrocosmic all-pervading and all-

encompassing existence. Vishnu had to come down on earth in order to eliminate evil forces represented by the demons, and to restore law and order as envisioned in the scriptures and to uphold their sanctity.

Now in the present verse a Vaikhanas is mentioned in whose heart the Vedas emerged. It is well established that the Vedas were created by Brahma, the cosmic creator. This Brahma emerged, sitting atop a lotus, from the navel of the Viraat Purush in his manifestation as Vishnu while the latter reclined on the bedstead made of the cosmic serpent known as Sheshnath. Brahma is one of the Gods of the Trinity, the others being Vishnu and Shiva. So, the Vaikhanas referred to here is most probably Brahma, the creator. When anyone speaks of something as thoughtful and having such an immense philosophical dimension as the Vedas, it is his heart that gets directly involved. Anything spoken from the deep recesses of the heart has firmness of conviction and faith. Speaking from the heart is a metaphor for sincerity, honesty, commitment and faith in what is being said. So, what the Vedas say is the truth which Vishnu wished to reveal.

Again, it might be that there was some ancient sage with the name of Vaikhanas. If this is the case then most probably he was sage Kapil. This is because the next verse no. 33 says that this sage named Vaikhanas revealed this great body of knowledge with which he was enlightened by the grace of Lord Vishnu in the form of Sankhya Shastra.]

33. These divine nectar-like words that sprouted in the heart of sage Vaikhanas by the inspiration of Lord Vishnu contained the primary body of knowledge which this sage revealed in the form of Sankhya Shastra (which is one of the six branches of Hindu philosophy)¹.

Listen about it from me (i.e. from Prajapati Brahma who is narrating this Upanishad to the Gods; refer verse no. 1-2).

The power and authority to perform some deed or take any action, the energy and the ability to do this and that, the stamina and strength to act—this dynamic aspect of the supreme Brahm is the latter's 'Shakti'. It is called 'Kriya Shakti' of the supreme Lord because it helps him in carrying out his mandate, in doing something such as the creation of this world and its subsequent regulation. This Kriya Shakti helps the Lord to act independently on his own. It is the stupendous and majestic and dynamic power of the eternal, truthful, supreme, transcendental enigmatic Brahma [In other words, Shakti is literally the Lord's stupendous cosmic energy, authority and power that enable Brahm to do what he wishes to do, to give effect to his wishes, to bring to fruition his desires. Brahm is neutral in his own right, but he utilises the services of his dynamic Shakti to give effect to his wishes. It was this cosmic Shakti that has helped Brahm to create, to sustain and to conclude this creation from time to time.

So the dynamic energy of Brahm revealed in the form of his Shakti is known as Sita according to this Upanishad. It is Sita who carries out the divine wishes of Brahm. When the latter decided to reveal himself as the Viraat Purush, the Shakti of Brahm known as the Sita principle became Prakriti or Mother Nature. When this Viraat Purush was named Vishnu, the same Sita principle became Laxmi. And when Vishnu incarnated as Lord Ram, the same Sita principle manifested itself as Sita, the consort of Ram. In fact, Brahm and his Shakti cannot be separated from one another just like it is not possible to separate fire from firewood, or water from an ocean. While Brahm represents the primary Authority of creation that acts neutrally and remains passive in order to maintain its objectivity and neutrality, Sita is the dynamic principle of the same Authority that is active and energetic in nature. After all, Brahm is the supreme Lord of creation, and if he has to exercise control and maintain

discipline in his creation he must have corresponding power and strength to do so. The latter is Shakti in the form of Sita.] (33).

[Note—¹*Sankhya Shastra*—References—(i) Krishna Yajur Veda's Varaha Upanishad, Canto 2, verse no. 55, and Canto 4, verse no. 35; Shwetashwatar Upanishad, Canto 5-6. (ii) Shukla Yajur Veda's Brihad Aranyak Upanishad, Canto 2, Brahmin 5, verse no. 14; Mantriko-panishad, verse no. 14.

This is one of the six great schools of Indian philosophy. It was first propounded by sage Kapil as 'Sankhya Sutras'. [Refer Bhagwata 3/25-33, and Canto 5-6 of Shwetashwatar Upanishad of the Krishna Yajur Veda tradition.]

Sage Kapil was the celebrated sage who is regarded as the fifth incarnation of Lord Vishnu (Bhagavata, 1/3; 3/24). He is compared to Lord Krishna in Bhagavata (10/26). He was the brother-in-law of sage Vashistha, being the brother of his wife Arundhati, and the only son of sage Kardama and his wife Devahuti. He taught even his mother spiritual wisdom in Bhagavata, and hence this part of this scripture is called 'Kapil Gita' in which the sage has expounded upon the philosophies of Sankhya Shastra, Ashtanga Yoga (the eight-fold path of Yoga) and Bhakti-yoga (the path of devotion for and submission to the Lord) (3/25-33).

Sage Kapil is however renowned for one of the six schools of Indian philosophies known as Sankhya Shastra.

The word *Shastra* means any body of knowledge which has been deeply researched and then systematically codified and made useful in a meaningful way.

The word *Sankhya*, according to some scholars, refers to the 'number' or 'numeral' that it refers to, because it says that there are twenty five elements or 'Tattwas' in creation. However, there are some others who assert that it refers to 'Gyan' or acquisition of truthful knowledge of the reality behind the façade of illusions. It stresses on Gyan or truthful knowledge as the only path leading to liberation and deliverance of the soul from this world, and its attaining final emancipation and salvation riding on the boat of knowledge.

Therefore, the combined word *Sankhya Shastra* refers to the philosophy that endeavours to unravel the great secrets of creation based on sound knowledge and rational logic. It has six chapters and contains five hundred twenty six Sutras or keys or codes that unlock the profound treasure of knowledge pertaining to who the creature actually is, how has he come to be what he is at present, and how he can be freed from this vicious cycle of birth and death. Only when one understands the beginning can he understand the end, because this so-called 'beginning' has its origin in the previous 'end'. That is, only after something ends and carries forward certain baggage with it does a new beginning can start. After all, this is based on the fundamental tenet of Nature that 'nothing can start from nothing; there must be something from which anything starts'. That is why we say that there cannot be smoke without a fire.

Now, if one goes back to the 'very beginning of creation' when there wasn't any prior life from which any new life could be born on the principles of 'deeds and their consequences', i.e. the theory that when a creature does any deed in this life then he would have to take a new birth to suffer the consequences of these deeds because they cannot be wished away, the question arises 'what started this creation then?' The Sankhya Shastra endeavours to answer precisely this question in a very logical and systematic manner.

This secret was revealed, according to the of the Krishna Yajur Veda tradition's Shwetashwatar Upanishad, 5/2, to sage and seer Kapil who was the first person to whom the esoteric secrets of creation were unraveled by the Supreme Being (Brahm) himself. In fact, the whole of Cantos 5 and 6 of this Upanishad are dedicated to this philosophy of Sankhya Shastra.

It was propagated by Kapil's disciple Aasuri and then by the latter's disciple Pankashika.

This philosophy accepts only three basic yardsticks or valid sources of knowledge—viz. ‘Pratakshya’ or direct perception or cognition of anything such as directly seeing a thing for one’s self, ‘Anumaan’ or implied knowledge or deduction of anything entails inference of something based on some other first hand knowledge, and ‘Shabda’ or the word affirming this knowledge which is like a testimony of some witness or any dependable source.

So this philosophy adopts the approach of reaching the unknown from what is known. It has reduced all that can be experienced in this world to two fundamental units of creation—the Purush (the Supreme Being; Brahm; cosmic Self) and Prakriti (Nature; the invisible matrix of all forms of natures and temperaments that characterize this creation). The basic argument of this philosophy is that ‘nothing can be produced from nothing’. In other words, if the creation has come into being, then there must be something that pre-dates this present creation. If this creation is the effect of some past deed, then obviously there must have some occasion when certain deed was done which resulted in the present. It states that ‘Karya (the result) pre-existed (had a truthful existence) in the Kaaran (the cause of the result)’. Suppose we have an earthen lamp. This lamp, made of clay or mud, was inherently present in the un-moulded lump of clay or mud before it was shaped. Had it not been so, the clay or mud could not have been moulded into the shape of the lamp.

When this argument is applied to the experience of the world, one observes that there are three basic qualities exhibited by all things—one that gives pleasure and happiness, the other which is just the opposite, and the third which does not effect us at all, i.e. we remain neutral to it. Sankhya philosophy states that there are three ‘Gunas’ or basic virtues and qualities in creation which determine these three responses as well as the characters of things which evince these responses. These three Gunas are Sata which produce positive responses of happiness and bliss, Raja which create negative response of pain and sufferings, and Tama which generates neither.

In more physical terms, Sata Guna means pure and holy, and it is conducive to knowledge marked by these characteristics. The Raja Guna produces desires and ambitions which create restlessness in their wake. Tama Guna is meanest of them all, for it creates a tendency for resistance and inactivity. A man having the Tama Guna in excess would not do anything himself and neither would he allow others to do their duties.

It should be noted here that there is a situation when all these three Gunas can theatrically exist in perfect balance—this situation is the ideal situation and is synonymous with Prakriti at the cosmic level. This Prakriti, therefore, becomes perfectly ‘neutral’ and self centered; it is the perfect example of grossness because it remains in a state of perpetual coma or paralysis because of this balance. It is when this perfect balance is disturbed that it starts stretching and yawning like a man waking up from a deep slumber.

An example would illustrate. An electrolyte works when there is a difference of potential between the two electrodes—i.e. the cathode and the anode. A neutral solution having the same electrodes dipped in it would not perform the function of electrolysis.

On the other hand, the Purush is the cosmic Consciousness or the Atma or cosmic Soul.

The *evolution of the creation* starts when a union is established between this Purush and Prakriti. There arises a question here. Purush is neutral and absolutely unattached to anything, while Prakriti is gross and lifeless. How is their cooperation possible? Well this is illustrated by the example of physically handicapped intelligent man who has lost the leg and cannot walk and a blind man who cannot see but can walk. The blind can carry the lame on his back, and under the latter’s guidance, can reach the destination.

The process of evolution of creation from this primary Nature or Prakriti is as follows—As the result of the three Gunas mixing with themselves, the first offspring was ‘Mahat’ or Buddhi (the cosmic intellect).

From the Raja Guna part of this Buddhi emerged Ahankar (cosmic pride and vanity, ego and the notion of individualism and selfish arrogance).

From the Sata Guna part of this Buddhi emerged Mana (the cosmic mind), the five organs of perceptions (eye, ear, nose, tongue and skin), the five organs of actions (hand, leg, mouth, excretory and genital).

From the Tama Guna part of Buddhi emerged the five Tanmatras (the five perceptions of sight, hearing, smell, taste and feeling) and from these further developed the five Bhuts or elements (such as the sky, air, fire, water and earth).

Thus, there would be twenty three such elements + Prakriti + Purush = *twenty five components of creation* in all.

There is another way at looking at this philosophy. It describes the origin of the cosmos from Brahm who created the macrocosmic first Male called Purush and his female counterpart, the Prakriti (Mother Nature), who are the basic cause of this vast and myriad creation. The individual male and female human beings are the microcosmic forms of that macrocosmic Purush and Prakriti. It is their union which resulted in this cosmos. Their offspring were—Buddhi (intelligence, wisdom, mind), Ahankar (pride, ego), the mind-heart complex called the ‘Mana’, the five perceptions (of smell, hearing, touch, taste and sight) forming the subtle body of the creature, the five elements (space, wind, fire, water, earth), the ten sense organs (five organs of perception—ear, nose, tongue, eye and skin, and five organs of action—hand, leg, mouth, anus and genitals), which together formed the gross body of the creature, the invisible Atma (pure consciousness) and Prakriti (nature of the individual creature). These are the twenty five basic constituents of creation.

So, according to Sankhya Shastra, there are *twenty-five fundamental Elements or Tattwas* as follows—Purush (the primal cosmic Male; the Viraat Purush), Prakriti (primal Nature), Mahtattva (the powerful Buddhi or intellect), Ahankar (ego, pride), the five organs of perception (i.e. the eye, nose, ear, tongue and skin), the five organs of action (i.e. the hand, leg, mouth, excretory and genitals), the Mana (mind), the five perceptions (such as the spoken word or speech, sight, smell, touch and taste), the five Bhuts (i.e. the five primary elements, the earth, water, fire, air and space or sky) = 25.

It further postulates that Brahm created Nature (cosmos) because it allowed itself to be covered or mired by the three Gunas—‘Sata’ meaning righteousness and virtuousness which are the best and noblest of qualities, ‘Raja’ meaning worldly passions and desires which are the medium or mediocre qualities leading to worldly desires, and ‘Tama’ meaning evils, sins and other mean mentalities leading to perversions and vices. The Purush, though he remains aloof, still gets shackled or attached to Prakriti, the creation, because of these three Gunas which act as ropes or strings that tie him down. This fact has been very stated in Shwetashwatar Upanishad, 5/10-12 and 6/10.

Breaking one’s habits is tantamount to liberation and deliverance from this bondage, and it is called Mukti. The three Gunas are the causes of the myriad temperaments, natures, thought patterns and behaviours of all the creatures, because they have all these three qualities or virtues in them, though they vary in ratio or proportion. These three Gunas are also present in Mother Nature, giving rise to a populace which is so varied and diametrically opposite to each other, even virtually getting at each other’s throat, because of the infinite possibilities created by their mixing in different proportions to mould the innate nature, inclinations and temperaments of a creature.

This school of philosophy says that there are five elementary ‘Bhuts’ in this creation—they are the earth, water, fire, wind and space which, in different permutations and combinations, form all the creatures who have a gross body. A

creature, it says, has eleven organs— five organs of perception (ears, nose, eyes, tongue and skin), five organs of action (hands, legs, mouth, anus and genitals) and one organ called the Mana (mind and heart).

According to Mahopanishad, 1/4 – 69 of Sam Veda tradition, these twenty-five elements or Tattwas are the following—five organs of perception (ear, nose, tongue, eye, skin) + five organs of action (hand, leg, mouth, genitals, excretory) + one Mana (mind) + one Ahankar (ego, pride, arrogance) + one Pran (the vital life-giving breath; the essential vibrations of life; the rhythm and essential functions pertaining to life) + one Atma (soul) + one Buddhi (intelligence, wisdom, discrimination) + five Perceptions (sight, smell, hearing, taste, touch) + five Bhuts (earth, water, fire, air, space) = twenty-five elements.

A relevant philosophy is that of the *Sankhya Yoga*. This philosophy is a combination of Sankhya philosophy and Yoga philosophy. In Shwetashwatar Upanishad 6/13 it is stated that the Supreme Being can be known by the means of 'Sankhya Yoga', i.e. by an intelligent fusion of 'Sankhya' and 'Yoga'.

The second chapter of Bhagvata Gita is also called Sankhya Yoga. Now, let us analyse this word. It has two parts—viz. 'Sankhya' meaning learning and knowledge, and 'Yoga' meaning a union, a conjunction, a fusion. Elsewhere, e.g. 5/5, this word has been used to signify 'Gyan' and 'Karma' or a conjunction of knowledge and the philosophy of doing deed. The 'Praanaagni-hotra Upanishad', 1, uses this word to mean 'intense thinking, deep contemplation or deep insight'. It is also, therefore, synonymous with 'Gyan Yoga' or the great concentration and diligent divergence of all energies of the creature to acquire truthful knowledge of the Truth and Reality behind what is apparent but not the whole truth, and what is not apparent at all.

These two paths are not separate, independent and distinct from one another. They are like the two legs by which one walks. The word Yoga also means to bring about a union between two entities, to create a synergy between the mundane and the spiritual. Here it refers to the union between the Atma and the Brahm, or the coordination of various elements of the creature's body so that congenial atmosphere conducive to spiritual upliftment and enlightenment is created for the realisation of the true nature of the 'self', which would mean realisation of the presence of Brahm inside the very own self of the seeker. To bring this about, deep concentration of mind is needed along with the focusing of all the energies of the body in one single pursuit; this is meditation and contemplation.

The word *Sankhya Yoga* therefore means a combination of both the eclectic values of Sankhya philosophy and that of Yoga. Hence, that which brings about a fusion or union between the known and the unknown, that which establishes a coordination between the creature's individual world and the cosmic world of the pure consciousness, that which brings the Atma, the pure 'self' of the creature close to the supreme 'Self' of the cosmos, that which links and ultimately brings about a merger of the single unit with its parent body, and that which helps in the creature's final liberation from the vicious cycle of birth and death, is called Sankhya Yoga.

Now the question arise how is this brought about? The answer is in the following the manifold path of Yoga besides acquisition of knowledge as expounded and espoused in the Upanishads. Yoga has basically two connotations—viz. (1) meditation and contemplation which aim in harnessing all the energy and potentials at the disposal of the creature and diverting them and concentrating them on one single goal chosen by the practitioner of Yoga; and (b) following other methods of achieving this aim as laid down in the scriptures dealing with Yoga.

There are *four paths of Yoga*—(i) Gyan Yoga, (ii) Bhakti Yoga, (iii) Karma Yoga and (iv) Raj Yoga.

(i) Gyan Yoga involves the intellect and mind to determine and delineate the true and the false; it helps to access and understand the reality and falsehood behind the manifested visible world which appears to be 'real' but is actually like a 'shadow of the truth'. This Gyan Yoga helps to establish the mind firmly into seeing unity in

diversity. Those following Gyan Yoga are called 'seers' because they can 'see' beyond the visible, multifarious and bewildering variety of this false world. Gyan Yoga is in the realm of the intellect and discriminating mind of a creature.

(ii) Bhakti Yoga refers to having devotion for a chosen Godhead who is a person's ideal, on whom he showers all his adoration, and on whom he focuses his attention. He is emotionally and sentimentally involved with his deity. Hence, the heart is the realm of Bhakti Yoga; it helps to commune with the divine.

(iii) Karma Yoga expounds on the importance of doing deeds and taking actions, but with a different attitude. It stresses that we must not get 'involved or attached' to those deeds or action in as much as we shouldn't be bothered about the rewards or punishments incumbent on such deeds or actions. We must do them dispassionately and with detachment. The action or deed should be treated as one's offering to the God as well as an offering to the sacred fire sacrifice. This will ensure that the actions or deeds are not unrighteousness, corrupt or evil. On the contrary, whatever is done in which a person's subtle sub-conscious says is not the correct thing to do will be deemed to be unrighteous, unethical and unlawful, and therefore cannot be an offering to either the God or the sacred fire sacrifice.

(iv) Raj Yoga is the psycho-spiritual practice of exercise and breath control; it involves the various steps involved in meditation and contemplation, as is generally understood by the term Yoga. This Yoga lays emphasis on physical training of the body and the mind, and is the subject matter of numerous Upanishads dealing with such exercises (e.g. Yog Chudamani of Sam Veda). It deals with such subjects as Pranayam, purification and activation of Naadis, kindling of Chakras (subtle energy centers in the body) etc.

These four types of Yogas are not mutually exclusive; they coalesce and overlap with each other and their main aim is to help the aspirant seeker in his pursuit of 'self-realisation'.

There is another platform of Yoga as propounded by the greatest exponent of this philosophy, i.e. sage Patanjali. According to him, *Yoga consists of eight-fold path*. These are briefly the following—(1) 'Yam' or self restraint; (2) 'Niyam' or observance of certain sacrosanct rules; (3) 'Asana' or postures for meditation; (4) 'Pranayam' or breath control exercises for purification of the body and mind; (5) 'Pratyahar' or withdrawal of the mind and its control; (6) 'Dharana' or having a firm conviction, faith and belief on the sanctity and truthfulness of the chosen path; (7) 'Dhyana' or contemplation and concentration of the faculties of the mind and intellect; and (8) 'Samadhi' or a perpetual trance-like state in which the aspirant loses all awareness of the external world and even himself, and remains perpetually in meditation. These eight-fold path of Yoga have been listed in Varaha Upanishad, canto 5, verse no. 11—11 ½ of the Krishana Yajur Veda tradition.

The Mandal Brahmin Upanishad of the Shukla Yajur Veda tradition describes these terms in detail in its Brahman (canto) 1, section 1, verse nos. 3-10.]

34. That supreme primordial dynamic power and energy of the Lord transformed itself into the 'Shakti' (the cosmic Goddess; the primary powers and forces of Nature which manifested themselves as a cosmic Goddess). As soon as the Lord decides to do anything, this Shakti does that for him immediately. It is this Shakti that has revealed itself in the form of this visible world.

[Now the virtues of this personification of the Lord's stupendous and magnificent cosmic powers, known as Shakti, are enumerated in the following verses —] She is an embodiment of grace, benevolence and kindness; of discipline and order, of peace, serenity and tranquillity, of splendour, glory and radiance at their best.

She is the primary cause of all that is visible as well as that which is not visible. She is also the primary cause of everything, whether that cause is evident or hidden.

She is the symbolic 'foot' or pedestal which supports the body representing the entire creation. Or, she represents the base upon which the entire edifice of creation rests.

She is present in all the forms in which this creation exists—incorporating in her form all the myriad faces, colours, classes and segments of society, whether the latter is treated as being classified into different segments or regarded as one composite whole.

This Shakti of the supreme Lord of creation is a constant companion of the latter. Shakti is inseparable from and an integral part of Brahm. She is a personification of the Lord's wishes and the dynamic ability of the Lord to fulfil his wishes. She therefore always obeys the Lord and follows him diligently. She is always eager and vigilant to immediately carry out the orders of the Lord. [Whereas at the cosmic level of creation this term 'supreme Lord' refers to Brahm, at the more local level of creation with relevance to the present world of mortal living beings the term would mean 'Lord Ram' who was an incarnation of Brahm on earth. Therefore, Shakti at the level of Brahm would mean Maya Shakti or Prakriti, and with reference to Ram it would mean Sita, the Lord's divine consort who was the daughter of king Janak—refer verse no. 6.]

Sita representing the Shakti principle of Brahm is as eternal and imperishable as the latter (simply because Shakti and Brahm are inseparable from one another).

While representing the Lord and being an inseparable part of the latter, she is still under the overall command of and subservient to the Lord who is the principal Authority of creation. She cannot and does not supersede the Lord on any count. She depends upon the Lord for her existence.

She assumes those forms that can be described or talked about, as well as those that cannot be so done.

She is present in the immediate point of time, as well as in the remotest point of time, both of the past and of the future.

She is cause and the controller of creation, its sustenance as well as its annihilation.

She showers her magnanimous blessing and gracious benevolence upon the entire creation.

She has all the abilities that enable her to accomplish everything successfully in this creation.

That is why she is lauded and extolled by the scriptures universally as the dynamic, all-powerful, almighty, majestic, magnificent, indescribable and most enigmatic aspect of Nature that is called 'Shakti'¹ (34).

[Note :- ¹Shakti— The concept of Shakti has to be understood in a holistic manner.

It has many connotations. In fact, this entire Upanishad is dedicated to the theme of Shakti of Brahm, albeit in the disguise of Sita. Please refer to note of verse no. 2 of this Upanishad.]

35. She (Sita) is a personification of the supreme Brahm's 'Ichha Shakti'¹ (the powers to accomplish something and fulfil desires).

In the form of 'Yogmaya'² (which is the powerful force of Brahm responsible for both the creation as well as the conclusion of creation, and for bringing about a union between the world which appeared to get separated from Brahm in due course of

time) she rests in a meditative posture symbolised by the mark of the Srivatsa³ present on the right chest of the Lord (here referring to Lord Vishnu because the Srivatsa is marked on his chest) at the time of conclusion of this creation (35).

[Note :- ¹The term 'Ichha Shakti' has been explained as a note of verse no. 11. Refer also to verse nos. 12, 36.

²The word *Yogmaya* has been explained as a note of verse no. 3. Refer also to verse no. 5.

³*Srivatsa*—this is the mark of the foot of sage Bhrigu which he had cast on the chest of Vishnu once when he got annoyed with the Lord. The Lord is so kind and gracious towards his devotees that instead of taking umbrage at this disrespect shown by the sage and punishing him for his misdemeanour, Lord Vishnu had blessed the sage that his footprint would always remain on his chest as one of the jewels worn by the Lord.

Lord Vishnu is the Viraat Purush or the macrocosmic gross body of Brahm from whom the rest of the creation evolved. At the time of conclusion of creation, Vishnu rests on a bedstead made by the coiled body of the celestial serpent called Sheshnath that floats on the surface of Kshirsagar. This reclining posture of the Lord is called Yog-Nidra, literally meaning deep sleep of meditation. Here the Lord closes his eyes and remains contemplative, meditating upon his own self.]

36. She (Sita) personifies the powers to enjoy or suffer that are inherently present in all the creatures of this creation. That is, the consciousness that gives the ability to the creature to enjoy anything in this world, or that makes him feel the pain of suffering, is known as the Sita principle.

Sita is a personification of the dynamic power of creation that enables all the creatures to fulfil their desires and successfully accomplish their goals in life. It therefore represents the virtue of fulfilment of all desires and accomplishment of goals. In other words, she is the eternal power that enables all the creatures to accomplish their desires and reach their goals in life successfully. In this aspect, she is said to personify those entities that are usually regarded as metaphors for successful fulfilment of all desires, such as the evergreen wish-fulfilling tree of Gods called the 'Kalpa Vriksha'¹, the celestial cow called the 'Kaamdhenu cow', the magical gem that removes all worries called the 'Chintaamani gem', the conch, the divine lotus and the mystical 'nine Nidhis' or the nine types of wealth².

Those devotees of the Lord who worship him reverentially daily according to the prescribed traditional way involving Yagya (fire sacrifice), Yam (exercise of self-restraint of passion and desires), Niyam (following of various auspicious rules of conduct and thought), Aasans (sitting postures adopted during worship and meditation or Yoga), Pranayam (breath control exercises done during meditation or Yoga), Pratyahar (restraining of the sense organs) Dhaarna (having conviction, belief and faith), Dhyana (contemplation, meditation, concentration or fixing of attention, deep thought and pondering), Samadhi (a trance-like state of bliss obtained during meditation when the consciousness exists in its 4th state of existence known as Turiya) etc.—all the expressed or unexpressed, articulated or implied, the overt or the covert desires and wishes of such devotees are fulfilled by the divine Goddess. [This is because when the Lord is pleased by the devotion and worship of the devotee, he uses the service of his divine Shakti to reward them.]

It is Sita that is present in the form of all objects used in offering of worship to the Lord—such as flowers, scent, sweets etc., in the form of offering of worship to dead ancestors, in the form of auspicious deeds such as pilgrimage and bathing at the holy

sites at pilgrim centres, and in the form of food and liquid that sustains the life of a living creature.

Verily, in all the myriad and diverse forms, mentioned as well as unmentioned—it is Sita that pervades uniformly everywhere, in all frames of time, and in all units of creation (36).

[Note—¹The Kalpa Tree—This has been described in note of verse no. 13.

²The *nine Nidhis*—These are the special assets that a living being possesses. These nine Nidhis may be spiritual or worldly; they may be tangible or intangible. In brief they are the following:-

Spiritual assets—according to saint Tulsidas' epic Ram Charit Manas, Aranya Kand, Doha 35-36, they are—(i) communion with saints and pious people where the Lord's glories are being sung, (ii) serving one's teacher and elders, (iii) praising the Lord's glories and doing Kirtan and Bhajan which are community singing of the Lord's glories, (iv) repeating the divine Mantras or holy words of the Lord, i.e. doing Japa, (v) having such virtues as 'Dam' or tolerance, patience, fortitude and resilience, 'Sheel' or good and righteous demeanors, 'Virati' or being renunciate and detached from deeds and to be dispassionate towards the world, 'Sam' or equanimity, looking everything as Brahm, having a non-dual approach of or view of the world, 'Santosh' or contentedness, and 'Sara' or simplicity and humility, (vi) having no deceit, conceit and falsehoods, (vii) not finding faults with others and criticising them unnecessarily, (viii) to have firm reliance and faith in the Lord, and (ix) not to feel dejected, depressed, despaired, inferior, lowly and condemned under any adverse circumstances, because the great and merciful Lord is always with them.

Worldly assets—such as gold, silver, diamond, gems such as ruby, sapphire and emerald etc.; kith and kin such as sons, wife, pets and livestock, homestead and farmland, name, fame and majesty etc. These worldly assets are at the micro level what the Gods possess at the macro level and kept in the custody of Kuber who is the treasurer of Gods.

Celestial assets of the Gods—these are represented by the precious gems stored in the treasury of Kuber, the treasurer of Gods. They are known as Mahapadam, Padam, Sankha, Makar, Kaschapa, Mukund, Kund, Neel, and Kharva. Actually these terms are used in ancient mathematics to measure quantity such as units, hundreds, thousands and millions in modern language.

According to another version, the nine Nidhis are the various special virtues or qualities or attributes that one possesses, and which make him special amongst others. They are the following—(i) Buddhi—intelligence and the power to discriminate, to think sharply, quickly, logically, rationally, deeply and analytically. (ii) Bal—strength, vigour and power of the body and of the mind as well as of the spirit. (iii) Yasha—fame, good reputation and name; majesty and renown. (iv) Dhairya—to have courage, fortitude, resilience, ability to hold on in the face of greatest adversity, misfortune and opposition. (v) Nirbhayataa—fearlessness, courage, bravery and an indomitable spirit. (vi) Aarogyataa—to be freed from diseases and illnesses, both mental as well as bodily. (vii) Ajaadyataa—the opposite of Jadataa; to be free from the negative trait of inertia, lethargy, depression, stagnation, lack of drive, initiative and will power. (viii) Vaakya-patutaa—to be an expert orator; speaking skills, eloquence, diplomacy, and wise and intelligent choice of the spoken word. (ix) Bhakti—to have steady and robust devotion, loyalty, dedication and conviction for one's chosen deity and faith. This quality, of course, comes under the category of spiritual assets also.

Other variations include the following qualities in this list of Nidhis because they are like an asset for a man which stand him in good stead in his life— (i) Sham—having self restraint and control; having peace, tranquility, serenity and quietness; being able to suppress desires, yearnings and natural instincts and impulses. (ii)

Dam—tolerance, forbearance, fortitude. (iii) Upriti—renunciation, detachment, dispassion, indifference and non-involvement. (iv) Titksha—endurance, patience, fortitude, sufferance, equanimity. (v) Samadhan—the ability to find a solution, an answer to even the most vexing problem; lack of confusion or doubts; clarity of thoughts and conception. (vi) Shraddha—having faith, belief, conviction, reverence and devotion. (vii) Sakhya—friendship and the ability to co-exist with even one's adversary. (viii) Daya—kindness, compassion, graciousness. (ix) Atma Bodh—self-realisation and being enlightened about the Atma, the pure consciousness, that resides inside one's inner self as his soul, as his spirit.

Sometimes, the last Nidhi of Atma Bodh is replaced with 'Seva' or the natural habit of serving others selflessly.]

37. Sita personifies the virtues of valour and strength.

In iconography, her visible divine form as a Goddess has been depicted as one having four arms. One arm is held in a posture called 'Abhay' (i.e. one that bestows fearlessness upon her devotees), one arm is in the posture called 'Var' (i.e. that which grants boons), and one arm holds a divine lotus.

She is gloriously adorned by a crown and a tiara as well as all other decorative ornaments.

She is standing in the shade of a Kalpa tree with four elephants pouring holy water as libation in her honour through four golden pitchers held aloft their trunks.

She is surrounded by all the Gods who stand around her to attend on her, while Brahma and other senior Gods are praising her by singing hymns in her honour. She is being praised by the Kaamdheni cow who is herself a bestower of the so-called eight Siddhis¹ as well as by the celestial Apsaras (the damsels of the heavens who are, according to mythology, courtesans in the heavenly court of Indra, the king of Gods) and other divine ladies belonging to the different Gods. The divine Vedas and other scriptures are singing her glories as well.

The Sun and the Moon are spreading their sublime light there (at the place where the Goddess Sita is being worshipped) as if they were lamps put up for the purpose of providing light.

Celestial bards and sages, such as Tumburu and Narad, are eulogizing her divine glories by singing devotional hymns in her honour. Goddesses such as Raka and Siniwali² are holding the ceremonial umbrella over her head. Swaha and Swadha³ are swaying hand-held fans for her. Haladini and Mayashakti are swaying the whisk. Sages Brigu and Punyana, amongst others, are offering their worship to her.

Sita, in her celestial divine splendourous form as Goddess Laxmi (the divine consort of Vishnu, the patron goddess of wealth and prosperity as well as all forms of majesty and glory known in this creation) is seated on a throne comprising of a lotus flower with it eight petals. She is adorned by divine and magnificent ornaments. She has pleasant eyes that show her to be very pleased and contented.

This divine form of the great Goddess who personifies/embodies the magnificent and majestic powers of Nature should be realised through proper knowledge of her essential form (by studying the scriptures). This is verily the preaching and knowledge as expounded by this Upanishad. Amen! (37).

[Note—¹The *eight Siddhis* are the following— There are eight *Siddhis* which are divine mystical powers which enables the person to accomplish astounding feats. They are the following—(i) 'Anima'—means the power to become microscopic or so minute that one becomes invisible to the naked eye; to become small like an atom; (ii) 'Mahima'—is to have majesty, glory and fame; to be honoured and acknowledged for one's achievements, wisdom, erudition, knowledge and skills; to become huge like a mountain, thereby standing out and being unique or special in a

crowd; (iii) 'Garima'—is to be heavy-weight in any field, to have special qualities that give one's ideas and words a great amount of importance and weight; to have stature, dignity, decorum, gravity and significance; (iv) 'Laghima'—is the grand virtue of being simple and humble inspite of being great, powerful and authoritative; it is to have simplicity and humility despite possessing grandeur, majesty, power, authority and magnificence; (v) 'Praapti'—is to be able to attain, gain or obtain anything wished or desired for; (vi) 'Praakramya'—is to have valour, ardour, strength, powers, prowess, potential and punch leading to triumph, glory and majesty; (vii) 'Ishwatwa'—is to be able to have lordship or sway over everything else; to be able to rule over others; (viii) 'Vashitwa'—is to be able to control and subdue others, and exert influence on them so much so that they become obedient and subservient.

References—(a) Krishna Yajur Veda—Yogshikha Upanishad, Canto 1, verse no. 151-155, Canto 5, verse nos. 46-55; Yogtattva Upanishad, verse nos. 56-102; Brahm Vidya Upanishad, verse nos. 23-24. (b) Atharva Veda—Annupurna Upanishad, Canto 4, verse nos. 5-8 (which says that a wise aspirant should not be deluded by Siddhis); Tripura Tapini Upanishad, Canto 2, paragraph no. 12 (which says that the eight Siddhis are enshrined in the first outer ring of the Sri Chakra used to worship Goddess Tripura).

²Raka and Sinniwali—(a) *Raka (goddess)*—First appears in Rig Veda, 2/32/4-5. She is the patron Goddess of the full moon symbolising the ripening of all the good virtues and spreading of fame, majesty, splendour, glory and name. She stands for success in all endeavours and personifies accomplishment that spread one's fame and glory. She provides food and good health, healthy children, bestows nourishment to the life giving herbs (Rig Veda, 2/33/4).

(b) *Sininwali (goddess)*—First appears in Rig Veda, 2/32/6-7. She is the patron goddess of the first moon that appears after the dark disc of the last day of the lunar cycle; therefore she stands for the new moon. She is regarded as the sister of the Gods and the divine consort of Lord Vishnu (Rig Veda, 2/32/6). She is the patron Goddess of wealth like Laxmi, and is the provider of children and symbolises their constant development and enhancement. She also gives light.

³Swaha and Swadha—the word *Swaha* means to offer anything, to dispense, to distribute. The offerings made to the fire sacrifice meant for the Gods is done by saying *Swaha*, while those meant for the dead ancestors is done by saying *Swadha*. According to the Purans, these two are the divine wives of the Fire God. Swaha takes the offerings made for the Gods in the fire sacrifice to them, while Swadha is responsible for taking the offerings made for the dead ancestors in the fire sacrifice to them.]

Chapter 10

Sharav Upanishad/Sharavo-panishad

This Upanishad was revealed as a discourse between sage Pippalaad and the creator Brahma. It describes the greatness of Lord Shiva in his form known as Rudra.

The word ‘Sharav’ has two connotations. According to one, it means one who is the killer or slayer, and the other meaning is one who is the liberator and a provider of salvation to the creature.

As per the first meaning, Sharav is that form of the Supreme Being which instils fear in the heart of evil and pervert creatures, and kills or eliminates their evil tendencies. This is endorsed by verse nos. 6-7 and explained by citing the instance of Nrisingh being killed by Sharav because the former had gone out of control and was terrorising the creatures. Other instances are in verse nos. 9, 11, 13, 14, 15.

The second meaning of Sharav as the supreme Lord who provides liberation and deliverance to the creature is expressly endorsed in verse no. 31, and indirectly by implication in verse nos. 10, 11, 17, 18, 30.

That Sharav and Shiva are the same Supreme Being known as Brahm is endorsed by verse nos. 3-5, 19-24, 26, 31-34.

The word also refers to ‘the Lord who shines in the heart of his devotees’. According to legend, Lord Vishnu had incarnated as Nrisingh, the half man and half lion incarnation, to kill the demon Hiranyakashipu who had been tormenting his own son Prahalad because the child was a devout follower of Vishnu. After having killed the demon, Nrisingh started roaming in the forests, striking terror in the hearts of all the creatures. It was then that Shiva, the universal Lord who has been honoured with the epithet of ‘Mahadev’ as he is the greatest and supreme God, had assumed the form of Sharav, the killer, and liberated Vishnu from the body of Nrisingh (refer verse no. 6). Thus liberated, Vishnu had thanked him a lot (verse no. 19) and went to his divine abode called Vaikunth. So this ferocious form of Shiva known as Sharav was also called ‘Rudra’, the angry and ferocious form of the Lord. One can imagine the fight that might have raged between Nrisingh and Rudra, and obviously Rudra must have been more ferocious than Nrisingh in order to subdue the latter.

Presently, when sage Pippalaad asked Brahma, the creator, who was the senior God amongst the Trinity consisting of Brahma himself along with Vishnu and Shiva, he replied that it is Rudra, or Shiva. Hence, this Upanishad is dedicated to Lord Rudra in his manifestation as Sharav, and is therefore named ‘Sharav Upanishad’.

The Gods have praised Sharav and established the latter’s superiority. This Upanishad describes the immense rewards of being enlightened about the esoteric secrets of the real and truthful form of Lord Rudra, along with the special norms to be observed while studying this eclectic philosophy.

This Upanishad also highlights the oneness between Shiva as Rudra and Vishnu. In this context, one should also refer to other Upanishads that espouse the same non-dual philosophy—viz. Rudra Hridaya Upanishad of Krishn Yajur Veda, and the Brihajjabal Upanishad, Brahman 6, verse nos. 8-9 of the Atharva Veda.

In this context it should be noted that there are Suktas or hymns in the praise of both Lord Shiva (verse nos. 9-15, 26) and Lord Vishnu (verse nos. 25, 27-28). Then there is a specific hymn establishing the fact that it is the same Supreme Being who has personified himself as the Trinity Gods consisting of Brahma, Vishnu and

Shiva (verse nos. 4). The greatness of this Supreme Being is highlighted in numerous verses, e.g. nos. 5, 21-23, 29-32.

-----*****-----

-----Shanti Paath-----

Please see appendix no. 1 for the English of this Shanti Paath.

1. Once upon a time, sage Pippalaad¹ asked Brahma the creator—‘Oh Lord! Please be kind to enlighten me about who amongst the three Gods of the Trinity, i.e. Brahma the creator, Vishnu the sustainer and protector, and Rudra² or Shiva the concluder, is senior and worthy of honour and worship?’ (1).

[Note—¹A brief introduction to sage Pippalaad is given as a note of verse no. 1, Canto 1 of Prashna Upanishad which is Chapter no. 1 of this volume.

²*Rudra* is the angry form of Lord Shiva. The word means ‘the terrible one; the angry and ruthless one; one who roars and thunders; one who makes the enemy weep; one who destroys this transmigratory world of birth and death; one who destroys ignorance and delusions; one who eliminates evil and perversions.’

Rudra is a Vedic deity and has been eulogized in three full Suktas (hymns) dedicated to him. These are Rig Veda’s 1/114/1-11; 2/33/1-15, and Yajur Veda’s 16/1-66. Besides these Suktas, Rudra is honoured as a deity at a number of places in the Vedas—viz. Rig Veda—1/43/1-4, 5/42/11, 7/46/1-4, 7/59/12; Atharva Veda—5/6/3-4, 6/55/2-3, 7/92/1, 11/2; and Yajur Veda—11/54.

Rudra is regarded as the father of Marut, the Wind God (Rig Veda, 2/33/1). Rudra assumes many forms—usually it is eleven forms (Taittiriya Sanhita, 3/4/9/7), but sometimes they are also said to be thirty-three in number (Taittiriya Sanhita, 1/4/11/1). Rudra is regarded as having a close relationship with Agni, the Fire God (Shatapath Brahman, 5/2/4/13). The Padma Puran, Swargakhanda, Chapter 8 mentions only eight Rudras. These eight, eleven or thirty-three forms of Rudra might mean as many aspects of Shiva.

However, in terms of the Upanishads, the eleven Rudras stand for the ten vital winds called Prans + one Mana or mind. The ten Prans are five chief Prans such as Pran (breath), Apaana, Samaana, Udaana and Vyana, and five subsidiary Prans such as Nag, Kurma, Krikara, Devdutta and Dhananjaya. [Refer—Trishikhi Brahmin Upanishad, Canto 2, verse nos. 77-87 of Shukla Yajur Veda tradition; Dhyan Bindu Upanishad, verse nos. 55^{1/2}-57 of Krishna Yajur Veda tradition.]

Rudra is said to have created such mythological figures as Bhuts (ghosts), Pretas (disembodied spirits), Pishacha (goblins), Khusmaandas (malignant imps).

In iconography, he has been depicted as wearing long tresses coiled on the head, has strong powerful arms, has a body decorated variously with serpents or priceless ornaments, and holds a strong and invincible bow and arrow as well as a thunderbolt. When necessary, he becomes ferocious and charges at his enemies on a chariot or on foot, while at the other times he is full of mercy and compassion. He is closely associated with forests and mountains, and is also the patron deity of herbs and medicinal plants. Hence, he is the killer of diseases and a great healer. Here, ‘healing’ would mean spiritual healing rather than physical ailments afflicting a creature.

He destroys sins and evil tendencies in the world, and grants the boon of liberation and happiness.

According to the epic Mahabharata, Anushasanparva, Chapter 14, it is Shiva in the form of Rudra who destroys this creation at the end of one cycle of creation.

Now, who would liberate such primarily innocent souls trapped by Maya, and who would provide protection to other innocent creatures who are being subjected to

torments by this single deluded and evil-possessed soul? Naturally it is their supreme Father who is very merciful and who is greatly pained at the predicament in which his off springs, the creatures, find themselves in. So this Father intervenes not only to free the trapped soul in the evil body, but also to provide succour and solace to other creatures who are being tormented by this single individual.

Thus, the Parameshwar assumed the form of Shrav or Rudra to liberate Vishnu from the evil body of Nrisingh.

The 11 Rudras—The eleven Rudras are the various manifestations of Lord Shiva. They are the following:--(i) Mannu (मनु), (ii) Manu (मनु), (iii) Mahinas (महिनस), (iv) Mahaan (महान), (v) Shiva (शिव), (vi) Ritdwaj (ऋतुध्वज), (vii) Ugrareta (उग्ररेता), (viii) Bhav (भव), (ix) Kaal (काल), (x) Vamdeo (वामदेव), and (xi) Dhritvrat (धृतिव्रत). The eleven Rudras appear in Rig Veda 1/43/1, and Taittiriya Brahman 3/4/9/7. They are regarded as the father of the Wind God or the Maruts (Rig Veda, 2/33/1). The word Rudra means one who is angry, terrible and wrathful. Amongst the Rudras, Lord Shiva is regarded as the most senior and enlightened.

The eleven Rudras according to Vishnu Puran (1/1/15) are the following— Har (हर), Bahuroop (बहुरूप), Trayambak (त्र्यम्बक), Aparaaajeet (अपराजित), Shambhu (शम्भु), Vrishakapi (वृषाकपि), Kapardi (कपर्दी), Raivat (रैवत), Mrigvyadh (मृगव्याध), Sharva (शर्व), and Kapaali (कपाली).

The Lord is considered to be the most enlightened of the Trinity Gods, and is therefore called 'Maheshwar'. He always remains in a meditative posture, always contemplating and meditating on the supreme Soul and the Truth. But still he shows anger and mercilessness, because one of his tasks is to punish the evil and sinful ones by ruthlessly slaying them in order to protect the good and righteous souls in the creation. Further, when his meditation and peace is disturbed he also becomes angry. He remains aloof and disinterested in the world, because he is very wise and enlightened, and he stays in the form of an ascetic. Ordinary people think that he is proud, arrogant and haughty because he does not give a damn to worldly formalities and niceties of behaviour. Shiva's failure to conform to set norms of proper and sane conduct makes him look most odd God.

The word 'Rudra' is literally used as a metaphor for anger, wrath, vehemence and cussedness. But this a very misleading title for Shiva because there are a number of great Upanishads which describe Rudra as none but the Supreme Being known as the transcendental Brahm from whom the entire creation has emerged, who sustains it and in whom the creation would finally collapse. It is this Brahm in the form of Rudra who is treated at the supreme Lord God of creation, and hence is called Maheshwar. The Rudra Hridaya Upanishad of the Krishna Yajur Veda tradition and Atharvashir Upanishad of the Atharva Veda tradition are exclusively dedicated to this theme. The Dakshin Murti Upanishad of the Krishna Yajur Veda describes the esoteric significance of the Shiva Tattva or the essential knowledge of Shiva who is the greatest Guru or moral preceptor and teacher of the creatures.

The Atharvashir Upanishad of Atharva Veda is especially relevant here because it explains the various epithets used to describe the virtues and glories of the supreme transcendental Brahm by Lord Rudra himself, and upon close reading it would be very clear that Rudra is describing Brahm when he describes himself.

The Nrisingh Purvatapini Upanishad of the Atharva Veda, in its Brahman 1, verse no. 3 says that the Rudras, along with the Vasus and Adityas etc., were born out of the third step of the divine Anushtup Chanda in which the Mantra of Lord Nrisingh was revealed to the creator Brahma when he did severe Tapa in order to initiate the process of creation.

Another form of Rudra is known as Kalagni-Rudra. It literally means Lord Shiva, the concluder, in his most ferocious form which is like the 'fire of dooms-day'. Shiva is the greatest ascetic, a great renunciate, most auspicious and regarded as an enlightened God. So his invocation helps the spiritual seeker to burn all his worldly

delusions and taints arising out of ignorance and attachments to falsehoods. This paves the path for his ultimate liberation and deliverance from the cycle of birth and death. Lord Shiva is the designated Authority that controls death and destruction, not only of the gross physical world and its visible objects but also metaphorically of all the evil tendencies, all the blemishes and faults that are characteristic of this deluding world and which usually cover the soul of the creature like a layer of thick scum floating on the surface of the otherwise crystal-clear waters of the mountain lake.

The Rudraksha beads (seeds of the tree *eleocarpus ganitrus*) with five faces or surfaces used in rosaries and necklaces are also called Kalagni-rudra beads because these are very much liked by Lord Shiva. The great spiritual importance and metaphysical significance of the Rudraksha beads have been explained in the Rudraksha Jabal Upanishad of the Sam Veda tradition, the Kalagni Rudra Upanishad of Krishna Yajur Veda tradition, and the Brihajjabal Upanishad, Brahman 7, verse no. 8 of the Atharva Veda tradition.

The Brihajjabal Upanishad of the Atharva Veda tradition is essentially revealed by Lord Kalagnirudra when he was approached by sage Bhususnd who wished to know about the immense spiritual value and metaphysical significance of the sacred ash of the fire sacrifice, called the 'Bhasma', and the three lines marked on the body from its paste, called the 'Tripundra'—refer Brahman 1-6, Brihajjabal Upanishad.]

2. The great grandfather Brahm replied—'Oh Pippalaad! Listen carefully to what I would narrate.' (2).

3. One is most fortunate and lucky if he can know or be acquainted with the greatest God known as 'Parmeshwar'—literally the supreme Ishwar or Lord God. This is possible only as an auspicious reward of immense good and righteous deeds done by the aspirant.

Even the chief Gods such as Vishnu who is the chief in the Trinity of Gods, and Indra who is the chief amongst all the rest of the Gods, are unable to know about this Parmeshwar from whose body even I (the creator Brahma) am born (3).

[Note—The 'Parmeshwar' referred to here is the Viraat Purush, the macrocosmic form of Brahm, the Supreme Being. Brahm is the cosmic Consciousness which is the root cause of creation. The subtle macrocosmic body of Brahm is known as Hiranyagarbha, and the gross body of Brahm at the cosmic level of creation is the Viraat Purush. As the name itself suggests, the 'Viraat' is the vast, colossus, all-including invisible form of Brahm, and it is from this Viraat that the rest of the units of creation, including Brahma the creator himself, came into being. Since Brahma represents the primary form of Brahm or the initial form that Brahm took in order to initiate the process of creation, the former is also called Hiranyagarbha. Therefore, Brahma is depicted as being born atop a divine lotus springing out of the navel of the Viraat Purush. Since the world is a manifestation of the Viraat Purush, the Purans have called this Viraat as Vishnu—the 'Vishwa or the world in this symbolic form'.

4. It is the same Lord who first bears (conceives and brings forth or reveals) Brahma the creator. It is he who is worthy of acceptance as the Supreme Being.

It is he who is the Lord of creation, the supreme Father, the most exalted, and the inspirer of the Vedas.

Indeed, he is the God of all the gods, and the Father of all (4).

5. It is this Parmeshwar who is the Father of me, Brahma, as well as of Vishnu the sustainer and protector of creation. It is he who concludes the entire world at the time of the dooms-day deluge in the form of Rudra or Shiva¹.

We bow and pay our obeisance to that great Lord God. It is he alone who is the regulator of this creation, the most exalted and honourable, and the Supreme One (5).

[Note—¹According to the epic Mahabharata, Anushasanparva, Chapter 14, it is Shiva in the form of Rudra who destroys this creation at the end of one cycle of creation.

The Narad-parivrajak Upanishad of the Atharva Veda tradition, Canto 8, verse no. 1 describes these three aspects of Brahm as Srishtih Brahm, Viraat Brahm and Samhaat Brahm. This particular Upanishad is Chapter 9 of this volume.]

6. It is this same great Lord who assumed the ferocious form of Sharav (the great killer or slayer) to overcome and kill Nrisingh¹ (6).

[Note—¹According to legend, Lord Vishnu had incarnated as Nrisingh, the half man and half lion incarnation, to kill the demon Hiranyakashipu who had been tormenting his own son Prahalad because the child was a devout follower of Vishnu. After having killed the demon, Nrisingh started roaming in the forests, striking terror in the hearts of all the creatures. It was then that Shiva, the universal Lord who has been honoured with the epithet of 'Mahadev' as he is the greatest and supreme God, had assumed the form of Sharav, the killer, and liberated Vishnu from the body of Nrisingh. Thus liberated, Vishnu had thanked him a lot and went to his divine abode called Vaikunth. So this ferocious form of Shiva known as Sharav was also called 'Rudra', the angry and ferocious form of the Lord. One can imagine the fight that might have raged between Nrisingh and Rudra, and obviously Rudra must have been more ferocious than Nrisingh in order to subdue the latter.

There is another connotation of the word 'Sharav'. The word literally means the killer or slayer. In other words, Sharav is that form of the Supreme Being which instils fear in the heart of evil and pervert creatures, and kills or eliminates their evil tendencies. The word also refers to 'the Lord who shines in the heart of his devotees' as their Atma or pure consciousness.

The creature or the embodied soul is called 'Shar' or the form of the ethereal spirit that has assumed a gross physical body having a head. One who cuts off the head is known as 'Sharav'. The head is a metaphor for pride and ego and their accompanying traits of hypocrisy, haughtiness and arrogance. It is in the head that all evil planning is done, and it is the head that inspires the creature to indulge in all sorts of vices and inauspicious deeds. When this happens, the great God, the Parameshwar, makes it sure that the soul of such a creature is liberated from the sinful body in which it has been trapped by killing the gross body and liberating the soul.

So, while on the surface it appears to be a physical fight between two powerful creatures, one being the Shar and the other being the Sharav, here referring to Nrisingh and Rudra respectively, it is actually a system evolved by Nature whereby evil and perversions are kept under check. It is a system instituted by the Supreme Being himself to regulate and maintain balance, order and law in his creation. Though Nrisingh was Lord Vishnu himself in that form, the latter forgot who he actually was once the Lord had assumed a physical form. This is the effect of Maya—the overwhelming power of delusions that automatically comes with having a gross body like that of ordinary creatures. This situation also highlights the reason why all the creatures are under the overpowering control of Maya—if Maya can delude Vishnu to forget about who he is and wander in the forests as some cruel creature in his form as Nrisingh then it is little wonder that ordinary creatures are held under the overpowering sway of Maya.

Now, who would liberate such primarily innocent souls trapped by Maya, and who would provide protection to other innocent creatures who are being subjected to torments by this single deluded and evil-possessed soul? Naturally it is their supreme Father who is very merciful and who is greatly pained at the predicament in which his off springs, the creatures, find themselves in. So this Father intervenes not only to

free the trapped soul in the evil body, but also to provide succour and solace to other creatures who are being tormented by this single individual.

Thus, the Parameshwar assumed the form of Sharav or Rudra to liberate Vishnu from the evil body of Nrisingh.]

7. When the supreme Lord of the Gods (i.e. Sharav or Rudra) caught hold of Hari's (i.e. Lord Vishnu's in his form as Nrisingh) leg and dragged him away forcibly, all the rest of the Gods were extremely alarmed and they pleaded with the former to have mercy on the latter. They prayed—'Oh the supreme Purush (Lord)! Have mercy on Vishnu. Do not slay him. Glory be bestowed upon you.' (7).

8. At that time, the most mighty, strong and powerful Lord attired in an animal hide (i.e. the almighty Lord known as Rudra or Sharav disguised as a wild beast) ripped apart the gross body of Vishnu (in his form of Nrisingh) and mercifully liberated the latter's soul from it.

Lord Rudra was then honoured by the epithet of 'Virbhadrā'—literally meaning the Lord who is strong, courageous, brave, bold, valorous and valiant (8).

[Note—The Nrisingh was the 'gross body' of Vishnu which the Lord had assumed just like the form of Sharav, the wild beast, that Lord Shiva had done in order to free Vishnu's from the form of Nrisingh.

The philosophy of the Upanishads repeatedly stresses in an unequivocal term that the gross body of any creature is not his 'true self', and that the latter is his Atma, his pure consciousness that is also called his 'soul', his 'spirit'. The gross body is just that—it is merely 'gross' and nothing else. The 'true self' is subtle and sublime, and it resides inside this gross body just like a person who lives in a building made of bricks and mortar. The Atma is virtually trapped within the limits of the gross body; the body acts as a virtual prison for the Atma. Hence, any situation which provides freedom for the Atma from the gross body would be giving liberation and deliverance to it.

Therefore, when Lord Rudra tore apart the external gross body of Nrisingh he actually liberated the Atma known as Vishnu from the prison of the gross body known as Nrisingh. Vishnu is not even remotely like the external features of Nrisingh which was most unconventional in being half man and half lion. Vishnu had assumed this odd form for a specific purpose just like Brahm, the Supreme Being, assuming so many varied forms to carry out specific objectives in this creation. The duty of Lord Shiva in his angry form of Rudra is to bring about the end of any unit of creation when its purpose is served. Hence, when the purpose of Vishnu's incarnation as Nrisingh was served, it fell upon Rudra to carry out his divine mandate to end this unconventional form of Vishnu. After all, to conclude anything is not Vishnu's duty, it is Shiva's role.

However, not to demean this form of Vishnu as Nrisingh and to stress that it is as holy as the Supreme Being himself, an entire Upanishad called the 'Nrisingh Tapini Upanishad' is dedicated to this Lord. It is Chapter 7 of the present volume. A reading of this Upanishad would show that all forms of Brahm are essentially the same, and one must not be either deluded or confused by the external features. It must be noted that the Upanishads are unequivocal in their declaration of the philosophy of Advaitya—i.e. the doctrine of non-duality which stresses that that all forms of 'Truth' are quintessentially one and the same.]

9. Indeed, it is Lord Rudra who can bestow all the Siddhis (mystical powers and accomplishments), and it is he who is the Lord worshipped by all.

We bow and pay our obeisance to the Lord who had also cut off the fifth head of Brahma, the creator¹ (9).

[Note—¹This incident is narrated in Devi Puran, Canto 42, verse nos. 35-54. A full English version of Lord Ram's story called the Ramayan as it appears in this Devi Puran, Canto 36 to Canto 48, has been published separately by this humble author, and this incidence is narrated in it in detail.

Briefly, the story goes that once Brahma got enamoured with his own daughter named Sandhya. At this evil thought of his, Lord Shiva had chopped off his fifth head. So we come to the conclusion here that Shiva, in his form as Sharav, is relentless in pursuit of upholding what is righteous and noble, and eliminating what is not. He has not spared either Brahma or Vishnu when they deviated from the path of Dharma and had broken the laws of Nature. That is why Shiva is honoured as 'Mahadeva', the 'Great God'.]

10. We bow reverentially and pay our obeisance to the great Lord known as Rudra who can burn to ashes the entire world by the fierce spurt of fire emanating from the third eye located in his forehead¹, and is so gracious that he re-creates it once again after punishing it (for its sins and misdeeds by reducing it to ashes), and then offers it his protection (10).

[Note—¹Lord Shiva has three eyes, two conventional eyes and one hidden eye located in the center of the forehead between the two eyebrows and the top of the root of the nose. Hence, Lord Shiva is also known as Lord *Trayambak* or Lord *Trinetrum*. The significance of the *three eyes* have been elucidated in a number of Upanishads, viz. (i) Atharva Veda = Bhasma Jabal Upanishad, Canto 1, paragraph no. 6; and Canto 2, paragraph no. 21; Sharav Upanishad, verse no. 10; Tripura Tapini Upanishad, Canto 4; (ii) Krishna Yajur Veda = Yogtattva Upanishad, verse no. 93.

This *third eye* is not some physical eye but a subtle eye symbolizing the Lord's high level of enlightenment and wisdom. This burning of the evil world by opening of the third eye of Shiva is a metaphoric way of saying that a creature can use his eyes of wisdom, erudition, knowledge and enlightenment to overcome all delusions and misconceptions about the truth and reality, along with all mischief as well as negativity and evil tendencies in this world. The 'burning' is elimination of such negativity and perversions.

According to Yoga philosophy, an ascetic focuses his Pran or vital winds at this spot in the forehead where he experiences enlightenment and the nectar of bliss dripping from it. By the way, Shiva is regarded as the patron God of all ascetics precisely for this reason.

There is a legendary story associated with this third eye. Once, Parvati, his divine consort, had closed his two eyes, and as a result the world was plunged in darkness. To save the world from this all-encompassing darkness, Shiva willed a third eye between the two eyebrows. This eye spouted fire with its accompanying heat and light. So, the celestial sun can be regarded as a symbol of this third eye.

Once when Shiva was in deep meditative trance and was teased by Kamdeo, the God of passions, at the behest of Gods who had wanted Shiva to marry and produce a male child who would kill the demons, he felt so annoyed by Kamdeo's temerity and impertinence that he opened this third eye to burn him down.

The three eyes of Shiva or Rudra symbolize the Sun, the Moon and the Fire which are regarded as the eternal sources of light in this creation. The Sun and the Fire provide the heat and energy so essential for sustenance of life besides being an eternal source of light, while the Moon is regarded as the pitcher of Amrit, the elixir of bliss and the soothing nectar that neutralizes the scorching effects of the Sun and the Fire. Refer verse no. 14 also. The third eye, as has been noted above, stands for the excellent level of wisdom, erudition, knowledge, enlightenment and omniscience that the Lord possesses.

The *Bhasma Jabal Upanishad* of the Atharva Veda tradition, Canto 2, paragraph no. 21, says that the three eyes of Lord Shiva are the sun, the moon and the fire.

From the metaphysical perspective, his two eyes are the conventional eyes, and his third symbolizes his deep insight and great wisdom and enlightenment. Shiva personifies the fire element which also has a symbolic significance. The fire is known to burn all impurities present in gold when it is put into it, thereby purifying the metal. Similarly, fire is used in blast furnaces to extract iron from its ore. Fire has the inherent ability to reduce to ashes all filth and garbage, which is a metaphoric way of saying that a person who has worshipped this element in the form of Shiva is supposed to have burnt all his faults, blemishes and shortcomings that taint his character and soul, thereby purifying his inner self. The ash is indicative of total renunciation and detachment from the world of materialism, because it is indicative of a renunciate way of life and symbolically stands for burning of everything into the fire pit. That is why Lord Shiva has been called the patron God of ascetics, hermits and Sanyasis who worship the fire element only.

Besides these points, Shiva is the God assigned the task of concluding the world which necessitates his being closely associated with the 'fire element' in the sense that he must be as unrelenting, merciless, powerful and ferocious as the latter in order to conclude this creation inspite of all the odds. He must reduce everything to ashes just like the fire does. And it is from this ash that the new creation would emerge in due course. Herein lie the magic of creation and its chief Lord, Brahm, the Supreme Being—the fact that a new creation rises from ashes!

The *Yogtattva Upanishad*, verse no. 93, of the Krishna Yajur Veda says that the third eye symbolizes the Fire element.

Lord Shiva as Lord *Triyambak* appears in the following Upanishads—

(i) Atharva Veda's *Bhasma Jabal Upanishad*, Canto 1, paragraph no. 6 which says that his Mantra should be said when the worshipper applies the sacred Bhasma (ash of the fire sacrifice) on his body from the toe to the head.

(ii) The *Tripura Tapini Upanishad* of the Atharva Veda tradition, Canto 4 is entirely devoted to Lord Trayambak. It describes the meaning of this word and the Mantras dedicated to Lord Trayambak in great detail.]

11. We bow reverentially and pay our obeisance to the great Lord known as Rudra who had killed Kaal (death personified) by trouncing him under his left leg, and who had drunk the scorching poison called Halaahal without a second thought¹ (in order to protect the creation from being eroded and scalded by its scorching effects) (11).

[Note—¹This refers to the incident when the Gods and the Demons had churned the celestial ocean in search of Amrit, the nectar of eternal life. This scalding and horrible poison known as 'Halaahal' was produced as a result of this churning, and Shiva had volunteered to drink it to protect the creation from its burning effects. So he picked it up in his cupped palms and drank it. But the Lord realised that if he allowed this fierce poison to enter his abdomen it would burn the creation because the entire creation is deemed to be lodged in the Lord's abdomen as he is the Viraat Purush himself. So he kept this poison in his throat, thereby giving it an eternal bluish tinge. In this form, and to commemorate this great event, Lord Shiva was honoured by a new epithet—'Neel-Kantha', the Lord with a purple or blue throat. Refer verse no. 16.

According to some accounts, when Shiva drank this fierce poison, Parvati, his consort, was so frightened at the consequences that she squeezed his throat, and thus the poison remained there forever.]

12. We bow reverentially and pay our obeisance to the great Lord known as Rudra who was so pleased by Lord Vishnu when the latter had placed his eyes at his left foot as a token offering that he gave Vishnu the powerful weapon called the 'Chakra', or weapon in the form of a circular serrated discus that Vishnu holds (12).

13. We bow reverentially and pay our obeisance to the great Lord known as Rudra who is so valiant, invincible, strong and powerful that he had defeated all the Gods in the Yagya (fire sacrifice) of Daksha¹. In this war, he had even ensnared Vishnu in a snare made of celestial serpents (13).

[Note—¹The story goes that Daksha was his father-in-law, but he did not approve of Shiva's life-style. So, once when he did a fire sacrifice, he did not invite Shiva and his own daughter Sati, the divine consort of Shiva, and neither did he offer any oblations to the Lord along with other Gods of the Trinity as is necessary during such ceremonies. Sati insisted on going to attend the ceremony inspite of Shiva's strong reservations, and there she was so peeved at the insult inflicted on her husband Lord Shiva that she died in the self-generated fire of Yoga. Then Shiva went with his army headed by himself as Virbhadrha. Refer verse no. 8. He ransacked the sacrifice and punished the Gods. When Vishnu tried to defend the sacrifice and intervene on behalf of the Gods, Shiva had him captured in the snare of snakes.

According to some accounts, Virbhadrha was created by Shiva by plucking a hair from his own head.]

14. We bow reverentially and pay our obeisance to the great Lord known as Rudra whose three eyes are the Sun, the Moon and the Fire (representing eternal sources of light, life, energy, warmth and heat).

He had playfully slayed the demon Tirpuraasur¹. [Hence, Shiva or Rudra is also called Tripurari.]

All the Gods are like animals in front of him. That is, all the Gods are under his overall command and depend upon him for their survival and protection. That is why the Lord is honoured by the epithet 'Pashupatinath' or the Lord of animals² (14).

[Note—¹Tarakaasur was the son of Vajraanga and his consort Varaangi. He had done severe Tapa (austerity and penance) as a result of which the creator Brahma had granted him several boons which had made him invincible. He was killed by Lord Subramanya, the son of Shiva and Parvati. He had three sons—Taaraaksha, Kamlaaksha and Vidyunmaali. They had also pleased Brahma and by his blessings built three great cities, collectively called 'Tripura'. These cities were made of gold, silver and iron. When they became a nuisance for the Gods, Shiva destroyed these three cities and the demons with one arrow. These three demon brothers are collectively called *Tripuraasur*. Therefore he got the name of Tripurari—one who destroyed the three enemy cities.

²This concept of how the Lord comes to be known as *Pashupati* has been explained in the Jabalu-panishad of Sam Veda tradition, verse nos. 11-18 which stresses that 'Isha' or Shiva is known as 'Pashupati', Lord of animals, because Shiva is the undisputed Lord of all the creatures, and those creatures who have lost wisdom and a sense of righteousness are no better than animals.

The term 'animal' is a general way of indicating all living beings who are serfs of their sense organs, who lack adequate wisdom and intellect to think for themselves what is Dharma (auspicious, righteous, noble and proper) and what is not, who are indulgent and have a preponderance of Tama Guna in them. Such creatures are overcome with Vasanas (passions and worldly yearnings) and unable to control their natural Vrittis (inclinations, habits, temperaments and tendencies) that are of lowly nature. They live a life wallowing in the illusive comforts and pleasures of the world, forgetting in the hallucination that all the charms of the world are illusive, deluding and entrapping for them and their souls. They have no time or inclinations for higher things of life and the soul. They think that this world is all there is to it, and that there is no better way to spend their precious life than to take a plunge in this world and its material objects. They have nothing to do with such eclectic subjects as Gyan, Atma, Mukti, self-realisation etc.

In order to control such creatures the Lord assumes the form of 'Pashupati' just like a householder has to become a 'cattle-herder' to take care of his livestock.]

15. We bow reverentially and pay our obeisance to the great Lord known as Rudra who is the supreme inspirer behind the various divine incarnations of Lord Vishnu* such as Matsya¹ (the legendary Fish), Kurma² (Tortoise), Varaaha³ (Boar), Nrisingh⁴ (half Man and half Lion), Vaaman⁵ (the dwarf mendicant form of Vishnu) etc.

The powerful Lord had even subjected Indra, the king of Gods, to become weary and tired. He had reduced to ashes the pride of Kamdeo-cupid, the patron God of love and passion⁶, and of Yam, the God of death⁷ (15).

[Note—*It is a very significant observation. It shows that there was some superior Authority who had directed Vishnu to reveal himself as the various incarnations listed in this verse. It is this superior Authority that is known as Brahm. This Brahm is the supreme transcendental Consciousness that resides in the heart of Vishnu to inspire the latter to do anything. If this is the picture at the cosmic level of creation then it is replicated at the level of the individual living being whose Atma is the same Brahm inspiring him to do anything.

¹*Matsya* or Fish incarnation of Vishnu—In this incarnation as a Fish or Matsya, which is the first of ten divine incarnations of Vishnu, the Lord is said to have saved Manu, the progenitor of mankind, and the Saptarishis (the seven mental sons of the creator Brahma) along with their wives during the dooms-day deluge. They were made to board a boat which was pulled by this Fish and saved from being drowned. They re-populated the world later on. It is a story identical to the Biblical story of the Noah's Arc.

²*Kurma* or Tortoise incarnation of Vishnu—It is the second incarnation of Vishnu. The Lord had supported the legendary Mountain called Mandara which had started sinking during the churning of the ocean by the Gods and the Demons in search of Amrit, the elixir of eternal and life.

³*Varaaha* or Boar incarnation of Vishnu—It is the third incarnation of Vishnu in which he killed the demon Hiranyaaksha and lifted the earth from the flood water where it had vanished. According to some versions, this demon had hidden the earth in the bowls of the ocean. This extrication of the earth is a symbolic way of saying that the Lord saves the creation from being submerged in the vast ocean of sins and evil. An Upanishad preached by Lord Varaaha appears in the Krishna Yajur Veda tradition as its 30th Upanishad.

⁴*Nrisingh*—The story of this incarnation is narrated in note of verse no. 6 of the present Upanishad. Further, there is an Upanishad dedicated to Lord Nrisingh known as Nrisingh Tapini Upanishad. It belongs to the Atharva Veda tradition and is its 7th Upanishad. It appears as Chapter no. 7 of the present volume.

⁵*Vaaman* or Dwarf incarnation of Vishnu—This is the fifth incarnation of Vishnu. When Bali, the grandson of Prahalad for whom Vishnu had incarnated as Nrisingh, conquered the entire world and deprived Indra, the king of Gods of his heavenly kingdom, Vishnu had took the dwarfish form of a Brahmin mendicant to retrieve the heaven for Indra when he was requested by Aditi, the mother of Gods, to do so. He approached Bali, who was famous for his charities, as a Vaaman or dwarf and begged him for ground sufficient enough to be covered by his three small steps. When the unsuspecting Bali agreed, Vaaman measured the entire earth with one step, the heaven with the second step and for the third step he measured Bali's own head or his crown. He put his third step on Bali's head and pushed the latter to the nether world. Hence, Vishnu is also called 'Trivikram'—one who conquered the three worlds in three steps. But the Lord is so kind and gracious that he not only bestowed to Bali the kingdom of the nether world but agreed to be his custodian there.

⁶The story of why *Kamdeo-cupid* was reduced to ashes is narrated in note of verse no. 10. Once when Shiva was in deep meditative trance and was teased by

Kamdeo, the God of passions, at the behest of Gods who had wanted Shiva to marry and produce a male child who would kill the demons, he felt so annoyed by Kamdeo's impertinence that he opened this third eye to burn him down.

This is why the Lord is also known as 'Kamari'—the one who had trounced the haughtiness of Kamdeo.

⁷Shiva had trounced *Yam*, the God of death, to save his devotee Maarkandeya. Sage Maarkandey was the son of sage Maarkandu. He was a great devotee of Lord Shiva, the patron God of death, so much so that when death approached him personified as Kaal when the sage was yet quite young because destiny had it that he would die still when young, he clung to the Shiva Lingam (the image of Shiva) with the greatest of devotion, surrender and urgency that comes with one facing certain death. Lord Shiva appeared and prevented Yam, the God of death from tying him in his snare and taking him away. The Lord blessed him with a virtual eternal life, blessing him that he would live for another 14 Kalpas (1 Kalpa = 1 day of Brahma or roughly 4.32 billion human years). His magnum opus is the 'Maarkandey Puran'. He had also edited and abridged the Manusmriti, the code of life and conduct as laid by the first human named Manu to regulate society and act as a constitution and manual for ready reference for the forthcoming human race, into eight thousand verses, and passed it to sage Bhargava. His reference comes in the Mahabharat epic when he approaches the Pandavas and taught them the principles of Dharma (code of righteousness, auspiciousness, probity, propriety and nobility). He was the one who had enlightened Yudisthira that Krishna was an incarnation of Lord Vishnu (Vanapurva, 189). In the same Mahabharat, he preaches the celestial sage Narad the laws of Dharma (Anushaasan-purva, 50-62).]

16. Thus, the Gods prayed to Lord Neelkanth Parmeshwar (literally, the supreme Ishwar or Lord God who has a bluish-tinged throat, a clear reference to Lord Shiva) in various ways to please the Lord and ask for forgiveness from him (16).

[Note—Refer verse no. 11 and its accompanying note.]

17. Pleased by the Gods' prayers, the Lord God destroyed all their torments that take three forms¹ as well as the sufferings associated with birth, death and old age² (17).

[Note—¹The three great torments are called Traitaap. They are the following—Adhi-bhautik—related to terrestrial creatures such as enemies, cruel kings and wild animals; Adhi-daivik—related to unfavourable Gods and malignant stars; Adhi-daihiik—related to the body such as diseases and horrors of old age etc.

²The three points of time when a man has to undergo the maximum amount of suffering is during his birth, during old age when he is infirm and ridden with various diseases, and at the time of death.

The implication of this verse is that the supreme Lord was so pleased with the Gods that he granted them immunity from these sufferings—they were made immortal and imperishable. Henceforth they did not have to take a birth or die or become old in the conventional sense.]

18. When Lord Shiva heard the Gods' pray and saw them showing great respect to him by offering their obeisance in various ways, he was very pleased. The primeval and eternal Lord of creation, Lord Shiva, blessed all of them with his mercy and grace, and gave them his protection (18).

19. He who is worthy of being offered worship, obeisance, honours and prayers, who is beyond the reach of the faculty of speech (i.e. words cannot describe his glories), and the dust of whose feet is eagerly sought even by Lord Vishnu (who is himself one of the great Gods of the Trinity)—that great Lord Maheshwar (Shiva) felt very

honoured and pleased when Lord Vishnu bowed before him with devotion and showed him his respects. [Refer verse no. 8. When Rudra or Lord Shiva had freed Vishnu from the gross body of Narsingh, Vishnu reverted to his primary form. Finding freedom from this gross body of a half man and half lion (Narsingh), Vishnu indeed felt very obliged, and therefore he offered his thanks to Shiva.] (19).

20. A spiritual aspirant who becomes realised and enlightened enough to be acquainted with the truth of the supreme transcendental Brahm who is an embodiment of eternal bliss, happiness, beatitude and felicity, Brahm who is so immensely great, indescribable, esoteric, mystical and transcendental that the mind and speech return defeated or empty-handed in their attempt to reach, understand and define him—indeed, such a Brahm-realised and enlightened aspirant has nothing to fear anymore. [This is because such a self-realised man would understand that his gross body is not his true identity, but the latter is the Atma that is his ‘true self’. This Atma is pure consciousness that is a sublime and ethereal entity which is not subjected to the fears and limitations that the gross body has to face.] (20).

21. The eternal and supreme Consciousness lives ensconced secretly in the subtle heart of all living beings¹ in a form that is smaller than an atom but of such immense importance and significance that it surpasses the most important and the most significant entity that might exist anywhere in creation.

Only a few self-realised and highly enlightened spiritual aspirants who do self-less service and have become freed from the snare of all sorts of emotional and mental miseries, grief and sorrows pertaining to this mortal world are fortunate enough to be able to have a divine glimpse of this eclectic, subtle, sublime and divine entity in their own hearts (or are able to realise the presence of this Consciousness in their own bosom) as a reward of the grace and munificence of the Lord himself (i.e. by the grace of Brahm who is also the Consciousness referred to here) (21).

[Note—¹Refer (i) Shukla Yajur Veda’s Subalo-panishad, Canto 8, verse no. 1. (ii) Atharva Veda’s Prashna Upanishd, Canto 3, verse no. 6; Mundak Upanishad, Canto 2, section 2, verse no. 6-9; Naradparivrajak Upanishad, Canto 6, verse no. 3.]

22. The supreme Lord who is meditated upon and remembered most reverentially by such highly acclaimed souls such as the sages/seers Vashistha¹, Vamdeo² and Shukdeo³ (the parrot sage), as well as by Viranchi (i.e. Brahma, the creator) himself, who is honoured by the offering of prayers by such honourable sages and seers as Sanatsujat and Sanatan (i.e. sages Sanatkumar and others called Sankaadi Rishis)⁴ amongst others—verily, that great Lord God known as Maheshwar (a reference to Lord Shiva) is the Lord who is the same primary and eternal Lord who was present even at the beginning of creation, and who predates all other Gods. [That is why Shiva is called ‘Bhagwan Adi Dev’—the primordial Lord God who was present before the creation came into being.] (22).

[Note—¹Sage *Vashistha* is one of the well known ancient sages and mentioned even in the Rig Veda (refer Rig Veda, 7/33/14). He is regarded as the Manas-putra of the creator Brahma. In other words, he was the mental-born son of Brahma born as a result of his decision to have a son. As such, he is one of the great celestial sages known as Sapta Rishis—or the seven great sages. According to another version, he was born in a Kumbh or a pitcher as a son of the Varuna God (the Water God). Another great sage named Agastya was his twin brother.

He was the court priest or Rajguru of the Ikshavaku dynasty belonging to the Solar race who ruled over the kingdom of Ayodhya. It was in this solar race that Lord

Ram, an incarnation of Vishnu around whom the epic Ramayan was written, was born. Vashistha is credited with one of the greatest treatises on Vedanta, called Yog Vashistha. It is also called Maha Ramayan.

Arundhati, also known as Akshamala and Urjaa, was the most erudite, sagacious and wise wife of sage Vashistha. She was the daughter of Prajapati Kardama and his wife Devahuti. Sage Atri's wife Anusuiya was her sister, and sage Kapil was her brother. Her famous son was sage Shakti. She was a preacher and a well known scholar of the scriptures in her own right, and was no less enlightened than her husband Vashistha.

His son was sage Shakti. Sage Parashar was his grandson, and sage Veda Vyas, who is the legendary classifier of the Vedas and the author of the Purans, was his great grandson.

The celebrated sage Kapil, who is said to be the proponent of the great school of Hindu philosophy known as Shankya Shastra, was the brother-in-law of sage Vashistha, being the brother of his wife Arundhati, and the only son of sage Kardama and his wife Devahuti. He taught even his mother spiritual wisdom in Bhagavata, and hence this part of this scripture is called 'Kapil Gita' in which the sage has expounded upon the philosophies of Sankhya Shastra, Ashtanga Yoga (the eight-fold path of Yoga) and Bhakti-yoga (the path of devotion for and submission to the Lord) (3/25-33).

There are a number of legends associated with Vashistha. One such tale narrates how his all-wish fulfilling cow named Nandini was attempted to be stolen by king Vishvarath, the son of Gaadhi. The attempt failed miserably. This king was so determined and in awe of Vashistha's mystical powers that had prevented him from acquiring this cow that he did severe Tapa (austerity and penance) to acquire similar powers. Thus, he became sage a great sage known as Vishwamitra.

²Sage *Vamdeo*—He is a well referred to sage in the Upanishads. According to Aitareya Upanishad, 2/1/5, he had realised the existence of the Atma, the pure consciousness, while still in the womb. The Brihad Aranyak Upanishad, 1/4/10, says that he had realised Brahm, the supreme transcendental Lord, and hence he is treated as being on the same high spiritual pedestal as Manu and Surya.

According to Shiva Puran, Kailash Khanda, 11/12, he had learnt about Pranav, the ethereal form of Brahm and revealed as the sound OM, from Kumarsvami, also known as Shanmukha or Subramanya.

Sage Aatreya was his disciple.

Amongst his great teachings is the Vamdeo Gita. It is one of the sixteen minor Gitas in the epic Mahabharata. It occurs in Shantiparva, Chapters 92-94, and has 94 verses. It is in the form of a dialogue between sage Vamdeo and king Vasumanas. It has been recounted by Bhishma to Yudishthir. The duties of kings are the main theme of this Gita.

The name Vamdeo has other connotations also. Vamdeo is one of the eleven forms of Rudra or Lord Shiva. His divine consort is known as Vaamaa.

The *Panch Brahm Upanishad* of the Krishna Yajur Veda describes him as being the third name or form of Brahm, the Supreme Being, in verse nos. 10-14. It says—“The third form (of Brahm) is known as *Vamdeo*—basically because Lord Shiva's general demeanours are at odds with the way the world likes to live. He is a renunciate par-excellence and lives completely submerged in perpetual meditation, not at all bothered by the niceties and attractions of this material world. This life style would be treated as unconventional and odd by the less-enlightened creatures of the world who remain submerged, neck-deep, in enjoying the material comforts and pleasures of this world. So it is natural they would call him 'Vamdeo'—the odd, weird, strange and anomalous God. This would be very evident if Shiva is compared with Vishnu and Brahma, the other two Gods of the Trinity. Vishnu is very much engrossed in the upkeep of this world because it is part of his duties—as he is the protector, sustainer and nourisher of this creation. Brahma also remains neck-deep

involved in this creation—because had it not been so he would never have explored means to create creatures who would copulate to propagate themselves. It is only Shiva who remains aloof from this swamp. Further, the word ‘Shiva’ itself means ‘one who is auspicious, beautiful, truthful, enlightened and eternal.’

Iconographically, the face of Shiva pointing to the north is called Vamdeo. This form of Brahm is a symbol of the fire element and stands for the power to purify, absorb and purge everything that comes in contact with it—like the fire that burns all impurities and brings out the inherent natural shine in an entity. He is said to rule over this element.

The Brihajjabal Upanishad of the Atharva Veda, in its Brahman 1 describes the five forms of Brahm but in a different way in the context of creation. It says that Vamdeo is the second form of Shiva who is treated in this Upanishad as being synonymous with Brahm (Brahman 1, verse no. 1). Let us examine what it has to say—“The second subtle form of Shiva is called Vamdeo who produced a sweet fluid which was like sweet water, and the earth was floated on it. [In other words, the first primordial ‘water’ from which the earth emerged refers to the vast cosmic ether that is symbolised by the salty ocean, and this second sweet ‘water’ refers to the underground water that is found under the solid surface of the earth. It is this water that is found in wells and springs. Since it surrounds the earth as a ring underneath the surface, the solid outer surface of the earth where terrestrial creatures and trees grow is virtually floating on this inner ring of sweet water. The salty water of the ocean floats on the surface of the earth and not vice versa.]

The Panch Brahm Upanishad of Krishna Yajur Veda tradition, in its verse nos. 10-14 describe the third form of Brahm called ‘Vamdeo’]. To quote—“The form of Brahm as ‘Vamdeo’ has the following grand virtues—he is a bestower of great knowledge, wisdom, erudition and enlightenment; he is like fire personified (i.e. he has the astounding potential and vigour as possessed by the fire, he is as powerful and potent as fire, as purifying and rejuvenating as the fire which is the third element of creation after earth and water).

He is illuminated with the light that is a metaphor for knowledge and wisdom. It is as brilliant and splendorous as millions of suns (signifying the power of knowledge, wisdom and enlightenment) [10].

He is a personification of the virtues of Anand (extreme sense of bliss, happiness and joys, of ecstasy and exhilaration, of beatitude and felicity). The Sam Veda with all its melodious connotations and singing patterns is its revealed form. [The Sam Veda is usually sung melodiously, set to beautiful music with all its captivating charm, as opposed to other Vedas which are chanted or recited in unison or even read quietly in seclusion, and therefore it fits in well with the observation that this form of Brahm is a personification of Anand—for music is indeed exhilarating and uplifting for the soul.]

Since singing obliges one to have a soothing and melodious voice, a voice which is sweet and pleasant, is mellowed and steady, and is able to sustain long notes and tones while singing, this form of Brahm is a personification of these virtues. [A melodious, pleasant, welcoming and sweet voice is the best gift that a man possesses; it endears him to everyone and at all places and time. Further, singing of the Sam Veda requires special skills, and all these qualities would distinguish a man from the rest. In other words, Brahm is not an ordinary God, but it is the sweetest, the most skilled, and the wisest entity in creation. Another connotations is this—‘the mellowed from of sound as indicated by the first vowels of Sanskrit language—viz. ‘A’ as in ‘a man’, and ‘Aa’ as in ‘master’ are indicative of Brahm’s virtues that signify the origin of creation. This is because to pronounce the letters ‘A’ and ‘Aa’ one has to open one’s mouth which symbolise the start of the process of creation.]

He is revealed in the form of the Ahavaniya holy fire, the best of the fires. [This fire is lit at the beginning to invoke the Gods and welcome them, hence is like the herald of good and auspicious intentions in creation.] [11].

Since Gyan is a personified form of this Brahm, it is very potent and powerful in slaying one's enemies (represented by ignorance and delusions). It is empowered with great authority, strength and potentials in this respect.

This Brahm is 'Avaya', i.e. it is imperishable, undiminished and infinite, and a personification of unmatched Shakti, i.e. it is a fount of divine cosmic energy, stupendous strength, great powers and astounding potentials.

His complexion is Shukla (white) in colour. [This word is indicative of, one, semen which is a metaphor for vitality, potency and stamina, symbolising its ability to create and propagate the creation, and second, the Sata Guna which is the best, the most auspicious and noblest virtue in creation. This word 'Shukla' also refers to the Shukla Yajur Veda.]

In spite of the fact that he is such an exalted entity, he has the low quality called Tama in him. [This is because if we are expected to take it for granted that everything in existence is Brahm personified, then it obviously includes the darker side of creation along with the brighter side. The darker side is symbolised by the word 'Tama'—meaning dark, while the brighter side is symbolised by the word 'Shukla'—meaning white. In other words, Vamdeo Brahm possesses the unique and often paradoxical qualities that defy understanding. It is not without reason that Brahm has not been able to be defined even by the Vedas, and they threw up the towel, saying 'Neti Neti'—not this not this.]

He (Vamdeo Brahm) is completely enlightened, wise and realised. No knowledge escapes it; it is a personification of these auspicious virtues [12].

He (Vamdeo Brahm) is not only the regulator and controller of the three worlds, but also has revealed himself in the form of these three worlds. [The three worlds are the ones revealed in the form of the three words uttered by the creator at the time of creation—viz. 'Bhu' referring to the terrestrial world, 'Bhuvaha' to the world above the earth, i.e. the sky, and 'Swaha' meaning the heavens where the Gods live. These three worlds also symbolically refer to the three states in which the consciousness exists—viz. the Jagrat or waking state, the Swapna or the dreaming state, and Sushupta or the deep sleep state which correspond to the Vishwa, Taijas and Pragya forms of existence.]

He is a bestower of all good fortunes and auspiciousness to all the creatures in creation. He gives the rewards to all according to the deeds done by them [13].

He is honoured by the eight 'Akchars'. [That is, he is praised by a Mantra having eight letters or syllables. This Mantra is 'OM Namoha Mahadevaye'.] It also means that he has revealed himself as the eight elements of creation that are 'imperishable, eternal and infinite' by nature—i.e. are 'Akchar'.

This supreme Divinity lives in the heart that is symbolically like a divine lotus with eight petals. [This vision of the heart as a lotus of eight petals is expounded in the Upanishads dealing with Yoga and Tantra.] [14]. (10-14).

The Varaaha Upanishad of Krishna Yajur Veda, Canto 4, verse nos. 34-42, 44 employ the metaphor of the bird (parrot) and an ant to describe the two types of creatures and the way they take to their Mukti or Moksha (spiritual liberation, deliverance, emancipation and salvation) citing the case of sage Shukdeo who was a parrot, and sage Vamdeo who represented an ant.

In its Canto 4, verse no. 34 it says that 'Sage *Shukdeo* (the parrot saint and son of sage Veda Vyas) found Jivan Mukti as did sage Vamdeo. But there was a subtle difference between the two types of Muktis. Those wise people who follow the path shown by sage Shukdeo find the ultimate liberation and deliverance for themselves in such a way that they do not have to come back into this world again, i.e. they obtain final emancipation and salvation.'

On the other hand, in its Canto 4, verse no. 34 it says that 'those who follow the example set by sage *Vamdeo* repeatedly die and take birth in this world. This cycle would continue for them till the time they find the Truth by practicing Yoga in relation to the profound philosophy known as Sankhya Shastra, understanding its

principle tenets and basic philosophy, besides painstakingly adhering to the theory of Karma (doing deeds correctly, with the proper perspective and wisdom, so that no consequence accrue which would create a baggage that is carried over to the next birth as destiny that forces the creature to enter a fresh cycle of birth and death). It is then only that they can get Mukti.’

In its Canto 4, verse no. 39 it says that those who practice Yoga do obtain Mukti just like sage Vamdeo did, but this involves due diligence and great effort. Followers of the path of Yoga are said to be the followers of the path shown by Vamdeo because they believe in obtaining Mukti through making diligent and hard efforts symbolised by their doing Yoga which is rigorous and involves painstaking efforts over a long period of time. Yoga is fraught with a lot of danger and hurdle as compared to the path of finding Mukti through the pursuance of the path of Gyan or acquisition of knowledge and enlightenment based on meditation and contemplation, study of the scriptures and pondering deeply upon their doctrines and other such methods that do not require rigid exercises and hard labour as required by Yoga.

³Sage *Shukdeo*—He was the son of the legendary seer and renowned sage Veda Vyas. He was highly respected and was born of the celestial maiden named Ghrataachi when she had taken the form of a parrot, called Shuka in Sanskrit, to produce Shukdeo. He had his education under the expert guidance of his father Veda Vyas (refer Maho-panishad of Sam Veda, Canto 2, verse nos. 1-20, and the entire Rudra Hridaya Upanishad of the Krishna Yajur Veda tradition). He was fortunate enough to have as his wise Guru (moral preceptor and teacher) the legendary king Janak, the father of Sita of the Ramayan fame and the most self-realised and enlightened king of his time (refer Maho-panishad of Sam Veda, Canto 2, verse nos. 28-77) and Lord Shiva himself (refer Shuk Rahasya Upanishad of Krishna Yajur Veda which was preached by Lord Shiva to Shukdeo).

His self restraint was so profound that the celestial Apsara, the dancing damsel of the court of Indra, the king of Gods, failed to trap him in her honey-trap of lust and passions. Shukdeo learnt the epic Bhagvata Mahapurana from his father and then narrated it to Parikshit at the culmination of the Dwapar Yug (the third era of the four-era celestial cycle of mythology) and the beginning of the present era called Kali Yug. In an incident narrated in Maho-panishad, Canto 2, verse nos. 21-27 it is described how sage Shukdeo had to wait for twenty-one days before king Janak granted him an audience to test his self control over anger, ego and self-pride of being a son of an enlightened father of the stature of sage Veda Vyas as well as his sincerity and steadfastness of purpose which are important virtues that must be present in a student of spiritualism and important criterion by which his eligibility as a disciple can be judged.

The Tejobindu Upanishad of Krishna Yajur Veda describes him as a truly Brahm-realised sage along with sage Sankaadi in its Canto 1, verse no. 47.

Shukdeo learnt the epic Bhagvata Mahapurana from his father and then narrated it to Parikshit at the culmination of the Dwapar Yug (the third era of the four-era celestial cycle of Hindu mythology) and the beginning of the present era called Kali Yug (which is the last of the four-Yug cycle).

⁴*Sanatkumar* and others called *Sankaadi Rishis*—Sage Sanatkumar is considered as one of the four Manas Putras or the mental-born sons of the creator Brahma. The other three are Sanak, Sanatsujaat and Sanandan. They are regarded in a perpetual state of boyhood. Together they are called ‘Sanakaadi Rishis’.

Sanatkumar had taught the greatness of Vishnu to demon Vrittaasur, the enemy of Indra, the king of Gods. He also taught spiritual wisdom to sage Narad, the celestial sage.

Sanatasujaat taught spiritual wisdom to Dhritrashtra who was the blind father of the Kauravas of the epic Mahabharat fame. Sanak is said to an eternal companion of Lord Vishnu. Sanandan is regarded as the ancient preacher of the Sankhya Shastra, even more ancient than Kapil.

Sanatkumar, along with sages Pippalaad and Angira, had approached sage Atharva to ask him about the highest form of meditation, the different aspects of OM and the culmination of spiritual journey by realising Brahm in the form of Shambhu, one of the names of Lord Shiva, in Atharva Veda's Atharva-shikha Upanishad.

It is narrated in the Brihajjabal Upanishad of the Atharva Veda tradition, in its Brahman 7, verse no. 8, that he had gone to Lord Kalagnirudra, one of the forms of Lord Shiva and who had first revealed this Upanishad to one sage Bhusund (Brahmans 1-6) to learn about the metaphysical importance and spiritual value of the Rudraksha beads. [Rudraksha beads are the seeds of the tree *Eleocarpus ganitrus*.]

According to Kalagni Rudra Upanishad of Krishna Yajur Veda, Sanatkumar was taught how to wear the Tripundra, the three lines marked on the forehead of all Hindus, by Lord Kalagnirudra himself.]

23. Lord Maheswar, the Great God ('Ishwar') and Lord of all the other gods, is truthful, is eternal, unchanging, steady and always omnipresent everywhere, is a (neutral and dispassionate) witness to all and everything (that is happening in this creation), is eternally blissful and happy, has no comparison or parallel in this creation, and is indescribable and incomprehensible.

The Lord or Bhagwan is also known as 'Girish' as he is the Lord of mountains. [This is because the symbolic abode of Shiva is said to be on the higher reaches of snow-covered Mt. Kailash. The reason for Shiva living in mountains is that he is the greatest Yogi or ascetic, and for an ascetic it is prescribed in the scriptures that he makes mountains and forests his abode. This is to help him in his meditation and contemplation or other forms of spiritual exercises. Mountains are places that give serenity, solitude, peace and tranquillity to the soul. They are the natural habitat for those who wish to pursue spiritual path of meditation and contemplation because they provide the aspirant with the perfect environment that fits their spiritual needs. Besides this, the mountains are metaphors for areas on earth where the positive energy of the consciousness is at its peak—and this is physically depicted in the form of high peaks of mountains that almost touch the sky.]

We say that the Lord lives there or anything else about the Lord only because we imagine it to be so, as it is just not possible to know about him (23).

24. Oh Suvrata (i.e. one who keeps auspicious vows)! The Lord's Maya (i.e. his delusion-creating tricks and highly mystical powers) is so confounding and mysterious that no one can be certain about him or about anything related to him so much so that even I, Brahma, the creator, and Lord Vishnu, the sustainer and protector of creation, are mystified and most confounded and perplexed regarding the supreme Lord. It's very difficult to get out of the snare cast by this Maya of the Lord. [Refer verse no. 31. Briefly, Maya is the delusion creating power of Brahm, the Supreme Being. It was Maya that was used by Brahm to weave this fabric of creation just like a magician conjures up a magnificent scene on stage out of thin air. In the present context, Maya is a veil that surrounds and hides the 'truth'. One cannot know Brahm in entirety because of the shroud of Maya that surrounds the truth about Brahm. It is because of this veil of Maya that an ignorant person thinks that Brahm and the rest of creation are different and separate entities, that therefore Sharav, Rudra, Shiva, Brahma, Vishnu and all other such forms of the Divinity are independent Gods that are separate and distinct from one another and from Brahm. A person who thinks in this term is deluded. He forgets that the external form or features by which these Gods are recognised and known are the gross forms of the same universal Divinity known as Brahm, and that these gross forms are not the 'truthful' forms of Brahm because

the latter is the cosmic ‘Consciousness’ that is a most sublime and subtle entity instead of being gross in any way. The factor of ‘Consciousness’ is the same in all the external forms that Brahm has taken, and therefore it is only out of ignorance induced by Maya that one thinks these forms as being separate from Brahm. It is out of the deluding affects of Maya that one is unable to know and come to grips about the ‘truth of Brahm’. A Brahm-realised person is one who has overcome this Maya and is able to recognise the truth that exists behind the misleading external façade.]

But this Maya can be easily got over with by remembering or meditating upon the holy lotus-like feet of the Lord. [In other words, if one takes the shelter of the Lord and surrenders himself to the Lord’s holy feet, then the deluding effects of Maya do not touch such a devotee, Maya cannot cast its magical charm on him or in any way affect him because of the Lord’s grace. Maya is regarded as a maid servant of the Lord, and when the Lord is pleased by someone it is natural that the maid servant would keep her hands off from such a person. Refer Ramcharit Manas of Goswami Tulsidas, Uttar Kand, Doha 71, Kha; and Doha 72, Chaupai line no. 1.] (24).

25. [Now, after having praised Lord Shiva as the great God, this Upanishad moves on to praise Lord Vishnu in verse nos. 25-28 and establishing him on a high pedestal which is equivalent to that occupied by Shiva. This is very significant as it removes any doubts as to which of the two Lords is superior. In fact, a wise man would understand that both Shiva and Vishnu, and for that matter Brahma and all the other Gods are merely different forms of one Great God known as Brahm. Brahm has taken so many forms in order to fulfil myriad functions of this creation. It is a clear symbolism of delegation of authority by the central Authority known as Brahm who is like the Emperor of creation. Refer Tripadvibhūt Maha Narayan Upanishad, Purva Kanda, Canto 1 which is Chapter 11 of this volume.]

It is Lord Vishnu¹ who has created this entire creation. [This puts Vishnu on the same exalted pedestal as Brahm, the Supreme Being. In fact, this refers to the Viraat Purush, the all-encompassing, all-pervading and almighty macrocosmic invisible gross body of Brahm from which the rest of the visible and the invisible creation emerged, including Brahma the creator and Shiva the concluder. Vishnu and Viraat Purush are regarded as the same Divinity having two names; they are synonymous with each other. But observed closely, the Viraat is the subtler form of Vishnu. When incarnations are being referred to, it is Vishnu who becomes relevant because he represents the slightly grosser aspect of Divinity (Brahm) as compared to the Viraat Purush. When the finer aspects of Brahm’s divine virtues and cosmic powers of Consciousness are being referred to, such as the Lord being omnipresent, all-pervading and all-encompassing, then the Viraat Purush is implied. The term ‘Viraat Purush’ literally means the Lord who has a colossus form that is as vast, measureless and fathomless as this creation. This is the all-inclusive form of Brahm, the Supreme Being, as Vishnu. That is, Vishnu and the Viraat are synonymous with each other. The only probable difference between them is the level of subtlety of their existence—for while the Viraat is the subtler form of Brahm even before Brahma the creator came into existence, Vishnu is the less subtler form of Brahm as he is a contemporary of Brahma and one of the Trinity Gods. While the Viraat Purush is the cosmic form of Brahm from whom the entire creation came into being, Vishnu is that form of Brahm which is responsible for taking care of the creation once it came into being.]

Since on the one hand all the creatures are said to be born from a tiny fraction of Vishnu’s body (or the body of the Viraat Purush) and therefore represent Vishnu in

a microcosmic form, and on the other hand it is me, Brahma the creator, who is regarded as the creator of all the world and its creatures, it follows that in fact it is the Supreme Being known as the Viraat Purush or Brahm who has done both in as much as he has played the roles of a creator as well as that of a sustainer of the creation—i.e. he has subtly transformed himself as Brahma to create this world, and then assumed the role of Vishnu to become a sustainer and protector of what has been created by Brahma. [In other words, the Supreme Being known as the Viraat Purush plays two roles—as Brahma he creates, and as Vishnu he sustains and protects the creation.] (25).

[Note—¹*Vishnu* or Narayan—Lord *Vishnu* has many names such as Vasudeo, Narayan, Viraat Purush etc.

The word ‘Vishnu’ consists of two components—‘Vishwa’ meaning the world or the entire creation, and ‘Anu’ meaning an atom. Hence, this is made up of atoms called Vishnu, and therefore the latter pervades throughout this creation.

According to this verse, the whole creation is a manifestation of Vishnu, and therefore it represents Vishnu at the microcosmic level of creation. Vishnu is put on the same pedestal here as the Viraat Purush because the Upanishads say that the creation is created from the Viraat, and with Brahma the creator because this creation is created by him.

The *Viraat Purush* is the macrocosmic gross body of Brahm, the Supreme Being, from whose body the rest of the creation, both the visible and the invisible, is said to have been formed; the Viraat embodies the whole creation in his own self. The word ‘Viraat’ itself means measureless, infinite, colossus and vast. The manifestation of Brahm as the Viraat includes Brahma the creator, Vishnu the sustainer, and Shiva the concluder.

Usually, Vishnu and Viraat Purush are regarded as the same Divinity having two names; they are synonymous with each other. But observed closely, the Viraat is the subtler form of Vishnu. When incarnations are being referred to, it is Vishnu who becomes relevant because he represents the slightly grosser aspect of Divinity (Brahm) as compared to the Viraat Purush. When the finer aspects of Brahm’s divine virtues and cosmic powers of Consciousness are being referred to, such as the Lord being omnipresent, all-pervading and all-encompassing, then the Viraat Purush is implied. The term ‘Viraat Purush’ literally means the Lord who has a colossus form that is as vast, measureless and fathomless as this creation. This is the all-inclusive form of Brahm, the Supreme Being, as Vishnu. That is, Vishnu and the Viraat are synonymous with each other. The only probable difference between them is the level of subtlety of their existence—for while the Viraat is the subtler form of Brahm even before Brahma the creator came into existence, Vishnu is the less subtler form of Brahm as he is a contemporary of Brahma and one of the Trinity Gods. While the Viraat Purush is the cosmic form of Brahm from whom the entire creation came into being, Vishnu is that form of Brahm which is responsible for taking care of the creation once it came into being.

Since on the one hand all the creatures are said to be born from a tiny fraction of Vishnu’s body (or the body of the Viraat Purush) and therefore represent Vishnu in a microcosmic form, and on the other hand it Brahma, the creator, who is regarded as the creator of all the world and its creatures, it follows that in fact it is the Supreme Being known as the Brahm, in his cosmic form as the Viraat or Vishnu, who has done both the jobs of creation and sustenance—i.e. he has subtly transformed himself as Brahma to create this world, and then assumed the role of Vishnu to become a sustainer and protector of what has been created by Brahma. [In other words, the Supreme Being known as the Viraat Purush or Vishnu plays two roles—as Brahma he creates, and as Vishnu he sustains and protects the creation.

Lord Vishnu, as the Viraat Purush, is the macrocosmic gross body of Brahm, and it is from this form of Brahm that the creator of the visible creation, i.e. Brahma the

old patriarch of creation, had emerged atop a divine lotus that sprouted from the navel of Vishnu. Lord Vishnu is the sustainer and the care-taker of the world. He is the most important of the Trinity Gods consisting of Brahma, the creator, and Shiva, the concluder. It's easy to produce and destroy, but a mammoth task to sustain and nourish what has been born.

Vishnu is also known by the name of *Vasudeo* because he is the sustainer and protector of creation, signifying his undisputed lordship over all the essential elements in Nature, called the Vasus of which there are eight in number, and which were created at the beginning of creation to help sustain the upcoming creation. It ought to be noted here that Vishnu is also called Viraat Purush, the macrocosmic gross body of Brahm, and it is from this form of Brahm that the creator of the visible creation, i.e. Brahma the old patriarch of creation, had emerged atop a divine lotus that sprouted from the navel of Vishnu. In other words, everything has its origin in the supreme Brahm.

Lord *Narayan* and Vishnu are synonymously treated in the scriptures. The etymology of the word Narayan is—the primary one who has his abode in the primordial causal waters of the cosmos; one who is the abode of all living creatures; one who has his residence in the bosom of all living beings as their Atma or pure self or consciousness; one who is the final goal of all spiritual pursuits. When the transcendental Supreme Being decided to initiate creation, his first revelation was Hiranyagarbha which represented the macrocosmic subtle body of creation, and from it emerged the Viraat Purush who is the macrocosmic gross body of creation. This 'Viraat' is literally the vast, infinite, measureless, fathomless and colossal form of the supreme Brahm, a form which is all-pervasive, all-encompassing, all-inclusive, immanent and omnipresent in creation. The 'Purush' is literally an entity that lives inside a dwelling, here referring to as the pure consciousness that lives as the Atma of all the living beings. (Brihad Aranyaka Upanishad, 2/5/18-19). This Viraat Purush is therefore the vast and all-inclusive cosmic Consciousness that entered the gross body of the creature and found a comfortable abode in the heart as his Atma. This Viraat Purush at the macro level of creation is known as Vishnu, the one who lives immanently in this creation, inseparable from it and forming its integral part.

Since Narayan or Vishnu is the term used to imply the Viraat Purush who is Brahm personified at the macrocosmic level of creation, it follows that Narayan or Vishnu is the supreme Lord of creation. It is from him that the rest of the creation has emerged. All forces of creation, right from their origin till their conclusion, have this Narayan representing Brahm as their primary source. It is Narayan that is the eternal fountain from which they all the dynamic forces of creation derive their independent strengths, abilities, authorities, potentials and powers. The primary forces are represented by Brahma the creator, Vishnu the sustainer, protector and nourisher, and Shiva the concluder. The other elements of creation are the sky, air, fire, water and earth. Indra represents the chief force that controls all other unit forces of creation, and therefore he has been depicted as the 'king of Gods' because all the Gods are deemed to personify one or the other aspects of the divine forces of creation which are responsible for controlling the various facets of the multifarious and varied creation. For example, Aditya or the Sun gives light, heat and energy to the creation in their twelve forms, including the visible Sun in the sky. The Vasus represent the essential assets that are needed to sustain all forms of life on this earth. Rudras represent the dynamic and forceful nature of a creature that helps it be pro-active and assertive in this world, to protect the assets generated by him and give protection to the society and his dependants by the use of force if necessary. And so on and so forth.

Narayan or Vishnu has *dark blue hue* as his complexion, symbolizing the blue colour of the endless sky which implies that wherever there is sky Lord Narayan is invariably present at the place. Lord Vishnu has all the virtues of the sky element—viz. he is eternal, infinite, fathomless, detached, omnipresent, all-encompassing, all-

pervading, neutral, detached, dispassionate, and the bearer of the entire creation. This colour of Vishnu stands for the sky element of creation.

He has *four arms* signifying the four quarters or quadrants of the compass, implying that the Lord controls and protects all the corners of the creation.

The *Tripadvibhut Maha Narayan Upanishad* of the Atharva Veda describes the various weapons of Lord Vishnu as follows—“He looks glorious with his many weapons which always accompany him. They are the Sudarshan Chakra (the serrated discus that is designed like a circular saw), the Panchjanya Shankh (the conch with five stripes), the Padma (the lotus), the Kaumodki Gadaa (the mace), the Nandak Khang (the sword), the Shaarnag Dhanush (the bow), the Musal or the Gadaa (the mace, the pestle, the hammer, the rammer, the dumbbell), the Parigha (the spear or pike) and other such divine weapons.”

Now, let us examine these weapons and their significance.

His *Shankha* (conch) stands for the sky as well as the wind element because the conch is hollow and it makes a resounding sound when air is blown into it. This sound represents the cosmic Naad, the background sound in ether from which, it is visualized by ancient sages and seers, that the entire creation emerged and derived its primary energy and dynamism. It is this Naad from which all forms of the languages are created, and the sound of the conch is so loud that it is heard for long distances. Hence, the sound of the conch stands for the generation and the propagation of life as well as of knowledge.

It is known as the *Panchjanya Shankha*. There is a legend associated with this *Panchjanya Shankha* (conch). There was a demon named Panchajanya. He lived in a minuscule form inside a conch at the bottom of the ocean. Once he ate the son of sage Saandipani. Lord Krishna had killed this demon, and retrieved the sage's son from the Yamloka, the abode of the God of death known as Yama. Krishna had taken this Shankha then, and it is called 'Panchanjanya' after the demon who lived in it.

The Shankha has a great symbolism when used by Lord Vishnu. It proclaims the presence of the Lord when he blows it. The sound of the conch is heard far and wide. According to some accounts, the conch alone stands for all the five elements of creation—viz. the sky, the air, the water, the fire and the earth. Now, let us analyse how the Shankha or conch stands for the five elements as observed here. The conch is hollow from the inside, indicating the sky or space element. It produces sound when air is blown into it, indicating the presence of the air element. The snail had this as its dwelling, and this snail lives in water. Thus, the conch indicates the fire element because it is this fire that helps a creature to survive even in water. The conch is formed in water and not on dry land like trees and terrestrial animals—indicating its origin in the water element. The body of the conch is hard calcium like the rocks and solid surface of the earth, indicating the presence of earth element as its integral part.

His *Padma* (the Lotus flower) stands for the water element as this flower grows in water and cannot survive without it.

The Padma or Lotus is a symbol of purity and cleanliness amongst the surrounding filth because the dirty water of the pond where the lotus grows does not stick to the petals of the lotus flower. It also signifies the fact that the Lord accepts only the best and the auspicious from amongst all in this creation because the lotus flower grows in dirty water of the pond but is untouched by its filth. So these divine virtues of purity and cleanliness are one of the many glorious virtues of Lord Vishnu.

The word 'Padma' also refers to the origin of creation because the creator Brahma was born atop the lotus that emerged from the navel of the Viraat Purush at the time of creation, as well as the fact that the opening of the bud of the flower is an imaginative way of depicting the unfolding or the emergence of creation from the primeval water. It symbolizes the continuously evolving world because lotus springs forth from water, and this world also springs forth from the causal waters of the cosmos and then grows in the vast ethereal space of the sky.

It also regarded as being closely related to the Sun and that is why it opens up when the Sun rises, and closes at sunset. Since the light of the Sun is a metaphor for wisdom, knowledge, enlightenment and purity of thoughts and actions, the Lotus in the hands of Vishnu indicates the presence of these eclectic virtues in the Lord, or that the Lord symbolises these auspicious and divine virtues and qualities of creation.

The Padma is also a symbol of Goddess Laxmi, the patron deity of good fortunes and wealth. Laxmi is depicted in iconography as being seated on a divine lotus in full bloom.

The *Chakra* (discus) is a weapon of Vishnu that is designed like a serrated wheel and is depicted as being brilliantly illuminated and glowing hot like the fire. It is also ruthless like the fire and destroys everything falling in its path. Hence, it stands for the fire element as well as the power of the Lord to destroy all obstacles. It also signifies that Vishnu is able to reduce to ashes all the corruptions and evil forces of creation. The Chakra also stands for the cosmic mind, because like the restlessness and the tendency of the mind to continuously fly from one subject to another without pause, the Chakra too keeps on revolving and flying off to pursue its targets relentlessly on the instructions of Vishnu. Further, the Chakra also is used as a metaphor for this creation which has been visualized in the form of a cosmic wheel.

This Chakra is called *Sudarshan Chakra*. The word ‘Sudarshan’ means ‘one that is auspicious, pleasing and comforting in appearance or to behold’. The ‘Chakra’ means ‘a circle or ring’ and it refers to a circular weapon which is like a round iron saw with hardened and sharp teeth. It is this invincible weapon that Vishnu uses more often than the rest to overcome the evil forces of creation.

According to legend, it was gifted to Vishnu by Lord Shiva when the latter was pleased by the former’s offering of worship to him at Kashi (Varanasi).

A great chunk of the first half of Canto 7 of the Tripadvibhuta Maha Narayan Upanishad of the Atharva Veda is dedicated to this discus.

His *Musal* or *Gadaa* (mace, rammer, hammer, battle-ram, dumbbell) stands for the earth element because it is as heavy and gross as the latter. This Gadaa also stands for the cosmic intellect because the intellect is used to keep a strict control over one’s wayward mind and its inherent fickleness, over one’s sense organs and their inherent restlessness etc. This signifies the ability of the Lord to be able to exercise infallible control over all aspects of creation. Being a metaphor for the intellect, the Gadaa also symbolizes the Lord’s ability to separate the auspicious and the righteous from the evil and the pervert, or to forcefully subdue the evil, pervert and corrupting forces of creation symbolized by the wayward and restless mind as well as the indulgent organs of the body.

The Gadaa is known as the *Kaumodki Gadaa*. It has the following connotation. The word ‘Kaumodki’ consists of two parts—viz. ‘Ku’ meaning ‘earth’, and ‘moda’ meaning ‘happiness. Hence, the mace of Lord Vishnu gives happiness to all the righteous creatures on earth by protecting them against the evil forces represented by demons.

It is called a ‘Gadaa’ because it was moulded from the strong bones of a demon named ‘Gadaa’, and hence bears his name. The demon gave up his bones to respect the wishes of the creator Brahma, who then got a mace crafted out of it at the hand of Vishwakarma, the God’s engineer, and kept it with Varun, the Water God. It was given to Lord Krishna at the request of Agni, the Fire God, when the former had got the Khaandava forest consumed by fire.

The *Nandak Khanga* (sword)—The word ‘Nandak’ means ‘one which gives joy and happiness to the Gods’. The Agnipuran, Chapter 245, describes an interesting episode regarding this Nandak sword. Once, the creator Brahma was performing a fire sacrifice on the banks of river Ganges. A demon named Lohaasur (the demon with a body of iron) came to disturb it. Suddenly, a male warrior-like figure emerged from Brahma’s body. He got transformed into a sword which was given by the assembled Gods to Lord Maha Vishnu who used it to kill the demon and chop his

body into pieces. The Lord then accepted the sword as one of his permanent companions, and named it 'Nandak'—the one that gave happiness and joys to the Gods because it helped to kill the demon who was the cause of their troubles.

The sword called Nandak symbolizes the grand virtues of erudition, sagacity, enlightenment and wisdom. It is the powerful intellect that is able to discriminate between the right and the wrong, and cut through all obstacles in the path of righteousness, auspiciousness, nobility and virtuousness, i.e. the path of Dharma.

The bow called *Saarang*—This symbolizes the cosmic senses of the Viraat Purush. This bow of Lord Vishnu is also known as the *Shaankhya Dhanush* (bow). It was made from the bones of demon named Shaankhya-chuda after he was killed by Lord Shiva.

The *Tripadvibhut Maha Narayan Upanishad*, Canto 7, paragraph no. 68 says that the Lord's chest is adorned by the Srivatsa, the Kaustav and the Vanmaalaa. Now, let us see what they are.

The *Srivatsa*—This is the mark of the foot of sage Bhrigu which he had caste on the chest of Vishnu ones when he got annoyed upon the Lord. The Lord is so enamoured of his devotees that instead of taking umbrage at this disrespect shown by the sage and punishing him for his misdemeanour, he had blessed the sage that his footprint would always remain on his chest as one of the jewels worn by Lord Vishnu. However, Laxmi was so angry at the temerity of sage Brighu that she cursed that henceforth she, in the form of wealth and material abundance, would always shun a Brahmin; it is believed that this is the reason why Brahmins, who are otherwise of a high birth, are always serving others in the society who are junior to them by birth for their monetary needs.

The *Kaustav Mani*—This is a glittering gem worn by Lord Vishnu, and it covers the sign of the Srivatsa. It was obtained at the time of the legendary churning of the ocean and automatically got lodged on the Lord's chest. {Mahabharat, Adiparva, 18.}

The *Vanmaalaa*—This is a garland (mala) worn by Vishnu and is made of flowers of the forest/wild (Van). The flowers are of a wide variety with those of the Kadamba tree (*Nauclea cadamba*) being in the center or the dominant ones. Sometimes, marigold, daisy or xanthium flowers are shown as being used in this garland.

Lord Vishnu has twelve close attendants, and their names have been given in the *Tripadvibhut Maha Narayan Upanishad* of the Atharva Veda tradition, Canto 7, paragraph 49 in the context of worshipping them while offering oblations to the worship instrument, called the Yantra. These attendants are headed by Vishwakshen. The list of the twelve attendants is as follows—Vishwakshen, Aachakraaye, Vichakraaye, Suchakraaye, Dhi-chakraaye, Sanchakraaye, Jawalchakraaye, Krudholakaaye, Maholkaaye, Viryolkaaye, Vidyolkaaye, and Sastrolkaaye.

The *vehicle* of Narayan or Vishnu is the bird called *Garud* (eagle or heron), and it symbolizes the spoken word. This is because spoken words are transmitted from one point to another by the medium of the sky just like the bird flying from one tree to another. Words and ideas are transmitted from one person to the other like the bird flying off from one tree and perching on another. That is why speech is likened to a bird. Garud is regarded as a personification of the knowledge contained in the Vedas because this knowledge is transmitted through the means of speech. Besides this point, there is another way of looking at this aspect. The knowledge contained in the Vedas help a wise man to reach his spiritual destination much like Lord Vishnu employing the services of Garud if he wants to go any place. The eagle is known to have a long range of vision and flies high up in the sky. The Garud is able to have a broad perspective of the sight seen below because from its high perch in the sky. This indicates the virtues of Vishnu in having wider knowledge and broad vision of life as well as to remain aloof from the humdrum affairs of the deluding world below. The Garud is extremely fast and reaches its destination in a fraction of a second—indicating the almost instantaneous reach of the Lord in all the directions of the

creation. Since the Gurud is able to fly it also stands for the imaginative abilities of the mind, and since it has a penetrating vision that sees long distances he stands for the sharp and wise intellect that has foresight and deep insight.

Narayan or Vishnu is said to recline on the bedstead of *Sheshnath* or the legendary serpent of thousand hoods who floats on the calm waters of the *Kshirsagar*. Now, let us examine their symbolisms.

The word 'Shesh' means 'leftover or remainder', and 'Naath' means the Lord. At the time of conclusion of creation, 'something' remains from which the new creation would come into being. It is this 'cosmic entity' into which the previous creation collapses and dissolves at the time of its conclusion. It is from this 'cosmic entity', the 'remainder' of the last creation, that the first signs of the new creation would emerge. Hence, the Seshnath represents the cosmic entity that remains after the creation ends. He is the 'Lord' (Naath) of what remains of this creation. Since Lord Vishnu is the unquestioned 'Lord and the Supreme Being' of this creation who remains even after everything comes to an end, and it is from him that the next phase of creation emerges, he is depicted in the Purans and in iconography as being reclining on the Seshnath. Sheshnath also represents the sum total of all the souls in their subtle forms which have been leftovers from the previous generation or cycle of creation, hibernating and waiting for the opportune time to remerge as a new creation. In this context, the *Kshirsagar*, or the ocean of celestial milk called Amrit upon which this Sheshnath floats, is like the preservative ambrosial fluid which sustains life and gives it nourishment during the time it is in hibernating phase before the commencement of new creation or springing forth of a new generation of living organisms. The Kshirsagar also represents the cosmic primordial gel from which the creation was moulded by the Viraat Purush at the time of creation.

The Kshirsagar, which is the celestial ocean of milk indicating Amrit or the ambrosial fluid of eternity and bliss, also signifies that Lord Vishnu is perpetually in a state of blissfulness, beatitude and felicity as he is constantly surrounded by its waters. That is why he is depicted as reclining blissfully and peacefully on the back of the Sheshnath while the latter floats on this ambrosia of blissfulness and immortality.

Again, since Amrit is a bestower of eternity and immortality, Lord Vishnu too is immortal and eternal because he is drenched by the spray of the waters of the Kshirsagar as it heaves and splashes against the body of the Seshnath.

This ocean known as Kshirsagar indicates the primordial fluid from which the rest of the creation is formed, and hence it is the 'causal water' or the causative factor which is at the foundation of all living creation coming into being; it is the wellspring of life in all its varied forms. The scriptures describe that earlier there was water everywhere, and from this primordial fluid emerged the earth and the fire element that kept this earth warm, making it habitable and enabling it to harbour life forms. This fact has been affirmed in Brihad Aranyaka Upanishad, Canto 1, Brahman 2, verse no. 2, and the Old Testament of the Holy Bible, the Book of Genesis, verse nos. 9-11.

Lord Vishnu's name first appears in the Rig Veda, 1/154-156. The Lord represents all that is virtuous, noble, righteous, auspicious, high and glorious in this creation. He is all pervading, all encompassing and omnipresent.

He is a personification of Yagya, or the various religious sacrifices (Shatpath Brahman, 1/1/2/13). The Lord has taken numerous forms and revealed himself on different occasions to uphold good and righteous, and trounce bad and evil. Lord Vishnu is also depicted as a synonymous deity for Brahm; he is Brahm personified.

The scriptures describes the various twenty-four incarnations of Vishnu which are called his 'Vyuhas' of Vishnu. A detailed note appended to the Tripadvibhuth Maha Narayan Upanishad, Canto 7, paragraph no. 18 of Chapter 11 of this volume describes all these incarnations of Lord Vishnu.

The divine glories of Lord Vishnu have been extolled in the *Tripadvibhut Maha Narayan Upanishad* of the Atharva Veda tradition which is entirely dedicated to him, but especially in its Canto 1, paragraph 5-6, Canto 2, paragraph nos. 11-12, Canto 7, paragraph nos. 67-68, and Canto 8, paragraph nos. 17, as well as in *Vishnu Puran*, Chapter 1, Canto 2, verse nos. 1-32, 55-70.

Vishnu is a revered deity honoured by all the Vedas. He appears in all of them, for instance—Rig Veda—1/154-156; 5/3/3; 7/99/1-3; 7/100; Sam Veda—222; 1625-27; Yajur Veda—5/15; 6/4; Atharva Veda—3/27/5.

The *Subalo-panishad* of Shukla Yajur Veda, in its Canto 6 also describes the omnipresent and all pervading form of Narayan.

The *Narayan Sukta* has six verses and it appears in the Shukla Yajur Veda. It reveals the genesis of creation in a very succinct way besides extolling and glorifying the primary Lord of creation known as Narayan. The Rishi of this Sukta is Narayan, the Devta is Aditya (Sun God), and Chanda is Trishtup.

Lord Vishnu is the sustainer, nourisher and the caretaker of the world. Therefore, he is regarded as one of the eight mighty Digpals/Digpaals (the main caretakers and superior custodian Gods) of creation. He is the most important of the Trinity Gods consisting of Brahma, the creator, and Shiva, the concluder. It's easy to produce and destroy, but a mammoth task to sustain and nourish what has been born.

According to Purans, even Brahma and Shiva have been created from Vishnu. Brahma emerged sitting atop a divine Lotus that sprouted from the Vishnu's navel in his subtler form as the Viraat Purush, a form that existed before the creation began to take shape in its grosser forms, as he lay reclined in the celestial ocean of milk, known as the Kshir-Sagar, on the bedstead of Sheshnath, the legendary serpent that floated on the surface of this ocean. On the other hand, Shiva is said to be born from his forehead when the Viraat Purush deeply meditated and a few drops of sweat emerged due to intense concentration and effort he was making.

The *Yogattva Upanishad* of Krishna Yajur Veda, in its verse no. 2 describes Vishnu as a Maha-Yogi, Maha-Bhut and Maha-Tapa.

There is a full Upanishad of the Krishna Yajur Veda tradition dedicated to the theme of Vishnu or Narayan. It is called *Narayano-panishad*.

The *Ram Purva Tapini Upanishad* of the Atharva Veda tradition, in its Canto 1, verse no. 1 clearly says that it is Lord Vishnu who had incarnated himself as Lord Ram. In its Canto 5, verse no. 9 it is said that at the time of Lord Ram's departure from earth, all the four divine arms of Lord Vishnu (Shankha or conch, Gadaa or mace, Chakra or discus, and Padma or lotus) that had accompanied the Lord during his incarnation as Ram too went to heaven with the Lord.

The *Ram Uttar Tapini Upanishad*, Canto 3, verse no. 1-4 describe how the various aspects of Lord Vishnu known by different names had accompanied the Lord in his incarnation as Lord Ram. Hence, Sankarshan (one of the forms of Vishnu) incarnated as Laxman, Pradumna as Shatrughan, and Aniruddha as Bharat. These three divine forms of Vishnu became the three brothers of Lord Ram who himself was none other than Lord Vishnu himself. The fact that Lord Ram was the great Lord Vishnu himself is again reiterated in this Upanishad, Canto 5, verse no. 3, 4/5, 4/10, 4/41, 4/45.

The *Paingalo-panishad* of the Shukla Yajur Veda, in its Canto 1, verse nos. 6 and 10 describes Vishnu in the context of the genesis of creation.

An entire Upanishad of the Atharva Veda tradition is dedicated to Lord Narayan or Vishnu. It is called 'Tripadvibhut Maha Narayan Upanishad'. It forms Chapter 11 of our current volume.]

26. Everything in existence comes to an end in a regular cycle and in a sequential order when the time comes. Therefore, everything is impermanent, mortal and perishable, and hence false and illusionary. [This is because if they would have been

real and truthful then they would have been permanent and immortal, as ‘truth’ never ends and it is constant.]

OM salutations! We pay our obeisance and greatest of respect to that Great Lord known as Mahadev (literally the great God or Lord) holding the ‘Shul’ (the invincible and strong spear or any sharp pointed weapon, here meaning the trident held by Shiva) who devours everything and brings them to an end. [That is, Shiva is the Authority that concludes this creation.]

At the same time our obeisance and greatest of respect are meant for the same Lord Maheshwar (literally the great Ishwar or God or Lord) known as Rudra (or Shiva) who is ever so merciful, gracious, benevolent and munificent on all (26).

27. It is only Lord Vishnu who is the supreme, unique, most exalted, most mystical and most enigmatic divine Authority in creation.

Though Vishnu is the Lord who enjoys everything in this world in his gross worldly form as all living beings in whose body the Lord lives as the universal Consciousness (known as the Atma) that lends their bodies life and vitality to enjoy the material things of the world, the Lord himself is absolutely neutral, constant, steady and un-involved (27).

[Note—That is, though the Lord plays a dual role of being the consumer of everything as the creature on the one hand, and as the consumed thing on the other hand—a paradoxical situation because of the fact that each unit and aspect of creation is one or the other manifestation of the same Brahm—he himself remains constant and steady, neither being the consumer nor the consumed. To understand this phenomenon we can take a simple example from material science which says that energy only changes its form and is never consumed or depleted.

For instance, energy may change its form from, say, heat to light as in the electric bulb, from electrical to kinetic and heat as in the dynamo and the motor, and so on and so forth. But the basic entity known as ‘energy’ is the same in all its variations. Similarly, Brahm is the consumer as well as the consumed—meaning one thing is transferred from, say, pocket ‘A’ and placed in pocket ‘B’. In both the cases, it does not mean that the principal thing itself is either depleted or destroyed or changed in any manner whatsoever. It only undergoes transformation but retains its intrinsic quality, virtue and identity.

Let us take another instance. If water is placed in two containers of different shapes and sizes—one, say, tubular and the other conical—it would still remain the same thing, it would still remain water, though its external form and shape are different.

Therefore we conclude that energy in any form would always be ‘energy’, and water in any form or container would still be ‘water’.

Refer verse no. 29 below which explicitly explains this concept.]

28. ‘That Lord (Vishnu) to whom four, two and five oblations are offered during fire sacrifices, let that Lord (Vishnu) be pleased with me.’ (28).

29. The offering that is made to Brahm is in its self Brahm personified. This offering is offered to the sacred fire which is also Brahm personified, and the person making such an offering is also Brahm personified. Even the process of making the offerings is also Brahm from start to finish. [This is unique instance of the philosophy of Advaitya or non-duality which espouses that ‘everything is Brahm’. The person who does the fire sacrifice, the things that are used for making offerings, and the sacred fire to which this offering is made, besides the actual deed of doing the fire sacrifice—all are nothing but Brahm in these apparently separate and distinct forms.

In other words, even though the various units of creation might appear to be separated from one another and apparently have no relation with each other, but when analysed intelligently at the fundamental level of existence they all turn out to be one single unit known as ‘creation’, and since ‘creation’ is uniformly pervaded by Brahm, the cosmic Consciousness, it follows that basically they are all Brahm in their individual forms.]

This is why those ascetics who have attained Samadhi or those who have reached the eclectic state of transcendental existence, there is only one non-dual Brahm to be attained. [This is because no matter which deity they worship and pay their respects to, they are actually worshipping and respecting Brahm in that form.] (29).

30. The Lord known as Hari (which is one of the names of Vishnu) shines or reveals himself in the form of omnipresent Consciousness or the various life-factors known as ‘Pran’ that are constantly and invariably present in all the organs of a creature’s body. Such a living creature who embodies Hari or Vishnu in this visible form is known as ‘Shar’.

The eclectic and mystical divine entity that entitles the creature to be known as Shar (i.e. a creature having life and conscious pulsating throughout his body which would have been dead and lifeless had it not been for this ‘consciousness’ that is present inside it) is called ‘Sharav’. Indeed, this Sharav is Brahm who bestows Moksha to the creature (i.e. Brahm provides emancipation and salvation, or liberation and deliverance to the creature’s soul, which is the latter’s ‘true self’). [The universal source of life known as ‘Consciousness’ that lends life to the otherwise lifeless gross body of a creature is known as Sharav. And since ‘Consciousness’ is another name for Brahm it follows that Sharav is no one else but the supreme transcendental Divinity known as Brahm. The creature who is empowered by Brahm, the creature having ‘Consciousness’ in his body, is known as ‘Shar’.] (30).

31. Even the exalted Gods get trapped and deluded by the immense powers of the Lord’s maverick Maya (refer verse no. 24) which cause such delusions as Mamta (having love and endearment for anything in this world inspite of being aware of its grossness, perishability, impermanence and falsehood) etc.—say, who can ever describe even a part of the immense magnitude and great reach of the Lord’s enigmatic, esoteric and mysterious power known as Maya when it is so powerful and effective that it can even delude the Gods? (31).

32. Hari (one of the names of Lord Vishnu which literally means the one who ‘steals’ or eliminates all the torments as well as the evil effects of sins and other misdemeanours of the creature) is beyond (superior to) the transcendental Brahm (meaning the invisible all-pervading Lord), and Isha (literally the ‘Lord’ of all or ‘one who rules over the entire creation’) is beyond (superior to) Hari. Therefore, there is no one equal to or greater than Isha (32).

[Note—If we examine this verse carefully in the context of what has been said earlier about Shiva or Rudra as being the eliminator of all torments, as the supreme Lord who is beyond the reach and understanding of the mind and speech, who is the undisputed Lord God of the entire creation, we come to the conclusion that all the three names mentioned here, viz. Hari, Brahm and Isha, essentially refer to the same Divinity. This is the basic philosophy of Advaitya Vedanta—the philosophy of non-duality, the doctrine that says that it is the same Truth called the universal and eternal cosmic Consciousness that has been given different names according to the various

functions it performs and the forms it assumes in this creation. In essence the terms 'Hari' and 'Sharav' too mean the same thing even literally—because both these words mean 'the one who eliminates or destroys'. In the case of Hari it means the destruction and elimination of the evils and sorrows of the devotee, and in the case of Sharav it means the one who had eliminated and destroyed the evil body of the Nrisingh. The soul of Nrisingh was being tormented by this most unconventional and horrible body as it was half man and half lion. So when this body was torn apart by Sharav, the soul found its freedom and peace from this tormenting existence.

The word 'Isha' means the 'Lord', and since it is usually applied to Lord Shiva, it follows that Shiva is the 'Lord' of creation. But the Upanishads have unequivocally and repeatedly stressed on the oneness of the 'soul' which is nothing but pure and truthful 'consciousness' though the latter might assume myriad forms. Therefore, all these names of Hari, Vishnu, Sharav, Rudra etc. apply to the same divine Being known as Brahm.

In other words, Hari, usually meaning Vishnu, Isha, usually meaning Shiva, and Brahm, usually meaning the Supreme Being, are all one and the same Divinity called by different names and playing different roles in creation.]

33-34. Shiva¹ is the only truthful, eternal and imperishable entity that remains infinitely constant, steady and unchanging, that is immutable and indivisible. Except Shiva everything else is un-truth, illusionary and false.

That is why besides the other exalted God known as Vishnu, the aspirant should meditate and contemplate only upon Lord Shiva who is the Lord (like Vishnu) who can help the aspirant to break free from all the fetters that shackle him down and prevent his liberation and deliverance from this ensnaring world.

We pay our sincere obeisance and the greatest of respect to Maheshwar (the great Lord God) who provides Mukti or liberation and deliverance from the formidable snare of this world which is very difficult to break free from, as well as is the Lord who devours everything in this world. [Refer verse nos. 5, 10, 17-18, 23, 26 and 30 in this context.] (33-34).

[Note—¹*Shiva*— This word *Shiva* refers to the third God of the Trinity, and the one who has been assigned the task of bringing the world to an end. The word itself briefly means the eclectic, glorious and beautiful virtues of truthfulness, purity, auspiciousness, wisdom, enlightenment, erudition, sagacity, blissfulness, dispassion, detachment, holiness and divinity. These are accompanied by a high degree of peace, tranquility, serenity and their attendant happiness, joy and bliss. Since 'truthfulness and auspiciousness' are qualities that are beautiful, this word also means something that is beautiful and beyond reproach.

Various names of Lord Shiva—Lord Shiva is considered as the most exalted and wisest amongst the Gods, and is therefore honoured with the epithet 'Maha Dev' or the Great God, and 'Maheshwar' or the Great Ishwar as he is regarded as the supreme Lord of the entire creation. [Refer Atharva Veda's Sharav Upanishad, verse no. 34, Atharvashir Upanishad, Kandika 4; Bhasma Jabal Upanishad, Canto 2, paragraph no. 1.]

This is why he is also called 'Ishan'. [Refer Atharvashir Upanishad, Kandika 4.]

As the concluder of creation he is known as 'Rudra' because then he has to assume a ruthless and angry form. [Refer Sharav Upanishad, verse no. 10.]

In his form as the liberator of the soul of the creature by destroying the latter's gross external body and freeing the soul, he is known as Sharav. Shiva had assumed this form to liberate Lord Vishnu from the horrible body of Nrisingh (half man and half lion). [Refer Sharav Upanishad, verse no. 6-8.]

He is known as Trinetrum or Trayambak as he has three eyes. [Refer (i) Atharva Veda = Bhasma Jabal Upanishad, Canto 1, paragraph no. 6; and Canto 2, paragraph

no. 21; Sharav Upanishad, verse nos. 10, 14; Tripura Tapini Upanishad, Canto 4; (ii) Krishna Yajur Veda = Yogtattva Upanishad, verse no. 93.]

He is called Pashupati because he is the Lord of lowly creatures with animal-like instincts. [Refer References: (i) Atharva Veda = Bhasma Jabal Upanishad, Canto 2, paragraph no. 8; Sharav Upanishad, verse no. 14. (ii) Sam Veda = Jabalu-panishad, verse nos. 11-18.]

One of his names is Kaamaari because the Lord had reduced the God of passions, known as Kamdeo-cupid, to ashes. [Refer Sharav Upanishad, verse no. 15.]

He is known as Neelkanth because he had drunk the horrible poison called Halaahal which emerged as a scorching froth at the time of churning of the ocean by the Gods and the Demons in search of Amrit or the ambrosia of life and eternity. [Refer Sharav Upanishad, verse nos. 11, 16.]

He is known as Shambhu as he is the one who remains uniform, unruffled and calm even under adverse situations. Shambhu is one who exists or is established in an enlightened state of highest consciousness (i.e. is 'Bhu') that is marked by perfect self control, complete neutrality, absolute tranquility, serenity, peacefulness and blissfulness (i.e. is 'Sham'). [Refer Atharvashikha Upanishad of the Atharva Veda tradition, Kandika 3.]

The *Maho-panishad* of Sam Veda tradition, in its Canto 1, verse no. 7 describes that Shiva was born from the forehead of the Viraat Purush, the macrocosmic, invisible and all-inclusive gross body of Brahm, the Supreme Being.

The *Panch Brahm Upanishad* of Krishna Yajur Veda, verse no. 41 espouses that Shiva lives in the heart of the creature as an embodiment of 'Sat-Chit-Anand', i.e. as his Atma—"Shiva, as Sat-Chit-Anand personified, always lives in the heart. He is a constant witness of all that is happening. That is why the heart is regarded as the doorway to liberation and deliverance from the traps that have been laid out by this delusory and cunning world of artificiality to ensnare the creature in its tentacles."
